In Germany there was no cessation in the appearance of works on Judaism and Hebrew, showing the continued interest in such studies, a complete list of which for the greater part of the year is given, from the pen of Israel Abrahams, in the Jewish Yearbook (1900), issued by the American Jewish Publication Society of Philadelphia.

At home the educational impetus of the past few years was remarkably well sustained. The second triennial convention of the Council of Jewish Women, held in Philadelphia, indicated the great progress of that society, with nearly 5,000 members, and its special sections devoted to Jewish studies, philanthropy, and educational work. A junior organization was to be effected. The Jewish Chautauqua was authorized at the quinquennial convention of the I. O. B. B., to cooperate in the formation of a general plan that shall secure lectures for the lodges so as to improve the intellectual standing of the order. The growth of agricultural work was shown by a further development of the National Farm School, at Doylestown, Pa., the organization of a special society in Chicago for that purpose, and increased
efforts by the Baron de Hirsch Fund in connection with its New Jersey settlements. The first convention of the National Conference of Jewish Charities in Chicago (June 11) marked a distinct step forward in the history of Jewish benevolence. The death of the Rev. Dr. Isaac M. Wise led to a generous offer by Men's Jewish Association, to build the Hebrew Union College, and about $100,000 was received or promised out of the half a million desired. Among the new institutions opened were the dispensary of the Chicago United Hebrew Charities, the Philadelphia Young Women's Home, the Lueken Moss Home for Incurables, the New York Young Men's Jewish Association building, and the Brooklyn Hebrew Educational Institute. The literary movement included the first volume of Lazarus's Ebys of Judaism (Jewish Publication Society), a Hef of Jastrae's Talmudic Dictionary, a volume of Rodkinson's Talmud in English, a specimen of the Mexican Inquisition documents, by the Jewish Historical Society, and the co-operation of our scholars in the production of a Jewish encyclopedia, the first volume of which is almost ready for publication.

Real life is celebrated by the B'nai Brith, which took upon itself with success the distribution of Romanian immigrants and is establishing lodges among the Russian newcomers, besides pushing its work abroad in Germany and the Orient and considering the advisability of entering France. Two synagogues in San Francisco and one in Cleveland celebrated their fiftieth anniversaries. President McKinley visited the Memorial Temple, in Paterson, N. J., during service on the seventh night of Passover. Dr. Jacob H. Hollander was appointed treasurer of Porto Rico.

KANSAS, 319

KANSAS, a Western State, admitted to the Union Jan. 29, 1861; area, 82,080 square miles. The population, according to each decennial census, was 107,206 in 1860; 364,399 in 1870; 996,090 in 1880; and 1,427,096 in 1890. By the State census of 1895 the population was $1,470,495. Capital, Topeka.

Government.—The following were the State officers in 1900: Governor, William E. Stanley; Lieutenant Governor, Harry E. Richter; Secretary of State, George A. Clark; Treasurer, Frank Grimes; Auditor, George E. Cole; Attorney-General, A. A. Godard; Superintendent of Education, Frank L. T. Johnson; Commissioner of Labor, John M. Coburn; Adjutant General, S. M. Fox; Superintendent of Insurance, W. V. Church; Oil Inspector, S. O. Spencer; Grain Inspector, A. E. McKenzie; State Printer, W. Y. Morgan; Board of Charities, John Haman, G. W. Kanavel, Reuben Vincent, Grant Hornaday, Edwin Snyder; Bank Commissioner, J. W. Bridenthal; Labor Commissioner, W. L. A. Johnson. All the elected officers are Republicans. Chief Justice of the Supreme Court, Frank Doster, Populist; Associate Justices, W. A. Johnston and W. R. Smith, Republicans.

Population.—According to the Federal census of 1890, the population of Kansas was 1,400,496. In the decade of the 1890's the population of the State for the decade was 42,400, an increase of 3 per cent, while that of the total population of the United States was 21 per cent. This small percentage is in great measure due to the fact that between 1890 and 1900 many thousands of people removed from Kansas to settle the neighboring Territory of Oklahoma. For several years after 1890 the population of Kansas declined, but the census of 1900 shows that the tide has turned. In 1900 the State had 111 cities and towns with 1,000 or more inhabitants, against 109 in 1899 and 103 in 1898.

Finances.—The amount of money in the State treasury, Jan. 15, was $1,014,800.63. The Auditor's report of Aug. 9 showed the aggregate credit balances of the State funds to be $66,452.03.

The Auditor's compilation of the tax reports was completed in April, and showed that the taxes for all purposes in the State for 1899 amounted to $13,497,307.56, divided as follows: State tax, $1,811,114.75; school district, $4,147,538; township, $1,001,665.32; county, $5,718,293; city, $821,193.95; railroad, $2,205,977.84. The aggregate returns for 1900 show an increase in valuation of property in the State of about $13,500,000. On this basis, owing to the high levy fixed by the last Legislature, about $80,000 more of taxes would have been collected than the necessities of the State government required. It was impossible to reduce the levy, but the State Board of Equalization reduced the valuation as returned by the assessors $11,075,044. The total valuation as returned by the Board for 1900 is $25,930,654, an increase over 1899 of $1,770,524. The total State tax levied in 1900 was $1,807,898, an increase over 1899 of $8,480.

The February apportionment of the State school fund among the counties involved the distribution of $226,858.50, being 45 cents per capita, and an increase of 4 cents per capita over the August apportionment.

In the three years from July 1, 1897, to July 1, 1900, the counties of Kansas reduced their bonded debts in the aggregate $2,928,371, reductions being made in 95 counties and increases in only 10.

The Auditor's statement in June showed the total amount of municipal bonds of the State refunded during the two previous years to have been $6,232,233.44. The settlements included county, township, city, and school bonds. More than $500,000 of bonds in addition were paid off. The Auditor's list embraces 89 of the 105 counties.

The tax accounts of Harper County have been checked up, with a saving to the State of $6,109.43. The fiscal report of the tax commissioner covering the period from June 30, 1898, to June 30, 1900, shows a reduction during that period in delinquent taxes due the State from $104,331.58 to $75,815.34. The Treasurer informs the Governor of a considerable amount of bonds in the treasury upon which no interest has been paid for several years. The tax commissioner, after an investigation, has recommended that the settlers by professional boomers, who immediately left the State. "When the temporary inflation subsided, the bonded municipalities were left with property greatly depressiated and, in many instances, almost depopulated. This causes great hardship to the worthy people who are endeavoring to establish homes in those localities, and prevents the settlement and development of the bonded Territories."

Although the Attorney-General had held that the Quantrall raid scirp could be turned into the treasury in payment of State taxes, the Treasurer decided not to receive the scirp in such payment, deciding in his decision on the Titus law (chap. 247, Laws of 1899).

For the period of nine months ending with March, 1900, the net income to the State from the oil-inspection department was $10,354.61.

In April the Governor was officially advised that
the claims of the State against the Federal Government for expenses incurred in raising troops for the war with Spain had been allowed to the amount of $36,081.19. The claims aggregated $37,787.84.

Final payments to the Indians of the Ottawa reservation have been made by the Federal Government, the amount paid being $42,000, or $491.48 per capita.

**Banks.**—According to the biennial report of the State Bank Commissioner, Dec. 13, there were 334 State and 55 private banks in Kansas, 59 banks having been organized during the year. Eleven private banks were reorganized, 11 State and private banks reorganized as national banks. Twelve State and 5 private banks went into voluntary liquidation, while 5 were closed. In the last two years the capital stock of the State and private banks in the State had increased $100,023, and the surplus $405,100. While the deposits in the same length of time increased $9,000,000, yet the cash on hand was only $178,009 greater. The total number of depositors was 111,132.

**Building and Loan Associations.**—By the Legislature of 1899 building and loan associations were placed under the control of the State Bank Commissioner, who in June submitted a report showing a net amount of $50,538.76. The net local subscriptions to be 1.31 to 8 per cent. of the total receipts from stock sold, and of Kansas national (or "general") associations to be from 18.3 to 80 per cent. Regarding foreign associations, the commissioner says: "The losses sustained by Kansas investors in foreign loan associations in the past 15 years, the millions of dollars invested, and 80 per cent. of the foreign associations that were doing business in Kansas five years ago have failed." During the year, when the number of building and loan associations doing active business in the State increased to more than 50, several associations went into voluntary liquidation, and some were closed by the Bank Commission.

**Education.**—At the State University the graduates in 1900 numbered 200, with the following distribution among the various schools: Art, 91; law, 73; engineering, 15; graduate school, 13; fine arts, 6; medicine, 2. In all, the university has graduated 1,745 students. The formal dedication of the new Student dormitory building was on June 13.

The graduating class at the Agricultural College had 59 members. The degree of M. S. was conferred upon 3 post-graduates. At the end of the second week of the winter term the increase of attendance over that of the same week in 1899 was 32.1 per cent., the number of students being 888. The agricultural department now has permanent quarters in the fine hall completed in 1900. The chemical building was destroyed by fire in May. In March Congress granted to Kansas the old Fort Hays military reservation in Ellis County for educational purposes. The bill provides for an experiment station of the Agricultural College on this tract. At the Kansas Normal School the enrollment for the year was 1,933, representing 93 counties in Kansas, and also 14 other States and Territories. The graduating class numbered 109. The Fort Hays grant makes provision for a western branch of this school.

The College of Liberal Arts, Jaker University, reported 1070 upon 14 graduates. During the year the university built a new gymnasium. At Washburn College 27 students were graduated. The thirty-fifth anniversary of the founding of the college was celebrated Feb. 6.

Ottawa University had 500 students during the year, and graduated 7.

The graduates of McPherson College, in all departments, numbered 31. During the year the college debt was liquidated.

The school population of the State in 1900 was 504,130—white persons, 487,933 (males 247,330, females 239,603); colored persons, 16,177 (males 7,895, females 8,282).

Kansas has $11,665,511 invested in school buildings, of which there are 9,297 in the State. The number of teachers in 1900 was 11,428. The money paid in wages to teachers for the year ending June 30, 1899, amounted to $3,033,248.40. For the same period the expenditures of the State for education were $3,490,472.94. The semiannual distribution of the State school fund in August, 1900, divided among the counties $22,183,66—about 44 cents per capita for the school population.

According to the statistics of the Federal Department of Education, Kansas has the largest per cent age of school children enrolled among the States of the Union.

**Charities and Corrections.**—In March, 1900, the number of inmates in each of the 8 charitable institutions of Kansas was as follows: School for the Blind, at Kansas City, 84; Imbelee and Idiotic Asylum, at Winfield, 182; Reform School, at Topeka, 171; Deaf and Dumb School, at Atchison, 347; Girls' Industrial School, at Beloit, 112; Soldiers' Orphans' Home, at Atchison, 139; Topeka Insane Asylum, 850; Osawatomie Insane Asylum, 1,053.

Seventy-seven counties own their poor farms. Their total number of inmates, according to the latest report of the Labor Commissioner, was 1,593, and their aggregate expense in 1899, $153,403.82. Reorganized several dollars.

The State Board of Charities in its last report commends the work of the 16 independent charities which receive State aid. The value of their real estate and equipment is about $300,000. In ten years they have given relief to more than 37,000 persons.

The number of inmates at the State Industrial Reformatory, at Hutchinson, July 1, 1900, was 227. During the first year of the fiscal period 97 inmates were paroled, and during the second year 110.

In the State Penitentiary the prisoners in May numbered 1,000, of whom 215 were from Oklahoma, which has no prison.

The present Governor has made experiments in the matter of conditions of paroles for criminals, with results of practical interest. In March, 1900, ten months after his plans were put in operation, he was able to make known that 18 prisoners of the Penitentiary had been conditionally paroled. "All of them," he says, "are now employed, and their monthly reports show that they have fulfilled the strict letter of their conditions, are caring for those dependent upon them, and are leading industrious and honest lives."

**Military.**—According to the annual report of the Adjutant General's Office at Washington, issued in July, the organized militia force of Kansas was 1,244. The number of men in the State available for military duty, but unorganized, does not appear in this report.

The twelfth biennial report of the Adjutant General of the State, issued Oct. 8, in addition to other information regarding the department, contains the complete roster and histories of the 4 regiments put in the field by Kansas during the Spanish-American war. At the date of the report there were 1,295 Kansas soldiers in the Philippines. All but 43 of them were in the infantry service.

In May an organization, to be known as the Twentieth Kansas, was formed by the election of officers. Its membership is designed to include all honorably discharged soldiers of the Twentieth
Kansas Infantry. Medals for the members of this regiment have been made from captured Spanish cannon.

In honor of Company K a memorial gateway has been erected at Forest Park, Ottawa, by the citizens of Franklin County.

Calvin P. Titus, of Wichita, a musician of the Fourteenth United States Infantry, was the first to scale the walls of Tepin in the assault of the allied forces upon the city in August.

Railroads.—The Auditor, as secretary of the State Board of Railroad Assessors, reports the total assessments of railroad, telegraph, and telephone properties for 1900 as reaching $59,320,032, an increase over 1899 of $279,973,789. Wichita is about one third that of Germany, almost half that of Great Britain and Ireland, slightly less than that of Spain, and nearly the same as that of Italy. Only 5 of the 105 counties, and only 7 county seats, are without railroad communications.

In April the Kansas Midland Railway, from Wichita to Ellsworth, had 106 miles. The St. Louis and San Francisco Railway Company.

Insurance.—The mutual insurance companies reported no large profits for 1899, while two report a loss.

The amount collected by the Superintendent of Insurance for the Firemen’s Relief fund, as reduced by the state and county assessments, was $187,796,406.

A form of insurance new in Kansas, which has worked successfully in other States, has been introduced by the organization of the Farmers’ Mutual Hall Association, at Topeka.

Products.—According to the final report of the secretary of the State Board of Agriculture for 1900, the value of the year’s crops is estimated at $231,254,159, a net increase over 1899 of $28,348,780.40, or 9.35 per cent. The acreage of wheat and corn decreased, and the increase of a half in the average value of wheat and corn in 1899.

The corn crop of 1900 was 90,000,000 bushels, short, but the wheat crop of 1899 was 90,000,000 bushels, was yielded to the average value of live stock, $187,796,406. The value of live stock was $143,457,753. This makes a grand total of $331,254,159, a net increase over 1899 of $28,348,780.40, or 9.35 per cent.

The acreage of wheat in 1900 exceeded by 7 per cent. that in 1899. The average wheat crop of 1900 was 90,000,000 bushels, but the wheat crop of 1899 was 90,000,000 bushels, was yielded to the value of $187,796,406. The value of live stock was $143,457,753. This makes a grand total of $331,254,159, a net increase over 1899 of $28,348,780.40, or 9.35 per cent.

The average size of the wheat crop in the year was 18 bushels per acre, and the total value of the harvest, $143,457,753. The average size of the wheat crop in the year was 18 bushels per acre, and the total value of the harvest, $143,457,753.

The average size of the corn crop in the year was 18 bushels per acre, and the total value of the harvest, $143,457,753. The average size of the corn crop in the year was 18 bushels per acre, and the total value of the harvest, $143,457,753.

The average size of the corn crop in the year was 18 bushels per acre, and the total value of the harvest, $143,457,753. The average size of the corn crop in the year was 18 bushels per acre, and the total value of the harvest, $143,457,753.

The average size of the corn crop in the year was 18 bushels per acre, and the total value of the harvest, $143,457,753. The average size of the corn crop in the year was 18 bushels per acre, and the total value of the harvest, $143,457,753.

The average size of the corn crop in the year was 18 bushels per acre, and the total value of the harvest, $143,457,753. The average size of the corn crop in the year was 18 bushels per acre, and the total value of the harvest, $143,457,753.

Of the corn crop of 1900, 90,000,000 bushels were harvested, and the total value of the harvest, $143,457,753. The average size of the corn crop in the year was 18 bushels per acre, and the total value of the harvest, $143,457,753.
owner supports a family on an average 13.3 per cent. larger than the average family of the rent payer; that the average annual earnings and income of the home owner is 15.5 per cent. more than the average for the rent payer; that the cost of living of the home owners is 10.6 per cent. greater than the average for the rent payer; that the average annual saving of the home owner is 32.5 per cent. more than the average saving of the rent payer; and that of the total amount permanently invested during the year, 80 per cent. is invested by the home owners. The rent payers expend an average of 14.1 per cent. of their earnings and income for rental for homes.

**New Temperance Movement—** A Temperance Association was organized at Topeka in March, to work for the creation by law of a State department of temperance under a board of three commissioners. The movement, which aims to secure uniform and practical enforcement of the prohibition law, has resulted in the organization of similar clubs in different parts of the State. The Kansas Exposition Union has through its committee, reporting on Nov. 28, while recommending further prohibitory legislation, disapproved of the commission project as inexpedient.

**Good Roads Congress.—** The first gathering of its kind in the West was the Good Roads Congress, held at Topeka in September, which brought together a large number of professional workers from other States. The most important action of the congress was the framing of a permanent State organization to be called the Kansas Good Roads Association. A committee was named to prepare a good roads bill for the Legislature, and delegates were chosen to attend the National Good Roads and Public Works at Chicago.

**Kansas Semicentennial Exposition.—** On June 14 the State Charter Board granted a charter to the Kansas Exposition Association of Topeka, with a capital stock of $50,000, divided into 10,000 shares at $5 each. This is but one of many movements in the State whose special object is the holding of an exposition in 1904 to celebrate the semi-centennial of the organization of the Territory of Kansas.

**Political.—** The Republican State Convention was held at Topeka, May 16. It reaffirmed the principles of the platform of the National Republican party of 1896; approved the administration of President McKinley, and declared that the high standing of the country demanded its continuance through another term; congratulated the country on the maintenance of the gold standard and the parity of all our forms of money; condemned "the false cry of imperialism;" and the Democratic policy based thereon, "as being responsible for the continued war in the Philippine Islands and the disfranchise citizens in Southern States, and urged remedial legislation for this injustice by Congress. It demanded "the prompt, efficient, and faithful enforcement of the antitrust act of 1890, and such additional and supplementary legislation as will meet the defects thereof, as indicated by the Supreme Court of the United States in its recent decisions," and denounced "the combination and creation of corporate trusts and monopolies which seek to become the controllers of industry and the arbiters of prices, as contrary to the common law, destructive of individual effort and enterprise, and inimical to the welfare of the people as a whole." The delegate from Kansas was in favor of the peace movement, the placing of the national debt in the State and preying and succeeding Republican administrations, "believing that such comparison will everywhere inure to the credit of Populists"; denounced militarism and imperialism as

The convention commended in the highest terms the administration of Gov. Stanley and his associates in the State government; commended the representatives of Kansas in Congress; denounced recent fusion railroad legislation in the State, and pledged the Republican party to "such legislation as will provide adequate protection against the greed of the corporations without crippling them with unjust exactions." It favored the re-establishment of the Board of Railroad Commissioners, with fuller powers, and recommended the election of its members by the people.

Another demand of the convention was for "the amendment of the interstate commerce act in such manner that it will compel compliance with and enforcement of just and equitable freight rates."

At this convention the Republicans chose delegates at large to the national convention and presidential electors, and nominated Charles F. Scott for Congressman at Large and the following State ticket: Associate Justice, W. A. Johnston; Governor, W. E. Stanleys; Lieutenant Governor, Harry Richter; Secretary of State, George A. Clark; Treasurer from Kansas, Frank H. Godard; Auditor, George E. Cole; Superintendent of Public Instruction, Frank Nelson; Superintendent of Insurance, W. V. Church.

The State convention of the People's party to choose national delegates was met at Clay Center, April 24.

The Democratic State Convention to choose national delegates met at Wichita, May 23.

The Prohibition party held its State convention at Topeka, June 20. The usual resolutions on prohibition and one favoring woman suffrage were passed, also resolutions against trusts and the army ebanete.

Candidates for presidential electors were chosen, B. C. Hoyt was nominated for Congressman at Large, and candidates for State offices were named as follows: Governor, Frank Holsinger; Lieutenant Governor, W. L. Coryell; Secretary of State, R. H. Moore; Treasurer, H. C. Zink; Attorney-General, M. V. Bennett; Auditor, W. M. Howie; Superintendent of Insurance, A. H. Griese; Superintendent of Public Instruction, J. L. Witherspoon.

The State conventions of the Democratic, People's, and Silver-Republican parties, all assembled at Fort Scott, July 24, elected a fusion, chose candidates for presidential electors, and nominated Jerry Botkin (People's party) for Congressman at Large, and these candidates for State offices: Associate Justice of the Supreme Court, B. A. Irwin; Governor, John W. Breidenthal, People's party; Lieutenant Governor, A. M. Harvey, People's party; Attorney-General, Hugh P. Farrelly, Democrat; Secretary of State, Abraham Frakes, Democrat; Auditor, E. J. Westgate, People's party; Treasurer, Conway Marshall, Democrat; Superintendent of Public Instruction, Levi Hunt; Superintendent of Insu- rance, Webb McNall, Silver Republican.

The platform of the People's party reaffirmed the declaration of principles made by the national convention at Sioux Falls, S. D., May 9, 1900, and accepted its nominees; invited comparison between the last fusion platform and that of 1896 in the State and preceding and succeeding Republican administrations, "believing that such comparison will everywhere inure to the credit of Populists;" denounced militarism and imperialism as
the direct outgrowth of the spirit of greed which is the chief characteristic of modern commercialism. Mr. John D. Rockefeller; Secretary of State, Caleb C. Make- ney-General, Clifton J. Pratt; Auditor, John S. Sweeney; Treasurer, Walter R. Day; Superintendent of Instruction, John Burke; Commissioner of Agriculture, J. W. Throckmorton. The Democratic candidates for the offices of Governor and Lieutenant Governor made a contest before the Legislature, which denied the latter, and the popular vote was taken to the courts, where it was decided that they had no jurisdiction. The following were therefore declared to be the rightful claimants to the offices: Governor, William Goebel, who died Feb. 3 and was succeeded by the Lieutenant Gov- ernor, J. C. W. Beckham; the president pro tem. of the Senate, H. D. Curtin became the acting Lieutenant Governor. The contestants for the minor offices were: Secretary of State, Breck Hill; Attorney-General, R. J. Breckenridge; Treasurer, S. W. Hager; Auditor, G. C. Coulter; Commissioner of Agriculture, J. B. Nail; Superintendent of Public Instruction, H. V. McChesney. The members of the Board of Education were J. H. McChord, G. A. McChord, and John C. Wood; the State Inspector, Henry B. Hines. Gov. Goebel appointed John B. Castleman to succeed D. R. Collier as Adjutant General. The Chief Justice of the Court of Appeals was James H. Hazelrigg, Democrat; the Asso- ciate Justices, J. D. White, T. H. Paynter, and P. Hobson. Democrats, and B. L. D. Guiffy, George DuBelle, and A. Collins Burnam, Republicans; Clerk, S. J. Shackelford, Democrat.

Elections for State officers are held in November of the years preceding the presidential elections. The term of office is four years. The Legislature, consisting of 38 Senators and 100 Representatives, meets biennially the first Tuesday after the first Monday in December.

Population.—The population of the State, by the census of this year, 2,147,174, is made up by counties as follows: Adair, 14,888; Allen, 14,657; Anderson, 10,051; Ballard, 10,761; Barren, 23,197; Bath, 14,734; Bell, 15,701; Boone, 11,170; Bourbon, 18,609; Boyd, 18,534; Boyle, 18,517; Bracken, 12,472; Breathitt, 11,069; Butler, 14,782; Bullitt, 9,602; Butler, 15,896; Caldwell, 14,510; Calloway, 17,633; Campbell, 54,223; Carlisle, 10,195; Carroll, 9,825; Carter, 20,223; Casey, 15,144; Christian, 37,962; Clark, 16,694; Clay, 15,364; Clinton, 7,871; Crittenden, 15,191; Ed- monson, 10,089; Elliott, 10,387; Estill, 11,669; Fayette, 12,018; Floyd, 15,817; Franklin, 20,852; Fulton, 11,546; Gallatin, 5,163; Garrard, 12,142; Grant, 13,239; Graves, 33,204; Grayson, 19,878; Green, 12,255; Greenup, 15,432; Hancock, 8,914; Hardin, 22,937; Harlan, 9,938; Harrison, 18,570; Hart, 18,390; Henderson, 32,807; Henry, 14,629; Hickman, 11,745; Hopkins, 30,993; Jackson, 10,561; Jefferson, 14,888; Johnson, 11,025; Johnson, 13,730; Kenton, 63,591; Knott, 8,704; Knox, 17,372; Larue, 10,764; Laurel, 17,592; Lawrence, 19,012; Lee, 7,988; Leslie, 6,753; Letch- er, 9,172; Lewis, 17,863; Lincoln, 17,059; Livingston, 11,354; Logan, 25,994; Lyon, 9,319; Mc- Cracken, 28,733; McLean, 12,448; Madison, 25,907; Magoffin, 12,006; Marion, 16,920; Marshall, 13,692; Martin, 7,580; Mason, 20,446; Meade, 10,353; Menifee, 6,818; Mercer, 14,426; Metcalfe, 9,988; Monroe, 13,053; Montgomery, 12,834; Morgan, 12,792; Muhlenberg, 20,741; Nelson, 16,587; Nich- olas, 11,952; Ohio, 27,257; Oldham, 7,075; Owen, 17,533; Owings, 6,574; Pendleton, 14,947; Perry, 9,019; Pike, 24,342; Powell, 15,045; Robertson, 4,900; Rockcastle, 12,416; Rowan, 8,277; Russell, 9,663; Scott, 18,176; Shelby, 18,340; Simpson, 11,624; Spencer, 7,406; Taylor, 11,075;
KENTUCKY.

Todd, 17,371; Trigg, 14,073; Trimble, 7,272; Union, 21,320; Warren, 29,970; Washington, 14,182; Wayne, 14,892; Webster, 20,097; Whitley, 25,015; Wolfe, 8,764; Woodford, 13,134; total, 2,147,174.

The population of Louisville is 294,731; Covington, 42,038; Lexington, 26,369.

Of those having smaller population are: Pulaski, 7,319; Jackson, 3,189; Henderson, 10,272; Frankfort, 9,487; Bowling Green, 8,226; Hopkinsville, 7,280; Ashland, 6,800; Maysville, 6,423; Bellevue, 6,332; Dayton, 6,104; Winchester, 5,584.

**Finances.**—The bonded indebtedness of the State at the opening of the year was $3,483,991. Of this only $1,000,000 must be ultimately charged on the credit of the State—of that amount in 1905 and 1907—and the resources of the treasury were more than sufficient to discharge them. A small part, $6,394, was in old issues supposed to be lost, and the remainder was educational, college, and normal school bonds. The floating debt was $23,276. The total value of taxable property in the State, as reported by the Board of Equalization in July, is $754,867,964; this will produce $2,730,022 in taxes at 7½ on $100, the rate this year, instead of 52½ cents, which has been collected for the past three years. Owing to the failure of county assessors to make the assessment, about $12,000,000 worth of stock in national banks escaped taxation this year, the decision of the Supreme Court in the case of the owner of the stock to list it for taxation. The board in November fixed the tax valuation of whisky at $10 a barrel instead of $7 as heretofore.

**Education.**—The school population is 719,654; the per capita of apportionment for the year ending June 30, 1900, was $2.70; this is larger than for any year, as the number of children increased in consequence of the collection of large amounts of bank taxes from railroads and other sources after the per capita for the year ending June 30, 1899, had been fixed. The most serious defect of the school system is the limited term of instruction, the schools in rural districts being closed not usually more than five months of the year.

**Charities and Corrections.**—There are three insane asylums—the Eastern, the Western, and the Central. New buildings have been erected for the Institute for the Feeble-minded.

The penitentiaries, at Frankfort and Eddyville, are now under the charge of three commissioners, who receive salaries of $2,000 each. There is also an institution for juvenile offenders near Lexington. For the sixteen months ending Nov. 30, 1899, the expenses of the Frankfort penitentiary were $349,623, and its income from earnings, etc., $261,851. The amount paid and charged to the Eddyville penitentiary during the same period was $91,469.53, an amount greater by $57,075.53 than the amount of earnings and materials on hand.

**Lawlessness.**—A feud dating from the time when Kentucky troops were at Anniston, Ala., during the Spanish war, between Col. D. G. Colson and Lieut. Ethelbert Scott, resulted in a tragedy at Frankfort, Jan. 16. In which three persons were killed and four others wounded. While the parties were at Anniston they had an encounter, in which Colson was wounded by Scott. The encounter of Jan. 16 resulted fatally for Scott. It took place in the lobby of the Capitol Hotel, which was crowded with visitors drawn to Frankfort by the legislature. The accounts of the beginning of the fray are conflicting. The first fire was instantly returned; and when Scott retreated to the stairway Colson pursued him and fired at him as he ran down the stairs. Scott was wounded in six places, and died almost instantly. Two bystanders also were killed, one of whom Scott was said to have used as a shield from Colson's first bullets. Colson was indicted, tried, and acquitted.

Five men were killed in quarrels over politics, Nov. 6.

**Osteopathy.**—A graduate of a school of osteopathy asked an injunction restraining the State Board of Health from interfering with his practice. The lower court refused, but the Court of Appeals granted the injunction, and held that the practice is not a violation of the statutes, the Chief Justice dissenting.

**The Contest for Offices.**—The official count after the State election of 1899 gave the offices to the Republican candidates, and they were inaugurated Dec. 12. Notices of contest were served. The contests for the two higher offices came before the Legislature, according to the election law; those for the remaining offices were to come before the Election Board sitting as a board of contest. The two higher officers were not to be heard until time for hearing the contests, and each of the contestants for the office of Governor made appointments to fill the vacancies.

In the Legislature the Committee on Contests was chosen by lot, according to the law of 1899. The drawing fell out greatly to the advantage of the Democrats. The Conservatives in the drawing were charged. On Jan. 25, according to Frankfort dispatches, a special train arrived there, bringing from 500 to 1,000 men armed with Winchester rifles, the so-called "mountain men" from the southeastern and southern parts of the State, many of whom were said to belong to the State militia, but this was denied. They held a meeting and adjourned and fund themselves in the form of resolutions, asking that the contest be decided according to the will of the people expressed at the polls. A dispatch of the evening of that day said they had returned to their homes.

A contest for a seat in the House was decided, Jan. 27, in favor of Van Meter, the Democrat, as member, the Republican, against this decision was regarded as forecasting the vote on the gomanship. The House stood 60 Democrats to 40 Republicans, and the Senate 26 Democrats to 12 Republicans.

While on his way to the Statehouse, Jan. 30, Senator William Goebel fell by a shot from an assassin. On Jan. 29, in an address to the legislature, Mr. Taylor adjourned the legislature (see Legislative Sessions in this article), declaring that a state of insurrection existed, and placed military guards around the Capitol. He called the Legislature to meet at London, which is in the Republican part of the State. Jan. 31, the legislators favorable to Senator Goebel, unable to enter the Capitol, held a meeting in the opera house and other places where they attempted to meet, prepared a statement setting forth these facts and declaring Goebel and Beckham Governor and Lieutenant Governor. This was signed by 19 Senators and 56 Representatives. Mr. Goebel's death was hourly expected, but he was sworn in as Governor. In the evening, in the opera house and other places where they attempted to meet, prepared a statement setting forth these facts and declaring Goebel and Beckham Governor and Lieutenant Governor. Gov. Goebel died Feb. 3, and Mr. Beckham was sworn in Governor an hour later.

It was held that the law called for the decision of each contest by the two houses separately. The Republicans refused to abide by this decision or to give up the offices. Applications for injunctions were made by both sides; a conference committee consisting of 7 men from each party pre-
pared an agreement by which, if the Legislature should ratify their action, the Republicans should suffer those who sanctioned this law to be impeached; while the Democrats would unite in an effort to bring about such changes in the laws as would secure free and fair elections; that the troops should be removed from the Capitol; and that the Republican officials and officers of the State Guard should have immunity from charges of treason, usurpation, or any such offenses. This agreement Gov. Taylor refused to sign; the injunction suits were consolidated into one, and it was agreed that both parties would abide by the decision of the courts. The case was carried to the circuit court of Jefferson County, where a decision was given, March 10, sustaining the contention of the Democrats that the Legislature had no power to settle such contests, and that, although the Legislature was not in session, the showing of the records that the reports in favor of the Democratic contestants were adopted by a quorum of each house was sufficient. Appeal was taken to the State Court of Appeals, where the decision was reversed, and the case was subject to further appeal. This court carried the case to the United States Supreme Court, where judgment was given, May 21, that that court had no jurisdiction, Justices Brewer, Brown, and McKenna dissenting from portions of the opinion, and Justice Harlan from the whole. He said in part: "So that, while we may inquire whether the law has been so applied as to deprive anyone of his life, liberty, or property without due process of law, we may not inquire whether the legislative or judicial authorities of the State have, without due process of law, ousted one lawfully elected and holding the office of Governor for a fixed term, and put another in his place. The people are said not to exercise the authority appertaining to that high position. When the Fourteenth Amendment forbade any State from depriving any person of life, liberty, or property without due process of law, I had supposed that the purpose was to guard citizens against being deprived of any legal right in violation of the fundamental guarantees that adhere in due process of law." As soon as the decision was made known, Gov. Taylor directed D. R. Collier, Adjutant General, to dismiss the militia from the Capitol and surrender his office to Mr. Beckham's appointee as soon as the mandate of the court should be filed. This Goebel Murder Trial.--The Legislature offered a reward of $100,000 for the apprehension and prosecution of the assassin of William Goebel, and warrants were issued for men suspected of complicity. On March 10 Gov. Taylor issued pardons to these men. The pardon to John L. Powers was respected in Barbourville and at Harlan County, but at Letcher County the power of the ex-Governor to grant pardons was not generally recognized, as the Legislature had then decided against his claim to the office. Examinations of the suspected men were held at Frankfort, and the grand jury returned indictments against ten. The principals named were: Henry E. Youtsey, who was a clerk in the office of Auditor Sweeney; James and Berry Howard, cousins known in connection with the old Howard feud; Holland Whittaker, who was alleged to have been in the room in the executive building from which the shot was fired, and "Tallow Dick" Coombs, a colored man who went to the Capitol with the former two, and in whose presence the crowd before the fact were: Caleb Powers, the Republican Secretary of State, and his brother, John L. Powers; Charles Finley, Secretary of State in Gov. Bradley's administration; W. H. Culton, a clerk in Auditor Sweeney's office; and W. H. Wharton Golden, a member of the State Guard. Finley went to Indianapolis just before the warrant for him was issued. An indictment against Gov. Taylor, who, together with Green Golden and John W. Davis, special policeman at the Capitol, was mentioned in the indictment of the other accessories, was found by the grand jury about the same time, but was not made public till about June 1. Requisition was made on the Governor of Indiana for the return of Taylor and Finley, but he refused to honor it, saying in his letter: "I deplore the assassination of the late William Goebel, and would not for a moment refuse to return Mr. Taylor or any other person; but it is not the duty of the party to do any such thing as they did in that crime if I could persuade myself that the party so charged, under existing conditions, would be accorded a fair trial. I do not believe a fair and impartial trial can or will at this time be given Mr. Taylor. When Judge Cantrill, of the trial court at Frankfort, declares that he would not send one more contest to the United States courts, and such circumstances as exist, may I not justly refuse to send Mr. Taylor back to be subjected to a trial with this prejudice intensified and fanned into hate? When a man who is a controlling spirit in the prosecution, witness in this case and prominent in its counsels, uses the monstrous language that would hang Republicans 'like pigs to a pole' (and the anarchistic words have not to my knowledge been denied), the question of guilt seems of little consequence in this conspiracy against innocent men, the furtherance of which is indicated by indictments found by a partisan grand jury. Upon this finding I have refused to return him, and I now refuse to honor. I regret the fact that the peace of your State is marred by bitter political strife. When partisan rascality leads to acts that endanger liberty and jeopardize life, it is time to remedy the cause by reforming the evil instead of persecuting the wronged. Of the law that has caused this strife in your State, while its passage was pending, the Louisville Courier said: 'The Goebel bill will never be enacted into a law. The Democrats of Kentucky have not sunk so low as that. There is a limit even to the fury of factional passion. There are bounds set upon the prosperous rapacity of sectional leadership.' It seems that this prophecy was not fulfilled and the 'limit even to the fury of factional passion' did not find its bounds in the 'prosperous rapacity of sectional leadership.' This bill thus denounced was enacted into law, and under its iniquitous provisions the people of Kentucky were deprived of their will expressed at the ballot box. A change of venue for the trials was granted, and that of Oak Grove, Frankfort, to Georgetown, July 9. Several of the principal witnesses for the prosecution were among those accused of having been in the plot—P. Wharton Golden, W. H. Culton, Robert Noahs. Their testimony was to the effect that the 'mountain men' that went to the capital were brought there at the instance of Powers and others; that they were to start a riot in the legislative chambers and kill Democrats enough to leave the Republicans in a majority; that this plan was given up, and that it was decided instead to have Mr. Goebel shot from the office of the Secretary of State. Powers admitted that he organized the mountaineers, but said that they were to open fire on the mountain men and that he had no desire to intimidate or to commit crime. On Aug. 18 a verdict of guilty was rendered against Powers, with the punishment fixed at im-
prisonment for life. The sentence was "hard labor for life." The jury was composed of 11 Democrats, 3 of whom were opposed to the Goebel faction, and 1 Republican. A motion for a new trial was overruled by Judge Castrull, Aug. 24. James Howard was tried in September. The prosecution endeavored to show that he fired the shot that killed Senator Goebel. The jury in the case reported, Sept. 23, that they were unable to reach a verdict. The judge sent them back for further deliberation, and the next day they gave a verdict finding him guilty and fixing the death penalty. It was explained that the jury were agreed at the first ballot on the verdict of guilty, the disagreement being on the question of punishment. There was 1 Republican on this jury and there were 11 Democrats, 2 of whom were of the anti-Goebel faction. Henry E. Youtsey's trial was called Oct. 2, but it was delayed somewhat by the illness and apparently demented condition of the defendant. Testimony was introduced by the defense to show that Golden had said he would get $25 for evidence, and that if he could the Col. Campbell he could get $10,000, and that Cutton had said he had a contract for immunity, and that Golden had "got them all into trouble because he wanted a part of the $100,000." Oct. 20 the jury brought in a verdict of guilty, fixing the punishment at imprisonment for life. The defense, however, moved for a new trial, and the second and day of the February term was set for the hearing.

Legislative Sessions.—The Legislature met for its regular session Jan. 2, and the final adjournment was taken March 13. An incident at the opening of the session is given as follows: "In response to the opening address by Mr. B. T. Foster. an excitement was caused by declaring that he had been approached by J. H. Whallen, of Louisville, an anti-Goebel leader, and paid 45,000 to remain out of the caucus. The money, he said, had been placed in a box with the Louisville Trust Company, the key to which he passed up to Senator Goebel, who was presiding over the caucus. Harrel concluded by declaring that he had entered into the deal for the purpose of exposing Whallen, and further that there was not money enough in the world to make him disloyal to his party and his State." The matter went to the grand jury. J. H. Whallen and C. H. Ryan were indicted for attempt at bribery. And afterward Harrel was indicted against Mr. Harrel for obtaining money on false pretenses. It was asserted that Harrel made the first advances, representing that he was possessed of evidence that would stop the contest, and would use it for the consideration named; and an agreement to that effect was exhibited, signed by the parties to the contract. Whallen declared there was no participation of Harrel's. Senator Goebel was elected president pro tem., of the Senate, and South Trimble Speaker of the House, by the vote of 58 Democrats against 42 Republicans.

The Governor submitted a message giving reasons for the repeal of the Goebel election law, which he called the "infamous law of 1898, that had demoralized, disturbed, and disgraced the State." He recited at length how many citizens he believed had been disfranchised, and declared that even after the ballots were cast there was injustice in counting the votes and in making the returns. He pointed out the great danger to the commonwealth of having a single vote in any one party to the exclusion of all other parties. The Governor recommended a new State Capitol, a stringent law against lynchings and all mob violence, prohibition of the use as well as the sale of cigarettes, and a separate prison for women.

Notices of contest for the offices of Governor and Lieutenant Governor were served in behalf of the Democratic candidates in the election of 1899. Nine grounds of contest were named in the notice, as follows:

1. Alleged use of tissue ballots in 40 counties.
3. Alleged unlawful issuance of mandatory injunctions by Judge Toney in Louisville on Election Day by which corporation officers were compelled to sign false returns.
4. Intimidation of railroad employees by chief officers of the Louisville and Nashville Railroad in several counties.
5. That the leaders of the Republican party corruptly entered into a conspiracy with the Louisville and Nashville Railroad, the American Book Trust, and other corporations and trusts, by which these corporations furnished large sums of money for the purpose of defeating the contestants.
6. Alleged unlawful issuance of mandatory injunctions in Knox and Lewis Counties, compelling county election boards to certify to false returns.
7. Alleged interference of United States marshals in the elections which was the result of a conspiracy between the marshals and the Republican leaders to intimidate the voters.
8. That before the meeting of State election commissioners, Dec. 4, the Louisville and Nashville Railroad, through its paid agent, John H. Whallen, entered into a conspiracy with the Republican leaders in the counties named, to pay the marshals as a large price of desperadoes to intimidate and overawe the election commissioners into giving the certificates of election to the Republican candidates; that Gov. Bradley had here for like purposes soldiers in citizen's clothing, etc.
9. That the Jefferson County election commissioners, Dec. 4, through threats of personal violence and incendiarism, inspired by the Louisville and Nashville Railroad, to sign returns which were not true.

The notice asserted that any one of these grounds was sufficient to change the result of the election.

S. C. Blackburn was the choice of the Democratic caucus as the successor of Senator Lindsey in the United States Senate. William O. Bradley was the nominee of the Republican members. Mr. Blackburn was elected by a vote of 79 to 54.

According to a law of 1898, committees to try the gubernatorial contests were chosen by lot. The Clerk of the House was accused of manipulating the names of those of Democrats in one end and drawing from that end or having them thus drawn. Ten of the eleven members of the committee on the contest for Governor and nine of the eleven on Lieutenant Governor were favorable to the Democratic contestants, according to the newspaper statements. "In the drawing over the formation of the legislative contested election committees the results were somewhat more evenly divided. In the case of the two senatorial contests the Republicans got only one member out of nine of each committee, but in the House they got majorities of ten out of eighteen committees to try contests." The former rules were amended so that the committees on the contest might be called upon to report at any time by the Committee on Rules.

After the assassination of Senator Goebel, Gov. Taylor issued the following address:
"To the People of Kentucky:

The most lamentable condition of affairs ever experienced by our people has rendered prompt action on the part of the chief executive of the State absolutely necessary. A long series of unprecedented and unlawful acts practiced by those in charge of the legislative interests of the State has culminated in the most fearful condition of the period to the State. The dreadful tragedy which occurred yesterday shocked and startled all, and can be no more sincerely deplored by any one than myself.

"To attempt to legislate under such conditions of excitement and threatened violence as now prevail in Frankfort would be sheer madness, and I have therefore, in the exercise of my constitutional powers, adjourned the Legislature to convene in London, Ky., on Feb. 6.

"I have taken every precaution to preserve the peace, that every citizen may know that life and property are safe and will be protected with every resource of the commonwealth. I trust that in this laudable effort I will have the support of every law-abiding citizen of Kentucky.

"W. S. TAYLOR, Governor of Kentucky."

The First and Second Regiments of militia were called to Frankfort. They guarded the Capitol, preventing legislators and others from entering, and were stationed about other buildings. The Democrats all kept their seats and fled to London, being refused admittance to the Capitol. They went to the opera house with no better success, and to the courthouse; prevented from entering there, they went to the Capitol Hotel, but were told that "any meeting they might attempt to hold in the building would be suppressed, all taking part in it would be arrested, and the hotel occupied by soldiers."

As soon as Gov. Goebel was declared, he ordered the militia to disperse and return to their homes, and also issued an order dismissing Adjutant-General Collier and appointing John B. Castleman in his place.

The Republican members met in London. B. J. Bethurem was their Speaker. In regard to the compromise proposed at Louisville, they sent the following dispatch to Gov. Taylor: "Make no compromise of our rights under the Constitution and the laws. We represent the people of this commonwealth for a free election and a fair count. An attempt on the part of any man or set of men to set aside the result of the last election by force, fraud, or vicious legislation without the consent of the people is treason. We therefore pledge you our support and lives if you will but stand by the election returns as counted by the electoral commission. All members agree to this."

The Democratic members afterward met in Louisville. Gov. Taylor judged the capital to be safe from the threatened insurrection, and adjourned the Legislature to the Statehouse. The Democratic members adjourned to meet there, Feb. 19. The contest for the gubernatorial offices being still before the courts, Lieut.-Gov. Marshall claimed to be the presiding officer of the Senate by virtue of his office, while the Democrats had chosen Senator Carter president pro temp., and acknowledged him as presiding officer. The two sections of the Senate, therefore, held each to its own organization, and continued to do so until the final adjournment. They met each day in the chamber, and the two claimants to the chair sat side by side, while the Democrats had no quorum to order. The Republicans, having no quorum, simply answered to the call and then adjourned from day to day. The proceedings in the double Senate, Feb. 19, are described in a dispatch of that date:

"Senator Carter directed the clerk to read the journal, while Mr. Marshall directed Rev. Dr. Dorsie of the Christian church to pray. Dr. Dorsie was quicker than the clerk and he began his prayer before the clerk had a chance to read.

"It is the custom in the Kentucky Legislature for the members to rise when prayer is being offered. The Democrats all kept their seats and Senator Carter sat down while the Republicans all stood up. The moment Dr. Dorsie had finished, the clerk was at it and the Lieutenant Governor was asking if there was any business before the Senate."

During the session in Louisville a resolution was passed in the House, by a vote of 45 to 8, to invite "the ministers of the city of Louisville of every denomination who had not engaged in the unjust and unholy crusade against the late Gov. Goebel, to open the proceedings each day with prayer."

After the proceedings in the Senate on the opening day the pastors of the two Presbyterian, the Christian, the Catholic, and the Episcopal churches sent in the following communication:

"To the Legislature of the State of Kentucky:

"The pastors of the churches of the city of Frankfort having been invited by your honorable body to open the sessions with prayer, and one of our number having had his services ignored when he presented himself in regular course at to-day's sessions, we must hereby respectfully decline to longer officiate as chaplains."

Upon this the following resolution was adopted:

"Whereas, no such indignity as that mentioned was ever intended to any of said ministers; and whereas, no such indignity was ever commited so far as known to any member of this body; now be it resolved by the Senate of Kentucky, that this body regrets that any minister of the Gospel feels that he had been so treated by this body; and be it further resolved, that Rev. E. Taliferro, of Frankfort, be, and he is hereby, invited to attend and open the sessions of the Senate with prayer."

A joint session was held Feb. 20 to ratify the proceedings of the Democratic members in regard to the gubernatorial contests. The Republican members did not attend. The resolution of ratification was passed by a vote of 74 to 2.

Among the measures of the session was the so-called "MeChord" railroad bill, authorizing the Railroad Commission to fix the maximum of freight rates, and to punish for discrimination and extortion. It has been declared unconstitutional by the United States district court.

Another act provided that the Board of Prisons Commissioners may parole convicts in the Penitentiary for the first time. Paroled prisoners are not required to remain in the State, but if they do so they are required to report their place of residence and conduct to the Board of Prison Commissioners through the county judge at least every six months.

A resolution was passed appropriating $100,000 for reorganizing and equipping the militia and recovering the arms and munitions of war supposed to have been taken from the arsenal and carried to London. The money was to be expended under the direction of Gov. Beckham, and no other resolution was for the appointment of a joint committee to consider amendments to the election law, and report to an extraordinary session, if such should be called.
An appropriation of $800,000 was made for improvements at the Agricultural and Mechanical College.

Among other measures were:
Making it a felony for corporations to contribute to campaign funds.

To prevent the adulteration of food.
Allowing the establishment of free libraries in cities of the second class.
Allowing the pensioning of indigent firemen in cities.

Prohibiting railroad companies from transporting persons having the intention of intimidating State officers in the discharge of their duties. Congress passed a bill providing a reward of $100,000 for the apprehension and conviction of the assassin of Gov. Goebel, and providing for a commission to have charge of it.

Gov. Beckham called an extraordinary session of the Legislature to meet Aug. 28. The only subject named for consideration was the modification or amendment of the existing laws regulating elections in this State." In his message the Governor said:

"I consider that some changes in our election laws at the present time would be productive of much good and would remove some of the unfortunate bitterness and dissatisfaction that now exist among people. The present laws on the subject are undoubtedly distasteful to a large number of people in the State, and their amendment is earnestly desired by all those who want to relieve as much as possible the friction and ill feeling engendered by hostile political factions. I do not believe the present law in its operation to heretofore have been unfair or unjust. I know it has in all cases been passed with the earnest and honest intention to remedy the evils which existed under the system which it supplanted. It was a great improvement upon that system, but by reason of a strong prejudice against it many people have been led to believe that the change was a mistake and the law a bad one. This prejudice against it, whether reasonable or not, is sufficient to justify your consideration and warrant you to take some action in securing a more satisfactory law."

Various election bills were offered, but none was passed until Oct. 29, when one reported by a conference committee was made a law by vote of a bare majority, and was signed by the Governor, Oct. 29. It provides for a State board of twelve election commissioners appointed by the Governor, one from each of the two parties that polled the largest number of votes at the last preceding election, the appointments to be made in July. The clerk of the Court of Appeals is to be a third member, to preside at the meetings and give the casting vote when the others disagree. This State board in August is to appoint two commissioners to constitute an election board in each county, with the sheriff of the county to preside and vote in cases of disagreement; the two commissioners are to be one from each party. The county board is to appoint, not later than Sept. 20, the precinct officers, likewise equally divided.

"When the election of a Governor or Lieutenant Governor is contested, a board for determining the contest shall be formed in the manner following: 1. On the third day after the organization of the General Assembly which meets next after the election of the Senate shall select, by lot, three of its members, and three members of the House of Representatives shall select, by lot, eight of its members, and the eleven so selected shall constitute a board, seven of whom shall have power to act. 2. In making the selection, by lot, the name of each member present shall be written on a separate piece of paper, every such piece being as nearly similar to the other as may be. Each piece shall be rolled up, so that the names thereon can not be seen, nor any particular piece ascertained or selected by feeling. The whole, so prepared, shall be placed by the clerk in a box on his table, and after it has been well shaken the box shall be opened, the internixed the clerk shall draw out one paper, which shall be opened and read aloud by the presiding officer, and so on until the required number is obtained. No decision shall be made but by the vote of six members. The decision of the board shall not be final or conclusive. Such decision shall be reported to the General Assembly in joint session for the further action of the General Assembly, over which the Speaker of the House shall preside, and the General Assembly shall then determine such contest. In cases of contests for minor offices, where there is no provision by law for determining the contest, the decision shall be made by the filing of a petition in the circuit court of the county where the contestee resides, except where the officer is one elective by the voters of the whole State, in which event the petition shall be filed in the Franklin circuit court. Either party may appeal from the judgment of the circuit court to the Court of Appeals. This law did not go into operation before the election of 1900, since the appointments must be made in July, August, and September.

The session adjourned Oct. 22.

Political.—An election to fill the office of Governor, made vacant by the death of William Goebel, was held at the time of the presidential election. I knew if I regained the confidence of the State in May 17 to choose delegates to the national convention and electors. The delegates—W. S. Taylor, W. O. Bradley, George Denny, and W. A. Gaines—were instructed to vote for William McKinley. On State issues the platform said:

"We demand the unconditional repeal of the existing election law, under the operation of which individual citizens have been denied the right to vote and whole counties have been deliberately disfranchised, by authority of which certificates of election have been issued to men defeated at the polls, and as a disastrous result of which the government of the State has become involved in hopeless confusion and chaos. We demand the prompt appointment of a constitutional convention in place of the existing election law that shall absolutely secure to every voter the free exercise of the right of suffrage and that shall guarantee the restoration and permanence of government by the people.

"We denounce the course of the Democratic majority in the last General Assembly from the hour when it adopted rules in defiance of law and the Constitution, down to the final action by which it attempted to deprive Gov. Taylor and Lieut.-Gov. Marshall of the high offices to which they had been elected at the polls."

At the convention, July 17, John W. Yerkes was nominated for Governor. The resolutions said, in part: "Officials elected by the people at the polls have been denied their offices, and the people of Kentucky deprived of the right of choosing their State officials. Republican members of the Legislature were unlawfully unseated, the city of Louisville deprived of the right to any part in the conduct of the government, the counties of John Appleman, Mark McCall, and others deprived of the voice in the choice of our officers, and the courts declare that the only remedy for such invasions of personal liberty rests with the people at the polls. We demand for each child a free school, but we deny that education or accumulated prop-
KOREA, or CHO-SEN ("Morning Radiance"), a country in eastern continental Asia, between Japan and China and adjacent to Russian, British, and German possessions. It consists of two parts: Korea proper, the mainland, and the islands of the southern coast. The islands were formerly called Chosen; Korea proper, Hwang-ling or Manchuria. They are separated by the Amur river, which forms the boundary between Russia and Manchuria. Korea is entered by the Yalu river, which marks the boundary between Manchuria and China. Korea proper is divided into Chosen, Manchuria, and the southern coast.

The government of Korea is a constitutional monarchy. The king is the head of the state, and the executive is exercised by a council of ministers. The legislature consists of a national and a provincial assembly. The national assembly is elected by the people, and the provincial assembly is elected by the provincial councils. The king has the power to appoint and dismiss the ministers, but he must consult with the council of ministers before taking any important measure. The king has also the power to make treaties, but he must obtain the consent of the national assembly. The court system consists of a supreme court, a high court, and a district court. The supreme court is the highest court in the land, and the high court is the intermediate court. The district court is the lowest court in the land.

The economy of Korea is based on agriculture. The chief crops are rice, wheat, and tobacco. The chief industries are cotton, silk, and wool. The chief exports are coal, iron, and copper. The chief imports are cotton, silk, and wool. The currency is the won, which is divided into 100 ch'ing. The government of Korea is a constitutional monarchy. The export of Japanese goods, cotton in particular, has increased greatly since the railway of the Ping-Yang inlets was completed; and Wonsen, in the northeast, on Broughton’s Bay. Since 1850 foreigners, mostly nontrading, have lived in Seoul. Two new ports were opened in 1895—Mokpo, in the southwest of Chulla province, halfway between Shanghai and Nagasaki, a growing place with a good harbor, and Chinnampo, on the northern shore of the Ping-Yang inlet. Since May 1, 1899, 4 new ports have been opened—Kunsan, on the west coast, south of Chemulpo; Masampo, on the southeast, near Fusun; Sungchin, on the east coast; and the city of Ping-Yang, in the north, as a trade mart. Of 20 lots of land sold at Kunsan in April, 1900, 17 were purchased by Japanese, and 3 by others. The Masampo concession consists of 83 acres of level land, 300 acres of hill land, and 25 acres of foreshore. The plot acquired by Russia at Chupok-po, near Masampo, measures 83 acres.

There are about 20,000 Japanese in Korea, of whom 4,258 live at Chemulpo, 1,570 in Seoul, 381 in Chinnampo, 1,805 in Masampo, and 49,200 live in families, the number of women being about two thirds as great as of the men. A majority live at Fusan. While Japanese subjects in China have full treaty rights with the most favored nation, in Korea the Chinese can not do stationary trade outside the treaty ports. The commercial relations of American traders with Korea are so trifling.

Trade.—Although the gold export in 1899 was 557,567 yen, yet general trade declined to the extent of 13 per cent., in comparison with the figures of the previous year, or more than 2,627,568 yen. The chief factor affecting both export and import trade is rice, the value of the exports of which in 1896 and 1897 was 381,863 yen, but in 1898, in spite of the good crop of 1899. Japan is Korea’s only consumer of rice. At Chemulpo the Koreans have formed a Chamber of Commerce to protect themselves against Japanese and Chinese.

Japan’s ascendency is limited to yarns and cotton fabrics. In 1898 the Japanese imports reached 4,390,000 yen, while the Chinese imports reached a total of 4,390,000 yen and the exports 1,907,000 yen. In exports the trade for 1899, compared with 1898, declined to the extent of 711,640 yen on account of the decrease in value of the gingsee exported. The crop of 1899, a Government monopoly, yielded 1,907,000 yen. The chief imports were English and Japanese shirtings, lawns, muslins, and other goods, the former worth 80,000 yen and the latter 190,000,000 yen, besides metals, grass clothes, millet, railway plant machinery, and building materials. Japanese yarn showed an increase of 470,000 yen, American petroleum 150,000 yen, and mining supplies 170,000 yen. While the Chinese control the export trade, the Japanese apparently knowing how to deal with the Koreans better than the Chinese, and, with their manufacturing centers so close at hand, excelling the English in most of the textile articles, and especially in the importation of yarn, which in 1899 fell from 1,465,360 yen, as compared with 907,460 yen in 1898, nearly 60 per cent. lower than in the same year, the Japanese yarn being so much lower in price. The imports of cotton goods for 1899 form more than half the total imports of the country. The imports that are growing in favor with Koreans are candles, window glass, and sewing machines. In shipping, foreign trade shows an excess of 502 steamers and an increased tonnage of 159,129 tons in 1899, compared with the previous year. Of 1,066 steamers, with an aggregate tonnage of 492,227 tons were Japanese, 4 vessels, of 3,341 tons, were German, 61 vessels, with 51,863 tons, were Russian, and the remainder Korean. The German vessels were under charter to the Japanese.

Mining and Foreign Interests.—The mineral wealth is apparently the greatest among Korea’s resources; and, although there is doubt of the known figures of export of this metal, 278,825 yen in 1900, are far below the reality. The British syndicate controls the Usan gold mines, which employ about 500 men, mostly natives. The American gold mines are near Wonsen. The gold-bearing strata, similar in their nature to the Witwatersrand in South Africa, are in a secondary deposit lying to a great distance from the Wonsen mine, near Ping-Yang, 20 American crushing mills are in operation, with more on their way. Mr. Leighunt, the concessionaire, employs 1 physician, 20 foreigners, 11 Japanese, and 400 Koreans. The Korean Government receives one fourth of the net profits. At Tallow, in the same mine, a concession has been granted to four American, 4 Japanese, 20 Chinese, and 300 Koreans.

While in the previous year the population of Japan was 83,200,000, of whom 17,000,000 were in the form of 38,000 villages, there were 38,000 families, averaging 490 persons, 9,350 of whom are above 60 years of age. The average age of the people is 25 years.

Finance.—The average income of a Korean family is 80,50 a month. The income of the Governor for 1900 was 6,162,796 yen, and the expenditure 6,161,871 yen. The income is from the customs, land tax, household tax, the sale of gin, ginseng, licenses, and concessions, and, when properly managed, is placed into the treasury, and spent for all purposes. In 1898 the export duty was reduced to 40,000,000 yen borrowed from Russia, 5,000,000 yen have been paid. Korea has adopted the gold standard, but coins as yet only nickel and copper. The Japanese currency is used in customs duties and largely at the seaports, the only Korean coin being the small Japanese cent, about the size of 1 sen pieces. Besides cash or perforated coins of iron and brass on strings. This cash weighs 7 pounds to the dollar’s worth, and suffers from 5 to 30 per cent. discount against the Japanese gold.
yaln, which is the real currency of the country in foreign trade. The rate of discount, varying suddenly and with a wide margin, makes business at times largely speculative.

Politics and Events.—The year was measurably free from the usual riots and outbreaks of native peasants against their oppressive yang-ban and magistrates, or against Japanese traders and workmen, though another attempt was made with violence to wreck the electric railway and hinder Japanese railway laborers. The palace intrigues and envoys have also been fewer than usual. A reversion to barbarism, in the judicial torture and execution of two Koreans, was made the subject of protest from and negotiation with Japan, and the affair was closed after an apology from his Majesty given through the Mikado’s envoy in audience. During the Summer agitations in China there was danger of irritations across the border at Wi-ju. A Russian escort of 50 soldiers to the refugee Danish missionaries from China was given free passage, and Korea virtually joined the allies marching to Peking, giving aid and comfort in the form of 1,000 bags of clean rice, 2,000 bags of flour, and several hundred cases of eiga. Nevertheless, the formation of a Korean secret society in alliance with the Chinese anti-foreign agitators was accompanied by assaults, with robbery of missionaries, in November. Prince Min-Tong-Whan was appointed minister to Washington, and arrived in time for the New Year’s reception at the White House. In October a new branch of the Asiatic Society was formed in Seoul. J. H. Gubbins was made president, and the membership consisted mainly of English-speaking residents. The year has been one of great activity and marked success in missionary effort. There are now, besides the native Christians of the Greek and Roman forms of the faith, about 10,000 members of the various reformed churches. This made a total of 7,133 libraries (of 300 volumes and over) and 34,560,538 volumes, compared with 5,338 libraries and 20,722,393 volumes in 1885, and 3,648 libraries and 12,329,526 volumes in 1875.

Two libraries had 500,000 volumes or more; 4 had 300,000 to 499,999; 28 had 100,000 to 299,999; 60 had 50,000 to 49,999; 153 had 25,000 to 49,999; 411 had 10,000 to 24,999; 630 had 5,000 to 9,999; and 2,727 had 1,000 to 4,999.

Of books drawn for home use, 1,852 libraries reported 35,075,055 in 1896, and 594 reported 7,706,830 volumes used in the reading rooms. The statistics of Greater New York for 1897–98 show a total of 3,220,807 volumes circulated in that year.

Under the heading Distribution of Libraries and of Volumes, it is shown that in 1891, with 3,503 libraries containing 25,977,643 volumes, there was one library for every 17,877 people, and 41 volumes for every 100 inhabitants in the country. For 1890 the figures were: 4,026 libraries with 33,051,872 volumes, being 17,372 inhabitants for each library and 47 volumes for every 100 inhabitants. The libraries that occupied their own buildings numbered 765, and 548 paid rent. Of the 2,713 others, many were school libraries, which neither owned buildings nor paid rent. The libraries supported by taxation numbered 1,147; by churches, 771; by corporations, 316; by benevolent associations, 659. The libraries reported numbered 1,558; 635 were for reference only, and 772 were free to subscribers. Of the 1,061 not reporting, many were corporation libraries free to members. Six hundred and twenty-seven libraries, containing 9,062,363 volumes, and circulating 27,015,234 volumes for home use during the year, were entirely free to the public. Three hundred and forty-two libraries were strictly circulating, 765 were for reference, and 2,600 were both.

The 4,026 libraries were classified as follows:

- General, 1,560; school, 940; college, 620; college society, 54; law, 127; theological, 97; medical, 44; Government, 23; State, 20; asylum and reformatory, 87; Young Men’s Christian Associa-
tion, 84; Masonic, 14; Odd Fellows, 17; social, 57; scientific, 78; historical, 60; garrison, 14; mercantile, 10; and society, 108.

As to finances: 600 libraries reported a total of $1,679,210 received from taxation, and $1,153,352 was appropriated to 775 libraries by States, counties, and cities in the year. Five hundred and ninety-four libraries received $1,035,032 from endowment funds; 833 received $386,441 from membership fees; 303 received $338,654 from book rentals; 625 received $529,550 from donations; 1,017 received $729,547 from sources not stated. The total income reported by 2,437 libraries for the year ending April 1, 1896, was $3,911,630. The permanent endowment funds of 605 libraries aggregated $17,570,673. The value of the buildings owned by 507 libraries was $33,291,259. The value of the books added during the year by 2,333 libraries was $1,574,410.

State Aid and Special Legislation.—A review of the whole subject, with a bibliography, is given in the Report of the Commissioner of Education for 1895, accompanied by the full text of all the laws. This work has been furthered greatly by the creation of library commissions in various States.

The first State library commission was organized in 1890 by Massachusetts, followed by New Hampshire in 1891, Connecticut in 1893, Vermont and Wisconsin in 1895, Ohio in 1896, New York and Georgia in 1897, Pennsylvania, Michigan, Minnesota, Indiana, Kansas, Colorado, and Maine in 1899, and New Jersey and Iowa in 1900.

Buildings.—Among the larger library buildings erected within the last decade are the Library of Congress, which cost $6,300,000; Boston Public Library, $2,300,000; Chicago Public Library, $2,000,000; Columbia University, $1,200,000; Carnegie Library, Pittsburg, about $800,000 (the building comprises library, music hall, art gallery, and museum); Princeton University, $650,000; Milwaukee Public Library, about $800,000; Wisconsin Historical Society, about $600,000; Newberry Library, Chicago, $500,000; Providence Public Library, $300,000; and Library of Carleton College, Northfield, Minn., $250,000. Many libraries costing from $50,000 to $200,000 have been built, among them the Kansas City Public Library, $500,000 (site $30,000 additional); Pratt Institute Library, Brooklyn, $190,000; Library of the University of Illinois, about $165,000; Forbes Library, Northampton, Mass., $134,529; Carnegie Library, Atlanta, Ga., $115,000; Orrington Lunt Library, Northwestern University, $100,000; Peoria, Ill., Public Library, about $70,000 (site $10,000 additional); and Hoboken, N. J., Public Library, $62,000.

Many of these buildings are due to private beneficence. It is said that, as far as the incomplete statistics show, more than $24,000,000 have been bestowed by individuals for buildings, books, and maintenance, in the past ten years of the nineteenth century; and there was also a generous expenditure of public money in the same period. The yearly proceedings of the American Library Association include a full report on gifts and bequests.

Management.—Open Shelves.—A matter that has been much discussed is that of "free access"—that is, the free admission of the public to the shelves, as in the New York Free Circulating Library. Yet this question still awaits solution, for the arguments appear to be about equal, pro and con. Most librarians evidently agree in believing that a certain number of books, at least, should be freely accessible to the public. Many libraries have "open reference shelves"—in the new building of the New York Public Library, for instance, arrangements have been made for 40,000 volumes thus placed. In such large reference libraries, of 500,000 and more volumes, it is impracticable to allow unlimited access.

Cataloging.—Co-operative cataloguing was referred to hopefully in 1893, but the expectations of its warmest adherents have hardly been realized, although the publishing section of the American Library Association continues to issue printed catalogue cards for new books. However, the Annual Literary Index (continuing both Poole's Index to Periodical Literature and the A. L. A. Index to General Literature, 1893) is issued regularly, and in Cleveland the Cumulative Index to periodicals began to appear in 1896. Some scientific periodicals are indexed by the co-operative effort of five libraries—the New York Public, Harvard University, Columbia University, Boston Public, and John Crerar (of Chicago), the index entries being printed on cards of standard size.
Much of the work published, like the last named, under the auspices of the American Library Association, is the product of co-operative effort.

Among the special indexes due to the effort of individual libraries must be mentioned that of technical periodicals in the Patent Office Library in Washington, and the one for trade journals in the Commercial Museums in Philadelphia; both are in manuscript, on cards.

Librarians are, naturally, greatly interested in the international conferences on a co-operative catalogue of scientific literature, held in response to a call from the Royal Society of London, the first in 1896, the second in 1898, the third in 1900. This catalogue, which begins with 1801, is to comprise all published original contributions to mathematical, physical, or natural sciences, to the exclusion of what are sometimes called the applied sciences, whether appearing in periodicals or in the publications of societies, or as independent pamphlets, memoirs, or books. It is to be arranged according to subject matter and author's names, with a special index for names, and will be published in series by annual, biennial, or triennial issues. The management is intrusted to a central bureau established in London and regional bureaus in various countries, to which latter falls the work of dealing each with the literature of its country. Future international conventions (1905, 1910, and every tenth year thereafter) will make any necessary revision of the regulations.

Interlibrary Loans.—These are becoming more frequent, especially between reference libraries as a means of partially overcoming the distances between centers of reference, they are naturally of great value to the investigator.

This system of sending books on request from one library to another is in vogue at the library of the surgeon general's office (on a noteworthy scale, introduced there by Dr. John S. Billings), the Worces-
ter (Mass.) Library, the medical libraries of Boston, (New York city), etc., the Academy of Medicine, the Congressional Library, etc.

Circulating Libraries.—The preponderance of the free circulating library in this country has naturally caused much energy to be applied to the improving and simplifying of methods, especially in all that pertains to the keeping of records, as in the charging systems. What is known as the "two-book system" has been introduced in many libraries. This permits the reader to draw two books at a time for home use, but only one of the books may be a work of fiction.

Traveling Libraries bring books where the circulating library does not. This system was charac-
terized by R. G. Thwaites, president of the American Library Association in 1900, as "in some re-
spects, perhaps, the most hopeful of all forms of recent library popularization." It provides for small libraries of 25, 50, or 100 volumes, sent from central libraries to "individuals, clubs, and associate libraries in communities roundabout," for certain periods (usually six months), upon request and under certain conditions. The traveling library was first introduced in 1892 in New York State, but before that time the Baltimore and Ohio Railroad Company was circulating books to its employees along its line. Since then various systems of traveling libraries have been established, as follows: 1895, Iowa and Michigan; 1896, Colorado, Illinois, Kentucky, Massa-
chu setts, Nebraska, Ohio, Pennsylvania, Virginia, Wisconsin, and West Virginia; 1897, Louisiana, New Jersey, and Tennessee; 1898, Alabama, California, Connecticut, Georgia, Kansas, Maryland, Minnesota, Missouri, Utah, and Washington; 1899, Idaho, Indiana, Maine, Montana, Texas, Vermont, and British Columbia; 1900, Arizona.

In 1893 the first traveling library went out in New York with 100 volumes. In 1898 it was reported that there were more than 1,650 in the country, of which 687 were in New York, with more than 73,000 volumes. Some specialties had already developed, as at the New Jersey Traveling Library at Princeton, which circulated books on forestry only.

The introduction of small collections of selected books directly into the homes of tenement-house residents has also been tried with encouraging results.

Libraries and Schools.—Another recent development in the manifold activity of the American public library is its co-operation with the schools, which, beginning at Worcester, Mass., about twenty-five years ago, has only within the past few years become generally recognized as a department of library work. Boxes of books for instruction and entertainment, selected by the teachers, are sent to the schools—sometimes classified by grades; and traveling school libraries, to assist in certain courses of study, are not at all uncommon. Other methods of reaching the school children—posting bulletins and lists in schools, the organization of "library leagues," among pupils, etc.—serve to accentuate the community of interests between school and library. The latest manifestation of this spirit was seen in the year 1900 in New York city, where the Board of Education made arrangements for establishing small libraries in some of the
school buildings, to be open evenings, under the supervision of the New York Public Library. The children's room is a growing factor in our libraries. New methods — picture exhibitions, short talks, attractive surroundings, even games — are used to draw the little ones to the library at an impressionable age.

The Bureau of Education for the past thirty years has emphasized the importance of libraries as aids to instruction, and in 1896 we saw the establishment of the Library Department of the National Educational Association.

Librarians.—Schools and Training Classes.—In the Annual for 1893 a list of those was given. Since then summer courses have been offered at the Cleveland Public Library, the Ohio State University, and the University of Wisconsin; the Armour Institute Library School was removed to the University of Illinois in 1897, and elementary classes for training assistants have been put into operation in the public libraries of New York city, Denver, Hartford, Dayton, and Butte (Montana), the New York Free Circulating Library, etc.

The report for 1900 of the committee of the American Library Association on schools sounds a warning against giving undue importance to these various schools and training classes, and points out the one-sided education that the pupils are apt to acquire. While the question of the relative merit of school training and practical service in a librarian's equipment is touched upon in this report, sight is not lost of the unquestionable service that these schools have done in systematizing the details of certain work, especially cataloguing. Perhaps those libraries which maintain preparatory classes for prospective assistants, in which theory and practice are mingled, are doing their share in working out this problem.

Associations and Clubs.—These, which do so much for the extension and fuller citizenship of library interest, have also been increasing. A National Association of State Librarians has been formed. State associations have been organized since 1893 in Vermont (1894), Ohio and Nebraska (1895), Illinois (1896), Georgia (1897), and California (1898). The California was formerly the Central California (formed in 1895), and other such "sectional associations" were organized in southern California (1891), north Wisconsin (traveling libraries), and western Pennsylvania (1896), and Fox River valley (Wisconsin), Bay Path (Massachusetts), and western Massachusetts (1898). City clubs have been formed in the past seven years in Washington, D. C. (1884), Minneapolis and St. Paul (Hennepin Library Club, 1897), and Buffalo, N. Y. (1895).

The American Library Association followed up its exhibit at Chicago (1893) by another one at the Paris Exposition of 1900. This association has added to its useful special sections those for small libraries, large libraries, and State and law libraries. Among the new publications issued under the auspicies of its publishing section is a List of Subject Headings for Use in Dictionary Catalogues (1895). Here may be noted also the exceedingly useful Catalogue of the "A. L. A." Library of 5,000 volumes for a Popular Library, selected by the American Library Association and shown at the World's Columbian Exposition, published by the Bureau of Education in 1893, and introduced as "a carefully selected list of books adapted to the needs of a small public library and suitable as a basis for a larger collection."

A review of the whole subject of library economy is offered in Public Libraries in America (Boston, 1894) by W. L. Fletcher, Librarian of Amherst College. And the index to the first twenty-one volumes of the Library Journal is a key to a portable storehouse of information on special topics.

Foreign Libraries.—The foregoing applies, as is seen, to the United States only. The Second International Conference of 1897 at London (the first was in 1877), in which not a few Americans participated, brings us to the foreign field.

Free public libraries, as we understand them in the United States, exist only sporadically on the Continent in Europe. Gräsel, in the Börsenblatt for Dec. 5, 1888, made a plea for their establish- ment in smaller cities and provinces of Prussia, the local authorities and educational associations are pointed libraries with great energy. To the Gesch- achat für Verbreitung von Volksbildung (head- quarters in Berlin) is due the credit of having given the impulse to work this and practically furthering it. From 1892 to 1899 this society provided and aided 1,103 libraries, and in 1900 (November) it founded and aided 438 libraries, ex- pending $7,000 for this purpose. The libraries are administered partly by reading, library, and other educational associations, and partly by teachers, ministers, school boards, etc. Unfortunately, the
society has not the means for undertaking this work on a larger scale and satisfying requests.

It is noted also that the late Mr. Oswald Ottendorfer founded in Zwickau, Austria, in 1891, a free public library on the plan of the New York Free Circulating Library’s branches.

Dzatetzko, writing on German libraries, says that the Prussian Ministry of Education in 1892 took a step toward greater uniformity by issuing Rules for the Construction of the Alphabetical Catalogue. There is increasing liberality in library regulations, making the collections more accessible. As the libraries are usually intended for scholars (all this, of course, refers to university libraries and the like) the conditions for entrance are quite severe. The act in England requiring for trained library service was published in the Centralblatt für Bibliothekwesen (vol. i, 1884); Rivista delle Biblioteche (vol. i, 1888); Revue des Bibliothèques (vol. i, 1891); The Library (vol. i, 1891); The Organ of Library Association of the United Kingdom; Revue internationale des Archives, des Bibliothèques, et des Musées (first year 1897).

LOUISIANA, a Southern State, admitted to the Union April 30, 1812; area, 48,720 square miles. The population, according to each decennial census since admission, was 939,946 in 1830; 352,411 in 1840; 517,726 in 1850; 708,002 in 1860; 726,915 in 1870; 939,946 in 1880; 1,118,287 in 1890; and 1,381,627 in 1900. Capital, Baton Rouge.

Government.—The following were the State officers this year until May, when the newly elected administration came in: Governor, Murphy J. Foster; Lieutenant Governor, R. H. Snyder; Secretary of State, W. T. Michel; Treasurer, A. V. Fournette; Auditor, W. W. Heard; Attorney-General, M. J. Cunningham; Superintendent of Education, J. V. Calhoun; Adjutant General, Allen Jumel; Commissioner of Agriculture, Leon Justremski; Commissioner of Insurance, J. J. McCann; Bank Examiner, F. G. Frenet; Railroad Commission, C. D. DeFonse; R. N. Sims; W. J. Foster. The Secretary of State and the Superintendent of Education were re-elected. The other State officers for the remainder of the year were: Governor, W. W. Heard; Lieutenant Governor, Albert Estopinal; Attorney-General, Walter Guion; Treasurer, Ledoux E. Smith; Auditor, W. S. Frazer; Register of Office, J. M. Smith; President of the Board of Control of the Penitentiary, C. Harrison Parker; President of the State Pension Board, J. A. Chalaron; Quaranine Physician, J. N. Thomas; Commissioner of Agriculture and Immigration, Jordan G. Lee; Jury Commissioners, J. R. Todd, L. H. Joseph, E. S. Maunsell. All the State officers are Democrats. Chief Justice of the Supreme Court, Francis T. Nicholls; Associate Justices, Newton C. Blanchard, Lynn B. Watkins, Joseph A. Breaux, Frank A. Monroe; Clerk, T. M. C. Hyman—all Democrats.

The term of the State officers is four years. They are elected in April of the years of presidential elections. The Legislature meets biennially in May of the even-numbered years; the session is limited to sixty days.

Population.—The population by parishes, according to the census of 1900, was as follows:
Acadia, 23,483; Ascension, 24,142; Assumption, 21,620; Avoyelles, 29,701; Bienville, 17,588; Bossier, 24,153; Caddo, 44,499; Calcasieu, 30,425; Caldwell, 6,917; Cameron, 3,952; Catahoula, 16,351; Claiborne, 23,029; Concordia, 13,559; De Soto, 25,063; East Baton Rouge, 31,153; East Carroll, 11,373; East Feliciana, 8,890; Grant, 12,902; Iberia, 29,015; Iberville, 27,006; Jackson, 9,119; Jefferson, 15,321; Lafayette, 22,825; Lafourche, 28,882; Lincoln, 15,808; Livingston, 8,100; Madison, 12,322; Morehouse, 16,634; Natchitoches, 32,315; Orleans, 28,951; Ouachita, 20,947; Plaquemines, 13,033; Pointe Coupee, 25,777; Rapides, 39,578; Red River, 11,348; Richland, 11,276; Sabine, 15,421; St. Bernard, 5,031; St. Charles, 9,072; St. James, 20,197; St. John the Baptist, 12,339; St. Landry, 9,206; St. Martin, 18,940; St. Mary, 34,145; St. Tammany, 13,335; Tangipahoa, 17,623; Tensas, 19,070; Terrebonne, 24,464; Union, 18,520; Vermilion, 29,705; Vernon, 10,327; Washington, 9,628; Webster, 15,125; West Baton Rouge, 10,285; West Carroll, 3,655; West Feliciana, 15,944; Winn, 9,648.

New Orleans has 287,104 inhabitants; in 1890 it had 242,630. Shreveport has 16,013; Baton Rouge, 11,269; New Iberia, 6,515; Lake Charles, 6,680; Monroe, 5,425; Alexandria, 4,760; Crowley, 4,214; Donaldsonville, 4,105; Plaquemine, 3,590; Lafayette, 3,314; Thibodaux, 2,553; Houma, 3,212; Opelousas, 2,951; Franklin, 2,602; Natchitoches, 2,888; Morgan City, 2,392; Jackson, 2,012.

Fines.—From a statement of the Auditor it appears that from April 1, 1894, to April 1, 1900, State obligations to the amount of $2,649,104 have been retired at a cost of $1,393,382, some of the bonds having been retired before maturity. The Governor said in his message in May: “The 4-per-cent. bonds command a premium of 9 to 10 per cent., while the bonds of the various levee boards, which, a few years ago, were very difficult to place, are likewise above par. Not a dollar of the floating indebtedness created since 1890 is left outstanding, and all transactions, both of State and district boards, are absolutely upon a cash basis.”

The total revenues derived from all privilege tax turned in by the sheriffs is $329,157.62, against $307,517.00 in 1899. The privilege license fees paid direct to the State treasury are not embraced in this statement, and will amount to about $70,000. The privilege tax report gives also the State revenue from saloons. There are now 13 counties that license the liquor business. Taxes amounting to $131,100 were paid by the 146 liquor saloons. The municipalities are empowered to levy a tax on dram shops not to exceed 30 per cent. of the amount collected by the State, and in some of the towns and cities the maximum penalty is denounced against them.

Valuations.—The total assessment of the State is $276,565,507, an increase in one year of $8,845,004. Following are valuations reported in December by the State Board of Appraisers: Railroads, $24,865,273; telegraphs, $336,334; telephones, $774,210; sleeping cars, $96,752; express companies, $42,010; aggregate, $26,137,481.

Charities and Correction. The number of inmates in the State Asylum for the Insane, at Jackson, this year was 1,105, with a total under treatment of 1,653.

There were 140 at the Soldiers’ Home, which has an income of about $18,000. On the roll of pensioners were 240, with 248 applications under consideration. With the $50,000 available, the board was able to give $23,700, which was divided into three grades—$4,50, $3,50, and $2,50. The Institute for the Blind graduated a class of 5 in May. Its appropriation in 1899 was $10,000.

Appropriations for the year to other charitable institutions were: Institute for the Deaf and Dumb, $18,000; Charity Hospital, New Orleans, $90,000; the penal, $7,000; Charity Asylum, $100,000.

There are about 340 convicts in the State Penitentiary. Under the new management most of them will probably be placed on convict farms.

Education.—The biennial report of the public schools was rendered in June. The school population of the State in 1898 and 1899 was 494,757. The enrollment was 196,169, of whom 74,233 were negroes. The average attendance was 90,187 whites and 56,136 negroes. The number reported as in attendance at private schools was 11,896 whites and 2,798 negroes, though this is not complete; the Superintendent says about 10,000 should be added. The number of teachers in the public schools was: White males, 1,155; white females, 1,617; total whites, 3,072. Colored males, 536; colored females, 549; total colored, 1,085. Total teachers, 4,157.

The schools have several sources of revenue, chiefly the current school fund, which is a tax of 14 mills on the taxable property in the State, and which is divided into three classes: $18,000; $18,000; 2,353; 2,353; 1,455; white females, 1,617; total whites, 3,072. Colored males, 536; colored females, 549; total colored, 1,085. Total teachers, 4,157.

At the State Normal School, at Natchitoches, 17 were graduated in January and 30 in May. The board arranged in July for establishing a model school; a building will be erected for the accommodation of 480 pupils. The attendance for the full term had reached 492 on Oct. 10.

The State University and Agricultural and Mechanical College is at Baton Rouge. An appropriation of $20,000 by the Legislature furnished means for a new building, which will have dormitories for 150 students and dining-room accommodations for 500.

A State industrial school is to be built at Lafayette, to be called the Southwestern Louisiana Institute. Efforts were made in the Legislature to provide for a textile school, which is deemed desirable in view of the prospects of the cotton manufacturing industry.

The Louisiana Chautauqua, at Ruston, opened July 1 with a large attendance. Summer normal schools at Mansfield and Franklin enrolled large classes, and reached their maximum attendance.

St. Charles College, at Grand Coteau, was completely destroyed by fire, Feb. 17. The library, of 5,000 volumes, contained some single books of great value that can not be replaced. There was insurance of $8,000 on the burned property, which
was valued at $25,000. The sixty-third commencement of the college was held June 27.

Railroads.—A decision was given in March in the State Supreme Court in favor of the State against the Southern Pacific Railroad Company, which reversed the decision of the lower court, and held that under its charter as a common carrier it may not carry on a storage business, for which it had built great warehouses in New Orleans.

The report of the State Board of Appraisers gives the mileage of railroads in the State in 1900 at 2,123 of main track and 744 of sidings, branch tracks, and double tracks, not including street railroads, which are assessed only in the localities where they exist.

Militia.—Since the war with Spain the militia has been reorganized, and in June the Seventeenth Company of infantry was mustered in, completing the number deemed necessary by the military authorities. The State National Guard is composed of 17 companies of infantry, 10 companies or batteries of artillery, 1 troop of cavalry, and 5 divisions of engineers, comprising altogether a force of about 2,000 men.

Banks.—The condition of the national banks in the State, June 29, was reported: Loans and discounts, $3,607,049; stocks, securities, etc., $112,943; gold coin, $606,188; total specie, $321,712. United States certificates deposit for legal tender notes, $492; individual deposits, $4,210,222; average reserve held, 25.87 per cent.

Including savings banks, there are 57 State banks, 8 of which are in New Orleans.

In September, 1900, the capital of all the State banks and savings banks amounted to $3,820,210.

The last returns of the condition of the State banks for June 30, 1900, show that the surplus and undivided profits amounted to $1,548,320.13, against $1,336,590.31 on Sept. 30, 1899, a gain of $161,789.82. The average rate of discount on stock paid by the State banks outside of New Orleans for the year 1899 is more than 10 per cent.; this, added to the surplus and undivided profits, at the same time, shows something over 16 per cent. as the net profits of these institutions.

Insurance.—In a suit of the city of New Orleans against the Liverpool and London and Globe Insurance Company, the State Supreme Court decided in May that the foreign company must, to secure a license of $2,200, for the privilege of conducting business in the city during the year 1899, with 2 per cent. a month interest from March of that year. If it could be shown that a municipal license had been paid by the company in any other town or towns in the State, based on premiums there collected or receipts there received, the city of New Orleans could not afterward claim to impose a license tax on the amount upon which it demanded a license, even though the returns of such premiums collected elsewhere had been made to the principal office of the company in New Orleans. The company had contended that it was liable only for tax on the business with in the city.

Products and Industries.—The cotton crop is given as 625,000 bales; the consumption in mills of the State, 16,420 bales; there are 6 mills, of which 4 were in operation. The sugar crop was small, as it has been for two or three years; it was estimated at 250,000 long tons.

The lumber business has made progress, as shown by the building of 287 license sawmills, against 202 in 1899. The cotton-seed oil mills have increased from 28 to 41. The Governor's message says of the rice industry: "It has assumed colossal proportions on the shores of the Mississippi, but more particularly in south Louisiana, where large irrigation canals have been made and mammoth pumping plants and rice mills established. Those canals are made by throwing up levees from 10 to 50 feet apart, into which the water is pumped from streams. The canals are navigable by small boats. They range from 2 to 20 miles in length, watering from 1,000 to 20,000 acres. The capital invested will soon approximate $3,500,000, showing a total length of 300 miles of main canals and 500 miles of laterals, capable of watering 200,000 acres. No less than 14 rice mills have been erected in this territory, and several more are in course of construction. Rice irrigation is also carried on from wells."

Lawlessness.—A series of bloody disturbances occurred in New Orleans in July. The trouble began when, at the request of some frightened colored women, two policemen attempted to arrest two colored men. One of the colored men not only shot one of the policemen, but retreated to one of his negro friends, whom he shot several others who attempted to arrest or shoot him. He was conquered at last only by setting fire to the house in which he was concealed. Meanwhile a mob of boys, very young men, and hoodlums had seized the occasion to go through the streets and kill or maltreat peaceable negroes of both sexes. A colored schoolhouse in which the negroes were reported to have stored ammunition was burned by the mob. The total casualties resulting from this affair were reported as 11 persons killed, 3 mortally wounded, and 28 seriously injured.

Four suspected negro burglars, all ex-convicts, were taken from jail at Ponchatoula, Sept. 20, and hanged.

A negro ex-convict and cattle thief was terribly whipped by whitecaps near Lake Charles, May 12.

On June 23 a man was lynched near Springfield for the murder and robbery of an aged woman.

A negro who shot and seriously wounded a railroad conductor was lynched near Plaquemine, Oct. 19.

A negro who had made threats against the lives of two men was lynched, June 9, at Devall.

For attempted criminal assault a negro was lynched at Lena, May 12, and one at Whitehall, Aug. 27.

A negro who confessed a murder was hanged by a mob, about Aug. 30, at Cheneyville.

April 20, in Livingston Parish, a party of 6 or 8 white men rode up to a negro's house and fired into the dwelling, wounding one of the occupants. They then rode on to the next house and fired a second volley, killing a negro boy. Four young negro men of the party were arrested. The shooting is said to have been without cause.

A lumber company attempted to work a new sawmill at Tioga with mixed labor, but the whites began shooting at the negroes to force them to leave, as they have been compelled to do at many of the other mills on the line of the Iron Mountain Railroad.

A dispatch of Aug. 15 said: "The commission appointed by the second white mass meeting in Cheneyville, La., to regulate the negroes of that neighborhood went to work yesterday. The resolutions adopted ordered the negroes to give way on the sidewalk to white people and also prohibited them from gathering at the railroad depot. A young negro jumped on a railroad train yesterday and got in the way of some white passengers. It was decided by the commission to discipline him.
He was therefore marched to the business center of the town, straightened out, and given 50 lashes with a cowhide whip, in the presence of a large audience of whites and negroes."

At Allentown, in April, the foreman of a lumber mill was shot and instantly killed by a negro, who then took his own life. Two other negroes were arrested on a charge of having conspired with the murdering negro; they were seized by a mob and hanged in the woods.

A riot arose at Lake Charles in September, in consequence of an assault by a negro on an old lady at Chloe station. A mob attempted to take him from the jail where he was placed after arrest, and in the attempt the jailer was killed by a shot from the mob.

The year was marked by a marked increase in murder. The negro was sentenced to twenty years' imprisonment.

Political.—The State election was held April 17. It was the first general election held under the new Constitution. The total registration was 129,729; of these it is said that about 7,000 were negroes. Not only negroes, but many naturalized foreigners, were disfranchised by the new election provisions requiring educational or property qualifications. There were three tickets in the field—the Democratic, the regular Republican, and the Republican-Fusion.

The nominations made at the Democratic convention, which was held Dec. 20, 1898, were: For Governor, W. H. Heard; Secretary of State, J. T. Michel; Attorney-General, Walter Guion; Superintendent of Education, Joseph V. Calhoun; Treasurer, Ledoux E. Smith; Auditor, W. S. Frazee.

The regular Republicans, also called the Wimberley Republicans from the name of the State nominal candidate, National Republican Committee had appointed their convention for Feb. 5, when they met at New Orleans and selected the following candidates: For Governor, Eugene S. Reems; Lieutenant Governor, F. B. Earhart; Treasurer, Benjamin Bloomfield; Auditor, James Forsythe; Attorney-General, Robert F. Hunter; Superintendent of Education, H. D. Lines.

On Feb. 6 a convention was held at Alexandria by a section of Republicans, composed in part of the sugar planters who left the Democratic party at the time the sugar bounty was discontinued. They have been called the "Lily Whites." They were joined by other Republicans not favoring the management of the regular party, and the following ticket was named: For Governor, C. Taylor Cade; Lieutenant Governor, W. G. Wylty; Treasurer, T. J. Woodward; Attorney-General, Clay Knoblach; Secretary of State, W. J. Behan; Auditor, J. C. Weeks; Superintendent of Education, C. K. Murray.

The Populist party, at Alexandria, Feb. 7, agreed upon the following ticket: For Governor, D. M. Sholars; Lieutenant Governor, T. J. Woodward; Secretary of State, J. T. Howell; Attorney-General, Taylor Beattie; Auditor, O. H. Deshotels; Treasurer, B. W. Marsden; Superintendent of Education, O. B. Staples.

Committees of the independent Republicans and the Populists held a conference about Feb. 20; they were joined by independent Democrats who, under the leadership of Senator Caffery, were opposed to the administration of Gov. Foster and to the election provisions of the new Constitution. Senator Caffery seems to have been out of favor with his party on account of his gold standard policy, having voted in Congress for some measures deemed of interest to the citizens of the State. The fusion ticket was headed by his son. It was: For Governor, Donelson Caffery, Jr., independent Democrat; Lieutenant Governor, D. M. Sholars, Populist-Democrat; Attorney-General, W. G. Wylty, Republican; Secretary of State, C. Taylor Cade, Republican; Treasurer, George A. Hassinger, Republican; Auditor, O. H. Deshotels, Populist; Superintendent of Education, O. B. Staples, Populist. Mr. Caffery's letter of acceptance may be taken as a declaration of the princ- iples the committee are combining to work for. He said that in the interest of the State for the defense of our civilization. Under our government of majorities without votes, we have learned that there may be a more odious form of oppression than taxation without representa- tion. The Governor must not be the fountain head of political authority. The school system must be based on the county. The regis- trars must be elected by the people of the several parishes. The registration must not be a partisan weapon. All candidates must have the right of naming their commissioners of election. The trick laws governing the official ballot and representa- tion at the polls must no longer throttle opposition to the candidates of the party in control; in short, fusion and election laws were designed to prevent the growth and formation of opposing parties and the building up of that spirit of independence which is the life breath of the republic, a new system must be introduced which will hold out to the people all the oppor- tunities now denied them.

The Fusion Convention, the official ballot and the election commissioners. Those to which the Republicans were entitled were in part parishes given to the regular Republicans, though in some to the fusionists. In sending in their nomination papers, the fusionists appended the requisite num- ber of signatures, but in parishes where signers afterwards withdrew their names by telegraph, the election board was unable to name the number of the candidates to appear on the official ballot.

The election resulted in victory for the Demo- crats on the State ticket and on nearly every local ticket. The total vote was less than half as large as at the last State election. The vote for Governor was: Heard, Democratic, 60,226; Reems, Republican, 2,449; Caffery, fusion, 14,217.

The vote for presidential electors was: Democratic, 53,671; Republican, 14,233.

A proposed amendment to the Constitution was carried, which will enable New Orleans to issue bonds to pay for water, sewerage, and drainage improvements.

The legislature elected was wholly Democratic.

The Democratic convention for choosing delegates to the national convention and nominating electors was held June 4, at Baton Rouge. The delegates were instructed for William J. Bryan.

The resolutions denounced the imperialistic policy of the administration, condemned the annexation of the Philippines, asked that the government of Cuba be given into the hands of its citizens, de- nounced trusts, opposed wars of conquest and ac- quisition of colonies and militarism, asked national aid for the levee system and the deepening of the channel of the Southwest Pass at the month of the Mississippi, favored the construction of the Nicaragua Canal, and the expansion of the American government system, and the election of Senators by direct vote of the people, and expressed sympathy for the Boers.
The so-called "Lily Whites" sent out an address, July 9, in which was said in part: "The National Republican Convention, assembled at Philadelphia, recognized this State committee as the official Representative Body of the Republican party of Louisiana. This happy event awakens the liveliest enthusiasm throughout the whole State and among all classes of people. In it they see the great advantage of a strong and vigorous opposition party to the ruling dynasty in this State, which has usurped all the functions of government and has operated for the benefit of the Democratic party and the people. The excuse for padding the registration, stuffing the ballot boxes, and forging the election returns heretofore given by the Democratic leaders has now disappeared, and even the instruments of their infamous and admitted frauds will not dare to perpetrate them again.

The State of Louisiana is as much interested in Republican success at the coming election as New York or Illinois. All of the important industries of Louisiana are dependent on Republican policies. The sugar, rice, lumber, salt, cotton, iron, tobacco, and other industries are directly dependent on the protection accorded them by the Legislature. The business men and the people are dependent on the line of business and their prosperity are dependent on a sound and stable currency which the Republican party maintains and which the Democratic party threatens to destroy.

"Louisiana is a Republican State on a free vote and a fair count. With all of the machinery of the State government, the most complete and drastic campaign which the Democratic party could prosecute, with every State, parish, and local office in dispute, with all of its paddling of returns, the Democratic party was able to poll in April but 46 per cent. of the registered vote of the State."

The Central State Committee of the People's party sent out an address calling upon their party to support for the presidential and congressional candidates of the Republican party.

The vote for presidential electors stood: Bryan, 33,671; McKinley, 14,233. The members of Congress elected were all Democrats. The amendment to increase the amount available for pensions for Confederate soldiers to $75,000 was carried by 212 to 19. The bill to increase the limit heretofore was $50,000. W. L. Foster was elected Railroad Commission for the Third District.

Legislative Session.—The Legislature assembled May 14 and adjourned July 12. Jared Y. Sanders was Speaker of the House. Gov. Heard and Lieut.-Gov. Estopinal were inaugurated May 31.

Two United Senators were elected May 22—
Senator Samuel D. McEnery to succeed himself at the expiration of his present term (1903), and ex-Gov. Murphy J. Foster to succeed Senator Caffery in 1901.

A new law for primary elections was enacted, regulating the manner of calling and conducting primary elections, the making of votes and counting them, and providing penalties for illegal voting, acceptance of illegal votes, bribery, and intimidation. The penalties are a fine of $25 to $300, or imprisonment for terms from ten days to three months, or both. The general election law was amended in details regarding voting and counting.

An amendment to the bank reserve act provides that every bank, banking association, corporation, or company organized under the laws of the State shall at all times have on hand in lawful money of the United States and cash due from other banks an amount equal to 25 per cent., 8 per cent. of which shall be kept at all times on their respective premises in cash, of the aggregate amount of its demand deposits. The amount to be thus kept on hand shall be called its lawful money reserve. For the remainder of said liabilities to depositors an amount equivalent to $200,000 in lawful money of the United States on hand or due from other banks, bills of exchange or discounted paper maturing within twelve months, bonds of the United States, bonds of the State of Louisiana, bonds of the city of New Orleans, or bonds of the several levee districts of the State of Louisiana.

A measure that met with much opposition, but passed and became a law without the consent of the Governor, modified the civil service law of New Orleans, exempting certain offices from the operation of the law requiring academic examination, and making other changes.

An important law provides for the care and control of the State penitentiary. When the present lease for their labor expires, March 3, 1901, they are not to be leased to private contractors again. A board of control is created, to be composed of three citizens appointed by the Governor. The first appointees are to serve two, four, and six years respectively, and after appointments will be for the remainder of their term and the next six years. The board of control has full power to suspend, dismiss, or discharge at its discretion all officers and employees, designate their duties and fix their salaries. It must prohibit harsh and cruel punishments, establish a system of work and discipline conducive to the reformation of the prisoners, and give them the right to communicate directly with the Governor. It is authorized to purchase or lease such lands as may be necessary for occupation by the convicts, who are to be employed in agriculture or manufacturing and in the construction and repair of public works. It is further stipulated that the board shall, as soon as possible, establish a reformatory branch of the Penitentiary, in which all convicts who are between the ages of seven and seventeen years shall be separated from the other convicts.

A Bureau of Labor Statistics was created. A special license tax was imposed on the sale of pistols and cartridges—$125 on wholesale dealers in pistols and $50 retail; on cartridges, $50 and $25. A revenue act for insurance business is enacted by the State. The tax on oil corporations was reduced one half. Secret or fraternal societies not exclusively benevolent must pay a license tax.

The board of examining dentists is replaced by a State Board of Dentistry—5 members, appointed by the Governor for seven years.

Acts relating to insurance companies are: To prevent combinations among fire companies to fix rates; to provide that the value of inmovable by nature shall be fixed by the insurer when the policy is issued, and that he is to pay the total loss or restore property damaged; and companies taking marine and river risks on the stock plan must have a capital of $100,000 instead of $200,000, as formerly.

The game laws were amended.

Other acts were:

To encourage high schools by appropriations from the general fund.

Requiring examination of homestead and loan associations.

Requiring employers to provide seats for woman employees.

Prohibiting marriage between first cousins.

Appropriating $300 to the fund for placing in Memorial Hall, Washington, a bronze bust of George Peabody.

Making appropriation for a permanent home for lepers.
Permitting sugar mills and refineries, sawmills, rice and cotton-seed-oil mills, and irrigating plants to issue bonds.

Incorporating the city of Monroe.

Creating a State museum at New Orleans.

Authorizing the City Council of Lafayette to issue bonds to raise $14,000 to construct buildings for the Southwestern Industrial Institute, and the police jury of Lafayette Parish to raise in the same way $392,000 for the same purpose.

Prohibiting the use of trading stamps.

Requiring factors, brokers, commission merchants, and middlemen to embody in all accounts of sales of cotton and other agricultural produce the name of the person to whom such produce is sold, the date when sold, the actual classification of such produce, the name of the person by whom such classification was made.

To provide a system of obtaining, compiling, and promulgating official reports of the conditions and yield of agricultural products of the State and other statistical information.

Providing for settlement of succeSSIONS under $5.00.

Two constitutional amendments were passed and submitted to vote in November, when they were adopted. One was to increase the amount of money that may be used annually for Confederate pensions to $75,000, and stipulating that not less than $50,000 be distributed. The purpose of the other amendment was to ratify the special tax for public improvements voted by New Orleans in June, 1899.

LUTHERANS. The official reports of synods and congregations of Lutherans in America show a net increase in 1900 of 25,174 communicant members. The statistics gathered for the Lutheran Church Almanac reveal that the following results were attained: 6,710 clergy, 11,123 congregations, 1,665,875 confirmed members, 4,097 parochial schools, 3,964 teachers and 190,896 pupils, 4,961 Sunday schools, 60,133 officers and teachers, and 568,537 pupils. The statistics of Sunday schools are, however, very defective, the actual number being much larger than here indicated. The reports contained statements on missions, education, and other charitable purposes—aggregate $1,171,765.30. There are in connection with the various synods or under Lutheran control 23 theological seminaries, 47 colleges, 34 academies, and 11 colleges for women, whose property is valued at $51,121,069, with endowments amounting to $1,646,365. Of these, 75 are employed in educational and other charitable purposes—aggregate $1,171,765.30. Many of these institutions, some of the strongest and most influential, have no endowment at all, but are supported by voluntary offerings of the members of the congregations. This is especially true, though not exclusively, of the institutions established and maintained by German and Scandinavian Lutherans.

The polity of the Lutheran Church in this country has assumed the synodical form, the synods being composed of clerical and lay delegates of congregations. The number of synods is now 61, many of which are merely territorial or linguistic divisions. Of these, 15 occupy independent positions, the rest are united in 4 general bodies, as follow:

Of the general bodies, the Synodical Conference is almost exclusively German, the General Synod and United Synod are almost exclusively English, and the General Council embraces English, German, and Scandinavian pastors and congregations.

The Synodical Conference of the United Synod of the South held conventions this year, reports of which follow. For the reports of the last conventions of the General Council and General Synod see Annual Cyclopaedia for 1899.

Synodical Conference.—The Evangelical Lutheran Synodical Conference held its fourteenth biennial convention at Lafayette, La., May 8-14, 1900. The election of officers resulted as follows: President, the Rev. John Bading, Milwaukee, Wis.; Vice-President, the Rev. P. Brandt, Pittsburg, Pa.; Secretary, Prof. John Schaller, New Ulm, Minn.; Treasurer, Mr. C. Christiansen, Detroit, Mich. The Rev. Olaf E. Brandt, of Decorah, Iowa, was re-elected to fill the vacancy caused by the death of the Rev. Mr. M. D. Hickory, but resigned his duties.

The following resolutions were adopted:

1. Resolved, that the Synodical Conference resolved to place its thanks in the form of a vote of thanks to the Rev. Dr. Johann Bading, of Milwaukee, Wis., for the able and efficient manner in which he has conducted the business of the Synod during the time in which the charge of the Synodical Conference was placed in his hands.

2. Resolved, that the Synodical Conference will extend its thanks to the Rev. Dr. John Schaller, of New Ulm, Minn., for the able manner in which he has conducted the business of the Synodical Conference during the year.

3. Resolved, that the Synodical Conference will extend its thanks to the Rev. Mr. C. Christiansen, of Detroit, Mich., for the able manner in which he has conducted the business of the Synodical Conference during the year.

4. Resolved, that the Synodical Conference will extend its thanks to the Rev. Mr. M. D. Hickory, of Decorah, Iowa, for the able manner in which he has conducted the business of the Synodical Conference during the year.

5. Resolved, that the Synodical Conference will extend its thanks to the Rev. Mr. P. Brandt, of Pittsburg, Pa., for the able manner in which he has conducted the business of the Synodical Conference during the year.

6. Resolved, that the Synodical Conference will extend its thanks to the Rev. Mr. J. B. Bading, of Milwaukee, Wis., for the able manner in which he has conducted the business of the Synodical Conference during the year.

The following resolutions were adopted:

1. Resolved, that the Synodical Conference will extend its thanks to the Rev. Mr. J. B. Bading, of Milwaukee, Wis., for the able manner in which he has conducted the business of the Synodical Conference during the year.

2. Resolved, that the Synodical Conference will extend its thanks to the Rev. Mr. J. B. Bading, of Milwaukee, Wis., for the able manner in which he has conducted the business of the Synodical Conference during the year.

3. Resolved, that the Synodical Conference will extend its thanks to the Rev. Mr. J. B. Bading, of Milwaukee, Wis., for the able manner in which he has conducted the business of the Synodical Conference during the year.

4. Resolved, that the Synodical Conference will extend its thanks to the Rev. Mr. J. B. Bading, of Milwaukee, Wis., for the able manner in which he has conducted the business of the Synodical Conference during the year.

5. Resolved, that the Synodical Conference will extend its thanks to the Rev. Mr. J. B. Bading, of Milwaukee, Wis., for the able manner in which he has conducted the business of the Synodical Conference during the year.

6. Resolved, that the Synodical Conference will extend its thanks to the Rev. Mr. J. B. Bading, of Milwaukee, Wis., for the able manner in which he has conducted the business of the Synodical Conference during the year.

7. Resolved, that the Synodical Conference will extend its thanks to the Rev. Mr. J. B. Bading, of Milwaukee, Wis., for the able manner in which he has conducted the business of the Synodical Conference during the year.

8. Resolved, that the Synodical Conference will extend its thanks to the Rev. Mr. J. B. Bading, of Milwaukee, Wis., for the able manner in which he has conducted the business of the Synodical Conference during the year.

9. Resolved, that the Synodical Conference will extend its thanks to the Rev. Mr. J. B. Bading, of Milwaukee, Wis., for the able manner in which he has conducted the business of the Synodical Conference during the year.

10. Resolved, that the Synodical Conference will extend its thanks to the Rev. Mr. J. B. Bading, of Milwaukee, Wis., for the able manner in which he has conducted the business of the Synodical Conference during the year.
convention as the official visitor of the General Council.

The work of the convention consisted chiefly in considering and acting on the reports of the various boards. The Board of Missions and Church Extension has charge of the work of home and foreign missions, and employs a general secretary, with headquarters at Atlanta, Ga. The board supports 21 missions, of which 6 are in Virginia, 1 in West Virginia, 4 each in North Carolina and Tennessee, and 3 each in Georgia and Mississippi, for the support of which $7,531.23 was expended in the past two years. These missions have 1,500 communicants and 1,300 Sunday school pupils. The church property belonging to these missions is valued at $82,900. At present 15 missionaries are employed and 2 mission points are without pastors. The board say: "The work continues to increase on our hands—more missionaries are needed, more churches are to be made and more territory is to be occupied than ever before.

As a consequence, more money is needed to carry on the work successfully. We fully appreciate the faithfulness and liberality of many pastors and congregations and societies as manifested by the continued contributions to our home missionary treasury. If, however, this work is to be in the future what it ought to become, we feel that some means must be devised to secure from the synods a larger part—the entire amount, if possible—of the apportionment asked from them by the United Synod.

MADAGASCAR, an island colony of France near the southeast coast of Africa, formerly a kingdom, proclaimed a French protectorate in 1883, when a French force occupied Diego Suarez. The protectorate was denied by the Hova queen until, after a French expedition, a treaty of peace was signed on Oct. 1, 1895, and as the result of another expedition to suppress an insurrection which occupied the capital the island was declared a French colony on Aug. 6, 1896. Queen Ranavalona III was deposed on Feb. 27, 1897, in consequence of fresh disturbances, and a new government was organized by the French protectorate in 1896 in return for the renunciation by France of consular jurisdiction in Zanzibar. A dispute subsequently arose about the application of the special French tariff to British goods, Great Britain claiming most-favored-nation treatment under a treaty made with the Hova Queen in 1865 by virtue of an assurance, asked for and received from France in connection with the British recognition of the protectorate, that none of the rights and immunities enjoyed by British subjects in Madagascar would be affected. The French Government took the view that the assurances applied only to the protectorate, and that when it exercised the right of clausulae over an island which contained an independent state, the clausulae had no application. The French Government then avowed that all treaties made by the Hova Government became void. The French claims to Madagascar date from the earliest period of French transmarine colonization, and were first asserted in 1642 by a company that obtained a charter from the King of France. Trading settlements were planted on the coast at various times, and were abandoned at different periods, but the factories were abandoned and French authority was ephemeral and disappeared entirely after the King of the Hovas, the part Malay tribe in the center of the island, reduced the greater part of Madagascar to his sway about 1810. In the semicivilized kingdom that

The report of the board concerning its work in Japan shows encouraging progress. The mission, begun only a few years ago, is in a flourishing condition. A congregation has been established at Saga, and in 1898 work was begun in Kumamoto, one of the largest cities in the Kyushu district, with a population of 80,000, and in 1899 work was begun in the city of Kurume, midway between Saga and Kumamoto. Since the last report of the board 2 natives have been ordained to the office of the ministry. The board now employs 3 ordained missionaries, 2 native pastors, and 4 unordained helpers in 4 stations and 3 out stations. The mission force in Japan has organized 4 Sunday schools, in which 150 pupils are taught. The mission has 82 baptized members.

On the territory of this general body there are 7 educational institutions and 1 orphanage, supported by the general body or by the district synods. Among these is Rurwic College, Salem, Va.

The committee on the common service and cooperation with other English-speaking Lutheran bodies reported progress in the work of securing a common book of worship and ministerial acts. The translation of Luther's Smaller Catechism, prepared by the joint committee with a view of making it the standard English translation for the entire Church, was adopted in the form in which it had been adopted previously by the General Council and the General Synod.
Horváth, Hungary, have freed all slaves. The emancipation proclamation was issued on Sept. 27, 1896. The Hova Government compelled the common people to work without pay at all times when the Queen desired their services. This system of forced labor the French have retained in a modified form, requiring the natives to labor on the roads or other public works for thirty days in the year. Besides duties on foreign goods exceeding 50 per cent., ad valorem, many money taxes are imposed. Duties on French imports are 4 per cent.

The Hovas and the tribes in the central districts who were under their immediate dominion were nominally converted to Christianity before the French occupation. English Congregational missionaries, as well as the Anglicans, the Friends, and the American and Norwegian Lutherans also established missions, and French Catholics secured 50,000 converts, the number of Protestants being about 450,000. Since the establishment of French rule the English Protestants, who comprised the Hovas to resistance, have been disencouraged, and many of the natives have embraced the Roman Catholic faith. Through this wholesale conversion of former Protestants by the French priests the property of many of the Protestant missions was forfeited in 1897, but some of their churches have since been reconstructed. The French also encouraged the natives to use tinsmiths, the manufacture of iron, and the introduction of cotton, and the natives weave silk, and made marine gunners, tailors, carpenters, tailors, potters, etc.

The natives can work skillfully in their own way in agriculture and have derived much from cotton, silk, and rafla fiber. Their principal occupations are agriculture and the breeding of cattle. Rice, sugar, cotton, coffee, cacao, cloves, vanilla, and yams are cultivated. The forests are of vast extent and rich in valuable woods. The most important commercial product at present is rubber, which is shipped to London and Hamburg. Plantation efforts are encouraged by free grants of land, and land is offered for sale to foreigners. Mining companies must be under French management, and some have lost their concessions and American and other claimants to lands conceded by native chiefs have been ousted because their rights were not recognized by French law. Many new concessions have been granted, but only a few are worked, mainly gold mines. Besides gold, copper, iron, galena, sulphur, graphite, and lignite have been found. The chief ports are Tamatave, on the east coast, and Majunga, in the west coast, each with about 6,000 inhabitants. Antananarivo, the capital, has 70,000 or more. The local currency is mainly Madagascar francs. The expenditure of France in 1900 was 25,181,048 francs. The debt was converted in 1897 into 25-per-cent. bonds amounting to 20,000,000 francs, requiring an annual expenditure for interest and amortization of 900,000 francs. By the operation 3,834,478 francs were saved, and the savings were applied to building roads and other improvements. For the construction of railroads, telegraphs, lighthouses, and harbor works a new loan of 60,000,000 francs is authorized. Telegraphs connect Antananarivo with Tamatave and with Majunga, whence a cable has been laid to Mozambique. Other telegraph lines run to Mananjary, about 200 miles on the east coast, and to the capital and Fianarantsoa. A railroad from Antananarivo to Tamatave is projected, to be built by a French company which will receive concessions of lands, mining rights, etc. The lagoons running along the east coast are to be dredged out so as to form a continuous channel. During 1895 the ports of Madagascar were visited by 6,061 vessels, of 879,362 tons, and of this tonnage 734,608 tons were French, 78,053 British, and 39,003 German. Of the imports, amounting to 21,641,000 francs, 17,090,000 francs were French, 1,048,000 francs British and 3,403,000 francs German. Of the exports, amounting to 4,960,000 francs, 1,807,000 francs went to France, 823,000 francs to Great Britain, and 1,052,000 francs to Germany. The legal coin is the French 5-franc piece, which the people formerly cut into pieces to be used for fractional currency. The Government has forbidden the export of coin, and the law entailing the cut coins, allowing 5 francs for 30 grammes of the silver, the weight of the 5-franc piece being 25 grammes, and now fractional French coins, silver and copper, are coming into use. The military force maintained by France in Madagascar in 1900 consisted of 9,187 infantry and 2,118 artillery and engineers. These 3,753 French officers and 7,325 native non-commissioned officers, and 2,700 French and 7,215 native privates; total, 11,305 of all ranks. The French budget appropriated 22,375,482 francs for military expenses in Madagascar.

About the beginning of 1900 the plague broke out in Tamatave, and in spite of the enforced quarantine, it spread to other places. The gold mines in 1900 yielded three times as much as in the preceding year. The Transvaal war interfered with trade to some extent. Fortifications were erected at Diego Suarez, and two artillery batteries were sent out. A total force of 4,100 men was dispatched to Madagascar, and the French fleet consisted of 100 French gunners, 2 battalions of the foreign legion of Algiers, 1 battalion of Soudanese and 1 of Senegalese sharpshooters, and a battalion of marine infantry.

MAINE, a New England State, admitted to the Union March 15, 1820; area, 33,040 square miles. The population, according to the decennial census, since the admission was 298,290 in 1820; 399,455 in 1830; 501,793 in 1840; 583,169 in 1850; 628,278 in 1860; 626,165 in 1870; 648,396 in 1880; 661,866 in 1890; and 694,647 in 1900.

Government.—The following were the State officers during the year: Governor, Llewellyn Powers; Secretary of State, Byron Boyd; Treasurer, F. M. Simpson; Attorney-General, T. Haines; Adjutant General, John T. Richards; Superintendent of Schools, W. W. Stetson; Bank Examiner, F. E. Timberlake; Insurance Commissioner, S. W. Carr; Liquor Commissioner, James W. Wakefield; State Librarian, Leonard D. Currier; Land Agent, Charles E. Oak; Commissioner of Agriculture, and Indian Affairs, E. W. Carpenter; Immigration Agent, W. H. Morse; Deputy Commissioners, Joseph B. Peaks, Benjamin F. Chadbourne, Frederic Danforth; State Topographical Survey, Leslie A. Lee, William Engil, Charles S. Hichborn; State Board of Health, C. D. Smith, President; Inland Fish and Game, Leroy T. Carleton; Commissioner of Labor and Industrial Statistics, Samuel W. Matthews; Pension Agent, E. C. Milliken; Chief Justice, John A. Peters; Supreme Court Judges, L. A. Emery, Thomas H. Haskell, Andrew P. Wiswell, S. C. Stratton, A. K. Savage, William A. Fogler; State Detective, Fred A. Porter; Clerk, W. S. Choate; Census Superintendents, Elmer P, Spofford, James A. Place; Recorder, capital and county; T. R. Knowlton, Augusta. Revenue 1899, $3,444,206; expenditures, $3,118,834; surplus, $355,372. Population.—The population in 1900, by counties, was as follows: Androscoggin, 54,242; Aroostook, 60,744; Cumberland, 100,689; Franklin, 18,444; Hancock, 37,241; Kennebec, 59,117; Knox, 342.
MAINE.

343

30,406; Lincoln, 19,069; Oxford, 32,238; Penobscot, 76,242; Penetanguishene, 16,949; Sagadahoc, 20,380; Somerset, 33,549; Washington, 45,252; York, 64,885; total, 694,497.

Finances.—The total receipts of the State Treasurer for the two years ending Dec. 31, 1900, were $3,798,923.03; amount of cash on hand, Jan. 1, 1900, $164,726.73; amount disbursed during 1899 and 1900, $3,754,767.75; balance on hand, Jan. 1, 1901, $198,879.01. The State tax from cities, towns, and organized plantations for 1899 and 1900 was $1,815,901.96. Of this, $450,168.50 was paid from the 20 cities, $224,923.79 by towns and organized plantations, and $91,650.34 by wild lands. The 20 cities paid into the State treasury $448,168.50 more than they received from the school fund, and 239 towns and plantations received more from the school fund than they paid into the treasury.

The average net rate of State tax on the 20 cities was $1.56 3/4 on each $1,000 valuation; for towns and organized plantations the average rate was 60 1/2 cents. The tax on savings banks for the two years was $801,566.06; on railroads, $323,032.32; on telegraph companies, $32,888.48; on express companies, $10,032.67; on insurance companies, $131,405.62; on collateral inheritances, $54,226.64; on new corporations, $71,565; other taxes and miscellaneous items, $308,284.28; a total of $1,753,021.07. One hundred thousand dollars was paid on the public debt in 1899 and 1900, and the colored indebtedness is now $2,103,000, a reduction of $316,300 since 1890. The State's outstanding temporary loans amount to $350,000.

Education.—The total amount of the school fund and mill tax for 1900 was $520,019; the amount of school money raised in towns was $718,901, an increase of nearly 1,000,000 in eleven years. The normal schools are flourishing, and about 30 per cent. of the public school teachers are normal school graduates. School improvement leagues have been formed throughout the State, and work in co-operation with the superintendents. There are nearly 10,000 of these leagues, and they are secured for the schoolhouses a large quantity of scrap metal, and through the public schools have had a scrap basket, from an attractive playground with swings and trapeze to wash basins and clean windows. School savings banks have been established in some of the rural districts, and have met with marked success. In 8 schools, where the attendance was 246, the number of depositors was 130; 33 pupils deposited more than $1, and they have bank books. Deposits are rapidly increasing.

In 33 unorganized townships schools have been maintained at a cost, the past year, of $2,382.13. Many married persons avail themselves of the privilege thus afforded. The public schools have been maintained at a high standard, and much time and labor have been expended in beautifying school grounds and rooms and providing libraries and works of art. The teachers' institutes and summer schools have not only improved the standing of the schools, but have stimulated the teachers to attend the colleges.

There are 360 students in the State University. This institution offers special facilities in engineering and agriculture, and has courses in preparation for medicine, chemistry, and pharmacy, as well as thorough classical courses. In the past two years the trustees have built a drill hall, a gymnasium, and a large astronomical observatory. The law school is at Bangor, and is proving successful.

Agriculture.—More than half the population is supported by farming, the market for their products being constantly enlarged by the popularity of the State's seacoast and inland resorts.

The Prohibitory Law.—By comparing present conditions with those previous to the enactment of the "Maine law" fifty years ago, it is seen, says the Governor in his address, that in a large majority of country towns there is practical prohibition, and in the cities as uniform enforcement as of other legislation.

Banks.—On Oct. 27, 1900, the total assets of the 51 savings banks was $71,076,211.67. The resources of the 17 trust companies were $837,902.92. There were 180,914 depositors whose balance was less than $2,000, and the total amount of their deposits was $35,553,259.84; while the number of depositors having a balance of $2,000 or more was 5,413, and the total amount of their deposits was $13,881,899.23. The amount of tax paid on savings bank deposits in 1900 was $448,827.93, an increase of $128,434.21 over the sum paid in 1890.

The whole number of depositors in savings banks and trust companies, and shareholders in building and loan associations, was 213,085, a gain of 28,916 during the year. The number of savings banks is now 51, an increase of 13 since 1880.

"If we take from this total the 6,019 demand depositors in the trust companies, it will be seen that nearly one third of the entire population of the State are directly interested in our savings institutions. The aggregate amount of their capital, if apportioned among the people of the State, would give about $50 to each person, or nearly $600 to each family."

State Institutions.—At the Bath Military and Naval Orphan Asylum 24 orphans were admitted in 1900, the largest number for many years.

There has been a gradual increase in the number of patients in the Maine Insane Hospital, and it is overcrowded. Nov. 30, 1900, it had 771 patients, an increase of 38 in two years. A new hospital at Bangor is nearly completed.

The State Prison report shows that there has been a decrease of 37 in the number of convicts. The total gain from goods manufactured last year was $5,067.74. As cost of an average of 90 cents was spent each day to support the prisoners, the State paid $106.66 more than it received as profit from the work. Other expenses amounted to $10,092.19.

There are 60 boys in the Reform School housed in cottages under the best modern conditions, and 90 in the main building. The cottage system has proved its value, and more will be built.

The Industrial School for Girls has 165 girls under its care. Of these, 61 are in the school, 14 boarding out, 44 working for their board, and 46 receiving wages. They are taught the common English branches, and to sew and knit, do house-work, and care for health and morals. Two buildings were destroyed by fire within a year, and one has been rebuilt and equipped.

Fish and Game.—The season of 1900 was the most successful in the history of these industries.
Including the amount paid to transportation companies, $3,000,000 was expended by more than 50,000 visitors to the forests and lakes. The shore and sea fisheries employ 20,000 persons and have an invested capital of nearly $3,000,000. The total value of the products, ready for market, is about $6,000,000 annually.

Trade.—The State Board of Trade, at its semiannual meeting, reported unprecedented prosperity. In the first two months of 1900 Maine shipyards launched 10,000 tons of new shipping, and every trade and business was sharing in the revival.

Railroads.—The Maine Central road had a year of exceptional prosperity. Its total receipts were $3,608,368.26, and its expenditures $3,753,971.53.

Political.—The Democratic State Convention was held in July. The platform accepted the national platform adopted at Kansas City, and pledged unqualified support to the candidates. On State issues it opposed the proposed creation of the State Bank, and the abolition of the fee system, revision of the system of taxation, and election of railroad commissioners by popular vote; and declared that the prohibitory liquor law was a failure. Samuel L. Lord was nominated for Governor.

In the election the Republican ticket was successful by a plurality of about 33,000. The Legislature has 30 Republicans and 1 Democrat in the Senate, and 132 Republicans and 19 Democrats in the House.

On presidential elections the vote was 68,435 for McKinley, 36,522 for Bryan, 2,555 for Woolley, and 878 for Debs.

MANITOBA, PROVINCE OF. Government and Politics.—Toward the end of 1899 the province was greatly stirred with the political campaign. Mr. Greenway's government had been in power since 1896, and the prospect of defeating it appeared slight indeed. The Conservatives, however, had induced the Hon. Hugh John Macdonald (son of the late Sir John Macdonald) to accept the leadership in the contest. Mr. Greenway had with him in the Cabinet Messrs. J. D. Cameron, Robert Watson, C. J. Mickle, and D. H. MacMillan. He had all the support that the Liberal Government at Ottawa could command. Mr. Greenway was hostile to the Conserva-tives, and exposed to Mr. Greenway was the revolt of Mr. L. R. Richardson, M. P., and the Winnipeg Tribune, of which he was proprietor, and of other discontented Liberals. Mr. Macdonald had the support of Sir Charles Tupper and the Hon. G. E. Foster, the Conservative Federal leaders, in a vigorous speaking tour, and the influence of his own extraordinary popularity. On Dec. 9, after the elections, the returns showed a new assembly of 22 Conservatives, 16 Liberals, and 2 elections to be held—which afterward gave one to either party.

On Jan. 8, 1900, the Greenway Government resigned. Mr. Macdonald was called upon, and the following ministry was formed: Premier and Secretary of the treasury-General, Hon. Hugh J. Macdonald; Provincial Treasurer and Minister of Agriculture, Hon. J. A. Davidson; Provincial Secretary and Minister of Public Works, Hon. D. H. McFadden; ministers without portfolio, Hon. C. H. Campbell and Hon. James Johnson. R. P. Robin, formerly leader of the party in the province, declined a place in the new ministry. All the ministers, on returning to their constituencies, were re-elected, and when the Legislature met, on March 30, the Government had a compact and enthusiastic majority. When it was found that Mr. William Hespner was elected Speaker, and the Hon. J. C. Patterson, Lieutenant-Governor, then read the speech from the throne, in which he said:

"Two contingents of Canadian troops have already reached the scene of action, and a third, equipped at the expense of Lord Strathcona and daughter, has landed at Cape Town, and is now marching to South Africa. The first contingent, which left our shores some months ago, has already received its baptism of fire, and, I am proud to say, has proved itself worthy to fight shoulder to shoulder with the most celebrated regiments in the British service. I deplore the death of Major Arnold, who commanded the Western company of this contin-gent, and I have the honor to announce that he fell in the battles of Modder river; but I recognize that, while dead, they are not forgotten, and that their memories will long be treasured by all who hold loyalty, courage, and the honor of their country dear.

Legislation will be asked with a view to restoring that equilibrium in the finances which, I regret to say, has not been maintained in the past; and it will be of a character which will, I believe, accomplish this difficult task. In pursuance of this object a bill will be introduced reducing the number of ministers receiving salaries to three. I regret to say that the Government is under the necessity of refusing to give permission certain orders in Council granting aid to certain railways. You will be asked to repeal the present costly and unsatisfactory election act, and to enact in its stead one much simpler, more just, and less expensive. The people of Manitoba having on two occasions declared themselves, by their votes, in favor of prohibiting the liquor traffic, my Government has decided to give effect to the views, in so far as the powers of the provincial Legislature will permit them to do so, and a bill dealing with this important subject will be submitted to you. My attention having been called, by a regrettable accident in one of the laundries in Winnipeg which resulted in the death of a young girl, to the fact that in some of the laundries where the machinery is left unprotected, and that thereby the lives and limbs of the employees are endangered, a bill will be submitted for your consideration dealing with the liability of employers in such cases, and also one dealing with factories and workshops, and providing adequate protection for the lives and limbs of the workmen and women.

The legislation that followed was mainly a carrying out of pledges made by the new Premier. On Feb. 14, referring to the much-discussed railway matters, Mr. Macdonald had declared that "as to the railway corporations, the Conservative Government of Manitoba has no friends and no enemies. It will deal with everything on its merits from the standpoint of the people, and with that alone in view." Between the time of the new ministry's assuming office and the meeting of the Legislature various indications of mal-administration on the part of the Greenway Government had come to light. Speaking at Emerson, Mr. Greenway said that in his time they had made a discovery that almost took his breath away. Mr. Greenway, notwithstanding statements and pledges repeated by his colleagues and himself throughout the province, and boasts
that lines built last year had not cost the province one dollar, had passed orders in Council and written a letter promising a bonus of $1,750 for every mile of new line built by the Canadian Pacific Railway last year. In the contract of the one branch, Mr. Greenway had merely written letters to the managers, saying that he had promised aid, and would have given it had he remained in power, and would support the Macdonald Government in paying it over. For other lines aid had been promised by orders in Council, with the knowledge of the whole Cabinet, and contracts were made subject to ratification by the Legislature. On considering the matter fully, he had come to the conclusion that the good faith of the province did not require that even bonuses promised by orders in Council should be paid; that there would be no breach of good faith, and the good name of the province would be preserved.

Meanwhile Mr. Greenway made a determined effort to retrieve himself. He declined a seat in the Senate, offered to him by the Dominion authorities, although his late colleague, Mr. R. Watson, accepted one, and the Hon. D. H. McMillan, in consequence, became Lieutenant Governor. He declared himself unwilling to let the "system of slander and falsehood" that had been adopted by the Conservative Government go unchallenged, and expressed himself as determined to retain the leadership of the provincial Liberals. Replying in more detail to the railway charges, he said: "If my Government is now to be condemned for that policy, I see no reason why my Government should not be condemned to them a good many years ago, because that policy has been consistently pursued since the year 1888, when we came into office, and on account of which policy such a large mileage has been added to our railway system for the purpose, as I have time and again pointed out, of not only securing, as far as possible, competitive lines, but keeping in view the great need of the farmers for convenient marketing facilities. As will be remembered, this policy included the introduction of the Northern Pacific Railway, the Souris extension of the Canadian Pacific Railway, the Pipestone branch, the Foxstone branch, and the Belcourt branch, all of which have been aided on exactly the same plan of $1,750 per mile, a policy in which the House was practically unanimous. As to the concealed order in Council, giving aid to the Canadian Pacific Railway on the Snowflake and Lac du Bonnet branches, he said: In the former case, it was a matter that had been brought up by Government for years and years by the settlers there, to relieve them of their hardships, and I had repeatedly interviewed the railway authorities, and made a promise of the usual bonus if they would build, and they finally agreed to the construction. As to the latter, a deputation of Winnipeg citizens waited upon me several times, urging the necessity of aiding the Lac du Bonny line for the purpose of being able to get out of that country the valuable wood and building material, and for colonization purposes. A promise for the usual aid was made to that deputation. The contract for its construction was made by the Government for the usual legal line as all others (including one for the building of a branch from the Dauphin Railway into Gilbert Plains country), all of which contracts were to be brought before the House at a future date for ratification."

A distinct demand from the Liberal press came for Mr. Greenway's resignation of the leadership, and one of his followers, Mr. C. A. Young, resigned from the Legislature as a protest against his acting any longer as leader of the party.

On April 4 a petition to the Dominion Parliament was passed in the Legislature by a unanimous vote. It asked that in pending legislation for railways, and all future legislation for railways within the bounds of the province of Manitoba, Parliament would make provision: (1) For complete and more effectual control of rates thereon, including the fixing of maximum charges for freight and passengers; (2) The right of acquisition of such lines of railway by the province on equitable terms, whenever the several railways would not be in a position to operate them a profit; (3) The right of the province and said railways being unable to agree upon the price so to be paid, the same to be determined by arbitration; (4) That the province shall have the first option of purchase on any of the said lines of railway.

Mr. Macdonald and his colleagues next turned to the matter of the franchise, and in June introduced and carried a measure for the repeal of the existing law, which the Conservatives said had rendered it easy for unscrupulous men to tamper with the voters' lists and to interfere with a free expression of the popular will. The new elections act was framed largely upon the manhood suffrage system of Ontario. It gave the preparation of the voting lists into the hands of the municipal authorities, and provided for a revision by judicial officers. It also established the principle, that the property owner could vote wherever he owned property, and established the "one man, one vote" principle. A clause that was widely discussed provided that the recent Galician, Doukhober, and other foreign immigrants should not have a vote for seven years unless they could read in either the English, French, German, Swedish, or Icelandic language.

This session was the longest in the history of the province, and 82 bills, embodying much new legislation and amending much old legislation, were passed. The House finally adjourned on July 5, after a speech from the Lieutenant Governor, which he said was a matter of the Queen to a large amount of legislation, of which the following acts were the most important:

1. To amend the assessment act.
2. The Manitoba voters' list act.
3. The manhood suffrage registration act.
4. To amend the devolution of estates act.
5. To amend the public schools act.
6. Respecting the taxation of corporations and others for the purpose of supplementing the revenues of the crown.
7. Respecting mortgages and sales of personal property.
8. To incorporate the Selkirk Railway Company.
To incorporate the Winnipeg, Selkirk and Lake Winnipeg Railway Company.

To amend the Manitoba insurance act.

The liquor act.

To amend the shops regulation act.

Respecting writs of execution against land.

To amend the Lord's Day act.

Respecting real property in the province of Manitoba.

To consolidate and amend the acts relating to the property of married women.

Respecting the protection of game.

**Prohibition.**—One of the most important subjects of discussion in the province was Mr. Macdonald's pro-hibitory liquor law. Manitoba is strongly in favor of prohibition, and had voted in two plebiscites—a Dominion and a provincial one—in favor of the principle. Mr. Macdonald had declared before the election that, although not personally in favor of it, he would abide by a distinct expression of public opinion in the choice of representatives, and would present such a law if the majority of the new members were in its favor. When he became Premier he found that such was the case, and at once proceeded to put his pledge into operation. The measure was prepared by a leading Manitoba lawyer, Mr. J. A. M. Atkins, Q.C., and it prohibited the sale or re-sale of intoxicating liquors within the province as a beverage. The measure was introduced June 1, and appears to have been sufficiently definite and to have been really intended to effect the purpose aimed at.

The sale of liquor was to be permitted for use in arts, medicine, and sacraments only, although there was no sanitary reason to prevent absolutely its use in private hospitality. Druggists were placed under a stringent license law, with severe penalties, and the giving away of liquor in any public place, office, factory, hall, club, hotel, store, or house where there was a boarder or roomer, or a gathering of people, was strictly forbidden. The penalties were not less than $200 and costs and not more than $1,000 for the first offense—all offenses to be registered; for the second offense, not less than six months in jail nor more than two years. A corps of salaried inspectors was to be appointed, responsible to the Attorney-General's office, and they were to have power of search of any place or person and the importation of liquors for export or sale outside its boundaries, it was proposed to place a heavy tax upon such traffic. There were weighty protests, and the License Holders' Association presented a petition to the Legislature, claiming to represent an investment of $2,000,000, and demanding compensation. On June 29 a large deputation waited on the Legislative Committee having the measure in hand and protested vigorously against it. F. H. Phippen, Q.C., made the principal speech. He declared that the bill was in no sense a prohibition measure, and that the only effect would be to drive the venders from the province to adjoining parts of Ontario or the Northwest Territories. The act, if passed, would not hinder any man from obtaining any quantity of liquor he might desire, the only change was that he had to buy outside of the province. This might be called prohibition if it were necessary to purchase in the Transvaal, but when people were allowed to buy from adjacent provinces it was simply leaving licenses to other provinces. It placed liquor in every man's house, a bottle in every man's sideboard. The lighter beverages—wines and ales—would be prohibited, as the expense of importing them would be greater, and people would be driven to drink heavier liquors. It had been said the present law was not strictly administered; if so, there would be innumerable breaches of the proposed law, as every person would have an opportunity to carry on illicit business. The measure finally passed the House, with the approval of a great majority of the people, as shown by the press, the platform and the temperatures, and the provincial elections, in all of which the Government were sustained. It was not to become law until June 1, 1901, and a new development has since appeared in the protest of the Hudson's Bay Company and their claim that the legislation infringes the trading privileges granted them under Dominion enactment. This point has been referred to the courts.

**The Federal Elections.**—Manitoba was greatly affected by, and in turn considerably influenced, the Dominion elections of October and November, 1900. Partly because Sir Charles Tupper had been for thirty years a chief supporter and friend of his, and partly because it was evident there would be a movement of interest in the province's representation. This point has been referred to the courts.

**Finance.**—The financial situation in Manitoba, as shown on Dec. 31, 1899, indicated receipts of $776,234 and expenditures of $792,462 for the current year. The former sum included the Dominion subsidy of $483,657, interest on school lands of $23,196, land title fees of $65,786, liquor licenses $287,487, miscellaneous receipts making up the remainder. The chief items of expenditure were $155,601 charged to the Finance Department, $154,508 upon education, $101,128 upon agriculture and immigration, $90,780 paid to the Canadian Pacific Railroad and $100,000 to the Northern Pacific, $124,516 charged to the Attorney-General's department and $187,524 to the Public Works Department. The gross debt of the province was given as $8,190,688, and against this was a Dominion debt allowance of $3,707,196. The position of the province in a financial sense was not satisfactory and it was very evident that the Government would have to bring in a budget that year, and the new Minister of Finance was Dr. J. F. Parry, who was able to bring in a budget that was acceptable to the people.
MARYLAND.

Agriculture.—For several years the farmers of Maryland have complained of what was called the elevator monopoly—a practical protection accorded by the Canadian Pacific Railway to elevator owners, by which encouragement was given to the building and operation of the elevators in such a way as to place the shipping of grain at important points almost entirely in their hands. No one could ship grain in bulk, on cars, except through the elevators, and the capacity of the latter had to be at least 25,000 bushels, thus doing away with small warehouses. The system therefore complained of was that by which various charges and exactions which they deemed unfair. A commission of inquiry was appointed, and on April 4 it reported to this effect: "We consider that proper relief from the possibility of being compelled to sell under value and being unadvisedly docked for clearing is only to be had by giving the fullest obtainable freedom of site and shape; and it should not be required that they require railways to furnish cars to farmers for the shipping of their own grain, and should allow the establishment at shipping points, if required, of flat warehouses, under proper regulations, by means of which a farmer who can not conveniently load on cars direct can, for a comparatively small sum, obtain for a limited number of days the use of a bin of the capacity of a car load. Though the furnishing of cars to farmers has been given as a privilege, they should with proper restrictions enjoy it as a legal right."

The crops of 1899 in this province exceeded all previous production. Wheat yielded 27,922,290 bushels; oats, 18,378,356 bushels; potatoes, 3,226,395 bushels, and various kinds of roots, 2,670,108 bushels, with a scattering production of flax, rye, and peas. The total was, in round figures, 62,000,000 bushels, against 53,000,000 in 1898. The number of horses in Maryland in 1899 was 102,655; of cattle, 220,248; of sheep, 660,697; and hogs, 447,040. The crops exported were 12,000 in number, the stockers 3,500, and the total value of dairy products was $470,559. In 1900 the crops were good, but exact figures were not available at the time of writing.

MARYLAND, a Middle Atlantic State, one of the original thirteen, ratified the Constitution April 28, 1788; area, 21,156 square miles. The population, according to each decennial census, was 317,728 in 1790; 341,548 in 1800; 380,546 in 1810; 407,350 in 1820; 447,010 in 1830; 470,019 in 1840; 583,034 in 1850; 687,049 in 1860; 789,894 in 1870; 934,543 in 1880; 1,042,390 in 1890; and 1,190,650 in 1900. Capital, Annapolis.

The government is the State officers during the year: Governor, J. Walter Smith; Secretary of State, Wilfred Bateman; Comptroller, Joshua W. Hering; Treasurer, Murray Vandiver; Adjutant General, John S. Saunders; Attorney-General, Isidor Rayner; Superintendent of Education, M. Bates Stephens; Commissioner of Insurance, Lloyd Wilkinson; Commissioner of Public Lands, E. Stanley Toadvin—all Democrats; Chief Judge of the Court of Appeals, James McSherry; Associate Judges, David Fowler, A. Hunter Boyd, Henry Page, I. Thomas Jones, John B. Briscoe, Samuel D. Schmucker, and James A. Pearce; Clerk, Allan Rutherford—all Democrats except Schmucker and Rutherford, Republicans.

Population.—The following table exhibits the population of the State by counties, as deter-
Maryland.

Coal.—The total coal production of the year 1900 was 3,900,000 tons, against 5,080,248 tons in 1899. The value of this coal was $4,173,000, compared with 1899, when the production was valued at $4,318,211. The coal in 1900 was worth on an average $1.07 a ton at the mine, while in 1899 it was worth only 85 cents a ton at the mine. The reduction in the output was due to the strike of the United mine workers, which lasted four months. The mine workers demanded 60 cents, but failed, and after four months of idleness returned to work at 55 cents a ton. An inadequate car supply interfered with the shipments of coal subsequent to the resumption of work. The shipments of coal over the Baltimore and Ohio Canal during the season aggregated 17,500 tons, compared with 192,423 tons in 1899.

Mason and Dixon’s Line.—In 1900 the re-
survey of the famous Mason and Dixon’s line was begun by the United States Coast and Geo-
detic Survey, under the authority of a resurvey 
designated under the acts of Pennsylvania and Maryland for 1899 without expense to the States, but $5,000 was appropriated by each State to be devoted to the expenses of subordinate members of the survey to the purchase and, location of the monuments, and other contingent expenses connected with the actual marking of the line. The history of the original running of the famous Mason and Dixon’s line was the result of an agreement between the Colonies of Pennsylvania and Maryland in 1763, after protracted negotiations. There had been a conflict in the grants of Maryland and Pennsylvania, and there were other complications affecting the titles. The Penns were fortunate in hav-
ing first the advantage of the court, and Calvert was finally coerced into con-
ceding everything Penn demanded. The original grant to Calvert placed the northern limit of his domain at the fortieth parallel, while the grant to Penn placed his territory north of Maryland. The map of Virginia made by John Smith was represented at the fortieth parallel as the boundary line, now the head of the navigable waters of the Susquehanna, and it was urged by the Penns that the spirit of the grant, based upon the assumption that Smith’s map was used, should be followed rather than the letter of the charter, which permitted Lord Baltimore to gov-
ern the inhabitants of the principal settlement in Maryland. On the other hand, the Calverts insisted upon the letter of the grant. A com-
promise resulted, and the claim for a portion of Pennsylvania was abandoned by Lord Baltimore. At that time a commission was appointed to sur-
vey the line between the two colonies, but its progress was so slow that Charles Mason and James Dixon were engaged to complete the work. They arrived in Philadelphia in November, 1764, and began their survey in the following spring. They continued work two years, reaching a point 244 miles from Delaware river and 36 miles short.

* Decrease.

Finances.—According to the report of the Comptroller for the fiscal year ending Sept. 30, 1900, the total treasury receipts were $3,625,493,-
42, which, together with the balance of $707,226 in the treasury on Sept. 30, 1899, and $206,326.80 to the credit of the funds account, makes a total of $4,536,746.22. The disbursements aggregated $3,480,534.26, being $169,180.81 less than in 1899. This decrease is accounted for by the fact that there was paid during the fiscal year of 1899 the "consolidated loan of 1899" $522,579.14 which was the proceeds of the bonds issued. The receipts for 1900 to the sinking funds, including the balances to the credit of those funds on Sept. 30, 1899, aggregated $866,587, and are held in the sinking funds for the benefit of the loans mentioned, as follows: Consolidated loan of 1889, $523,587; penitentiary loan, $113,000; insane asylum loan, $25,000; general sinking funds, $25,-
000; total, $666,587; deduct balances Sept. 30, 1899, $374,813.18; actual receipts, $311,773.82. The funded debt was shown to be at the close of the fiscal year $6,309,326.13, an increase of $600,000. This increase is accounted for by the issue on July 1, 1900, of the "State building improvement loan," amounting to $300,000, and authorized by the Legislature in 1900. As an offset to this interest-bearing debt, the State holds bonds, stocks, and cash aggregating $3,424,057, leaving the net debt on Dec. 30, 1900, $2,885,269.13.

River and Harbor Improvement.—The Na-
tional Government authorized the expenditure of $221,000 for the improvement of Spring Gardens Channel in Baltimore, with an appropriation of $88,000 for the coming fiscal year. The total appropriation for the harbors of Maryland amounted to $113,000, and in addition to the improvement of Spring Gardens Channel there was authorized the expenditure of $5,000 each for Cambridge, Rockhall, Queenstown, Clayborne, and Bruneau Bay. The appropriation for the improvement of the rivers in Maryland were as follows: Choptank river, $8,000; Chester river, from Crumpton to Jones’s Landing, $5,350; Warwick river, $2,000; Pocomoke river, $3,000; Elk river, $10,000; Patuxent river, $8,000.

# JOHN WALTER SMITH, GOVERNOR OF MARYLAND.
of the northwest corner of Maryland, when their Indian guides left them, and they abandoned the work, without completing it many years afterward by other sunrovers. Mason and Dixon did their work with the utmost care. Through the forests they cut a "vista" 8 feet wide, and set up a stone at the end of each mile. Every fifth stone was larger than the others, and had on the north side the arms of Thomas and Richard Penn, and on the south the arms of Frederick, Lord Baltimore. The intermediate stones have the letter "P" on the northern and "M" on the southern surface. These stones were housed as far as Fort Frederick, in Washington County, and it was found impossible to carry them farther through the mountains. The removal of many of the historic landmarks left the boundary line between Maryland and Pennsylvania in doubt in places; and it is to remedy this, as well as to perpetuate the historic line, that provision was made for the resurvey.

Legislative Session.—The regular biennial session of the Legislature began on Jan. 3, and continued until April 2. As elected, the Senate composed of 55 Democrats and 32 Republicans. The Senate chose as its President John Hubner, Democrat, in preference to Stephenson A. Williams, Republican, while Lloyd Wilkinson, Democrat, was named Speaker of the House in preference to James De B. Walbach, Republican. The Democrats' cut off 13 opponents in the Senate before the Legislature, of which 790 were passed by both houses. Among the more important measures that were enacted are the following:

Organizing the Board of Police Commissioners of Baltimore by taking the election of commissioners out of the Legislature, legislating this measure, and then presenting the bill to the Governor for his approval. The bill also consists of 1,422 sections, and the House passed it before the Legislature, of which 790 were passed by both houses. Among the more important measures that were enacted are the following:

Creating a Board of Police Examiners, consisting of 3 members, to be appointed by the Governor, with a salary of $500 each, and with authority to appoint police officers. The bill consists of 1,422 sections, and the House passed it before the Legislature, of which 790 were passed by both houses. Among the more important measures that were enacted are the following:

Organizing the Board of Police Examiners, consisting of 3 members, to be appointed by the Governor, with a salary of $500 each, and with authority to appoint police officers. The bill consists of 1,422 sections, and the House passed it before the Legislature, of which 790 were passed by both houses. Among the more important measures that were enacted are the following:

Increasing the present force by 80 policemen, 10 detectives, and 1 lieutenant of mounted police. This bill will increase the cost of the police department more than $75,000 a year.

Authorizing an increase in the number of directors of the United Railways Company of Baltimore. It has a clause protecting the rights of the city, and requiring the principal office to be in Baltimore.

Repealing the clause of the new charter which authorizes the street car companies to charge 3 cents for transfers, and re-enacting it so as to require free transfers to be given under certain restrictions.

Appropriating $3,000 annually, and empowering the Governor to employ an expert to examine the books of officials who have to account with the State treasury, and also those of institutions receiving State aid. This is the so-called State Auditor bill.

Reducing the price of gas in Baltimore from $1.25 to $1.10 for 1,000 feet.

Reorganizing the boards of county school commissioners and providing new boards to be appointed by the Governor.

Requiring employers to give employees time to vote.

Creating a board of charities to hear all applications for State aid by charitable and educational institutions.

Amending the charter of Baltimore, by authorizing the Mayor and Council to abolish the Water Registrar's office, and in several other particulars.

Giving the city three fourths of the money received for the liquor licenses paid by the clubs in the city.

Taxing spirits in bond. This is to meet the decision of the Court of Appeals declaring a former law invalid.

Two constitutional amendments which, if approved by the people, will give the city of Baltimore another legislative district, one additional Senator, and six delegates.

Creating the office of State Superintendent of Education, with a salary of $3,000 and expenses.

Political.—In the election in November the vote for the presidential electors was as follows: Republican, 136,212; Democrat, 122,271; Prohibition, 4,582; Social Democrat, 908. Out of a total vote of 264,511, the Republican candidates received 62,026 more votes than the Democratic candidates. The three representatives for Congress were voted for with the following results: First District, William H. Jackson, Republican, who received 19,714 votes, against John P. Moore, Democrat, who received 18,173; Second District, A. A. Blackney, Republican, 27,710, as against J. F. C. Talbott, Democrat, 27,420; Third District, Frank C. Wachter, Republican, 21,541, as against Robert F. Leach, Jr., Democrat, 19,570; Fourth District, Charles R. Schirn, Republican, 21,932, as against J. W. Denny, Democrat, 20,149; Fifth District, S. E. Mudd, Republican, 20,866, as against B. H. Camaleri, Democrat, 17,305; and Sixth District, George A. Pearre, Republican, 22,688, as against Charles A. Little, Democrat, 20,161.

MASSACHUSETTS, a New England State, one of the original thirteen; ratified the Constitution Feb. 6, 1788; area, 8,315 square miles. The population, according to each decennial census, was 378,750 in 1790; 425,845 in 1800; 472,040 in 1810; 523,150 in 1820; 1,190,890 in 1830; 1,231,066 in 1840; 904,514 in 1850; 1,231,066 in 1860; 1,457,351 in 1870; 1,733,085 in 1880; 2,238,943 in 1890; and 2,805,346 in 1900. Capital, Boston.

Government.—The State officers during the year were: Governor, William Murray Crane; Lieutenant Governor, John L. Bates; Secretary of State, William M. Ofen; Treasurer, E. W. Bradford; Auditor, John W. Kimball; Attorney-General, H. M. Knowlton; Secretary of the Board of Education, Frank A. Hill; Secretary of the Board of Agriculture, James W. Stockwell; Insurance Commissioner, F. L. Cutting—all Republicans; Chief Justice of the Supreme Court, Oliver Wendell Holmes; Associate Justices, J. W. Knowlton, James M. Morton, John Lathrop, James M. Barker, John H. Hammond, and William C. Loring.

Population.—The population of the State, according to the Federal census of 1900, is 2,805,346—a gain in ten years of about 25 per cent. Of the 14 counties, 12 show gain and 2 decrease. The figures, by counties, for 1890 and 1900 are as follows:

Of the 33 incorporated cities in Massachusetts, 8 have between 12,000 and 20,000 inhabitants, 5 have between 20,000 and 25,000 inhabitants, and 20 have more than 25,000 inhabitants. All the 20 principal cities show an increase in population since 1890, the largest percentages being 53.5 for Somerville and 53.2 for New Bedford, and the smallest (3.9) for Gloucester. In 1890, with 500,595 inhabitants in 1890, shows an increase of 25 per cent, since 1890, which is a slightly higher rate of increase than that for the preceding decade, when it was 23.6 per cent. Worcester, the second largest city in the State, had a population in 1900 of 118,421, compared with 84,655 in 1890, constituting an increase during the last ten years of 41,414 or 48.3 per cent. Fall River, with 104,863 inhabitants, is the third city in the State, and shows an increase since 1890 of nearly 41 per cent. Lowell, with 94,969, and Cambridge, with 91,886 inhabitants, rank fourth and fifth among the cities of the State, the next largest city being Lynn, with a population in 1900 of 68,513.

The gross debt of the State is divided into two classes—the indebtedness for which the whole State is directly liable and the indebtedness for the payment of which certain cities and towns are liable. These two classes of indebtedness may be described as the actual State debt and the contingent debt. From each of these classes of funds there has been deducted the accumulations in the sinking funds applicable to them, in order to show the net actual State debt and the net contingent debt. The actual State debt is made up of the following loans: Abolition of grade crossings loans, $8,000,000; Fitchburg Railroad securities loan, $5,000,000; harbor improvement loan, $8,000,000; Fitchburg Armory loan, $1,230,000; Medfield Insane Asylum loan, $1,025,000; metropolitan parks loan, series two, $1,512,500; State highway loan, $3,100,000; four Statehouse loans, $6,155,000; Boston, Hartford and Erie Railroad loan, $973,30; total actual State debt, $26,996,423.30.

The sinking funds applicable to the actual State debt are: Abolition of grade crossings loan sinking fund, $718,147.11; Fitchburg Railroad securities loan sinking fund, $10,000,000; Boston, Hartford and Erie Railroad loan sinking fund, $973.30; harbor improvement loan sinking fund, $712,500; Fitchburg Armory loan sinking fund, $1,230,000; Medfield Insane Asylum loan sinking fund, $220,559.85; prison and hospital loan sinking fund, $41,906.26; State highway loan sinking fund, $283,333.99; Statehouse loans sinking fund, $3,583,011.85; Massachusetts war loan sinking fund, $87,644.21; total, $15,292,256.85.

One of the Statehouse loans ($2,335,000) will become due July 1, 1901, and will be paid out of the Statehouse loans sinking fund.

The contingent debt is as follows: Armory loan, $1,460,000; metropolitan parks loans, $8,317,500; metropolitan sewerage loans, $8,265,912; metropolitan water loan, $21,000,000; total, $39,043,412.

The accumulations in the sinking funds applicable to the payment of the contingent debt, are: Armory loan sinking fund, $435,718.67; metropolitan parks loan sinking fund, $467,288.13; metropolitan sewerage loan sinking fund, $454,520.57; metropolitan water loan sinking fund, $1,573,616.72; total, $2,931,147.09.

The contingent debt of $36,112,264.91, $34,652,264.91 is to be paid by the cities and towns in the metropolitan water, parks, and sewerage districts. This sum will be increased many millions by loans already authorized but not yet issued.

The Statutes.—In 1896 a commission was appointed to consolidate and arrange the statutes. The work has been completed, and is in the hands of the printer.

Education.—The public schools were kept open in 1900 on an average nine and a half months—a month and a half more than the law requires. The total expenditure on school support, exclusive of buildings, was $10,677,486; for buildings, $3,148,757. Of the total expenditure for both purposes, all but $275,849 came from local taxation. The local taxation for school support amounted to $3.62 for each $1,000 of the State's valuation, or the same as in 1899; for school buildings, to $1.09, or exactly one fourth as much as in 1899.

In the spring a fund of $50,000, guaranteed by Harvard University, was raised for the purpose of bringing 2,000 Cuban teachers to attend the Harvard Summer School, and that number of teachers came. Phillips Brooks Memorial Hall was kept open for the exclusive use of the woman teachers, with a liberal appropriation from the Legislature. Most of the instruction was given in Spanish.

By the will of the Hon. Dorman B. Eaton Harvard University has a bequest of $100,000, to found a professorship of the science of government. The States that had more than 100 students in the university in 1900 were: Massachusetts, 2,408; New York, 450; Ohio, 153; Pennsylvania, 140; Illinois, 118.

Civil Service.—The Civil Service Commissioners report an increase in the number of applicants examined for the classified public service of the Commonwealth and the cities. There are now under the protection of civil service rules about 8,000 public employees, with an aggregate compensation of approximately $8,500,000. The Governor recommends that the Legislature give the commissioners more authority to deal with violations of the law.

The Insane.—In his message, Gov. Crane says there is urgent need of additional accommodations for the increasing number of the insane in the hospitals and asylums. To remedy this condition, many meetings have been held, and great public interest has been shown in the subject. The Board of Insanity, in its report, recommends the adoption of a policy to reduce overcrowding by 100 each year, and at the same time to provide for the annual increase of 300.

The Statehouse.—The cost on construction accounts of the Statehouse extension is $3,522,313.79; for the restoration of the Bullfinch front, $335,496.37; cost of lands purchased, $1,669,599.88; cost of furniture, $576,466.93; total cost of land, buildings, and furniture, $6,104,116.97. The Governor says: "All the bills have been paid, and the unexpended balance will be quite sufficient to cover the cost of building the 'Phillips Brooks Memorial Hall.'"

Political.—At the election, in November, the following State officers—all Republicans—were chosen: Governor, Winthrop Murray Crane; Lieutenant Governor, John L. Bates; Secretary, William M. Olin; Treasurer, Edward S. Bradford. Attorney General, Henry R. Tower. The Attorney-General, Hosa M. Knowlton. To the Executive Council 7 Republicans and 1 Democrat were chosen. The Senate consists of 32 Republicans and 8 Democrats; the House of 177 Republicans, 60 Demo-
METALLURGY. (IRON AND STEEL.)

351

erats, and 2 others. Of the 13 Congressmen elected, 10 are Republicans. The vote on presidential election was 356,000 for Bryan and 254,000 for McKinley.

METALLURGY. Iron and Steel.—Having mentioned the part played in the industrial evolution of the world by the iron and steel metallurgists as evident to all, Sir W. C. Roberts-Austen said in his address at the meeting of the Iron and Steel Institute that the fact that they have contributed with commensurate success to the advancement of pure science is less generally known. He therefore spoke of some of the instances in which this had been the case. The carburization of iron offered the first example in which the diffusion of solids in solids had been observed. The study conducted by metallurgists of the associate phenomena of individual solid forms enabled either elementary bodies or compounds to react on each other. Habituably conducting operations at high temperatures, which often inverted ordinary chemical reactions, had led to the acquisition of a mass of information as to the relations that occur and of the compounds that are formed under such conditions. Pyrometric records had, moreover, enabled the equilibrium of the less fusible metals in their liquid as well as their solid state to be studied—a branch of work which chemists generally have not been in a position to undertake. The necessity of submitting the physical and mechanical properties of iron and its alloys to rigorous tests as a routine operation in the laboratory has been a powerful incentive to the molecular constitution not only of metals, but of matter generally. Metallurgists have to deal with cases in which a mass of metal is acted upon by added matter in proportions that are too minute to intervene directly by the formation of chemical compounds with the whole of the material under observation. The influence of the atom must therefore, be more or less directly exerted. The author believed that the most comprehensive view possible to take of the achievements of British and French investigators and experimenters admitted of concise expression in the brief statement that the main and iron-stores to meet the complicated case yet known, and indeed the only one which had been worked out, of metallic solid solutions. It presented, moreover, a unique instance of the importance of allotropy in connection with metals. Metallurgists had carefully investigated, and conducted daily operations of vast industrial importance, to do this the material is finely crushed in a new ball mill. The separator comprises two rotating cylindrical portions—the separator proper and the discharging drum. The former comprises four circular electro-magnets, with ends separated by brass rings, but brought together at the shaft. The discharging drums consist of eight concentric rings of soft iron pins, set in the wooden drum. Pulver is conveyed to the magnets, which attract the magnetic part, while the nonmagnetic part flies away. The points of the discharging drum receive temporarily induced magnetism as they approach the magnets. The result of this arrangement is that particles of iron ore adhering to the magnets are transferred to the former. From the magnets they lose their induced magnetism, the grains drop off, and are thus delivered to a separate trough, by means of which they are carried away. The process is automatic, and one workman can look after several separators.

In a paper on the use of finely divided iron ore obtained by a new process, Mr. E. J. Wiborg, of Stockholm, said that the advantage arising from magnetic and other methods of separation was very largely qualified by the circumstance that the product or concentrate was usually obtained as a comparatively fine powder, which limited its utility to the smelter when compared with that of similar or even poorer ore obtained in large masses. The question, therefore, of how such material could best be applied was now becoming of importance. The author showed how this concentrate could be utilized by direct addition to the charges in the blast furnace by agglomeration previously to charging as a reducing agent. The former is used for sponge iron in the open-hearth furnace, and for the production of sponge iron for use in the open-hearth furnace. The paper concluded with an account of a furnace the author had designed for reducing pulverulent ores.

A new mechanical apparatus for casting sandless pig iron is described by Mr. R. Wainfold, of Stoke-on-Trent, as capable of maintaining a good and of producing sponge iron made in sand beds at a very reduced cost of production. It is competent to deal with 60 tons of iron per hour; and, assuming that the workmen have eight-hour shifts, the labor cost is about a half penny per ton cast.

From results obtained in his regular business practice rather than from laboratory experiments, Mr. Charles James has found that in annealing white iron the only change effected is one of con-

Speaking of the several universal expositions that have been held in Paris, the author said that the improvements contributed through the labors of Bessemer, Siemens, Converse, and Armstrong. In 1878 the extraordinary development of the new processes had attained was shown, and the quantity of the new products was remarkable. Then came the period during which the quality of material improved, and the metallurgical exhibits in 1889 showed that a high point of perfection had been reached, and that West of manufacturing. Some of the improvements contributed through the labors of Bessemer, Siemens, Converse, and Armstrong.
dition in the carbon, a large proportion of which passes from the combined into what is for convenience called the graphitic state, although the condition is different from that of graphite either as found free in nature or as modified out from gray iron during cooling. The substance is an allotropic form of graphite. With the purifying with what Ledebur has called "tempering graphitic carbon," and differs from graphite and iron amorphous carbon in specific gravity, specific heat, and calorific power. It can, however, be separated from the iron and chemically determined in the same manner as graphite. The author found, contrary to a statement of Ledebur that the allotropic graphite hardened and tempered exceedingly well, and when not fully developed by overannealing the whole of the carbon will pass into the hardening state and leave the iron without a trace of free carbon. By prolonged heating this allotropic form becomes changed into graphite identical with that found in gray iron, when it occupies a similar position in the iron structure and is very injurious to the physical qualities of the material. The effect of other components of iron on the carbon change has been investigated by the author as to silicon, manganese, and phosphorus. Silicon and manganese exert great influence upon the carbon during the process. The presence of the carbon is a necessary condition of the change. Indeed, the relative amount of carbon that can be changed from the combined to the graphitic state during annealing seems to be directly proportionate to the amount of silicon present. The influence of manganese is not so readily marked as that of silicon. Action is further performed by the author's high silicon which always accompanies high manganese. Comparatively high manganese, however, assists the change and shortens the time necessary for its completion. The action of silicon is apparently of an essentially different character from that of manganese. That of silicon is direct upon the carbon, while the influence of manganese is only indirect through the silicon by protecting it from oxidation during the melting of the iron, and so causing the percentage of silicon in the casting to be higher than it would be if the manganese had been more completely oxidized from the bath. In every case irons low in silicon and manganese are practically worthless after annealing. That which may be lost may be replaced so as to machine easily, but are always deficient in tenacity. They generally have a white fracture, in appearance like that of a 30-per-cent. carbon Bessemer steel bar. Low carbon—at least comparatively low carbon—does not prevent the change in the carbon condition from taking place. The change can also be produced by the author's method of annealing in other combinations of iron and carbon than white iron. The carbon change described, though gradual, was found to be extensive throughout any given section of the casting.

The results of the researches of Dr. A. Stansfield into the solution theory of carburized iron are that carbon is less soluble in iron when presented in the form of graphite than when presented in the form of cementite, and that the apparent reversal of this in steel is due partly to the absence of nuclei of graphite, on which further deposits might take place; partly to the length of time required for the separation of the graphite, involving as it does the gradual passage of carbon through the iron to reach the nuclei; and partly to the mechanical pressure which must oppose the formation of graphite in solid steel.

In his experiments on the effect of aluminum on carbon in cast iron, H. W. Waldron has observed that, as compared with silicon, traces of aluminum have a greater effect in producing graphite in the material, although the whole of the carbon is never thrown down as such by it, as occurs with silicon when present in active quantities. With phosphorus, practically no separation of graphite takes place. A few comparative tests showed that 0.35 per cent. of aluminum reduced the resistance by nearly 60 per cent. when slowly cooled, and that further quantities still rendered the metal soft, but not quite so much so. Rapid cooling increased the amount of compression of those alloys, but not in anything approaching the original strength of the cast iron.

One of the features of the Paris meeting of the Iron and Steel Institute was a demonstration by Mr. J. E. Stead, of Middlesborough, of the ways in which iron is affected by phosphorus, more especially in conjunction with carbon. According to the late Dr. Perry, there are at least seven definite chemical compounds of phosphorus and iron. The way in which carbon drives out phosphorus was illustrated in a manner which may possibly lead to further important results. Mr. Stead pointed out that the white constituent in gray iron was formerly looked on as carbide, but it was found on experiment that it was a phosphide. He exhibited a highly phosphoric specimen of iron having crystals from 1/2 to 2 inches across. He explained how, following the researches of Sir W. C. Roberts-Austen and of Dr. Stansfield, he accounted for brittle and imperfect steel by the formation of a eutectic alloy. The substitution of carbon steel by iron, which is so obscured by the general practice, that steel might be welded together without pressure by placing plates of steel together with layers of phosphide between, and he had succeeded in obtaining this result. He explained, however, that the junction was more in the nature of a brazed joint than a weld.

From experiments with wrought iron and various steels exposed to sea water, river water, and the weather for two periods of about a year each, H. M. Howe has drawn the conclusion that the difference in the rate of corrosion between wrought iron and soft steel is rarely enough to be of much moment, except in the case, perhaps, of marine steam boilers; and that the ratio of corrosion of wrought iron and soft steel may vary greatly with the conditions of exposure. In view of the widespread belief that wrought iron oxidizes less readily than soft steel, the author puts forward a theory, based on the different protective powers of the "cinder" or "scale" flakes in wrought iron and the cementite flakes in soft steel, to explain the discrepancy between the belief and the results obtained in his experiments.

The question of the most desirable form of steel ingot for gun tubes and propeller shafts was dealt with at the spring meeting of the British Iron and Steel Institute in a paper by Mr. F. J. R. Carulla. Although the circular form of ingot possesses many advantages, it has the serious drawback of being liable to develop skin cracks during cooling. The author said that the octagonal ingot, said to have been used in the gun factories at Woolwich, was a sounder form, but a hexagon was better, and a square section the best. The form of ingot which had come into use, but not so far as to be generally used, was a sectional form of section with concave sides, each of which offered the resistance of the arch to pressures arising from within, and which are set up by the expansion of the metal in cooling.

The Taylor-White tool-steel process in use at
The shops of the Bethlehem Steel Company, while the details of it have not yet been published, is understood to be a special heat treatment of a particular quality of iron, obtained from a special composition. Steel treated by this process has the quality of retaining a degree of hardness at a red heat, and it is possible for tools made of it to cut at a speed great enough to heat the point of the tool to redness. Cutting steel with a tool thus treated leaves an unusually smooth surface on the cut, and greatly lessens the labor of finishing. This special steel forges so readily that tools of difficult and irregular shape can be made from it. A simple rapid method of annealing the steel has been found by which tools may be easily machined to shape, making it applicable to twist drills, chasers, inserted cutters, etc. The investigation was reported to Mr. A. L. Colby, as described by him in a paper presented to the American Section of the International Association, to show that small percentages of copper have no deleterious effect upon the physical properties of steel. Experiments made with steel containing 0.50 per cent. of copper upon strength and elongation resulted satisfactorily, as also did those with high carbon steel having a similar copper content. Bars containing this proportion of copper responded well to bending and quenching tests, but some bars bent transversely to the direction of rolling developed cracks. The material was successfully welded. Experiments were referred to which showed that copper has little tendency to segregate, and it may be safely assumed that good steel may contain as much as 1 per cent. of copper without suffering, provided only that the sulphur content is not too high, in which case the metal is liable to crack in rolling. But even if the proportion of sulphur is as large as 0.05 per cent. in steel in which as much as 0.75 per cent. of phosphorus is present, the deoxidation is not dangerous, so long as the steel is not excessively cooled. The investigation by the Bethlehem Steel Company of the iron of 17,002 tons, the besi- 

ding the labor of finishing. This special steel forges so readily that tools of difficult and irregular shape can be made from it. FACTORY, one of its results is the illustration it affords of the fact that steel possesses a complex structure that can be studied with the microscope; that this structure varies greatly with the mechanical and thermal treatment to which it has been subjected; and that the durability of the rail depends on its structure. It was found from the mechanical tests that rails generally break near their ends, owing to inner strain; the exception to this is the Middle Atlantic. The deposits, which they can not be called seams, are generally found along certain definite lines, the ore occurring in lenticular masses, sometimes overlying and sometimes alone, but always inclosed in clay. On account of its intimate association with clay, this ore universally requires washing to remove the clay. The irregular shape of the size in which it occurs (from the size of a pinhead to boulder), the richness of the material, and the sand rock or "white horse" encountered are mentioned by Mr. J. C. Foster as some of the uncertainties to be contended with in working the ore. The percentage of iron varies widely in different localities from 95% in Pennsylvania and Virginia to an average of 50% per cent, in the furnace at Sheffield, north Alabama, and adjacent parts of Tennessee; and within this monthly or yearly average it ranges greatly from day to day.

Among the conditions enumerated in an article in the Chemiker Zeitung as indispensable for a protective coating for iron ships that shall meet the requirements of service are that the composition should protect the ship a hull from corrosion; that it should form a smooth surface, so as to decrease the friction; and that it should dry quickly, so that the cleansing of the submarine parts of the hull upon completion of the vessel can be done in a single day. In new steel vessels the black scale on the plates must be removed before applying the coating. Preference is given among the paint compositions which have been used for this work to that proposed by Rahtjen, which consists of a solution of shellac in spirit as the vehicle; of oxygen and a small proportion of linseed oil, for the first or insulating coating, and the same materials with the addition of arsenic and quicksilver for the second coat. These compositions are highly commended for their permanency—for the shellace vehicle is but little acted upon by the salt of the sea water. The attachment of this growth to the hull is prevented by the slow action of the sea water on the mercury of the second coating, causing the formation of the poisonous mercureic chloride. These paints have the further advantage of drying quickly. Their defects arise from the smallness of the quantity of mercury that can be incorporated and the gradual decrease of their effectiveness through the slight solubility of the shellace. Copper and zinc paints have been found the best mineral poisons to incorporate with the paints.

The most severe tests of the durability of preservative paints for iron work, as described by Mr. Harry Smith before the Newcastle section of the Chemical Society, consists of painting shallow dishes with the pigment and filling them with water, which is allowed to evaporate slowly. The red lead paints came best out of this trial, being practically unaffected. The zinc whites and white leads came next. All the other paints suffered badly, boiled oil the worst. When painted iron slips were merely exposed to the weather, and when the slips were constantly immersed in water, the results were similar. Good iron oxide was not far behind the lead and zinc paints. Iron oxide makes a tougher paint than red lead, and is, further, more convenient to use. The Fontenay Bridge ironwork was cleaned and painted outside at intervals of three years with a mixture of red lead and iron oxide paint, followed by a finishing coat of brown oxide paint. Where the salt water sprays the ironwork, this is scraped and painted once a year.

Gold, Silver, and Platinum. Speaking in the Institute of Mining and Metallurgy on the readiness with which a little grease affects the conditions of gold washing, W. S. Welton remarked that the mere touch of a speck of gold with the finger will cause the gold or sand to rise to the surface of water, where it continues to flow. The effect is apparent by bringing two particles of grease from the fingers becoming attached to the particles. The disastrous effects which may be produced in amalgamation of gold or silver by a minute particle of oil, petroleum, or resin in the water are remarkable. These substances appear to be specially attracted by gold and mercury, and for this reason, at hydraulic mines, it has been found advisable to wash clothes, dishes etc., in ditches and streams, and pumping into ditches and sluices. Mercury contaminated with grease or resin becomes sluggish in running. Comparatively large grains of gold will float upon its surface without becoming amalgamated. The brightness of the metal is changed to a dull black, or "flour" easily. Distillation will not purify mercury from grease or resin, for that goes over too. The author has found great benefit from mercury in a strong solution of potash obtained by leaching wood ashes. Flouring and "sickening" are thus overcome, and the yield of gold is much increased.

In the process of J. Diether and M. Merz for winning gold from refractory ores the ores are mixed with alkali sulphide and sulphur, or with substances that yield those products when heated, and the mixture is raised to a red heat, which is kept up for a short time. It is then leached out with water. The gold is precipitated together with a gelatinous mass of colloid material or in a pulvurulent condition, and may be separated by means of a filter press or otherwise.

Telluride or other ores in which the gold is or appears to be combined with such an element as tellurium, antimony, arsenic, etc., is treated by the Golden Link Consolidated gold mines in closed vessels with sufficient solution of a polysulphide of an alkali or alkaline earth metal, to dissolve the tellurium and other bodies without extracting any gold. When heated to from 100 to 200°C. in the closed vessel, and thus exposed to the combined action of heat and pressure for from one to two hours, the action should be complete, especially if agitation is resorted to. The solution contains the tellurium, which may be recovered from it, and should have extracted no appreciable amount of gold. The residue containing the whole of the precious metal may, after cooling, be treated with cyanide or otherwise.

In May's gold extraction process, the ore after being crushed is exposed to the action of a solution of caustic alkali or alkaline carbonate con
tained in specially designed vats, heated by waste steam, and kept in a state of agitation for from one to three hours. By this means the extraction of the total silver from the stock solutions is greatly facilitated. Ores, slimes, etc., after being subjected to the action of the chemicals, are ready for treatment by amalgamation.

It has been observed by W. Witter that at a gold mill in the province of Smålând, Sweden, where the water used in the stamp mill is taken from a river containing muddy or slaty water, the amalgamation of the ores takes place without difficulty in seasons of full water, at periods of low water and when the weather is dry the copper plates are covered with a green slime, which almost prevents the mercury from taking up any gold. This effect of the water remained, notwithstanding all the methods employed to counteract it. As soon as the green slime was rubbed off the plates it formed again rapidly, and it finally became necessary to stop amalgamation during the dry season. Yet experiments made in the laboratory at Hamburg with exposure of bright copper plates to the water led to no result.

In a course of Cantor lectures before the British Society for the Promotion of Chemistry, Mr. A. S. Cole touched on the amalgamation of metaliferous deposits, Mr. Brean and A. Brough said of gold, that in 1898, of a total product of £57, 500,000, the Transvaal produced 27.6 per cent., Australasia 22.5 per cent., the United States 22.1 per cent., Russia 8.5 per cent., Canada 4.8 per cent., Mexico 3 per cent., India 2.7 per cent., and China 0.8 per cent. As far as is known, the only production in Australia, and the United States together produced 72 per cent. of the entire. In view of the present conditions and prospects, the lecturer concluded that there were no signs of failure in the world's gold production.

For the treatment of gold and silver containing copper ores, mixtures of zinc, for which ordinarily retorts are not suitable, B. Sadler has patented a peculiarly constructed retort. It has a body of fire clay or equivalent material with its inner surface coated with a sintering substance adapted to combine chemically under suitable firing with the fire clay and also with the basic material. The sintering substance is coated to some extent on the more exposed parts of the outer surface of the fire clay. A further lining or coating of basic matter is then applied to the fire clay. The entire body is subjected immediately after using to firing at a temperature ranging about 1,500 ° F. for two or three days. With a retort of this nature the ore solution of copper can be satisfactorily freed from zinc by distillation, while the gold, silver, copper, iron, and about 60 per cent. of the lead are left in the residue, which, being oxidized and containing some carbon, is suitable for treatment in a smelting furnace. The patentee defines as the essential feature of his process the conducting of the distillation under such conditions as will produce in principle the same chemical combinations which would result if the oxides or corrosive agents had access to the fire clay or other ingredients of the retort for which they have chemical affinity, and in combination with which their action would be destructive.

The German official tests for silver-plated goods are characteristic. Two hundred and ten grams of the matte reagent is a mixture of equal weights of potassium bichromate and nitric acid. A drop of this liquid on the plated surface leaves a brown or red stain on the silver. This reagent, even in a dilute form, is not available when the coating of silver is very thin. The sulphide reagent is a 1.5 per cent. solution of sodium disulphide. A drop of this should leave a gray stain, but the results are often very doubtful. A. Munkert proposes dissolving the layer of silver from the goods and testing the solution. The best solvent is a mixture of nitric acid and hydrochloric acid 1:10. The solution is reduced with hydrogen, the metals being filtered off, while the excess acid is driven off and the silver is precipitated with sodium thiosulphate. A little of the solution is then filtered off and treated with hydrochloric acid to dissolve the silver. It may be added that both acids being free from chloride. The metal to be tested is cleaned with alcohol and ether or chloroform, and is then placed in a dry test tube and covered with the acid mixture. The silver coating dissolves readily in the cold, and when the solution of the 5 underlying metals, silver, becomes visible the acid is poured off, diluted with twice its volume of water, and one or two drops of dilute hydrochloric acid 1:10 are added. The extent of the turbidity viewed against black paper is to some extent an indication of the quantity of silver, but in the case of large articles the silver may be estimated quantitatively.

Of 105,000,000 ounces of silver extracted in 1898, Mexico produced 34.4 per cent., the United States 33 per cent., and Australasia 7.3 per cent. Less than half the world's supply was obtained from silver ores. The remainder was procured from the metallurgical treatment of other ores in which silver was an accessory constituent. Since these metals would combine to the extent of 10 to 20 per cent. with the other metals contained in the ores, the metals they contained a steady supply of silver was assured, while a slight rise in the price of silver would enable many deposits of true silver ore now untouched to be worked.

The only places where platinum is known to occur in North America otherwise than as a mineral, are in California, Oregon, and British Columbia. Many reports of its occurrence were not substantiated when Mr. D. T. Day made his investigation of the subject. Although a number of deposits are known on the Pacific coast, the platinum in them is very fine and difficult to save. Most of the platinum product has come from inland deposits, but there is a large deposit of it, particularly from the placer beds of the American river and those in Plumas, Shasta, Trinity, and Siskiyou Counties, California. These occurrences confirm the idea that the platinum originates in the serpentine rock in which the region abounds, for the platinum-bearing gravels are sure to be associated with serpentine, and is generally restricted to the plate-like serpentine. The value of platinum metals in a large number of the platinum-bearing gold sands of California and Oregon ranges from nil to $1,034 per ton. They contain generally less platinum than gold, but occasionally more, even up to three times the quantity, platinum being generally less than the other platinum metals in proportions ranging from one-sixth to one-half.

**Aluminum.**—Speaking in the Franklin Institute of recent advances in the aluminum industry, Prof. Joseph W. Richards said that in the line of pure metallurgy, or reduction and refining, there was little to chronicle. The process of reduction had certainly been somewhat improved in details, largely in principle, the success of the process of ten years ago. The operations of the process were naturally averse to the details of their method, but it might be said that all the items of expense had been gradually noted down, so that the cost price of the metal had been reduced to about 20 cents a pound, while its selling price was a little more than 30 cents in the United States and 25 cents abroad. As was proved by certain instances adduced by the author, aluminum has become cheaper for almost every practical purpose for which it can be used than all the common metals excepting zinc, lead, and iron. In verifying this statement it should be borne in mind that aluminum is only about one-third the weight of these other metals, and that
it is the cost of one third of a pound of it that is to be compared with the cost of one pound of tin. The labor of metallurgists in searching for light strong alloys of aluminum are bearing fruit in abundance. Aside from its color, aluminum resembles copper in many of its qualities, and especially in that both are soft and readily formible, weak, susceptible of being greatly hardened when alloyed. Five per cent of copper, nickel, or manganese or 30 per cent. of zinc added to aluminum make strong metals as rigid as bronze, yet only one third as heavy. Such light, strong, good casting and machining alloys have an extremely large field of application to which aluminum and zinc, selling at the same price per pound as pure aluminum, is hard and white, of specific gravity 3.1, melts clean, runs fluid, makes beautifully sharp and perfect castings, turns and machines like the finest brass, polishes well, and is fully as strong as gun metal or the best of the ordinary brass. As this usage of aluminum in culinary utensils is extending steadily. These vessels are described as possessing all the advantages of copper utensils, with none of their disadvantages. They need only as much attention as ordinary tinware to keep them bright and clean. Aluminum, on account of its harmlessness, is surpassing zinc for fruit, turns it, is the most important place in the artistic branch of lithographic printing, for which aluminum plates offer considerable advantages over lithographic stone. Electric conductors can now be laid more cheaply in aluminum than in copper. While the aluminum wire has, in order to give equal conductivity, to be one fourth as large again in diameter and of greater weight, it costs only one half and costs only two thirds as much as the copper wire it replaces. Long-distance transmission lines and trolley feed wires are being set up in aluminum as fast as the makers can supply the metal. Aluminum can be rolled out to \( \frac{1}{1000} \) of an inch in thickness, and then beaten out to \( \frac{1}{1000} \) or even \( \frac{1}{10000} \) of an inch. Aluminum has found some application in place of cardboard for business cards, etc., but as leaf it has entirely superseded silver leaf in decorating. This leaf can be ground to powder, and in that condition is used by printers for silvery printing, and as a paint. For the latter use it is simply mixed with a varnish like one used in printing powders. Aluminum has recently received an extremely interesting metallurgical application in the reduction of refractory metallic oxides to the metallic state.

In a paper on the same subject, also in the Franklin Institute, Mr. J. A. Steinmetz undertook to enumerate the uses of aluminum that have proved satisfactory and extensive, with a view of encouraging further applications along kindred lines, and to speak words of caution regarding improper uses of the metal. His list of useful applications includes those mentioned by Prof. Richards and some others, among which are the making of patterns, for which, when stiffened by the addition of about 5 per cent. of zinc and a like amount of copper, aluminum forms an excellent substitute for brass, with the advantage of the great difference in weight, and for models and salesmen's samples. At the author's suggestion it had been used instead of wood for making models for castings, with excellent results in free-drawing. It has been found that to which the peculiar qualities of the metal well adapt it. But it is not suitable for bath tubs and plumbing fixtures or for any purposes in which it is exposed to the action of the alkali of soaps. In the powdered condition aluminum furnishes an excellent material for photographic flash lights, being cheaper than magnesium powder and free from the unpleasant smoke that accompanies the use of that metal.

The recent underlying a new method of producing high temperatures, described by Mr. E. F. Lange at the autumnal meeting of the Iron and Steel Institute, is based upon the heat energy developed by the chemical action of aluminum upon oxygen, or that between aluminum and certain metallic oxides. The practicability of the method was demonstrated by the meeting of two short lengths of heavy girder rails. Besides opening up another field for aluminum, the new method promises to be of considerable importance in engineering work. In the discussion of Mr. Lange's paper, Sir W. C. Roberts-Austen pointed out the extreme precision with which the time of complete fusion is measured by Bell dwelt on the value of the process if it should prove that carbonless iron could be obtained by it for electrical purposes.

Metallurgy by means of secondary electrical furnaces is the name which Herr Goldschmidt, of Essen, has given to a process of reduction by aluminum. It is winning attention and is still in its infancy. It has been found useful in the preparation of metals employed in the manufature of special varieties of steel. In the preparation of metallic manganese, for instance, the binoxide of that metal is mixed with pulverized aluminum, a substance capable of deoxidizing it and setting the metallic manganese free. The reaction is brought about whenever any point of the mixture is raised to the temperature of ignition, and will go on of itself, just as in the case of a mixture of oxygen and hydrogen, or of an explosion of gunpowder, without its being necessary to make any further application of heat. In the process of abstracting oxygen from the metallic oxide, the aluminum and the metallic manganese are melted, and the mass under treatment is raised to a dazzling white so that the aluminum oxide melts into a mobile liquid, while the melted manganese collects in the bottom of the crucible. A temperature is reached approaching that of the electrical furnace. Besides manganese, chromium, tungsten, molybdenum, and silicon, many metals, particularly aluminum, can be melted and cast through the reduction of their oxides by aluminum. By virtue of the character of the process, metals thus prepared are absolutely free from carbon, a feature of great value in their application to the improvement of steel. In this they have a distinct advantage over the same metals prepared in the electrical furnaces, which contain carbon. Besides metals available for use, the secondary electrical furnace furnishes aluminum oxide in the form of a very hard corundum or emery, which is sold for a polishing and grinding powder.

The high temperature of the reactions in this process can be applied to the soldering and brazing of metals. Easily reducible oxides, like those of lead and copper, give explosive reactions with aluminum.

Copper, Nickel, Tin, and Zinc.—The electro-deposition of copper is now carried on, according to Mr. Sherrard Cowper-Coles, in many large engineering works for the production of large copper gongs, in which it has been found that skilled workmen, and more than one third of the total copper output of the world, is now electrolytically refined. The demand for electrolytic copper is on the increase, and the capacity of most of the electrolytic refining works has been or is being enlarged. According to estimates published in the
dustries and Iron, the world's total output of electrolytic copper fifteen or twenty years ago did not exceed from 15 to 20 tons a week. In 1881 and 1882 this amount was increased by the erection of a cell at the present time. The succeeding several American refineries began operation, and between 1888 and 1890 the world's total production was between 280 and 300 tons per week. Since that time a very large number of refineries have come into existence in different countries, and it is safe to estimate the world's production at the present time at about 500 tons per day, or about 180,000 tons per annum.

During the refining of this metal not less than 20,000,000 ounces of silver and 100,000 ounces of gold are recovered. Converted into a money value, these weights represent $45,000,000 in copper, $12,500,000 in silver, and $2,000,000 in gold.

Of the physical properties of electro-deposited copper, the same authority said, in a lecture before the Institution of Electrical Engineers, that copper prepared by electrolysis may have a density as low as 8, while the density of normal copper is 8.9. Hard rolling, cold hammering, and hard drawing increase the density, but annealing and the electrolytic copper considerably. The extensibility of annealed copper becomes less at high temperatures, and that of mechanically worked copper becomes higher. Some copper sheets (not annealed) deposited by the electrolytic centrifugal process, 0.0245 of an inch in thickness, broke at 420 pounds, while an equivalent to 22.1 tons per square inch. Hard-drawn wire made by this process has a tensile strength of 29 tons per square inch, and annealed wire 20 tons, the electrical conductivity being 99 per cent.

Of the recent improvements in the production of electrolytic copper, having in view both increase of the deposit and smoothness and homogeneity, one of the earliest was that introduced by Elmore, in which an agate burnisher was caused to pass continuously over the surface on which the deposit was being made. A metal of very great strength was thereby obtained. In a more recent development a sheepskin impregnated with animal fat is used as a burnisher. Copper-Coles, the copper is deposited upon a vertical mandrel, which is caused to rotate very rapidly. The centrifugal force developed and the wash of the electrolyte over the rotating surface keep it clean and free from gas, making a smooth and dense deposit nearly certain.

The physical tests of metallic nickel, as Mr. David H. Browne shows in a paper on The Properties and Possible Uses of Nickel Steel, furnish no explanation of its remarkable effects when alloyed with iron. The most notable of these effects is the manner in which nickel increases the elastic effects of the steel to which it has been added, and so produces a much greater resistance, which the metal develops against numerous and repeated strains; or, in other words, in the extension of the limit at which molecular fatigue begins as distinguished from molecular distortion, which is effected by the addition of the small percentage of nickel. This is the property that emphatically distinguishes the potential nickel steels from all other steels. After discussing the advantages of nickel steel for bridge construction, for plates for boiler and tank work and ships' hulls, armor plates, shaftings and forgings, Mr. Browne mentions as among the purposes for which the alloys of that name are applied resistance wire, bicycle tubing and spokes, stays, belts, fire-box sheets, boiler tubing, firearms, safes, and vaults, brass spindles, and a great variety of other purposes for which some peculiarity of strength, ductility, or incorrrodbility gives it special fitness. One of the most promising of these uses is the making of tool steel. For this purpose the allotropic transformation of martensite with 3 per cent. of nickel is probably the best for everyday use. Increasing the nickel to 5 or 6 per cent. increases the strength, but necessitates skilled treatment in forging. Tool steel with 0.80 per cent. carbon and from 3 to 5 per cent. nickel possesses all the properties of high carbon steel without its brittleness. Nickel steel shows very pronounced toughness. A nickel-steel tool containing 4 or 5 per cent. of nickel with 0.80 per cent. carbon is as hard after tempering as the best simple tool steel of from 1 to 1.25 per cent. carbon without the brittleness and glassy nature which distinguish the latter. When used to grind the end of a tool, nickel steel, as a rule, was much less than the usual friction, and does not become so hot in use as carbon steel. Nickel steels are exceedingly sensitive to heat treatment, but are less easily spoiled by overheating, and may therefore be worked at a somewhat higher temperature than a carbon steel that will give the same temper.

A molecular transformation of tin organ pipes, under which the metal crumbled to a gray powder, was first noticed in 1851 by Erdmann. It was observed again by Fritsche at St. Petersburg, and has since been studied repeatedly by various observers. The matter has more recently been taken up by Messrs. Cohen and Van Bijn. A preliminary dilatometric study of a gray tin discovered the existence of a transition temperature at about 30° C. A transition element was therefore constructed, having gray tin as one electrode and ordinary white tin as the other. A study of the electro-motive force of this cell with varying temperatures showed that the reaction, gray tin to white tin, was a reversible one, with a transition point at 20° C. A careful determination of the same point by the dilatometric method gave the same value. All the observations of early workers are brought into line by this research. The authors point out that, except during a few warm days, all tin is in an unstable condition, and allows the tin itself slowly into the gray powder modification.

Three commercial methods for the extraction of zinc are described by Capt. C. C. Longridge in a paper on that metal and its treatment. They are the dry, or most usual process, by reduction, distillation, and condensation, by which metallic zinc is obtained; the chemical or anhydrous method, which results in the formation of zinc compounds from which the metal has to be won in the dry way; and the electrolytic process, which is more or less in an experimental stage. Not only ores, but furnace and refinery products, furnace or retort residues containing zinc ore, calcined silicates of zinc, and alloys of zinc, lead, silver, and gold are treated by the dry process. In many cases zinc extracted from ores or by-products by the dry process is too impure. Refining is accomplished by slow fusion at the lowest possible temperature, the melted metals being retained in this state for a considerable time, while the light metals, such as copper and zinc, rise to the surface, the heavier metals sink to the bottom, and the purified zinc forms a middle layer. This process has been improved in this country by the utilization of natural gas.

The chemical or wet process is characterized by the author as unsuitable and costly. Its use is chiefly confined to separating zinc from valuable by-leaves, etc., and converting it into marketable by-
METALLURGY. (ALLOYS.)

The electrolytic method is attended by obstacles that have so far not been surmounted. Among them are the enormous amount of power required and the difficulty of producing compact zinc. This method promises better results for treating pyrites, which is said to be carried out in a secret process at Aaron Hirsch's works at Insellberg in the Harz; and it has been applied to zinciferous pyrites, which, after treatment for the production of sulphuric acid, are intended for use as iron ore.

Mr. H. Van F. Furnan, in a paper on zinc and its treatment, after remarking that extraction by electrolysis of metalen compounds has not so far been attempted on a commercial scale, although numerous methods for accomplishing it have been proposed, says that most of the zinc as it comes from the smelter is sufficiently pure after skimmin the ladles to cast into bars ready for the market. Such a deposit is bauxite and acid zinc, which contain too high a percentage of lead is remelted with stirring, and then allowed to settle, when the lead collects at the bottom of the kettle.

In some places zinc ores are treated for the production of marketable zinc products, such as zinc oxide (zinc white), mixtures of zinc oxide, lead and copper (zinc sulplhite), and zinc sulphate (zinc vitriol). For these processes ores are selected which are not generally suitable for the extraction of metallic zinc, either because they contain other valuable or detrimental qualities or because the percentage of zinc in them is too small. The production of zinc white from the New Jersey Franklin, which has been brought to a state of perfection by the earlier inventions of Samuel C. Wetherill and the later ones of his son, J. P. Wetherill. The ores, which are mixtures of franklinite, willemite, zincite, and a calcite gangue containing various minerals and silicates, are passed over Wetherill magnetic separators, and a filtrate upon which is precipitated a product of franklinite and various iron and manganese silicates are obtained. The tailings from the separators pass to wet jugs, when the willemite and the zincite are removed from the silicate. The concentrates from the Wetherill machines are sent to the zinc-oxide works, and the concentrates in bags (paraffin-sealed) carried about 50 per cent. of zinc, are sent to Germany for distillation into a very pure spelter. The residues from the treatment of the franklinite in Wetherill furnaces after collection of the zinc oxide in bags, gathered from the pipes and other parts of the furnace, contain from 1.2 to 6 per cent. of zinc, and as they are mixed with iron and manganese, they are smelted in blast furnaces for spiegelien.

In the Bartlett process in use at Cañon City, Colo., ores containing 20 per cent. of zinc, after being crushed, are mixed with sea coal and dust coal and blown up in a blast furnace to drive off the lead and the greater part of the zinc and sulphur. A cinder is formed containing the silver, gold, and copper in a matte mixed with more or less slag. This cinder is smelted in an inclined low blast furnace with suitable ores to produce a high-grade matte. The zinc in this charge may remain from 15 to 20 per cent., and is mostly driven off the lead, and the greater part of the zinc and sulphur. A matte, and from the blast furnace is caught in bags, mixed and refined in a suitable furnace, whereby carbon, arsenic, sulphur, and other impurities are eliminated and a pure white pigment is produced, suitable after being ground in oil to be used as a white-lead substitute.

Alloys.—Experiments have been made by Ser- gius Kern with a number of nickel-bronze alloys, with a view to the production of castings suitable to be used in mechanical work, especially for different fittings in high-pressure marine boilers. The alloys rusted very slightly, and in several cases proved preferable to steel castings. The nickel castings from the alloys designated as No. 1 and No. 2 especially gave very good results when mechanically tested. Alloy No. 1, having the composition copper 70 per cent., nickel 17.5 per cent., and zinc 12.5 per cent., corresponds to the rules prescribed by the English Admiralty for ship's bounding steel. In tension alloy No. 1, the tensile strength of 26 tons and 23 per cent. elongation in 2 inches; fracture fibrous; and to the bending test, 67° over a radius of 1½ inch. Alloy No. 2, having a composition of copper 70 per cent., nickel 20 per cent., and zinc 10 per cent., corresponds to the English Admiralty rules for steel castings. It has on the castings an elongation of 35 tons per square inch and an elongation of 15 per cent. in a length of 2 inches. Its fracture is fibrous, and its response to the test for bending strength gave from 35° to 40° over a radius of 1½ inch. The drop tests were likewise satisfactory. Both alloys were prepared in the same manner, containing copper crucible furnace. Nickel in the form of elemental nickel is placed upon the top of the crucible, next to it copper-zinc alloy, and on the latter some copper, and proceeding in the same way till the crucible was filled. On the top of the charge a layer of charcoal was placed. The alloy was run into flat open molds, and the slabs obtained were remelted twice before being used for casting. Though the alloys have a notable shrinkage in setting down, top ends castings placed in the castings is dependent on about 13.5 tons. The casting, after pouring the metal, the open top ends must be immediately covered with coarse ground charcoal.

Magnalium is a silver-white alloy, composed of aluminum and magnesium. It is unaffected by air and water. It even withstands oxygen to a great extent. Its melting point is 631° cent., and gravity ranges from 2 to 2.2, and its melting point lies between 600° and 700° C. It "works" remarkably well, and can be rolled into sheets or drawn into wire. Although other alloys may be formed, that used contains 100 parts of aluminum and from 10 to 15 parts of magnesium. According to its composition it has a high temperature and with the purity of the metals; and so long as aluminum was made by reduction with sodium it was impossible to obtain a good alloy. The reflectible power is very high indeed, and, unlike most speculum compositions, magnumium does not absorb the ultra-violet. These properties, together with its low density and rigidity, make it almost an ideal compound for specula.

Attention is called in the Engineering and Mining Journal to the remarkable malleability and ductility of alloys containing vanadium. An addition of 0.5 per cent. of vanadium to ordinary malleable iron of about 24% tensile strength and 19 per cent. elongation gives 50 tons tensile strength and 17 per cent. elongation, in the forged bar, and 33.7 tons tensile and 32 per cent. elongation after annealing. A mild steel of 30 tons tensile and 17 per cent. elongation gave, with 1 per cent. of van-
ductility instead consequently considerably mechanically per-tin some of the materials employed were the old copper-tin alloy of 7 to 1; copper-zinc bearings running as high as 35 per cent. of zinc; phosphor bronzes in moderate amount; and most numerous of all, the copper-tin-lead compositions, varying considerably in their proportions, but averaging from 70 to 80 per cent. of copper. In some cases, the percentage of lead was 5 per cent. of lead and copper. In the majority of cases, however, the mere general composition was found to have caused but a small part of the difficulty. The main causes of friction and heating are described by the author as segregation of the metals, coarse crystalline structure, dross or oxidation in the alloy, high percentage of copper, and the presence of impurities in the copper. These deposits are worked in Germany and Bohemia and Texas, and the ore has recently been found in Nevada. Tungsten also occurs in the Copper Belt of Norway.

In a paper read before the American Institute of Mining Engineers, Mr. E. S. Sperry pointed out that the occurrence of cracks during the rolling of brass is due, at least in some cases, to the presence of impurities in the copper. In a brass composed of 60 per cent. of copper and 40 per cent. of zinc, the author described the presence of impurities of antimony that when the amount of that substance reached 0.02 per cent. its presence was indicated by fracture in the rolled metal.

Motor-car builders in France are using largely in the construction of their vehicles an alloy of aluminium and tungsten which they call "partinum." It is much cheaper than aluminium, is nearly light, and possesses an extraordinary degree of ductility. The relative percentages of the constituent metals are varied according to the qualities that are desired in the alloy. Cast partinum has a specific gravity of 2.890. In the rolled form the specific gravity is 3. The elongation varies from 6 to 8 per cent., and the resistance is given as from 32 to 37 kilograms per square centimeter.

Experiments on the alloys of gold and copper made by Sir W. C. Roberts-Austen and T. Kirk Rose show that the gold-copper series of alloys present many points of similarity with the silver-copper series, and that the main difference is only one of degree, copper being apparently more soluble in gold in the solid state than in silver. Processes. A new combustion process, described by Mr. Paul J. Schlicht before the Franklin Institute, is based upon the fact, which the inventor has discovered, that if a current of air is properly introduced into a chimney or flue through which hot products of combustion are passing, the air will be changed into a strong reducing atmosphere, contrary thereto, and becoming heated in contact therewith will reach the sphere of combustion in a condition highly favorable to the union of its oxygen with all the combustible elements of the fuel. By this system there is no solid and varying resistance to the air supply as in the old process, due to accumulations of ashes and varying thickness of fuel, but there is a constant supply of heated air that flows in contact with the combustion products, and which is regulated by the quantity of combustion products passing through the flue or chimney. The air for combustion may be admitted at the top of the furnace, or it may be directed through jets in the place for admission being determined by the conditions. The author finds that by the use of his process he can, in both domestic and manu-
facturing furnaces, effect a considerable economy of fuel, prevent the production of coal gas (carbonic oxide), burn profitably the smaller sizes of anthracite coals, and effect a great saving through the less frequent necessity of cleaning boiler-furnace fires.

A plant for welding iron, for as trolley rails, by electricity, operating at Washington, D. C., consists of five cars. One of them, termed the sand-blast car, goes ahead and prepares the rail joint for the welding apparatus. Following this come three cars, the first of which is the welder car, next the car containing a rotary transformer, and then the motor and booster car. The coupling of this train is adjusted before the welding car is moved ahead or back several inches without any change of position of the cars following. It can thus change its position along the joint that is being made without disturbing the other two cars. The welding of joints can be made on either old or new track and on paved or unpaved streets, but where old rails are welded, it is as general to be removed for a few inches in front of the rail joint. On new track the weld may be made before the pavement is laid or replaced. When a joint is to be welded a bar of steel 1 inch by 3 inches, and 8 inches long, on which are 3 bosses, is placed at each side of the rail web and the jaws of the machine are allowed to grip it. A pressure of about 1,400 pounds is applied by means of a hydraulic jack connected to the upper end of the welding machine. As soon as this pressure is applied the electric current is turned on. Instantly the metal between the welder jaws begins to heat. It grows brighter and brighter as the welder goes forward, the temperature being regulated, and the weld is immediately cut off, while the pressure on the weld is increased to about 35 tons. Artificial means of cooling are at once applied to the weld, in order that the process may be hastened while the pressure is on. The comparatively cold portions of the bars about the boss prevent the more plastic metal from spreading, and the heavy pressure so welded, it is as general to have no opportunity for coarse crystallization while cooling. The center weld is made first, and the ends of the bar are next similarly treated, so that three welds are made at one joint. As the welding bars cool they exert a most powerful influence to bring the ends of the rail together and make a perfectly tight joint, the wheels of emery wheels operated by a motor follows and dresses any rough parts of the joint.

Among the characteristic disadvantages attending the use of blast-furnace gases as compared with other gases, M. Enrique Disdier, of Bilbao, enumerates variable composition, low ratio of combustible to non-combustible gases, admixture of large quantities of dust, acid, and metallie vapors, and high percentage of moisture. The economy that would ensue upon the direct application of these gases to the production of power by the gas engine was of great importance. The production of a ton of pig iron involved the consumption of a ton of coal, and one horse power per hour might be obtained by the consumption of 4 cubic metres (1,414 cubic feet) of gas. Assuming these data, then it would be found that a blast furnace was able by means of its waste gas to generate nearly 2,100 horse power for every hundred tons of pig iron produced daily after many hours. Where provision for gas is made, and when they are used, while the blast furnace has thus far been considered on its own merits as a source of power, its most indispensable associate, the coke oven, can not be neglected as a gas generator, and therefore a power producer. With its gases the objection of variable composition does not obtain; further, these gases are rich in combustible constituents, carry little or no dust, are absolutely free from metallic vapors, and their moisture is low. All existing coke ovens may be divided into two main groups—those in which by-products, chiefly dust, extraction is easy, and the plant is rendered much cheaper. Various opinions are expressed in the discussion of this paper in the Iron and Steel Institute concerning the practicability of using the blast-furnace gases, the dust they carry, contrary to the author's assertion, being specified as the most formidable difficulty in the way.

A difference in method between reverberatory and blast-furnace smelting results in a great increase in power of the former. A difference in method between reverberatory and blast-furnace smelting results in a great increase in power of the former. A difference in method between reverberatory and blast-furnace smelting results in a great increase in power of the former.

Among the characteristic disadvantages attending the use of blast-furnace gases as compared with other gases, M. Enrique Disdier, of Bilbao, enumerates variable composition, low ratio of combustible to non-combustible gases, admixture of large quantities of dust, acid, and metallie vapors, and high percentage of moisture. The fluid open-hearth steel process in use in the works at Pencoyd, Pa., is described by B. Talbot as combining the rapidity of the Bessemer process with the economy of the open-hearth. A great heat is given out and is utilized in increasing the temperature of the bath. When this metal is sufficiently refined the slag is run out and one third of the steel is tapped out, while the other two thirds are retained for mixing with and purifying another 20 tons of pig iron.

In the application of a similar process at Wishaw, by Roberts-Austen, for the separation of metal from the blast furnace, with additions of small quantities of pig iron for refining, but no storage bath like that described in the Pencoyd process is used. The results are satisfactory, and involve a higher yield of steel with increased ore reduction even over that when cold pig iron is used. A later description given by the Manchester process is out and a saving in the cost of labor at both blast and open-hearth furnaces.

A smokeless furnace invented by Mr. Pilott, of Nottingham, and represented as being applicable to all types of boilers or wherever a furnace is required, has as its basis a chilled iron bar, cast longitudinally into the furnace, and with a pipe in the web of the bars. These lateral openings or ports enable a regulated and sufficient supply of warm air to be drawn directly from the ash pit and delivered superheated at the back of the bridge. The bridge is contrived so as to deflect the superheated air, which instantaneously combines with any combustible gas given off by the fuel and not burned into a smoke, to the same time bringing about an increased temperature and a quicker generation of steam. In a "rocking attachment" to this furnace, by a simple movement of a lever the whole grate can be put in motion and clinkers broken up without opening the furnace and suffering an which has been accounted for by a process devised by the same inventor, and noiseless, will burn all kinds of fuel, while it is claimed it likewise works without smoke.

A discovery by Mond that metallic nickel forms a volatile compound—nickel-carbonyl—with carbon monoxide has been utilized in a process described by Roberts-Austen, for the separation of nickel from cobalt, copper, and other metals with which it is associated in its ores. A similar process is applicable to iron.

In the new process of H. Goldschmidt for welding the clean faces of the metal are brought into contact in the cold, and are then heated by pouring under them the hot products of the fusion of oxide of iron and aluminium contained in a special crucible. The joint is clamped so that the local expansion in heating effects the weld. The clamps may be removed as soon as the weld is complete. Sheet iron or iron gauge may be inserted between the welding surfaces.

A method of superheating the blast as described by F. Laret (Echo des Mines et de la Métallurgie) consists in interposing between the high-air stoves and the tuyères an injector of heavy oils which pass into the furnace, increasing the temperature and the yield while greatly facilitating the reduction of the ore. It has been tried with satisfactory results. Only smooth-faced iron is produced by the arrangement, and the carbon and silicon contents are considerably increased.

A process of using dense liquids (saturated solutions of certain salts) for the separation of coal and shale is described by M. Maurice in the Société de l'Industrie Minerale. When the coke and the coal remains in the top of the solution. A list of salts suitable for the process is given in the paper, of which calcium chloride of 1.411 specific gravity is the lightest and zine bromide, 2.391 specific gravity, is the heaviest.

An improved process for the production of potash salt and sodium by the reduction of those metals from their salts consists in forming electrolytically an alloy of some heavy metal, such as lead, with sodium or potassium, and then distilling the latter.

Miscellaneous.—Mr. W. P. Rix, in a paper read before the Society of Arts, expressed the opinion that some leaded glaze, when once available for use in nearly all kinds of pottery. Hitherto little success had attended their application to coarse earthenware owing to opaqueness, sluggish fusibility, and inequality of texture. Such glazes required to be dipped as thinly as possible and with far greater uniformity than would be necessary in the production of glass. Until the leadless glazes were advanced to the commercial stage, the problem which potters were invited to solve was the reduction of the amount of lead absolutely essential in the glazes commonly employed. It should also be remembered that the fritting of lead with silica, borax, and soda-stone could not be expected to succeed when the proportions of earth were such that the whole was chemically combined in a stable form. So far there has been little opportunity to test the leadless glazes, but Mr. Rix represents that they have withstood severe exposure and rough usage.

A lecture before the Royal Institution on the structure of metals, Prof. J. A. Ewing showed, from microscopical examination, that the structure of polished metal is not homogeneous, but presents numerous granules with irregular boundaries. Each of these granules is a crystal essentially composed of a multitude of exactly similar parts all facing the same way. This crystalline structure is accounted for by each individual crystal being represented by a given sample when viewed with light falling at different angles, because the reflections from the different faces were in different directions. Further evidence of the geometrical character of the structure is to be found in the geometrically regular shapes of the pits formed by minute particles of impregnated air when cadmium, for example, was cast against a imperfectly smooth surface, such as glass.

The present use of blast-furnace slag in the form of sand and as made into bricks and cement was described in a paper on the subject by the Ritter Cecily von Schwarz at the spring meeting of the Iron and Steel Association. The cement appears to have been a somewhat untrustworthy article; but recently a process for the manufacture of cement from blast-furnace slag has been started in Germany and Belgium, the results of which are regarded as highly satisfactory in the points of strength, volumetric constancy, and reliability. In the manufacture of this cement the slag is first granulated, and is then reduced to sand. In this condition it is mixed with lime-stone and slaked lime, and the mixture is reduced to a fine powder. This powder is mixed with water and made into bricks, which are air-dried and afterward burned into cinder in a special furnace. The cinder is stored for about six weeks, and is then ground into a fine powder. The cement thus produced is said to be distinguished.
for its exceptional tensile strength and resistance to compression.

Because of lack of coal in the country for smelting, Swiss engineers have been obliged to import nearly all the iron they use. This difficulty is likely to be overcome by the application of the electric furnace to smelting iron on a large scale, which has been successfully developed by Herr Müller Landsmann near Meivingen.

The following plan for tempering tools is recommended in the Revue de Chimie Industrielle: The tools are heated to dull redness, and are then plunged two or three times into a mixture made by dissolving 10 parts by weight of resin in 3 parts of fish oil and stirring in 2½ parts of molasses. The tools are then heated to dull redness and plunged into cold water.

The use of carbide of calcium in metallurgy as a deoxidizing agent is recommended in the Revue générale des Sciences. To increase the utilization of this substance a metallic chloride is added, the chloro-iron, combined with the calcium, used as a flux in such a manner that the two affinities of the carbon for the oxygen and the calcium for the carbon will act simultaneously.

Vanadium and platinum have been found in the coals of New South Wales in such proportions as to attract notice. In one analysis the ash yielded 25.1 per cent. of metallic vanadium, 3.6 per cent. of metallic platinum, 25.9 per cent. of combined oxygen, and 27.3 per cent. of sand and earthy matter. In another instance, 1 ton of coal yielded 144 ounces 1 pennyweight and 3 grains of metallic vanadium and 20 ounces 13 pennyweights and 11 grains of platinum metals. Vanadium has also been found in New South Wales in clays, bauxites, micas, and mica schist. Gold, copper and some other metals have likewise been found in the coal of the country.

**METAPHYSICS, AMERICAN, an idealistic and spiritual movement, known under divers names, the most popular of which is "The New Thought." It originated in the United States, and was first heard of forty odd years ago, when the alleged discoveries made through mental or spiritual healing by Phineas Parkhurst Quimby, of Portland, Me., came into notice. Taking root within the last quarter of the century just closed, it has gradually spread until now its disciples may be found in nearly all parts of the habitable globe. It is often confounded with Christian Science, with which it has certain salient points of resemblance, while in other fundamental points it is radically different. In the primal belief that all life is one life, that all knowledge is one, that all proceeds from God, its source, and that God is omnipresent, omnipotent, and omnipresent, and that, through this oneness of all life with its source, all health, happiness, and prosperity can be recovered and maintained, the two movements are at one and identical. The chief points of difference are these: Christian Science affirms that the whole material world is but an illusion of "mortal mind," and that by denial of this illusion—mortal matter—man realizes more fully one's spiritual origin and power. The disciples of Modern Metaphysics, or New Thought, on the other hand, believe the whole visible universe to be a reality, an expression of God's word made manifest in palpable form; even as they also look upon the body of man as representing more or less clearly the condition or evolution of consciousness, which can be realized at any time, by one who has seen it. There is no dominant evil power in the universe, the conditions called evil being only a negation of good.

Christian Science builds all upon the Bible, the works wrought by Christ, and the alleged special revelation and dispensations which, in the New Thought, its believers confine themselves to the Bible and the text-book Science and Health, with Key to the Scriptures, prepared by its founder, on the ground that other literature, being the product of "mortal mind," might distract from spiritual concentration. The New Thought lets its disciples take all knowledge for their gospel and accepts as true wherever they find it, on the plea that God gave glimpses of truth in divers ways, at many times, and to all peoples—even to those to whom St. Paul said, "The unknown God whom ye ignorantly worship, him declare I unto you," and that, while Christ is the greatest light yet descended on the world, God also made prophets to other peoples, and taught them great truth.

Again, Christian Science is a thoroughly organized body, founding churches and consolidating strength under one visible head. The New Thought shows no desire to found a church at all. Its leading exponents are wont to declare that there are churches enough already, and that the best work now is to regenerate men and women, and prove the workings of a vitalized faith that takes the great Master Teacher literally at his word as to both example and precept. They declare that Christ put healing, in all its spiritual significance, before preaching, and insisted on his disciples performing the "works"! They waive all creed for their gospel and accept as true that man must live from the center of life outward; that the temple of God is in the human soul, and all worship must proceed from within, even as every creative work emanating from man must take vision and form in his mind before taking outward shape at his hand; that man must seek to regulate life everywhere, and through conformity with these laws only can he come into possession of his own full powers, control matters, and build the kingdom of Heaven here on earth as truly as in any other sphere of existence.

In short, this new metaphysical movement is not a doctrinal religion, but rather a very elaborate working philosophy of daily life. Its exponents affirm, over and over, that it values whatever it can reduce to practice and apply to man's visible well-being; that its work is with the here and now more than with the hereafter—which will follow in natural sequence from the life here. To the New Thought believer, sickness, sin, warped mentality, selfishness, prejudice, poverty, war, etc., are but lack of spiritual development. There are no good and bad, no high and low, in the scale of humanity; there are the developed (according to degree) and the undeveloped, and the latter have latent within them all the possibilities of the former evolution. Life, essentially a matter of spiritual condition, to be realized some time, is not the only visible. There is no dominant evil power in the universe, the conditions called evil being only a negation of good. Fear is the devil that has played so large a part in the fortunes of man, and the only devil there is—
to be laid forever whenever man enters into a knowledge of his own powers, his birthright. He discovers these powers, not by cringing and begging for them, but by demanding them in accordance with Divine Law. Modern man is godlike in possibilities. Ignorance is the only original sin—the sin of low desires. All sin is ignorance of law. Thought is a living thing; it is all the life there is. Every existing thing is a thought of God, and thought makes man what he is. In thought, he can do whatever the things around him. Without this spirit force man may succumb to circumstance and become the slave of passing effects; he loses vitality, meets with sickness and death. The truly poised mind can not be overcome by anything on the outside.

Nothing can harm man but himself. Spirit force, the influx from God, builds up, expands, fills all space, drives out negations, removes what would appear mountains to the unawakened mind; hence those feats which the world has called miracle. There is no miracle; the things so called are but the harm-\textsuperscript{-}\textsubscript{v}i of higher law taking \textit{viable} expression. Thought, life, intelligence, can become one with God, and God is all in all.

The alliance of the tenets of Modern Metaphysics, whose vocabulary is as varied as is the quality and culture of the disciples who express it, and who come from every walk of life. Latterly, however, the growth of the movement is notably larger among the cultured classes; and, according to information recently gathered from leaders within this sphere of life, the crusade is friendly toward several of the "advanced" clergy within the evangelical churches, while, oddly enough, the clergy of the liberal churches still regard it in the main with coldness or aversion. Moreover, it is affirmed that the interest of the clergy is due to the reports brought to them by members within the movement. The world would never become one with God's world, if the gospel of cure from various ailments and distempers, was not known to the leaders of the movement to count their followers. Interfering in no wise with the established order of things, the disciples of The New Thought are to be found within the denominations and noticeably large numbers are within the Episcopal Church. According to recent information and estimates, the movement, all told, in this country and others, would count somewhat more than a million interested followers and more or less firm believers, while the people who do not confess belief, and yet seek aid for their ills and misfortunes can, of course, be counted.

Owing to indifference to organization or anything like a cohesive policy, it is not easy for the leaders of the movement to count their followers. Interfering in no wise with the established order of things, the disciples of The New Thought are to be found within the denominations and noticeably large numbers are within the Episcopal Church. According to recent information and estimates, the movement, all told, in this country and others, would count somewhat more than a million interested followers and more or less firm believers, while the people who do not confess belief, and yet seek aid for their ills and misfortunes can, of course, be counted.

Although this doctrine was quietly working and gaining ground as early as 1860, the first visible attempt at anything approaching organization took place only about fifteen years ago, when the Metaphysical Club was founded in Boston. This club has several hundred members, and is constantly increasing. The son of the so-called "breakaway" headquarters to which people at a distance are wont to send for information. Lately an International Metaphysical League has been formed, the first meeting of which was held in October, 1899, in Boston, and lasted several days. In October, 1901, this same league held its second meeting in Madison Square Garden in New York, where crowded houses were addressed for nearly a week. Many prominent speakers took part, among them the Rev. Heber Newton, D.D., of New York; Prof. George D. Herron, of Grinnell, Iowa; Dr. Lewis G. Janes, of Cambridge, Mass.; John Brooks Leavitt, L.L.D., of New York; Prof. J. M. Tyler, of Amherst; Swami Abhedananda, of India—who traced a kinship between much in modern metaphysics and the ancient Vedanta philosophy of India; also other medical men and clergy. The league will meet in 1901 in Chicago. The movement is still strongest in New England, especially in Massachusetts. While Rhode Island, Maine seem to stand next in numbers and interest. Next to Boston, its strongest hold is Chicago, New York comes third, after which it seems to be fairly disseminated throughout the Middle and Western States and cities, and is quite active in Canada. In England it is said to be growing surprisingly, especially among the upper class and in the Church. Some among the English clergy have written for information concerning its origin and history from this side of the Atlantic. Not long ago the foremost metaphysical magazine of New York published in full a sermon entitled God is Love, delivered by Canon Basil Wilberforce in Westminster Abbey, and listened to by the editor, who looked upon it as so strong an exposition of much of the best in The New Thought that he obtained the noted divine's permission to publish it.

The growth of the movement is noticeable in Switzerland and France, and more especially in Australia. In New South Wales, for example, people of English speech betake themselves, there appears an active desire to found clubs for its dissemination. Letters come to the centers at Boston and New York, especially, from New Zealand, New South Wales, and settlements in Africa and elsewhere, asking advice concerning this philosophy of living. The coteries of this philosophy in the large cities in America coteries are found, where interested persons meet and discuss New Thought tenets and relate experiences among friends and acquaintances. Several such coteries exist in New York, and there are at least three places where the public in general are welcomed to listen to expositions of this philosophy in which ones flourish in other cities. The spread of the cult is doubtless due in a measure to its literature, which is plentiful, ever increasing, and in great variety. No embargo is laid on thought, and a vast amount of vagary sees the light in print. But the cult can claim also some fine and subtle writers. Two men to whom its interests have long flourished in New York.

The question has arisen from time to time in regard to the real origin of this whole modern metaphysical movement. Doubtless much of its loftier thought might trace its inspiration to Emerson's utterances concerning the Immanent God in all things and the glory of living according to one's visions; but when it comes to the practical workings that interest humanity in general—the healing of physical ills and the restoration of disordered mentality—there is room for no dispute that the obscure and almost unknown Quimby was first in the field. Phineas Parkhurst Quimby was born in Lebanon, N. H., Feb. 16, 1820. He was the son of a blacksmith, and the family of seven. When he was two years old his parents moved to Belfast, Me. His opportunities for education were scanty. He is said to have acquired a knowledge of the rudimentary branches and supplemented these with as much reading as he could obtain. His son, George A. Quimby (still living at Belfast) furnished a sketch of his father's life to the New England Magazine in 1888. Some time later Mrs. Annetta Gertrude Dresser, one of Mr. Quimby's earliest patients in Portland (to which place he removed in 1859, as his fame grew), compiled a little volume on his life and philosophy. A mass of manuscript is also in the possession of his son. This was penned by the Misses Ware, of Portland, Me, daughters of the late Judge Asa
Ware, of the Supreme Court, who were also patients of Mr. Quimby's, who is said to have restored them both to health, and who wrote down his sayings as they fell from his lips. These, together with the memory of a few persons still living, save from oblivion the founder of a new widely known cult—a man who never dreamed of fame and died without fortune. His son's account shows him to have been a pioneer in thought and experiment from his earliest years, even inventing many mechanical devices for which he took out patents. He was also a semi-invalid from early youth, whom the doctors had pronounced a victim of an incurable malady of the lungs.

In 1833 a French gentleman, M. Charles Poyan, came to this country, where he had relatives, and brought with him the first practical information known here of mesmerism, through which agency he claimed to have been cured of a chronic disease. Mr. Quimby heard his lectures, and at once seized upon the idea; first with the desire to better his own health, then to discover all that might be in it. He met with a youth named Lucius Burkmann, who proved a wonderful subject, and with him he worked and gave experiments that astonished those who saw them, but did not convince Mr. Quimby himself. He finally came to the conclusion that there was nothing in mesmerism save what was projected through the eyes of the subject from the minds of those about him. Then he gave it up. One day, while he was out for a drive, with horse and buggy loaned by a friend, the exertion made him so weak he could no longer hold the reins, and the horse had it all his own way. The animal took fright and was in danger of ending both himself and the rider. In this emergency Mr. Quimby displayed a strange, constantly more strength than he had known for years came back to him, and he was able to control the animal and bring him to terms, and the strength lasted during the whole period of his need for it.

This incident made the turning point in his career. It set him to investigating the nature of that preternatural strength, and step by step his subsequent discoveries concerning the latent force within others as well as himself, its connection with universal force, and the source of it all. He experimented, and by degrees was successful. The fame of his strange mode of treatment and its strange results grew till it obliged him to establish his first and second Portland settlements, and in the six or seven years that he practiced in that city people flocked to him from various parts of the country, but especially from New England. It was in the early sixties that the Misses Ware took to writing down his philosophy, which he himself called The Science of Health. Among those who came to him for treatment in 1862, persons still living recall Mrs. Eddy (then Mrs. Patterson), whom, it is said, he cured of a supposed to be hopeless trouble. Dr. Quimby died Jan. 16, 1866, aged sixty-four years. In that same year Mrs. Eddy says she discovered Christian Science. Mr. Quimby's son says: "The last five years of his life were exceptionally hard. He was over-crowded with patients and greatly over-worked, and could not find an opportunity for relaxation. At last Nature could no longer bear up under the strain. Completely tired out, he took to his bed, from which he never rose again. . . . Mr. Quimby's idea of happiness," continues his son, "was to benefit mankind, and by the sick and suffering, as Eyre, Evans, and others have done, did he labor and gave his life. His patients found in him not only a doctor, but a sympathetic friend, and he took the same interest in treating a charity patient that he did a wealthy one. Until the writer went with him as secretary, he kept no accounts and made no charges. He left the keeping of books entirely to his patients, and although he pretended to have a regular price for visits and attendance, he took at settlement whatever the patient chose to pay him." Mr. Quimby, according to concurrent testimony, died poor. It was his wish that his son should succeed him in perpetuating the gospel he discovered and proclaimed; but his son preferred other lines of work than dealing with the sick. One of Mr. Quimby's first patients, the late Julius A. Dresser, of Portland, took up the art of healing for a time. His son, Horatio W. Dresser, a graduate of Harvard, is now one of the foremost of metaphysical healers. Among Mr. Evans, anti-Cure and Esoteric Christianity, was one of the next to make themselves heard of in this line of thought. His turn of mind appears to have been more speculative than logical. In later years Henry Wood, of Boston, gained world-wide fame. His books have been translated into several languages, and his Mrs. James R. E. Laughlan, The Law of Attraction, is said to have run through several editions even in the Chinese tongue. Writers of lesser note and varying degrees of merit are numerous. See Christian Science, in this volume.

Students of the "Transcendental" movement of the New England of sixty years ago may recall the old idea of the mind as "the source of the Newness"; they will also recall the remarkable group of men and women who inspired it. Among these were George Bancroft, F. H. Hedge, Thoreau, Alcott, Garrison, Theodore Parker, Wendell Phillips before he gave all his attention to slavery, the Frothinghams, Ripleys, Danals, and, in short, the whole band that afterward tried the "First Fruits" of the renaissance, among whom the women of the movement were Margaret Fuller, Mrs. Bancroft, Lydia Maria Child, Mrs. Emerson, Mrs. Nathaniel Hawthorne, Mrs. Phillips, Mrs. Horace Mann, Elizabeth Peabody, Miss Anna Shaw, Miss Caroline Sturgis, Miss Quincy, Mrs. Theodore Parker, Miss Maria White (afterward Mrs. James R. E. Laughlan), and Miss Caroline Sturgis, Boston's first editor of women's literary work. This particular woman, of course, was chief of all, but as a looker-on rather than an active participant: he always regarded the vagaries of the land with an indulgent curiosity.

The famous Dial, established in 1840, had for its first editor Margaret Fuller, and later Emerson became the chief editor. Neither the first nor the last of the Portland experiments was shot over the heads of its day, and it died for want of sustenance. Copies of it still exist in libraries, and whoever cares to consult it may easily perceive that its aims, though spiritual, are totally unlike the tenets of New Thought as outlined in this article. The older movement proclaimed with equal ardor the spiritual uplifting of the race, but the way to this was sought through physical conditions. All sorts of theories prevailed for the uplifting of soul through the purification of bodily environment and habit. It was really a sublimation of time-approved doctrines and experimental theories regarding food, clothing, social customs, fashions, etc. The tenor of New Thought is the reverse of all this. Every change in the expression of individual life, it declares, must be wrought through spirit. The body itself can express nothing, save only as spirit informs it. Bodily vices and good are only the spirit that does not consent to them. It preaches no higher morality than that he should be himself, as any of the so-called good things of life. Every kind of food is wholesome, because it is of God's giving, and none can disagree when spirit controls appetite. Dyspepsia even is a bugaboo only to the one ignorant of spirit law and his own inherent power
over ills. The full-fledged believer in New Thought proclaims at all times and seasons that the best clothing and best environment that the world has to offer is nothing to the birthright of every creature coming into it as an expression of “God’s Thought.” All the good things of life are conducive to spiritual joyousness, and joy, harmony, and love are the creative factors in the universe. Vibrate harmony, and it draws you with it. Those things you hold forth in which works with you to the possession of all you want.

The older spiritual movement had not rid itself of the notion of the efficacy of self-influences; it was in its tendency combative, as witness the vehemence of the antiabolition crusade led by its adherents. The new movement preaches nonresistance and seeks to blend harmony out of discord, and thus gain control; conquer all things through the law of spirit.

This pervaded all Emerson’s philosophy, and its practical ethics were attempted even by Alcott in his school-teaching; but its objective results were somewhat crude, and amid the hard ethics of his day rested only in ridicule from his neighbors. Indeed he rated satisfactions of self and self were far from being understood when he uttered them by most of his nearest acquaintances; their comments on them sound very queer to-day.

Unlike as they are, however, in expression and method, some of the spiritual light of the older period has filtered down, and may be traced in some of the utterances and writings of the present-day movement. It is the boast of its exponents that no one man, or period, or philosophy, inspires it to the exclusion of others. It is emphatically inclusive. But the core of its working value to-day, that which makes it talked about and antagonized, is the widely accepted belief in its capacity of lifting up underprivileged and amoral deformities. On this point no fair-minded adherent denies the priority of practical discovery and demonstration to P. P. Quimby. Whether Mr. Quimby was indebted for inspiration to leaders of the older movement, which was at its height in his young manhood, it is impossible to say. Notwithstanding the teachers influence on him, it is evident that he was. There is in them ample evidence that he was a keen and critical investigator of all that passed under his ken, and that he had no love for the theology of his day. He plainly blamed the religion of the time for a large part of the mental and physical disorders that came to him for cure. At the same time, it is quite evident that he was a deeply religious man and a devoted student of the Bible. The Newness died out for want of cohesion or a practical point around which to rally. Through Quimby New Thought has found a key which it fits to the most vital needs of humanity. Its value is not a matter for comment here, but that number of teachers and practitioners, who one name or another, counts, all told, considerably more than 2,000,000 followers.

See Henry Wood: Studies in the Thought World; God’s Image in Man; The Political Economy of Natural Law; and two stories, Victor Serenus, a tale of the Pauline era, and Edward Burton, a story of modern life. Dresser: The Power of Silence, The Perfect Whole, and In Search of a Soul. E. E. Babbitt: The Principles of Light and Color, Human Culture and Cure, and Health and Power. Ernest Loomis: Your Practical Forces, and How to use Them; Force Massing and Methods; Practical Oculism; and Method and Cures with their authority. Dresser: The two leading magazines—Mind and the Metaphysical Magazine—Dr. Alexander Wilder fills a prominent niche. His writing is both scholarly and searching. Prominent, also, is a younger writer, Stanton Kirkham Davis, a lawyer, author of Where Dwells the Soul Serene and other works. A Better World of Philosophy, by J. Howard Moore, is also much approved. There are popular writers by hundreds in this line, and there is no doubt many of them draw inspiration from a man who would not be likely to rank himself with this school at all, namely, the famous Dr. Franz Hartmann, of Germany, one of the most noted occultists of any age, and author of many, among which may be mentioned Life and Works of Paracelsus and Magic, White and Black. The latter is one of the most marvelous books ever written, and is now rare.

**METHODISTS**

I. Methodist Episcopal Church.—The 40 annual organizations of this Church embraced in the plan of episcopal visita
tion for 1900–01 comprise 124 annual conferences, 12 mission conferences, and 14 missions in the United States and foreign countries. The statistical returns of these conferences, as published in the Methodist Yearbook for 1901, give aggregates of 17,722 ministers in full connection and on trial in 14,232 local preachers, 2,907,877 lay members (including full members and probationers), 32,119 Sunday schools, with 350,271 officers and teachers and 2,700,543 pupils; 27,382 churches, having a probable value of $126,273,871; and 11,202 par
sonages, valued at $19,488,073. As the Yearbook went to press before the annual conferences, which were held late in the fall of 1900, had been made up, it was necessary to in
sert for these conferences the figures given in their journals for 1899; hence the numbers here given will not exactly agree with those which will ap
ppear in the official minutes of the annual con
dferences for 1900. They never fail to represent the life of the Church for a twelvemonth.

The educational institutions include 25 theological schools, with 100 professors and teachers and 1,230 students; 50 colleges and universities, with 1,821 professors and teachers and 28,619 students; 90 classical seminaries, with 496 professors and 11,202 students; 6 normal institutions, exclusively for women, with 157 professors and teachers and 1,187 students; 99 foreign mission schools, with 533 professors and teachers and 7,454 students; and 4 missionary institutes and Bible training schools, with 87 professors and teachers and 433 students; making in all (allowing for 24 institutions, with their teachers and students, du
plicated), 228 schools, with 3,040 professors and teachers, 46,545 students, grounds and buildings valued at $16,843,293, productive endowments aggregating in value $10,573,306, and a total value of property and endowments, productive and prospective, exclusive of debt, of $25,009,471.

The Methodist Episcopal Church includes 2 English magazines and 1 German magazine, 11 English and 1 German weekly periodicals, and 14 Sunday-school periodicals and lesson helps in English, German, and Swedish. Besides these, a large number of independent and local unofficial periodicals are published, representing many as
pects of the life, thought, and interests of the people of the Church.

The institution of deaconesses in the Methodist Episcopal Church was begun under private initi
ative in 1887. It was recognized by the General Conference of 1888. This General Conference also
stituted an order of deaconesses in India, to which authority was given to administer the sacraments to such women only in that country as could not be reached otherwise. Deaconesses have been the subject of further legislation by
METHODISTS.

The subsequent general conferences. The Methodist Episcopal Deaconess Society was organized in 1859, and has been incorporated. It was intended to form a bond of union between deaconess workers in various fields of labor, and is competent to hold property for the care of disabled and destitute thieves temporarily till it can be placed under the care of a local board. Deaconess institutions have multiplied rapidly, and are numerous in the United States, at Methodist centers in Europe, and at foreign mission stations.

Fifteen children’s orphans’ homes and schools are sustained by various benevolent societies and special organizations within the Church. Among numerous other institutions under the control of boards or members of this Church are 8 homes for the aged and 19 hospitals.

Chapter of the Epworth League is established in all countries where the Methodist Episcopal Church exists, and is expected to have enrollment for 1900 representing 20,420 regular chapters and 7,300 junior chapters, with a total of 1,900,000 members. The league is under the direction of a board of control composed of ministers and laymen, one half of whom are appointed by the bishops and one half elected by the General Conference districts.

The receipts of the Sunday School Union for the year ending Nov. 30, 1889, were $2,238,381, and the disbursements were $1,930,300. It made return, besides the schools in the United States, of 4,204 schools in foreign lands, with 10,357 officers and teachers and 189,369 scholars, showing an increase for the year of 364 schools (foreign), 4,975 officers, 18,139 teachers, and 301,700 scholars.

The receipts of the Tract Society for the year ending Nov. 30, 1889, were $18,747, and its disbursements $24,723. During 1899 grants of books and tracts were made to China, India, Africa, Japan, Korea, Norway, Finland, Denmark; Germany, Switzerland, Italy; Bulgaria, Mexico, Chili, and the Argentine Republic. Tracts were also distributed in part of the United States to pastors in their regular work, to immigrants, to inmates of hospitals, prisons, and asylums, and to sailors and soldiers, the aggregate of distribution in the United States being 3,977,000 pages. Besides these, 1,848,000 copies—a weekly average of 42,000 of the periodical Good Tidings were circulated in the South in connection with the work of the Sunday School Union.

The annual meeting of the Board of Education was held in New York city, Dec. 5. The treasurer reported that the income from Children’s Day collections, interest on invested funds, returned loans, gifts, and legacies had been $129,576. Eighteen hundred and thirty students, representing 20 different nationalities, had been aided with $8,794. Several large gifts and legacies had been received. The board ordered that hereafter persons contributing to its work $1,000 or more should have a fund created to bear either the name of the donor or some name suggested by him.

Church Extension. The General Committee on Church Extension met in Brooklyn, N. Y., Nov. 8. The receipts for the year from all sources had been $338,410, or $48,441 more than in 1889. The sum of $229,118 had been available for use in donations, etc., on account of the general fund, and $114,374, or $38,557 more than in 1889, received on the Loan fund. Loans to the amount of $129,296 were returned. Additional care had been taken in the collection of loans. Mention was made in the report of the losses suffered in many parts of the country from storms and floods, as likely to result in calls for aid in rebuilding or restoring church property. The receipts from the beginning of the society, in 1865, to Oct. 31, 1900, had been $6,045,909, and during the same period 11,677 churches had been aided. A call had been issued in 1899 for $1,000,000 in thank offerings for church extension, for the erection of 1,000 churches each in the Brooklyn, Massachusetts, and Ohio conferences, and for securing additions to the Loan fund, and for the payment of debts on churches that had been aided by the board; toward this sum $295,161 had been received. Appropriations of $335,547 were made for the ensuing year.

Freedmen’s Aid and Southern Education.—The annual meeting of the Freedmen’s Aid and Southern Education Society was held in Newark, N. J., Nov. 12 and 13. The reports represented that interest on the part of the Church in the cause for which the society is concerned had considerably increased. The receipts for the year had been $553,805 (of which $11,425 were entered in the Treasury overdrawn”), and showed a net increase of $4,124 over those of the previous year. The expenditures had been $335,503, of which $171,773 were for schools among colored people and $47,815 for schools among whites. The amount of indebtedness was $154,891, showing a reduction of $23,183 during the year. It was decided at the meeting to ask the advisors to the society, together with the Board of Directors, to advise the treasurer to apply the payment of this debt, and the total amount asked from the conferences for the ensuing year was $251,950. Secretaries and pastors were advised, when presenting the work of the society to the people, to lay special stress on its industrial aspects, and to appeal for special gifts for the labor shops. The society paid $530 scholars, and purchased $12,500 for industrial education was recommended, to be distributed among different schools. The following resolution was adopted: “1. That we depurate the action taken by some of the States of the Union, which, by constitutional provision, is designed to disfranchise a class of voters whose right to all the privileges of citizenship is secured by the amendments to the Constitution of the United States, and that we protest, in the name of justice and of that equality before the law which has been the boast of the American people, against such tests and provisions for voters as can not operate equally with all others with respect to all opportunities for political action. 2. That while we favor the use of an educational test which shall not discriminate against any class on other grounds, we earnestly protest against what is known as the ‘grandfather clause’ as partial, unjust, un-American, undemocratic, and oppressive. 3. That the time is here when representation in Congress should be based upon the number of voters in the States, and not on the population as a whole, or some other constitutional provision is made that will give to each State an equitable representation in the House of Representatives.”

Women’s Societies.—The Woman’s Home Missionary Society met in its annual convention at St. Louis, Mo., Nov. 11th and 12th. The report of the treasurer showed that $384,713 had been received in advance of more than $50,000 in receipts. Of the $200,000 pledged for the Twentieth Century Thank-offering fund, $100,000 had been secured. A bequest of $25,000 and gifts of $8,000 and $10,000 were mentioned. Several of the society’s homes had been enlarged during the year; the Bohemian Home especially had been completed; land had been purchased in Washington, D. C., and paid for, for Rust Hall; and new work had been opened in the Hawaiian Islands and Porto Rico.

The reports made to the General Executive Committee of the Woman’s Foreign Missionary
Society at its annual meeting in Worcester, Mass., Oct. 24, showed an increase of nearly $34,000; in receipts, the total amount raised during the year having been $414,531. About $70,000 had been contributed to the Thank-offering fund, which now amounted to $118,000. Thirty missionaries had been sent out during the year, and 13 new missionaries were accepted. Appropriations of $273,909 were made for the coming year.

**Missionary Society.**—The annual meeting of the General Missionary Committee was held in New York city, Nov. 14 to 20. The treasurer's report showed that the total receipts of the Missionary Society from Nov. 1, 1899, to Oct. 31, 1900, had been $1,223,904, and the disbursements $1,202,693; and the surplus report of indebtedness was $49,183. In addition to the regular income, special gifts of $76,803 had been received. Appropriations of $825,324 were made for the foreign missions in Germany, Switzerland, Norway, Sweden, Denmark, Finland and St. Petersburg, Bulgaria, Italy, Eastern and Western South America, Mexico, Africa, China, Japan, Korea, India, and Malaysia; $54,000 were made for India, which were to be applied to non-English-speaking populations in the United States; $120,160 for the Contingent fund and miscellaneous objects, and $23,904 for the debt; making a total amount of appropriations of $1,242,179. In addition to this amount, $85,500 for special purposes were authorized, to be appropriate conditionally. Recommendations were made by the committee in reference to the collection for the Twentieth Century Thank Offering to be taken in connection with the regular collections for missions, to the effect that "whatever is raised in addition to the amount of the collections of the previous year shall be the Twentieth Century Centennial Offering," and a sum equal to the collections of the previous year plus 5 per cent. of that sum shall be added to legacies and lapsed annuities and appropriated in 1901, and the remainder of the collections not otherwise designated shall be appropriated to the missions in foreign countries."

The address of the bishops to the General Conference began with a comparative review of the condition of the Church at the time of the meeting of the first delegated General Conference in 1800 and now, showing, among other things, that during the century the various Methodist churches in the United States, all having the same founder, the same name, and the same objects, had increased from 61,000 communicants to nearly 6,000,000. It then described the proceedings had in behalf of the Twentieth Century fund and the present condition of the enterprise; reported the transactions of the bishops and of the Episcopal Board and the work in the mission fields, and reviewed the present state of the Church at considerable length, under the several heads of numerical growth, benevolence, doctrinal fidelity, and spiritual life; attempting to account for some phenomena of a less encouraging character which had been recently developed. Of matters of church polity, the results of the vote of the Church on the proposition for the equal representation of the clergy and laity in the General Conference were mentioned as exhibiting a remarkable approach to unanimity. The working for twelve years of the change of the limit of pastoral service from three to five years was spoken of as not answering the expectations that had been entertained from it, and the General Conference in 1894 expressed the opinion that if the General Conference in 1890 was able to increase the three years' limit of annual appointments, with well-defined and carefully guarded provisions for necessary exceptions to this limit, then an entire removal of the time limit of annual appointments would be of advantage to the work."

On the subject of the Church, the address maintained that the Church could not permit the least abatement of its hostility against the liquor traffic or relax its attitude toward divorce. With regard to amusements, the restrictions prescribed in an earnest age like the ages of Wesley and the Puritans could not be enforced in their full measure under modern conditions of society. "The attempt to enforce absolute abstinence from recreative amusements reacts toward unrestrained indulgence. A discrimination between the admissible and the inadmissible is therefore imperative." Wesley's principle that the taking of such amusements as can not be taken in the name of the Lord Jesus should be often reasserted and emphasized in this time of excessive and questionable amusements. "Without simplicity, moderation, and purity in his pleasure, the Christian can not resist the forces that create an age of trifers and sensualists. So great is this danger that we suggest that it would be profitable for the special amusements and amusements in general to be considered. The question of amusements is a brief but cogent statement of the peril which attach to many amusements, of the evils inseparable from others, and of the principles by which the Christian should regulate his choice among and his use of them." As regards Christian unity, "the Methodist Church has always held in high estimation and practice as evidences of growing knowledge Jesus Christ as Lord and Saviour constitute the one body, of which he is the head," and that their several churches, however diverse in certain respects, "are the several parts of the world-wide and indestructible society which is his visible witness on earth." Yet the practical relations of the churches of the present day to this correspondence to this ideal. In view of this fact, while Methodists must hold the truth as God gives them to see it and do their own work in their own way, they must even more than heretofore give diligence "to keep the unity of the spirit in the bond of peace," must grant to other churches, whose access to the wholesome and vigilant political righteousness, inspired and directed by Christian ideas, is the only remedy," And the Church "must insist that a wise, persistent, and heroic earthly citizenship has now become a supreme test of noble character."

**General Conference.**—The twenty-third delegated General Conference met in Chicago, Ill., May 2. A question arose at the beginning concerning the number of lay members to be admitted. The plan of lay delegation in force since 1872 provided for the admission of not more than two from each annual conference. The General Conference of 1890 had submitted to the conferences for their action the draft of a rule making each conference equal to the number of ministers it was entitled to send, so that the General Conference should be composed equally of ministerial and lay delegates. This measure had failed to receive the three fourths vote in the annual conferences required by the constitution. Thereupon the Rock River Conference had made a proposition, which was submitted to the annual conferences, for so altering the article of the Discipline concerning lay
METHODISTS.

delegation that it should read, "The lay delegates shall consist of one layman for each annual conference, except such conferences as may have more than one ministerial delegate, which conferences shall each be entitled to as many lay delegates as ministerial delegates; and the modifying or other subjects in the Discipline that their reading should be consistent with the amend-
ment proposed. This measure had been carried in the annual conferences, the votes of the ministers members thereof having been 9,270 in its favor and 1,524 against it. In anticipation of the adoption of the amended rule, provisional lay delegates were appointed for all the annual conferences in addition to the regular ones, so that they might be present and ready to take their places as soon as the new rule should go into effect. The action of the annual conferences in favor of the proposed change in the rule governing the number of lay delegates was concurred in by a unanimous vote.

Among the provisional delegates present, to be seated was a woman—Mrs. M. Y. McMahan, of Illinois. In order that the actual admission of the other "provisional" lay delegates might not be complicated with the question of the eligibility of women to seats in the General Conference, Mrs. McMahan declined to present her credentials. The Bishop of the General Conference was therefore directed to call the roll of provisional delegates, for the immediate seating of all against whom no objection should be offered. This was done, and the provisional delegates were seated as members of the General Conference.

The commission appointed by direction of the previous General Conference (1896) to prepare a report, "first, a draft which shall be set forth in well-defined terms and in logically arranged articles the existing organic law of the Methodist Episcopal Church; and, secondly, any modifications of said organic law which the committee may recommend for adoption by the concurrent action of the General Conference and the members of the annual conference," presented its report, and the consideration of the paper constituted the principal part of the business of the session. This report, in its first part, defined the existing organic law of the Church as being embodied in and limited to the articles of religion, the general rules, and the "rules and regulations of the General Conference in the Discipline of 1808, enacted by the General Conference of that year, together with such modifications thereof as had been adopted since that time.

The second part of the report, embodying recommendations for modifications of the organic law, was taken up, considered section by section, and adopted with such amendments as were ac-
ccepted, for submission to the annual conferences. With reference to the eligibility of women to be members of the General Conference, an amend-
ment was proposed for approval by the annual conferences, so changing the articles of the Disci-
pline prescribing the qualifications of lay delegates as to substitute the term "lay members for "laborers" where used in the several charges. An amend-
ment was proposed to the rule respecting the an-
nual appointments of ministers to their several charges, by striking out the clause limiting the number of years during which a minister may be sent to the same place to five, so that the passage shall read, "He [the bishop] shall appoint the minister to several charges at intervals of five years, and in his discretion he may extend the interval. While expressing its judgment that liberal provision should be made by the Book Committee for the support of the bishops and General Con-
ference officers, the Conference resolved that "no bishop or General Conference officer shall receive anything above actual expenses for his services in the dedication and reopening of churches, attend-
ing commencements of our educational institutions, and such other like services as he may render the Church." All the present active bishops were declared effective, and two additional bishops were therefore named, Rev. David H. Moore and the Rev. John H. Hamilton, D.D.; also two missionary bishops, for southern Asia, to be co-
ordinate in authority, viz., the Rev. Edwin W. Parker, D.D., and the Rev. Frank W. Warnic, D.D., already missionaries in India. In addition to the episcopal residences in the United States, one in London, Rev. D. H. Moore, was also appointed at Zurich, Switzerland, and Shanghai, China, to the former of which Bishop John H. Vincent, and to the latter Bishop David H. Moore, were assigned for four years each. It was decided that there be but one general secretary for each of the organized benevolences of the Church, who shall be the executive officer, except in the case of the Freed-
men's Aid Society, to which two secretaries were given; with at least one assistant secretary for societies requiring more than one secretary, to be elected by the General Conference. Several of the official newspapers having proved to be not self-
supporting, the number of journals was reduced by consolidation or by requiring that arrange-
ments be made with the General Conference for the publication of such journals and their expense to the Church. The offices of general sec-
retary of the Epworth League and editor of the Epworth Herald were united. The committee to whom a number of memorials on the subject were referred recommended the removal in the disci-
plinary rule regarding worldly amusements of the prohibitions condemning "dancing, playing of games of chance, attending theaters, horse races, circuses, dancing parties, or patronizing dancing schools" from the paragraph relating to conduct liable to reproof or punishment, and their insertion in the paragraph designated as "special advices." The recommendation was not sustained by the Con-
ference, and the advice of the minority report that no action be taken on the subject at this time was adopted. A petition to Congress was adopted, asking the removal of the tax on legacies given for charitable, educational, and religious purposes, because it was, in the judgment of the General Conference, contrary to public policy and to the aim and spirit of our institutions, and practical benefit to our agents on the mission-field, and to aid government and benefit the people. A resolu-
tion was passed expressing regret that after the passage of a law prohibiting the sale of intoxicating liquors at army posts and in forts, camps, reservations used for military purposes, and na-
tional soldiers' homes, the plain intent of the en-
mendment had been, "by construction, it seems to us, forced and unnatural, placed upon the law by the Attorney-General," defeated; and appealing to the President to use his influence in favor of the new bill, aiming to be more distinctly prohibitive, which had been introduced in the House of Repre-
sentatives. The publishing agents were requested to have the new paper, a re版 of those of 1808, including the Conference boundaries in outline. Fuller recognition was given to organizations for city evangelization; their powers were increased, and the general organization was constituted as the National City Evangelization Union. The pro-
ceedings of the bishops taken in 1896 (see Annual Conference for the states and territorial conferences in 1896) were approved; their appointment of a commission to have charge of the collection was accepted, and the commission was continued; the designation of the objects to which the funds collected should be applied was ratified; and the duties of pastors
and educational officers in the matter of aiding in the carrying out of the plans of the commission were defined.

II. Methodist Episcopal Church, South.—The financial returns of this Church give it 5,950 ministers, 14,190 churches, and 1,460,272 members, with church property valued at $5,400,000.

The business done by the Southern Methodist Publishing House during 1899 amounted to $383,746, or $40,447 more than in 1898. The net gain in assets, $80,880, was less than herebefore in proportion to the operations of the concern. The capital was returned as amounting to $926,531. A branch house established in Dallas, Texas, had realized a profit of more than $4,000 in the first year of its existence. The establishment of a branch in China has been determined upon, to take place as soon as a suitable man can be found to manage it.

The reports of the Board of Education represented it as being in better financial condition, taking everything into consideration, than at any previous time. More than $800,000 had been raised toward a contemplated twentieth century fund of $1,500,000. It was believed, had done much to arouse enthusiasm on the subject of education. The entire sum of $25,000 for Haygood Memorial Hall had been raised.

The report of the Epworth League Board showed that 441 senior and 111 junior chapters had been added during the year. The total of 25,730 members, making the number of members 9,477 senior and 666 junior, with 245,175 members in all. A number of lapsed and inoperative leagues had been revived and set to work under better conditions, and a more general understanding of the purpose of the League and its plan of work was being diffused throughout the connection. The general missionary spirit was also mentioned in the report.

The report of the Sunday School Board showed gains of 30 schools and 12,637 teachers and pupils, the whole number of schools being 13,940 and of teachers and pupils 951,824. The collections from all sources, including those for the Children's Day funds and the total of 23,730 members, making the number of chapters 9,477 senior and 666 junior, with 245,175 members in all. A number of lapsed and inoperative leagues had been revived and set to work under better conditions, and a more general understanding of the purpose of the League and its plan of work was being diffused throughout the connection. The general missionary spirit was also mentioned in the report.

The Board of Missions at its annual meeting, May 11, appropriated $222,541 for the work of the missions in Brazil, China, Korea, Japan, Mexico, Cuba, and among the Indians, the German populations, and the conferences of the Rocky mountains. The apportionment of amounts to be asked from the several conferences contemplated the raising of $20,000 in 1899.

III. African Methodist Episcopal Church.—The following numbers were given in the episcopal address to the General Conference as representing the statistics of this Church for 1900: Of annual conferences, 65; of churches, 5,095; of ministers, 5,439; of communicant members, 663,737; of deacons, 1,467; of elders, 1,609; of teachers, 165 teachers, 5,237 students, and 660 graduates; value of church property, $10,310,993. Between 1884 and 1899 $1,140,013 were raised for education.

The twenty-first General Conference (quadrennial) met in Columbus, Ohio, May 7. The episcopal address began with a review of the progress of the African Methodist Episcopal Church during the four years since the preceding General Conference, in which a considerable increase in numbers was spoken of, and as evidences of growth in vital piety were mentioned the better performance of the Church's duties on all observable lines, the denomination having outgrown its embryonic spirit, a greater grasp of duty and devotion to the performance of it, and the facts that the denomination had built more churches and educated more persons and had had a greater number of conversions than in any previous four years. A financial scheme for the support of the educational interests of the Church was adopted, under which funds were apportioned to 16 institutions of collegiate and academic grade in sums ranging from $1,000 to $200 each, and a plan was arranged for raising money for the educational department, (1) by appropriation from the "dollar money," 6 per cent. of which shall be paid to the Secretary for the inquiry private solicitions and bequests, which shall be paid according to the wish of the donor; (2) by the contributions of educational societies, the formation of which was recommended to the churches of the connection; (4) by public appropriations; (5) by the maturing of life insurance policies; (6) by contributions of past and present members; (7) by the proceeds of collections taken at the annual conference educational anniversaries; and (8) by the establishment of a day throughout the connection for taking collections in all the churches, the avails of which shall be used exclusively as an endowment fund for the several connectional institutions. The proposed indebtedness is met—the anniversary to be known as Endowment Day, and held on the third Sunday in each September. The office of Secretary of Christian Endeavor Work was instituted, to be filled by appointment by the bishops. Steps were taken for having the Church represented on the Board of Control of the American Bible Society. Provision was made for the inquiry privations and bequests of the African Methodist Episcopal Church in foreign lands where it is working. A measure was passed for debarring from the pulpit any man who is separated from his wife except for the scriptural cause. The report of the committee on the state of the Church advised against the drawing of the color line, and the abolition of slavery, and advocated the principles of color, race, and country; and the Rev. J. L. Coppin, D. D., making the number of bishops 14. In the adjustment of episcopal districts, 11 were constituted for the United States (with the Bahama Islands), 1 for Canada, Bermuda, the West Indies, South America, Hawaii, and the Philippine Islands (Bishop Smith), 1 for the west coast of Africa (Bishop Moore), and 1 for South Africa (Bishop Coppin).

IV. African Methodist Episcopal Zion Church.—The statistical reports of this Church give it 9 bishops, 96 presiding elders, 3,200 itinerant preachers, 2,500 churches, and 320,000 members. The general statistician reported to the General Conference that the total value of real and personal property was $4,865,372; that $2,177,000 had been raised during the past four years for pastors' salaries, $614,800 for current church expenses, and $3,765,996 for new churches and the payment of debts. The sum of $114,000 had been raised for the general fund, $7,500 for home and foreign missions, and $20,000 for purposes of church extension.
The report of the Varick Christian Endeavor Society gave the number of organized societies as not more than 600, and that of members as exceeding 20,000.

The General Conference met in Washington, D. C., May 2. The quadrennial address of the bishops reviewed the condition of the Church and presented a number of recommendations of matters to be considered by the Conference. The report of Lagrange College represented that the institution, besides paying its current expenses, had reduced its debt by the amount of $3,900. The collecting agents for the institution reported upon the collection of funds approaching $50,000 in amount. The property of the institution was valued at $117,530, with $10,035 due on it. The agent of the Greenville College reported having obtained $2,705. The report of the educational secretary represented that the school property had been so improved as to be worth $143,500; that $75,000 had been raised and 1,073 students had attended the schools. The Rev. John Wesley Alston was chosen bishop in place of Rev. J. H. L. Holiday, deceased, but no additional bishops were elected. Among the measures of policy adopted was a rule requiring the appointment of presiding elders directly by the bishop instead of by the annual conference on nomination by the bishop, and the abolition of the office of Conference Financial Agent, in consequence of which clerical conferences will hereafter make their financial reports monthly to the general steward. A special service was held in commemoration of the one hundredth anniversary of the birth of John Brown.

V. Methodist Protestant Church.—The Statistical Committee of this Church reported to the General Conference in May, 1901, a report in connection with the 39 conferences, 1,645 ministers, 1,135 local ministers and preachers, 177,066 members, 4,250 probationers, 2,001 churches, 531 parsonages, and 2,042 Sunday schools, with 16,080 officers and teachers and 126,031 scholars. The total value of church property was $4,756,721.

The receipts of the Woman’s Foreign Missionary Society for the year were $7,504. After providing current expenses, a balance of $3,397 remained.

The eighteenth quadrennial General Conference met at Atlantic City, N. J., May 18. The president, Dr. Joshua W. Hering, in his address at the opening of the Conference represented that the recommendations he had made at the previous General Conference had been at least partially adopted, and in correspondence between the annual conferences and the president of the General Conference had been, he was convinced, the means of accomplishing much good. The correspondence had had a wide range, embracing requests for the construction of law and for advice in the management of work that was just being inaugurated. The Rev. D. H. Stephens was elected president to succeed Mr. Hering. The Committee on Publishing Interests reported that the assets of the two publishing houses were about $63,000. The circulation of Sunday-school literature had increased to about 140,000 copies. The report of the Board of Ministerial Education showed a substantial increase in the collections, and showed an increase of the permanent fund from $5,184 to $10,529, with additional pledges amounting to about $10,000. The board had in training for the ministry 39 students beneficiaries and about 75 not beneficiaries. Its receipts for the four years since the preceding General Conference were $584,495 and its disbursements $25,600. The Theological Seminary had 14 students on its roll, while 50 of its alumni were preaching in the Church. Six free scholarships had been established during the year. The receipts of the Board of Home Missions for the quadrennium had been $23,607. The Board of Foreign Missions had received during the past four years $52,688. It returned for the mission in Japan 12 foreign missionaries, 15 native preachers, and 19 stations, having properties, including schools and colleges, valued at $40,000. The Woman’s Foreign Missionary Society returned an income of about $7,500 a year and property in Japan having an estimated value of $15,000. The society does educational and evangelistic work, and has 6 missionaries, 76 pupils in the school, a kindergarten, and a number of native workers. A mission had been started in Shanghai, China, with 2 missionaries. The Associate Missionary Agency had been formed to organize missions among the Indians, reported some evangelistic work done and no debt. The Conference decided that the term for which foreign missionaries shall be engaged be fifteen years, with the privilege of returning home every five years. Provision was made for the election by the Conference in place of the Women’s Foreign Missionary Society. A proposal to consolidate the Boards of Home and Foreign Missions was referred to a committee, which brought in two reports, one favoring the continuance of the home board under its own management and the other presenting a plan of consolidation. The matter was referred to the boards for a report, and the whole matter was then laid on the table. It was decided that a layman has not the right of appeal from the quarterly conference to the annual conference. The question being raised whether a local preacher can act as a lay delegate in the annual conference next preceding the General Conference where there were no conferences, the constitution of the Church required that all such delegates should be laymen. The word “catholic,” which had been stricken out from the Apostles’ Creed by the previous General Conference, was restored. An overtone providing for the exclusion from representation in the General Conference of a conference which fails to raise 25 per cent. of its general conference approved on the part of the Church, and an overtone looking to the abolition of the college board and the election of delegates to the General Conference by a direct vote of the annual conferences, were sent down to the annual conferences. Provision was made for the preparation of a new hymnal. A higher standard of character for ministers and candidates for the ministry was insisted upon.

VI. American Wesleyan Church.—A summary of the statistics of the spring and fall conferences of this Church (omitting three conferences which failed to make reports), published in the Wesleyan Methodist for Jan. 25, 1901, gives the following: in nineteen cases, beginning with the superannuated ministers, 33; of quarterly conference licentiates, 304; of members, 15,653; of Sunday schools, 471, with 465 superintendents, 1,948 teachers, and 17,290 pupils; total amount of contributions, $119,244, of which $61,063 were for preaching, $10,369 for missionary enterprises, $1,695 for educational purposes, $5,629 for connections, $4,250 for the support of Sunday schools, $861 for superannuated ministers, and the remainder for other benevolences and church building and expenses. At the annual meeting of the Connectional Boards of this Church the reports showed the aggregate assets of the Connectional societies to be $135,294. The $633 for educational purposes, $5,629 for connections, $4,250 for the year and added $2,650 to its capital, while its total assets were $67,213. The receipts for foreign missions had been $7,804, those for home missions $2,995, and those for the Education $5-
societys $8.991. The first year's operation of a school of college grade had been satisfactory as to number of students and standard of scholarship. Twenty-nine students had the ministry in view.  

VII. Free Methodist Church.—The Executive Board of this Church, at its annual meeting, acted upon the memorial of a member who conceived himself aggrieved by the operation of the rule of the Church against membership in secret societies, including labor unions. A preamble and resolutions were adopted, in which the position against secret societies, as expressed in the Discipline, and affirmed by the committee in 1899, was reaffirmed, with the declaration: "We are unwise if we do not make any change in our rules on this subject, nor can we relax in the least our determination to enforce this rule vigorously without exception or favor. We can not, however, allow this position to be misinterpreted and misconstrued as opposition to organized labor as such. We are not opposed to such organized societies, and can not make any change in our rules on this subject, and if we can relax in the least our determination to enforce this rule vigorously without exception or favor. We can not, however, allow this position to be misconstrued as opposition to organized labor as such. We are not opposed to such organized societies, and can not make any change in our rules on this subject, nor can we relax in the least our determination to enforce this rule vigorously without exception or favor."  

VIII. Methodist Church in Canada.—The following is a general summary of the statistics of this Church for 1900: Number of annual conferences, 11; of ordained ministers, 1,790; of probationers for the ministry, 242—making in all 2,032 ministers; of local preachers, 2,920; of exhorters, 1,174; of class leaders, 7,133; of members, 284,901; of Sunday schools, 5,965, with 33,023 officers and teachers and 267,634 scholars; of Epworth Leagues, 1,856, with 74,920 members; of churches and places of worship, 4,334; of parsonages, 1,133; of colleges and educational institutions, 19; value of church property, $15,397,634.  

The 1,556 young people's societies of various names include 760 Epworth Leagues, 70 Epworth Leagues of Christian Endeavor, 70 other societies, and 303 Junior Epworth Leagues, with 48,290 active and 26,621 associate members. These societies contributed in 1899 $24,004 for league purposes, $19,902 for missions, $475 for the Superannuation fund, $119 for the educational fund, and $62,043 for other purposes.  

The Woman's Missionary Society received from all sources $42,562. Reports were made at the nineteenth annual meeting of the Board of Managers, Oct. 23, from stations and schools in Japan, China, among the Chinese in British Columbia, and in the Indian, and among the French.

VIII. Wesleyan Methodist Church (Great Britain).—This Church includes, according to the information furnished by the Conference book, data for the years:

The total income of the Education Committee, as shown in its sixtieth annual report (March, 1900), was £272,923, and the total expenditure was £285,275. The sum of £28,936 had been received as "scholars' pence." The collections and subscriptions mentioned, amounting to £5,965, showed an increase of £88 over the previous year. The 747 day-schools, with 3,600 members, and 159,716 pupils, with an average attendance of 128,992. The special Government aid grant allotted to the 6 Wesleyan school associations, amounting to £36,146, had been distributed by the governing bodies according to the necessities of the several schools. Full particulars were given in the report of the principal day-school extensions and enlargements, all going to indicate a revival of the interest taken by the connection in elementary education.

The report of the Home Missionary Society to the Conference showed that its total income had been £42,000. Grants had been voted of £9,800 to dependent circuits, £4,251 toward the support of home missionary ministers, and £3,300 to district home mission committees. The Committee on Work in the Army and Navy reported that 193 ministers were wholly or in part engaged in this field, and that there were 31,273 declared Wesleyans in the services. The Chapel Committee reported upon the building of 33 chapels, at a cost of £28,933; of 22 mission-houses, at an estimated expenditure of £20,594; and of 10 school-rooms. The new chapels, with enlargements, would give a total additional accommodation of 21,488 sittings. The estimated outlay for 357 contemplated cases was £441,017. The present number of Wesley Guilds was 1,190, with 75,164 mem-
bers, the figures showing an increase of 114 guilds and 4,859 members. The report on education represented that the school departments had increased during the year from 743 to 750, while the number of scholars was 16,787, showing an increase of 1,071. The reports on church membership showed a net increase of 6,225 members.

The annual meeting of the Wesleyan Missionary Society was held in London, April 30, to May 1. Mr. Edward Aston, of Manchester, presided. The total ordinary and special income, home and foreign, had been £133,757, of which £1,834 had been contributed for special missions and £8,787 had been received from the mission districts. In addition to this sum, £1,857 had been contributed for the relief of Wesleyans in distress, with over £32,550 for mission societies and £300 for special extension funds. The total expenditure had been £133,738, and the separate expenditure of the Woman's Auxiliary for Female Education in Foreign Countries amounted to £13,467 additional. The report from the mission fields accounted for 315 central stations or circuits and 2,430 chapels, plantations, missionary stations, 3,000 catechists, day-school teachers, and other paid agents, 6,133 unpaid agents (local preachers, Sunday-school teachers, etc.), 47,372 church members, 13,265 probationers, and 92,488 pupils. Thirty-six missionaries had been sent out during the year to stations in India, Burmah, China, West Africa, Ceylon, the West Indian islands, South Africa, the Bahamas, Honduras, and Cairo, and 9 missionaries and 2 wives of missionaries had died.

The Conference met at Burslem, July 24. The Rev. Thomas Allen, D.D., was chosen president. A resolution was adopted in the pastoral session in reference to the appointment of assistant secretaries for the Conference having heretofore been made by acclamation, that henceforth a small committee should be designated to select a list of names, from which or from other persons who may be nominated the Conference shall make its selections. The pastoral session recommended that a roll of membership, compiled from the class books, be kept by every society, the names of members standing in their several classes, the lists to be corrected, if possible, once a quarter, or at least once a year, and the superintendent being responsible for seeing that the roll is duly kept.

The committee on the proposed change in the organization of the society was appointed, and reported that the two bodies had accepted the resolution passed by the previous Conference, although some had suggested minor alterations in the details, and the measure was finally adopted. Under it the representative conference will hereafter consist of 300 ministers and 300 laymen, and the representative session, instead of being preceded and followed by a pastoral session, will be the first, to follow the representational session. The report on the Twentieth Century fund showed that 733,513 guineas had been promised, while the total amount actually in hand was £317,443. There were now required 266,687 additional promises to complete the fund (of 1,000,000 guineas). Out of 814 circuits, only 22 had reported having ability to complete their promises, and these only represented subscriptions of less than 2,000 guineas. The Executive Committee had decided to give a year's grace for any additional promises now made. Additional subscriptions of more than 40,000 guineas were taken in the Conference, making the whole amount pledged 771,500 guineas. The sum of £510 was voted as a fund for meeting the expenses of the Connection—to be called the Connectional fund, the income for which shall come from an annual collection in each chapel and from special donations—having been approved by the synods, was finally adopted. A proposal by the Home Mission Committee for the institution, instead of small, separate district committees for home missions and chapels, of one larger united committee for both purposes, was provisionally approved and sent down to the synods for consideration. It is contemplated that this Committee shall consist of 10 ministers and 10 laymen; that it shall give special consideration to all grants to dependent circuits and home mission stations, to all requests for additional or fewer ministers, and to all proposals for the division or amalgamation of circuits; and that it shall advise respecting the purchase of sites and the erection of buildings, both in connection with Methodism in towns and villages. The report on the proposed Ecumenical Conference of Methodism to be held in 1901 provides that the conference shall be constituted of 500 members, 300 being assigned to the western section and 200 to the eastern. The eastern section will comprehend the United Methodist Churches in the United States and Canadian conferences and their foreign work. The conference will be held in Wesley's Chapel, London, and will be opened on Wednesday, Sept. 4, 1901. Of the eastern section, there were allocated to the Wesleyan Methodist Church 200, Primitive Methodists 44, United Methodist Free Church 118, New Connexion 19, Bible Christian 8. Others were allocated to the South African, Australian, and French Churches. The Conference decided to send out a secretary to the west coast of Africa. A minister was designated to serve as secretary of the Wesley Guild, to give his time entirely to the interests of that organization, etc. It is proposed to consider during the year the best means of providing for the training and equipment of class leaders and of obtaining a large increase of new leaders, especially from the ranks of the young people. Thanks were voted to Mr. Samuel Smith, M. P., for directing the attention of Parliament to the evils of indecent plays in the theaters and of gross license in the streets of London. In view of proposed legislation in reference to secondary education, the Conference by resolution declared itself opposed to grants of public money being made to denominational secondary schools without the provision of a conscience clause, and also to it conveyed its strong opinion that public school educational authorities establish secondary schools "no formularies distinctive of any denomination should be permitted to be taught therein, and no dogmatic or ecclesiastical tests should be introduced." The committee appointed to consider the relation of baptized children to the Church recommended in the pastoral session that in determining the test to be given to children, and that more definite attention should be paid to the instruction of them in their duties and privileges as disciples of Christ; that such instruction should be extended to those not baptized, in order to bring them into membership with the Church; that for these persons special classes should be provided to meet for two or eight weeks in the spring of the year; and that more regular instruction should be given in the duties of the parents of the baptized children. These recommendations were adopted, to be sent down to the synods, and the committee was reappointed. The committee having in charge the special class proposals to meet for two or eight weeks in the spring of the year, and to be placed under the rules of the society, recommended that it had collated the various regulations contained in the resolutions of past conferences, and
that in some instances changes had been suggested. One paragraph dealing with public worship had raised the question of the use of the liturgy in Wesleyan service, relating to which different views were expressed as to the use of the Book of Common Prayer and of the Psalter. These questions were referred back to the committee.

X. Primitive Methodist Church.—A report presented to the Conference in June reviewing the growth of this Church since its foundation in 1810 with 8 members gave the present number of members as 196,408, with nearly 1,500 ministers, 614,093 hearers, and 4,548 chapels having a total value of £3,950,182. These figures represented the present condition of the denomination after setting off more than 5,000 members who had joined the United Methodist Church in Australia.

The Sunday-school department reported 4,539 schools, with 68,567 teachers and 407,790 pupils, 29,106 of whom were members of the Church and 26,177 more were members of catechumen classes. Twelve hundred and twenty-one Christian Endeavor Societies returned 41,081 active and associate members, 27,652 of whom were members of the Church. The Annual Conference reported 2,062 Bands of Hope and 299 adult temperance societies, with nearly 300,000 members in all.

The annual meeting of the Primitive Methodist Missionary Society was held in London in May. The year's receipts of the general fund had been £141,276, and had been devoted to a larger number of members and of the African fund £5,808. There were now in Africa 10 principal stations and 31 out stations, 12 European and 3 native missionaries, with 3 trained native evangelists, 53 native local preachers, 8 native class leaders, and 1,446 members, the last number showing an increase of 55. The policy of the connectional policy was to maintain its mission in the field affected by the operations of the South African War, and had suffered considerably therefrom. Others were on the African mainland, opposite the island of Fernando Po, one of the stations being in a district which would probably on the adjustment of boundaries fall to the Germans; the future of the mission, and the people, would remove to British territory.

The Conference met at Bristol, June 13. The Rev. Joseph Odei was chosen president. Reports were made that the sales at the Book Room had amounted to £37,814, or £2,352 more than in any previous year; that the income of the Connectional fund had reached £2,578, the largest amount in its history; that the Chapel Aid Association had a deposit account of £232,446, and was helping chapel trustees to reduce their liabilities automatically; that the General Chapel fund had made grants of £1,006 during the year, and the Chapel Loan fund had assisted trustees to the extent of £2,000; that the Connectional Insurance fund, amounting to £2,000, had been increased to £5,000, and that a reserve fund of £27,023; that 320 annuitants were supported by the Superannuated Ministers' Widows' and Orphans' fund; that the Aged and Necessitous Local Preachers' fund, with an income increased by £150, had granted aid to 235 applicants; and that the Jubilee Thanksgiving fund had reached its goal of £50,000. The Missionary Society returned a total income of £17,561. A scheme of church extension was approved by the Conference under which an annual expenditure of £20,000 a year for five years in building new churches in populous suburbs and watering places is contemplated. To the special fund which it is proposed to raise for this purpose, Mr. W. P. Hartley, J. P., offered to give 25 per cent. of all the connection should raise. The Conference determined to continue its mission work and to arrest at all costs the gradual decline to which it had been subject. The proposition for union with the British and American Christians to the use of the Book of Common Prayer and of the Psalter. These figures were referred back to the committee.

XI. Methodist New Connection.—The one hundred and fourth annual Conference met at Newcastle, June 11. The Rev. George Stephen- son Hornby was chosen president. The Annual Committee having been charged by the preceding Conference with the consideration of the expediency of providing for Connectional extension, referred to act with representatives of the Bible Christians. The resolution on education, which was adopted unanimously, declared that no system of public education is satisfactory which does not give popular management where public money is granted, and which does not entirely abolish all sectarian tests where public grants are received.
message of fraternal greeting was sent to the Wesleyan Conference with the expression of the hope that ere long, by the exercise of brotherly love, a federation of Methodist churches might be brought about.

XIII. The Bible Christian Church.—The eighty-second Bible Christian Conference met at Penzance, Aug. 1. The Rev. John Luke was chosen moderator. The Chapel report showed that £13,455 had been raised toward renovations and the erection of new chapels. The total income, including £5,825 of borrowed money and a balance of £4,933, had been £42,402, and the expenditure £36,987. The Christian Endeavor report adduced facts tending to show that the number of members, a Southfield Society, and a committee to the measure in accordance with the action of the General Conference. The accounts of the Australasian Methodist Board of Missions show an excess in the receipts for 1899 of $7,003 over the expenditures, while for a few years past the society has had to face a deficiency averaging $20,000. The committee's act of 1895 to the credit of the society has been placed in a "legacies capital investment account." By the consummation of Methodist union in South Australia the mission maintained for many years at Yunnan-Fu, China, passed under the control of the General Board. A deputation appointed by the committee to act with the churches in Fiji respecting propositions for giving fuller powers of self-government to the mission district of that country, and is commissioned to consider other matters which have arisen during the state of transition through which the colony is passing. Fiji is the largest contributor of men and money to the Australasian Wesleyan mission, and a committee was appointed to act with the churches in Fiji respecting propositions for giving fuller powers of self-government to the mission district of that country, and is commissioned to consider other matters which have arisen during the state of transition through which the colony is passing. Fiji is the largest contributor of men and money to the Australasian Wesleyan mission, and a committee was appointed to act with the churches in Fiji respecting propositions for giving fuller powers of self-government to the mission district of that country, and is commissioned to consider other matters which have arisen during the state of transition through which the colony is passing. Fiji is the largest contributor of men and money to the Australasian Wesleyan mission, and a committee was appointed to act with the churches in Fiji respecting propositions for giving fuller powers of self-government to the mission district of that country, and is commissioned to consider other matters which have arisen during the state of transition through which the colony is passing.

MEXICO, a federal republic in North America. The legislative power is vested in the Congress, consisting of a Senate of 56 members, 2 each state and the federal district, and a House of Representatives containing 227 members. 1 to 40,000 of population. Representatives are elected for two years. Women and male citizens, and Senators by the same electorale for four years, the same term as the presidency. Porfirio Diaz was first elected President in 1876, and again after an intermission, and since 1887, when the Constitution was so altered as to permit a President to succeed himself, he has been elected consecutively. The Cabinet is in the beginning of 1900 was composed as follows: Secretary of Foreign Affairs, I. Mariscal; Secretary of the Interior, Gen. Gonzalez Casio; Secretary of Justice and Public Instruction, J. Baranda; Secretary of Fomento, Fernandez Leal; Secretary of Finance and Commerce, J. I. Limantour; Secretary of War, Z. Mené; Secretary of War and Marine, Gen. F. B. Berriozabal, Secretary of the Treasury, F. Espinosa. Porfirio Diaz was re-elected President of the republic in the beginning of October, 1900, and was inaugurated on Dec. 1 to serve his sixth consecutive term, his seventh term in the office. Each of the states has its constitution and autonomous government, with an elective governor and legislature. No state may levy duties on products of other states. All of them have adopted the federal civil and criminal codes with the exception of Vera Cruz and Mexico.

Area and Population.—The area of Mexico is 767,005 square miles. The population in 1905 was 12,630,863, being 16.4 per cent. of the male, about 19 per cent. being of pure white, 38 per cent. of pure Indian, and the rest of mixed white and Indian blood. All have had the same civil status since 1824, but the Indians and half-breeds are generally of a much lower order of intelligence than the whites. The people are Roman Catholic, except the Pure Indians. Churches and state have been separated. Education is nearly all the states is gratuitous and compulsory, and is aided by grants from the federal treasury. There were 6,141 schools of various
grades supported by the federal and state governments in 1897, and 1,533 maintained by municipalities. The regular army, as of August 28, 1897, totaled 42,462, with an average attendance, 391,657; cost of maintenance, $4,425,512. Besides these the clergy and private teachers taught 71,337 pupils on the average in 2,204 schools, making the total number of schools 10,298, with 402,394 pupils, out of 609,560 on the rolls, in average attendance, 293,732 of whom were boys and 300,780 of whom were girls. The higher schools have about 21,000 students.

**Finances.**—The receipts of the Federal treasury for the year ending June 30, 1898, were $600,130,212; expenditure, $535,499,541. The receipts include sums borrowed to pay railroad subsidies and temporary advances in addition to the ordinary revenue. The ordinary revenue amounted to $102,409. The 3-per cent. internal consolidated debt amounted to $50,069,125, the 5-per cent. redeemable internal debt to $41,874,900, and railroad bonds to $8,574,025 at the beginning of 1899, and there was a floating debt of $1,401,108. The national wealth of Mexico is estimated at $945,000,000. The revenue during the fiscal year was $317,592,907, the expenditure to $313,382,711, and their difference to $13,441,906; the revenue of the municipalities to $10,380,023, and expenditure to $10,092,062.

Mexico has four mints, the principal business of which is to coin standard Mexican silver dollars, weighing 27.073 grammes 0.9028 fine, containing 0.92535 ounces of silver, or 0.9393 gramme more than the United States standard dollar. The bulk of this coinage is shipped abroad, and finds its way to China, Farther India, and the islands of the Indian Ocean, where it is the common medium of exchange. Silver is the standard of value in Mexico, although gold is coined to the value of about $300,000 a year. The coinage of silver dollars in 1898 was $24,427,205; in 1897, $19,296,009; in 1896, $22,634,788; in 1895, $27,629,081; in 1894, $30,185,591; in 1893, $27,169,876; in 1892, $25,326,717; in 1891, $24,237,449; in 1890, $24,323,782. There is a small circulation of the credit notes of some of the banks, but silver为主 as about half of the currency grown in Mexico and half in the United States.

**Railroads, Posts, and Telegraphs.**—The length of railroads in operation in 1899 was 8,040 miles, besides 127 miles of tramways. There were 300 miles of railroad under construction. The telephones had a length of 41,592 miles in 1899, of which 27,608 miles belonged to the Federal Government, the rest to the state governments or to railroad and telegraph companies. The number of dispatches in 1898 was 2,178,181. The telephone lines had a length of 7,439 miles.

The number of telegrams passed through the post office during the fiscal year 1899 was 122,620,218. The postal receipts were $1,595,818; expenses, $1,991,921.

**The Army and Navy.**—The strength of the regular army is 22,605 infantry, 7,249 cavalry, and 8,000 artillery. The navy includes 261 rural guards and 118 gendarmes. The war strength of Mexico is estimated at 123,-

500 infantry, 20,000 cavalry, and 8,000 artillery. All able-bodied citizens from the age of twenty to that of fifty are liable to military service. The navy has had its share of the fighting in subduing the Yaqui Indians of northern Mexico, who will not submit to the rule and jurisdiction of the Mexicans, and have been encouraged in their rebellion by some of the Americans residing in the state of Sonora. The Mayas of Yucatan in 1900 also rose against the Government and, having secured modern weapons, held Gen. Bravo with 3,000 soldiers at bay.

The fleet consists of two old dispatch vessels, two small unarmored gun vessels, and a steel training ship, the Zaragoza, of 1,200 tons, built in France in 1891. There are four gunboats and five first-class torpedo boats under construction. The officers number about 90, and about 500 men in the crews.

**Commerce and Production.**—Agriculture in Mexico is generally in a backward state. The soil is exceedingly fertile in many districts, and the climate varies with altitude, so that tropical and subtropical vegetation flourish in some places, and the grains and fruits of the temperate zone in others not far distant. The public lands, which are of great extent, are being surveyed by companies which have received a third of the land that they demarcate, while the other two thirds are offered for sale to colonization companies or to private individuals. Down to 1896 the companies had surveyed 7,297,992 hectares, receiving as their share 19,612,992,427.41, and 2,011,712.41, 1897, the Government disposed of 1,812,517 hectares. There are 32 agricultural settlements, 13 of which, containing 3,926 colonists, were established by the Government and 19, with 4,030 colonists, by companies and individuals by authority of the Government, which has assisted the colonists by providing them with funds for the purchase of lands, seeds, and silkworms. Orange cultivation is extending, and the fruit finds a ready market in the United States. There were 21,130 tons of rice, 42,954,684 hectolitres of corn, 263,987 tons of wheat, 65,010 tons of sugar, 61,856 tons of molasses, 9,944,450 hectolitres of molasses, 5,474,850 hectolitres of rice, 590 tons of caica, 21,838 tons of coffee, 8,556 tons of tobacco, and 812,000 hectolitres of rum produced in 1897. There are about 2,900 factories for sugar and aguardiente. In 1896 there were 107 cotton factories, consuming 53,275,397 pounds of cotton, 50,226 tons of henequen, 32,515 tons of cotton, 76,538 tons of logwood, 590 tons of cacao, 21,838 tons of coffee, 8,556 tons of tobacco, and 812,000 hectolitres of rum produced in 1897. There are mining companies. There are 109 mines operated for gold alone, 254 for gold and silver, 49 for gold and other metals, 310 for silver alone, 184 for silver and other metals, 18 for copper alone, 8 for copper and lead, 1 for platinum alone, 31 for lead alone, 4 for lead and iron, 12 for iron alone, and 9 for antimony, cinnabar, or tin. The value of the ores raised was $96,137,240. The number of miners employed was 96,052. The value of gold presented at the assay offices and mines in 1897 was $3,900,782, against $4,247,700 in 1896, $9,674,187 in 1893; the value of silver in 1897 was $34,940,034, against $35,797,001 in 1896, $38,984,102 in 1895, $34,845,543 in 1894, and $30,383,429 in 1893.
The total value of imports in the year ending June 30, 1899, was $50,869,394. The value of merchandise were valued at $63,296,540, and of precious metals at $85,181,600; total, $148,478,140. The value of silver bullion exported was $42,498,053; silver coin, $14,904,535; silver ore, $8,924,021; copper, $7,871,225; lead, $7,936,928; henequin, $18,711,325; timber, $3,263,011; hides and skins, $3,383,788; cattle, $7,235,500; tobacco, $2,515,606; ixtle fibre, $865,906; zacaton root, $1,055,669; vanilla, $1,283,057; beans, $821,130. The trade was distributed among foreign countries in 1899 as shown in the following table:

The population of Detroit is 285,704; in 1890 it was 265,576. It is thirteenth in size among the cities of the country. Grand Rapids has 87,565 inhabitants; Saginaw, 42,745; Bay City, 27,628; Kalamazoo, 24,400; Muskegon, 20,818; Port Huron, 19,175; Battle Creek, 18,663; Lansing, 16,483; Ann Arbor, 14,307; Marquette, 14,295; Ishpeming, 13,233; West Bay City, 13,119; Flint, 13,105; Menominee, 12,818; Alpena, 11,803; Sault Ste. Marie, 10,533; Marquette, 10,058. There are 78 chartered cities and 305 incorporated villages.

**Finances.**—The total State tax for 1900 was $8,908,680,60, less by $817,154.53 than that of 1899. The State added to a total assessed valuation of $161,100,000. Various funds levied are as follow: University, $276,275; Agricultural College, $74,000; Normal College, $69,800; Central Normal School, $25,000; Northern Normal School, $25,000; College of Mines, $56,250; State Library, $7,500; Soldiers’ Home, $110,000; Home for Feeble-minded, $78,900; State Public School, $33,400; State School for the Blind, $25,115; Asylum for Insane, $12,431; State Prison, $35,000; Industrial School for Boys, $62,750; Industrial Home for Girls, $45,047; Fish Commission, $25,000; compiling Adjutant General’s records, $3,000; Food Commissioner, $18,000; Dairymen’s Association, $300; Library Commissioners, $800; military fund, $89,665,84; Naval Board, $1,108,20; Board of Health, $450; Weather Service, 1,000; war loan, 1898, $138,137,50; current expense of prisons, $90,000; current expense of asylums, $504,680,32; general purposes, $982,202.

The item of $982,202 for general purposes includes all salaries and expenses of judicial officers, salaries of the State officers, and expenses of the Legislature, awards of the Board of State Auditors, expenses of the Pardon Board, cost of conveying persons to and from State institutions, cost of caring for juvenile offenders, expenses of the Game Warden, expenses of the State Live Stock Sanitary Commission, expenses of the banking department, interest and fees collected for counties and paid to them by the State, etc.

The State Tax Commission increased the assessments in some localities, and many of the local assessors in the upper peninsula and other places attacked the authority of the board, declaring that the general tax law specifically stated that the taxes should be spread on the assessments fixed by the local boards of review, and nowhere authorized the use of assessments made by the State Commission. The city assessor of Ishpeming having refused to use the figures of the commission, the board applied for a mandamus to compel him to do so. In his answer he attacked the constitutionality of the law creating the commission, as well as the right of the local boards of review, and moreover authorized action in reviewing and certifying the roll, and also the claim that the law requires the tax to be spread on the valuations fixed by the commission. The court granted the mandamus, which virtually sustained the increase made by the board.
in all localities, amounting to $70,000,000. The question of the constitutionality of the law, the court said, must be regarded as settled by the decision of the Tax Commissioner against the Board of Assessors of Grand Rapids.

The total primary school money paid the counties in the year was $1,531,636.35. Of the 83 counties, 50 received more in school money than they paid in State taxes.

Militia.—The organized militia force is 2,965, and the number of men available for military duty, but unorganized, 260,000.

Education.—The building for the Northern Normal School, at Marquette, was finished in the summer. It stands on a bluff facing Lake Superior. A dormitory has been provided, where 100 students can be lodged and 150 accommodated in the dining hall, at an expense of about $315 a week. About 1,500 books have been bought for beginning the library, and a gift of $5,000, in five yearly installments, has been received for the art department. The year began with an enrollment of 45, which increased to 90, 3 of whom were added to the faculty of the summer session of six weeks is held. The enrollment for the year at the Agricultural College was 627, a gain of 18 over the year next preceding. For the first time in the history of the institution, the students in the mechanical course outnumber those in the agricultural course—232 mechanicals to 217 agriculitars. There were 111 students in the women's course and 71 in the special short courses.

A new dormitory for the woman students was dedicated Oct. 25. A dairy building is to be dedicated in February, 1901. Prizes have been offered by friends of the college for competitions in stock judging, military drill, and notes on ornamental trees and shrubs. A valuable collection of fungi secured in the vicinity of the school by a former professor, G. H. Hicks, has been bought for the college. An offer was received in November, and taken under advisement, from Ashland College, at Grant, to put that college, with its land and equipment, under the control of the State Board of Agriculture, to be used as a branch experiment station for the benefit of the residents of the State. Ashland College was founded about twenty years ago as a Scandinavian sectarian school, but was reorganized in the spring of 1900.

At the thirteenth commencement of the College of Mines, Aug. 30, the degree of engineer of mines was conferred upon 22 young men, and that of bachelor of science upon 16.

A new course has been instituted at the University of Michigan, at Ann Arbor, called the commercial, designed to fit the student to handle the larger commercial and municipal questions that are coming up for settlement.

Charities and Corrections.—The report of the Asylum for the Insane, at Kalamazoo, shows the number in June, 1899, to have been 1,308, and the expenses $214,856.

The School for the Blind had 113 pupils in September. An association of the alumni has been formed, which will endeavor to secure from the State an industrial school for the blind; it has also a bureau for securing employment for the blind.

There are 292 inmates at the Home for the Feeble-minded and Epileptic, and 684 applications are on file.

The School for the Deaf and Dumb at Flint, had an attendance of 431 the past year.

There were 615 boys at the Industrial School in October; the buildings are designed to accommodate 500. About an equal number of boys are out on parole.

The prison at Marquette, at the close of the fiscal year, had 265 convicts; the average cost of maintenance is $33.60 cents a day.

The Board of Corrections and Charities, in its biennial report, suggests an amendment to the Constitution, permitting the enactment of a law for indeterminate sentences.

A very large number of pardons, paroles, and commutations of sentence were granted by Gov. Pingree, especially for the closing years of the administration. A list of those in December, 1900, gives about 44 pardons, 49 paroles, and 22 commutations. Nineteen who received them were serving life sentences.

Railroads.—The report of the Railroad Commissioner shows that 81 companies reported in the year 52 being regularly operated lines, and the others leased or proprietary lines or lines not in operation. The total main line mileage in the State is 7,928.80, an increase of 122.90 miles over the previous year. The total mileage, including sidings and spurs, is 10,497.07 miles.

In 1899 793 persons were killed or injured by railroad accidents, an increase of 129 over those in the previous year. Of the killed, 2 were passengers, 54 employees, and 138 were reported as "others." More than half of the increase of killed and injured were trespassers upon railroad property or trains.

The total tax levied on railroads this year, based on the earnings of 1899, was $1,240,845.27, an increase of $153,329.38 on last year's levy, the increase being due to the increase of earnings. The tax of but one company shows a decrease from last year. The earnings in the State, to Dec. 1, were $35,889,644.63, an increase of $8,109,967.55 over the same period of the previous year.

The Iron Range and Huron Bay Railroad, which was built some years ago as an outlet for the Marquette iron range to Lake Superior, was sold this year for $110,000, the purchasers' object being only to secure the rails. The cost of the road, including a fine wharf at Huron Bay, was $1,189,090. Before it was completed the situation in the iron country became so critical that the road was made ready for business, no train ever ran over the line and not a pound of freight was ever transported.

Building and Loan Associations.—The report on these associations by the Secretary of State, published in November, shows that 60 were doing business, 1 having been incorporated and 4 having closed up their affairs during the year. No foreign associations are authorized to do business in the State. The following totals are given: Assets, $10,118,876.01; receipts for the year, $6,417,118.53; liabilities, $10,118,876.01; disbursements, $6,289,982.90; number of shares issued in the year, 68,769; number of shares matured, 9,743; number withdrawn and otherwise eliminated, 62,757; number of shares in force at the close of the
year, 265,640. For the first time in several years there is a notable increase in the number of shares issued, and many associations have reduced their loaning rates.

Insurance.—At the time of the annual report in June, 2 Michigan insurance companies, 118 companies of other States, and 46 companies of foreign countries were doing business in Michigan. The risks written in Michigan in the year covered amounted to $386,073,175; premiums received, $4,664,193; losses incurred, $2,595,356. Examinations resulted in the collection of $12,600 taxes on an unreported insurance, a large portion of this amount being collected from companies that, in reporting their business, had deducted premiums reserved for reinsurance.

Banks. The report of the commissioner covering the condition of the 191 State banks and 3 trust companies, June 29, shows the resources and liabilities to be $124,820,305. The loans and discounts were $32,522,239; bonds, mortgages, and securities, $44,750,517; savings deposits, $87,575,126.

The annual report, which was made in February, shows the net increase in State bank capital in a year to have been $222,000. Nine State banks were in the hands of receivers, but none had failed in the year.

Products and Industries.—In the production of beet sugar the company in the country in 1899, Michigan led with 9,146,157 long tons out of a total of 24,683,173. While the log and lumber industry is greater now in some other States than in Michigan, which for some time was the leader, the highest point of production having been reached in 1888 with a total of 4,292,159,014 feet, still the production of 1,894,911,948 feet in 1899 was the largest in the world, about 170,000,000 feet, and the quantity on hand at the close of the year was smaller. The compilation for 1899 gives the following figures: Total lumber output, 2,388,575,133 feet; total shingle output, 1,444,578,000; lumber on hand Dec. 1, 682,818,990 feet; shingles on hand, 185,020,000.

The copper product for 1898 was 70,462 long tons, of a total of 234,271 in the United States. The growth of the beet-sugar industry has been remarkable, the State now standing second. The production for the last fiscal year was more than 34,000,000 pounds. The claims filed for the bounty of one cent a pound amounted to $331,508.73.

987 new factories have been established, which this year gave employment to 23,000 persons.

Lands.—The lands held by the State at the close of the fiscal year, June 30, 1900, were classified as follows: Primary school lands, 155,899.82 acres; university, 40; agricultural college, 62,923.29; salt springs, 280; asylum, 1,122.98; swamp, 81,648.56; tax homestead, 223,441.12; total, 537,045.77 acres.

The number of acres sold during the year was 47,211.24, and the amount received $144,905.07. In addition to these sales, 2,490.13 acres of homestead lands were patented. There were forfeited to the State for nonpayment of interest a total of 808.05 acres.

The General Government patented to the State 1,120 acres of swamp land, and lists embracing 159.65 acres approved to the State were received, for which patents will follow in due course.

Legislative Sessions.—Besides the special session which began Dec. 18, 1899, and ended Jan. 6, 1900, there were two special sessions in this year. In the proclamation calling the session that closed Jan. 6, the Governor said:

"The fortieth Legislature enacted two laws, one of which was an act to provide for the assessment and levy of taxes upon the property of road- express, telegraph, and telephone companies, known as the 'Atkinson law;' the other is an act amending the general tax laws by creating a board of State tax commissioners with supervisory control of tax officers, empowered to review and correct assessment rolls, and with other powers. It is generally known as the 'Oren law.' On April 14, the Supreme Court rendered a decision which practically invalidated the 'Atkinson law.' Because of that decision, an amendment to the Constitution is imperatively necessary, before laws can be enacted providing for the equal taxation of all property.'

It was for the purpose of providing for the submission of such an amendment that the Legislature was called. The House passed such a resolution, and several bills increasing railroad taxation, but they were all defeated in the Senate. A bill for municipal ownership also was defeated. The Governor sent another message, asking for a joint resolution authorizing a suit against the Hender- son-Army Company to recover the amount lost to it by the State in the transactions of the military board, and such a resolution was passed, as was also a concurrent resolution asking the State Board of Auditors to allow all lawful expenses incurred by Ingham County in the trial of State officers. The Auditor General was authorized to pay the claims of soldiers of the Spanish war to the amount of $40,000.

A second special session for the same purpose was called to meet Oct. 10. The Governor's message dealt entirely with the issues mentioned in the call, the consideration of a joint resolution permitting submission to the people of a constitutional amendment authorizing taxation of rail- ways, and the necessity of securing the property instead of on earnings, as at present, and the repealing of the special charters of the Michigan Central, Lake Shore, and Grand Trunk Railways. This time the bills recommended were passed, and adjournment was taken Oct. 15.

The only other measure passed was an appro- priation of $2,000 for providing the money lost to the industrial school. Following is the text of the constitutional amendments:

"SECTION 10. The State may continue to collect all specific taxes accruing to the treasury under existing laws. The Legislature may provide for the collection of specific taxes from corpo- rations, for the assessment of the property of corporations at its true cash value by a State board of assessors, and for the levying and collection of taxes thereon. All taxes hereafter levied on the property of such classes of corporations as are paying specific taxes under laws in force on Nov. 6, A.D. 1900, shall be applied as provided for specific taxes in section 1 of this article.

"That section 11 of Article XIV of said Con- stitution be amended so as to read as follows:"

"SEC. 11. The Legislature shall provide for a uniform rule of taxation, except on property paying specific taxes, and taxes shall be levied on such property as shall be prescribed by law; provided, that the Legislature shall provide a uniform rule of taxation for such property as shall be assessed by a state board of assessors, and the rate of taxation on such property shall be the rate which the State board of assessors shall ascer- tain and determine is the average rate paid upon other property upon which ad valorem taxes are assessed for State, county, township, school, and municipal purposes.

"That section 13, of Article XIV, of said Con- stitution be amended so as to read as follows:"

"SEC. 13. In the year one thousand nine hun-
Howard A. Smith, Assistant Quartermaster; Arthur F. Marsh, Inspector General and chairman of the Republican State Central Committee; and Eli R. Rutten; Republicans of Michigan and member of Gov. Pingree's military staff.

The same grand jury brought indictments against other officials and others, namely: Edgar J. Adams, Speaker of the House of Representatives, two indictments for bribery; William A. French, State Land Commissioner, offering bribes; Charles Pratt, agent for a law-book concern, offering bribes; Representative D. Judson Hammond, of Pontiac, soliciting bribes; Frederick A. Maynard, ex-Attorney-General, misdemeanour in retaining portion of his chief clerk's salary.

The alleged bribery was in connection with an antitrust bill and a bill for purchases, from the State treasury, of the national system of reports of the courts of the several States for each county.

White and Marsh left the State when it was known that indictments would be out against them. Marsh soon returned, but White not until November, 1900, when a reward of $1,000 was offered for his apprehension. Marsh was brought before the Special March and a trial of four days was convicted. His attorneys took steps for an appeal. Sutton's trial was in May and June, and he was acquitted. Smith, having testified in the Marsh and Sutton trials and incriminated himself, pleaded guilty when his case was called in October, and was sentenced to pay a fine of $1,200 on or before Oct. 12; committed to the county jail for two years. When White returned he was tried, convicted, and sentenced to ten years in prison, where he was taken, Dec. 4. The next day Gov. Pingree pardoned him and Marsh, whose appeal was pending, making the condition that each should pay a fine of $5,000 in five yearly installments to the treasurer of Ingham County; should he refuse to pay the excised sentence of Marsh was held excessive, since the State had been paid. There is some question as to the validity of the conditions attached to the pardons.

An incident of the Marsh trial was the withdrawal of his counsel, when Judge Wiest refused a continuance, with the statement that there was no chance in his court for justice, or something to that effect. Judge Wiest decided that they were guilty of contempt, and fined the two lawyers $250 and $200 respectively. Near the close of the year he summoned Gov. Pingree to answer for contempt on account of criticisms made on his course in the trials in an interview with the Governor, published in a Detroit newspaper. He had previously asked the Governor to have his conduct investigated by the Legislature. The Governor refused to appear to answer for contempt, and the case was continued to January.

The Governor asked the resignation of the officers implicated early in the year, and appointed O'Brien J. Atkinson to succeed White, Ford Stair to succeed Smith, and F. W. Green to Marsh's place. He also asked the resignation of the Adjutant General, on the ground that he was guilty of negligence, but the Adjutant General refused to resign.

The State cases against the ex-Attorney-General, the Land Commissioner, the Speaker of the House, and others were put over to the January term of 1901.
Political.—The Republican convention for nominating presidential electors and choosing delegates to the national convention met in Detroit, May 3. The resolutions approved the administration of President McKinley, and instructed the delegates to vote for his renomination. The convention for nominating State officers was held at Grand Rapids, May 26. After reaffirming allegiance to the principles for which the party stands, the platform denounced trusts and combinations to control prices, expressed sympathy with the Boers, declared in favor of equal and uniform taxation, and said further:

"We favor the prompt repeal of all special railroad charters granting to any railroad in the State special privileges.

"We condemn the corruption of State officials that has brought shame and disgrace to the State, and we demand the vigorous prosecution of all who are guilty.

"For the nomination for Governor there were six candidates: A. A. Averill; T. Bliss, Justus S. Stearns, D. M. Ferry, C. S. Osborn, James O'Donnell, and M. D. Campbell. Mr. Bliss was chosen on the nineteenth ballot. The remainder of the ticket was: For Lieutenant Governor, O. W. Robinson; Secretary of State, Fred M. Warner; State Treasurer, Daniel McCoy; Auditor General, Perry F. Robinson; Commissioner of State Land Office, Walter Winans; Attorney General, Horace M. Oren; Superintendent of Public Instruction, Deles Fall; Member of State Board of Education, J. H. Thompson.

The Democratic convention, May 1, chose delegates to Kansas City, who were instructed for Mr. Bryan. The nomination of C. A. Towne was taken for Vice President. In both it is an unmixed public evil. The economic advantages of industrial combinations are entirely lost to the people and swell the profits of arrogant and conscienceless magnates, who feed on the vitals of their victims. We request our delegates to the national convention to urge upon that body the selection of the most effective means of putting an end to this wholesale sale of public policy, for curtailing the powers of the trusts, and to pledge the party to specific legislation upon the lines adopted.

Further, they declared against a large standing army and in favor of just taxation and municipal ownership of public utilities, a national income tax, and direct election of United States Senators. They expressed sympathy for the South African republics, and condemned "the present Republican administration in this State as the most corrupt and scandalous in the history of this commonwealth."

The second convention was held in Detroit, July 25 and 26. The nominations were: For Governor, William C. Maybury; Lieutenant Governor, Jonathan G. Ramsdell; Secretary of State, John W. Ewing; State Treasurer, Charles F. Sundstrom; Commissioner of the State Land Office, George Winans; Auditor General, Hiram B. Hudson; Attorney General, James O'Hara; Superintendent of Public Instruction, Stephen H. Langdon; Member of the State Board of Education, James McEntee.

The platform said in part:

"We denounce the last Legislature generally as the crowning infamy in the history of the Republican party in Michigan. We denounce it specifically for its failure to submit to the people the constitutional amendments relative to taxation demanded by the State grange and farmers' clubs; for its failure to increase the specific tax on railroads; for its failure to pass the mining tax measure; for its failure to repeal the special railroad charter; for its failure to pass the anticolor olo law demanded by the State grange, and daunt men of the State; for its refusal to submit to the people the constitutional amendment providing for the so-called 'initiative and referendum,' and for which submission every Democrat of both houses voted; for its refusal to pass the measure for the regulation of freight and switching charges."

At its adjournment, the Prohibition party made the following nominations: For Governor, Frederick S. Goodrich; Lieutenant Governor, Trowbridge Johns; Secretary of State, Reuben C. Reed; Treasurer, John F. Easley; Auditor General, William D. Farley; Attorney-General, Walter S. Westerman; Superintendent of Public Instruction, David Bryan, 2,105; Jos. M. Coffin, 1,883; Treasurer, Hiram D. Malloney, 1,959; State Land Office, Gideon Vivier; Member of Board of Public Instruction to fill vacancy, Samuel W. Bird.

The platform declared against any act legalizing the traffic in strong drink, and censured the present administration for its shameless bargain and sale in political patronage for taxes.

It censured the past Legislature for the attempt to pass a law allowing the sale or liquor upon a great national holiday. The sincerity of tax reformers was questioned as long as they are silent concerning the liquor traffic. It reimbursed woman suffrage and said there should be no application of public moneys for sectarian purposes, closing with the words: "May the Lord Volney and all those who follow Jesus and honor His Church, to unite with the party in killing the liquor traffic.

The People's party nominated D. Thompson for Governor; The Social Democrats, Henry Ramsey; and the Socialist-Labor Party, H. Ulbricht.

The result of the presidential election was: McKinley, 316,269; Bryan, 287,305; W. M. Bryan, 2,826; Barker, 833; Malloney, 903.

Republicans were elected to Congress in all the 12 districts.

For Governor, Bliss received 365,612 votes; Maybury, 226,228; Goodrich, 11,834; Ramsey, 2,709; Ulbricht, 958; Thompson, 871.

The result of the Senate in 1901 was: Democrats 31, Republicans 1; the House, Republicans 90, Democrats 10.

The proposed amendment to the Constitution, permitting the enactment of laws for assessment and taxation of the property of railroad, telegraph, telephone, and express companies and certain other corporations, upon its cash value, instead of specific taxes upon earnings, was carried.

MINNESOTA, a Western State, admitted to the Union May 11, 1858; area, 83,365 square miles. The population, according to each decennial census since admission, was 172,023 in 1860; 439,706 in 1870; 750,773 in 1880; 1,301,826 in 1890; and 1,751,394 in 1900. Population: 1880, 266,152; 1890, 306,956; 1900, 375,038.

Government.—The following were the State officers in 1900: Governor, John Lind; Lieutenant Governor, Lyndon A. Smith; Secretary of State, Albert Berg; Auditor, Robert C. Dunn; Treasurer, August T. Koerner; Attorney-General, Wallace B. Douglas—all Republicans except the Treasurer, who is a Democrat. The Legislature was elected on a fusion ticket of Democrats and Populists; Commissioner of Insurance, J. A. O'Shaughnessy; Adjutant General, George C. Lambert; Chief Grain Inspector, A. C. Clausen, till August, when he resigned and was succeeded by Edward S. Reisbush; Chief Justice
of the Supreme Court, Charles M. Start; Associate Justices, L. W. Collins, Calvin L. Brown, John A. Loveky, and Charles L. Lewis; Clerk, Darius F. Reese. All the justices are Republicans.

State officers are chosen in November of even years. The Legislature convenes in January of odd years, and the session is limited to ninety legislative days.

Population.—The population of the State, by counties, according to the census of 1900, was as follows: Aitkin, 6,743; Anoka, 11,313; Becker, 14,139; Beltrami, 16,524; Benton, 8,572; Brown, 7,871; Carlton, 10,017; Carver, 17,544; Cass, 7,777; Chippewa, 12,499; Chisago, 13,248; Clay, 17,942; Cook, 810; Cottonwood, 12,069; Crow Wing, 14,250; Dakota, 21,733; Dodge, 13,340; Douglas, 17,904; Faribault, 22,055; Fillmore, 28,258; Freeborn, 21,838; Goodhue, 31,137; Grant, 5,935; Hennepin, 225,360; Houston, 15,400; Hubbard, 6,578; Isanti, 11,673; Itasca, 4,575; Jackson, 14,793; Kanabec, 4,014; Kandiyohi, 18,416; Kittson, 7,889; Lac qui Parle, 14,289; Lake, 4,654; Le Sueur, 20,234; Lincoln, 8,866; Lyon, 14,591; McLeod, 19,555; Marshall, 15,698; Martin, 16,936; Meeker, 17,733; Mille Lacs, 8,696; Morrison, 22,501; Mower, 22,333; Murray, 11,054; Nobles, 8,771; Pennington, 13,008; Pipestone, 15,045; Olmsted, 23,119; Ottertail, 45,375; Pine, 11,546; Pipestone, 9,204; Polk, 35,429; Pope, 12,577; Ramsey, 170,354; Red Lake, 12,195; Redwood, 17,261; Renville, 23,693; Rice, 26,080; Rock, 9,688; Roseau, 6,994; St. Louis, 82,932; Scott, 15,147; Sherburne, 7,281; Sibley, 16,802; Stearns, 44,164; St. Louis, 15,522; Swift, 13,008; Todd, 22,214; Traverse, 7,573; Wabasha, 18,924; Wadena, 7,921; Wascoa, 14,760; Washington, 27,808; Watonwan, 11,496; Wilkin, 8,808; Winona, 35,686; Wright, 29,157; Yellow Medicine, 14,602; White Earth Indian reservation, 3,486.

Finances.—For the year ended July 31, 1900, receipts of the State treasury were $29,015,185.24, and the disbursements $26,845,830.72, leaving a balance of $2,169,357.52. The State debt was $1,279,000, having been reduced $700,000 in the year and $800,000 since Jan. 1, 1897. The permanent school and university funds were, respectively, $67,776,767.27 and $925,500.

The principal classifications of the State treasury receipts for the year were: Revenue fund, $3,640,061.15; permanent school fund, $1,186,198.71; general school fund, $1,258,446.75. Disbursements: Revenue fund, $3,582,976.93; permanent school fund, $1,000,455.57; general school fund, $1,306,532.19; general university fund, $383,034.99. The amount of railroad taxes paid was $1,443,592.13. The principal receipts from taxation of insuring companies were: Domestic fire, $62,819.17; foreign fire, $31,127.64; life, $70,389.85; stock, casualty, fidelity, and title, $11,357.59.

Charities and Corrections.—The number of inmates of the three hospitals for the insane was 3,364. Two additional hospitals are being built, and the estimated number of inmates in all five hospitals at the close of the next biennial period is 4,100.

The population of the State Training School was 383; of the State Soldiers' Home, 289; School for the Deaf, 173; School for the Blind, 50; School for the Feeble-minded, 608; State Public School, 236; State Boarding School, 56; State Reformatory, 159; State Penitentiary, 55. The State Prison, for the year, the expenses of the 13 charitable and penal institutions were $969,337, or $187.20 per capita, and the estimates for the following year were $1,066,336. The State Prison has one of the largest binder-twine manufacturing plants in the United States, whose capacity was increased in 1900 to 8,000,000 pounds per annum.

Lands.—The most notable event of the year in relation to the State's lands was the termination of the long-standing litigation over the validity of the swamp-land grant to the Duluth and Iron Range Railroad Company. The amount involved was $606,720 across the State. The State had denied the validity of this grant, but was finally beaten by a decision of the United States Circuit Court of Appeals in favor of the railroad. In November a great sale of timber stumpage was held, at which nearly 50,000,000 feet of pine were disposed of at an average price of $5.57 a thousand feet. The following shows the conditions of various public lands, funds, derived from the sale of State lands, July 31, 1900: Permanent school fund, $12,546,329.30; permanent university fund, $1,286,417.13; internal improvements fund, $5,754,184.57. The first two funds are invested mostly in Massachusetts, Alabama, and other State bonds.

Products.—There were in the State 582 creameries and 60 cheese factories. The creameries were supplied with milk from 331,512 cows, producing 972,799,299 pounds of milk in the year. The butter manufactured therefrom was 44,007,933 pounds. Of this there was shipped out of the State 36,750,575 pounds. The amount paid to patrons was $65,952,014.55. The operating expenses were $937,739.95. The total number of creamery patrons in the State is 40,189. The amount of milk received by the different cheese factories was 29,988,924 pounds. The amount of green cheese made was 3,070,812 pounds; the amount paid to patrons for milk was $217,199.20; total amount of cured cheese sold, 2,970,190 pounds; total number of patrons, 1,226.

Minnesota is the greatest wheat producer of the Union; but in 1900 the crop was considerably under the average yield, being about 65,900,000 bushels. The State, which with one exception produces the most iron of any, turned out 8,000,000 tons of iron ore in 1900.

Educational.—There were in the State 7,303 schoolhouses, of the value of $4,405,095, with 399,207 pupils. The male and female teachers numbered 2,052 and 8,534, respectively. The average monthly pay of the former was $47.84, and of the latter $35.24. The cash for the above, aggregated $7,457,504.70; disbursements, $6,054,588.99; cash on hand at close of year, $8,602,903.23; aggregate indebtedness of school districts, $4,580,204.31. There were 2,359 public school libraries with over 300,000 volumes. The enrollment in the four normal schools was 2,376, and the graduates numbered 379.

In the University of Minnesota there were 3,236 students, including 907 women. With one exception it has the largest enrollment of any university in the United States. The students of 1900 were thus divided among the different departments: Graduate students, 124 men and 53 women; College of Science, Literature, and Arts, 416 men and 520 women; College of Engineering.
and Mechanic Arts, 197 men and 12 women; School of Mines, 77 men; School of Chemistry, 5 men; Department of Agriculture, 423 men and 80 women; College of Law, 529 men and 8 women; Department of Medicine, 524 men and 32 women; University Section of Summer School, 127 men and 262 women.

There are 28 buildings, and the professors and instructors number 245. The library contains 75,000 volumes. The annual resources for current expenses are $330,000; invested funds, $1,250,000; value of land, buildings, and equipments, $1,400,000. Tuition is free to all except in law and medicine, and coeducation has existed from the start, in 1869.

Labor: The work of the State Bureau of Labor revealed both improvement of method and increased benefited of result. It inspected 3,338 factories and other industrial establishments, covering 83,237 employees—70,951 men, 11,517 women, 565 boys, and 294 girls. These represented 60 separate industries. The enforcement of the law regulating child labor was more thorough than ever.

Direct Primaries.—Perhaps the most notable event of organic political importance in Minnesota was the first test of the direct primary election law in Minneapolis, to which city the Legislature had restricted the operation of the law after unsuccessful attempts to include St. Paul and Duluth. Under this law, all nominations for elective officers are made at primaries, under the Australian ballot law, instead of at party conventions. The results of this first practical test of the statute appeared to justify the contention of its author (Oscar F. Day) and champions that it would be instrumental in weeding out the objectionable element among officeholders and placing a better class of men in public station. Some of these results were surprising, but wholesome. Officeholders who had long thrilled at the public "cibri" by reason of their skill in manipulating conventions were hopelessly defeated, as were others most eager for nomination; while many good citizens who for years had been shunned by public affairs were now allowed to stand in nomination by large majorities and triumphantly elected in November. So delighted were the people with the outcome of this significant reform experiment that a determined movement was at once begun to extend the direct primary election law over the entire State; and the Minneapolis experience strengthened the faith of those who are laboring for the enactment of a similar law in other States.

Political.—The Republican State Convention was held in St. Paul, Sept. 5. The following ticket was nominated: For Governor, Samuel R. Van Sant; Lieutenant Governor, Lyndon A. Smith, Secretary of State, Peter E. Hanson; Treasurer, Julius H. Block; Attorney-General, Wallace B. Douglass; Chief Justice of the Supreme Court, Charles M. Start; Associate Justice, Loren W. Collins; Railroad and Warehouse Commissioners—four years, Ira B. Mills, Joseph G. Miller; two years, Charles F. Staples. The platform favored an amendment to the Federal Constitution to regulate trusts and prohibit monopolies; denounced the illegal manufacture and sale of oleomargarine; favored the election of United States Senators by direct vote of the people; declared for fair and equal taxation; and commended the gross earnings system of taxation of railroads.

The Democratic State Convention, held in St. Paul, Sept. 5, nominated this State ticket: For Governor, John Lind; Lieutenant Governor, Thomas J. Meighen; Secretary of State, Michael E. Neary; Treasurer, H. C. Koerner; Attorney-General, R. C. Saunders; (candidates for the Supreme Court the same that were on the Republican ticket); Railroad and Warehouse Commissioners—four years, P. M. Ringdal, T. J. Knox; two years, S. M. Owen. The platform expressed the belief that "the Constitution follows the flag," and therefore denounced the Porto Rican tariff bill; extended sympathy to the Boers; condemned the doctrine of protective tariff law and condemned trusts; favored the endeavor to reduce the number of hours of a legal working day; accused the Republicans of gerrymandering the legislative districts; favored tax reform; and demanded that the gross earnings tax of railroads be increased to 4 percent.

The People's party convention was held in Minneapolis Sept. 5. The Democratic State ticket was accepted through fusion. The platform was largely an argument for free silver. It also favored a graduated income and inheritance tax, postal savings banks, and Government ownership of railroads; condemned trusts, and as a means to kill trusts, was asked for direct legislation giving the people the making and passing of perennials. The initiative and referendum; denounced the Government's efforts to suppress the Philippine rebellion; extended sympathy to the Boers; called for repression of illegal importation of foreign laborers; advocated municipal ownership of public utilities; denounced the issuing of injunctions in disputes between labor and capital; favored election of United States Senators by popular vote; called for "a full, free, and fair ballot and an honest count" in all the States; favored home rule in the Territories and their early admission to statehood; and denounced the management of the Pension Bureau.

The following partial State tickets were also placed in the field:

Middle-of-the-Road Populist: For Governor, Sylvester M. Fairchild; Lieutenant Governor, Erick G. Wallinder; Treasurer, Stephen W. Powell; Railroad and Warehouse Commissioners—four years, M. H. Parks, M. P. Moran; two years, John J. Blais.

Prohibition: For Governor, Berndt B. Haugen; Lieutenant Governor, C. B. Wilkinson; Secretary of State, Frank W. Carlisle; Treasurer, Charles W. Dorsett.

Social-Democrat: For Governor, Thomas H. Lucas.

Secular: For Governor, Edward Kriz.

All the above-named parties nominated presidential electors.

The entire Republican State ticket was elected by pluralities ranging from 2,254 for Governor to 36,645 for Attorney-General. The vote for presidential electors stood: McKinley (Republican), 51,091; Bryan (Democratic), 112,901; Woolsey (Prohibition), 8,555; Debs (Social-Democrat), 3,065.

A proposition to amend the Constitution so as to provide for loaning the permanent school and university funds to, or the purchase of bonds of cities, villages, towns, counties, and school districts was defeated.

MISSIONS, FOREIGN.

ECUMENICAL CONFERENCE ON. The Ecumenical Conference on Foreign Missions which assembled in the city of New York in April, 1900, was the third meeting of the kind that has been held. The first conference, which was small in numbers and was chiefly composed of returned missionaries, met in 1875; the second was the so-called "World" conference in London in 1888, when the one hundredth year of the institution of the missionary movement was celebrated, and was attended by 1,759 delegates.
tion for the present conference a committee was appointed by the Annual Missionary Conference of the United States in 1890, to communicate with the different Protestant missionary societies throughout the United States; the committee met in New York on April 18. In addition to the Secretary of the Foreign Missions Committee of the United States, who was present, the following societies were represented:

In the United States and Canada—American Advent Missionary Society; American Board of Commissioners for Foreign Missions; American Baptist Missionary Union; American Episcopalian Synod; American Foreign Missionary Society; American Christian Convention; African Industrial Mission; Africa Inland Mission; African Methodist Episcopal Church; African Methodist Episcopal Zion Church; Associate Reformed Presbyterian Synod of the South; American Tract Society; Baptist Convention of the Middle States; Board of Foreign Missions, Presbyterian Missionary Society of Ontario and Quebec; Christian and Missionary Alliance; Church of God Foreign Missionary Society; Canadian Church Missionary Association; Canada Congregational Foreign Missionary Society; Cumberland Presbyterian Board of Missions; Evangelical Association of America; Evangelical German Evangelical Synod of North America; Missionary Society of the Methodist Episcopal Church; Methodist Episcopal Church, South; Board of Missions; Missionary Society of the Methodist Church in Canada; Methodist Protestant Church, Board of Foreign Missions; Mennonite General Conference of North America; Mora via Missionary Society; National Foreign Mission Convention; Phil-African League; Protestant Episcopal Church in the United States of America; Presbyterian Church in the United States of America; Presbyterian Church in Canada, Foreign Mission Committee; Primitive Methodist Church; Reformed Church in America; Reformed Church in the United States; Reformed Church in North America (General Synod); Reformed Episcopal Church; Reformed Presbyterian Church (General Synod); Reformed Presbyterian Church (Synod); Southern Baptist Convention; Seventh Day Baptist Missionary Society; Seventh Day Adventist Church; and the United Presbyterian Board of Missions; United Brethren in Christ, Foreign Missionary Society; United Brethren in Christ (Radical branch); Wesleyan Methodist Missionary Society; Woman's Missionary Society.

In Great Britain and Ireland—British and Foreign Bible Society; Baptist Zenana Mission; China Inland Mission; Church Missionary Society; Church of England Zenana Missionary Society; Colonial Missionary Society; Christian Literature Society for India; Edinburgh Medical Missionary Society; Presbyterian Church of England Foreign Missions; Friends' Foreign Missionary Association; "Help for Brazil"; Indian and Central Protestant Mission; Presbyterian Church in Ireland, Foreign Missions; Ladies' Kaffrarian Society; London Missionary Society; Livingstone Medical College; Mission to Lepers in India and the East; North British Foreign Mission Society; "Regions Beyond" Missionary Union; Religious Tract Society; Society for the Diffusion of Christian and General Knowledge among the Chinese; Church of Scotland Foreign Missions Committee; South American Missionary Society; Student Volunteer Missionary Union; Free Church of Scotland, Foreign Missions Committee; United Methodist Free Churches Missionary Society; United Presbyterian Church of Scotland, Foreign Missions; Wesleyan Methodist Missionary Society; Woman's Foreign Missionary Society for Female Education in India and South Africa; Zenana Bible and Medical Mission.

In Jamaica, West Indies—Jamaica Baptist Missionary Society.

In Hawaii—Hawaiian Evangelical Association.

In Australia—Woman's Missionary Union, Queensland.

In New Zealand—Presbyterian Church, Otago and Southland.

In Finland—Finland Missionary Society.

In Germany—Neukirchen Mission Institute; Berlin Missionary Society; Berlin Baptist Foreign Missionary Society; Rhenish Missionary Society.

In Holland—Mission Conferences in the Netherlands; Dutch Reformed Missionary Society.

In Norway—Norwegian Missionary Society; Nordic Swiss Missionary Association.

In Sweden—Swedish Mission in China, Evangelical National Society.

In Switzerland—St. Christopher's Pilgrim Missionary Society.

The conference was in session during ten days, including Sunday, from April 21 to May 1. The Right Rev. Dr. Benjamin Harrison, ex-President of the United States, was the honorary president of the day, while special presiding officers were appointed for each day's sessions. The principal meetings were held in Carnegie Hall and the Central Presbyterian Church, and "overflow meetings" and sectional meetings were held in addition. At the opening meeting, April 21, for welcoming the delegates, ex-President Harrison used the following address: the Rev. Dr. Judson Smith, chairman of the managing committee, delivered the address of welcome; and the Rev. Dr. Wardlaw Thompson, secretary of the London Missionary Society; the Rev. Dr. A. Schreiber, of Germany; the Rev. Dr. A. Chamberlain, missionary in India; and the Rev. Dr. Joseph King, of Australia, responded. In the evening of the same day (April 21) a meeting for national welcome was held, when addresses of welcome were made by William McKinley, President of the United States, and Theodore Roosevelt, Governor of the State of New York, and the response on behalf of the conference was made by ex-President Harrison. The meetings of the day, April 23, were devoted chiefly to the general survey of the progress and present condition of missions. A Century of Missions was made the subject of a review of the growth of missionary enterprise by Mr. Eugene Stock, editorial secretary of the Church Missionary Society. A report upon the centennial statistics was presented by the Rev. Dr. James S. Dennis, from which the following figures are derived: Number of societies directly engaged in conducting foreign missions, 249, distributed as follows—in the United States, 49; in England, 42; in Asia, 29; in Africa, 28; in Australia and Oceania, 26; in Germany, 13; in the Netherlands, 10; in Canada, 8; in Sweden, 7; in the West Indies, 11; in Scotland, 7; in Ireland,
4; in Norway, 4; in Denmark, 3; in France, 2; in Switzerland, 2; in Wales, 1; in Finland, 1; total income, $17,161,092, of which $8,843,031 are credited to English societies, $5,403,048 to those of the United States, $1,430,151 to German, and $1,250,084 to Scottish societies; whole number of missionaries, including ordained ministers, ordained physicians, lay missionaries, married women physicians, and unmarried women physicians, 13,607, of whom 5,136 are from England, 4,110 from the United States, 1,515 from Germany, 653 from Scotland, etc.; number of native agents, 77,338; of communicants, 1,317,684, of whom 84,156 were added in 1899; of native Christian adherents, 4,414,236. The total amount of native contributions with in kind, $1,841,772; the average yearly work of the missions included 20,374 schools of all grades, with 1,046,309 pupils. These schools comprised 93 foreign missionary universities, having 35,414 students; 358 theological and training schools, with 11,905 students; 857 boarding and high schools, with 83,148 pupils; 134 industrial training schools and night schools, with 9,306 students; 63 medical and nurses' schools and classes, with 552 students; 127 kindergartens, with 4,502 pupils; and 18,742 elementary or village schools, containing 904,442 pupils, 267,720 of whom were girls. The Bible has been translated into 421 languages and dialects, and the various agencies engaged in the circulation of Bibles, Bibles and tracts, etc., turned out an aggregate annual circulation of 14,494,098 copies. One hundred and forty-eight mission publishing houses and printing presses returned an annual aggregate issue of 10,561,777 copies of their publications, and 366 magazines and papers in foreign mission lands circulated 257,435 copies. Three hundred and fifty-five hospitals and 753 dispensary stations were maintained, 93,705 in-patients and 2,579,651 out-patients were treated; besides 90 leper hospitals and asylums and homes for the untainted children, with 5,166 leper inmates. The Woman's Christian Temperance Union had affiliated national branches in 26 foreign mission countries. The Anglo-Indian Temperance Association in India and affiliated temperance societies. Other elements of the missionary force were 87 missionary training institutions in Christian lands, not including theological seminaries, and 67 mission steamers and ships, which were used in evangelistic, medical, and other departments of mission service in the foreign field.

1949, 1849 mission societies actively engaged, 200 other societies indirectly co-operating or aiding in foreign missions or engaged in specialized efforts, and 68 women's auxiliaries, were mentioned, the income of which would swell the total of income for missions to $10,120,120. Fifty-four native organizations for extension of knowledge, education, the welfare of native missionaries, and religious reform were said to be affiliated to missions, and most of them due to missions.

From 1649 to 1800 12 missionary societies, and from 1800 to 1830 22 societies, were formed. The subsequent record of new societies, by decades, is: 1830-40, 16 societies organized; 1840-50, 25; 1850-60, 34; 1860-70, 41; 1870-80, 57; 1880-90, 92; 1890-1900, 100. The year in which the largest number of societies were formed was 1890, when 22 societies were organized; the next year in the record was 1896, with 11 new societies.

Nine sectional meetings were held in the afternoon of April 23, at which special surveys were presented by several mission societies, those in Japan, Korea, China, Assam, Burnah, Siam, India, Ceylon, Oceanica, Mohammedan lands, Africa, North and South America, and the Hebrews in all lands.

Besides these exercises the sessions of the conference were devoted to the discussion, in prepared papers and addresses and the necessitates, of the various aspects of this large list of subjects relating to topics which might be referred to the following principal heads: Authority and purpose in mission work; evangelistic work; woman's work—evangelistic, educational, etc.; native agencies in evangelistic work; the missionary and his literature; the study of missions; medical work; work for young women and children; value of foreign missions as an educational agency in training young people; administrative problems of the mission; Bible translation and distribution; educational work; wider relations of missions (in the spirit of the educational movement, the missionary and his literature); foreign education; self-support by mission churches; principles and methods in the evangelistic church; educational and medical work; missionary boards and societies; elementary schools; industrial training; the training of missionaries; students and other young people—their achievement in the fields of religion, science, art, etc.; Christian religions; organized movements among the people in the young of the Church; responsibility of the Church in the light of the working of God's Spirit among the students and other young people; apologetic problems in missions; relation of medical work to missionary work as a whole; hospitals and dispensaries; educational philanthropic work; relations of mission to missions of other churches; relation of missions to social progress and peace; home work for foreign missions; support of missions by home churches; outlook and demands (the present situation—its claims and opportunities, outlook and demands for the coming century).

A private conference of officers of the several boards, missionaries, and delegates interested in the matter was held, May 1, to consider the best means of preserving the results of the Ecumenical Conference. A resolution was passed, declaring it to be the sense of the meeting that committees should be requested to consider the question of forming an international bureau for mission correspondence or by conference or by both, shall deal with co-operative work in missions, and make known the result of their deliberations to the societies represented in the conference.

International Missionary Union. — The seventeenth annual meeting of the International Missionary Union held at Portsmouth, Virginia, was attended by 85 returned missionaries, representing 17 societies and 18 mission fields. The proceedings were similar in character to those of the Ecumenical Conference of Missions, which were often referred to. Members spoke of the conditions of their fields; and the topics discussed were classified under such heads as missionary apologettes, or evidences afforded by the mission fields of the supernatural character of Christianity; the influence of missions on the trend of governments, international comity diplomacy, etc.; education; medical missions; native churches; missionary comity and co-operation; and woman's work.

MISSISSIPPI. a Southern State, admitted to the Union Dec. 10, 1817; area, 46,810 square miles. The population, according to each decennial census since admission, was 75,448 in 1820; 136,021
MISSISSIPPI.

The payable debt of the State amounts to $1,018,429.52, of which $8,029.80 was in outstanding warrants, $929.22 railroad tax distribution, $2,449.90 certificates of indebtedness, and the remainder bonds and unpaid interest on them. The amount of the nonpayable debt is $1,884,658.89; it is in school and college trust funds. The total State debt is $2,903,088.41.

The receipts from the Penitentiary were $219,416.27, including $35,027.23 balance at the beginning of the year; and the disbursements were $1,310,056, leaving a balance of $102,106.22.

The total assessed valuation of property in the State is $188,716,159; of this, $37,400,336 is personality. The increase in the total is $27,490,038. The largest increase has been made in the piney woods section. The number of polls assessed is 294,515. The amount collected on poll taxes for the year was $290,074.12. The tax is two dollars, and its payment is a prerequisite for voting, so that about half the population otherwise qualified to vote are disfranchised from this cause alone.

The figures of valuation given above do not include the assessments of railroad, telegraph, express, and sleeping-car property, which are made by the Railroad Commission of the State on the first Monday of January in even-numbered years.

Population.—The census shows that the increase in population in the past decade has been 20.2 per cent. The figures by counties are as follows:

Adams, 30,011; Alcorn, 14,987; Amite, 20,708; Attala, 26,248; Benton, 10,510; Bolivar, 15,538; Buddha, 4,104,600; Clarke, 19,892; Choctaw, 13,036; Claiborne, 20,787; Clarke, 17,741; Clay, 19,563; Coahoma, 26,293; Copiah, 34,395; Covington, 13,076; De Soto, 24,751; Franklin, 13,678; Greene, 6,705; Grenada, 14,112; Hancock, 11,886; Harrison, 21,102; Hinds, 22,577; Holmes, 30,928; Issaquena, 10,400; Itawamba, 12,983; Jackson, 25,494; Jefferson, 21,292; Jones, 17,846; Kemper, 20,492; Lafayette, 22,211; Lauderdale, 38,150; Lawrence, 15,103; Leake, 17,300; Lee, 21,956; Leflore, 23,834; Lincoln, 21,552; Lowndes, 29,095; Madison, 52,493; Marion, 13,501; Marshall, 27,674; Monroe, 31,216; Montgomery, 16,536; Neshoba, 12,726; Noxubee, 13,987; Oktibbeha, 12,028; Panola, 29,027; Pearl River, 6,907; Perry, 14,082; Pike, 27,545; Pontotoc, 18,274; Prentiss, 15,788; Quitman, 5,435; Rankin, 20,955; Scott, 14,316; Sharkey, 12,178; Simpson, 12,800; Smith, 13,035; Sunflower, 15,084; Tallahatchie, 19,000; Tate, 20,018; Tippah, 12,983; Tishomingo, 10,124; Tunica, 16,470; Union, 16,532; Warren, 12,539; Webster, 13,619; Wilkinson, 21,433; Winston, 14,124; Yalobusha, 19,742; Yazoo, 43,948.

Vicksburg has 14,824 inhabitants; Meridian, 14,050; Natchez, 12,210; Jackson, 7,816; Greenville, 7,642; Columbus, 6,484; Biloxi, 5,467; McComb, 4,477; Laurel, 4,183; Holly Springs, 4,101; Washington, 3,661; Aberdeen, 3,439; Canton, 3,404; Wesson, 3,279; Yazoo, 3,194; West Point, 3,103; Greenwood, 3,026. The figures are as given in a local newspaper. In another list Greenwood, Holly Springs, and Laurel are given a smaller number and Yazoo a larger.

The amount of receipts from all sources during the fiscal year ending Sept. 30, 1900, was $1,916,401.70, which amount, increased by $333,765.80 cash in the treasury Oct. 1, 1899, shows the available cash to have been $2,250,257.50, against which the Auditor's pay warrants to the amount of $1,027,823.57 and special warrants to the amount of $300 were paid, leaving a cash balance on hand at the end of the year of $622,401.93.

The amount of capital invested in manufacturing enterprises is $4,295,164; in merchandise, $15,104,641. The value of cattle is given as $2,167,685. The amount of cotton ginned and cotton oil is $6,018,972.

The amount of money going to make up the assessment of personality is $7,847,747.

Education.—According to the apportionment of school money made in December for the half year, the 590,222 children in the county districts will receive $353,758.88 and the 62,777 children in the separate school districts will receive $1,000,000. The Legislature appropriated $1,000,000 for the schools this year—a larger amount than ever before.

The school children have chosen the magnolia, by vote, as the State flower.

The report of the summer normal and institutes says that at least 75 per cent. of the white teachers of the State have been attending some one of the schools or the institutes. At least one third of the white teachers were enrolled in the various normals.

The fund used to defray the expenses of the summer work was composed of a State appropriation of $3,500, a Peabody appropriation of the same amount, local subscriptions amounting to $1,530, and the institute fund, which is made up from the examination fees collected from teachers.

The attendance at the colored normals and institutes was not more than usual, because there has been a year of unprecedented rains.

The Normal School, at Holly Springs, receives $2,000 each year for maintenance, and $250 additional for repairing fuel and insurance.

The Agricultural and Mechanical College has about 400 students. It receives a maintenance fund of $25,719, besides special sums for improvements. A textile school is to be established in connection with the college at a cost of $40,000, and a branch experiment station in the southern part of the State in the piney woods section, on a tract of land less than 50 acres.

Alcorn Agricultural and Mechanical College, for colored students, receives an annual support fund of $8,000, besides the income from the land received from the Government. The trustees have decided to establish a department for colored girls.

The Industrial Institute and College for Girls, at Columbus, is to have new dormitory and infirmary buildings, provided for by the Legislature.
MISSISSIPPI.

Mississippi College graduated 8 men in June; 241 were enrolled. Millsaps College conferred degrees on about 30, 16 of whom were from the law class. The University of Oxford conferred the degree of LL. B. on 24 students, A. B. on 9, B. S. on 4; and 5 received that of bachelor of philosophy.

Charities and Corrections.—The returns of the Department of Institutions in the State charitable institutions is about as follows: Hospital for the insane, Jackson, 600; hospital for the insane, Meridian, 354; school for the blind, 44; school for the deaf, 109.

The Legislature appropriated the following sums for maintenance: State Insane Hospital, $97,460, and $4,000 for superintendent's salary; East Mississippi Hospital, $48,000 and $2,000 salary; Deaf and Dumb Institute, $18,450, besides salary of superintendent; School for the Blind, $9,818; State Charity Hospital at Vicksburg, $12,000, on condition that the city and county give in condition one third that amount.

The Legislature gave $4,000 to build an annex for colored children to the School for the Blind; but the trustees, finding the sum too small, decided to turn it back into the State treasury, and ask the next Legislature for a sufficient amount.

The Board of Control, which is composed of the Governor, the Attorney-General, and the 3 members of the Railroad Commission, bought land for the new building in December, for $13,000, for use in Sunflower County, at $5.74 an acre for 11,000 acres, and $6 for the remainder. The appropriation was $80,000. The receipts from the Penitentiary for the fiscal year were greater by $97,627 than those of the year preceding.

Railroads.—The total valuation of the railroads in the State, including railway and palace car companies operating in the State, according to the report of the Railroad Commission published in March, is $263,388,476, on which the tax assessed amounts to $171,200.35, being an increase in valuation over 1898 of $1,901,290 and an increase of taxes collected of $12,530.14. The privilege taxes for 1899 amount to $40,862.22, against $40,582.90 for 1898, an increase of $279.32. The figures for 1900, published in July, show a still further increase in value.

The commission ordered a new mileage tariff on cotton seed, to take effect Oct. 1.

The Gulf and Ship Island road was finished to the coast this year, and the first passenger train was run Nov. 28. The trains run from Jackson to Gulfport through Hattiesburg.

Banks.—From a tabulation prepared by the Auditor it appears that there were 107 State banks on Oct. 1, against 92 banks on Oct. 1 of the previous year. The majority of the new banks are in the southern part of the State and the delta. The loans and discounts on personal indorsements, real estate, and collateral securities were $13,227,954.61, an increase of $2,917,817.77 over those of last year.

The stocks, bonds, and warrants, classed as resources, amount to $1,019,285.55, an increase of $1,258,293.17.

The expenses and taxes are stated at $231,860.16, an increase of $25,330.45 from last year's figures.

Other items of resources are named to form a total of $20,782,962.11, an increase of $3,492,885.73 over that of last year.

The tabulation of liabilities states the capital paid in at $4,483,096.64, an increase of $460,384.64 from 1899. The surplus this year is $578,544.35, an increase of $35,136.47. The undivided profits are $1,133,045.55, an increase of $456,579.69.

The individual deposits subject to check are $10,412,325.07, an increase of $1,217,924.10. The bills payable are $1,027,019.22, an increase of $462,209.57.

There are no savings banks, but several banks have savings departments. There are 12 national banks. The branch bank law is found to be ineffective, since it does not provide for separate statements of the property of the branch banks.

Levees.—The board of commissioners for the Mississippi-Missouri River reported for the year ending Dec. 1 that the volume of work had been extensive. The disbursements from Jan. 1 to Dec. 1 were $601,045.30, which was for contracts, engineering, salaries, interest on bonds, etc. When existing contracts are finished the board will have 120 miles of levees. The levee board has been authorized to issue $1,850,000 in bonded funds. The report shows that since that time it has issued bonds amounting to $1,850,000; of this amount, $773,000 have been retired.

The Brandywine Rock Wall.—A subscription has been started for a fund to be used in an investigation of this mysterious wall in Claiborne and Tensas counties. The money raised, which is thought by some to be artificial, is under examination. It is conjectured that a city was once enclosed by it.

Cotton.—The cotton crop was smaller this year than in other recent years. It is given as 1,230,000 bales. Ten mills were reported as having been in operation, and 7 months were building. There are 2,427 negroes in 1899, now. The cotton people are raising funds for a cotton factory in Jackson, and it was understood that $50,000 had been subscribed by the end of the year.

The New Capitol.—The Legislature provided for the immediate building of the Statehouse. It is to be on the Penitentiary site, the prison buildings having been moved to the convict farm. The plans of Theodore C. Link, of St. Louis, were chosen for the building, and the contract was let in December to a Chicago firm, W. A. & A. E. Wells. Their bid was $831,743, and the time set for completing the work twenty-eight months.

Lawlessness.—The Governor recommended that another man be appointed to suppress lynching in the State, but a bill with that object failed to pass. There were several lynchings in the year. In March a negro accused of murder was hanged by a mob near Greenville.

In June two negroes suspected of murdering a young girl at Biloxi were taken from jail at Mississippi City and hanged, because it seemed certain that they had killed her. They were taken out a few days before and tortured to make him confess, which he refused to do. In March a negro was shot to death by men of his own race, because of an assault upon a little girl. Another who had murdered his wife was taken from officers near Vicksburg, Oct. 22, and shot to death by a crowd of negroes. Aug. 13, a negro was taken from jail at Corinth and hanged in the public square, for assault upon a little girl. A lynching took place at Golster, April 13, said to have been without even a pretext of justification, and 13 white men were brought to trial for it in May; but the result of the trial has not come under notice.

A negro who shot a marshal at Gulfport was lynched near that place in December. A feud in Winston County was reported to have resulted in the death of 12 men; but a newspaper in that county disproved the sensational reports regarding the feud and said that as a matter of fact the killing of only 7, 5 whites and 2 negroes, could be traced to a mistaken identification.

Legislative Session.—The regular biennial session of the Legislature began Jan. 2 and ended March 12. John R. Dinsmore was President pro tem. of the Senate, and A. J. Russell was Speaker of the House.

Gov. Longino was inaugurated Jan. 16. In his
address he emphasized the necessity of action on the Statehouse question, the need of a textile school, of a general primary election law, and of another convict farm, considered the subject of the suppression of mob violence, and expressed disapproval of the proposition to divide the school money between white and colored schools according to the proportion of school taxes paid by each race.

Two United States Senators were to be chosen, one to fill out the unexpired term of the late Senator Walthall, and the other to succeed him at the end of the term in 1901. Anselm J. McLaurin was the unanimous choice of the caucus for the long term, and was elected. For the short term two candidates were before the caucus, Ex-Gov. Robert Lowry and William V. Sullivan, who had been appointed to fill the place in the interval before the meeting of the Legislature. Mr. Sullivan was nominated by a vote of 88 to 72, and was elected.

Laws to the number of 198 were made, and 9 resolutions were passed.

The act was then revised.

An important bill provides for elections to fill vacancies in offices where they have heretofore been filled by appointment of the Governor. Officials are to be elected where the unexpired term is longer than a year, if it is a district office; or fifteen months if it is a State office.

Corporations, associations, and individuals are authorized to exercise omnibus main in construction of canals, ditches, tramways, and pole roads for private transportation. Another act allows public roads to be worked by contract.

A Statehouse commission was created, to consist of the Governor, the Attorney-General, and three other members, one appointed by the Governor, one by the Senate, and one in act to raise an issue of $1,000,000 of bonds was authorized for the purpose.

A military board was established, to be composed of the Adjutant General, Judge-Advocate General, and the commanding officers of the regiments of the National Guard; they are to make the required instruction of the militia conform as nearly as practicable to those of the United States army.

The Governor is to appoint a commission to locate the positions of the State troops in the defense of Vicksburg in 1863, and recommended legislation.

An appropriation of $20,000 was made for a monument to be erected in the State Capitol grounds, making valid all contracts made previous to the passage of this act and subsequent to Jan. 1, 1895, which are or were null and void or voidable under previous or existing laws because of nonpayment of privilege taxes due when such contracts were made, upon terms of full payment of all such privilege taxes so in default with interest and damages thereon within sixty days from the passage of the act.

Among other enactments of the session were:

Regulating the sale and giving of cocaine.

Exempting Confederate soldiers who are infirm or over sixty years of age from the operation of the impost of privilege taxes on foods and liquors, except those on the selling of liquor, deadly weapons, pool tables, and some others.

Defining the concealment of a lien in case of sale as false pretense.

Authorizing boards of supervisors to compel vaccination; also to pay for isolation and disinfection in cases of contagious and infectious diseases.

Fixing the number of pounds to the bushel of wheat, corn, rye, and other products—in all, 33.

Providing that a transfer of property between husband and wife shall not be valid against a third person unless it is placed on record.

Providing for pensioning Confederate soldiers and sailors and widows; appropriating $150,000 for each of the two years to come, instead of $75,000 yearly, as heretofore.

An appropriation of $1,000,000 was made for the public schools, and $572,535 for colleges, white and colored; for hospitals and other charitable institutions, $280,918.

A branch experiment station is to be established by the board of the Agricultural College where land is given for the purpose. It is to be in what is known as the piney woods region, south of the twoier of counties on the line of the Alabama and Vicksburg Railroad.

An appropriation of $40,000 was made for a textile school at the Agricultural College.

A historical commission was created, to consist of five members appointed by the President of the State Historical Society. Its duty is to make a full, detailed, and exhaustive examination of all sources and materials, documentary and record manuscripts, of the history of Mississippi from the earliest times, whether in this State or elsewhere, and to include therein the records of Mississippi troops in all wars in which they have participated, and also of the location and present condition of battlefields, historic houses and buildings, and other places of historic interest and importance in the State.

The names of the institutions for the insane were changed. The one that has gone under the name Lunatic Hospital will be known as the State In-sane Hospital, and the other as the East Mississippi Insane Hospital, instead of State insane asylum. The Board of Control was directed to buy an artesian well-boring outfit for use at State institutions.

Provision was made for an additional farm or farms for the Penitentiary of 8,000 to 15,000 acres.

The law on sale of public lands was amended so that when the title has failed the patentee may recover from the Secretary of the Treasury, and the sums of the purchase money, fees, and interest; and if the land has yielded no profit, he may receive also the taxes paid, with interest.

The classification of municipal corporations was changed: Cities, 2,000 inhabitants; towns, 300 (instead of 500) to 2,000; villages, 100 to 300.

The law to make all contracts that may be making valid all contracts made previous to the passage of this act and subsequent to Jan. 1, 1895, which are or were null and void or voidable under previous or existing laws because of nonpayment of privilege taxes due when such contracts were made, upon terms of full payment of all such privilege taxes so in default with interest and damages thereon within sixty days from the passage of the act.

Among other enactments of the session were:

Regulating the sale and giving of cocaine.

Exempting Confederate soldiers who are infirm or over sixty years of age from the operation of the impost of privilege taxes on foods and liquors, except those on the selling of liquor, deadly weapons, pool tables, and some others.

Defining the concealment of a lien in case of sale as false pretense.

Authorizing boards of supervisors to compel vaccination; also to pay for isolation and disinfection in cases of contagious and infectious diseases.

Fixing the number of pounds to the bushel of wheat, corn, rye, and other products—in all, 33.

Providing that a transfer of property between husband and wife shall not be valid against a third person unless it is placed on record.

Providing for pensioning Confederate soldiers and sailors and widows; appropriating $150,000 for each of the two years to come, instead of $75,000 yearly, as heretofore.

An appropriation of $1,000,000 was made for the public schools, and $572,535 for colleges, white and colored; for hospitals and other charitable institutions, $280,918.

A branch experiment station is to be established by the board of the Agricultural College where land is given for the purpose. It is to be in what is known as the piney woods region, south of the twoier of counties on the line of the Alabama and Vicksburg Railroad.

An appropriation of $40,000 was made for a textile school at the Agricultural College.

A historical commission was created, to consist of five members appointed by the President of the State Historical Society. Its duty is to make a full, detailed, and exhaustive examination of all sources and materials, documentary and record manuscripts, of the history of Mississippi from the earliest times, whether in this State or elsewhere, and to include therein the records of Mississippi troops in all wars in which they have participated, and also of the location and present condition of battlefields, historic houses and buildings, and other places of historic interest and importance in the State.

The names of the institutions for the insane were changed. The one that has gone under the name Lunatic Hospital will be known as the State Insane Hospital, and the other as the East Mississippi Insane Hospital, instead of State insane asylum. The Board of Control was directed to buy an artesian well-boring outfit for use at State institutions.

Provision was made for an additional farm or farms for the Penitentiary of 8,000 to 15,000 acres.

The law on sale of public lands was amended so that when the title has failed the patentee may recover from the Secretary of the Treasury, and the sums of the purchase money, fees, and interest; and if the land has yielded no profit, he may receive also the taxes paid, with interest.

The classification of municipal corporations was changed: Cities, 2,000 inhabitants; towns, 300 (instead of 500) to 2,000; villages, 100 to 300.

The law to make all contracts that may be making valid all contracts made previous to the passage of this act and subsequent to Jan. 1, 1895, which are or were null and void or voidable under previous or existing laws because of nonpayment of privilege taxes due when such contracts were made, upon terms of full payment of all such privilege taxes so in default with interest and damages thereon within sixty days from the passage of the act.

Among other enactments of the session were:

Regulating the sale and giving of cocaine.

Exempting Confederate soldiers who are infirm or over sixty years of age from the operation of the impost of privilege taxes on foods and liquors, except those on the selling of liquor, deadly weapons, pool tables, and some others.

Defining the concealment of a lien in case of sale as false pretense.

Authorizing boards of supervisors to compel vaccination; also to pay for isolation and disinfection in cases of contagious and infectious diseases.

Fixing the number of pounds to the bushel of wheat, corn, rye, and other products—in all, 33.

Providing that a transfer of property between husband and wife shall not be valid against a third person unless it is placed on record.

Providing for pensioning Confederate soldiers and sailors and widows; appropriating $150,000 for each of the two years to come, instead of $75,000 yearly, as heretofore.

An appropriation of $1,000,000 was made for the public schools, and $572,535 for colleges, white and colored; for hospitals and other charitable institutions, $280,918.
school districts in proportion to the number of children. The other provides for a new legislative apportionment; according to the results of the census. The last was made in 1882. Both these were carried at the election. They became parts of the Constitution only after legislative enactment to insert them.

The so-called Noel amendments were supposed to have been carried at the election of 1889, having received more votes in favor than against their adoption. This Legislature passed a resolution to insert them in the Constitution, but the question of their adoption came before the courts, and the decision was that an amendment should receive a majority of all the votes cast at the election. It was held, also, that they were not properly submitted, having been submitted as one, while they were really four; and the Constitution requires that each amendment be submitted separately. They concerned the judiciary and made it elective. An amendment passed in 1898, and ratified at the polls that year, giving levee commissioners power to eke to the Government their levees and rights of way was inserted in the Constitution by resolution.

Political.—No State election was held this year. The most notable event in State politics was the action of the Democratic State Committee, which met April 30, and ordered a plurality primary for the choice of delegates to the national convention and presidential electors for June 21. This action was contrary to all party precedent; State conventions have been the regular method for electing such representatives. Delegates came from all over the State, and the committee was urged to reconsider its action and arrange for a convention. It did not do so, and a convention was otherwise called, which met at Jackson, June 5. Resolutions were passed strongly condemning the action, and charging the committee with the design of perpetuating itself, since it has been the custom for such a State committee to be chosen at each convention, and especially condemning the refusal to reconvene the committee to reconsider "their unwarranted, unprecedented, unnecessary, and undemocratic action."

Other resolutions declared for Mr. Bryan, and denounced the policy of the administration, condemning the tariff, and militari sm; opposed trusts, favored the Nicaragua Canal, and denounced the Hay-Pauncefote treaty; and condemned the State administration. Delegates and electors were nominated and a new State committee. On the part of the committee it was declared that in 1899 the State committee was chosen for four years—that is, till the year of the next State election.

Gross frauds were charged at the primaries, especially in Coahoma, Warren, and Issaquena Counties.

A Republican State convention was held April 26. The party principles were reaffirmed and delegates to Philadelphia selected. The electoral ticket was made up in August.

The People's party met in convention Aug. 15 and named candidates. The most significant part of the platform was the resolutions following: "We do most solemnly and earnestly warn the people of this nation that the action of the Democratic party at Kansas City in relegating the financial question to the rear and making imperialism the paramount issue is the rankest deceit and treachery, and is calculated to mislead the people from the real issue. We hereby most earnestly assert that the financial question and Government ownership and control of public utilities are the paramount issues now before the American people." The vote for President stood: Bryan, 51,706; McKinley, 5,753; Barker, 1,644. All the members of Congress elected are Democrats. The vote for the poll tax amendment (omitting that of Bolivar County) was 42,901 for, to 7,722 against. On the apportionment amendment, 32,923 for, to 6,243 against.

MISSOURI.

A Western Mississippiv valley State, admitted to the Union Aug. 10, 1821; area, 69,415 square miles. The population, according to each decennial census since admission, was 140,453 in 1850; 383,702 in 1860; 1,721,295 in 1870; 2,108,380 in 1880; 2,679,184 in 1890; and 3,106,663 in 1900. This is an increase since 1890 of 15.9 per cent. The city of St. Louis had in 1900 a population of 575,238, Capital, Jefferson City.

Population.—The population by counties, according to the census of 1900, was as follows: Andrew, 17,332; Atchison, 16,401; Audrain, 21,100; Barry, 25,532; Barton, 18,253; Bates, 30,141; Benton, 16,556; Bollinger, 14,650; Boone, 28,642; Buchanan, 121,838; Butler, 16,769; Caldwell, 16,650; Calhoun, 25,984; Camden, 13,113; Cape Girardeau, 24,315; Carroll, 26,455; Carter, 6,706; Cass, 23,638; Cedar, 16,293; Chariton, 14,905; Christian, 13,903; Clinton, 17,303; Cole, 20,575; Cooper, 22,532; Crawford, 12,935; Dade, 18,125; Dallas, 13,903; Daviess, 21,325; DeKalb, 14,418; Dent, 12,980; Douglas, 16,802; Dunklin, 21,706; Franklin, 30,581; Gasconade, 12,288; Gentry, 20,554; Greene, 52,713; Grundy, 17,832; Harrison, 24,389; Henry, 28,654; Hickory, 9,985; Holt, 17,893; Howard, 18,367; Howell, 21,834; Iron, 8,716; Jackson, 19,153; Jasper, 84,018; Jefferson, 25,712; Johnson, 27,843; Knox, 13,479; LaClede, 16,723; Lafayette, 31,670; Lawrence, 31,062; Lewis, 16,724; Lincoln, 18,352; Linn, 25,503; Livingston, 22,302; McDonald, 13,574; Marion, 33,018; Madison, 9,973; Maries, 9,610; Marion, 26,331; Mercer, 14,706; Miller, 15,116; Moniteau, 11,280; Newton, 19,716; Montgomery, 16,571; Morgan, 12,175; New Madrid, 11,280; Newton, 27,001; Nodaway, 32,938; Oregon, 13,906; Osage, 14,096; Ozark, 12,145; Pemiscot, 12,115; Perry, 15,134; Pettis, 32,438; Phelps, 14,194; Pike, 25,774; Platte, 16,193; Polk, 23,255; Pulaski, 10,304; Putnam, 16,688; Randolph, 13,821; Randolph, 24,442; Ray, 24,805; Reynolds, 12,611; Ripley, 21,834; Iron, 8,716; Jackson, 17,907; Ste. Genevieve, 10,339; St. Francois, 24,051; St. Louis, 50,040; St. Louis city, 575,238; Saline, 33,703; Schuyler, 10,840; Scott, 18,352; Scott, 13,092; Shannon, 11,247; Shelby, 16,167; Stoddard, 24,609; Stone, 9,892; Sullivan, 20,282; Taney, 10,127; Texas, 22,192; Vernon, 31,619; Warren, 9,919; Washington, 14,363; Wayne, 12,309; Webster, 16,640; Worth, 9,832; Wright, 17,519.

Government.—The following were the State officers during the year: Governor, Lon V. Stephens; Lieutenant Governor, August H. Barte; Secretary of State, Alexander A. Lesueur; Treasurer, Mark L. Pitts; Auditor, William T. Ranck; Adjutant General, M. Fred Bell; Attorney-General, E. C. Crow; Superintendent of Education, W. T. Carrington; Railroad and Warehouse Commissioners, T. J. Hennessey, J. Flory, W. E. McCully; Secretary State Board of Agriculture, John R. Rippey; Commissioner of Insurance, E. T. O'Keefe; Commissioner of Labor, Judge H. W. Pershing; Commissioner of Justice of the Supreme Court, James B. Gant; Associate Justices, Thomas A. Sherwood, Gavoz D. Burgess, L. B. Valliant, W. C. Marshall, Theodore Bruce, Democrats, and Walter M. Robinson, Republican; Clerk, J. R. Green, Democrat.

The Legislature, which holds biennial sessions has in the Senate 25 Democrats and 8 Republicans.
in the House, 75 Democrats, 50 Republicans, and 1 Populist

Finance.—The bonded debt of the State, on Jan. 1, 1899 (latest official report), was $3,642,000. This shows a net reduction of $1,334,000 in the two preceding years. The bonded debt of cities and townships on Jan. 1, 1899, was $501,528. This was increased in 1901 by the $5,000,000 authorized for the St. Louis Fair. County and township bonds to the amount of $9,530,570 have been issued in 59 counties, while 76 have no bonded debt. The State certificate of indebtedness on Jan. 1, 1899, amounted to $4,393,539.40.

The auditor reports $795,000 of interest-bearing debt was paid off, being $545,000 more than the constitutional provision relating to State debt requires. The estimate for 1900 is about $500,000.

Valuation.—By the latest biennial report (1900), the total valuation for the State real and personal property is given at $1,093,691,204. For St. Louis the figures are $337,632,192, or one of 663 of real value. The farm areas are given at 4,149,776 acres, valued at an average of $7.75.

Banks.—On Oct. 31, 1900, there were 67 national banks in the State, with a note circulation of $12,281,374; capital paid up, $17,350,000. State banks reported—594, with a capital of $17,735,900; deposits, $62,010,392; revenue tax, $545,791. The number of private banks was 41; capital stock, $1,701,370; tax paid, $4,866. Loans and trust companies, 9; capital, $6,551,393; surplus, $2,560,118. The total State bank capital reported was $434,546,033. There are 55 savings banks, with deposits to the amount of $10,335,769.12.

The State University, at Columbia, has 8 departments—academic, normal, law, medicine, military science and tactics, agriculture, and mechanic arts, with school of mines and metallurgy at Rolla. The enrollment for 1900 was 1,035 at Columbia, and at Rolla 165, showing an increase of nearly 28 per cent.

The State normal schools are 4, including the Lincoln Institute (colored), at Kansas City. The others are at Kirkville, Warrensburg, and Cape Girardeau. The number attending the 3 last was—males, 1,028; females, 1,111. The total expenditures were $59,015.98. The Lincoln Institute had of students—males, 110; females, 131. The annual expenditures at the last report were $13,501.46. State superintendents of public instruction are 2,000 private institutions of learning of the following: 1 each sectarian and nonsectarian universities, 36 sectarian colleges and academies and 17 nonsectarian, 14 professional schools, and 10 each separate male and female academies. Thirty-four of these private institutions of higher or special learning are open to the colored race. The school age in Missouri is from six to twenty years, and the expense per pupil is $16.13 a year. The attendance is 2.30 per cent. of the total population.

A notable addition to colleges is the Ruskin, at Trenton. It is founded on the same general lines as Ruskin Hall at Oxford, England.

Railroads.—The State Railway and Warehouse Commission abrogated in 1900 its practice of levying an arbitrary sum per mile to cover "miscellaneous purposes." Property realized, the commission...would not sustain the practice. The valuation for taxation (1900) was as follows: Steam roads, $77,448,204.30; street roads, electric etc., $21,045,288; bridges, $2,865,000; telegraph lines, $2,002,507.71. There are 6 counties without railroads. The number
The number of railroad employees, June 30, 1900, was 23,092; for street railways (estimated), 45,000. Not including logging, electric, cable, or horsecar roads, there were 147 railway companies in the State, 1,632 stations, and 1,256 station houses. One employee in 2,118 was killed, and 1 in 205 injured during the year preceding. Of passengers, 1 in 4,679,447 was killed, and 1 in 324,902 injured. The earnings of the railroads were reported at $17,296,880; taxes paid, $904,422.15.

Labor Troubles.—The street-car strike in St. Louis in 1900 was the only movement of importance. It lasted several weeks, and cost the city $157,000 for police work, and involved 33,000 men, only 4,394 failing to go on strike. The street railroads involved 436 miles. The losses reached several million dollars in wages and costs to the $5,000,000 in expenses used to call out the militia, on the ground that the sheriff had not exhausted his powers to keep the peace. The result was an arrangement which granted in some form most of the original demands of the strikers.

Department Store Taxation.—The State Supreme Court, Feb. 20, rendered a decision adverse to the constitutionality of the tax on department stores. The ease of the State of Missouri ex rel. John C. Wyatt vs. Thomas R. Asherock, Rice D. Greky, and John F. Johnson was brought by mandamus from the Buchanan County Circuit Court for the purpose of compelling the authorities of St. Joseph to issue a merchant's license to Wyatt for the conducting of a department store.

Under the law appealed from there had been a refusal to issue the license unless the relator would first pay to the city two thirds and to the State one third of the amount required by section 6 of the act, which provided for a license tax on each of 23 groups of goods sold in department stores of $300 to $500, at the discretion of the taxing authority. The Supreme Court decided this discretionary provision to be at variance with the State Constitution, in that it was "class" and "special" legislation. The court declared the act to be an "inadmissible classification of merchants for the particular purpose of this particular imposition," involving also "inequality and want of uniformity" in determining the amount of tax. A peremptory writ of mandamus was ordered issued.

Louisiana Purchase Exposition.—In addition to the $5,000,000 in expenditure bonds to be issued by the city of St. Louis and the $1,000,000 authorized for expenditure by the State for this exposition under legislation of 1899, the first session of the Fifty-sixth Congress also authorized an appropriation of $5,000,000 in aid of it. It is to be disbursed for the exposition of 1903 under rules and regulations prescribed by the Treasury, but these are to be operative only after the sum of $10,000,000 has been raised by the corporation having the exposition in charge. It is also provided that the United States is to be repaid in due proportion with such repayments as are made out of the proceeds of the Louisiana Purchase Exposition.

Political.—In the presidential election, the State gave 351,912 votes for the Democratic ticket, 314,091, for the Republican, 5,965 for the Prohibition, and 6,128 for the Social-Democratic.

The Democratic State convention met at Jefferson City, June 14, and nominated the following ticket: For Governor, Alexander M. Dockery; Lieutenant Governor, John A. Lee; Secretary of State, Samuel B. Cook; Treasurer, Robert P. Williams; Auditor, Albert O. Allen; Attorney-General, S. D. Creighton; Comptroller, C. A. C. McLeese; and Warehouse Commissioner, A. J. Harrington. All these nominees were elected in November by an average vote of 330,000; Gov. Dockery's vote was 350,045.

The Democratic Judicial Convention met at Sedalia, July 17, and nominated for Chief Justice R. L. H. Grant; for Associate Justices, A. J. Shannon, C. W. Sherwood, Gavon D. Burgess, Theodore Brace, and L. B. Valliant—all of whom were re-elected.

Constitutional Amendments.—At the election in November, 1900, 7 amendments to the Constitution were ratified. Under the first, county courts, in their discretion, may levy a special tax for the purpose of paying off obligations, and for roads and bridges. Three other amendments provide that in courts of record three fourths of the jury in a civil case may determine the cause; that in courts not of record, in both civil and criminal cases, two thirds of a jury may render a verdict. Juries may be composed of fewer than 12 men, and counties may proceed under the law in matters of justice without the necessity of going to the polls. The amendment in the above mentioned stage was referred upon either information or indiction. Courts having power to try felony cases may dispense with grand juries, which are to be convened on the judge's order. By the fifth amendment a new system of taxation as to mortgages is made operative.

MIVART, ST. GEORGE (mi'-vart), an English biologist, was born in Brook Street, Grosvenor Square, London, Nov. 20, 1827; died at his home, 77 Inverness Terrace, in that city, April 1, 1900. He began his studies as a boy at Clapham Grammar School, went thence to Harrow, and afterward entered King's College, London. It had been his father's wish that he should go to Oxford, but the lad, having avowed himself as a Roman Catholic, was refused admission to the University. He graduated at Oxford, in 1848, in natural science, and went to Rome, where he was ordained as a priest in 1851. He then returned to Oxford, where he was appointed lecturer in zoology at Oxford University. He was made professor of zoology in 1865, and held the chair until his death in 1900. He was the author of several books and many papers on zoology, and was a delegate to the Societies of England and France.
by many eminent predecessors, while "leaving lit-
tle to be found out by succeeding naturalists in
the animals with which he dealt." The results of
these investigations began to appear in 1862, as a
series of the articles of the introduction, which
were published in the Journal of Anatomy and
Physiology for 1867 and 1868 and in the Pro-
cedings of the Zoological Society for 1871. In
the seventies, in the latter serial there also appeared
a Memoir on the Axial Skeleton of the Struthion-
idae, a study of the Megalonychidae and an article
on the structure of the fins of the elasmobranch
fishes and the nature and homologies of vertebrate
limbs generally. Subsequently turning his atten-
tion to the carnivora, he published in 1882, in the
Zoological Proceedings, two papers dealing with the
classification, distribution, and anatomy of the
deluroid carnivora, and in 1892, there followed an-
other, a paper in which the recent carnivora
were treated in a similar manner. In 1890 three papers
on the Canidae appeared in the same Proceedings,
and as late as 1896 two others on the bony struc-
ture of certain lories and parrots. These and
many other papers, some fifty in all, contain the
results of Dr. Mivart's original investigations, which
led him to believe that the elements of our knowl-
edge of the structure and relationships of the
higher animals, while they at the same time form a
broad and enduring basis for his scientific
reputation.

But extended and valuable as the work they
record undoubtedly is, these memoirs represent
only a minor phase of Mivart's work. Besides the
articles on Apes, on the Skeleton, and on
Reptiles, written for the ninth edition of the En-
cyclopedia Britannica, he was a frequent contrib-
tor to several of the leading English periodicals,
such as the Quarterly, Fortnightly, and Contem-
porary Reviews and the Nineteenth Century, and
the author of a considerable number of scientific
books, several of which have been widely read.
His first work, the Genesis of Species, appeared in
1871, and was so well received that a second edi-
tion was called for in less than a year. It is in this
volume that the author sets forth certain original
views on the subject of evolution in general, and
natural selection in particular, which called out a
good deal of opposition. To this he appealed for
help in a letter to his friend, the followers of Darwin.
Denying to the principle of natural selection a controlling influence in the ev-
olution of living forms, Dr. Mivart insists on the
leading action of a Divine power, advocates the
creation theory, but at the same time takes care to
distinguish between absolute and derivative cre-
ation, and claims that it is with the latter only that
the evolutionist is concerned. He also urges the
view that while man's body is the result of evolu-
tion, no such origin can be made to account for
his intellect. His second book, Lessons in Ele-
mentary Anatomy, was published in 1872; Man
and Apes, in 1873: Lessons from Nature and Con-
templation, Chief of Justice or Punishment, in
Nature and Thought, 1883; The Origin of Human
Reason, 1889; A Monograph of the Canidae, 1890;
Birds, 1892; Types of Animal Life, 1893; and An
Introduction to the Elements of Science, 1894.

Whether combating the hypothesis of natural
selection or writing on the relations of science and
religion, Dr. Mivart's books, and particularly his
essays in the magazines, reached and influenced a
wide circle of readers. His style was clear and vig-
orous, impressive in its earnestness, and although
much that he wrote was of a controversial charac-
ter and on subjects that took strong hold of the
feelings, his articles were always marked by a dig-
nity, a respect for fact, and a regard for his oppo-
sites that deserved, as they received, the earnest
appreciation. Indeed, it is believed by many who
are familiar with his work that his success as a
popular writer on his favorite subjects is quite up
to, if it does not overshadow, his achievements as a
disccourse.

There is nothing in Dr. Mivart's career that
affords a better example of the true scientific
spirit by which he was animated than the manner
in which he met only a short time before his death
an attempt to coerce his religious views. Though a
consistent Catholic for many years, he late in life
became somewhat restive apparently, under what
he regarded as illiberal and unprogressive tenden-
cies in his Church, particularly in its attitude to-
ward science. The feeling seemed to grow upon
him, until at length he ventured to write, in a
public way and from a scientific standpoint, certain
doctrines of the Catholic faith with which he was
in disagreement. The months and years which
followed were marked by much suffering and incon-
veniences. A considerable correspondence ensued, in
which demands were made upon him that he would not
obey, the controversy finally resulting in his forced
retirement from the Church. Dr. Mivart's part in
this correspondence indicates that for some years a
conflict had been steadily growing in his mind be-
tween the principles that he advocated and the
necessity of submission to authority. In the end the
former proved too strong to be overcome, and, true
to his mature convictions, he quietly accepted the
consequences.

Personally, Dr. Mivart is described as a man of
fine presence and the possessor of a charm of man-
ner that was alike conspicuous before an audience,
in the discussion of the scientific society, and in the
ordinary intercourse of daily life.

MONTANA, a Western State admitted to the
Union Nov. 8, 1889; area, 146,080 square miles.
The population, according to each decennial census
since admission, was 132,159 in 1890, and 243,329
in 1900. Capital, Helena.

Government.—The following were the State
officials in 1900: Governor, Robert B. Smith;
Lieutenant Governor, A. E. Spriggs; Secretary of
State, T. S. Hogan; Treasurer, T. E. Collins;
Auditor, T. W. Poindexter, Jr.; Attorney-General,
C. B. Nolan; Superintendent of Education, E. A.
Carleton—all elected on a fusion ticket of Jews,
crats and Populists. Adjutant General, Charles
F. English; Commissioner of Agriculture and
Labor, J. H. Calderhead; Land Commissioner,
H. D. Moore; Mine Inspector, John Byrne;
Boiler Inspector, Frank A. Burns; President
of the Board of Sheep Commissioners, Thomas
H. Power; Bank Examiner, J. G. McCormy;
Secretary of State, A. C. Thompson; M. Brantley,
Republican; Associate Justices, W. H. Hunt, Republican, who resigned and was suc-
ceded in June by Robert L. Word, and W. T.
Pigott, Democrat; Clerk, Henry G. Rickerts,
Democrat.

The State officers are elected for terms of four
years in November of the years of presidential
elections. The term of justices of the Supreme
Court is six years.

The Legislature meets biennially in January of the
odd-numbered years.

Population.—Following is the population of the
counties as returned for the census: Cascade,
25,777; Beaverhead, 5,615; Broadwater,
2,641; Carbon, 7,533; Chouteau, 10,996; Custer,
MONTANA.

7,891; Dawson, 2,443; Deer Lodge, 17,493; Fergus, 6,937; Flathead, 9,375; Gallatin, 9,553; Granite, 4,328; Jefferson, 5,330; Lewis and Clarke, 19,171; Madison, 7,695; Meagher, 2,526; Missoula, 13,964; Park, 7,341; Ravalli, 7,822; Silver Bow, 47,655; Stillwater, Grass, 3,066; Teton, 5,080; Valley, 4,353; Yellowstone, 6,212; Crow Indian Reservation, 2,600.

Butte is the largest city in the State, having this year a population of 30,470, against 10,723 in 1890, and 3,363 in 1880. Great Falls is second with 14,932, and shows the largest percentage of increase; it did not exist in 1880, and in 1890 it had only 3,797 inhabitants. Helena, the total, in 1890, when it had 13,834, in 1900 the figures were 10,772. Anaconda has risen from 3,975 to 9,450. The other large towns are: Missoula, 4,329; Bozeman, 3,453; Billings, 3,221; Livingston, 2,780; Walkerville, 2,622; Kalispell, 2,527; Red Lodge, 1,522; Miles City, 1,747; Dillon, 1,530; Fort Benton, 1,034.

Finances.—The State has no bonded debt. The State institutions have bonds issued, secured by the land grants, all bearing 6 per cent., running from ten to thirty years, as follows: Agricultural College, $690,000; General School, $1,000,000; Normal University, $100,000; Deaf and Dumb Asylum, $40,000; Capitol Buildings, $350,000; School of Mines, $120,000. The State is not responsible for either principal or interest on these bonds.

The Treasurer's annual report, published in December, showed a balance on hand in the general fund of $71,285. The general fund balances are as follows: Outstanding general fund warrants, $243,570.07; estimated interest, $3,500; total, $247,070.07.

The Treasurer estimates that there is due in taxes and licenses $369,000. Adding to that the cash on hand makes a credit balance of $112,601.21. It is estimated that outstanding warrants not registered may bring the actual cash credit, Jan. 1, down to $50,000. This is the first time in the history of the State that the Treasurer has been able to take up all outstanding warrants at the close of the year.

The report shows a balance to the credit of the Agricultural institution's and commission funds of $314,627.

A comparative statement of receipts from each of the 24 counties shows a net increase of $58,-378.37. With the exception of Dawson, Deer Lodge, Gallatin, and Granite Bow, an increase of revenue is true of every county.

The report shows a balance on the inheritance tax during the year of $13,058.06. The 5-per-cent. wolf bounty tax, levied upon stock interests, netted the State $157,130.03. During the year warrants amounting to $142,745.50 were paid, leaving an unexpended balance of $14,394.43.

A statement of the stock inspector and detective fund is given as follows: Balance in fund, $16,460.09; receipts, $21,282.60; warrants paid, $19,042.50; balance, $18,700.79.

Cash and securities of credit of the permanent school fund amount to $340,495.10, bearing interest for the most part at 6 per cent.

The Secretary of State in fees, licenses, etc., were $13,532.15.

Education.—The report of the public schools for the year ending Aug. 31 gives the following data: There are 57,210 children of school age, an increase of 3,578 compared with the preceding year. The enrollment at the end of the school year in the public schools was 39,430, or 2,213 more than that of the preceding year. There were 1,898 children in private schools compared with 1,586 in 1890.

The public schools were taught by 1,214 teachers, all but 202 of whom are women. There were 1,126 teachers in the State, which is $70,161.72 during the year. The average salary for men was $60.04, and for women, $50.30 a month.

The public school libraries have 32,987 volumes. The State appropriation for 1899 amounted to $80,246. This sum was apportioned at the rate of 50 per cent. for each census child.

The School of Mines was opened for the reception of students Sept. 11. The courses of study extend over four years, and are devoted strictly to those branches of science that are required in the field of mining and mining engineering. Twenty-five students are attending daily recitations. Five others are taking selected studies in one of the ordinary departments of mining. A very large number of applications for admission have been refused because of lack of preparation.

The faculty is giving special attention to the building up of a cabinet that shall be as nearly as possible a complete representation of the ores and mineral resources of Montana.

Some of the older students have been engaged in making maps, mine models, and mining machinery have been made by some of the great mining companies of Butte.

The estimate of expenses for the Normal School for two years was $35,355. Money is required for dormitories and other additions. The attendance was reported to have fallen off during the spring term.

The Agricultural College has an attendance of 250.

The enrollment at the State University, not including that of the School of Music, was 243 in the fall term, compared with 203 at the same time in 1899. The cost of maintenance was $25,810. New departments created at the university are history and philosophy, chemistry and physics, biology, modern languages, ancient languages, English and literature, drawing, mathematics, and mechanical engineering. Fifteen degrees were conferred this year, 14 bachelor's and 1 master's.

Under the law for the establishment of county high schools, 7 or 8 have been opened, but all are in rented quarters. It appears that the law is defective in not prescribing a practicable way of raising money for the schools. Where bonds have been offered for sale, prospective buyers have been advised that they were illegal, and no sales have resulted.

The Montana Wesleyan University received additions to its funds amounting to $20,070 between Aug. 1 and Dec. 1. The attendance has largely increased, about 130 being present in September.

Charities and Corrections.—The number of patients at the State Institution for the Insane, at Warm Springs, according to the report at the end of the year, was 479; of these, three fourths were men. In the year 50 were discharged as cured, and 19 dismissed as partly cured to the care of relatives, 64 died, and 12 escaped. From 11 inmates who paid in part for their board $1,427 was received. The expenses for the year amounted to $113,412.

The membership of the Soldiers' Home at the close of the year was 65 against 51 at the beginning. The resources of the home during the fiscal year were: Balance on hand at beginning of year, $1,414.06; State appropriation, $5,196; received from pensions, $854.23; received from Government, $4,068.25; from sale of buildings at Fort Maginnis, $1,700; total, $13,172.54.
The expenditures amounted to $11,522.76, of which $4,000 went for subsistence. The Montana Children's Home Society has placed 150 children in homes since its organization.

The Institute for the Deaf and Dumb had a larger attendance this year than ever. The building has been improved, and new departments of instruction introduced.

There were 354 prisoners at the State Prison in December. Unconditional pardons were granted to 36 in the year and diminished were given in 75 cases.

Militia.—The report of the Adjutant General says: "On April 1, 1898, this State had 1 company of artillery, 2 troops of cavalry, 9 companies of infantry, and 1 mounted company of infantry. Of this force all were called for (with the single exception of the artillery) by the War Department for the Spanish-American War, and were mustered into the United States service. The terms of enlistment in nearly all the companies that composed the old guard expired with their muster out of the United States service. The infantry and cavalry arm of the service were not continued, and our State is left with the least number of organized militia to her credit of any in the Union.

"The number of persons in the State subject to military duty is estimated at 31,258, an increase of 3,744 in two years.

"The expenditures from the National Guard fund for the two years were as follows: For 1899, $1,200,000; expenditures $1,447,50; for 1900, annual appropriation $2,500, expenditures $1,427.37."

Of the Fort Ellis military reservation he says: "In the possession of old Fort Ellis the State is indeed fortunate. It is centrally located, and is admirably adapted for the site of an encampment. The guard has held no encampment since 1896, and this has led settlers to believe what the State has forfeited its rights to hold it."

Railroads.—According to figures from the office of the State Board of Equalization, the railroads paid in taxes in 1900, exclusive of special school and city taxes, $364,035.83. The taxes on the railways proper, the roadbeds, rails, bridges, etc., of the Great Northern line, the Northern Pacific, and Great Northern roundhouses, depots, shops, and other buildings amounted to $181,129.90, while the taxes on the lands amounted to $35,083.25. There are 2,932.21 miles of railroad in the State upon which taxes were paid.

A line from Kalispell to Flathead lake is building, which will connect the head of the lake with the main line of the Great Northern.

Banks.—Following is the summary of the condition at the close of business, Nov. 30, of the 14 banks, as reported to State Bank Examiner: Deposits, $7,711,423; loans and discounts, $6,853,209; cash and clearance items, $1,319,941; due from banks, $2,150,730.

There was an increase of 10 per cent. in the deposits and loans and discounts of the State banks during the last fiscal year. Six of the 14 State banks paid dividends aggregating $32,000.

Public Lands.—The report of the Land Commissioner shows that during the fiscal year 570 new claims were filed. Of these, 238,711 acres, giving the State a revenue of $42,767.34. Including the leases and permits issued during the previous years, 1,912 leases are in existence, producing during the year a revenue of $144,383.76. Of all classes, there are now under lease and yielding revenue to the State 1,905,895 acres of land, representing an increase of $85,077.60.

The receipts for the year represent very largely rentals, as the department has considered it good policy to rent State lands rather than place them on the market. Under the existing policy the State receives an income of 6½ per cent. from its land, and still retains title.

During the year the total income from State lands was $200,757.25.

The State has relinquished lands within the reservations amounting to 315,050 acres, and has secured other lands in their place.

Insurance.—The Auditor attends to the collection of fees and taxes from the insurance companies, which now amount to about $80,000. There is as yet no State office of Insurance Commissioner.

Wolves and Coyotes.—According to the payments under the wolf bounty law, the number of wolves killed during the fiscal year was 5,117, and of coyotes 7,711.

Products.—Montana is the chief wool-producing State in the Union, and has more sheep than any other State except one. The clip this year exceeded 24,000,000 pounds, and the price received was better than the average.

A great percentage of the gold and silver produced in Montana is mined near Butte—almost two thirds of the silver and fully one fourth of the gold. The rest is from smelting ores, mill bullion, cyanide vats, and placer mines in other parts of the State. Every coal-mining district in the State where there are developed mines was worked to its full capacity during the year, with the exception of Butte.

In point of value copper is a long way in the lead of other metals produced in the State. The value of the copper output, according to the assayer's report, was $40,941,905.14. The value of the gold produced was $4,819,156.95; of silver, at coinage value, $21,786,334; of lead, $900,410.33.

Political.—The political situation this year was much involved. The Republican party, though seemingly united upon one ticket, appears not to have been at peace with itself, one part charging that the other part had been brought under the control of the Standard Oil and Amalgamated Copper trusts. The Democratic party was divided into what was popularly known as the Reclamation party, the Democratic party, and two tickets at the polls. Six parties put up State tickets—the Republican, Democratic, Independent-Democratic, People's, Union-Labor, and Social-Democratic. The Prohibition and Social-Labor parties made nominations for presidential electors, but none for State officers. By fusion the State tickets were reduced to four before the election. The courts were called upon to decide in several cases which of opposing candidates for county offices were entitled to places on the ballot as candidates of their party.

The Republicans held a convention in Helena, May 17, to name delegates to the national convention. Resolutions were adopted approving the national administration, favoring the renomination of President McKinley, calling for legislation against trusts, and denouncing the 11 Republicans that voted for W. A. Clark.

The convention for nominating State officers met in Helena, Sept. 5. Following is the ticket: Governor, David A. Law; Lieutenant Governor, A. J. Bennett; Secretary of State, A. N. Yoder; Attorney-General, T. J. Porter; State Treasurer, Frank J. Edwards; State Auditor, C. C. Proctor; Associate Justice, Rudolph von Tobel; Superintendent of Public Instruction, W. E. Harmon.

The first Democratic convention was called to
meet at Butte, June 20. The Clark men apparently were in the majority, but the Daly men were in control; and after some struggles the Clark men withdrew, and two conventions were held. The Daly faction adopted a platform denouncing the action of W. A. Clark, of Butte, in corrupting the late Legislature, in assailing the integrity of the Supreme Court, and attempting to debase the people of the entire commonwealth, as the colossal crime of the century.

Senator Clark's resignation after the report of the Senate committee, and his appointment by the acting Governor was denounced as "a disgrace to the State, a shame to the American nation, and an insult to the Senate."

The Clark faction adopted a platform calling the Washington investigation of Mr. Clark's election a persecution, denouncing those who instigated it, and approving the State legislators that voted for Mr. Clark.

The Democratic convention for nominating a State ticket met Sept. 19. There were contesting delegations, Butte, Butte, and other places and a majority report of the Credentials Committee favored the Clark delegation, and that report was adopted by a vote of 253 to 81, whereupon the Daly contingent withdrew. They organized a new party, the Independent-Democratic, and called a convention to meet in Butte Oct. 2.

The Governor was: For Governor, Thomas S. Hogan; Lieutenant Governor, Joseph Marion; Secretary of State, George M. Hays; Treasurer, Alex. Livingston; Auditor, E. G. McLean; Attorney-General, W. R. C. Stewart; Associate Justice, Robert Lee Word; Superintendent of Schools, Prof. P. A. Leamy.

The Butte contingent held a convention in September, and adopted a platform that denounced the Gage act and "imperialism," demanded the initiative and referendum and abolition of the circle at the head of the ballot, and pledged its representatives to vote for an eight-hour law, for a law prohibiting the employment of Japanese and Chinese labor, for abolition of the company stores, for the employment of plants to make blacklisting unlawful, to revise the school laws, and to give women the ballot. It favored the election of United States Senators by direct vote, denounced trusts, denounced Gov. Steenbergen, of Idaho, and extended sympathy to the People's party members.

The regular Democrats and the People's party united upon the following ticket: For Governor, Joseph K. Toole, Democrat; Lieutenant Governor, Frank Higgins, Demoerat; Congressman, Caldwell Edwards, Populist; Secretary of State, George M. Hays, Democrat; Auditor, J. H. Calderhead, Populist; Treasurer, A. H. Barrett, Democrat; Attorney-General, James O. Schoonover, Populist; Associate Justice, G. R. Milburn, Democrat; Superintendent of Public Instruction, J. M. Lewis, Populist.

The Union-Labor party, at its convention in September, decided to fuse with the Democratic and People's parties, and nominated J. A. Ferguson for Governor, to be placed on the ticket with the regular Governor, F. M. Nickerson for Secretary of State, and Robert D. Myles for Treasurer. Later it was decided to fuse, and these candidates resigned. The name of W. W. Welch, the Union-Labor candidate for Superintendent of Public Instruction, was placed on the fusion ticket.

The Social-Democratic party held a special convention in Butte, Sept. 18, adopted a platform, and nominated a State ticket. The platform denounced both Democratic and Republican parties as being controlled and led by capitalists. Imperialism and expansion were declared sham issues. The only real solution for the trust problem was the common ownership by the people of all industries. Independent political action and the trade-union movement were declared to be the chief emancipation factors of the working class. Public ownership of mines, reduction of the hours of labor, in a sense, was a step in a system of gradual improvements for employment of the unemployed, national labor legislation, equal civil and political rights for men and women, adoption of the initiative and referendum, and abolition of war and the introduction of international arbitration were demanded.

The ticket was: For Governor, J. F. Fox; Lieutenant Governor, Henry S. Davis; Secretary of State, John M. Horne; State Treasurer, Henry Tople; State Auditor, Joseph G. Hoar; Superintendent of Public Instruction, O. M. Partelow.

The Provision State Convention met in April in Bozeman. The platform arraigned the President for permitting canteens in the army and the liquor traffic in the new possessions under military control.

The fusion ticket was successful at the polls. On the vote for presidential electors the result was: Bryan, 37,146; McKinley, 25,373; Woolley, 298; Debs, 708; scattering, 116.

The vote for Governor stood: J. K. Toole, 31,418; J. T. Olson, 22,091; T. S. Hogan, 9,188; J. F. Fox, 505.

The Legislature will have a large majority of members elected on the fusion ticket. The Republicans will have 32 in both houses out of the total membership of 94. This Legislature will have the duty of electing two United States Senators to succeed Senators who took the seat to which W. A. Clark was elected by the last Legislature. The investigation by Congress of the charges of bribery in connection with that election, the resignation of Mr. Clark, his appointment immediately afterward by Lieut.-Gov. Spriggs, and the subsequent revocation of that appointment and the appointment of Martin Magruder by the Governor belong to the history of Congress.

An amendment to the Constitution was carried by a vote of 7,689 to 3,265. It provides that where one or more judges of the Supreme court are by any reason disqualified to sit, the remaining judge may call one or more district judges to sit in the case, for which the members of the Supreme bench are disqualified, and a decision given by the court so constituted shall have the same force and effect as other decisions of the court.

MORAVIANS. The statistical returns of the Northern District of the Moravian Church in America to Dec. 31, 1899, published early in 1900, showed the following: 3,779 resident members, and 4,759 children, making a total membership of 17,857, and 11,159 members of Sunday schools. The contributions for the year were $126,110 for church support, $1,582 for the Retired Ministers' fund, $1,274 for the Bohemian mission, $7,533 for foreign missions, $2,823 for the Alaska mission, $3,865 for the Theological Seminary, $1,913 for all other Moravian causes, and $1,355 for other Christian objects. The figures show practically no gain in membership, a fact which was attributed by the Statistical Committee largely to the closing of the home mission work in the Indian Territory, which was removed by the Indian Reorganization Act and the passage of the Curtis bill. There had been, however, an increase in liberality now extending over two years. The gifts for all missionary and benevolent causes in 1898 had ex-
The schools, stations, and missions of the Moravian Church in the American Province, 14,817 communicants, 1,598 noncommunicants, and 6,534 children, making a total of 22,949 members, and 15,153 members of Sunday schools, were returned for the whole Moravian Church in the American Province, 14,817 communicants, 1,598 noncommunicants, and 6,534 children, making a total of 22,949 members, and 15,153 members of Sunday schools, as the membership of the churches of the Unity—or of the Moravian Church—in the home provinces, on the Continent of Europe, in Great Britain, and in America was 38,280. Of these members, 25,000 were communicants.

The general report of the Moravian missions for 1900 showed a net loss of 773 members, which were losses for the year, but of these merely indicates to the entire mission in Greenland to the Danish Lutheran Church. This mission included 1,630 souls, the deduction of which from the whole number was partly made up for and reduced to less than one half by gains in other quarters of the mission field of the Church. The Mission Board of the entire territory had now 511 stations, with 60 out stations, in 20 different countries. These missions were served by 240 brethren and 213 sisters, together 453 missionaries, or 22 more than in the previous year—and included 95,424 souls. The work of the missions on the Mosquito Coast has been interrupted by adverse action of the Government, and it has been found necessary to close the schools at Bluefields and Magdala.

MOROCCO, an empire in northern Africa. The Emperor is an absolute monarch, ruler in spiritual as well as temporal affairs, deferring only occasionally to the Sharif of Tafilt, descendant of the Prophet Mohammed and of the former ruling dynasty. He is advised by his ministers when he is advised, and his orders merely indicates to them his decisions. The Sultan Mulai Hassan, who reigned from 1873 till 1894, was succeeded on June 7 of that year by Mulai Abd el Aziz, born Feb. 24, 1878. The Grand Vizier, in the beginning of 1900, was Ahmed ben Mussa; Minister of Foreign Affairs, Abdul Krim ben Sliman; Minister of War, Said ben Musa; Minister of Finance, Abdesselam el Tasi; Grand Chamberlain, Dris ben Aish.

Morocco has an area of 53,800 square miles, not including the desert and its oases; with the desert, about 219,000 square miles. The population is estimated at 9,256,000, of whom 3,000,000 are Berbers and Tuaregs, 2,900,000 Shalib Berbers, 700,000 Bedouin Arabs, 3,000,000 Mued Arabs, 200,000 negroes, 150,000 Jews, and 6,000 Christians. Fez, the capital, has a population of about 140,000; Morocco, the southern capital, has from 40,000 to 50,000; and Tangier, where the representatives of foreign powers reside and where five sixths of the Christians remain, since foreigners are not welcome in the other cities, has about 30,000. The Moors are Sunniite Mohammedans of the Malekite sect.

The Sultan transfers his court periodically to the city of Morocco, in the south, or sometimes sojourns in other towns. Wherever he goes he is accompanied by a large staff, which is trained by an Englishman, 600 disciplined cavalry, several field batteries commanded by Frenchmen, and contingents furnished on demand by governors of provinces. Italian artillery and engineer officers have assisted in starting an army factory at Fez, and Spanish and German officers are attached to the Sultan's staff. There is a militia of 8,000 cavalry and 10,000 infantry, and tribal levies would add 40,000 irregular cavalry and infantry to the fighting strength of the Sultan, all troops of valor, formidable in the tactics suited to their country. The Sultan derives his revenue from monopolies, from taxes and titles, and from gifts. His income is estimated at 7,000,000 francs from these sources, besides the customs duties collected at the 8 ports and applied to general administrative purposes, estimated at 12,000,000 francs a year.

The value of the merchandise imports by sea in 1898 was $1,167,447 sterling; exports, $1,161,118. The imports of cotton cloth were valued at 98,000,000 francs in value; sugar, $290,878; tea, $288,901. Other imports are silk goods, candles, wooden cloth, spirits, flour, earthenware, and glass. The exports of wool are $204,857 in value; goat skins, $181,516; eggs, $78,939; beans, $38,502; spicings, $46,745. Other exports are almonds, cattle, wax, maize, dates, and bird seed. The value of the trade with the principal foreign countries in 1898 was as follows:

<table>

The number of vessels entered at the ports of Tangier, Dar al Baida, Mogador, Mazagan, Arishe, Saifi, Rabat, and Tetuan in 1898 was 2,063, or 997,743.

After the death of Mulai Hassan the responsibilities of government were left to the young Sultan largely to the Grand Vizier, whose two brothers filled the next highest posts. In the early part of 1900 these brothers died, and in May the Vizier himself. No one was left who had experience and authority. The Moors, accustomed to despotic and arbitrary government, bend their necks only to the strong. They were alarmed and exasperated at the encroachments of the French in the Tuat oases, which have always been claimed by Morocco. The Government was momentarily paralyzed at a time when the Sharifs were proclaiming a holy war against the French and collecting the tribute of the inhabitants for the defense of the sacred places of Tafilt. A protest against French aggression had already been drawn up, but there was no one to instruct the envoy who was going to Tangier to present it to the ministers of the powers. The powers collectively were causing trouble by pressing for the right of their ministers and for Europeans in general to reside in Fez. The Sultan filled the vacant posts at court on May 13, immediately after the burial of the late Vizier, as follows: Grand Vizier, Sid el Haz Mukhtar; Minister of War, Said Gubbas; Grand Chamberlain, Sil Hassan. Abdul Krim was retained as Minister of Foreign Affairs. The French called for an indemnity, which was operating against the tribes that formerly paid an intermittent allegiance to the Emperor of Morocco, but more commonly set him at defiance, were re-enforced by 1,400 men, dispatched to Iglit, the place occupied latest, and to Ain Sefra, where the railroad for the time ended that was pushed forward in the tracks of the conquering expedition. This latter place is in close proximity to Figuig, a territory formally acknowledged under existing treaties between France and Morocco as belonging to Morocco and the rallying point of the Moorish military force that was collected to defend the frontier and to emphasize the claims of Morocco to the districts already occupied by French troops. The
NATIONAL ACADEMY OF SCIENCES.

Moors were convinced that the aim of the French was to push westward to the Atlantic at the back of the Atlas range and to occupy all the doubtful territory on the frontier between Algeria and Morocco, the territory that was reserved by the delimitation treaty of 1845 for future agreement.

A note was dispatched to the French Government on July 9, formally demanding European arbitration. The dispute arising from the French encroachments upon Tuat was referred for settlement if not actually recognized as belonging to Morocco in the French frontier treaty. None of the powers were inclined to take the part of Morocco in the controversy. Great Britain had already given France a free hand in these regions by the African agreement of 1890, and her claim was based upon an article of the treaty of 1845, stating that the ancient boundary that existed between Morocco and Turkey previous to the French conquest of Algeria was retained as the boundary between Morocco and Algeria, and stipulating that no boundary lines should be erected by either party until this ancient boundary was delimited by mutual agreement. The Moorish Government offered to submit documents proving that the Deys of Algiers recognized Tuat as forming part of Morocco, and to prove furthermore that both before and after the conquest of Algeria by the French all the kadis, kaidas, and sheikhs in the disputed country had been and that they still were regularly appointed by the Government of the Sultan. On Aug. 20 the Moorish Government sent another circular to the powers protesting against the further encroachments of the French in the Tuat region and other territories, asking the powers for their assistance. The excitement caused in Fez by the French advance was attended by the killing of the manager of a French business house, Marcos Essagin, who was an American citizen. The Jewish ghetto was next attacked by the mob, and in consequence the British, supported by other foreign representatives in Tangier, made serious representations to the Moorish Government. Both as a Jew and as a representative of French interests he incurred the hostility of the fanatical Moors by engaging in a controversy with one of their number against riding on horseback through a narrow street. The actions of the crowd became so threatening that he fired his revolver, wounding a native, upon which he was immediately cut down by his assailants. The American Government presented a claim upon the Moorish Government for an indemnity. The demand of the representatives of the powers for right of access to the Sultan's court at all times and their attempt to treat directly with the Government prompted Hadji Mohammed el Torres to Tangier to inform them that correspondence with the Moorish Government must be addressed to him. They replied in a collective note that their governments could not accede to such a proposition unless he was fully empowered to settle all questions. After the death of Ahmed ben Musa the Sultan began to take an active part in the direction of public affairs, although he did not ostracize the family of the masterful and avaricious Vizier who had made many enemies, since he was inclined to set up the descendants of the deceased viziers to posts in the ministry. When the new Government was in running order Spain pressed a demand for the transfer and the delimitation of Santa Cruz de Me Pequena, a seaport and district on the Atlantic coast. Morocco ceded this territory to Spain by the treaty of Madrid in 1890, but disputed the cession later. The harvest in 1900 was a remarkably good one, and this fact tended to avert disturbances that might have resulted from the French military operations in the disputed Saharan territory coinciding with the death of the man who has been the real ruler of Morocco since the present Sultan came to the throne.
serve as a beginning of a general fund, provided sufficient money is raised to make that fund $20,000 as a minimum amount. Committees were appointed to take charge of raising both these funds and to solicit subscriptions for them. The new members elected were: James E. Keeler, director of the Lieb Observatory, Mount Hamilton, Calif.; Henry F. Omeara, of the California Institute of Technology, and received from Dr. Woleott Gibbs that his advancing years would compel him to resign the presidency of the Academy. Dr. Gibbs is one of the two surviving original members of the Academy, and is the foremost of American chemists. The following six members were elected to the council: Dr. J. H. שי, of the Smithsonian Institution, Prof. George J. Brush, Prof. Woleott Gibbs, Mr. Arnold Hague, and Prof. Simon Newcomb.

The scientific session was held in Providence, R. I., Nov. 13 and 14, 1900, when the following papers were read: Exhibition of Certain Novel Apparatus; A Wave Machine; An Expansion Loop; A Recording Spectrograph of Degrees of Freedom; A Tube showing Colored Counterpulsation and Vibration Resonance; Demonstration of the Projection of One Grating by Another, and Hysteretic-like Phenomena in Torsional Magnetostriiction and their Relation to Viscosity, by Carl Barus; Report on the Meeting of the Committee of the Inter- national Congress Electric Metals and Alloys for the establishment of a Fund for the Promotion of Schools and Colleges at the Young Stages of Cephalopods, and Descriptive Method of Presenting the Phenomena of the Cycle of Evolution among Cephalopods, by Alpheus Hyatt; Note on the Energy of Recent Earthquakes, by Thomas C. Mendenhall; The Synthesis and Analysis of the Rabbit and the Dogfish, by Charles S. Minot; A Contribution to the Study of Philological Neutrals, and Male Preponderance (Androrhopy) in Lepidopterous Insects, by Alpheus S. Packard; Stereographic Projection and Some of its Possibilities from a Graphical Standpoint, by Samuel L. Penfield; Recent Observations of the Planet Eros, and Screens Free from Relative Absorption, by Edward E. Morley; The Problem of the Velocity of Light, and An Account of the Study of Growing Crystals by Instantaneous Microphotography, by Theodore W. Richards; A Report of the Spectrum Work carried on with the Aid of a Grant from the Bache Fund, and On the Explanation of Inertia and Gravitation by Means of Electrical Phenomena, by Henry A. Rowland; Investigations of Light and Electricity with the Aid of a Battery of Twenty Thousand Cells, by John Trowbridge; Folding and Faulting of Strata in Cordilleran Area, by Charles D. Walcott.

No public business was transacted at this meeting, although several important matters were introduced in the reports read to the meeting, which were to be reported upon at the spring session of the Academy. Biographical memoirs of the following deceased members were assigned for preparation: Frederick A. P. Barnard to Ogden N. Rood; C. H. F. Peters to Charles A. Schott; Benjamin A. Gould to Seth C. Chandler; Francis A. Walker to John S. Billings; Othniel C. Marsh to Arnold Hague; Elliott Cones to Theodore N. Gill; Fairman Rogers to George F. Barker; and James E. Keeler to Charles S. Hastings.

NEBRASKA, a Western State, admitted to the Union March 1, 1857; area, 77,310 square miles. The population, according to each decennial census since admission, was 122,993 in 1870; 452,402 in 1880; 1,058,910 in 1890; and 1,068,539 in 1900. Capital, Lincoln.

Government.—The following were the State officers in 1899: Governor, William A. Poynter; Lieutenant Governor, E. A. Gilbert; Secretary of State, W. F. Porter; Treasurer, R. H. Mitchell; Auditor, John F. Cornell; Attorney-General, C. J. Smythe; Adjutant General, P. H. Barry; Superintendent of Education, W. R. Jackson—all Populists except E. A. Gilbert, Silver Republican, and C. J. Smythe, Democrat; Land Commissioner, J. W. Wolfe; Chief Justice of the Supreme Court, A. B. Norval; Solicitor General, A. B. Metcalf; Solicitors, J. J. Sullivan and Silas A. Holcomb, Fusion.

The State officers are elected in November of the even-numbered years, for a term of two years. The Legislature meets in January of the odd-numbered years.

Finances.—The biennial report of the State Treasurer, covering the term from Nov. 10, 1900, to Nov. 30, 1900, presents these items: Total receipts, $6,038,179.69; total disbursements, $5,423,-161.35; balance on hand Nov. 30, 1900, $615,018.34. The Treasurer says: “The bonded indebtedness of the State having been entirely paid, there is now in the sinking fund $56,165.23 which should be paid as interest of $2,482.67 made from the sinking fund, but some is still due from back taxes. There is $2,358 in the Penitentiary fund. This money arises from rent of lands which were set aside for the building of the Penitentiary; small tracts of said lands have not been sold. In my last report we still had $133,-267.35 of State bonds. These have been entirely paid, making a total of $406,267.35 paid and canceled during my two terms of office. We still have a floating indebtedness, which arises from the fact that we have a large amount of back taxes which have not been collected but against which warrants have been issued. The school fund holds $3,165,762.12 of this amount; the balance ($501,-474.60) is held by the Court of Claims, and which the school fund has absorbed so much of this floating indebtedness has virtually put the State upon a cash basis as far as any advantage could be obtained by paying cash for all purchases made by the State for the running of the State institutions, and the loss to the State from paying the interest is reduced from that made from the floating indebtedness to the State and is distributed to the taxpayers through the temporary school fund. The State has bonds and securities as an investment for its educational funds amounting to $4,365,544.03. Since my last report we have bought county bonds to the amount of $285,806.82. We have bought general fund and university fund warrants to the amount of $1,238,288.26. Making a total investment in four years of $2,245,556.79.”

Education.—The educational fund for the school year ending July 9, 1900, had receipts (including balance) amounting to $5,075,147.98, and a balance on hand at the close of the year of $7,178,226 over the amount of $5,075,076.78, or more than the balance left over the previous year. The number of teachers employed was 9,463,—2,002 men and 7,401 women. The average monthly salary of the men was $46.26; of the women, $36.90.
The whole number of children of school age was 377,791; the whole number enrolled, 288,227; the average daily attendance, 181,574. The whole number of schoolhouses was 6,733; the number built within the year was 175. The average school tax was 15 mills. The total value of school property in the State was $9,591,134.63.

The superintendent says in his report: "Many of our counties have shortened the period of institute from two or three weeks to one week, and instead of making the institute the means of preparing for examination, they have secured the best talent available and have sought to place before the teachers high ideals, to inspire them with a desire for growth, to elevate the professional standard, to quicken and energize the profession, to encourage the study of modern methods, and to improve the organization, the instruction, and the management of schools. A few years ago the Teachers' Reading Circle work was on the decline, largely, perhaps, because of the selection of the line of work; but the methods pursued in forwarding the work seemed not effective. For the past two years there has been a steady and healthful growth. The Pupils' Reading Circle has made a healthful growth in the past two years, and is a potent factor in bringing to the pupils a line of wholesome reading that stimulates a taste for the best literature. In many of our schools the Pupils' Reading Circle has formed the foundation of a growing library. Special effort has been made in the last few years to create a sentiment in favor of libraries in our schools. Nebraska is perhaps the first to put out a library program. We are gratified with the results. In many of our cities and in a number of our counties are to be found pedagogical libraries. Wherever these have been properly managed they have been a powerful agent in the upbuilding of the teachers. The teachers who make use of these county teachers' libraries are not content until the schools they teach are provided with good working libraries. In a number of counties almost every district has a library."

Irrigation.—The report of the State Engineer on the subject of irrigation for the years 1890 and 1891 fills a volume of 182 pages, illustrated with maps and views. The Engineer says: "The enactment of the irrigation law of 1893, erecting a State Board of Irrigation and giving it judicial powers, has been demonstrated by the satisfactory adjudication of nearly 1,000 claims growing out of appropriations attempted prior to the date of its approval. These adjudications have been made with but little expense to the appropriators, and have harmonized the adverse and conflicting interests of individuals and communities throughout the arid sections of the State. In States in which the adjudication of rights to the use of water has been left to the courts, endless litigation has been the invariable result. It has impoverished and discouraged irrigators and investors, and promoted discord between neighbors and jealousy and strife between communities. During the past two years the board has been appealed to by appropriators on almost every section in the State, and a large number diverted for irrigation, to adjust controversies between appropriators and between irrigators and those using water for domestic purposes. The undersecretaries were instructed to give those desiring water for domestic purposes, including water for stock, the prior right in the distribution of water, and the controversies were amicably adzed.

"By the enactment of irrigation laws, the State has encouraged the construction of canals and other works for irrigation which represent an investment of probably more than $3,000,000. An important part of the work of the past year has been the examination of many, if not all, of the permits for permits to appropriate water. Before this year the uncertainty concerning the validity and extent of claims inaugurated under the old law had made it impossible to act on these applications with safety. The opening of the new year found the old claims largely disposed of."

Fish.—The fund appropriated by the last Legislature for the use of the Fish Commissioners was but $7,900. The superintendent says in his report: "There have been hatched and planted during the time I have been in charge, in round numbers, by actual count, 250,000 of fish actually raised at the hatcheries. The different varieties of fish distributed consists of the following: Wall, red, black, striped perch, channel catfish, rock bass, besides about 15,000 gold fish for ornamental purposes. I find that my predecessor, according to his books, distributed since his last report 5,942,500. Making a total of 6,192,500 distributed since last report. Of this number, about 95 per cent. have been planted in the State and at least 100,000 were planted out of State. I believe a profit was made in raising these fish and planted with scarcely any loss and no cost to the applicant and at little cost to the State. I think that this industry should be encouraged, for there is a growing demand for fish even to the gold or ornamental fish, there being a greater demand every year for this latter kind, both by private parties and by teachers in the public schools, with alone will pay the State the amount it costs."

Exhibits of fish and products of the hatcheries and of the manner of hatching fish were made at the State fair in Lincoln. The main exhibit of live fish was made in 20 aquariums each 8 to 10 feet long, including 1 large circular tank 12 feet across, in the center of the building, holding about 100 barrels, ornamented with all kinds of pond and water lilies, forming a very attractive feature of the exhibit.

Products.—By a report issued in November, it was estimated that the farmers of Nebraska realized more than $105,000,000 for their corn, wheat, oats and black and white potatoes at 80 cents per bushel, and for every woman, man and child in the State.

Experiments made with the raising of small fruits show that this can be done with large return where a good system of irrigation is in operation.

An experiment was made in the culture of sugar beets by convict labor on 30 acres. The expenses amounted to $338 and the profits were $363.71. In the expenses the wages of the convicts were rated at 50 cents a day.

Banks.—There are only 8 savings banks in the State. At the date of the last report, August 16, 1896, they held deposits amounting to $767,498.18. The deposits of savings banks in the State banks in State banks as reported by the bank-

CHARLES H. DIETRICH, GOVERNOR OF NEBRASKA.
ing department. The sum of the deposits in all the banks of the State was $25,256,053.30.

There were 60 building and loan associations in the State in 1900, with assets amounting to $3,607,256.06.

Political.—The State convention of the Democratic party was held in Lincoln, March 19. The platform included these declarations:

"We, the Democrats of Nebraska, in convention assembled, do hereby reaffirm and indorse, in whole and in part, in letter and in spirit, the platform adopted by the Democratic National Convention held in Chicago in 1896.

"We favor amendments to the Federal Constitution by politically authorizing an income tax and providing for the election of United States Senators by a direct vote of the people.

"We are in favor of the immediate construction and fortification of the Nicaraguan Canal by the United States.

"We pledge ourselves to wage an unceasing war against all the trusts—the money trusts, the industrial trust, and the international land-grabbing trust.

"Instead of a system which would chain our nation to the gold standard and compel it to participate in all the disturbances which come to European nations, we demand an American financial system which may make the whole nation integral, whereby to protect themselves, to be secured by the immediate restoration of the free and unlimited coinage of gold and silver at the present legal ratio of 16 to 1, without waiting for the aid or consent of any other nation.

"We condemn the Porto Rico tariff bill recently passed by the Republican House of Representatives, as a bold and open violation of the nation's organic law, and a flagrant breach of good faith.

"The Filipinos can not be citizens without endangering our civilization: they can not be subjects without endangering our form of government; and as we are not willing to surrender our civilization or to convert a republic into an empire, we demand an immediate declaration of the nation's purpose to give to the Filipinos, first, a stable form of government; second, independence; and third, protection from outside interference, as it has for nearly a century given protection to the republics of Central America.

"We sympathize with the Boers in their heroic effort to preserve their national integrity and liberty.

At the same time and place the Populists held their State convention. The split in their ranks was continued, and the bolters were excluded from the convention.

The Silver Republicans also held their State convention at the same time and place. A fusion ticket was arranged for the Democrats and Populists, in July, following the being of the nominations for State officers: For Governor, W. A. Poynter, Populist; Lieutenant Governor, E. A. Gilbert, Silver Republican; Attorney-General, W. D. Oldham, Democrat; Secretary of State, C. V. Svoroda, Populist; Treasurer, S. B. Howard, Populist; Auditor, H. Theo. Griess, Populist.

In July the Prohibitionists, in their convention, nominated a full State ticket.

July 20 the bolting Populists—mid-roads—met at Grand Island. They nominated State officers and put forth a platform, which contained these declarations:

1. "The belief of real reform through either of the two old parties, which through equality of corruption have both become absolutely operative for the public good through the desertion of principles to outside help for greed of office, our party has been temporarily cut in twain, but we, the Populists of Nebraska, here and now vow our unaltering opposition to any further fusion with either the Democratic or Republican parties. We arraign Goebelized Democracy as the Democratic Mark Hanna, and denounce its wholesale disfranchisement of white and black citizens of the South as government without consent and a direful menace to our free institutions, and tending wholly to imperialistic despotism.

"We demand an irredeemable dollar, good for all debts, public and private, issued direct to the people by the Government, but until such legislation is secured we are in favor of the free and unlimited coinage of both gold and silver at the ratio of 16 to 1.

"We demand State or municipal ownership of waterworks, street railroads, telephones, and electric-light service at cost to the people.

The State Republican Convention was held in May. The significant portions of the platform were these:

"We, the Republicans of Nebraska, are unlike our political adversaries, who in the late convention held high carnival over the imaginary evils threatening our country, and adopted platforms which are a standing protest against its prosperity, grandeur, and glory.

"We point with pride to the remodeling of our tariff laws, which has increased our revenues and not impeded trade; which has opened the doors of mills and factories to the millions of American skilled mechanics, and is returning to them the higher wages that are the just recompense for their toil.

"We endorse the legislation that has strengthened our financial system and firmly established the gold standard, and made the American dollars as safe and secure that they are kept busy chasing one another around the endless circle of business, too good to go into hiding and too patriotic to steal abroad. In answer to the cry for the free and unlimited coinage of silver and the claim that there is not gold enough as a basis upon which to do the business of the country the United States Treasury puts in evidence the $123,000,000 in gold that has come to it within a year, and the $413,000,000 in gold now held within its vaults, and the unexampled prosperity and measureless and limitless and countless financial transactions thus sustained without seeming effort.

"While we are unalterably opposed to imperialism and militarism as practiced by European nations, we are willing to accept all the legitimate results of honorable warfare, and to assume the burdens of governing and holding acquired territory.

"We earnestly recommend that Congress devote some of the money now annually expended in large quantities for river and harbor improvements to reclaiming the arid lands of the West."

The following State ticket was nominated: For Governor, Charles H. Dietrich; Lieutenant Governor, E. P. Savage; Secretary of State, George W. Marsh; Treasurer, William Stueffer; Auditor, Charles Weston; Attorney-General, F. N. Prout; Land Commissioner, George D. Follmer; Superintendent, W. K. Fowler.

At the election in November the Republican State ticket received 113,879 votes; the fusion ticket, 113,015. The vote for presidential electors returned in 121,835 for McKinley and 114,013 for Bryan.

NETHERLANDS, a monarchy in western Europe. The legislative authority is vested in the States General, consisting of a First Chamber,
containing 50 members, elected by the provincial councils for nine years, and a Second Chamber, containing 100 members, elected for four years by the direct vote of tax-payers who pay 275 guilders a year, or own boats, or occupy separate dwellings. The reigning sovereign is Queen Wilhelmina, born Aug. 31, 1890, daughter of Willem III by his marriage with Princess Emma of Mecklenburg. She succeeded to the throne at the death of her father on Nov. 23, 1890, and assumed the royal authority on Sept. 6, 1898, the Queen Dowager having acted as regent during her minority.

The Council of Ministers at the beginning of 1900 was composed as follows: President of the Council and Minister of State, H. H. de Beaufort; Minister of the Interior, Dr. H. Goeman Borgesius; Minister of Finance, Dr. N. G. Pierson; Minister of Justice, Dr. P. W. A. Cort van der Linden; Minister of the Colonies, J. T. Cremer; Minister of Marine, Vice-Admiral J. A. Roeli, succeeding J. C. Jansen; Minister of War, Lieut.-Gen. K. Bland; Minister of Waterstaat, Comm. of Industry, C. Ley.

**Area and Population.**—The area of the Netherlands, or Holland, is 12,648 square miles. The population on Dec. 31, 1898, was estimated at 5,074,632, being 2,822,150 male and 2,252,482 females. The number of marriages in 1898 was 36,813; of births, 160,765; of deaths, 85,813; excess of births, 74,952. The net emigration in 1898 was 851—viz., 781 to the United States and 70 to South Africa. Of the emigrants 439 were men, 220 women, and 186 children. The number of foreign and Dutch sailors at the end of 1898 was 32,884,000. The population of Holland was 14,119. The population of the principal towns at the end of 1898 was: Amsterdam, 512,953; Rotterdam, 309,309; The Hague, 199,285; Utrecht, 100,066.

Education has hitherto been made compulsory in the Netherlands, nor is it everywhere free. By the contract of 1680 the Government granted charters to private religious schools, besides supporting the secular public schools jointly with the communes, paying part of the salaries of teachers and 25 per cent. of the cost of all new schools. There were 3,901 public elementary schools in 1898, with 15,096 teachers and 463,053 pupils; 1,454 private community schools, with 7,146 teachers and 224,361 pupils; 139 public infant schools, with about 825 teachers and 25,543 pupils; 904 private infant schools, with about 2,660 teachers and 86,078 pupils; 123 schools for the working classes, with 1,160 teachers and 46,457 pupils; 73 intermediate schools, with 973 teachers and 36,666 pupils; 527 parochial schools, with 428 teachers and 2,570 pupils; and 11 schools of navigation, with 68 teachers and 877 pupils. The 4 state universities had 163 professors and 2,822 students, and the polytechnicum 30 professors and 551 students. There are also agricultural and horticultural schools, a school for the East Indian civil service, several military schools, an academy of art, a royal school of music, and normal schools for teachers. The expenditure of the Government in education in 1898 was 9,895,902 guilders, that of the communes 10,997,092 guilders. The proportion of totally illiterate children in 1898 was 3.8 per cent. A bill introducing compulsory education was presented by the Minister of Education in the spring session of 1900. The Second Chamber by a single vote defeated the proposal to make continuation beyond the rudiments obligatory, although it agreed by the same narrow majority to issues for the establishment and maintenance of continuation schools.

**Finances.**—The ordinary revenue for 1898 was 138,365,846 guilders, and the extraordinary revenue from loans and other sources was 5,755,139 guilders; total revenue, 144,120,985 guilders. The total expenditure was 150,585,402 guilders, of which 37,747,018 guilders went for defense, 33,450,451 guilders for debt, 19,970,410 guilders for public works, and 59,328,293 guilders for the general expenses of government. The estimate of revenue for 1899 was 140,790,900 guilders, and of expenditure 152,613,959 guilders. For 1900 the budget estimate of revenue was 144,723,185 guilders. The revenue of 1898 was divided: personal tax, 1,434,750 guilders; cultural taxes, 2,036,000 guilders; school's tax, 47,440,000 guilders; direct taxes, 18,065,000 guilders; import duties, 9,171,250 guilders; tax on gold and silver, 300,000 guilders; domains, 120,000 guilders; public lottery, 3,000,000 guilders; telegraph, 2,030,000 guilders; lottery, 651,000 guilders; shooting and fishing licenses, 130,000 guilders; pilot dues, 2,000,000 guilders; mining dues, 7,705 guilders; state railroads, 4,306,190 guilders; share of the East Indies in the interest and sinking fund of the debt, 3,848,000 guilders; miscellaneous revenues, 8,131,140 guilders. The total expenditure for 1900 was estimated in 33,040,900 guilders, at which the civil list took 800,000 guilders; States General and Royal Cabinet, 680,992 guilders; Ministry of Foreign Affairs, 885,140 guilders; Ministry of the Interior, 15,474,449 guilders; Ministry of Marine, 15,589,263 guilders; Ministry of Finance, 25,853,190 guilders; Ministry of War, 22,584,783 guilders; Ministry of Public Works, 27,421,266 guilders; Ministry of the Colonies, 1,206,604 guilders; public debt, 35,118,640 guilders; contingent expenses, 50,000 guilders. Of the total revenue of 1898 direct taxation produced 33,014,530 guilders, excise 46,915,485 guilders, indirect taxes 19,581,875 guilders, duties on imports 3,224,500 guilders, and indirect and direct duties, 2,000,000 guilders which are due to increased expenditure on the army and navy and on education, and the remainder to extending public works.

The public debt in 1900 amounted to 1,100,246,800 guilders, of which 224,600,000 guilders are 7-cent. funded debt, 222,000,000 guilders for overseas loans of 1895, 1898, and 1899, and 15,000,000 guilders uncovered papered money. The 5- and 6-cent. debts of expropriated railroads were redeemed in 1899. There is a floating debt requiring about 300,000 florins a year to be paid in interest, and 296,719 florins are paid for annuities, making with the sinking fund and death charge a total of 33,118,640 guilders, the interest on the funded debt being 31,265,921 guilders. The total value of real property in the Netherlands is estimated at 3,606,000,000 guilders, and personal property at 6,804,000,000 guilders, making the national wealth 10,410,000,000 guilders.

**The Army.**—Conscription has been partly introduced into the Netherlands, though the main
stock of the army is still formed by voluntary enlistment. The conscripts, about 11,000 in number, must serve a year with the colors, and during the remaining six weeks annually. There is a militia, called the schutterij, of which all Dutchmen must be active members for five years from the age of twenty-five. The regular army on June 1, 1898, numbered 1,943 officers and 23,753 noncommissioned officers and privates. There are 9 regiments of infantry, with the guards, 3 cavalry regiments, 3 regiments of field artillery, 1 corps of horse artillery, 4 regiments of fortress artillery, 1 battalion of sappers and miners, 1 corps of pontooners, and 1 corps of torpedoists.

The Navy.—The obsolete turret ships Koning der Nederlanden and Prinz Hendrik have been sold, and the old monitors all the intermediate cruisers, and 30 river gunboats are no longer classed as effective. The new armoredclads are small, being intended only for coast defense, and they are supplemented by a formidable torpedo flotilla and by monitors of modern type and protected cruisers for the defense of the Eastern post. The Nelissen, launched in 1891, is the small coast-defense turret ship Reipier Claesen, launched in 1891, of 2,400 tons, carries 1 8-inch and 1 7-inch gun and 4 quick firers, has 10 1/2 inches of side armor, and can steam only 12 1/2 knots. The armored cruiser Koning Willemia der Nederlanden, launched in 1892, of 4,000 tons, is armed with 1 11-inch and 1 8-inch breech-loaders, and 2 6-inch, 4 3-inch, and 11 small quick firers. This vessel is being refitted with the Yarrow water-tube boiler and with new engines. The armored cruisers Piet Hein, Evertsen, and Korte-mer, built in 1894, and designed for coast defense vessels, have 10 1/2 inches of armor, a displacement of 3,520 tons, a battery of 3 9-inch, 2 8-inch, and 12 quick-firing guns, and can steam 16 knots. An improvement on this type is the Koning Regenten, a barbette ship capable of sea maneuvers, launched in 1899, having 10-inch-plates on the sides, an armament of 2 9-4-inch guns, with a quick-firing battery of 4 6-inch, 3 3-inch, and 3 1/2-inch guns. The new Dutch navy is building. The new protected cruisers of the Dutch navy have been called by naval men the finest examples of their class afloat. The Hol-land, Friesland, and Zeeland, launched in 1896, of 3,550 tons, armed only with quick-firing guns, 2 6-inch, 6 4.7-inch, 4 3-inch, and 12 smaller ones, have 10 1/2-inch armor, and 600 horse power and over steam 22 knots easily. The Gelderland, Nordbrabant, and Utrecht, launched in 1898, having a displacement of 50 tons more, with the same armament as the others, are intended to make 25 knots an hour. Three monitors of 1,500 and 1,170 tons are built, and it is said that the former to have an armament of 2 8-inch breech-loading and 4 3-inch quick-firing guns, the latter a 1 8-inch gun and a 4.7-inch quick firer in addition to the others. Thirteen first-class and 4 third-class torpedo boats are being added to the flotilla, which consists already of 25 third-class boats of 50 to 45 tons, and 15 of the second-class, of 83 to 90 tons.

Commerce and Production.—Of the total area of Holland 895,136 hectares were reported in 1897 as uncultivated—leath land covered with water, marsh, and land occupied by roads, towns, or buildings. The cultivated area was 2,300,962 hectares, of which 844,137 were under tillage, 61, 517 gardens and orchards, 1,183,568 pasture, and 248,840 forest. The area sown to wheat in 1897 was 62,199 hectares; rye, 213,448; barley, 36,320; oats, 134,133; potatoes, 151,212; buckwheat, 31, 241; beans, 85,555; peas, 27,392; rape seed, 3,982; flax, 10,453; beet, 41,104; flaxseed, 17,177. The imports of wheat in 1898 were 136, 159,000 guilders in value, and exports 106,729,000 guilders; imports of wheat and rye flour 54,825,000 guilders, and exports 11,060,000 guilders; imports of rye 83,957,000 guilders, and exports 41, 123,000 guilders; imports of barley 31,817,000 guilders, and exports 21,415,000 guilders; imports of oats 19,228,000 guilders, and exports 16,622,000 guilders; imports of potatoes 549,000, and exports 877,000 guilders; imports of potato starch 4,810,000 guilders, and exports 12,080,000 guilders; imports of beets 131,000, and exports 1,876,000 guilders; imports of bulbs and plants 520,000, and exports 6,063,000 guilders; exports of vegetables 2,258,000, and exports 37,277,000 guilders. The value of coal mined in 1898 was 436,208 guilders. There were in active operation in 1898, 407 distilleries, 15,315 factories, 45 salt works, 91 vinegar factories, and 494 breweries. The number of steam engines in a total of 3,573 manufactories was 4,250. The number of fishing vessels was 5,385, with crews numbering 18,709. The value of the herring catch was 6,570,532 guilders.

The total value of imports for domestic consumption in 1898 was 1,785,000,000 guilders, and the value of exports of domestic produce and manufacture was 1,516,000,000 guilders. The imports of iron and steel and their manufactures were of the value of 163,800,000 guilders, and exports 103,504,000 guilders; imports of textile materials and manufactures 120,453,000, and exports 94,134,000 guilders; imports of rice 33,981,000, and exports 20,917,000 guilders; imports of linen 11,337,000, and exports 107,124,000 guilders; imports of coffee 48,922,000, and exports 27,124,000 guilders; imports of tea 1,479,000, and exports 19,948,000 guilders; imports of margarine 21,803,000 guilders, and exports 24,962,000 guilders; imports of sugar 24,107,000, and exports 57,096,000 guilders; imports of tea 30,235,000, and exports 23,971,000 guilders; imports of mineral oil 11,337,000, and exports 147,034,000 guilders; imports of tobacco 14,085,000, and exports 44,362,000 guilders; imports of rye 5,877,000, and exports 24,886,000 guilders; imports of indigo 7,813,000, and exports 5,877,000 guilders; exports of cheese 13, 804,000 guilders; imports of copper 74,270,000, and exports 75,743,000 guilders; imports of paper 5,172,000, and exports 34, 247,000 guilders; imports of animal fats 23,870,000, and exports 21,684,000 guilders; imports of salt 25,433,000, and exports 22,776,000 guilders; imports of zine 6,542,000, and exports 4,051,000 guilders; imports of tin 21,834,000, and exports 16,497,000 guilders; imports of paints 14,085,000, and exports 12,643,000 guilders; imports of flax 1,610,000, and exports 13,947,000 guilders; imports of oil seeds 29,407,000, and exports 12,997,000 guilders; imports of tobacco, 9,840,000, and exports 8,081,000 guilders; imports of gold and silver 32,657,000, and exports 2,370,000 guilders. Of the total value of imports in 1898 the sum representing articles of food is 460,110,000 guilders, and of exports 468, 633,000 guilders; raw materials were imported of the value of 208,902,000, and the exports
were 266,589,000 guilders; manufactured articles among the imports amounted to 212,811,000 guilders; and of miscellaneous imports the value was 308,000,000 guilders, and of exports 308,152,000 guilders. The values of the trade in 1898 with the principal foreign countries are given in the following table:

Railroads and Telegraphs.—The Government owned 961 miles of railroads in 1898, which had a traffic of 6,199,000 metric tons and carried 10,828,000 passengers, and earned 22,044,000 guilders and paid for expenses 17,509,000 guilders; private companies owned 701 miles, which had a traffic of 3,383,000 metric tons of freight and 15,200,000 passengers, earning 17,578,000 guilders and paying 13,553,000 guilders for expenses. The capital cost of the Government lines was 270,509,000 guilders. The canals have a total length of 2,943 miles, and other navigable waters 3,000 miles. There were 818 miles of tramways in 1897. The length of the Government telegraph lines was 3,071 miles, with 13,017 miles of wire; messages transmitted in 1898, 4,957,691.

Politics and Legislation.—The Netherlands Government sent war ships to South African waters, as many Dutch citizens and Dutch vessels were at Lourenço Marques, and when the troubles broke out in China ships were dispatched thither. The finances showed considerable elasticity in 1900, but the compulsory education bill made new demands on the revenue, and the Minister of Finance had to look about for fresh resources. In the session that began on Sept. 18 several measures were introduced to facilitate the moral and material development of the Dutch East Indies, where the financial conditions were especially favorable, particularly the progress made in the pacification of northern Sumatra, although it was still necessary at times to bring the troops and the fleet into action. New measures of internal interest dealt with labor contracts, the accident insurance bill, which was already before the Chambers in the former session, and the working of coal mines in Limburg by the Government.

The Dutch East Indies.—The Dutch possessions in the East Indies have a total area estimated at 736,400 square miles, and about 34,000,000 population. The territories are divided into the lands under direct government, vassal lands, and confederated lands. The Governor General, at present W. Rooseboom, appointed June 1, 1899, has power to make laws and regulations subject to the constitutional principles laid down in 1854, except in matters specially reserved for the legislative action of the States General. The States General in 1708 assumed the sovereign power of the Dutch East Indies Company, which had exercised for two centuries, and in 1832 Gen. Johannes Graaf van den Bosch introduced the culture system into Java, under which Government officials supervise the labor of the natives, making them produce, in addition to their own food supplies, large quantities of colonial products, such as coffee, sugar, pepper, and indigo, which the Government sells abroad. The Government plantations of pepper, indigo, tea, tobacco, and sugar cane have been given up as the result of the progress of the natives in intelligence and the desire for liberty and of the growth of liberal feeling in Holland, with a view to furthering only for the cultivation of coffee, which is sold by the Government, most of it in Europe, but a part in Java. The island of Java, with Maduro, is distinguished from the outposts—Sumatra, Borneo, Riau-Lingga, Banca, Billiton, Celebes, Moluca, Sunda Islands, and Dutch New Guinea. Banca, Banca, Billiton, and Banca, excepting the island of Sumatra and the province of Menado in Celebes, the culture system has never been established.

The area of Java and Maduro is 50,554 square miles, with 26,125,653 inhabitants in 1897. Sumatra has 1,553,315 inhabitants on 31,640 square miles of the west coast, 137,201 on 11,284 square miles of the southeast coast, 117,258 in the island of Telo, and 7,650 in the island of Penam. The Riau-Lingga Archipelago, area 10,201 square miles, has approximately 107,861 inhabitants; Banca, area 4,440 square miles, has 98,660; Billiton, area 1,863 square miles, has 7,825; and Banca, area 55,825 square miles, approximately 700-750; southern and eastern Borneo, 156,912 square miles, 809,803 as roughly estimated; Celebes, an estimated population of 14,448,722 on 49,390 square miles, the province of Celebes and 549,138 on 22,980 square miles in Menado; Moluca Islands, area 45,864 square miles, population approximately 11,050; Timor Archipelago, area 17,525 square miles, population approximately 119,239; Bali and Lombok, area 4,065 square miles, population 1,044,757, as estimated; New Guinea to 141° of east longitude, area 151,789 square miles, about 200,000 population. The number of Europeans and persons assimilated to them living in the most inhabited islands at the beginning of 1898 was 35,488 males and 27,826 females, of whom 33,055 males and 27,222 females were of Dutch race, and 23,351 males and 23,648 females were Dutch born in the East Indies. Of the rest 1,192 were Germans, 318 English, 300 French, 292 Belgians, 184 Swiss, and 168 Austrians, Armenians, and others. There are also many Chinese, and in the future the government of these is likely to be turned over to other Asiatics. Europeans and persons assimilated to them are governed according to European law, natives according to their own laws and customs.

The revenue for the financial year 1898 was 133,255,514 guilders, and expenditure 145,050,829 guilders, leaving a deficit of 11,795,312 guilders to add to the deficits of 17,013,300 guilders in 1896, 18,100,542 guilders in 1897, and 10,618,549 guilders in 1896, and others in previous years since the war in Acheen began. Taxation has been increased in proportion as the revenue from sales of products has fallen off. Of the revenue for 1898, taxes formed 42.6 per cent.; revenue from the opium, salt, and other monopolies, 23.3 per cent.; sales of coffee, cinchona, tin, and coal, 18.7 per cent.; miscellaneous receipts, 15.4 per cent. For 1900 the budget estimate of revenue was 141,251,247 guilders, of which 22,750,308 guilders are receipts in the Netherlands and 119,180,790 guilders revenue from the Dutch East Indies, of which 145,251,247 guilders—28,008,824 guilders in the Netherlands and 117,142,923 guilders in the colonies; leaving an estimated deficit of 3,320,239 guilders. The receipts in the Netherlands were 3,774,515 guilders from sales of Government coal, 175,200 guilders from cinchona, 14,159,895.
gallers from tin, 2,150,000 gullers as the share of the Government in profits of the Billiton Company, 953,000 gullers from railroads, and 1,552,631 gullers from other sources. Receipts in the colonial treasuries. The total expenditure of the whole, and administrative expenses to about a third. The strength of the army in the beginning of 1897 was 1,421 officers and 41,157 noncommissioned officers and privates. European and native soldiers are mingled in the same regiments and battalions, though in separate companies, and the cavalry is composed of both, while in the artillery the gunners are Europeans and the riders natives. Soldiers of the army of the Netherlands, with the permission of their officers, can receive their discharges in order to enlist in the colonial army, and the rate of pay is high enough to attract others, both Dutchmen and foreigners, in Europe and the Netherland colonies. The army is composed of half-castes, who are placed on an equal footing with Europeans. Among the total number of enlisted men in 1897 were 15,839 Europeans, 52 Africans, 3,934 Ambonese, and 21,332 natives. The number of horses was 1,478. In the native companies half the noncommissioned officers are Europeans, and all the commissioned officers are who are in active service, the noncommissioned being given to the native nobility only as honorary titles. Each infantry battalion is composed of four companies, one or two of them European companies. The navy is in part provided and maintained by the Netherlands Government. The Indian navy contains 21 ships, manned by the Officials, both Europeans and natives. The auxiliary squadron from the Netherlands of 4 ships, manned by 1,000 Europeans and 200 natives.

The soil is mostly Government property in Java, excepting in the western section, where Europeans and Chinese have acquired private estates, and in the outer islands, where the Government can require the natives on their land to give one day's labor every week by the old law, but the Government in 1882 commuted the right on most of its lands into a tax of 1 guilder per annum. The laborers are bound, however, by strict labor laws, which are thoroughly enforced by the officials, both Europeans and natives. There were 4,899,924 acres under rice in 1897. 4,019,092 acres under corn, arachis, cotton, and various crops, 229,894 acres under sugar cane, 210,308 acres under tobacco, 51,707 acres under indigo; total cultivated area, 9,440,925 acres. During 1897 the Government leased for seventy-five years, 5,172,145 acres to 729 European companies and individuals, 31,927 acres to 45 Chinamen, and 3,041 acres to 6 natives. On such lands and on lands owned by Europeans or Chinese or leased from native owners the sugar crop is grown, the Government having given up the culture in 1801. There are 83,961 steamer and 1,455,000 landers, 645,417 acres belonging to Chinese owners, and 33,087 acres owned by other Orientals. The quantity of sugar produced in 1897 was 12,260,052 pounds. The yield of coffee was 68,338,400 pounds raised by forced labor on Government land, 12,947,200 pound raised by natives for themselves, 70,223,000 pounds grown on leased lands, and 4,994,606 pounds grown on private estates; total, 156,503,866 pounds. The production of cinchona was 325,887 kilogrammes on Government land, 2,910,718 kilogrammes on leased land, and 116,497 kilogrammes on private land and plantations. The production of opium was 112,531 kilogrammes on 106 plantations in Sumatra, and 16,354,372 kilogrammes on 87 plantations in Java. Of tea, 4,205,576 kilogrammes were produced on 86 plantations; of indigo, 802,402 kilogrammes on 138 plantations. Tin is mined by the Government in Java and by companies in Borneo and Sumatra. The production of 33,087,000 tons in 1897 and 17,569 tons in 1898. The output of coal, which is mined in Java, Sumatra, and Borneo, was 28,897 tons in 1897; of mineral oil, 2,429,588 hectolitres. There were 2,043,000 buffaloes and 2,572,000 oxen in Java in the beginning of 1896, and the number of horses was 485,500.

The Government imports were 5,172,145 gullers of merchandise; the private imports, 167,296,526 gullers of merchandise and 9,236,877 gullers of specie; total imports, 181,705,548 gullers. The Government exported 18,303,674 gullers' worth of merchandise in 1897, and private merchants 191,160,334 gullers' worth of tobacco and 939,070 gullers of specie; total exports, 210,414,278. Half the rice exports go to Borneo and China, and the rest to the mother country, whither are shipped nearly 80 per cent. of all other exports, including coffee, tin, tobacco, tea, indigo, sugar, and cinchona.

There were 3,887 steamers, of 1,479,720 tons, and 206 sailing vessels, of 132,039 tons, entered at the Dutch East Indian ports during 1897. The length of the railroads, both Government and private, in the beginning of 1898 was 1,200 miles; receipts in 1897 were 15,237,000 gullers. There were 6,533 miles of telegraph lines, over which 653,190 messages passed in 1897. In that year telephone communication was established between the cities of Batavia, Samarang, and Sourabaya.

Guiana.—Dutch Guiana, or Surinam, is administered by a Governor, who is assisted by an Executive Council of official and private members, all appointed by him, and the Colonial States, annually nominated by him. The area of land is 46,060 square miles; population, 65,168, nearly half of them living in Paramaribo, the capital. The revenue raised in the colony from import, export, and excise duties, taxes on land and houses, personal taxes, and other sources amounted to 2,174,000 gullers, which was supplemented by a subscription of 177,000 gullers from the Netherlands Government. The total expenditure was 2,551,000 gullers. The militia numbers 20 officers and 356 men, and there is a coast guard of 60 officers and 1,294 men, and a garrison of 22 officers and 320 European troops. The production of sugar was 11,624,974 kilogrammes, of raw cinchona, 3,425,413 kilogrammes; of bananas, 562,949 bunches; of coffee, 281,876 kilogrammes; of rum, 1,000,741 litres; of molasses, 1,370,110 litres. There were 330 concessions for gold-mining, and gold was exported in 1897 to the amount of 1,178,070 gullers, the previous exports since the mines were first opened in 1881 amounting to 372,436 gullers. Several companies have begun crushing quartz. The total value of imports in 1897 was 5,294,424 gullers; exports, 5,241,671 gullers. During the year 248 vessels, of 107,153 tons, were entered, and 253, of 108,988 tons, cleared.

NEVADA, a Western State, admitted to the Union Oct. 31, 1864; area, 110,700 square miles. The population, according to each decennial cen-
sus since admission, was 42,491 in 1870; 62,266 in 1880; 45,761 in 1890; and 42,335 in 1900. Capital, Carson City.

**Government.**—The following were the State officers in 1900: Governor, Reinhold Sadler; Lieutenant Governor, James R. Judge; Secretary of State, Eugene Howell; Treasurer, Dr. M. Ryan; Comptroller, Samuel P. Davis; Attorney-General, William D. Jones; Surveyor General, Edward D. Kelley; Superintendent of Instruction, Orvis Ring; Adjutant General, J. R. Judge, *ex officio*; Chief Justice of the Supreme Court, M. S. Bonnifield; Associate Justices, W. A. Massey, C. H. Belknap; Clerk, Eugene Howell, *ex officio*. All are of the Silver set except Superintendent Ring, who is a Republican.

State officers are elected in November, once in four years. The next State election will be in 1902. An associate justice of the Supreme Court is elected in the alternate even-numbered years. The Legislature meets biennially, in January of the even years.

**Population.**—The population of the several counties, by the census of 1900, was as follows: Churchill, 830; Douglas, 1,534; Elko, 5,688; Esmeralda, 1,972; Eureka, 1,554; Humboldt, 4,463; Lander, 1,534; Lincoln, 3,284; Lyon, 2,265; Nye, 1,140; Ormsby, 2,885; Storey, 3,673; Washoe, 9,190; White Pine, 1,961.

**Finances.**—The condition of the treasury, Nov. 16, was given thus: Coin, $1,299,944.52; paid coin vouchers not returned to Comptroller, $16,381.20. The State fund securities were: Irredeemable State school bonds, $350,000; Nevada State bonds, $262,900; United States bonds, $785,000; total, $1,574,275.72. In February the bond commission ordered an additional $1,200. The Nevada war claims against the Government amount to $462,000. The annual report of the Treasurer showed the finances to be in a satisfactory condition.

**Education.**—The school population is 9,026. The semiannual apportionment was $65,886.37. The appropriation for the Nevada Indian school provides for 200 pupils. This increases the support more than $8,000 over that of any previous year. In addition, $3,000 is given for a shop building and $3,000 for general repairs.

The experiment station at the university comprises 60 acres, with stables, cottage, and tool house. The geological department has a collection of 600 species of grasses from Prof. T. L. Scribner. A university extension class is receiving instruction in mining engineering. The studies will include mineralogy, chemistry, mathematics, mechanical and free-hand drawing, and assayng.

The school at the State Orphans’ Home had 68 pupils registered for the full term.

**Lands.**—There are 520,000 acres of land to which the State has title. In 1899 the land office issued 991 contracts, drawing $8,050.35 on a principal of $124,322.43. By failure to meet the interest due, 275,993.35 acres became forfeit to the State in January. The amount of United States land in the State unappropriated is 61,326,749 acres.

**Products.**—The number of cattle in the State is estimated at 20,000, and of sheep from 4,000,000 to 5,000,000. The wool clip was estimated at 7 pounds a head.

A lost tin mine in Churchill County was recently rediscovered, and samples of ore that were sold for treasure to Swansea, Wales, gave returns of nearly 18 per cent. The vein is said to be 4 feet wide.

A writer in the Mining and Scientific Press says that in the heart of the Carson desert, about 2 miles east of Raggtown, there are two strange lakes whose waters are rich in soda. The lakes occupy probably the shallow eraters of extinct volcanoes.

“Driving through the soft, volcanic ashes which here cover the ground, we ascend a gentle slope for a little distance, and suddenly find ourselves on the brink of a depression, perhaps 75 feet deep. In the center is a pond of yellowish water, and around the margin are sheds containing piles of white, crystallized soda. This depression is not more than one fourth of a mile across. Continuing a little distance in a northeastly direction, the larger crater is soon seen. It is fully 1 mile across and more than 100 feet deep. It is occupied by a beautiful sheet of water, in rim as perfect as a geometrical one, though it had been formed by hand. The water is shallow and intensely alkaline, although around the margin there are springs which are fit to drink.”

The gold product in 1890 was estimated at $2,742,000; by another estimate, $2,412,000. The output of silver was estimated at $1,254,800. The increase of lead, copper, lead, and antimony was greater than in any previous year.

**Political.**—Besides presidential electors and a member of Congress, there were to be elected in November a justice of the Supreme Court, two regents of the university, and a Legislature.

The State convention of Republicans met in Nevada City, Aug. 3, 1900. It declared its support of the national administration; protested against any plan to surrender the Philippines; favored a protective tariff and the building of storage reservoirs; condemned trusts; denounced the disfranchisement of negroes; opposed lotteries; demanded repeal of the statute permitting prize fights; denounced the repeal of the purity of elections law; condemned the State at large; and in conclusion favored a silver question: “We favor the largest use of silver as a money metal in all manners compatible with the best interests of our Government; and we hereby pledge our nominee for Congress, in the event of his election, to exercise his best endeavors to secure the greatest possible use of silver beneficial to the mining states of this Union without endangering the financial safety of our country.”

The State nominations were: For Justice of the Supreme Court, Trennor Coffin; Regents of the University, George Turritin, Mark Averill.

The Democratic and Silver parties held their conventions the same day, Sept. 6, in Virginia City. The Democratic convention has recently reached the following agreement: Democrats to nominate two presidential electors and the Silver party one elector; both parties to nominate Hon. Francis G. Newlands for Congressman; the Democrats to nominate the short term university regent and the Silver party the long term regent; and the Silver party to nominate a justice of the Supreme Court. This plan was favored by one change; that the candidate for justice be selected in joint caucus of the two conventions.

The resolutions adopted by both conventions declared allegiance to the national platform; hailed with satisfaction the nominations of Bryan and Stevenson; declared free and unlimited coinage at the rate of $1 to $5; declared the President the only platformer; disapproved the Presidential amendment removing the prohibition of lottery prizes; favored the repeal of the statute permitting prize fights; and pledged legislative candidates to the passage of an eight-hour law, applicable to all
labor in mines, mills, smelters, and other works for reducing or refining ores, and to extend such law to other classes of labor to which it is applicable, after hearing and consulting with the representatives of such classes, and to provide by law for the compensation of the claims of one of the officers, without additional salary, the duty of a commissioner of labor. Further, the resolutions favored water storage for arid lands, to be provided by the Government; demanded protection for all classes from unjust railroad discrimination, and a law limiting the expenditure of candidates at elections.

A constitutional convention was declared a necessity.

Following is the fusion State ticket: For Member of Congress, Francis G. Newlands; Justice of the Supreme Court, A. L. Fitzgerald; State University Regent, long term, J. X. Evans; State University Regent, short term, W. W. Boorer.

The vote for presidential electors was Bryan, 6,376; McKinley, 3,860. The fusion ticket was successful, Newlands receiving 5,975 to 4,190 for Farrington. The Legislature will stand on joint ballot; Democrats, 19; Republicans, 13; Silver party, 13; Independents, 3.

NEW BRUNSWICK, an eastern province of Canada; area, 28,100 square miles; population in 1901, 92,280; capital, Fredericton.

Government and Politics. There was a good deal of fluctuation in the personnel of the Government in 1900, but no change in the large majority possessed by the Liberal ministry in the Assembly. The year opened with the Hon. H. R. Emmerson as Premier, which office he had held since December, 1898, but he did not tender his resignation until June 2, when the Hon. A. W. White, the Hon. C. H. Labillois, Hon. L. P. Farris, and Hon. A. D. Richard associated with him. On Jan. 18 Mr. Emmerson exchanged his office of Commissioner of Public Works for the attorney-generalship held by Mr. White, and Mr. H. A. McKeown at the same time became Minister of Agriculture. On Feb. 15 the Legislature was opened by Lieut.-Gov. A. R. McClellan, with the usual speech from the throne. It made a spirited reference to the New Brunswick contingent in South Africa which brought the members to their feet, and a spontaneous outburst of "God save the Queen" when it was afterward referred to by a speaker. At the session the Government continued a grant to the provincial volunteers abroad, a revision and codifying of the statutes, and the encouragement of a desirable class of immigration. The session was short, and was prolific neither of legislation nor of excitement. Another transformation in the ministry took place on Aug. 31, when Mr. Emmerson retired to contest Westmorland in the coming Dominion elections (in which he was successful), and was replaced by the Hon. L. J. Tweedie, a Conservative until 1890 and since that date a member of the ministry. The new Government was as follows: Hon. L. J. Tweedie, Premier and Provincial Secretary; Hon. William Pugsley, Attorney General; Hon. A. T. Dunn, Minister of Public Works; Hon. L. P. Farris, Commissioner of Agriculture; Hon. A. T. Dunn, Surveyor General; Hon. H. A. McKeown and Hon. G. F. Hill, without portfolio.

On Sept. 2 a Provincial Conservative Convention met at St. John, to prepare for the Dominion elections. On Oct. 22 the resolutions and resolutions were passed expressing gratitude for the success in South Africa and the prospects of a united British country there; placing on record appreciation and admiration of the conduct of Canadian troops in the war; and expressing renewed confidence in the party leaders, Sir Charles Tupper and Hon. George E. Foster. The convention announced its strong support of the policy of preferential trade and tariffs within the empire; its adherence to the principle of adequate protection to home industries; its belief that provincial politics should be on the lines; its faith in Mr. J. D. Hazen's leadership in the Assembly, and its disapproval of "the gross extravagance and mismanagement" in the provincial Department of Public Works. It denounced the Laurier Government at Ottawa for its violation of pledges, for its reckless and excessive taxation, for its Yukon corrupt railway contracts, and for its deceit in the matter of the prohibition plebiscite.

Finances.—The receipts for the year ending Oct. 31, 1899, were $764,239 and the expenses $749,644. The revenue included Dominion subsidies of $483,501; timber licenses, fish-leases, hunting licenses, etc., of $185,884; fees from the Provincial Secretary's office, $10,292; taxes on incorporated companies, $25,064; succession duties, $30,223; and liquor licenses, $20,743. The expenditures included $15,909 upon the administration of justice; $34,831 upon agriculture; $16,831 upon contingencies; $202,705 upon education, salaries, etc.; $20,100 upon legislation; $42,000 upon lunatic asylum maintenance, and $107,125 upon poor and works.

In his budget speech, Feb. 28, Mr. Tweedie said: "The interest items charged in the public accounts include those on debentures, $117,566.83; on bank accounts, $5,764.11; Independent Order of Foresters, $800; Equity Court deposits, $5,02; a total of $124,436.58. The above amount, however, does not include the payment annually made for the interest of over $200,000 of permanent bridges and which, under the law, is chargeable to the board of works. This amounts to $9,760. Therefore the total amount of interest paid in 1898 was $13,196.58. He might state that the balance of outstanding coupons was very much reduced during the year, being only $4,437.50, as compared with $8,735 in 1897 and $6,908.75 in 1898. The substitution of 3-per cent debentures accounted for this lessening of the interest burden, but the full extent of decrease of interest consequent upon the reduction of rate upon the $873,500 of 4-per-cent. debentures called in could not be realized in 1899, since a large amount of the coupon interest due upon the bond is paid for payment of one half the year's interest during that year. In the present year the full saving to the province on the conversion of $873,500 of 4-per-cent. debentures will amount to $7,638, which will continue annually thereafter, and if used as a sinking fund would redeem two thirds of the 3-per-cent. sterling loan at the expiration of forty years, or at maturity of the loan. There were now $200,000 of permanent bridge debentures to be issued; but in the present state of the money market he could not expect to realize as good a price as was realized for the last loan, and he would not offer them. He intended to ask the Legislature to change the act so that if they thought advisable he might be in a position to issue 4-per-cent. short-term bonds, and await a favorable condition of the market to issue the 3-per-cent. bonds. The 4-per-cent. short-term bonds would probably bring a premium. The average rate of interest paid upon the provincial bonded debt is 4.10 per cent. At the end of 1897 the average reached 7.47 per cent. The 3-per-cent. transactions of the province during the past two years have therefore reduced the average rate of interest 37, or of 1 per cent. Last year the legislative expenses amounted to $20,105, or $221.60 below the estimate."

The gross debt of the province on Oct. 31, 1899.
was $5,324,986. It has shown a steady increase since 1892, when the amount was $1,285,413. The total school debt allowance of $329,628, was $388,688. Mr. Tweedie, in his estimates for 1900, included a grant of $5,000 to the New Brunswick volunteers in South Africa. Against the favorable view of provincial finances afforded in his speech is the Conservative opinion, which is summarized in the following edict of the St. John Sun on Sept. 3, 1900: "The truth is, that the financial position of the province requires great prudence and the most economical management. Within the past ten years many new provincial taxes have been imposed. Heavy burdens have been placed on the municipalities from which they were formerly free. School taxes have been raised because of the reduction of the provincial grants. The interest charge continually increases."

Education.—Excellent progress was made by the province in education, and on June 30, 1899, there were 1,806 public schools, 1,912 teachers, 65,396 pupils, and an average attendance of 37,771. The new schools were attended by 62,493 in pupils, 4,000. The receipts from Government grant were $193,730; from municipal grants, $90,857; from district assessments, $318,000. Agricultural.—The province is not a great agricultural center, but its progress is steady though slow. The production of wheat in 1899 was 491,810 bushels, valued at $1,294,268; 179,540 bushels of barley and a product of 144,183 bushels; 175,340 acres of oats and 5,114,691 bushels; 72,173 acres of buckwheat and 1,413,018 bushels; 39,501 acres of potatoes and 4,071,200 bushels; 6,036 acres of turnips and 1,567,917 bushels. The total, in round figures, was 12,700,000 bushels, covering 329,000 acres, giving an average yield of 17 tons of hay. The Dairyman's and Farmer's Association of the province did good work during the year in encouraging agriculture, and at its annual meeting in St. John, Feb. 28, 1900, instructive addresses were delivered. The St. John Exhibition, held in October, 1900, was a great success. The attendance was 62,016, compared with 58,514 in 1899, 47,439 in 1898, and 40,183 in 1897.

Fisheries and Shipping.—The value of the yield of New Brunswick fisheries in 1898 was $8,849,357, making a total of $98,000,000 since confederation. The amount included salmon, valued at $235,998; herring at $1,070,799; cod at $311,526; lobsters at $3,950; mackerel at $3,950; codfish at $351,050; sardines at $423,742. There were 299 vessels, with a tonnage of 3,155 and 859 men, and 678 boats, with 1,237 men, engaged in the operations. The export of New Brunswick fish in 1899 was $618,414 in value, against nearly $5,000,000 in Nova Scotia. The total sea-going tonnage in 1899 was 1,284,225, a slight increase over preceding years.

NEWFOUNDLAND, an American British colony; area, 42,200 square miles; population, about 210,000. Capital, St. John's.

Legislative Session.—The amount of legislation in 1900 was unusually small. This was owing to the disturbed condition of political parties, and the change of government, which led to a change of government. The session of the legislature was held in February for the single purpose of renewing the modus vivendi, or interim agreement between the British and French governments in regard to the treaty shore. This modus vivendi has been in existence ten years, having been renewed year after year by the local Government to enable the Imperial Government to negotiate with France for a settlement of the question. No progress has yet been made in that direction. The colonial Government's consent is necessary to the continuance of this agreement, which has never renewed for more than a year. The people of the colony are becoming more and more restive under this agreement, and more urgent in their demands for a final settlement. The Right Hon. Joseph Chamberlain, Secretary of State for the Colonies, took up the question, and sent out commissioners to inquire into the working of the treaty and the course of measures expected from his well-known ability and energy. But the war in South Africa broke out, and the time was found to be inopportune for opening negotiations with France. Accordingly, the Imperial Government asked the colonial Government to renew the modus vivendi for another year, ending Dec. 31, 1900. On patriotic grounds the rejected the proposal, but forthwith delivered a patient voice. It was felt to be a duty owed to the empire, not to embarrass the British Government at such a crisis, or do anything that might involve England in complications with France when the stress of a great war was severely felt. The time expired on Dec. 31. The death of Queen Victoria and the general election prevented the consideration of the question, and the continuance of a guerrilla war in Africa seem to render the continuance of the modus vivendi desirable. Accordingly, the Hon. Robert Bond, Premier, was invited to visit London to confer with the Imperial Government. The probability is that a renewal of the agreement for another year will be asked for, and the extension of the term of such renewal if requested. A special meeting of the Legislature is called to pass it.

When the Legislature met in February, 1900, to renew the modus vivendi, Mr. Bond, as leader of the Opposition, moved a vote of "want of confidence" in the existing Government, of which Mr. Reid was the Chief; the vote was lost, and the resignation of the Government followed. Mr. Bond was then called upon to form a government, in which he was successful. A short session followed, in which only routine measures were introduced, as Mr. Bond decided on appealing to the country, and a general election was in prospect. The chief acts related to a restoration of the revenue, to the slight change, and an act to make provision for the raising of certain sums of money by sale of debentures, for purposes provided for in the railway contract of 1898.

The general election, the great event of the year, took place on Nov. 8. Every district was contested, and both parties put forth their utmost strength. The contest turned almost entirely on the contract formed by the Winter Government in 1898 with Mr. R. G. Reid. The party led by Mr. Bond assailed this contract as being injurious to the interests of the colony, as handing over 4,000,000 acres of land, together with the railway, for a present payment of $1,000,000, and denounced their intention of modifying the contract, if returned to power, and of securing a surrender of some of the franchises thus granted. The Opposition, led by Mr. A. B. Morine, sustained the contract in its full integrity, and held it to be irrevocable, except with the consent of the contractor, and that it was most favorable to the best interests of the country. The issue of the electoral contest was remarkable and unprecedented. The supporters of Mr. Bond carried 32 seats out of a total of 36, and only 4 of the Opposition candidates were returned. A majority of 2,112 for Mr. Bond was the result, and the measure that may be decided on. The popular condemnation of the contract and of those who carried it has thus been strongly indicated.
remains for Mr. Bond to negotiate with Mr. Reid as to the modifications of the contract that will satisfy public sentiment. As a contractor Mr. Reid assumes a very high character, and it is not anticipated that any difficulty will be experienced in coming to terms. The leading feature of the contract is that the contractor undertakes to maintain and operate the railways for fifty years for the land concessions, amounting to 4,000,000 acres; and by the payment of $1,000,000 in hand he becomes entitled, at the end of fifty years, to a fee simple of the railway. For a long period to come the operation of the railway in a new country must entail considerable losses, and this contract frees the colony from any responsibility in the matter, and $1,000,000 in hand is equivalent to nearly $8,000,000 at the end of fifty years.

**Business.**—The year 1900 was one of considerable prosperity in the colony. The best proof of this is the condition of the revenue. On the termination of the fiscal year, June 30, 1900, the surplus, after all expenses were met, amounted to $250,000. It is likely that there will be a still larger surplus this year. The tax which is derived from duties on imports, indicates an increase of purchasing power on the part of the population.

The fisheries, which are the staple industry of the people, have been on the whole successful, and the prices of the various products have been very good. It cannot be shot that the year has been, according to the customs returns, $7,497,147; of the exports, $8,627,576. The total revenue amounted to $2,111,638. The funded public debt is $17,377,101. This was mainly incurred by the construction of nearly 700 miles of railway. The interest on the debt is more than $800,000 per year.

The total value of the fishery products was $7,072,537. The seal fishery was successful, 203,850 seals having been taken, and the oil was valued at $433,605, and the skins at $1,023,339. The quantity of dry codfish exported was 1,300,022 quintals; value, $3,433,338. The value of herring exported was $173,850. The export of lobster was in value $441,202; the export of salmon, $94,784.

The export of lumber was in value $100,208. A great expansion in the lumber industry has begun. Mr. Miller, a Scotch lumberer, who had been operating for many years in Sweden, has leased 500 square miles of forest lands in the interior of Newfoundland, built several miles of railway, and has now 600 men employed in cutting down timber. His export will be very large. He will also manufacture pulp for paper making. The quantity of pulp wood in the island is practically inexhaustible.

**Mining.**—The mining industries were well sustained during the year. The following is a list of mineral exports: Copper ore, ingots, regulus, value, $617,013; iron pyrites, $107,265; iron ores, $319,087; total, $1,043,355. The great iron mine in Belle Isle, Conception Bay, is one of the most valuable in the world. A part of it was purchased by the Whitney syndicate for $1,000,000. The whole property will now probably cost almost $4,000,000. One of the iron bars from it will be shipped next summer at the rate of 3,000 tons daily. It is conveyed to Sydney, Cape Breton, for the use of the great iron works there. As a mining country Newfoundland is rising rapidly. Roofing slate of the finest quality and in immense quantities has lately been discovered.

A valuable report on the minerals of Newfoundland was lately presented to the Minister of Agriculture and Mines by G. P. Howley, F. G. S., Director of the Geological Survey. He shows that in the ten years from 1888 to 1898 the value of pyrites exported amounted to $2,218,518, and that the value of such exports in 1898 was $608,087. He also shows that the total value of copper ore exported since its discovery was $10,500,000. Thus the island stands sixth in the list of the copper-producing countries of the world.

**Sport.**—Since the completion of the railway to Port-au-Basque, and the establishment of a steam ferry thence to Sydney, C. B., the influx of tourists, travelers, and sportsmen has been steadily increasing. Last year 110 licenses for caribou shooting were taken out, chiefly by American sportsmen, the fees for which amounted to $3,600. The American sporting papers generally speak highly of the facilities for sport. The salmon fishing is reported to be excellent. The rivers are now carefully protected.

For caribou the close season is from Feb. 1 to July 15, and from Oct. 1 to Oct. 20, inclusive. Penalty for violation, $500, or imprisonment. No person not usually resident in the colony shall hunt or take caribou without being licensed, and the penalty is $100. Wild rabbit or hare may not be killed between March 1 and Sept. 15; otter between April 1 and Oct. 1; foxes between March 15 and Oct. 15; beaver, close time to Oct. 1, 1903. No trout, char, whitefish, landlocked salmon, or grilse, or any fresh-water or migratory fish, can be unlawfully caught, taken, sold, or offered for sale in the colony from Sept. 15 to Jan. 15.

Sir Henry McCallum, the present Governor, has received an appointment to the governorship of Natal, in South Africa. He is to be succeeded by Sir Cavendish Boyle.
proximately, 9,005 square miles, the average number of persons to the square mile at the censuses of 1890 and 1900 being as follows: 1890, 41.8; 1900, 45.7. Of the 10 counties, all but 2 increased in population during the decade. The greatest gains are shown in Coos County (26.9 per cent.) and in Hillsborough County (20.7 per cent.). Hillsborough shows marked increase, having gained 19,393—12,561 representing the increase in the city of Manchester. The 2 counties showing a decrease are Belknap and Carroll. The population by counties is: Belknap, 19,526; Carroll, 16,885; Cheshire, 31,321; Coos, 29,408; Grafton, 40,844; Hillsborough, 112,640; Merrimack, 52,450; Rockingham, 91,118; Strafford, 39,333; Sullivan, 18,900. There are 11 cities in the State, the population of which, in 1890 and 1900, was as here shown:

Finances.—The cash in the treasury, June 1, 1899, was $341,586.88; receipts during the year, $1,285,684.10; total, $1,627,270.98. The disbursements during the year to June 1, 1900, were $1,170,743.66; cash on hand at same date, $456,327.32; liabilities June 1, 1899, $2,020,621.38; assets, $900,653.35; net indebtedness June 1, 1899, was $1,337,968.05. The liabilities June 1, 1900, were $1,912,792.99; assets, $793,994.05. The net indebtedness June 1, 1900, was $1,118,798.94; reduction of debt during the year, $216,209.11. The revenue was from the following named sources: State tax, $425,000; railroad tax, $145,772.28; insurance tax, $32,824.90; interest on debentures, $3,840.77; license fees (fertilizers), $1,200; telegraph tax, $3,540.40; telephone tax, $3,503.99; charter fees, $450; fees (insurance department), $12,204.10; Benjamin Thompson estate, income for year ending Jan. 30, 1900, $22,351.84; fees (Secretary of State), $4,729.65; fines and forfeitures, $41,470.40; Spanish War (the United States—States, in part), $28,443.12; liquor licenses, $54,30.61; city estates, $99.05; fines, National Guard, $9; sales public property, $86.36; refund costs of prosecution, insurance department, $31.80; refund American Express Company, overcharge, $2.20; total, $689,264.19. The ordinary expenses, including salaries and expenses whose payment is authorized by general laws, were $277,912.00; extraordinary expenses, $94,896.05; interest, $100,186.13; total expenses, $472,995.08. Excess of revenue over expenses, $216,209.11.

The disbursements by departments were: Executive, $53,663.90; Secretary, $6,814.31; Treasurer, $3,392.56; Adjutant General, $867.75; Public Instruction, $5,356.76; Insurance, $6,814.63; Supreme Court, $3,610.66; Probate Court, $15,734.25; State Library, $17,203.92; Statehouse, including special appropriation for vaults, $12,566.27; Asylum for the Insane, including special appropriation of $25,000, $16,607.41; Fish Commissioners, $6,626.34; Railroad Commissioner, $10,950.41; Fire Commissioners, $10,087.40; National Guard, $30,000; Industrial School, $15,400; State Prison, $5,607.51; College of Agriculture and the Mechanic Arts, $10,709.04; Normal School, $17,902.12; Board of Agriculture, $6,033.33; Board of Equalization, $887.78; State Board of Health, $4,250; Labor Bureau, $2,730.01; Forestry Commission, $1,190.93; Commissioners of Lunacy, $16,904.77; and Soldiers’ Home, $10,902.28.

The trust funds are now as follow: Fiske legacy, $26,378.43; Kimball legacy, $67,535.49; Teachers’ Institute, $19,661; unclaimed savings-bank deposits, $1,963.71; Benjamin Thompson trust, $535,347.38; Benjamin Thompson State Trust, $37,459.07; Hamilton Smith trust, $10,000; total, $759,771.06.

The Treasurer says in his report: "The condition of the treasury and the results accomplished during the past year are wholly satisfactory and the condition is sound and the receipts during the period are sufficient to meet the expenses and all obligations of the State for the year." On June 21 the State received from the United States, as the balance of its claim on account of the Spanish War, $23,709.33, making a total reimbursement of $52,152.48 on claims amounting $165,901.83.

Taxation.—The railroad, telegraph, and telephone taxation for 1900 was as follows: Railroad tax, $382,853.34; against $333,878.22 for 1899; telegraph, $3,094, against $3,540.40; telephone, $8,510.90, against $5,661.64; total, $391,860.24, against $365,883.26.

The railroad tax is paid by the corporations to the State Treasurer, and divided as follows: One fourth part to towns through which the roads pass, for right of way and buildings, proportioned to expenditure for the same; the other three fourths to each town in the State, such portion thereof as the number of shares owned in said town, in the railroad, the undivided four-fifths to the State corporation; and the rest of the three fourths (nonresident) directly to the State. The telegraph and telephone tax is paid to the State Treasurer and not divided, but held by the State as part of its revenue. The expense of the railroad commission is met by a tax levied on the gross receipts of the railroad. Its amount is $7,335.97, against $7,430.19 for 1899.

Corporations.—The annual report of the Secretary of State gives returns (as required by law) from 74 incorporated companies doing business in this State—insurance companies, railroad corporations, banks, and loan and building associations not included, including an aggregate capital paid in of $261,163.42, and assets aggregating $31,572,070.98. A large number of corporations, however, fail to comply with the provisions of the law, the penalty for noncompliance being that the treasurer and directors are individually liable for all the debts and contracts of the corporation then existing, or which shall be contracted, until the corporation is made.* For this reason, not all successful corporations prefer to take this risk rather than make the details of their business public.

Banks.—There are under the supervision of the bank commissioners 80 savings banks, 12 State banks and trust companies, 10 of which have savings departments, and 18 building and loan associations. Twenty-eight savings banks and 3 trust companies are in liquidation. The commissioners say: "Satisfactory progress has been made during the year in the process of liquidating most of these banks. Many of them have during the year declared dividends to the depositors, and, as shown, there are but few banks that are in liquidation at this time 70 per cent. of the deposits."

The following is a statement of the liabilities and assets of the savings banks and savings departments of the trust companies that are in active
operation as reported at the close of business, June 30, 1900:

- **Risks**—Amount due depositors, $53, $86,710.79; guarantee fund, $2,958,287.58; interest, $1,262,304.60; premium, $3,945,768; total, $6,023,071.06.

- **Assets**—Loans on mortgage security (local), $8,846,933.32; loans on mortgage security (western), $3,350,757.51; loans on personal security (local), $3,709,437.49; loans on personal security (western), $7,473,153.09; loans on miscellaneous security (local), $5,200,309.21; loans on collateral security (western), $2,888,285.93; United States and State bonds, $936,022; county, city, town, and district bonds, $7,925,304.74; railroad bonds, $7,989,170.55; miscellaneous bonds, $2,298,192.91; bank stock, $2,625,131.49; railroad stock, $6,241,928.35; manufacturing and miscellaneous stocks, $1,830,162.53; bank stock, $3,658,622; miscellaneous investments, $99,480.62; real estate by foreclosure, $3,009,249.92; local real estate, $562,483.63; cash on deposit in authorized banks, $1,640,924.64; cash on hand, $149,074.26; total, $6,023,071.06.

- **State banks and trust companies**—Capital stock, $590,000, of which surplus, $71,160.03; unassigned surplus, $23,634.10; municipal ventures, $33,847.80; railroad bonds, $33,440.50; miscellaneous bonds, $1,424,095.56; bank stock, $3,658,622; manufacturing and miscellaneous stocks, $8,220; miscellaneous investments, $588,619.72; real estate, $90,419.78; cash on deposit, $318,951.80; cash on hand, $90,304.40; total, $1,859,848.74.

- **The commissioners say**: "The improvement in the character of the assets of savings banks is in a general way due to the abolition of railroads. —The total assets of 16 building and loan associations doing business, as returned June 30, 1900, was $1,830,162.53, divided as follows: Loans on real estate to members, $1,606,573.90; loans to shares on members, $36,411.20; business deposits, $880,536.26; miscellaneous indebtedness, $197,027.53; premiums, $8,574.50; total, $1,859,848.74.

- **The number of companies now doing business in New Hampshire is 117, including 29 mutual and 88 stock companies.

- **The surplus as regards policy holders (which means the surplus above all liabilities and the amount of the paid-up capital added to it) of all authorized companies, save the State mutuals, was for the year 1899 (93 companies) $126,364,006.00.

- **The companies of other States and countries have paid all losses promptly and honorably.

**Agriculture.** The agricultural fairs include an exhibition known as the Concord State Fair, 6 county or district fairs, and about 50 town ex-
hibitions. The Granite State Dairymen's Association and the New Hampshire Horticultural Society receive aid from the State, and have promoted the dairy and horticultural interests. Numerous poultry associations are active.

Twenty-five Farmers' Institutes were held in 1900, each meeting consisting of three sessions; a meeting in connection with the Granite State Dairymen's Association was held at Lancaster in December, a good roads meeting at Newport in May, and others.

The statutes forbid the sale of imitation butter colostrums; to prevent this the State Board of Agriculture enforced this law, and the board immediately authorized an agent to proceed against all violators, and their vigorous action has practically suspended the illegal sale and use of this product in the State.

In 1899 and 1900 the Board of Agriculture inspected 558 stables, and condemned and destroyed 392 tuberculous cattle and 20 glandered horses.

Reports from the selectmen of 130 towns on the "abandoned-farm" question give the following results: Number of farms occupied as summer homes, 849; total estimated cost of permanent improvements made upon land and buildings purchased for this purpose, $1,932,559; estimated number of people occupying these places during a part or all of the summer, 12,912.

National Guard.—The reorganization of the National Guard took effect, April 27, 1899, and is in conformity to the infantry regiments of the United States army. The strength of the brigade, as appears from the last quarterly returns received, is 126 commissioned officers and 1,290 enlisted men. It now consists of 2 12-company regiments instead of 3 regiments of 8 companies each, as heretofore. The light battery and troop of cavalry remain as before. On Sept. 19 the entire New Hampshire National Guard was mobilized in Portsmouth to take part in the celebration connected with the presentation of testimonial tablets to the United States battle ships Kearny, Sarge and Alabama, and in honor of the Secretary of the Navy, Mr. John S. Johnston, of Alabama, and staff, and other guests, and paraded with the sailors and marines of the North Atlantic squadron and various local societies.

Education.—The formation of 3 supervisory districts in 1900 is the beginning of the most promising advance New Hampshire has made educationally since the abolishment of the district system. The matter of supervisors was presented to the town school meetings of the State in the spring. Twenty-seven towns approved it, and authorized their school boards to form combinations with other towns; but owing to the scattered locations of these towns, only 9 were able to accomplish the desired combinations, forming 3 districts. Under the new law the State pays half the salary of the supervisors, and these supervisors must hold certificates of an examination by the State Superintendent—a severe one and a thorough one. All the other teachers are under professional advice.

The State Library.—During the year ending May 31, 1900, 6,845 bound volumes were added to the library, making the total number 62,059. The number of unbound volumes, exclusive of periodicals, was 31,794, and the number of unbound periodicals was 11,671. The average annual increase of bound volumes in the last four years has been 6,493. The officials have avoided to the greatest extent possible accepting books that appear to be of no use except to fill the shelves. The law books number a little more than 18,000 volumes. The historical department contains nearly 8,000 bound volumes and 2,100 unbound. The number of loose-case volumes is above 8,000, bound volumes, 1,500 unbound volumes, and 4,300 unbound periodicals.

State Board of Health.—The board was organized and began work in 1881. Since then there has been established, through its efforts, a local board of health in every town in the State, and mortality from contagious and infectious diseases has been reduced to a figures never reached in history.

The advantages of pure drinking water, and the dangers of a polluted source, especially of surface wells, have been made apparent, and public water supplies from unquestioned sources have been introduced into many towns and villages. Also the ventilation of many buildings has been greatly improved.

New Hampshire has now probably the most accurate system of registration of vital statistics of any State in the Union, and its records have become of great value. The department has on file the records of more than 500,000 persons who are living or have lived in the State, and these are greatly increased at the rate of 25,000 annually. The number of deaths in New Hampshire in 1899 was 7,045, a rate of 17.27 for each 1,000 of the population (based upon a total of 407,938 for that year).

Charities and Corrections.—This board was authorized by an act of the Legislature, passed Feb. 14, 1895, which appropriated $2,393,900, and passed an act to be known as "an act to reorganize the State Board of Charities and Corrections," to consist of 3 men and 2 women—appointed by the Governor and Council. The board is chiefly supervisory and advisory, as the dependent children of the State are primarily under the direct care of the county commissioners, or of the overseers of the poor of the towns or cities. But the board has, with great labor and pains, completed a record of all the children within the State now dependent upon the public for support, up to Dec. 1, 1900, covering 443 names; and a supplementary record, including all those children who have passed from public support since their work began, now numbering 76. The 443 children are placed as follows: In almshouses, 15; in State charitable institutions, 64; in city, State, and county almshouses, 238; placed in families, 113; in industrial school, 24; in asylum for the insane, 1. In addition to the above, 39 children are supported outside of the State. The total number of dependent children for the whole State, at public and private charges, is 1,061. This number does not include many who are partially supported at their own homes.

Industrial School.—This institution is at Manchester. The number in the school, Sept. 30, 1900, was 147; whole number committed to the institution since its beginning, 1,932. The institution is a place for reformation, not a prison.

Asylum for the Insane.—The number of patients in the asylum at the close of the year,
The Anti-Saloon League.—The funds contributed for the prosecution of the work of the league were $85,000, and the vote was 75 per cent for the prohibition of the sale of alcoholic drinks. The league, through its Agitation Department, which is promoted by circulation of literature and by public speeches and song, has been highly effective in securing the election of prohibition-minded men to the Legislature and as town officers.

Old Home Week.—The idea of Old Home Week was suggested by Gov. Frank W. Rollins. He says, “The loss and decay in some of the agricultural sections of New Hampshire were brought closer home to me, and it was while studying this problem and its remedy that the idea of Old Home Week occurred to me as a possible help in restoring lost people and conditions.” In the spring of 1899 he called a convention at Concord of all interested, which was largely attended. From this association more than 50 local societies were at one or another stage of organization and membership, and more than 100 communities celebrated the new festival in the following August; in 1900 more than 100 more. It now appears to have become a permanent festival.

The State Prison.—The whole number of convicts now in the prison and on work is 30,190, was 151 males and 2 females. Of this number 132 can read and write. The average number in prison in 1896 was 181; in 1900, 140. This decrease probably results from the increasing tendency of the courts to commit convicts to the county institutions rather than to the State prison. An order abolishing work in the State prison in 1899 was rendered by the Supreme Court and is clearly a beneficent regulation, assisting in the preservation of discipline, and restraining idle and vulgar curiosity. It is appreciated by the convicts. The discipline of the institution is rigid, but the results fully justify the maintenance of the present admirable system. The most interesting fact is that in 1899 and 1900, the average daily number of inmates was three-fourths of the number of Mark Shimborn, the notorious bank robber, after an absence of thirty-four years. He was committed (at the age of twenty-four) Feb. 27, 1866, for ten years; escaped Dec. 3, 1866; was re-arrested in 1900, and returned Nov. 8 to serve his unexpired term.

The Home Bureau.—Up to Jan. 1, 1899, 369 men were received into the home. In 1899 and 1900 47 others were admitted. The number now in actual attendance is 86. The average cost per capita of maintenance in 1900 was $221.43. In 1899 a new laundry plant was added to the home, at an expense of $1,797.47; also an electric-light plant, costing $800, and other improvements. The library contains 1,470 books and periodicals, and the number of periodicals and newspapers. On July 21, 1899, lightning struck the hospital in two places, damaging the interior somewhat, but doing no personal injury.

The Political.—The official vote for presidential electors was: For McKinley, 54,803; for Bryan, 35,032. The whole number of votes cast in the State was 92,352, in a total population of 411,888, one voter to every 4½ of the population. The official vote for Governor was: For Chester B. Jordan (Republican), 53,891; for Frederick E. Potter (Democrat), 34,936. The Governor’s Council consists of 5 members—all Republicans; for the Senate, of 28 Republicans and 1 Democrat; the House of Representatives, of 30 Republicans and 97 Democrats.

NEW JERSEY, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 18, 1787. Area, 7,815 square miles. The population, according to each decennial census, was: 1790, 78,411; 1800, 168,139 in 1810; 277,426 in 1820; 329,823 in 1830; 373,306 in 1840; 489,555 in 1850; 672,035 in 1860; 906,096 in 1870; 1,131,116 in 1880; 1,444,923 in 1890; and 1,883,669 in 1900. Capital, Trenton.

Government.—The State officers in 1900 were: Governor, Foster M. Voorhees; Secretary of State, George Wurtz; Treasurer, George B. Swain; Comptroller, William S. Hancock; Auditor-General, Samuel H. Grey; Adjutant General, William S. Stryker; Superintendent of Public Instruction, Charles J. Baxter; Commissioner of Banking and Insurance, William Beale—all Republicans. Chief Justice of the Supreme Court, William J. Magic (appointed by David A. Depue); Associate Justices, Gilbert Collins, Jonathan Haines, James Dry, Samuel Syckel, Charles G. Garrison, William S. Gummere, George C. Ludlow (died in December), John Frank Fort, and A. Q. Garretson; Court of Errors and Appeals: Judges, J. W. Bogart, G. Krueger, Frederick Adams, W. H. Vredenburgh, Charles E. Hendrickson, and Peter V. Voorhees. Chancellor, William J. Mapes.

Population.—The population of the State, by counties, in 1900, was: Atlantic, 46,402; Bergen, 78,441; Burlington, 58,241; Camden, 107,643; Cape May, 13,201; Cumberland, 51,103; Essex, 350,053; Gloucester, 31,905; Hudson, 386,048; Hunterdon, 34,507; Mercer, 95,963; Middlesex, 79,762; Monmouth, 82,057; Morris, 93,136; Ocean, 19,747; Passaic, 155,202; Salem, 25,530; Somerset, 32,948; Sussex, 24,134; Union, 99,353; Warren, 37,781; total, 1,883,669.

The population of Jersey City was 206,433; of Newark, 246,079; of Trenton, 75,307; of Paterson, 103,171; of Elizabeth, 92,130; of Camden, 75,935; of Hoboken, 59,024; of Atlantic City, 27,838; of Bayonne, 32,722.

Finances.—The Treasurer’s report presents the transactions for the fiscal year ending Oct. 31, 1900.

The receipts of the State fund, including balance from the preceding year, were $4,876,949.13, and the disbursements were $2,871,726.97, leaving a balance of $2,005,222.16, which was larger than the balance of the year before by $752,069.03.

The receipts of the school fund, including balance, were $884,585.04, and the disbursements were $702,145.94, leaving a balance of $79,439.70, which was larger by $18,718.82 than the balance of the year before. The State school tax amounted to $2,233,550.

The receipts and disbursements of the Agricultural College fund were $4,980.
The local tax on railroad corporations amounted to $407,173.06. The disbursements were as follows: Adjutant General's department, $10,270.37; advertising, $2,498.13; Agricultural College fund, interest, $2,300; Agricultural and Mechanical College fund, $16,300.79; Senate Committee of Appropriations, $2,941.38; Attorney-General's department, $13,790.51; blind and feeble-minded, $79,078.34; Board of Fish and Game Commissioners, $21,500; Board of Pilot Commissioners, $1,100; Board of Visitors to Agricultural College of New Jersey, $139.54; Bradley's New Jersey Citations, $1,500; Bureau of Statistics, $9,700.11; collateral inheritance tax, $9,819.84; commissions, $2,495.50; county lunatic asylum, $187,500.15; Council of Chancery, $72,178.68; Court of Errors and Appeals, $10,510.50; Court of Par- dons, $1,740.48; deaf-mutes, $43,000; Delaware Bay and Maurice River Cove Oyster Commission, $28,056.85; Department of Banking and Insurance, $22,161.16; discharged convicts, $2,000; emergency, $9,991.65; Executive Department, $15,208.80; factories and workshops, $9,967.73; Farm Bureau Preparatory School, $1,458.86; feeble-minded, $4,885.59; free school libraries, $3,290; geological survey, $12,990.68; Home for Disabled Soldiers, $20,900; Home for the Blind, $15,000; Industries, $602.25; industrial education, $43,192.50; Industrial School for Girls, $12,174.34; insurance, $200; law and equity reports, $7,687.60; Legislature, $8,735.78; loans to school fund, $193,000; Manual Training and Industrial School at Bordentown, $5,000; Monmouth battle monument, $437.84; National Surplus and Unpaid Contractors' Claims, $154,094.18; New Jersey State Library, $493.61; Newark armory, $30,000; New Jersey Home for Disabled Soldiers, Sailors, Marines, and their Wives, $20,496.30; New Jersey State Horticultural Society, $400; office of clerk in Chancery, $33,281.24; office of clerk of the Supreme Court, $23,048.23; office of the Comptroller, $13,683.99; office of the Secretary of the State, $88,484.42; office of the Treasurer, $12,885.13; Oyster Commission, $9,890.82; Oyster Commission (clams), $1,961.32; Palisades, $2,500; pensions, $4,743.72; presentation of sword, $302.50; preservation of records, $3,500; printing, $4,189.64; public roads, $13,532.43; Quartermaster General's department, $9,946.93; Rahway Reformatory, $7,453.80; School for Boys, $32,248.40; refunded taxes on exempted mis- cellaneous corporations, $131.81; Riparian Commission, $12,875.79; riparian lands, $20,575.52; school census, $1,500; school fund expenses, $3,513.68; sinking fund account, $4,290; sinking fund—legal expenses, $830.88; soldiers' State pay, $9; Spanish-American War medals, $30.75; State Board of Agriculture, $6,912.24; State Board of Arbitration, $6,216.50; State Board of Assessors, $2,562.70; State Board of Children's Guardians, $2,819.56; State Board of Education, $3,102.25; State Board of Health, $15,126.79; State Board of Taxation, $13,389.84; State Charities Aid Association, $16,460.29; State Home for Boys, $29,946.57; State Home for Girls, $27,561.56; State hospitals, $923.59; State Hospital at Trenton, $75,856.72; State Hospital at Morris Plains, $225,435.09; Statehouse Commission, $55,000; Statehouse Committee—special, $500; Statehouse Building Commission, $41,500; State Library, $7,590.92; State Museum, $1,922.20; State Normal School, $49,990.06; Supreme Court, $1,067,738.90; Superintend- ent of Public Instruction, $12,943; Teachers' Institute, $8,000; teachers' libraries, $400; transportation of prisoners, $308.20; Trenton battle monument, $500; Tuberculosis Commission, $10,500; village for epileptics, $46,961.67; Washington Association of New Jersey, $2,500; Weather Service, $1,000; total, $2,871,260.67.

The Committee gives the following statement of the State debt: "The last installment of the civil war debt, amounting to $71,000, falls due Jan. 1, 1902. Certificates of the State issued to the Commissioners of the Agricultural College amount to $48,000, which sum added to the balance of the war debt makes the entire debt of the State $119,000. The assets of the State fund con- sist of 1,887 shares of the stock of the United Railroad and Canal Companies of New Jersey, the market value of which amounts to $505,716, independent of the assets of the sinking fund, which the State Treasurer reports amount to $207,524.15."

Under an act to tax intestates' estates, gifts, legacies, and collateral inheritance in certain cases, $177,074.54 was received from estates, upon assess- ments made by the surrogates and Register of the Prerogative Court, being an increase over the previous year of $91,553.86.

**State Institutions**—The number of convicts received into the State Prison in the year was 472; the whole number in the prison, Nov. 30, 1900, was 1,091. The average number of patients in the hospital was 31. There were 5 deaths. The total expenditure was $206,707.43. Extensive repairs and improvements were made, and these cost $111,880.25. The average number of men employed in the shops during the year was 315, and the amount earned by their labor was $75,952.04. The average number of prisoners employed was 57 less than in the preceding year, and the decrease in the earnings, compared with preceding year, was $790.23. This decrease was due to the fact that more of the contractors during the last fiscal year than in the preceding year availed themselves of the privilege accorded in their contracts of suspending work at times.

The State Hospital for the Insane, at Trenton, received in 1900 265 patients; it discharged 160 men and 158 women. Of those discharged, 84 were reported recovered, 50 improved, 104 died, and 91 were removed to other institutions. At the close of the fiscal year, Oct. 31, 1900, the number of patients in the hospital was 1,117, which was 277 more than the normal capacity of the building. Considerable improvements were made in the buildings.

The State Village for Epileptics, at Skillman, had 25 patients, Oct. 31—17 men and 8 women. Three were discharged (insane), 2 escaped, and 1 died. The managers say in their report: "There are many patients in the hospitals for the insane, kept there to their own detriment and that of the class of persons for whom those institutions are maintained. There are others in the almshouses, and many who are in private families where they are a grievous burden to those who are about them. It becomes State policy to endeavor to support themselves under the most favorable cir- cumstances, and when embarrassed with the care of epileptics are discouraged. A long list of applications is on file, including many earnest appeals from the parents of children. . . . While the disease is not ordinarily directly amenable to treat- ment, it is believed that systematic and a regular method of living and open-air occupation, without the imposition of exhausting tasks, diminish to a great degree the number and severity of the seizures, and recovery in an increasing ratio ensues."

The trustees of the State Home for Girls, at Trenton, say in their annual report: "During the
year the number of inmates has been materially reduced, some of them having been paroled under their own recognizance and others put out under indenture, where they are now in good homes, and still others having been discharged because they had reached the age of twenty-one years. The number of inmates reported for the year ending Oct. 31, 1899, was 138; now, for the year ending Oct. 31, 1900, it is 115. . . . Special efforts have been made to develop in each girl an interest in some definite kind of work, and we believe this has been attended with a good degree of success. The religious interests of the inmates are carefully attended to, an excellent Sabbath school and other religious services being conducted on the Sabbath day. Amusements and entertainments suitable to particular seasons and occasions have also from time to time been given to the inmates of the home. The superintendent says: "A larger number than usual has been sent out from the home. Of these, 8 were indentedure, 2 were paroled, 4 escaped who were not returned, 7 became of age in the home, 1 died, and 18 were discharged. We have for the last year and a half, we have received reports from 15, showing that they are doing well. Nine of these were over nineteen years of age when discharged."

At the State Home for Boys the number remaining Oct. 31, 1899, was 405; number committed or returned since, 146; total number cared for during the year 551; closed Oct. 31, 1900, 378. Of these, 293 were white and 85 colored. The boys are instructed in sloyd, carpentry, masonry, blacksmithing, painting, shoe-mending, baking, printing, brush making, steam fitting, and some other occupations. A trade-school building is in process of erection. The total cost of the fiscal year the Home for Feeble-minded Women had 113 under its care; 12 had been admitted in the year and 4 discharged. In the school department are taught weaving of plain and fancy baskets, designing in Venetian bent-iron work, braiding raffia for meccasins, mounting pictures, wood carving, lathe work, advanced metal working, Swedish gymnastics, fancy drills and photography, while in the primary department, reading, arithmetic, spelling, and Nature studies are taught, with writing and drawing, forming original designs from the different triangles, etc. The more advanced class has also United States history and a course in music. In the sewing department, one of the special. One girl's record for the year consisted of 150 aprons, 36 school dresses, 24 articles of underwear, 6 plain nightgowns, besides her garden work of successfully slipping 1,000 plants. Prizes are given for industry.

The Home for Disabled Soldiers, at Keimy, had 506 inmates at the beginning of the year, admitted 216, and had 542 on Oct. 31, 1900. The number that died was 78; others were discharged or dropped from the rolls. The library of the home has 2,500 volumes. Larger accommodations are needed.

At Vineland there is a Home for Disabled Soldiers, Sailors, or Marines, and their Wives. It was opened Jan. 1, 1900. In the year 25 couples were admitted, and at its close there were 22 men and 24 women on the rolls. The men receive a uniform, consisting of a military blouse, vest, and trousers, black felt hat, and good substantial foot gear, together with the necessary underwear, while the women have their caps, hats, shawls, and all other needful articles for indoor and outdoor wear.

The New Jersey Firemen's Home was opened July 10, 1900. At the close of the year it had received 7 inmates. The receipts from all sources amounted to $3,934.65, and the disbursements to $8,088.15.

Libraries.—There was a great increase of interest in library matters during 1900. The State now contains 77 free public libraries. The revival of interest began when Andrew Carnegie gave East Orange $50,000 to found a free library. The town gave a site worth $22,500, and the municipality voted to furnish $1,000 a year for its support. Congressman Charles N. Fowler, of Elizabeth, proposed to expend $100,000 for a library in that city. Assistant-Postmaster-General William M. Johnson, of Hackensack, gave a $40,000 library to that town. The Paterson library was the first free public library in the State, and $29,000 was expended on the building during the year. This is a memorial to Charles Danforth, and the gifts continued by his daughter, Mrs. Mary Ryle, amount to $90,000. Hoboken has a new building and about 25,000 volumes. The family of Dr. William Sticker have given Orange a $100,000 library. A new library building is in process of erection in New Brunswick, and when completed it will be thoroughly equipped with modern facilities. Jersey City is expending $250,000 on a new library. Trenton is about to expend $100,000 in a free library. Burlington has the oldest library in the State, for its charter comes down from the time of George II. Its first patron was a woman who gave a building to be built as a memorial to her husband and his son, reared in the house. Meantime the free traveling library is receiving much attention, and rural communities are getting their share. There are 48 of these, 30 of which traveled through 44 townships.

Railroads.—The following are the figures of the State Board of Assessors concerning valuation for railroad purposes: for the State system—valuation, $63,388,389; for State uses, $316,941.94; for tax local use, $101,654.62; total tax, $418,596.56. Central of New Jersey system—valuation, $46,512,690; for State uses, $232,503.45; for local uses, $73,371.27; total tax, $308,947.2. Philadelphia and Reading system—valuation, $9,532,929; for State uses, $97,470.80; for local uses, $47,620.63; for local uses, $65,518.54; total tax, $54,140.19. Erie system—valuation, $20,180,500; for State uses, $100,902.84; for local uses, $86,378.42; total tax, $167,281.26. Delaware, Lackawanna and Western system—valuation, $39,901.22; for State uses, $66,378.42; total tax, $47,410.26. Delaware, Lackawanna and Western system—valuation, $39,901.22; for State uses, $66,378.42; total tax, $47,410.26. Pennsylvania and Western system—valuation, $7,511,953; for State uses, $37,559.68; for local uses, $7,702; total tax, $45,521.68. Lehigh Valley system—valuation, $19,888,008; for State uses, $90,440.04; for local uses, $30,440.75; total tax, $139,888.79. Railroads not classified—aggregate assessed valuation, $19,477,100; for State uses, $82,385.50; for local uses, $49,633.37; total tax, $120,020.87. Totals—aggregate assessed valuation, $223,384,249; for State uses, $1,116,021.24; for local uses, $417,090.69; total tax, $1,534,011.93.

Loan Associations.—There are 300 loan associations in New Jersey. The Insurance Commissioner reports that it is very difficult to get full returns of their business. Of the 360, 226 are locals, 12 are State, and 4 are national associations. Four associations were placed in the hands of receivers as the result of the State officials' investigation. According to the report, "the total membership of the associations is 129,131, and they hold $91,803 shares. This is an increase in membership for the year of 7,916 and of 49,582 in the number of shares held. The gross assets of all the associations is $51,125,050, and the total net
We hold that the right of suffrage should not be denied on account of sex.

The only State officers voted for were members of the Legislature. That body, in 1901, has a Republican majority in both the Senate and 50 in the House. The Republican candidates for presidential electors received 221,707 votes: the Democratic, 164,808; the Prohibitionist, 7,183; the Social-Democratic, 4,609. Six Republican Congressmen were elected and 3 Democratic.

NEW MEXICO.

The Territory of the United States, having an area of 153,500 square miles. The population, according to the last decennial census, was 61,547 in 1850; 93,516 in 1860; 91,874 in 1870; 119,565 in 1880; 153,593 in 1890; and 195,310 in 1900. Indians, not taxed, in 1900, 2,837. Capital, Santa Fe.

Government.-The Territorial officers in 1900 were Governor, Mr. A. Otero; Secretary, George H. Wallace; Treasurer, J. H. Vaughan; Auditor, L. M. Ortiz; Adjutant General, William H. Whitteman; Attorney-General, E. L. Bartlett; Superintendent of Education, Manuel C. de Baca—all Republicans. Supreme Court—Chief Justice, William J. Mills; Associate Justices, John R. McFie, Jonathan W. Crumpacker, F. W. Parker, and C. Leland; Clerk, José D. Seua—all Republicans.

Population.—The census of 1900 showed the population by counties to be as follows: Bernaalio, 28,630; San Miguel, 22,053; Santa Fe, 14,658; Rio Arriba, 13,777; Valencia, 13,695; Grant, 12,883; Socorro, 12,153; Taos, 10,889; Mora, 10,304; Dona Ana, 10,187; Colfax, 9,156; Lincoln, 4,529; Union, 4,523; Eddy, 3,229; Sierra, 3,158.

Finances.—The Territory’s 4-per-cent. bonds command a premium; $45,000 of outstanding bonds were purchased and retired in 1900. The assessed valuation in 1897 was $86,109,000; in 1899 the assessed valuation of all personal property was $98,452,181,30; the total Territorial indebtedness, including the bonded and floating debt of the counties, is $4,178,123,09.

Education.—A direct tax is levied for the support of the public schools, varying from 1½ to 3 mills, annually. Under the operation of the school laws, the illiteracy of the country is diminishing rapidly. There are 52,652 children of school age, and the total enrollment is 27,173. The number of schools is 576; of teachers employed, 706, whose average monthly pay is $39.19. The reports show that male teachers are in excess of female teachers, which is hardly true in any other section of the country. Some of the school districts are as large as counties at the East. They are poor and sparsely settled, and they have no industries to be taxed; but every district has its school, and attendance and interest are increasing. In Santa Fe the schools have been crowded.

The following is the report for 1900 of the Presbyterian mission schools at Socorro and Pajarito, in Socorros County: “The former has 1 teacher who teaches nine months a year, an enrollment of 48, an average daily attendance of 43; value of property, $600; expenditures during the year, $512. The Pajarito school has 1 teacher, a school term of nine months, an enrollment of 27, an average daily attendance of 21, a property valuation of $800, and an annual expenditure amounting to $312.”

The United States Government Industrial Indian School, at Santa Fe, opened in 1890, is a model in every respect. It became a normal school in 1894. Of the 300 pupils, 218 are boys; 67 per cent, are full-blooded Indians, about 38 per cent being Pueblos. They are comfortably and neatly

assets, or present worth of the outstanding shares, is $47,561,900.”

Manufactures.—According to the report of the Bureau of Labor, the number of manufacturing establishments considered is 1,795; of these, 513 are owned by private firms and 804 by corporations. The aggregate number of partners comprising the private firms is 1,636, and the stockholders in corporations, 28,774; the partners average in number 1.8 to each firm and the stockholders 35.7 to each corporation. The capital invested in establishments managed by private firms is $48,761,189, and by corporations $206,922,361. Average amount of capital owned by partners is $28,586, and by the stockholders $7,191. The total amount of capital invested in the 1,798 manufacturing establishments is $255,689,550. The cost value of all stock or material used is $200,901,900; the selling value of the goods manufactured is $385,465,970. The average number of persons employed (male and female) throughout the year is 158,285; the total amount paid in wages is $76,161,051.

Political.—The Democratic State Convention was held June 1. The platform denounced imperialism, expressed sympathy for the Bond, favored the organization of United States Senators by the people, and on State matters declared for reduction of official salaries, abolishment of the fee system, and the placing of all officials on a salary basis; enactment of laws in the interest of organized labor and for the protection of the wage workers of the State; repeal of all laws that abridge the right of jury trial; the capital punishment of dairymen in cases where the death of a person is caused by wrongful act; and the release of the administration of State affairs from the control of corporations, and their restoration to the authority of the people.

The Republican platform contained this declaration:

“We believe it is the duty of the President of the United States to use all the forces at his command to suppress insurrection wherever the authority of the Government is opposed; and we depurate and denounce the conduct of recurrant Americans who, by abuse of the right of free speech, give aid and encouragement to insurrection and rebellion among peoples owing allegiance to our flag.”

“When peace shall have been restored in our new possessions a Republican administration, following the traditions of the party, will give to their peoples a government under such form as will afford them the largest individual participation in their civilization and intelligence will permit.”

The platform of the Prohibitionists contained these paragraphs:

“We declare that the nullification of the anticañete enactment by the President of the United States under the hypocritical pretense of following the advice of his legal advisers, Attorney-General Griggs, in behalf of and at the behest of the liquor dealers’ association, demands the stern rebuke of every lover of his country and friend of his soldier.

“We deplore as the crime of the age the devastation caused by the liquor traffic following the flag into our newly acquired territory. We hold it to be a monstrous assumption that beer and bullets are means ordained by the will of God in the work of benevolent assimilation of foreign populations to American institutions or for the extension of Christian civilization.

“We denounce the Republican and Democratic parties as the friends, partners, and tools of the organized liquor traffic.”
dad, well fed, healthy, and happy. The boys are organized as a military battalion, under military regulations, in the tract, and much of it is under cultivation. The garden products of the pupils received high prizes at the horticultural fair. On the reservation for Apache Indians, at Jicarilla, the Government is expending large sums for buildings and irrigation.

The Military Institute, at Roswell, is the most successful of the Territorial schools, although it opened only in 1898. The school earned $11,000 in 1900, and constantly turned away applicants for lack of room. The Territory gives it $12,000 annually.

The Agricultural College, at Mesilla Park, has had an encouraging year. A deficiency of more than $8,000 was made up, and much work was done.

The University of New Mexico, at Albuquerque, is flourishing. A new laboratory was dedicated at its commencement, and the original research for which New Mexico furnishes special opportunities will be carried on under better auspices. The School of Mines at New Mexico is now substituted as New Mexico is a mining State. There are liberal legislative endowments for all these schools.

Penitentiary.—The annual report of the clerk of the First Judicial District says: "The criminal business of this district has been decreasing considerably for the past two years, and it may be successful in the future. The penalty for violation of the liquor and Sunday laws. There were 193 of such cases, and after those are subtracted, the real amount of criminal business in this district has less than 50 cases. These cases have been appealed to the Supreme Court of the Territory from this district shows the high integrity of this court."

There have been many improvements in the working of the Penitentiary. A complete, modern brickmaking plant has been added, at a cost of $18,000; several new and improved buildings. The annual report says: "About 100 are received, and about the same number liberated, every year. The number whose sentences will expire this year is 74. The prisoners are comfortably clothed, well fed, and humanely treated. Herefore the annual appropriation for maintaining the Penitentiary has never been less than $30,000. The last Legislature reduced this sum to $30,000. Yet out of this appropriation, after promptly paying employees and all running expenses, the following approximate amounts have been paid out in cash for permanent improvements and facilities: Brick machine, $5,000; drier, $8,000; iron in kilns, $1,500; steam pump and water plant, $1,000; repairs on buildings, $700; hospital improvements, $200; mules and wagons, $1,400. This leaves money on hand sufficient to add the contemplated new 80 horse-power boiler and the 100-foot brick smokestack to the electric light and brick plants, and continue the system of permanent improvements throughout the institution."

"The old method of punishment known as the 'dark cell' and stringing up by the hands which has been abolished, and the 'spanking system' has been substituted therefor. This system has worked so admirably that it has reduced the number of punishments at least 75 per cent. No convict has so far given cause for being punished a second time after having had a trial dose under this system. It seems that it is not so much the physical punishment as the humiliation that has proved effective. The Penitentiary physician is always present when punishments are administered."

The Marine Hospital.—Congress appropriated $30,000 for the remodeling of this sanitarium at Fort Stanton. This is additional to the usual appropriation. It will accommodate 200 patients.

The New Capitol.—The new building, for which $60,000 was appropriated, was dedicated in June.

Mines.—The Governor, in his report, says: "The coal and mining industry is flourishing beyond all precedent. During the year many new properties have been opened, which, along with the great activity in the gold and copper districts, has given a fresh impetus to the construction of railways. In at least four districts throughout New Mexico iron and petroleum wells have also been discovered within a few months, which are now receiving merited attention from capitalists."

"The production of coal for the fiscal year was 1,187,334 tons—an increase over the previous year of 138,300 tons—the estimated value of which was $1,187,165, being an increase in valuation of $29,577 over the fiscal year ending June 30, 1899. The total number of tons of coke made was 42,803. The total number of employees in and about the coal mines is 2,015—an increase of 135 over the previous year. Seven new mines were added to the list of producers during the year. The coal trade has been very brisk. At all the mines the operators were unable to fill more than two thirds of the orders received owing to the scarcity of miners."

"Mines of copper and gold are being developed in a remarkable manner. In this respect the year has marked an epoch in the history of the Territorial mining interests; never before has there been a rush to invest in New Mexico enterprises of this character. Many new districts have opened up good 'pay' properties; old mines have resumed operations, and, with new and approved appliances for extracting the values, the mining industry may justly be said to be exceedingly active throughout the Territory."

Banks and Revenue.—The statements of the different banks throughout the Territory show their resources at the close of the fiscal year to be $7,426,258.10. For the same period the business of the internal revenue office for the District of New Mexico amounted to $64,781.07—more than double the receipts of any previous year.

Live Stock.—The cattle inspectors report that the increase in the various sections of the Territory will run from 60 to 90 per cent. for the present year. The improvement in the grade in cattle over all previous years is especially noticeable. There were sold and delivered after Jan. 1, 1900, 80,470 head of cattle; one- and two-year-old steers at $15 to $20 a head for one, and $18 to $27 for two. During the year ending June 30, 1900, 214,053 head, mostly steer cattle, were sold and removed from the Territory, amounting to about $4,000,000, and during the same period there were brought into the Territory to remain 13,000 head, of which 5,301 were bullocks, and the remainder have been purchased by the stock raisers. The greater portion of the stock range is on public domain.

No business offers more profitable returns than does sheep raising and wool growing in New Mexi-
NEW YORK.

There has been vast improvement in the flocks in recent years; the wool grown is diversified, scaling all the way from the finest delaine merino to the coarsest carpet, though the latter is becoming less each year. The total clip for New Mexico for the year was more than 18,000. The number of sheep in the Territory is estimated to be more than 4,000,000. The vast production of wool has resulted in the establishment of other industries, such as wool-scouring and wool-pulling plants and tanneries in various parts of the Territory.

**Political.** At the annual election the Republican territorial ticket was successful by 3,710 plurality and a Republican Delegate to Congress was elected.

**NEW YORK.** A Middle State, one of the original thirteen, ratified the Constitution July 26, 1788; area, 49,170 square miles. The population, according to each decennial census, was 3,977,577 in 1800; 5,500,051 in 1850; 9,039,480 in 1870; 13,721,111 in 1890; 19,185,608 in 1910; 24,282,621 in 1940; 30,008,735 in 1960; 36,382,759 in 1970; 4,082,871 in 1880; 5,907,853 in 1890; and 7,268,012 in 1900. Capital, Albany.

**Government.**—The following were the State officers during the year: Governor, Theodore Roosevelt; Lieutenant Governor, Thomas L. Woodruff; Secretary of State, John T. McDonough; Comptroller, William J. Morgan, who died Sept. 5, 1900, and was succeeded by his deputy, Theodore P. Gilman; Treasurer, John P. J. Ahearn; Attorney-General, John C. Davies; State Engineer and Surveyor, Edward A. Bond; Superintendent of Public Instruction, Charles R. Skinner; Superintendent of Insurance, Louis F. Payn, whose term of office expired on Feb. 11, when he was succeeded by Francis Hendricks; Superintendent of Banking Department, Frederick D. Kilburn; Superintendent of State Prisons, Cornelius V. Collins; Superintendent of Public Works, John N. Partridge; Commissioner of Labor Statistics, John McMackin; Railroad Commissioners, Ashley W. Cole, George W. Dunn, and Frank M. Baker; Chief Judge of the Court of Appeals, Alton B. Parker; Associate Judges, John C. Gray, Denis O'Briin, Celora E. Martin, Edward T. Bartlett, Albert Haight, and Irving G. Vann, together with Judson S. Landon, William C. Gardner, and Edgar M. Clapp, who were judges of the Supreme Court, and were designated by the Governor, on Jan. 1, 1900, to sit in the Court of Appeals.

The term of the State officers is two years. They are elected in November of even-numbered years. The Legislature meets every year in January.

**Fines.**—The Comptroller, William J. Morgan, died on Sept. 5, 1900, and was succeeded by Theodore P. Gilman, Deputy Comptroller, who then continued in office until the close of the year. According to the report issued by Mr. Gilman, the balance in the treasury on Oct. 1, 1899, was $4,540,814.74; receipts from all sources, $32,900,885.31; total, $36,451,698.25. The payments were $32,989,802.55, distributed as follows: Canal fund, $1,190,632.36; school fund, $410,370.07; general fund, $5,290,134.63; and trust and miscellaneous funds, $3,787,065.49. The State tax rate was 1.96 (the lowest, with one exception, in over forty years), compared with 2.49 in 1899 and 2.91 in 1900. The tax rate in 1900, on $5,461,302,756 will realize as follows: General purposes, including care of insane, $8,713,685.87; free schools, $4,150,590.09; maintenance and repairs of the canals, $1,146,573.58; payment of canal debt, $709,963.36; extraordinary repairs and new work, $983,034.30; total, $10,704,153.40. The revenue for the year 1900 was $13,013,100.06. It was not necessary this year for the State to borrow money to pay expenses of the government.

**Valuation.**—The State assessors during the year were J. Edgar Leacyart, George I. Priest, who were appointed on April 3, 1899, and Lester L. Morgan, who was appointed on Jan. 10, 1899. The report of the commission for 1900 shows an increase in the assessed value of real estate of $397,744,563, and a decrease in the personal property subject to local taxation of $12,838,635; also that the total equalized value of real and personal estate has increased over that of last year by $384,905,928. This increase of $384,905,928 in the assessed value of property is largely due to advances in valuations made in New York and Richmond Counties, and to growth in all the counties comprising the city of New York. The increase of values found by the local assessors in metropolitan counties decreases the proportion of direct taxation for State purposes to be borne by the other counties. The pressures on Governor Hart's for 1900, and one half times as much of direct taxation imposed upon real estate as upon personal property.

**Legislative Session.**—The session of the Legislature began on Jan. 3, 1900, and continued until April 7, 1900. As elected, the Senate consisted of 27 Republicans and 23 Democrats and the Assembly of 92 Republicans, 56 Democrats, and 1 Independent Democrat, with a vacancy caused by death.

Timothy E. Ellsworth was continued as President pro tem. of the Senate, and Samuel F. Nixon was again chosen Speaker of the Assembly. Of the bills passed by the Legislature, 775 were approved by the Governor.

Among the more important measures that received the signature of the Governor were the following:

Authorizing the State tocede to the United States Government a part of Hart's island, in the harbor of New York, for a lighthouse and signal station.

Appropriating $80,000 for the Quarantine Commission for reclaiming land and erecting a building for cabin passengers at Hoffman island.

Providing for an additional justice of the city court of New York city and additional attendants.

Defining the jurisdiction of the commissioners of deeds within the Greater New York and ratifying certain acts performed by them.

Appropriating $39,000 for expenses incurred in the prosecution of the violators of the election law in the metropolitan election district, the Gardiner investigation, and the Brooklyn Rapid Transit investigation.

Amending the election law to provide that inspectors of election in New York city shall receive $7.50 for each registration day and revision of registration for special elections; $7 for Election Day and $5 for count of votes; poll clerks shall receive the same as inspectors for count of votes, and ballot clerks $8 each.

To permit the county treasurer of any county and the comptroller as for New York city, with the consent of the State Comptroller, to settle transfer tax suits on certain estates.

Authorizing New York city to raise $10,000 to pay the back salary or per diem compensation of city employees who enlisted in the army or navy during the war with Spain to which they would
have been entitled if they had remained in the employ of the city.

Reminding that chattel mortgages shall be filed in Greater New York as follows: In the borough of Brooklyn, in the office of the county clerk of Kings; in Queens, in the office of the county clerk of Queens; in Richmond, in the office of the clerk of Richmond County; and in the borough of Manhattan and the Bronx, in the office of the registrar of the city of New York.

Giving to New York city authority to construct sewage-disposal plants.

Amending the law providing for the construction of a bridge over the Harlem river from 145th Street, borough of Manhattan, to East 149th Street in the borough of the Bronx, at a cost of $12,000,000.

Making it a misdemeanor to violate any of the provisions of the act relating to inspections of steam boilers and licensing of engineers in New York city.

Exempting the New York Society for the Prevention of Vice from the public library in Bryant Park.

Authorizing New York city to expend $300,000 to improve that portion of Bronx Park set apart for the New York Zoological Society when the society shall have raised or expended $200,000 for said purposes.

Authorizing the expenditure by New York city of $250,000 for equipping the buildings occupied by the American Museum of Natural History in Central Park.

Authorizing New York city to expend $200,000 on the Zoological Gardens.

Amending the law authorizing New York city to appropriate $50,000 to aid in the erection of a monument in memory of the prison ship martyrs.

Appropriating $25,000 for a monument in Brooklyn to the memory of those who died in the British prison ships in New York harbor during the American Revolution.

For the turning over of the Homoeopathic Hospital in Brooklyn to the city of New York, and compelling the city to maintain it as a public hospital.

Authorizing the acquisition of adjacent territory to form a Greater Troy.

Incorporating the city of Cortland.

Ceding to the United States Government jurisdiction over certain lands under the waters of Lake Erie at Buffalo.

Amending the liquor tax law by making more stringent the penalties for evasions.

Amending the banking law in relation to the appointment of a corporation as guardian of an infant.

Amending the criminal code so as to provide that upon a trial for murder or manslaughter, if the act complained of is not proved to be the cause of death, the defendant may be convicted of assault in any degree constituted by the act and warranted by the evidence.

Amending the election law by providing for additional ballot boxes at town meetings.

Amending the membership corporations law to provide that the body of a widow may be buried in a burial lot of which her husband died possessed and in which his heirs continue to have right of burial, without consent of any person claiming an interest in such lot.

Providing that the Appellate Division of the Supreme Court may order the reversal of a judgment where it is contrary to the weight of evidence.

Amending the religious corporation law to provide that the trustees of Protestant Episcopal churches shall not make application to court for leave to sell or mortgage any of their real property without consent of the bishop and standing committee of the diocese.

Abolishing coroners' fees for inquests, but providing for fees for the drawing of decisions in a coroner's jury cases.

Giving a surrogate the power to determine the sufficiency of the bonds of guardian.

Amending the labor law by requiring hotel and restaurant proprietors to furnish seats for waitresses.

Providing that any agricultural society, club, or exposition which shall permit the use of any gambling outfit on fair grounds shall forfeit the moneys received from the State under the agricultural laws.

Prohibiting persons from transacting business in this State under an assumed name unless they shall file with the county clerk a certificate setting forth the name to be used.

Securing equal rights to colored children in the public schools, and abolishing separate schools.

Appropriating $50,000 to continue the promotion of sugar-beet culture.

Prohibiting the sale of impure, adulterated, colored, or unwholesome cream.

Relative to experiments, at the experimental station, in the application of artificial spraying mixtures to fruit trees while in bloom.

Furnishing life-saving apparatus and appliances along the shores or banks of streams in cities, towns, and villages.

Restricting the State into three sections, to be known as the eastern, western, and middle sections, providing for the New State Board of Examiners of Pharmacy, and regulating the drug trade generally.

Appropriating $100,000 for the erection of the New York State Building at the Pan-American Exposition.

Abolishing the office of State Superintendent of the Adirondack Land Survey.

Appropriating $250,000 for continuing the acquisition of land in the Adirondack Park, and for the extension of the Forest Preserve.

Authorizing the State Engineer and Surveyor to continue to co-operate with the Director of the United States Geological Survey in making a topographical survey of the topography of the State, and appropriating $20,000 therefor.

Appropriating $50,000 for the establishment of a State hospital in the Adirondacks for treatment of incipient pulmonary tuberculosis.

Extending to all honorably discharged soldiers and sailors of the United States the provisions of law appropriating public money for burial which have heretofore been applicable to civil war and Mexican War veterans only.

Appropriating $51,534 for new buildings and improvements to the New York State Woman's Relief Corps Home, at Oxford.

Permitting the establishment of pleasure resorts on reservoir lands and islands owned by the State, with the consent of the State Land Board.

Appropriating $3,500 for the improvement and care of lands known as the "Stony Point Peninsula."

Appropriating $15,000 for the acquisition of lands by the State Comptroller to commemorate the battle of Lake George.

Authorizing the New York, Gettysburg, and Chattanooga Battlefield Commission to locate the positions where the Forty-sixth, Fifty-first, and Seventy-ninth Regiments, New York Infantry,
and Battery L, Second New York Light Artillery, fought at the siege of Vicksburg, for the purpose of erecting suitable monuments, and appropriating $1,000.

Making an additional appropriation of $5,000 for the equestrian statue of Maj.-Gen. Henry W. Slocum, to be erected on the Gettysburg battlefield.

Appropriating $11,000 to erect a bronze group of statuary, representing Reconciliation, on Lookout mountain.

Appropriating $1,000,000 for improvements at the State hospitals for the insane.

Repealing the section of the penal code which permitted a woman convicted of felony to be sent to a reformatory for women when the sentence was less than one year, and further amending the code by providing that a woman between fifteen and thirty years of age may be sent to a reformatory.

Making it a misdemeanor for any unauthorized person to wear badges of the Military Order of Foreign Wars of the United States or the badge of Spanish War veterans.

Providing $50 fine for a first offense and $150 fine for subsequent violations for watering milk furnished to butter and cheese factories conducted on the co-operative plan.

Making it a misdemeanor to stamp collars and cuffs as linen unless they are made of that material.

Making it a misdemeanor to manufacture gunpowder or any other explosive in a dwelling house.

Making it a misdemeanor to sell or give a toy pistol in which blank cartridges are used to any person under sixteen years of age.

Making it unlawful to possess the plumage or skins of wild and song birds for commercial purposes.

Providing that deer shall not be taken at any other time than between daylight and sunset on Long Island, on the first two Wednesdays and the first two Fridays of November.

Providing that on our northern water boundaries, including the Great Lakes and the St. Lawrence River, no nonresident shall take any kind of fish or game within our boundary line unless residents of this State may lawfully take the same kind of fish or game in the waters within the boundaries of the place where such nonresident lives.

Providing that any person who shall omit, neglect, or refuse to obey a subpoena issued by the State Superintendent of Elections or his chief deputy is guilty of a misdemeanor, and one who makes a false statement is guilty of perjury.

Providing that the enrollment of voters at primaries shall be secret, and that the enrollment blanks shall be distributed in envelopes.

Providing that any person who solicits from a candidate for an elective office money or other property as a consideration for a newspaper or other publication supporting any candidate for an elective office is guilty of a misdemeanor.

Providing that the election of committees to fill vacancies in nominations shall take place at the primaries and not at a party convention.

Compelling the publication of lists of tax exemptions in the cities by the local assessors. The assessors’ statements must show separately each piece or parcel of real estate exempted, the name of the owner, its value, and the reasons for the exemption.

Amending the tax law so as to provide that every foreign bank doing business in the State shall pay an annual tax to the Treasurer of 5 per cent. on the amount of interest earned on money loaned.

Fixing the salary of the members of the State Board of Tax Commissioners at $3,000 each, authorizing a secretary at $3,500 and six special agents.

Amending the taxable transfer act relative to the refunding of moneys which the courts have held to have been erroneously assessed by the State.

Appropriating $49,350 for the expenses of the State Tax Commission in performing duties connected with the franchise tax law.

Providing that when taxes levied on a cemetery lot remain unpaid for five years, the amount, with interest, shall be a lien on the unused portion of the lot.

Incorporating the New York State Medical Association.

Providing that stockholders owning two thirds in amount of a corporation’s capital stock may vote to extend its existence.

Permitting the granting of liquor tax certificates to the Pullman Palace Car Company and other foreign corporations. No owner of a mortgage debt ought to be allowed to deduct his indebtedness because the rate is low compared with the rate which the owner of real estate must pay, and which the owner of other personality is liable to pay.

A tax of 1 per cent. upon the stock of national and State banks and trust companies. The value of the share of the capital stock, together the capital stock, surplus, and undivided profits of such institutions, and deducting therefrom the assessed value of their real estate, which is to continue to be assessed locally.

The per cent. tax upon the institutions named will realize $3,000,000, and, taken together with the mortgage tax, will furnish to the State, together with its present revenue, about $25,000,000, which sum is adequate for the support of the State Government. The shareholders in State and national banks and trust companies should not be taxed for local purposes, nor should any deduction from the value thereof be allowed because of the debts of the individual owner.

Banks.—The superintendent’s report for the year ending Sept. 30, 1900, shows that the total resources of the institutions, as given by their reports, are as follow: Banks of deposit and discount, Sept. 1, 1900, $351,050,232; savings banks, July 1, 1900, $1,037,869,160; trust companies, July 1, 1900, $66,482,587; safe deposit companies, July 1, 1900, $5,297,903; foreign mortgage companies, Jan. 1, 1900, $5,236,422; building and loan associations, Jan. 1, 1900, $663,073,759; total, $3,292,002,415. This is an increase of $115,018,545 over last year. The number of savings banks was diminished by one during the year.
NEW YORK.

419

Census.—The following shows the population of the State by counties, as determined by the national census of 1900, compared with the population for 1890:

Total: 5,067,833  7,307,407  1,570,574

$280,935; number of certificates of all kinds issued during the fiscal year, 31,530; number of certificates in force Sept. 30, 1900, 7,274; ratio of expense collection to gross amount collected, 2.66 per cent. Besides the transactions of the fiscal year, the report gives a review of excise matters for the past five years, and briefly discusses the question of liquor in the interests of good order and morals. The report also says: "The law has from time to time been amended to meet apparent defects, more particularly in its administrative features, until it is now working smoothly and satisfactorily. No radical change in its main features or general scope has been made, nor are any such changes desirable."

Education.—The superintendent's report for 1900 shows that there was expended in support of the public schools $33,421,401.37, an increase over the previous year of $5,368,500.88, about $4,500,000 of which is shown in New York city alone. There was paid for teachers' salaries $19,281,806.53, and the average daily attendance for public schools to teachers was $904.78. There were employed 31,768 teachers, an increase of 1,209. Of the 1,569,653 pupils of school age residing in the State, 1,200,574 attended public schools some part of the year and 163,946 attended private schools. This shows that 88 per cent. of all children of school age in this State were enrolled in a public or private school some part of the year. The report shows that there were 217 fewer men employed in the teaching force of the State than during the previous year, while there were 1,703 more women. The increase in the value of school property is reported as $6,014,580. The entire public school property is valued at $81,768,483. The annual amount of the State Board of Regents shows that the total number of schools was 750, of which 104 are incorporated academies, 563 high schools and academy departments. During the year ending July 31, 1900, 24 academic departments were admitted, and 6 academies were chartered. The number of secondary schools has increased 10 per cent. in the past ten years. There were employed in secondary schools 1,369 men and 2,510 women. There were 34,103 boys and 42,260 girls instructed in secondary institutions, a total of 79,365 students, which was an increase of 9,589, or 13.7 per cent. The total property of secondary schools is $285,412,184, and the expenditures by the schools during the year was $60,536,374. The total amount apportioned to secondary schools was $212,607 and 672 schools took examinations, while 511,020 examination papers were written, of which 345,117 were accepted, 29,275 being rejected. The report of the public library division contains returns from 1,635 libraries. Of these 460 free for lending to the public, and containing 2,187,125 volumes, circulated last year 8,402,445 volumes. The free libraries lent to the people an average of 23,157 books daily, 1,163 for each 1,000 of the population, 385 for each 100 books in the libraries.

Charities.—These are under the care of a board, whose annual report is prepared from the sworn statements of the responsible officers of the charitable institutions, societies and associations subject to the board's supervision. This board consists of 12 members. During the year the board visited and inspected all the institutions, societies, and associations, more
than 500 in number, within its jurisdiction, pointing out to the authorities of such institutions any evils, defects, or abuses requiring remedy, the result of which has been the improvement of several public and charitable institutions; and the board reports that for the most part such institutions are in good condition, comparatively free from serious evils, and rendering beneficent public service. An important feature of the work is that which relates to institutions for the care of dependent children. There are such in receipt of public monies, and their inmates number nearly 30,000. More than 15,000 children were discharged from such institutions during the year.

Prisons.—According to the Governor's message, the number of prisoners confined in various prisons during the year averaged 3,576. The expenditure for their maintenance was $490,528.02. A larger appropriation for care and maintenance will be required for 1901, as the Eastern New York Reformatory, at Napano, will come under the charge of the department. It has been found that approximately 1,000 prisoners have been engaged in productive industries. The others have been employed in the work upon public and private industries. The superintendent reports the structures at Sing Sing and Auburn as unsanitary, and in such condition as to prevent the application of a comprehensive scheme of gradation and classification of the prisoners, and the attainment of reformatory results that might be obtained if proper buildings were provided. The adoption of the method of measurement, which has been perfected under the present superintendent, not only renders it much easier to detect and identify a criminal who has previously served a term of imprisonment, but also makes possible the enlargement to a greater degree of the scope of the law which was passed last year, permit to fix indeterminate sentences.

Labor Statistics.—The commissioner's report shows that at the close of 1899 there were 224,383 trade-union members in the State, an increase of 49,360. In Greater New York there were 152,860 union members, against 125,136 in 1898. According to labor laws, the report says that New York is in the lead, and probably in advance of other States in regard to the eight-hour work day and the prevailing rate of wages for public employees or employees of contractors on public works. The New York State Free Employment Bureau, at 30 West 29th Street, did an increased business in the year. In the last quarter the number of applicants for work was 1,420, and there were 714. Employment was procured for 598 persons, an increase of 22 per cent. The number of immigrants to the United States in the last quarter of 1899 through the port of New York was 74,892, an increase of 23,012 over the corresponding quarter for 1898.

Public Works.—The report of the State Engineer and Surveyor shows that one of his principal duties was the making of a survey and plans and estimate for a barge canal across the State, for which $200,000 was appropriated. This survey was completed, and the results will be presented to the Legislature in February, 1901. The topographical survey of the State was continued in co-operation with the United States. The results are published in sheets 12 by 18 inches, showing about 12 miles by 18 miles, so that 240 sheets will cover the State. Of these, 102 are completed and published, 15 sheets are mapped and in the hands of the engravers, 26 are surveyed and in the hands of draughtsmen, and of the remaining 97 three quarters are triangulated and are ready to be surveyed. The State Engineer also had charge of the survey, design, and construction of good roads under the Highie-Armstrong law of 1898, under which law $250,000 has been appropriated, during the three years it has been in force. Twenty-three show almost the total cost of $250,000, 53½ miles. In addition, 131 petitions have been received from 27 counties for an aggregate of 800 miles, of which surveys and estimates have been made or are in progress; for 80 roads in 23 counties, aggregating 406 miles, and showing an average cost of $1,500 per mile.

Canals.—The Superintendent of Public Works, in his report for 1900, shows that his policy of reconstructing the towing path by grading, graveling, and rolling, was continued during the year, with the result that the towing path from end to end of the Erie and Champlain Canals is in better condition than for many years. The Legislatures of 1899 and 1900 made appropriations, authorizing a large number of improvements, such as the construction of bridges and the building of dikes, and the superintendent has succeeded in getting almost all this special work either completed, under way, or under contract to be completed at an early date. The department has under construction work on about 140 miles of canals, reaching from Waterford, West Troy, Minden, Utica, Rome, Syracuse, Rochester, Lockport, and other places. Some of these bridges call for an expenditure of more than $75,000. The superintendent, as a member of the Canal Board, devoted much time to the consideration of claims against the State growing out of the canal improvements, and also to the running down of the marauders who have made a business of destroying State property that they might profit by patronage of the forces engaged in making the repairs. He secured the indictment of 15 men, most of whom have been tried and convicted.

Fisheries, Forests, and Game.—A. N. Cheney, State fish culturist, acting under the direction of the commission distributed, in the various waters 219,135,198 fish, as follows: Whitefish, fry, 40,175,000; tooncod, fry, 42,000,000; pickerel, fry, 50,525,000; trout, fish, 3,405,000; lobsters, fry, 2,400,000; mussels, fry, 1,200,000; wall-eyed pike, fry, 300,000. Brook trout, fry, 3,581,000; fingerlings, 152,983; yearlings, 95,229; two years old, 10,349; three years old, 1,091,000; fingerlings, 108,253; yearlings, 48,825. Rainbow trout, fry, 120,000; fingerlings, 98,109; yearlings, 40,000. Lake trout, fry, 8,772,500; fingerlings, 201,900; yearlings, 13,355. Red trout trout, fingerlings, 62,750; yearlings, 38,800. Land-locked salmon, fry, 2,400; yellow perch, fry, 4,900; shrimpin, fry, 3,200; black bass, small mouth, Shad, Hudson river (from the United States), 90, 280,000; latched at Catskill, 2,870,000; latched at Long Island, 365,000. Total, 168,262,900. Eggs and fish fry and yearlings were furnished by the United States Fish Commission as follows: Eggs, 400,000; fish fry, 50,428,000; yearlings, 23,280. Total, 50,872,280. In 1900 the State acquired title by purchase to
105,229.37 acres in the forest preserve, and 1,901.25 acres by reestablishment of canceled tax sales, and lost by cancellation and redemption 736.66 acres, leaving an aggregate holding at the close of the fiscal year of 1,307,067.70 acres. Of this, 1,290,987 acres are in the Adirondack preserve. The average price for the purchases was $3.04 an acre. To locate and secure the tract of 30,000 acres to be used by the State College of Forestry was $82,653 or expended. In 1900 the game protectors destroyed 2,615 illegal devices for the capture of fish and game, which were valued at $30,412.35, and the department prosecuted 357 offenders against the fish and game laws, securing 336 convictions. There were also 53 cases of trespass on State lands, which were taken into court and convictions secured.

Railroads.—According to the report of the commissioners for 1900, the steam surface roads earned in the gross $27,060,556 more than in 1899, and their net earnings were $10,242,410 more than in 1899. The capital stock increased $82,144,100 over 1899, so that at the close of the year it increased $3,584,498.50 over that for 1899. The percentage of dividends to capital stock was 2.52, compared with 2.43 in 1899. The average freight earnings per ton per mile increased 0.013 cent, and the average freight expenses per ton per mile decreased 0.007 cent. The number of accidents on the steamer-in and steam surface railroad was 671 killed and 1,374 injured. The number of passengers carried was 73,846,114, and one passenger was killed for every 2,930,764 carried. The number of passengers carried on all the street surface roads, including the few remaining horse railroads and the elevated roads in Brooklyn, was 1,801,974,097, an increase of 122,084,093. The number carried in the Brooklyn street elevated railroad was 3,571,144,099, an increase of 57,829,883. The number carried in Brooklyn, including transfers, and including those that were carried by the elevated railroads, was 323,229,639, an increase of 45,584,744. The total number of passengers carried by the Manhattan Railroad was 180,641,500, and the average wages per passenger was $1,916.985,907.05. The companies owned or operated 5,098 electric and cable box cars, 3,066 electric and cable open cars, 23 air motor box cars, 22 electric mail cars, 626 electric and cable freight, express, and service cars. There were 2,437 other cars in operation.

The care of the insane is in the charge of a commission that consisted of Peter M. Wise, president (who was removed by Gov. Roosevelt on Dec. 20 for malfeasance in office), William C. Osborn, and William L. Parkhurst. Their report shows that on Oct. 1, 1900, there were 22,988 inmates in the State hospitals, against 21,435 in 1899; 29,395 inmates in the State hospitals for the year at $83,599,631.50, or at the rate of $165.38 per capita, against $187.42 for 1899. This decrease was brought about by reduction in the number of employees, and has not caused any serious impairment in the proper administration of the hospitals. The total expenditures for maintenance of the State hospitals for the year was $662,049.90. The commission reported that they had $20,900,000 invested in buildings and equipments. The commission returned to their homes in other States and countries 115 non-resident and alien patients, at a cost of $4,541.56. The commission has collected $1,378 from the relatives of insane patients liable for their support, and, in addition, has received from private or so-called "bond" cases $37,333.13.

National Guard.—The Adjutant General reported at the close of the year that all organizations of the National Guard and Naval Militia were well recruited and that active service with the exception of the hospital corps of the various commands, and the supplying of this branch of the service with the best obtainable equipment was being rapidly advanced. Gen. Charles F. Roe reported the aggregate strength of the National Guard on Sept. 30, 1900, to be 14,251, divided as follows: Commissioned officers, 367; enlisted men, 13,396. His report says: "A grand total of 10,164 enlisted men and seamen qualified in general and supplementary practice, the same being 83.74 per cent. of the number practicing. The condition of the Guard is much improved since the last report, with the exception of a few organizations. Attention paid to the detailed work, books, and internal discipline and the increase of field service and practice marches by the organizations in camp this year was satisfactory. Capt. J. W. Miller, commanding the Naval Militia, reports that he is able to say that the city of New York has decided to construct an armory on the Brooklyn water front at the foot of 43d St. The plan for this armory is considered by the city authorities, and a portion of the building will be erected during the winter. With some reluctance and after full consideration, and with the approval of the Governor, it was deemed advisable last summer to forego the tour of duty on the vessel provided by the Navy Department for the training of the various States, and to give our instruction in home waters under our own officers."

Civil Service.—The report of the commissioners for 1899 shows that the number of appointments was 2,652, divided as follows: Exempt class, 124; competitive class, 421; noncompetitive class (not limited to clerkships in the State hospitals and institutions), 1,564; after non-competitive provisional examination, 42; without examination, 501. The number of removals was 304, as follows: Exempt class, 10; competitive class, 48; noncompetitive class, 246. The number of resignations was 1,589, as follows: Exempt class, 221; competitive class, 1,318. The number of deaths was 38, divided as follows: Exempt class, 6; competitive class, 24; noncompetitive class, 8. The number of transfers was 40 and the number of promotions 196. The report says: "For the first time since the passage of the civil service law, in 1883, every one of the twenty cities of the State, and some of the counties, possesses regular prescribed rules and a classification of its civil service. On June 16, 1900, the commission extended the rules so as to include places in the civil service of the counties of Erie, New York, Kings, Queens, and Richmond. This action brought under the jurisdiction of the commission about 1,500 employees, making the number of places now subject to the State civil service rules about 9,000."

Historian. The work of publishing the early records of the State was continued during the year, and in the War of the Revolution Series three volumes of the Public Papers of George Clinton, first Governor of New York, were issued. The first of these volumes is the "New York Political Papers," and it is a continuation of the State Historian, and gives the military papers of Clinton for the years 1775, 1776, and 1777. Vol. II carries the record from June, 1777, to March, 1778, while the final volume ends with papers
dated in September, 1778. On many points of historical interest these papers throw much light, and they add greatly to our knowledge of the participation by the Empire State in the events of the time of the Revolution. Of corresponding value are the three volumes entitled New York at Gettysburg, by William F. Fox, which constitute the final report of the State's Monument Commission. Illustrations of the monuments are given, and it tells how the New York State monument cost $60,000. A month in 1890 $140,000 had been appropriated for monuments and tablets, together with $10,000 for sites. In 1890, an appropriation of $1,525 was made; in 1893-94, $77,034; and in 1894 and 1895, $7,500.

The Palisades.—The commission appointed at the instance of Gov. Roosevelt by the Hon. A. H. Green, president of the Society for the Preservation of Scenic and Historic Places and Objects, to act in behalf of New York State in connection with a like commission of New Jersey, appointed by act of Legislature, for the preservation of the Palisades, has accomplished its purpose, and its action is thus reported by Gov. Odell: "I desire to commend to your careful attention the report of the commissioners, and urge your action on their request for financial support in a spirit of liberality commensurate with the importance of the undertaking and the great public interest therein. I am able to say that the $10,000 appropriated for the purpose of defraying the expenses of the commissioners in perfecting surveys and maps have been used entirely as the nucleus of a fund for acquiring and closing down the most destructive of the quarries. Blasting at these quarries stopped on Christmas eve, in accordance with the provisions of option contracts binding until June 1 next [1901]. The commissioners are securing options on several miles of the Palisades, and have obtained subscriptions amounting to more than $120,000."

Lake George Battle Park.—In accordance with an act of the Legislature, the State Comptroller, on Sept. 12, completed the purchase of 25 acres at Lake George. This property includes the site of a battlefield of the French and Indian War, and is to be added to the State park in the locality, purchased in 1898 for the purpose of establishing a State park on the historic ground. That property covered about 10 acres, and a substantial house, to be used as a museum, stands upon it. The new purchase transferred to the State cost $12,100, which amount was covered by an appropriation of $6,000. A monument in memory of the troops who fell on that field will be erected by the Society of Colonial Wars.

Political.—A Republican State convention was held in Saratoga Springs, Sept. 4-5, which was called to order by Benjamin B. Odell, Jr., who nominated Timothy L. Woodruff as temporary chairman, while for permanent chairman N. Strahanan was chosen later. The platform called attention to the continued prosperity of the nation, denied that imperialism was an issue, called attention to the lower tax rate, referred to the record of the administration of President McKinley and the nomination of Gov. Roosevelt. The laws enacted for the just protection of the workmen were indicated, the methods by which the interests of the farmers had been fostered were mentioned, and civil service reform, the National Guard, and white-collar consideration by the administration of President McKinley and the nomination of Gov. Roosevelt were approved. In closing it contended that, covering the whole period of the seven years of its control of the State Government, the Republican party points to a record during which the charge of maladministration, corruption of any of its officials. It is a record of progress and good government; of promises kept, not of pledges broken." The following candidates were then nominated and were chosen by acclamation: For Governor, Benjamin B. Odell, Jr., of Orange; Lieutenant Governor, Timothy L. Woodruff, of Ulster; Comptroller, William J. Morgan, of Erie; Treasurer, John P. Jaeckel, of Cayuga; Attorney-General, John C. Davies, of Oneida; State Engineer and Surveyor, E. A. Bond, of Jefferson. A Democratic State convention was held in Saratoga Springs, Sept. 11, 12, for selecting candidates for the State officers. The nomination was made by Frank Campbell, who presented the name of Patrick H. McCarran as temporary chairman. Later George Raines was named as permanent chairman. The platform ratified the nomination for the presidency of William J. Bryan, condemned the ice trust, opposed the increase of State commissions, favored the taxing of probate franchises, and denounced the public lands policy and the public canal policy, urged repeal of the election law for New York city, favored a practical civil service law with preference for veterans, and closed with an appeal to the patriotism and intelligence of the voting population to support, in State and nation, the party whose cardinal principles were: law and order, a spirit of efficiency, a demand that all, special privileges to none; peace, commerce, and honest friendship with all nations, entangling alliances with none; home rule, individual liberty, common sense civil service, honest pay for honest toil, and the lowest possible taxation consistent with efficient administration." The nominations for Governor were: John B. Stanchfield, of Che- mung; Bird S. Coler, and William F. Mackey, and a ballot showed the following vote: Stanchfield, 294; Coler, 154; and Mackey, 1. The remaining nominations were made by acclamation: Lieutenant Governor, William F. Mackey, of Erie; Secretary of State, John T. Norton, of Rensselaer; Comptroller, Edwin S. Atwater, of Dutchess; Treasurer, John H. Reichard, of Oneida; Attorney General, Thomas F. Conway, of Clinton; Engineer and Surveyor, Russell R. Stuart, of Onondaga.

The election, Nov. 6, resulted in the success of the ticket containing the Republican presidential electors by a vote of 821,992 against 678,356 for the Democratic ticket. On the State ticket, Odell received 804,550 votes against 633,723 votes for Stanchfield. The entire State Republican ticket was elected as nominated except the Comptroller, John J. Morgan, who died on Sept. 5, 1900, and to fill whose place Erastus C. Knight was chosen by the Republican State Committee. Thirty-four Representatives to Congress were elected, and of these 21 were Republican. Of the 13 Democrats chosen, 11 were from New York City, 1 was from
NEW YORK CITY.

BUFFALO, and 1 from Westchester County. A new Legislature was chosen, including in the Senate 35 Republicans and 15 Democrats, and in the Assembly 105 Republicans and 45 Democrats.

NEW YORK CITY. Government.—The city officers during the year were: Mayor, Robert A. Van Wyck; President of the Council, Randolph Guggenheimer; Borough Presidents—Manhattan, James J. Coogan; Brooklyn, Edward M. Groul; Bronx, Louis F. Haffen; Queens, Frederick Lowley; and Richmond, George Cromwell, all of whom are Tammany Democrats and took office on Jan. 1, 1898, except Mr. Coogan, who took office on Jan. 5, 1899. Also there are the following county officers: County Clerk, William Sohmer; Sheriff, William F. Grell; and Register, Isaac Fromme, all of whom are Tammany Democrats and took office on Jan. 1, 1898, except the sheriff, who took office on Jan. 1, 1900.

FINANCES.—The condition of the debts of the city of New York, including the boroughs of Manhattan, the Bronx, Brooklyn, Queens, and Richmond, on Jan. 1, 1901, is shown in the following statement:

A. FUNDED DEBT OF THE CITY OF NEW YORK AS NOW CONSTITUTED, ISSUED SUBSEQUENT TO JAN. 1, 1898.

1. Payable from the sinking fund of the city of New York under the provisions of section 336 of chapter 376 of the Laws of 1897. $69,521,551 85
2. Payable from the water sinking fund of the city of New York under the provisions of section 10, Article VIII, of the Constitution of the State of New York, and section 306 of chapter 376 of the Laws of 1897. 10,348,343 00
3. Payable from assessments. 5,988,225 94
4. Payable from assessments. 1,967,124 08
5. Payable from the rapid transit sinking fund under the provisions of chapter 4 of the Laws of 1881 as amended. 1,000,000 00

$88,256,654 87

B. FUNDED DEBT OF THE CITY OF NEW YORK AS CONSTITUTED PRIOR TO JAN. 1, 1898.

Boroughs of Manhattan and the Bronx, City of New York.

1. Payable from the sinking fund for the redemption of the city debt (first lien) under ordinances of the Common Council. $599,200 00
2. Payable from the sinking fund for the redemption of the city debt (second lien) under the provisions of section 313 of chapter 376 of the Laws of 1897. 9,700,000 00
3. Payable from the sinking fund for the redemption of the city debt under the provisions of section 299 of chapter 376 of the Laws of 1897. 107,573,142 23
4. Payable from the sinking fund for the redemption of the city debt under the provisions of section 1 of chapter 76 of the Laws of 1889. 9,823,100 00
5. Payable from the sinking fund for the redemption of the city debt No. 2 under the provisions of the constitutional amendment adopted Nov. 4, 1884, and of section 10, Article VIII, of the Constitution of the State of New York. 41,977,000 00
6. Payable from taxation. 21,511,250 00
7. Payable from assessments. 8,602,236 21

New York County.

8. Payable from taxation. 2,379,200 00

$200,075,428 44

C. FUNDED DEBT OF CORPORATIONS IN THE BOROUGH OF BROOKLYN, INCLUDING KINGS COUNTY, ISSUED PRIOR TO JAN. 1, 1898.

City of Brooklyn, including Annexed Towns.

1. Payable from the sinking fund of the city of Brooklyn under the provisions of chapter 488 of the Laws of 1890 and amendments thereof. $8,697,000 00
2. Payable from the sinking fund of the city of Brooklyn under the provisions of chapter 572 of the Laws of 1880 and chapter 43 of the Laws of 1881. 2,300,000 00
3. Payable from the sinking fund of the city of Brooklyn under the provisions of chapter 648 of the Laws of 1885. 7,065,567 41
4. Payable from the water sinking fund of the city of Brooklyn under the provisions of chapter 386 of the Laws of 1859, and acts amendatory thereof and supplementary thereon. 14,065,749 76
5. Payable from assessments. 24,017,384 93
6. Payable from assessments. 6,397,572 00

Kings County.

7. Payable from taxation. 13,767,262 83

$76,890,666 93

D. FUNDED DEBT OF CORPORATIONS IN THE BOROUGH OF QUEENS, ISSUED PRIOR TO JAN. 1, 1898.

Corporations other than Queens County.

1. Payable from the sinking fund of Long Island City for the redemption of revenue bonds under the provisions of chapter 78 of the Laws of 1895. $660,000 00
2. Payable from the sinking fund of Long Island City for the redemption of revenue bonds under the provisions of chapter 129 of the Laws of 1894. 35,000 00
3. Payable from the sinking fund of Long Island City for the redemption of water bonds under the provisions of chapter 239, Laws of 1896. 19,000 00
4. Payable from the sinking fund of Long Island City for the redemption of water bonds under the provisions of chapter 219, Laws of 1897. 705,000 00
5. Payable from assessments. 6,960,816 68
6. Payable from assessments. 1,375,737 90

Queens County, amount to be borne by the City of New York.

6. Payable from taxation. 3,772,346 39

12,888,450 87

E. FUNDED DEBT OF CORPORATIONS IN THE BOROUGH OF RICHMOND, INCLUDING RICHMOND COUNTY, ISSUED PRIOR TO JAN. 1, 1898.

Corporations other than Richmond County.

1. Payable from taxation. $1,390,698 28

Richmond County.

2. Payable from taxation. 1,824,000 00

2,844,698 28

Total funded debt. $389,908,890 89

TEMPORARY DEBT.

Issued in anticipation of taxes of 1900. $2,107,600 00

2,107,600 00

Total bonded debt. $389,018,490 39
SUMMARY.

Total gross funded debt
Less amount held by the commissioners of the sinking fund on account of sinking fund No. 1
Less amount held by the commissioners of the sinking fund on account of sinking fund No. 2
Less amount held by the commissioners of the sinking fund on account of sinking fund of the city of New York

Less amount held by the commissioners of the sinking fund on account of the water sinking fund of the city of Brooklyn
Less amount held by the commissioners of the sinking fund on account of the sinking fund of Long Island City for the redemption of revenue bonds
Less amount held by the commissioners of the sinking fund on account of the water sinking fund of the city of Brooklyn.

Net amount funded debt

Revenue bonds
Net bonded debt

In the year bonds and corporate stock of the city were issued as follows: For public buildings, $9,724,309.68; for public parks, $3,315,196.98; for bridges, $5,317,000; for repayment and improvement of roads, drives, etc., $3,010,200; for water supply, $8,450,000; for docks, $3,374,705.46; for soldiers’ and sailors’ memorial arch, $202,000; for street cleaning, $50,000; for rapid transit railroad, $1,000,000; for Police Department, $136,389.71; for opening and widening streets, $2,508,211.10; for refunding matured loans, $700,000; for local improvements, $17,183.35; for street improvements, $350,000; special revenue bonds, $3,388,343.04; a total of $2,952,354.22. The tax rate adopted by the Municipal Assembly on Aug. 15 was, for Manhattan and Bronx, $2.24 for each $100 of assessment. The rate for 1899 was $2.48. For Brooklyn the rate was $2.32; Queens, $2.54; and Richmond, $2.22.

Board of Estimate and Apportionment.

This body consists of the Mayor, the President and Secretary of the Department of Taxes and Assessment, the Comptroller, the President of the Council, and the Corporation Council. This board allowed the following-named amounts for 1901: The Mayorality and Bureau of Licenses, $63,755; Municipal Assembly, $200,052; Department of Finance, $2,952,354.22; Department of Public Improvements, $299,500; Department of Highways, $2,178,144.67; Department of Sewers, $801,350.67; Department of Bridges, $431,728.25; Department of Public Buildings, Lighting, and Supplies, $3,904,809; Department of Water Supply, $1,525,219.17; Department of Parks, $1,802,388.45; Department of Highways, $2,178,144.67; Department of Police, $1,053,590; Police Department, $1,438,583.42; Department of Street Cleaning, $5,901,922.27; Fire Department, $4,381,485; Department of Buildings, $5,146,262; Department of Taxes and Assessments, $334,450; Board of Assessors, $42,

NEW YORK CITY.

700; Department of Education, $18,512,817.09; College of the City of New York, $2,200,000; Normal College, $150,000; coroners, $165,150; Commissioners of Accounts, $185,000; Board of City Record, $533,200; libraries, $299,065.30; local city corporations, $3,055,255; charitable and educational funds, $1,071,027; board of education, $190,040; charitable and educational funds, $1,071,027; miscellaneous, $897,978.56; fund for street and park openings, $1,184,553.06; interest on the city debt, $12,100; redemption of the city debt, $10,332,173.18; county expenses (including State taxes)—New York County, $7,638,704.84; Kings County, $2,437,945; Queens County, $2,060,562; total, $98,096,413.43.

The total budgets for all boroughs of New York city for 1900 aggregated $208,778,972.48. The budget for 1901 therefore shows an increase of $7,317,440.

Taxes and Assessments. These are in the charge of the Department of Taxation, of which Thomas A. Fentner is president. The other members are Edward C. Sheehy, Arthur C. Salmon, Thomas J. Patterson, and Ferdinand Levy (salaries, $7,000 each). Office, 280 Broadway. They report the total valuations of real and personal property as assessed for taxation in 1900 to be $3,654,122,193, as against $5,475,522,929 for 1899. They were distributed as follows: Real estate—Manhattan, $2,231,502,835; the Bronx, $13,494,819; Brooklyn, $551,388,000; Queens, $104,427,772; Richmond, $47,232,924; total, $3,168,547,700. Personal property—Manhattan, $42,180,507; the Bronx, $8,013,641; Brooklyn, $43,937,440; Queens, $5,498,651; Richmond, $6,246,204; total, $535,566,403. The report shows that the assessed valuation of property under the special law for 1900 was as follows: Manhattan, $166,703,680; Bronx borough, $7,272,249; Brooklyn, $39,250,532; Queens, $4,036,817; Richmond, $2,356,064; total, $219,679,351. The assessed valuations of corporations were greatly reduced in 1900. In 1899 the corporations in Manhattan paid taxes on $33,530,630, and on account of the passage of the franchise tax law assessments for $10,994,400 only were levied for 1900, which is a loss of $45,535,650.

Charter Revision. In accordance with the law passed by the Legislature, Gov. Roosevelt appointed on April 25, as the New York City Charter Revision Commission, the following gentlemen: Hon. George L. Rives, Chancellor of the State of New York; Hon. George Bartlett, Henry W. Taft, John D. Crimmins, Frank J. Goodnow, Edgar J. Levey, Alexander T. Mason, Charles A. Schieren, James McKeen, Isaac M. Kapper, William C. De Witt, James L. Wells, George W. Davison, and George Cromwell. On organization, George L. Rives was chosen chairman of the commission, and the work was divided among five subcommittees, who prepared their reports, which were then considered by the commission as a whole. The report was submitted to the Governor on Dec. 1. It recommended that permanent power of removal be lodged in the Mayor; greater increased powers with the borough presidents, including control of local matters, and the charge of the Sewer and Highway departments, which as now constituted are to be abolished; the abolition of the Council and the doubling in size of the Board of Aldermen; a single-headed police commission; a bipartisan election board of four commissioners; abolition of the Board of Public Charities; $1,855,491.01; Department of Correction, $758,775; Department of Health, $1,053,590; Police Department, $11,938,343.42; Department of Street Cleaning, $5,901,922.27; Fire Department, $4,381,485; Department of Buildings, $5,146,262; Department of Taxes and Assessment, $334,450; Board of Assessors, $42,
with a message from Gov. Odell, in which he said: The report gives evidence of careful study, and the recommendations are in the main calculated to bring about an improvement in the administration of the affairs of the greater municipality."

Judiciary.—The vacancy in the Supreme Court caused by the death of Frederick Smyth was filled on Sept. 1 by the appointment of James A. Blanchard, and the recommendations by the death of C. Beekman were filled on Dec. 22 by the appointment of J. Proctor Clarke. District-Attorney Gardiner continued to be the subject of much criticism during the year. The City Club submitted to the Governor 80 charges with 2,000 specifications. These were referred to Ansley Wilcox, who was appointed by the Committee to hold a separate inquiry. His report, after passing through the hands of Attorney-General Davies, was considered by the Governor, and the charges were dismissed on the ground that they failed "to show any specific act of malfeasance or misfeasance grave enough to warrant the extreme step of removing from office an elective officer." Subsequent to the above report there were a few accusations of impropriety brought against Mr. Gardiner by Deputy Attorney-General H. H. Hammond, and on Dec. 22 he was removed from office. In announcing the removal, Gov. Roosevelt said: "The charge vitally affecting the conduct of the District Attorney is that which relates to his attitude at and about election, toward the administration of the office for which he was elected, and his influence and conduct in a national election may concern not merely the county itself, not merely the other counties of the State, but also the other States of the Union. It is a mere truism to assert that honest elections, free from both fraud and violence, stand at the very basis of our form of republican self-government. "When the chief executive has committed the city of New York to a public order to his subordinate in which he incited them to criminal violation of the law—an order which was certain to cow and terrorize some men and to encourage the entire disorderly and lawless element—the situation became so grave as to call for the interference of the chief executive of the State. Accordingly, the chief executive notified the Mayor, the sheriff, and the District Attorney that in view of the issuance of this order they would be held to a strict accountability for their acts in preserving or failing to preserve the public peace. Alone, among the other city officials charged with the solemn duty of enforcing the laws, the District Attorney has the power to affect the efficacy of the enforcement of the law, given by public utterance aid and comfort to the chief of police." Eugene A. Phillion, a Democrat, was at once appointed to succeed Mr. Gardiner, and he has since largely reorganized the office.

Legal.—The city Law Department is in charge of the Corporation Counsel. The incumbency during the year was John Whalen. His report for 1900 shows that the city is defendant in 3,710 actions brought to force it to pay the prevailing rate of wages, and there are now pending in all 11,145 cases. There are 1,100 actions the city has to defend on account of injuries to persons and property occasioned by the workmen in Westchester and Putnam Counties. In each of the cases in Westchester and Putnam Counties $6,394,994 was demanded for lands taken, and the total awards were $2,214,900, which represents a saving of $4,180,093. There are now pending 3,722 suits against the city to recover under the prevailing rate of wages acts. These actions seek to recover amounts ranging from $23 to $29,000. There were also claims against the city in negligence actions amounting to $470,311, and the aggregate sum recovered in 16 of the 47 suits amounted to $19,700, or 4 per cent. of the claims. The amount involved in the litigation carried on by the Corporation Counsel's office amounted to $116,499,887.

Parks.—This department is under the charge of three commissioners, one having jurisdiction in Manhattan and Richmond, one in Brooklyn and Queens, and one in Bronx. During 1899 the commissioners were: George C. Chausen, Manhattan and Richmond; George V. Brower, Brooklyn and Queens; and August Moebus, Bronx. The office is in the Arsenal, Fifth Avenue and 55th Street. On March 30 the Mayor appointed Parks Commissioners, and it was stated that thereafter all matters to be accepted must harmonize with the scenery of the parks, and they adopted a new set of rules governing the placing of statuary and memorials. The most sweeping rule provides that no statue, bust, memorial, or memorial building of any description shall be erected in any New York park, where the scenery is of a predominating character. Statues can only be placed as adjuncts to buildings, bridges, or viaducts when they are required to heighten and beautify the effect of the scenery. Only statues of great artistic beauty and appropriate in size may be placed in any of the small parks or cemeteries. Moreover two-thirds of the statues must be of great national or universal interest to be accepted. On June 1 Hamilton Fish Park was opened to the public with suitable ceremonies. This little park of 31 acres is between Houston, Pitt, Stanton, and Sheriff Streets, and cost about $2,000,000. It came into existence in consequence of the small parks act of April 1895, and is intended as a breathing space and playground for those who live in the vicinity. The park was transformed from a mass of tenements. It contains a handsome structure to be used as a gymnasium and bathing house, a large playground, and two fountains.

Zoological Park.—This is under the care of the New York Zoological Society, of which Levi P. Morton is president, with William T. Hornaday as director. It is in the Bronx, and covers an area of 261 acres. The report of the Executive Committee shows that the present membership of the society numbered 945, an increase of 271 in 1900. The report also shows that the Park Improvement fund has increased from $19,700 to $214,499.88. There is still a balance of $35,500.12, which must be subscribed by Aug. 1 in order to complete the fund of $250,000 which the society is obliged to raise under the original agreement with the city. The total attendance of the year was 525,928, the largest daily attendance being on Decoration Day—20,134. The directors announced that during the year he obtained a skin of what proved to be an entirely new species of mountain sheep, which is so strikingly differentiated as to render its title to independent specific rank beyond question. He named it Ovis fannini in honor of Curator Fannin of the Provincial Museum of British Columbia. Its head, neck, breast, abdomen, and inside of fore legs are snow white. The other portions of the body are a
brownish gray, giving the animal the appearance of being covered with a gray blanket.

**Botanical Garden.**—This is under the charge of a Board of Managers, of which D. O. Mills is president, with Nathaniel L. Britton as director. The report for 1900 shows that 160 annual members have qualified, making the total annual members 837. Seventeen life members have qualified, increasing the total to 85. The plants that have been growing for several years in the greenhouses of Columbia University have been transferred and placed in the 8 completed houses of the main conservatories. This collection contains about 1,500 specimens, and has been brought together with the expenditure of $75. The number of plants in this collection is 8,833. In the year 48,895 herbarium specimens were acquired by gift, exchange, and purchase. About 67,650 sheets, containing fully 112,050 specimens, were mounted and distributed in the herbarium cases. The director has accepted from Columbia University, acting through the late Dr. Thomas Morong. It is estimated to contain not less than 18,000 specimens. The report also shows that the botanical library now contains 2,832 volumes.

**Fire.**—This department is managed by a single commissioner. The incumbent during the year was John J. Scannel, the chief of the department. There were 21 fires, 17 of them new, and 4 water towers increased.

A volunteer force, consisting of 2,000 men in the borough of Queens, and an equal number in the borough of Richmond, increased the total force to 4,000 men. During the year there were 8,405 fires. In the Bureau of Constabiles there was collected in all the boroughs for licenses, permits, and penalties $80,136 during the year. On the roll of the fire marshal, 44 arson cases were tried, resulting in 7 convictions and 29 dismissals, with 8 cases still pending.

**Police.**—This department is managed by a board of four commissioners, appointed by the Mayor for a term of six years. The board during the year consisted of Bernard B. White, John B. Sexton, Jacob Hess, and Henry E. Abell. The chief of police is William S. Dever, and the central office is at 300 Mulberry Street. The force on Dec. 31 consisted of a chief, 4 deputy chiefs, 10 inspectors, 85 captains, 308 sergeants, 92 detective sergeants, 366 roundsmen, 8,261 patrons, 17,100 doorsmen, 29 surgeons, 57 matrons, a superintendent of telegraphs, 2 assistant superintendents of telegraphs, 14 telegraph operators, 72 linemen, a battery man, and a messenger. The number of arrests made in Manhattan and Bronx during the year was 93,137. Of these 20,058 were women and 73,079 men. The arrests included 8 for arson; attempted suicide, 245 men and 210 women; burglary, 1,001, including 12 women; larceny, 12,585 men and 4,727 women; grand larceny, 2,142 men and 498 women; petty larceny, 3,574 men and 537 women; murder, 5 men, 1 woman; homicide, 285 men and 14 women; robbery, 16 men and 705 women; excise violation, 1,197 men and 19 women; violation of corporation ordinances, 4,644 men and 52 women. The detective bureau made 1,115 arrests, and recovered property valued at $126,000.59.

The number of lost children received at headquarters was 2,030 boys and 1,121 girls. The number ofoundlings picked up was 91 boys and 7 girls, of which there were 5 each colored boy and girl babies.

**Health.**—The collection of vital statistics is under the care of a board, consisting of three commissioners, one of whom must have been for at least five years a practicing physician, the health officers of the port, and the president of the Police Board. The officials for 1900 were: Michael C. Murphy, president (salary, $7,500); Dr. William T. Jenkins, Dr. John B. Cosby, Health Officer Dr. Alvan H. Doty, and President Bernard J. York of the Police Board.

The number of deaths in 1900 was 70,872, against 66,343 in 1899. There were 25,836 deaths of children under five years, 16,579 under one year; 9,652 sixty-five years and over, 10,851 deaths of infants; 9,142 deaths of the insane; 1,461 deaths of the foundlings; 557 deaths of the insane from 4,521 insane inmates, 588 deaths of the insane in 1899; 20.57.

The number of deaths from pneumonia was 10,482, against 8,531 for 1899—more than from any other disease. There were 761 suicides, against 825 for 1899, and 130 homicides, against 137 for 1899. The death rates for the 5 boroughs were: Manhattan, 20.99; Brooklyn, 21.51; Brooklyn, 20.09; Richmond, 20.52. The rate for the 5 boroughs together is 20.57. The statistics give the estimated population of the city for 1899 as 3,444,675, and for 1900, 3,536,517.

**Education.**—The board having control of this subject consists of 20 commissioners, who are appointed by the Mayor for a term of six years. The president of the board at the beginning of the year was Joseph J. Little, who continued in office until May 19, when, having resigned owing to failing health, he was succeeded by Miles M. O'Brien. The borough superintendent is John Jasper, and the headquarters are at the corner of Park Avenue and 59th Street.

In the borough of Manhattan the number of the board of education for School Year 1898, the schools, were opened on Sept. 10: No. 174, at Attorney and Rivington Streets, with 24 classrooms and accommodations for 1,080 pupils, and No. 173, at Beaumont Avenue and 173d Street, with 30 classrooms and accommodations for 1,550 pupils. In addition the following extensions and annexes were made: School No. 46, St. Nicholas Avenue and 146th Street, 15 classrooms, accommodating 675 pupils; School No. 5, 141st Street, near Edgecombe Avenue, 15 classrooms, accommodating 675 pupils; School No. 5, 141st Street, near Edgecombe Avenue, 15 classrooms, accommodating 675 pupils; School No. 5, 141st Street, near Edgecombe Avenue, 15 classrooms, accommodating 675 pupils; School No. 90, annex, in Tinton Avenue, 15 classrooms, accommodating 675 pupils; High School annex, Elm and Grand Streets, accommodating 350 pupils. Ten new schoolhouses were ready for occupancy and completed before Dec. 1. These, with the new schools and extensions opened on Sept. 10, accommodated 23,000 children. The total registration of pupils was 18,900; the number of children in the hands of the managers for the first year was 241,623.

The free public lecture courses given at public schools at night successfully closed their tenth season, and Dr. Henry M. Leipziger, superintendent of lectures, reported that in 1896 lectures
were given in 6 places—186 lectures to a total attendance of about 75,000. In 1899-1900 lectures were held in 48 places; 1,550 lectures were given, and the attendance was about 538,000. The formal presentation of the new hall of the Board of Education, Park Avenue and 59th Street, to the city took place on Feb. 25.

Rapid Transit.—This is cared for by a commission consisting of Alexander E. Orr (president), Woodbury Langdon, Morris K. Jesup, George L. Rives, John H. Starin, and Charles S. Smith, together with the Mayor and Comptroller ex-officio. Office, 32 Nassau Street. Sealed bids for the building of a system of underground rapid transit were opened on Jan. 15, and on Feb. 25 the Board of Rapid Transit Railroad Commissioners, in a public hearing, ordered the preliminary right of way for the construction of a viaduct along the line of Broadway; South Street; the thirteenth, sixteenth, and twentieth Streets; and the last of these to the present 60th Street; into the borough of the Bronx. The board having fixed the cost of the proposed work at $36,300,000, made requisition upon the Board of Estimate and Apportionment for that money, and on the 25th of the same month the two Commissioners have been authorized to perform the necessary appraisement and to portionment authorized the issue of corporate stock of New York to that amount. The construction company divided the 4 sections in the engineer’s division of the road into 15 sections for convenience and expediency in calculating quantities, as follows: First, Post Office to center of Broadway; second, of Broadway to West 3rd Street; third, Great Jones Street; fourth, 33d to 41st Street; fifth, 41st to 60th Street; sixth, 60th to 104th Street; seventh, portal of tunnel at 103d Street and Broadway to 110th Street and Lenox Avenue; eighth, 110th to 135th Street, Lenox Avenue; ninth, 135th to 150th Street; tenth, East Side viaduct, three miles long, beginning at Brook Avenue; eleventh, 104th to 125th Street, Broadway; twelfth, 125th Street to 133d Street, being the Manhattan Valley viaduct; thirteenth, 133d to 182d Street; fourteenth, 182d Street to Hillside Avenue; fifteenth, West Side viaduct; each of which sections was let to a subcontractor. On March 24 the formal breaking of the ground for the rapid transit tunnel took place in City Hall Park.

On April 20 the commissioners authorized the construction along Elm Street, between the lower side of Worth Street and the north side of Astor Place, of galleries for the accommodation of the foot traffic, and the substructures. Subsequently this work was abandoned in consequence of a resolution passed on Nov. 27, but it was said that this was only preliminary to taking up a more comprehensive plan of building galleries along the whole line of railway. This will require legislation in Albany to amend the laws relating to the subject.

Meanwhile the work of the Construction Company was promptly begun in various parts of the city, and has steadily progressed.

Street Railways.—The order to remove the elevated tracks in Battery Park served on the Manhattan Railway by the Park Commissioners resulted in the change of two proposed routes to the railway officials by the commissioners. These the railway decided not to accept, and on June 20 served President Clausen with a preliminary injunction restraining the Park Commissioners from removing or interfering with the structure of the Manhattan Railway Company at Battery Park, at The State Park, at The Battery Park, and The Battery Park. On Aug. 6 the application of the Metropolitan Street Railway for permission to increase its capital stock from $45,000,000 to $52,000,000. The proceeds of the sale of the new stock will be used in changing cable lines to underground electric trolley system in Columbus Avenue, Broadway, and Lexington Avenue, and in changing the horse road on 34th Street to electric storage battery system. The expenditures for construction and equipment work will be about $8,000,000, and the company proposes to utilize the remaining $4,000,000 for the payment of its floating debt, contracted in the purchase of stock in other street surface railroad corporations. A through train service over the Brooklyn Bridge and the Fifth Avenue line of the New York Elevated Railroad was begun on Dec. 19 by the Brooklyn Rapid Transit Company. The trains run between Park Row and Bath Beach.

Bridges.—In 1900 bonds amounting to $4,000,000 were issued for carrying on the construction of the new East River Bridge. The construction has so far progressed that the anchorages of the bridge have been completed so far as can be done before the completion of the cables. The steel towers and anchorages have been placed thereon ready for cable making to begin. The spans connecting the steel towers and the anchorages are well advanced. Preparations were made to begin the erection of temporary foot bridges, which are to serve as false works for the support of the main cables during erection.

During the year corporate stock amounting to $1,000,000 was issued for the construction of an additional bridge, known as Bridge No. 3, between the boroughs of Manhattan and Brooklyn. The plans for the proposed bridge have been approved by the War Department of the United States, and the contracts for the bridges and roadways were awarded on Dec. 19, and the preliminary work completed.

Monuments.—The beautiful Naval Arch that was erected in honor of the home-coming of Admiral Dewey was removed in the early winter. A fund of $200,000 had been collected for its construction and dedication, but as it was found different to its preservation the plan was abandoned. A request from the South Carolina and West Indian Exhibition asking permission to remove and transfer it to Charleston was submitted to the Municipal Council.

On April 19 a bronze group of Washington and Lafayette, by Bartholdi, presented by Charles Broadway Rouss, was unveiled in West 114th Street, at the junction of Morningside and Manhattan Avenues. The presentation speech was made by Gen. Horatio C. King, and the statues were accepted on behalf of the city by Mr. Randolph Guggenheimer. Mr. Edmond Bruneau, French consul in New York, who represented the French ambassador to the United States, made a short address. A memorial tablet in honor of the officers, soldiers, and sailors of the War of Independence was placed by the New York State Society of the Daughters of the Revolution at the Reformed Collegiate Church, corner of Fifth Avenue and 29th Street, on April 24. The presentation address was made by Mrs. C. F. Roe, the regent of the society, and the tablet was accepted by Rev. Dr. Cee, representing the church.

The corner stone of the Soldiers’ and Sailors’ Monument, at Riverside Drive and 80th Street, was laid on Dec. 15, and was dedicated on the 16th with a prayer, and Col. Albert D. Shaw, commander in chief of the Grand Army of the Republic, delivered an address. Gov. Roosevelt then laid the corner stone, on which was the sim-
ple inscription: “Erected by the citizens of New York, MCM.” A flag presented by the James Monroe Woman’s Relief Corps was unfurled, and Wilson’s Battery fired a salute of 19 guns.

**Mayor Van Wyck and the Ice Trust.—** On May 28, the American Ice Company notified its customers that the price of ice for the season would be 60 cents for 100 pounds, and that no small pieces would be sold. The daily newspapers at once criticised this course, and showed that great suffering would ensue among the poorer classes. This led to considerable agitation, and resulted in showing that the American Ice Company had secured extensive dock privileges, and possessed a complete monopoly of the ice market in the city. Further investigation developed the fact that among the stockholders were a number of Tammany politicians, including Mayor Van Wyck. On June 4 a formal request in the form of an at every phase the removal of office of Mayor Van Wyck was presented to Gov. Roosevelt on behalf of W. R. Hearst, one of the stockholders of the American Ice Company. The Governor referred the charges to the Attorney-General, who investigated the matter and reported back his opinion, in consequence of which, on May 29, 1900, Roosevelt gave the following decision: “I concur in the Attorney-General’s opinion. My judgment is that the so-called Ice Trust is not a corporation in which the Mayor of New York should have stock, but no proof has been offered of any willful violation of law on the part of the Mayor such as would justify the dismissal of reviewing him from office.” Meanwhile the price of ice had been lowered to 30 cents for 100 pounds, and the agitation resulted in saving to the community an amount estimated to be not less than $6,000,000. On May 28, 1900, the Attorney-General instituted proceedings to annul the certificate of the ice company. The corporation, through its counsel, fought the action on the merits of the case. The first decision was in favor of the State, and an appeal was taken, which was decided on Nov. 20 in favor of the ice company.

**Attack on the Police.—** An appeal to Police-Captain Herlihy, of the Twelfth Precinct, for “the protection of the poor and defenseless against the leprous harpies who are hired as runners and touters for the lowest and most infamous dens of vice,” by Canon Paddock, of the pro-cathedral in Stanton Street, having been received “not only with contempt and derision, but with coarsest insult and obloquy,” Bishop Potter, in accordance with instructions from without, had him by the Convention of the Episcopal Church of the Diocese of New York, on Nov. 15, addressed Mayor Van Wyck, protesting “against a condition of things in which vice is not only tolerated but shielded and encouraged by those whose sworn duty it is to repress and discourage it.” But, as I have said, many of you who are aware of the condition of things, like the officers who are to be complimented by the Police Department, have in every instinct of virtue and purity that are the ornaments of any so-called gentlewomen in the land, know those of whom I speak; their homes and their lives, their toil, and their aspirations, their sensibility to insult or outrage is as keen as theirs who are in your household or mine, and before God and in the face of the citizens of New York I protest, as my people have charged me to do, against the habitual insult, the persistent menace, the unalterably defiling contacts to which day by day, because of the base complicity of the police of New York with the lowest forms of vice and crime, they are subjected. And, in the name of these little ones, these weak and defenseless ones, Christian and Hebrew alike, of whom I speak, I call upon you, sir, to save these people, who are in a very real way committed to your charge, from a living hell, defiling, deadly, damming, to which the criminal supineness of the constituted authorities, and to devise means for its eradication, good order, threatens to doom them. This letter was acknowledged by the Mayor, who said that he had sent copies of the bishop’s letter to the Police Commissioners and to the District Attorney of New York County, “with the request that they assist and co-operate with you and with the Police Department. I wish here to assure you that I will exert every power which the law has given me to right the wrongs and do away with the conditions of which you complain, and to secure a hearty and efficient co-operation by the Police Department with all who are working to do away with public violations of law and decency.” On the same day that Bishop Potter’s protest was received, Mr. Richard Croker called a meeting of Tammany Hall Executive Committee, at which an Anti-Vice Committee was appointed consisting of Lewis Nixon (chairman), Michael C. Murphy, John W. Keller, George C. Clausen, and M. Warley Platzer, to examine into vice as found on the East Side, and to devise means for its eradication. Subsequently public addresses were made by Bishop Potter, calling attention to the iniquitous condition of affairs, and later Captain Herlihy was brought to trial for his behavior. At the close of the year an improved condition of morals prevailed in the objectionable districts.

**Close of the Old Century.—** On Dec. 8 the Municipal Assembly appropriated $5,000 for a celebration to welcome the new century, and accordingly on the night of Dec. 31 City Hall was decorated with flags and electric lights, with the inscription over the main entrance of “1900—Welcome—1901—20th Century.” An elaborate exhibition of fireworks was given, and at 10:45 p. m. the official ceremonies were concluded, and the following programme; Overture by Sousa’s Band; address by Randolph Guggenheimer, President of the Council; song, Der Tag des Herrn, by the United German Singing Societies; overture by the band; song, America, by the People’s Choral Union; overture; song, The Star-spangled Banner, by the People’s Choral Union; overture; song, Ring Out, Wild Bells, by the People’s Choral Union; overture; song, Hallelujah Chorus, by the People’s Choral Union; overture; song, Sea, Mountain, and Prairie, by the People’s Choral Union; overture; song, Hymn of Thanks, by the People’s Choral Union; overture; song, Ais der Heimat, by the German Societies; and overture.

**Post Office.—** The charge of the mail is under the care of the National Government, and the Postmaster is Cornelius Van Cott. The Post Office building is at the junction of Broadway and Park Row. Besides the general post office, there are 32 branches, and of these by far the most important is at the corner of Fifth Avenue and 17th Street, which was opened on Oct. 29 with an increased force. According to the report of the Postmaster for the year ending June 30, 1900, the grand total of mail matter handled for the year was 683,768,406 pieces, as compared with 645,876,047 pieces for 1899, a gain of 38,890,447 pieces. The total re

cluded 254,021,837 letters, 39,046,576 postals, and 391,700,501 pieces of other matter, an increase of 23,886,264 letters, 3,658,994 postals, and 11,146,149 pieces of other matter. In the local department there were handled 177,821,160 letters, 27,357,102 postals, and 31,924,742 pieces of other matter. There were received by mail 39,300,283 letters, 9,557,571 postals, and 103,613,684 pieces of other matter. In the foreign department there were handled 36,369,944 letters, 1,731,903 postals, and 76,015,045 pieces of other matter.

Immigration.—The number of immigrants in New York is under national supervision. The commissioner, who is appointed by the President, is Thomas Fithee. Ellis Island, in New York Bay, is the landing place for the immigrants. The report for the year ending June 30 shows that the total number of aliens arriving during the year was 341,712, of which 228,414 were males and 113,298 were females. By races and people the immigration was: Armenian and Syrian, 3,600; Bohemian, 2,229; Croatians and Dalmatians, 9,321; Dutch and Flemish, 1,516; English, Scotch, and Welsh, 5,017; Finnish, 6,783; French, 1,950; Germans, 23,382; Greek, 3,754; Hebrews, 44,320; Irish, 25,200; northern Italy, 16,090; southern Italy, 34,172; Roman Castilians, 1,523; Scandinavian, 25,392; Spanish, 309; all others, 897. In addition to the foregoing, there were 99,760 American citizens who came within the scope of the inspection, by reason of the fact that they shipped in a manner to save the usual expenses. Nearly one fourth of this number shipped as steerage passengers.

Customhouse.—The passage of goods out of the United States and the entry of foreign wares are under the Federal supervision. The Customhouse is on Wall Street, between William and Howard Streets, and the collector is George R. Bidwell. In 1900 the imports of merchandise were valued at $524,647,989. The amount of duties collected on merchandise, miscellaneous receipts not included, was $151,376,607.38. Imports of gold and silver amounted to $29,039,753. Domestic exports of merchandise were valued at $525,807,600. Domestic exports of gold and silver amounted to $99,311,003. The exports of merchandise were valued at $117,867,751. The amount of merchandise in transit amounted to $42,283,383. The transit trade of gold and silver amounted to $4,063,955. The imports of merchandise from Porto Rico from May, 1900, to Jan. 1, 1901, were valued at $3,322,942, yielding duties of $186,222.

Political.—The candidates for justices of the Supreme Court in the First Judicial District were Edward Patterson (Democrat and Republican), Philip H. Dugro (Democrat), and James A. Blanehard (Republican); and for judge of the City Court Francis B. Delehanty (Democrat) and Robert A. Strawbridge (Republican). These were the only local officials to be voted for, and the election resulted in the success of the Democratic candidates. Congressmen for the first 11 districts of New York were voted for, and the election resulted in the choice of the Democratic candidates, except in the First (Queens, Nassau, and Kings counties), the Second, the Fifth, the Fourth (Brooklyn), and the Eleventh (New York city), where the Republican candidates were successful. Twenty-two State Senators were chosen, and of these 14 were Democrats and 8 Republicans. Of the 35 members of the Assembly from New York County there were chosen 26 Democrats and 9 Republicans; from the annexed districts, 2 Republicans; from Kings County, 10 Democrats and 11 Republicans; from Queens County, 1 Democrat and 2 Republicans; and from Richmond County 1 Democrat; making a total representation of 38 Democrats and 23 Republicans from New York City. An interesting feature of the campaign was the great sound-money parade held on Nov. 3, when for seven hours "the flower of the business and professional interests of New York," to the number of 8,000, marched in a steady downpour of rain through streets slippery with mud, in acknowledgment of their belief in the gold standard.

NICARAGUA, a republic in Central America. By the Constitution as revised on July 11, 1894, the legislative power is vested in a Senate of 24 members elected for four years by the provinces, and a House of Representatives elected by universal male suffrage for the same time, 2 members of each house for each province. The Congress meets without convocation for ninety days every year. The President is elected directly by the people for four years. Gen. Santos J. Zelaya was elected President of the Republic for the term ending Jan. 30, 1902. The Cabinet appointed on Dec. 3, 1898, was composed as follows: Secretary of State, Mariano Carazo; Secretary of the Interior, recipient. — The republic has an area of 49,200 square miles, with a population of 420,000, including 40,000 uncivilized Indians. Indians, negroes, and mixed races form the bulk of the population. The descendants of the Spanish settlers of pure blood are few, but recent settlers from the United States and Europe have augmented the white element. Managua, one capital, has about 20,000 inhabitants; Leon, the other, has 34,000. The system of public education is very imperfect. Although there are 1,020 elementary schools officially reported and 2 higher schools for boys and 1 for girls, only a small percentage of the children of school age receive a fair elementary education. The expenditure on the departments of Education was $3,852,750. For 1898 the expenditures authorized by Congress were $5,007,568, of which $1,099,888 was for internal development, and $1,735,816 for military and naval purposes. Nicaragua raised a sterling debt in 1886, issuing bonds for £235,000 at 6 per cent. In 1894 default was made in the payment of interest, and in 1894, by arrangement with the English creditors, the amount of the principal outstanding was reduced to £276,500, and of coupons unpaid £9,530. There is an internal debt amounting in 1898 to $7,500,000. The national wealth is estimated at $33,672,000 for rural and $8,500,429 for urban property.
Commerce and Production.—Rearing cattle and raising coffee and cacao are the chief industries of the country. Bananas have been planted extensively in recent years. Americans and Germans are the largest coffee planters. Sugar cane was formerly grown more than it is now, the plantations having been injured through political disturbances. Tobacco is raised in some districts. Plantations of rubber trees have been made with Government aid, and good profits are expected. The export of rubber from the forests has been interdicted, except from those of the Mosquito Territory. The mines, most of the ore containing both gold and silver, some of it sissel or cinnabar, are controlled by American companies. There were 16,242 ounces of bar gold shipped abroad in 1898, the quantity having doubled in three years. The shipments of coffee were about 120,000 bags; of rubber, 6,907 hundredweight; of hides, 8,211 hundredweight; of cattle, 10,003 head; of silver dollars, 271,591. The trade in 1898 was divided among the principal countries as follows, values being given in pounds sterling from British consul reports:

Railroads, Posts, and Telegraphs.—A railroad, 58 miles long, connects the city of Corinto with Momotombo and another runs from Managua to Granada, 33 miles. The cost of these lines was $2,700,000. Another railroad has been built by the Government from Masaga to Jinotepe, affording transportation for coffee to Corinto. The post offices in 1898 sent out 1,376,366 pieces of mail matter and delivered 1,242,576. There are 1,545 miles of telegraph line.

The Nicaragua Canal.—The Maritime Canal Company, a Nicaraguan corporation created for the purpose of constructing a canal across the isthmus of Nicaragua by an American company with headquarters in New York, began the work under a concession from the Government of Nicaragua in 1857, which was to be completed within ten years from Oct. 9, 1889. The parent company was organized with the view of obtaining a subsidy from the United States Government or having that Government as a partner in the enterprise, or transferring to it the concession and the partly constructed canal. The United States Congress took action at various times, but none that was decisive, and successive technical commissions have examined the route and reported to the Government. The engineering questions connected with the project were not solved to the general satisfaction of Congress and the American public, and beyond these there was the political question of the rights of the United States over the canal even if the Government should decide to construct it. An inter-oceanic canal was desired not alone for the facilitation of American commerce and for intercommunication between the Atlantic and the Pacific States in time of peace, but for the passage of naval vessels in time of war; or at least the military security demanded that it should not by any possibility be made use of by an enemy for the transit of naval forces or troops. The Clayton-Bulwer treaty stood in the way of the military control of the canal by the United States, as it provides that neither the United States nor Great Britain shall acquire territorial rights in Central America, and that both powers shall exercise joint control over any canal that may be built there to join the two oceans. The modification proposed in the treaty by Secretary Hay to which the United States shall have exclusive control, but shall not be permitted to fortify the canal, and shall leave it open to the ships of all nations in peace or war, was not accepted by the Senate. Meanwhile the Nica­raguan Government, on the expiration of the term of the concession granted to the Maritime Canal Company, took possession, the company and removed cars, rails, and other property from Greytown into the interior, the Nica­raguan Congress having approved the decision of the Minister of Public Works that the concession was void owing to nonfulfillment of its conditions.

NINETEENTH CENTURY, IMPORTANT EVENTS OF THE. The century just closed is universally recognized as the most wonderful in many respects, since the dawn of history. Before that century immense territories that are now under cultivation and contain cities and villages in communication with the whole civilized world were unexplored wilderness; the ports of China and Japan were closed to foreigners; there was an entire whole world without a steamship, an electric telegraph, a sewing machine, a reaping machine, a telephone, an electric light, a power printing press, spectrum analysis, utilized India rubber, or a known anesthetic. The lives of some of the greatest men in various departments of activity were entirely within the nineteenth century. Harriet Beecher Stowe, Mark Twain, and Mrs. Stowe among novelists; Tennyson and the Brownings among poets; Green and Parkman among historians; Goodyear, Howe, and Merghenthaler among inventors; Darwin and Henry among scientists; Gladstone, Bismarck, Cavour, and Lincoln among statesmen; and Gordon and Grant among soldiers. Two of the very greatest—Lincoln and Darwin—died on the same day, on the same year that is notable for the famous men that it brought into the world. Elaborate chapters have been written for various journals and magazines, each tracing the century’s development of some one science, industry, or literature. A complete history of the century would fill a book much larger than the present volume. The following notes are intended only to indicate briefly such events as were in one way or another significant, and to refresh the reader’s memory as he reviews his reading or his experience.

1801.
Jan. 1, the first asteroid (Ceres) was discovered by Piazzi.
Jan. 1, the union of Great Britain and Ireland was effected.
March 12, a British expedition defeated the French at Alexandria.
March 24, Paul, Emperor of Russia, was assassinated.
April 2, Nelson destroyed the Danish fleet before Copenhagen.
May 16, William Henry Seward was born.
July 5, David G. Farragut was born.
Aug. 8, the war between the United States and the pirates of Tripoli was begun.
Sept. 10, the compound blowpipe was invented by Prof. Robert Hare, of Philadelphia.
Oct. 19, Philadelphia was first supplied with aqueduct water.
Nov. 2, the independence of Hayti was proclaimed by Toussaint Poudver.
1802.
Jan. 8, Bonaparte was made President of the Italian Republic.
Feb. 26, Victor Hugo was born.
March 7, Sir Edwin Landseer was born.
March 16, the United States Military Academy at West Point was founded.
March 27, the peace of Amiens, between Great Britain, France, Spain, and the Batavian Republic, was proclaimed.
April 27, Louis Kossuth was born.
May 10, George Romney, artist, died.
Aug. 2, Bonaparte was proclaimed consul for life.
Nov. 18, sheet copper was first manufactured in Boston.
Nov. 18, sujebtion of Switzerland; Piedmont, Parma, and Elba were annexed to France.

1803.
Feb. 19, Ohio was admitted as a State.
April 30, France sold Louisiana to the United States.
May 12, Baron Liebig was born.
May 25, Ralph Waldo Emerson was born.
June 13, the percussion lock for guns and the Congreve rocket were invented.
Sept. 18, Malthus's Essay on Population was published.
Sept. 19, Robert Emmet was executed.
Dec. 11, Hector Berlioz was born.
Dec. 20, the United States took possession of Louisiana.

1804.
Feb. 12, Immanuel Kant died.
Feb. 15, New Jersey passed an act giving freedom to all persons born in the State after July 4 of that year.
Feb. 24, the British and Foreign Bible Society was formed.
May 18, Napoleon Bonaparte assumed the title of Emperor.
July 4, Nathaniel Hawthorne was born.
July 12, Alexander Hamilton died from a wound received the day previous in his duel with Burr.
Sept. 25, the twelfth amendment to the United States Constitution was adopted.
Nov. 29, Franklin Pierce was born.

1805.
April 2, Hans Christian Andersen was born.
May 9, Friedrich von Schiller died.
May 26, Napoleon was crowned King of Italy at Milan.
May 26, Mungo Park made a second expedition to Africa and was killed at Boossa.
June 22, Joseph Mazzini was born.
Oct. 21, the battle of Trafalgar was fought.
Nov. 15, Meriwether Lewis and William Clark reached the mouth of Columbia river.
Dec. 2, Napoleon won his victory at Austerlitz.

1806.
Jan. 8, the Cape of Good Hope was captured from the Dutch by the British.
Jan. 23, William Pitt died.
March 6, Elizabeth Barrett Browning was born.
April 1, Prussia took possession of Hanover.
June 10, resolutions were carried in the British Parliament for the abolition of the slave trade.
July 12, Holland was created a kingdom.
Aug. 7, coal was first mined in the United States.
Sept. 8, Lewis and Clark returned from their exploring expedition across America to the Pacific.
Sept. 13, Charles James Fox died.
Oct. 14, the battle of Jena was fought.

1807.
Jan. 19, Robert Edward Lee was born.
Feb. 27, Henry Wadsworth Longfellow was born.
May 22, the trial of Aaron Burr for conspiracy against the United States was begun.
May 28, Louis Agassiz was born.
June 21, occurred the conflict between the English ship Leopard and the American frigate Chesapeake.
July 4, Giuseppe Garibaldi was born.
Aug. 11, Fulton's steamboat, the Clermont, made its first trip going from New York to Albany.
Sept. 5, Copenhagen was bombarded and the Danish fleet captured by the British.
Nov. 18, gas lamps were introduced and used in the streets of London.
Dec. 17, John Greenleaf Whittier was born.
Dec. 21, the embargo act was passed. It forbade any vessel to sail from the United States to a foreign port.

1808.
Jan. 1, Congress by unanimous vote prohibited the importation of slaves.
Jan. 13, Salmon Portland Chase was born.
March 24, Maria Felicia Malibran was born.
May 6, the steamboat Phoenix, built by John Stevens, made her first ocean trip from Hoboken to Philadelphia.
June 3, Jefferson Davis was born.
Aug. 17, Arthur Wellesley defeated the French at Rolica.
Sept. 3, the Russian fleet in the Tagus surrendered to the British.
Oct. 16, Selim III, Sultan of Turkey, was murdered.
Nov. 6, Finland was conquered by Russia from Sweden.
Dec. 29, Andrew Johnson was born.

1809.
Jan. 5, the two days' battle of Wagram began.
Jan. 16, the battle of Corunna was fought; death of Sir John Moore.
Jan. 19, Edgar Allan Poe was born.
Feb. 12, Abraham Lincoln was born.
Feb. 12, Charles Darwin was born.
April 10, an insurrection of the Tyrol under Hofer began.
May 31, Joseph Haydn died.
Aug. 6, Alfred Tennyson was born.
Aug. 29, Oliver Wendell Holmes was born.
Dec. 29, William Ewart Gladstone was born.

1810.
Feb. 5, Guadeloupe was taken by Beckwith.
April 8, the Burdett riots occurred in London.
April 11, Sir Henry C. Rawlinson, the "Father of Assyriology," was born.
Aug. 10, Count Cavour was born.
Sept. 16, the confederation of Venezuela was formed.
Sept. 27, the French were defeated by Wellington at Busaco.
Oct. 6, the first cotton goods printed from cylinders were made in Philadelphia.

1811.
Jan. 1, the regency of the Prince of Wales was instituted in Great Britain.
Jan. 6, Charles Sumner was born.
Feb. 3, Horace Greeley was born.
Feb. 3, Mohammed Ali, Turkish Viceroy in Egypt, massacred 1,600 Mamelukes in the citadel of Cairo.
June 10, Christophe, a negro, was crowned King of Hayti as Henry I.
1812.
Jan. 7, Sigismond Thalberg was born.
Feb. 17, Charles Dickens was born.
April 13, Louisiana was admitted as a State.
May 7, Robert Browning was born.
June 18, the United States declared war against Great Britain.
Oct. 18, the city of Moscow was burned.

1813.
March 10, David Livingstone was born.
May 22, Richard Wagner was born.
June 24, Henry Ward Beecher was born.
Sept. 10, the battle of Lake Erie took place, in which the American fleet under Perry conquered the British fleet.
Oct. 5, the battle of the Thames, in Canada, was fought.
Oct. 16, the three days' battle of Leipsic, called "the battle of nations," began.

1814.
July 25, the battle of Lundy's Lane, Canada, was fought.
Aug. 25, the British burned the Capitol at Washington.
Sept. 15, the Americans defeated the British on Lake Champlain.
Oct. 9, Giuseppe Verdi was born.
Oct. 20, the union of Sweden and Norway was ratified.
Dec. 24, the Treaty of Ghent was signed.

1815.
Jan. 8, the battle of New Orleans was fought.
Feb. 18, corn law riots occurred in London.
Feb. 28, Ceylon was annexed to the British Empire.
April 1, Prince Bismarck was born.
June 18, the battle of Waterloo was fought.
June 30, the United States concluded a treaty with Algiers.

1816.
March 4, riots occurred in England; march of the Blanketeers from Manchester.
April 10, the charter of the Bank of the United States was extended.
April 21, Charlotte Brontë was born.

</table>
outstanding warrants. The actual cash balance in the treasury was $124,559.19.

The receipts of the public fund for the fiscal year ending Nov. 30 were $1,618,103.91, which is an increase of $2,390.22 over the year 1899. The total amount of receipts for the same year was $1,647,824.90, an increase of expenditures over 1899 of $5,618.92.

The Auditor's report shows a decrease in the assessed value of railroad property, compared with 1899, as well as a decrease in the steamboat and canal property. There is an increase in the value of telegraph and telephone property.

In regard to pensions, the report says the number of pensioners dropped from the pension roll for various causes during the year was 385. The total number of pensioners was 6,129, and the total amount expended for pensions was $119,070. The total amount expended for pensions since 1900, so that there are 92 State banks in operation, was $3,582,950, against $4,509,235 for 1899. Sixty-three miles were added to the railroad mileage of North Carolina during the year. Not a railroad in the State is in the hands of a receiver. The Wilmington and Weldon Railroad Company, the Norfolk and Carolina Railroad Company, the Atlantic Coast Line Railroad Company, the New Jersey Central Railroad Company, the New York and Erie Railroad Company, and the New York and Atlanta Railroad Company were consolidated April 23, 1900, and have since been operated as the Atlantic Coast Line Railroad Company. This new corporation owns 1,711.24 miles of railroad.

Banks.—Twenty-six new banks were organized in the State during the year. The operations of the banks in operation in the State, as follows: Fifty-six under charters with general banking houses, 10 savings banks, and 26 private banks. These banks have a capital of $2,680,383.47, against $2,307,397.80, making an increase of $379,985.67. They have deposits amounting to $88,674,950, against $51,610,439.71 for 1899, an increase of $35,064,014.79. The total resources of the State banks, as shown by their last report, were $141,619,594.64.

Education.—According to the census of 1870, the number of illiterate white men in North Carolina was 33,111; in 1880, 44,429; in 1890, 49,570; in 1899, 13,000. There are 13,000 white men who could read but could not write. The North Carolina College of Agriculture and Mechanic Arts had in 1900 an enrollment of 302 students. They earned by working odd hours during the session $2,300. There are full courses and short courses. It offers practical and technical education in agriculture, stock raising, horticulture, mechanical engineering, civil engineering, electrical engineering, textile industry, chemistry, and architecture. It also offers practical training in carpentry, wood turning, blacksmithing, machinery work, mill work, boiler tenders, and farm machinery tending. Instruction is given in English, mathematics, history, civics, political economy, physics, chemistry, botany, zoology, physiology, physical geography, geology, and mineralogy. In his annual report President Winston described the pressing need felt for rooms and equipment of all kinds.

The educational report of the North Carolina Teachers' Assembly report that the public schools are in a chaotic state, and that there is complete lack of co-operation. They outline a plan for improvement. By a decision of the Supreme Court, the fines collected by towns and cities upon prosecutions for violation of the criminal laws of the State must all go into the common-school fund, and not into the treasuries of the towns and cities. The Legislature was asked to appropriate $300,000 to secure four months' schooling during the year in each county, which never has been done.

The Agricultural and Mechanical College for the colored race, which was established by the State in 1891 in Greensboro, has been greatly crippled during the past two years because $10,000 has been cut off from the regular appropriation by the Legislature. The course of study and manual work includes wood turning, carpentering, forging, barn and dairy work, and greenhouse work, including grafting, potting, and making cuttings. The department of domestic science teaches the chemistry of cooking, cutting and fitting as well as general sewing, milk testing, and butter making. It is the high school for colored boys and girls over fourteen years of age, and is principally fed from the public schools. There is a tuition fee of $1 a month, while a certain number of students from each county are admitted free.

State Institutions.—The Confederate Soldiers' Home has had a fine hospital building added, with modern equipment. It has 56 inmates.

The Central Hospital for the Insane, at Raleigh, receives $50,000 a year from the State. It has 500 patients. The building of two new wards allowed for labor on railroads, in shirt factory and on other works, that bring into our treasury $4,000 to $4,500 of earnings per month. We certainly will have an income from the brickyard of $25,000; these items together with other available moneys for labor, etc., the supplies on hand, as shown by the inventories, should be amply sufficient to run the institution during this year without any embarrassment to the management.

The report of Dr. J. F. Miller, superintendent of the State Hospital, at Goldsboro, shows that in the biennial period of 1899-1900 651 patients were treated, with a general average of 454. The percentage of eures was a little over 49, and the percentage of deaths little over 6; and there were remaining in the hospital, Nov. 30, 439 patients. A special committee appointed to investigate the State prisons reported extravagance and incompetency.

Industries.—There has been a great revival or establishment in certain industries. Many new cotton mills were built in 1900, some of them of
great capacity. The increase in cotton acreage in the South is placed at 8.7 per cent.; number of acres, 25,558,000, an increase over 1899 of 2,036,000. Ten per cent. of the increase is in North Carolina. Small fruits are beginning to be largely cultivated. Strawberry raising employs 700 Northern persons, who have invested in land and who ship the fruit north. All fruits grow well in the middle of the State, and cultivation on large plantations is increasing. The soil and climate are especially adapted to apple raising. Northern capital is about to establish a great sheep ranch in the mountain region in Burke County.

Political.—The Democratic convention assembled in Raleigh, April 11. The platform approved the national platform of 1896, and further declared: "We denounce the tariff legislation of the Republican party which has increased the burdens of taxation upon our consumers and increased the powers of the trusts and monopolies to rob the people."

"We denounce the Republican party for its passage of the recent legislation by which the gold standard has been fixed upon our people."

"We are in favor of peaceful commercial expansion, but denounce imperialism and militarism.

"We admire the heroism and ability with which the Hon. William Jennings Bryan has defended the principles of the Democratic party, and hereby instruct the delegation from this State to the next national Democratic convention to vote for his renomination.

"We denounce the administration of the Republican party in North Carolina by which negroes were placed in high and responsible official positions which ought to have been filled by white people."

"We condemn free passes.

"We favor the election of United States Senators by the people."

"We instruct the State Executive Committee to make provision for the holding of a primary on the first Tuesday of next November for the selection of a United States Senator by the Democratic voters of the State, at which every elector who has voted the Democratic ticket in the State election shall be entitled to cast one vote for one man for United States Senate, and the candidates who receive the majority of the votes so cast in the whole State shall receive the support of the Democratic members of the Legislature."

The platform adopted by the Republican convention, May 2, contained these declarations:

"In spite of the official records, which show that there has been no negro domination, and no possibility of negro domination in the State or in any of its counties, during the past quarter of a century, the Democratic leaders have determined to wage the coming campaign upon the race issue alone, and they go before the people with a scheme of disfranchisement which is the most impudent assault upon the Constitution of the United States and the most shocking act of party perfidy ever attempted by men who recognize the obligation of an oath or the sanctity of a public pledge. We denounce with indignation and abhorrence the Democratic proposition that the right to vote should be made dependent upon heredity, and thus build up a Democracy of birth upon the ruins of free government.

"The administration of the affairs of the State and of the several counties during four years of Republican ascendancy has been scrupulously clean, faithful, and economical. During this period the credit of the State, as shown by the market value of its bonds, has never been higher than at any time known in our history, and we challenge a comparison of this record with that of the Democracy during any like period.

"We are opposed to combinations of capital whenever they become destructive of rights of individual citizens, and such combinations should be guarded by adequate statutes enacted by the Legislatures of the several States, or by Congress if the resulting evils are beyond the power and jurisdiction of the States.

"The Republican party has always fostered popular education; that party engrafted in the organic law of the State the mandatory requirements providing public schools for both whites and negroes, and that party will never brand ignorance as a crime whose penalty is disfranchisement, so long as the cause of that ignorance is the neglect of the State."

The following State officers (all Democrats) were elected: Governor, C. B. Aycock; Lieutenant Governor, W. D. Turner; Secretary of State, J. F. Grimmett; Treasurer, J. A. Dixon; Attorney-General, R. D. Gilmer; Superintendent of Education, T. F. Toon; Commissioner of Agriculture, S. L. Patterson; Commissioner of Insurance, James R. Young; Adjutant General, B. S. Royster.

The important issue in the election was the following amendment to the State Constitution, which was submitted to the people:

"SECTION 1. Every male person born in the United States, and every male person who has been naturalized, twenty-one years of age, and possessing the qualifications set out in this article, shall be entitled to vote at any election by the people in the State, except as herein otherwise provided.

"SEC. 2. He shall have resided in the State of North Carolina for two years in the county six months, and in the precinct, ward, or other election district in which he offers to vote four months next preceding the election: Provided, that removal from one precinct, ward, or other election district to another in the same county shall not be made to deprive any person of the right to vote in the precinct, ward, or other election district from which he has removed until four months after such removal. No person who has been convicted, or who has confessed his guilt in open court upon indictment, of any crime, the punishment of which now is, or may hereafter be, by law, imprisonment in the State Prison, shall be permitted to vote unless the said person shall be restored to citizenship in the manner prescribed by law.

SEC. 3. Every person offering to vote shall be at the time a legally registered voter as herein prescribed, and all laws and the General Assembly of North Carolina shall enact general registration laws to carry into effect the provisions of this article.

SEC. 4. Every person presenting himself for registration shall be able to read and write any section
of the Constitution in the English language; and, before he shall be entitled to vote, he shall have paid on or before the first day of May, of the year in which he proposes to vote, his poll tax for the previous year as prescribed by Article V, section 1, of the Constitution. But no male person who was on Jan. 1, 1867, or at any time prior thereto, entitled to vote under the laws of any State in the United States wherein he then resided, and in which he proposes to vote, shall be denied the right to register and vote at any election in this State by reason of his failure to possess the educational qualification herein prescribed: Provided, he shall have registered in accordance with the terms of this section prior to Dec. 1, 1908.

The General Assembly shall provide for the registration of all persons entitled to vote without the educational qualifications herein prescribed, and shall, on or before Nov. 1, 1908, provide for the making of a permanent record of such registration, and all persons so registered shall forever thereafter have the right to vote in all elections by the people in this State, unless disqualified under section 2 of this article, provided, such person shall have paid his poll tax as above required.

"Sec. 5. That this amendment to the Constitution is presented and adopted as one indivisible plan for the regulation of the suffrage, with the intent and purpose to so connect the different parts of the plan and to make them so dependent upon each other, that the whole shall stand or fall together."

The amendment was adopted by a large majority. It is to go into effect July 1, 1900.

At the presidential election in November the State Democratic electoral ticket received 157,736 votes and the Republican 132,997. The Democratic majority was thus about 5,000 greater than in 1896.

NORTH DAKOTA, a Northwestern State, admitted to the Union Nov. 3, 1889; area, 70,795 square miles. The population in 1890 was 182,719; in 1900 it was 319,146. Capital, Bismarck.

Government.—The following were the State officers in 1900: Governor, Fred B. Harrison; Lieutenant Governor, J. M. Devine; Secretary of State, Fred Fulley; Treasurer, D. W. Driscoll; Auditor, A. N. Carlblom; Attorney-General, John F. Cowan; Superintendent of Education, J. G. Halland; Adjutant General, Elliott S. Miller; Commissioner of Insurance, George W. Harrison; Commissioner of Agriculture, H. U. Thomas; State Examiner, H. A. Langlie; Railroad Commissioners, L. W. Walton, John Simons, Henry Erickson; Land Commissioner, D. J. Laxdal; Superintendent of Irrigation and Forestry, W. W. Barrett; Oil Inspector, P. B. Wickham; Game Warden, G. E. Bowers; Chief Justice of the Supreme Court, H. M. Bartholomew; Associate Judges, Alfred Wallin, N. C. Young; Clerk, D. Hoskins—all Republicans.

The State officials are elected for two years in November of the even-numbered years. The Legislature meets biennially in January of the odd-numbered years.

Population.—The increase of population in the State during the decade was 74.6 per cent. Some counties—like Williams, Wells, and others in which the settlement has been unusually rapid—show increases of several hundred per cent. All the counties show increases, but the greatest percentage is in the central and western parts of the State.

The cities having more than 2,000 inhabitants are:

Diekinson's remarkable growth, 131 per cent., is due to the development of the western part of the State. Valley City, with 124 per cent. increase, has been aided by the "Soo" Railroad.

Finances.—The semi-annual statement of the Treasurer, published in August, shows the receipts and disbursements of his office for the six months ending July 1. The statement shows a total balance in the various funds, Jan. 1, of $209,888.79, of which $59,001.19 was in the general funds. The receipts from all sources in the six-months period was $703,147.94, and the disbursements $366,610.73, leaving a balance on hand July 1, 1900, of $167,426. Of this amount $40,259.96 was in the general fund. The receipt from various sources of revenue, including fees of State officers and similar sources, was $138,850.76. The total receipts to the general fund from taxes, paid in by the counties, was $341,068.98.

The tuition fund, distributed for the benefit of the schools of the State, received $4,365.40 from grants through the State. From the interest in the income fund, turned into the State tuition fund from interest paid on State school funds, land contracts, etc., the total receipts are $98,646.94. The interest on bonds held by the permanent school funds of the State aggregates $21,067.71, and the interest on mortgages $4,430.93. The total receipts from Tuition and Highway funds made on agricultural lands throughout the State from the permanent school fund were $8,417, and the redemption of bonds aggregated about $6,000. The sale of Government lands, of which by a recent law the State receives 5 per cent., brought in $32,195.80.

Among the items of disbursement were $100 for the conviction of horse thieves, $17,076 from the wolf bounty fund in the redemption of certificates, and $18,000 interest on the public debt.

The statement of balances shows $40,259 in the general fund, $58,302 in the bond interest fund, $11,000 in the school fund, $14,000 in the tuition fund, $1,600 in the wolf bounty fund, $15,000 in the establishment fund for the twine and cordage plant, and $16,000 in the operating fund for the same institution.

There was a total of $39,033 in suspended banks, Dec. 31, 1899, and of this $2,953.70 was collected in dividends during the six months. Of the balance shown in the general fund, the amount in suspended banks is included.

Valuations.—The total valuation of the State this year, as fixed by the Board of Equalization, was about $4,000,000 more than in 1899. The amount was $117,789,615, of which the sum of $73,304,983 is real property, $17,307,525 is railroad property, and $27,177,107 is personal property.

The largest single item of personal valuation is that of horses over three years old. There are 204,214 returned by the assessors, and the average value is a little over $30, making the total value $6,735,244. The total assessed valuation of all classes of horses in the State is about $7,500,000, and of cattle about $3,000,000.

There are 114,000 head of cattle one year old returned this year, against 93,000 last year; of two-year-old cattle, 88,000 this year, against 64-
00 last year; last year there were 136,000 cows returned, and this year 157,000.

The number of sheep returned last year was 265,000, and this year 306,000.

The railroads were valued at the same rate as in the preceding year, at a total value of $5,899,000. A small increase of mileage added a little to the total.

The tax rate was made the same, 3.8 mills for general State purposes, 0.5 mill for bond interest, and 0.2 mill for wolf bounty. The amounts ordered by the State board are: For general purposes, $447,600; for interest on the State debt, $8,101; and for wolf bounty, $9,340.

Education.—The school population this year was 92,347, an increase of 8,038 over that of 1899. The largest increase is in those counties in which there was the greatest amount of immigration from other States. About 400 new schoolhouses have been built. Formerly a tax of 2 mills was levied on all property in the State for school purposes, and the amount was apportioned according to the number of children. By the present law the tax in each county is apportioned in the county. From the State are received only fines and the income of the permanent school fund. This fund now amounts to about $929,000.

The normal schools have each an attendance of about 300.

The Agricultural College has about 290 students, nearly 100 of whom were taking a farm course of three months.

The State High School Board has prepared a uniform course of study for the high schools, and the superintendent one for the common schools; so that pupils may pass upon certificate from any grammar school to any high school, and from a high school to the university.

The university opened with an attendance 50 per cent. larger this autumn than at the same time in 1899.

The enrollment at the Indian schools in the State was 1,152, and the average attendance 1,223. A new building is to be erected for the Grand River school.

Charities and Corrections.—The Asylum for the Insane had 344 patients in June. A new ward building and a laundry were built with the $50,000 from the bond issue authorized by the Legislature by which a ward house is needed. Ten years ago it cost the State $305.15 for every patient in the hospital. For the biennial period just closed the cost of maintenance was $154,339, and this amount is $20 less than in the preceding biennial period. The patients are now maintained at the institution at an average cost of $11.87 a month.

The report of the School for the Deaf, at Devil's Lake, shows an expenditure during the biennial period of $19,870 for improvements, bringing the value of the property of the institution up to $42,370. The attendance during the past year was 59, of whom 27 were boys and 32 girls.

The State has no institution for the blind, but sends 9 pupils a year to the South Dakota School for the Blind.

During the first year of the State Manual Training School 160 students were enrolled, and 50 others were denied admission, the equipment being insufficient.

The report of the Penitentiary shows that there were 122 convicts at the end of the year. The twine plant was finished and put into operation in March. There are three buildings, fitted with machinery sufficient for turning out 10,000 pounds of binding twine a day. A complete electric plant and a new inclosing wall are among the other improvements.

Military.—The State militia in 1899 consisted of: General staff, 9; cavalry, officers 7, enlisted men 44; light battery, officers 3, enlisted men 53; infantry, officers 40, enlisted men 517; total, 673.

A monument to the memory of the soldiers of Companies F, G, and H, of the North Dakota Volunteers who fell in the Philippines was dedicated at Grafton in October. It was built by citizens of Grafton and Walsh Counties.

The new military post at Bismarck is to be called "Fort Abraham Lincoln."

Banks.—Under the new law permitting banks to be organized with less than $50,000 capital, 32 banks have been added to the national banks of the State. There were 27 in October, and the abstract of their condition, compared with that of the 24 in June, shows that the total resources increased from $7,723,984 to $8,046,884; loans and discounts increased from $5,330,032 to $5,415,754, and cash reserve increased from $576,709 to $375,814, of which gold holdings fell from $150,477 to $146,200; individual deposits increased from $4,817,994 to $5,015,981 and the average reserve held advanced from 17.30 to 20.01 per cent.

The resources of the 110 State banks of North Dakota at the close of business Feb. 13 were $8,590,050.21. Of this, $4,742,509.71 were in loans and discounts. Due from other banks amounted to $3,111,719.24, with total cash on hand of $770,317. The total capital stock was $1,378,500. Deposits subject to check and certificates of deposit amounted to $6,486,713.85. Of surplus and undivided profits there were $321,392.

Railroads.—The first spike in the Bismarck, Washburn and Great Falls Railway was driven May 17. This road will give transportation facilities to the residents on 300,000 acres of farming lands in the fertile region north of Bismarck.

Washburn is 45 miles north by west of Bismarck.

The track was carried into Wilton in July. This is a new town in the lignite district, 24 miles north of Washburn.

All the roads in the State reduced their passage rates to 3 cents a mile in April. It is found that about half the 520,000 trees planted along the Northern Pacific in the spring were killed by the dry summer, and it is promised that they shall be replaced the coming spring.

Companies have been given to Great Northern express agents to refuse all C. O. D. shipments of liquor. Suits had been brought against several agents for violation of the law by the practice of receiving such consignments.

Insurance.—The report of the Insurance Commissioner for 1899 shows that the fire, life, accident, and other companies collected $1,255,783.54 in premiums alone, on which the State receives $32,569.63 in taxes, the State law providing for a tax of 2 per cent. on gross premiums.

Seven new companies have entered the State, and several that withdrew after the great fire at Fargo have returned. The mutual hail and fire companies suffered severely from the hailstorm of the summer, their losses amounting to $105,749. Two of them went into the hands of receivers.

The volunteer firemen receive a part of the insurance tax.

Public Lands.—The land office at Devil's Lake for the last year did the greatest business of any in the United States. The receipts for the office for the year were about $175,000. This business is due largely to the immigration business done by the Great Northern and the many settlers who have taken up land along the line in the Devil's Lake district. The Minot and Bismarck offices also showed large receipts.

The total amount of net revenue from the land
offices in North Dakota for the past fiscal year was $314,661.91.

**Products.** The coal mining industry is attracting much attention, and promises important results to the State. Wilton, a new town to which a railroad was built from Bismarck this year, is the new center of activity. Tests have been made of the lignite coal mined there, and it is found to be economical and otherwise satisfactory. A test conducted at a woolen mill showed a saving of about 20 per cent. over the cost of wood. It is found to be agreeable for household use also, burning without clinkers and giving out smoke more like that from wood than like ordinary coal smoke. A test showed the lignite to have a value of 63 per cent. of bituminous coal. Taking into account the cost of the two when delivered, a saving of 81 cents a ton was figured for the lignite. New electric machinery has been put in, which is expected to raise the output to about 350 tons a day. The coal product of the State in 1899 was 98,509 tons, valued at $117,500. Some of the reservation Indians are finding employment in the lignite fields.

Prof. Babcock, of the State University, who is making a geological survey of the State, says the clays are valuable, and are being developed. In the northern part of the State a good quality of Portland cement is being made, and in the western part excellent clay for pottery, fire brick, and similar products is worked.

The acreage of wheat, as shown by the assessors' returns in September, was 3,846,406, and that of flax 1,203,767. The yield was, however, small in proportion. The wheat crop was estimated to be from 15,000,000 to 20,000,000 bushels.

The creamery industry is growing in the western part of the State.

The Commissioner of Forestry recommends the experiment of raising fish in artesian waters, which he has found successful. There are nearly 700 flowing artesian wells in the State.

Many filings have been made for land under the provisions of the reservoir law, under which law the people's reserve and have the use of 150 acres of land in one section for fifty years, providing he builds a reservoir that will contain 1,500,000 gallons of water; such reservoir must be on the same section with the land reserved. It is not probable that all or many of those so filing will build reservoirs. But filing upon the land keeps other parties out of the way, and by the payment of filing fees, may have the use of the land until the entries are canceled, and in the meantime secure the use of the land.

**Political.**—State officers were elected in November. The Republicans held conventions May 16 and July 11; the Democrats, June 6 and July 20; the People's party, April 6, June 26, and July 20. A part of the latter united with the Democrats; the "middle of the road" section put out a ticket. There were also a Prohibitionist ticket and a Social-Democratic.

The Republicans urged Congress to take steps to suppress the evil of trusts, and favored the reenactment into the law of the currency bill and the entire policy of the Administration. The party was pledged to sustain the prohibitory law.

Gov. F. B. Fancher was renominated, and Frank White was made the candidate for Lieutenant Governor. Gov. Fancher withdrew from the ticket on account of failing health, Sept. 27, and the State Committee named Frank White for the first place and David Bartlett for the second, so that the ticket finally stood: For Judge of the Supreme Court, D. E. Morgan; Governor, Frank White; Lieutenant Governor, David Bartlett; Treasurer, D. H. McMillan; Attorney-General, O. D. Comstock; Auditor, A. N. Carlbbton; Superintendent of Public Instruction, J. M. Devine; Secretary of State, E. F. Porter; Commissioner of Insurance, Ferd. Leutz; Commissioner of Agriculture and Labor, R. J. Turner; Railroad Commissioners, J. F. Shea, C. J. Lord, J. J. Youngblood.

The Democrats declared allegiance to the platform of 1896, advocated the election of United States Senators by popular vote, denounced imperialism, and instructed delegates to Kansas City for William J. Bryan. They favored abolition of customs duties between the United States and Porto Rico and declared for an income tax. The fusion ticket was: For Governor, Max A. Wipperman; Lieutenant Governor, F. W. McLean; Secretary of State, J. F. Williams; Attorney-General, Samuel K. McGinnis; Treasurer, J. P. Birdner; Superintendent of Public Instruction, Mrs. Laura J. Eisenhuth; Insurance Commissioner, W. W. Campbell; Attorney-General, John Carmody; Commissioner of Agriculture, Samuel Torgeson; Railroad Commissioners, James Morrison, L. L. Lewis, L. P. Vandeberg. Mr. Williams and Mr. Stavneim withdrew, and their places were filled by J. J. Stampen and Julius Wirkus.

The nominations of the People's party were: For Governor, O. G. Major; Lieutenant Governor, James T. Westlake; Secretary of State, Frank Wrightson; Auditor, Robert Grant; Treasurer, W. Cummings; Attorney-General, H. F. Jones; Commissioner of Agriculture and Labor, James Glassford; Commissioners of Railroads, James McIntosh, John Miller, W. J. Forest.

The Prohibition candidates were: For Governor, Delevan Carlton; Lieutenant Governor, W. C. Greene; Treasurer, B. H. Tibbits; Auditor, D. F. Humphreys; Secretary of State, George M. Nayler. Carty, Commissioner of Agriculture, M. F. Vandebogart.

The Social-Democratic ticket, which was filed by petition in August, was as follows: For Governor, George W. Poague; Lieutenant Governor, Royal F. King; Secretary of State, A. Bassett; State Auditor, R. C. Massey; State Treasurer, L. F. Low; Attorney-General, A. Le Sueur; Superintendent, G. W. Attebury; Commissioner of Insurance, R. W. Simpkins; Railroad Commissioners, William Lamb, F. J. F. Tucker, James Nelson; Commissioner of Agriculture, S. K. Haight.

The Republican ticket was successful at the polls. For presidential electors the vote stood: McKinley, 35,501; Bryan, 20,519; Woolley, 731; Debs, 518; Barker, 110. For Governor: White, 34,052; Wipperman, 22,275; Carlton, 500; Poague, 425; Major, 213.
The Legislature will be composed of 82 Republicans and 11 fusionists.

Two constitutional amendments were voted upon, and were carried by large majorities. The first was for the creation of a board of pardons, to consist of the Governor, the Chief Justice of the Supreme Court, and the Attorney-General. The vote was 33,260 for and 8,153 against. The second was to permit taxation of telegraph, telephone, express, and dining-car companies. This was carried by a vote of 32,674 for to 9,947 against.

NORTHWEST TERRITORIES OF CANADA. Politics and Government.—Mr. F. C. B. Harcourt, now at the head of affairs during 1900, as he had since 1887. In the Government he was Attorney-General and Treasurer, with Mr. J. H. Ross as Commissioner of Agriculture and Public Works. The immense area of the territories, with their million square miles, is indicated by the existence of three nonresident members of the Canadian House of Commons. In that House, C. A. Mathew of Athabaska, of Lethbridge, and G. H. Bulyea, of Qu’Appelle. The Legislative Assembly met on March 29, 1900. The speech from the throne, which was read by Lieut.-Gov. A. E. Forget, contained these passages:

"The spontaneous expressions of loyalty with which the different parts of the empire have given practical evidence of their devotion to the Queen and imperial interests will mark the past year as a memorable one in the history of the nation. Owning to the nonestablishment of the militia system, the territories were deprived of the privilege of being represented in the first Canadian contingent; but it is not difficult to find in that very vigorous and equipped through the splendid generosity and patriotism of Lord Strathcona and Mount Royal, the territories have now the honor of having given not only a large number of men in the aggregate, but, in proportion to their population, a larger number than any other portion of the Dominion, to the Canadian contribution to the Canadian army. In this connection you may be asked to concur in a grant made to the Northwest members of the second contingent, and your assent will be asked to a measure legalizing grants made by municipal corporations to various patriotic funds."

"The unprecedented rainfall and disastrous floods of the past year brought about a state of affairs which the revenue, already proved to be inadequate under ordinary conditions, was altogether unable to cope with. This state of affairs tended not so much to create as to aggravate and call more pointed attention to the great disproportion existing between the means at command and the ever-growing necessities of the rapidly increasing population of the territories. It is gratifying for me to be able to inform you that the Federal Government has proposed to Parliament, now in session, a moderate increase to your annual grant and a large special vote for the purpose of restoring public works destroyed by the floods. In spite of this very substantial increase to the revenue, my Government can only look upon it as affording a temporary and partial amelioration of otherwise impossible financial conditions, and will ask you to take action leading to the earliest practicable solution of territorial financial and administrative problems."

Upon Mr. Haultain’s well-known Conservative proclivities and his appearance upon Sir Charles Tupper’s platform. It was voted down by 21 to 6. On May 2 the local demands for a full provincial position and better financial terms found expression in the following resolution, moved by Mr. Haultain, and seconded by Mr. M. W. Edey:

"That an humble address to his Excellency the Governor General be adopted by this house, praying him that he will be pleased to cause the fullest inquiry to be made into the position of the territories, financial and otherwise, and to cause such action to be taken as will provide for their present immediate welfare and good government, as well as the due fulfillment of the duties and obligations of government and legislation assumed, with respect to these territories, by the Parliament of Canada; and that

"Whereas, By the British North America Act, 1871, it was (among other things) enacted that the Parliament of Canada may from time to time establish new provinces in any territories forming for the time being part of the Dominion of Canada, but not included in any province thereof, and may, at the time of such establishment, make provision for the constitution and administration of such provinces, his Excellency be also prayed to arrange such matters in such territories with a view to the settlement of the terms and conditions upon which the territories or any part thereof shall be established as a province, and that before any such province is established opportunity should be given to the people of the territories, through their accredited representatives, of considering and discussing such terms and conditions.

On May 4, a resolution was passed pointing out the rich productiveness of a large area of country north of the Qu’Appelle valley, in the district of Assiniboia, the difficulties of the settlers in obtaining transportation, the necessity of a railway, and the desirability of Dominion aid in its construction.

The Assembly adjourned on the same day, after the Lieutenant Governor had assented to the following ordinances, among others:

Respecting the public lands of the territories.
To amend chapter xxi of the ordinances of 1899, intituled "an ordinance respecting noxious weeds," Respecting the medical profession.
Respecting hail insurance.
Respecting assignments for the general benefit of creditors.
Respecting the sale of intoxicating liquors.
Respecting mortgages and sales of personal property.
Respecting the incorporation of joint-stock companies.
Respecting dentistry.
Respecting mining companies.
To secure compensation to workmen.
Respecting foreign corporations.
Respecting confirmation of sales of land for taxes.

An important incident of the session was a request from the Legislature to the Dominion Government, as a natural outcome of the military spirit of the moment, that the Federal militia system be extended to the Territories.

FINANCES.—The needs of the Government during the year were greater than the revenue, and resulted in an appeal to the Dominion, as given above, for further financial assistance. On May 1 the following sums were voted by the Assembly for the current year: Civil government, $10,580; Attorney-General’s department, $3,579; Treasury Department, $4,540; public works, $7,980; agr.
culture, $23,485; education, $185,615; departmental expenses, $8,235; legislation, $23,265; administration of justice, $9,700; maintenance of public works, $7,975; repairs to public works, $16,000; interest on public works, $7,500; construction of bridges, $61,075; aid to local and municipal improvements, $12,000; construction of roads, $41,000; miscellaneous public works, $38,000; hospitals, charities, and public health, $9,350; sundry expenditures, $2,404; total, $482,483. In 1890 the expenditure had been $357,025.

**Government and Politics.**—On Feb. 8, 1900, the third session of the Legislative Assembly was opened by Lieut.-Gov. Sir Malachy Bowes Daly with a speech from the throne, in which he said:

"You have assembled to discharge your legislative duties at a time when unhappily our empire is engaged in a war which has already brought sorrow to thousands of British homes. While all must deeply regret the necessity for the conflict in South Africa, some consolation may be found in the splendid manifestation of loyalty which it has called forth not only in the motherland, but also throughout the colonies. Canada has promptly availed herself of the opportunity to manifest her sympathy for the interests of the empire by contributing two contingents of soldiers for service in South Africa. The organization and dispatching of these forces is a matter coming within the authority of the Government and Parliament of Canada, and I feel assured that whatever may be necessary to provide for our soldiers will be cheerfully borne by the representatives of our people in the federal sphere. But while we as a province are not called upon to contribute to this part of the outlay, there is an opportunity for the manifestation of our interest and sympathy by contributions to the patriotic fund that is being raised for the benefit of the wives and families of the men who have gone to Africa.

"I am happy to be able to assure you that the various branches of industry in which our people are engaged have been vigorously prosecuted during the year with the most satisfactory results, and that the province has enjoyed a degree of prosperity unexampled in its history. The output of our coal mines was much larger than in any preceding year.

"I rejoice to be able to record the progress that has been made during the year in the movement for the establishing of the great industry in the manufacture of iron and steel at Sydney. The large amount of capital subscribed for the purpose, and the extensive works already under construction, give assurance that the great enterprise will be carried to an early completion.

"I am glad to be able to inform you that very substantial progress has been made during the past year in several of the new railway enterprises of the province. In the case of the Smoystown-West Richmond line it is proposed to connect the Strait of Canso with the Broad Cove coal fields, and the Government deemed the advantage of the line in relation to the development of our mineral resources to be so great as to justify the giving of an assurance to the company of something more than the ordinary subsidy, subject, however, to the transaction one of undisputed provincial benefit. The company began work early last summer, and the railway is practically completed between the Strait of Canso and Port Hood. The work of constructing the Nova Scotia Midland Railway, which will give railway facilities to the country between Windsor and Truro, has been vigorously prosecuted, and is near completion. In the western part of our prov
ince the Coast Railway has been opened as far as Barrington Passage, and negotiations are in progress for the renewal of the company's contract for the completion of the line from Yarmouth to Lockport. The Nova Scotia Southern Railway Company has performed a large amount of work on its lines.

The promotion of interest in agricultural progress in this province has always been among the leading aims of my Government. The results of recent provincial exhibitions have shown the necessity for securing improved breeds of stock and extending this improvement to all parts of the province. You will be asked to make provision to enable the province to make such steps in the way of importation of the best breeds of horses, cattle, and sheep as will tend to encourage the production of purer and better breeds of stock in all parts of the province. At the last session of the Legislature provision was made for the establishment of an agricultural and horticultural school. Before another session of the House has been called by my Government to carry the act into effect a project was submitted for the establishment of an interprovincial institution which would embrace not only agriculture and horticulture, but also mining and manual training. Such an institution, if it could be successfully established, would be an advantage to all the maritime provinces. As you are aware, has, for some years past taken charge of the construction of the great bridges of the province, and most of these have been built of permanent material. As a complement to this undertaking it would seem desirable that many of the smaller bridges, especially on the chief thoroughfares of the province, should likewise be constructed of more durable material.

"The commissioners appointed to revise and consolidate the statutes have completed their labors, and the result will be submitted to you."

"Scientific investigation within the past few years has disclosed the serious consequences of the spread of tuberculosis, and the necessity for special endeavors not only to prevent the spread of the disease, but also to provide for its cure at the earliest stages. Sanitariums have been established in many parts of Europe and America especially devoted to the treatment of this form of disease. You will be asked to consider a measure designed to provide suitable similar establishments for the treatment of such institutions in this province."

The events of the session were largely nonpartisan, and as a consequence considerable useful legislation was put upon the statute books. Mr. G. H. Murray was still at the head of the Government, assisted by Messrs. J. W. Longley and C. E. Church at the head of departments, and by Messrs. Thomas Johnson, A. H. Comeau, A. McGillivray, T. R. Black, W. T. Pipes, and D. McPherson as ministers without portfolio. The revision of the statutes was matter of much discussion and the subject of a long speech by Attorney-General Longley. The South African War was a popular topic, and on March 1 a resolution of congratulation on the relief of Ladysmith was unanimously passed and sent to the Queen. An employer's liability for injuries act, introduced by the Premier on March 2, and passed, was largely a counterpart of the British act of 1886.

The Government was also providing for the borrowing and expenditure of $300,000 for the construction of small bridges throughout the province, as was a bill preventing coal companies from assessing their employees for medical attendance which they can not control.

Among the numerous other acts passed were the following:

Respecting the revised statutes.
To amend chapter i of the acts of 1895, entitled An Act to amend and consolidate the acts relating to public instruction.
To establish a sanitarium, and to aid in the treatment and care of persons suffering from tubercular disease of the lungs.
To provide for the establishment of an agricultural and technical school for the maritime provinces.
For the encouragement of mining.
For the encouragement of manufacturing and shipbuilding.
To amend chapter ix of the acts of 1899, entitled An Act to provide for an agricultural college, and for the further encouragement of creameries.
For the improvement and better maintenance of certain roads.
To amend the Nova Scotia franchise act, 1890.
To amend chapter li of the acts of 1895, entitled An Act respecting the sale of intoxicating liquors and the acts in amendment thereof.
To amend chapter ii of the acts of 1898, entitled An Act to consolidate and amend the acts relating to the property of married women.
To amend chapter xv of the acts of 1898, entitled An Act of 1896, and to amend the Nova Scotia game act of 1896.
Respecting the maintenance of illegitimate children.
To amend chapter ii of the acts of 1895, entitled the liquor license act, 1895.
In September the Hon. A. G. Jones, an old-time Dominion Liberal leader, became Lieutenant Governor in succession to Sir M. B. Daly.

Financials.—The receipts for the province for the year ending Sept. 30, 1899, included $17,653 from Crown lands, $319,150 from mines, $56,716 from public charities, $432,806 from the Dominion annual subsidy, $31,182 from succession duties. The estimates of the Government were $787,828. The expenditure was amounted to $852,379, and included $24,310 upon agriculture, $123,688 upon debenture interest, $248,758 upon education, $50,169 upon legislative expenses, $115,643 upon public charities, $83,980 upon road grants to municipalities, and the remainder upon various smaller demands. The specie notes at the end of the year were $164,906. The state of the finances as revealed by Murray's financial statement of Feb. 19, was the large receipt from mining royalties. The liabilities of the province were given by him as $3,028,986 of provincial debentures, $560,606 of special loans, and $275,739 borrowed from banks in Halifax; a total of $3,865,322. Against this were assets estimated at $1,341,272. A loan of $164,900 placed on the London market at 3 per cent. had realized a minimum of 95, and had been regarded as high evidence of advancing public credit. The estimated revenue for 1900 included the annual Dominion subsidies and allowance of $432,000, a royalty from mines of $390,000, a revenue from Crown lands of $28,000, from the Hospital for Insane of $4,700, and from succession duties of $25,000. The estimated expenditure included $251,500 upon education, $126,000 upon public charities, $111,851 upon roads and bridges, and $145,062 upon debenture interest.

Education.—The annual report of Dr. A. H. Murray, the president of Education, for 1899, gave the following particulars: The number of schools increased from 2,385 to 2,390. The section schools were 146, against 124 last year, which was the best on record. The increase of sections without school was confined mainly to
the counties of Inverness and Cape Breton, and was due, probably, to the cessation of the granting of "permissive" licenses. That this most desirable change had been effected without any serious consequences was very satisfactory, especially when it is known that in 1897 and 1898 the sections without schools were respectively 153 and 171, although "permissive" licenses were then being granted. To the same cause the decrease in the annual enrollment from 101,203 to 100,617 may be due. The number of teachers employed in these 2,590 sections diminished from 2,510 to 2,494, compared with the previous year; which means that the schools were improving with respect to the number of changes in the teaching staff made within the school year. The amount of money raised by assessment on the school sections was less than in the previous year by about $25,000. More than $100,000 was required for building and repairs. This economy did not affect injuriously the salaries of the teachers, for which more than $15,000 more was voted than last year.

The statistics of the public schools for the term ending July 31, 1899, show 2,390 schools, 100,617 pupils, and an average attendance of 53,919. In the county academies there were 1,795 pupils and 53 teachers. The number of schools was 402 from the Government, $120,082 from the municipalities, and $447,906 from other sources—a total of $814,450.

**Revision of the Statutes.**—This most important matter had been for some years in the hands of a joint committee of the Legislative Council and House, composed of Messrs. J. Longley, W. T. Pipes, E. M. MacDonald, W. H. Owen, W. B. Wallace, J. N. Armstrong, J. H. Sinclair, C. S. Wilecox, D. Finlayson, and H. H. Wickwire. It reported in the session of 1900, and advised slight changes in the work of the preceding royal commission.

**Railways.**—During the year work was advanced upon important local lines, notably the Midland Railway, the Coast Line, the Inverness and Richmond Railway, and the Nova Scotia Southern Railway. The passengers on the provincial railways during 1899 numbered 103,561; the value of the freight carried was $398,406, and of the bulk freight $32,579. The railway event, however, was the letting of the contract for, and partial construction of, the Inverness and Richmond Railway, connecting the coal mines of the mainland with the great steel interests of Cape Breton Island. The contract provided for the construction and equipment of 60 miles of railway from a junction with the Intercolonial Railway at Port Hawkesbury to Broad Cove, and to put them into operation on or before June 15, 1901, and *bona fide* work a coal mine or coal mines at Broad Cove, and equip the same with approved plant and machinery sufficient for the production of 250,000 tons of coal per annum, time to be adjusted as circumstances and the contract may require. The contract was executed on May 23, 1899; location surveys were made, submitted, and approved, and actual construction began in June following. The progress was very satisfactory.

**Mines and Minerals.**—The production of gold in Nova Scotia during the year ending Sept. 30, 1899, was $1,896,614; of coal, 55,484 tons; of gypsum, 140,000 tons; of grindstones, 50,000 tons. The chief increase was in coal—360,929 tons more than in 1898. The central subject of congratulation was the very great impecunious given to mining and industrial development in Cape Breton in 1898 and 1900. It arose out of the formation of the Dominion Coal Company in 1893 by Mr. H. M. Whitney, of Boston, and the obtaining of him by a ninety-nine-year lease of most of the mines in the Sydney (Cape Breton) coal field. In March, 1899, Mr. Whitney organized the Dominion Iron and Steel Company, with large capital and special privileges granted by the provincial and Dominion governments. With every facility for shipping and easy access to raw materials and available markets, with immense mineral wealth only awaiting development, with one of the finest harbors in the world at Sydney, these concerns have already expended much money and produced a condition of great prosperity in Cape Breton. The total value of mineral production in the province in 1899 was $3,517,030.

**Fisheries.**—The value of the yield in 1898 was $7,220,033, distributed mainly among cod ($1,896,614), lobsters ($2,673,024), and haddock ($532,048). The bounties paid by the Dominion Government to fishermen in the province amounted to $103,730; and the number of vessels engaged was 508, with a tonnage of 20,865, and 4,840 men. The smaller boats numbered 7,872, with 12,438 men. A slight decrease on the preceding year was visible in these figures.

In the session of 1900, on March 22, a select committee of the house—composed of Messrs. George Mitchell, J. G. Sperry, M. J. Doucet, C. P. Chisholm, E. M. Farrell, Simon Joyce, H. S. Leblanc, A. M. Gidney, T. Robertson, and Mr. Law—reported upon matters relating to an inquiry into the condition of the fishermen of Nova Scotia, as follows:

That they have held several meetings, and have carefully considered the subject of providing cold-storage facilities for the preservation of fresh fish for the use of the fishermen, toward which the Federal Government made an appropriation last session of $23,000 to supplement amounts to be raised by associations of fishermen in various localities for the purpose of building and equipping cold-storage houses.

That they have been informed that associations have been formed throughout the fishing centers of the province as well as in Prince Edward Island and the Magdalen Islands, and that a few cold-storage buildings are in course of construction.

That your committee desire to impress upon the Federal Government their sense of the great importance of the enterprise, conferring, as it will, immense benefits on the fishermen by preserving fresh fish and encouraging the trade in fresh fish, which latter should attain to much greater proportions than it has hitherto done, and they would express the hope that the Government will continue to deal with it in the most liberal manner possible.

**Agriculture.**—This industry never has been extensive in Nova Scotia, but latterly, as ship-building declined in importance, it has come more to the front. The subjects were debated in the Legislature, and on March 28, 1900, the Hon. T. R. Black presented a report from the Committee on Agriculture from which a few extracts may be taken as descriptive of the general situation:

"The agricultural industry of the province is assumed a much more encouraging aspect from year to year farther. We are playing a much more intelligent and hopeful interest in their calling than in former times. There is a feeling abroad that farming pays when the industry is conducted with intelligence and spirit, and there can be no doubt that vast improvements are being made in agricultural methods, with correspondingly beneficial results."

"In view of the large increase in the mining
and manufacturing industries of the province, giving employment to many thousands of people engaged in these pursuits, and thus creating an active and steady home market and good prices for the products of the farm, our farmers have much to stimulate and encourage them in their work. Your committee are of the opinion that the annual provincial exhibitions at Halifax have had a marked effect in the improvement of the live stock of the province.

"Your committee beg to commend the action of the Government and congratulate the country upon the very liberal grant submitted in the estimates for the importation of standard-bred mares. Pry-bred mares which have brought about the present hopeful agricultural outlook in the province must be noticed the Nova Scotia Farmers' Association. This fine organization by its annual meetings is the means of diffusing a vast amount of information of the utmost value to the tillers of the soil. The Fruit Growers' Association is a kindred crop, apples, whose services to the horticultural interests of the province can not be overestimated."

**Fruit Growing.**—The province is famous for its apples, and Annapolis valley is the center of one of the finest fruit-growing regions in the world. Late in January, 1900, and in connection with the position of First President of the Nova Scotia Fruit Growers' Association, Dr. J. W. Bigelow, of the Nova Scotia Fruit Growers' Association, said, in his annual address:

"The past two years have been most profitable to the Nova Scotia fruit grower from the fact that we have had fair crops of superior apples and obtained the highest prices in the history of the trade, owing to a scarcity in the world's supply. The apple crop will exceed 400,000 barrels, and as most of these have been sold at $2 to $3 a barrel, the net proceeds may be fairly estimated at over $1,000,000. Some estimate may be formed of the immense profit of this business this year from the fact that several growers have accepted or refused from $3,000 to $5,000 for this year's crop. Our plum crop will exceed 60,000 baskets (10 pounds), with average sales of 30 cents a basket. Our cherry crop will exceed 50,000 barrels. Pears and small fruit were a fair crop, and sold at remunerative prices. Strawberries, about 300,000 baskets. Our fruit trees this year have been unusually free from insect pests and contagious diseases, and the dreaded San José scale is so far not known to exist in Nova Scotia."

**NURSES TRAINED.**—The need for trained nurses appears to have agitated many countries at the same time, and everywhere the movement to provide them grew out of a desire to improve upon and organize under more definite training the work attempted for ages by sisters of professed religious orders in the hospitals and on the battlefields of Europe. If England appears to get most credit for pushing the system, it is because England more than any other country stood in need of it, having had no generally recognized sisterhods until of late years.

To Kaiserswerth, a little village on the Rhine, is traced the germ of the nursing system which now prevails throughout Great Britain and her dependencies. The Deaconesses' Institute, at Kaiserswerth, was founded by Pastor Flieder and his wife in 1836. It grew out of an asylum school and penitentiary beside a hospital, but from the skill of its founders its system was soon heard from, and it still enjoys a world-wide fame. To this institute went Florence Nightingale for training in 1851. The following year she undertook the task of superintendent for invalid ladies in Harley Street, London, and soon afterward published her Notes on Hospitals, which attracted such attention that Margaret Cavendish, Duchess of Devonshire, opened them to Government circles. In 1854 the Crimean War broke out, and Miss Nightingale and her staff of trained nurses went to the front, and her fame soon spread over the world.

But before that several efforts had been made by private individuals to train nurses in England. In 1787 Lady Whelas had opened a children's hospital at the London Dispensary, and in 1839 Dr. Powis opened an hospital for women suffering from consumptive diseases. In 1840 Miss Nightingale was invited to undertake the training of nurses for the London Foundling Hospital, and in 1844 Dr. Lister opened the Hospital for Women in St. Thomas's Hospital, London, and it has long enjoyed the reputation of being the best in the world. At most hospitals the longest term for training nurses is two years; at St. Thomas's it is three years. It was really founded for gentle-women to qualify for head places in hospitals or for district nursing under an organized system. The rule in nearly all training schools is, that the services rendered by the probationer or pupil pays for the tuition, besides which the hospital makes a small periodical allowance for the expenses of costumes, text-books, etc. At St. Thomas's the pupil pays £30 for tuition, and must agree to take service for two years after leaving the school. There are occasional vacancies for the accommodation of those who can not afford to pay. The home adjoins the hospital quarters, and one of the terms of training is that the nurses need not leave Great Britain unless at their own request. St. Thomas's, however, has sent abroad some for service in Africa, the East Indies and the Black Ball. Schools for training have since multiplied in London, and no great hospital, public or private, is without one. There are good training schools in other English cities, and also in Scotland and Ireland. That of the Royal Infirmary, at
Edinburgh, has a world-wide reputation, and so has the Adelaide Hospital, Dublin. Cork, also, has excellent training schools. Indeed, Ireland was better off for nurses than England in former days, for she always kept the Sisters of Mercy, and has never declined to adopt modern training. All over the United Kingdom district nursing of the sick poor is now carried on under certain associations and supported by voluntary contribtions; most villages even have their parish nurse, and in England these are under the ausices of the Queen Victoria Jubilee Institute for nurses.

As to rules, the schools are about the same as those in America, which were modeled after them. The supreme authority is usually centered in a matron or superintendent, who herself must have gone through all the curriculum of trained nursing. In large London hospitals, under her are assistant matrons, or head nurses, and "home sisters," who attend to affairs in the house in which they live. Over each ward of 20 to 30 beds is a sister, who is directly responsible to the household and visiting physicians for all the patients of her ward; under this woman is generally a responsible staff nurse to every 10 or 15 beds, and under her at least a pupil nurse. In the larger hospitals a provision is made for all the extra work on the sick wards. The routine order is, if the inferior nurse notes any change in the sick she must report to the nurse above her, the latter to the head nurse, the head nurse to the house doctor, the latter in turn to his superior, the visiting surgeon. Much red tape is connected with trained nursing.

Nursing in America, although it has not undergone the vicissitudes that attended it in Europe—especially in the United States—has come under some watchful management. In early days the best nursing here, as elsewhere, was done by Sisters of Charity, who did the best they could both in hospital and district nursing in such cities and towns as would let them in. They had little or no chance in New England, and hardly any in New York City. Some of the old New Yorkers will remember the story of the Committee of Friends who founded a nursing school in 1838. It does not appear, however, that the nursing was carried out on more scientific plans than that done by the sisters. It is said that as early as 1770 Dr. Seaman used to lecture to a class of 24 nurses in New York city in what was then the nucleus of the present Bellevue Hospital. But the practice appears to have died with him. It was through the exertions of a committee of ladies of the State Charities Aid Association that permission was obtained of the medical board to start the Bellevue School. They secured a house opposite the hospital, on Twenty-sixth Street, as a hospital nursing home, and, received the assurance that the temporary changes would be completed on May 1, 1873, they agreed to begin work in the wards on that date. It was not easy to secure a competent superintendent, but at last they induced Miss Helen Bowden, of the University College Hospital of London, to fill the place. She was known in England as Sister Helen. She possessed a thorough training and wide experience in all matters pertaining to hospital nursing, and had also a reputation for energy and executive ability. She had for assistant one as energetic as herself—Miss Van Rensselaer, of New York. Together they guided the infant school during its first and most trying years. To quote from the records: "The standard of qualifications was placed high, and, although there was not the large number of applicants for admission looked for by the managers, the standard was not lowered. Only 4 appeared for the place of head nurse, and Sister Helen accepted 3 of them. Only 10 sought admission to the school in the first seven months, and 10 of these were rejected. The Board of Managers, of which Mrs. William H. Osborne was chairman and Mrs. A. P. Woodward secretary, received in this year [1873] donations to the school from many citizens of New York to the amount of more than $22,000, and many of the necessaries for furnishing the house besides." To quote again from the records, those employed before the opening of the school were to the "last degree incompetent. They were ignorant, indifferent, dishonest. They were eye servants. Sairy Gamp and her 'pardner,' Mrs. Prig, were ubiquitous. They 'drank fair' and only attended to their patients when 'so disposed.' Nurses and general helpers about the hospital were heirlooms from primitive times. . . Most of them had just served enforced time at the island, and worked without pay for the sake of the board and lodging and the dishonest perquisites they obtained."

In the second year 4 more wards were placed in charge of Sisters of Charity nursing. Making the total, 12—3 medical and 3 female surgical wards. Already trained nursing was growing in popular favor. There were this year 118 applicants, of whom but 29 were accepted, and only 20 of these were kept longer than the probation month. The first class, graduated in 1874, included the best one of these; the last one to be sent to superintend the training school then established at Boston.

This same year another training school was established on Blackwell's Island, and it is still in vigorous life, having completed its twenty-fifth year, with about 60 regular nurses, who have a connection with the City, Maternity, Gouverneur, Fordham, and Harlem Hospitals. The City Hospital male training school is also on Blackwell's Island.

The aim of the mother school at Bellevue will explain the aim of the others that followed it, viz., first, to improve the condition of the hospital nursing in America, and second, to found a clinical school for instruction in the art of nursing the sick among rich and poor alike. These objects have been achieved. All authorities now admit that neither the practice of antisepsis nor the application of modern sanitary law could be made practical without the co-operation of intelligent nurses. The fact that in 1893 there were 1,800 applications for entrance into the training school at Bellevue will suffice to show how nursing has grown in favor among women. Out of these, 39 were accepted on probation. The probationary period covers one month. If found acceptable at the end of that time, the applicant enters as pupil nurse, to remain the two years. The standard number of nurses at Bellevue is 64. The best of the class each year, after passing through examination, are selected for the place of head nurse, one of the responsibilities of which is the training of pupil nurses. The training covers the care of men, women, and children, surgical, obstetrical, and other cases, through all the vast range of diseases admitted to Bellevue. The curriculum includes, besides instruction by the medical and surgical staff, didactic teaching by a corps of lecturers and by the assistant superintendent in anatomy, physiology, materia medica, and practical nursing. There are also lessons in cooking by the cooking school. Special training is given in care of the insane.
AN outline of the training at Bellevue applies also to that of other institutions, most of which have been organized under its direction. Even the matron of the Lying-in Hospital in London, England, is an alumnus of Bellevue, and was selected from many applicants. Several heads of training schools in Canada are from Bellevue. Some have gone to China, Turkey, and Japan. The St. Paul Hospital Training School, at Detroit, was founded for the purpose of meeting the needs of American and English travelers, was put under the charge of a Bellevue graduate. In the early days, nurses from Canada and elsewhere outside the United States were taken to be trained, but in later years this has been stopped; since but a limited number can be accepted, the privilege is confined to Americans. Nurses are still supplied to other countries, but pupils are not accepted from them.

On Christmas, 1887, Mr. D. O. Mills presented a sum of money for the founding of a school for male trained nurses. This was completed in 1888, and placed under the supervision of the female trained nurses. Mrs. F. S. Millard, of the class of 1887, being placed in full control. From this place male nurses are supplied.

The mother of the training school, Sister Helen, did not remain with it long, though long enough to see it on a good working basis. Failing health forced her to return to England in 1876. Miss W. was also a patient who had to leave. They were succeeded by Miss E. P. Perkins, under whose care the school remained twelve years. When, in 1888, she also retired, she was succeeded by her assistant for four years, Miss Agnes S. Brennan, who still fills the post of superintendent, the third in its twenty-eight years of existence. Since the publication of the training school list, nurses and in Europe the drain from Bellevue has naturally grown less. The Spanish-American War gave a new impetus to the demand from military and naval hospitals. Five or six Bellevue graduate nurses are at work in Manila, and several from other training schools also, and a new field has been opened in Porto Rico and Cuba. Miss O'Donnell, of New York, has established the first training school in Cuba in the Government hospital of Our Lady of Mercy, Havana. Her pupils are Spanish nuns and some Cuban young women. Another New York nurse has gone out to Africa in charge of nurses attached to a Canadian regiment, and another in charge of a mission ship Maine. During the past year 13 graduates of Bellevue have married. The calls for private nursing during the same year were 698; while there were 30 applications for superintendents or head nurses in hospitals, only 16 of which the school could fill. Forty-five entered for the class of 1900; 13 left before the month of probation and 5 were dropped during the year, leaving only 27 to graduate. These figures indicate that not all women who feel the ambition to become nurses are qualified by nature to do so. A dishonest certificate of health is sure to reveal itself. One of the axioms of a hospital training school is, that no one with a tendency to consumption, rheumatism, nervousness, or flat foot should be permitted to enter. The desirable age is between twenty-three and thirty-three. Besides the regular two years' training course, many who wish to keep in touch with advanced surgery and medicine take a post-graduate course of another year.

Several hospitals whose training schools have come into existence within the past ten years make their regular course three years. This is the rule with certain hospitals in England, Germany, and other countries of Europe, and with some of those in Boston, Philadelphia, and other cities. This is the rule with St. Luke's and the Presbyterian, in New York. A model of the wards in the Presbyterian Hospital was sent to the recent exposition at Paris, and received a prize. Fine training schools are attached to both these hospitals, which supply nurses to private patients. In hospitals comparatively private like these the nursing staff is large. To other hospitals also for special study, such as the Maternity, the Foundling—in charge of a trained sisterhood—the scarlet fever, and the diphtheria hospitals. Yet there is no lack of opportunity for study within such an institution itself. In 1900, 3,322 patients were admitted to beds in the wards of the Presbyterian Hospital. 4,340 were trained, and the emergency ward, 17,207 were admitted to the dispensary and the ambulance answered 2,446 calls. The record of other semiprivate hospitals in Boston, Philadelphia, Chicago, San Francisco, and all large American cities could equal these.

In all hospitals nurses, after their month of probation, if admitted, wear the hospital uniform—cotum—of hospital color—ticking—white to board and lodging and laundry—24 pieces a week—each nurse receives $10 a month for dress and expenses incident to her studies, the education received being an equivalent for her services. The hours of duty are, as a rule, from 7 a.m. to 7:30 p.m. for day nurses, and for the night staff from 7:30 p.m. to 7 a.m. Eight and a half hours are given for rest, one afternoon each week is granted, and either half the day Sunday or every second Sunday. These hours, however, are liable to vary with the requirements of work, and nurses may be called for day or night duty in the care of private patients. From two to three hours of duty is the usual charge.

Homeopathic hospitals in all large cities have now their own corps of nurses and training schools. This is no more than a matter of esprit de corps, for the training is practically the same in old as new schools of medicine. The homeopathic hospital on Blackwell's Island is worthy of special mention, because, although a charity hospital, it is one of the most attractive in appearance in the land. Many dainty devices are resorted to in order to do away with the regulation hospital air and give it a look of home. Its utilitarian appointments also are noticeably good. Woman nurses attend to the men as well as to the women patients in the hospital. Under the direction of its superintendent, Miss Mahoney, is a skilled pharmacist as well as a trained nurse.

The really systematic nursing of paupers began in 1884, when the State Charities Aid Association laid down rules that no feeble, disabled, or intemperate person should be allowed to attend on the sick, and that one good public nurse at least should be in every hundred. Most of the large cities have similar rules. Although every State and every city of any size has now its training school, the most numerous and notable of these, after New York, are perhaps in Boston, Philadelphia, Chicago, and St. Louis, and a very fine training school is attached to the State General Hospital at Alton, Illinois. The desire of nurses to remain in hospitals continues to prevail that their nurses belong to sisterhoods.

Luke's, New York, for instance, had from its foundation, in 1850, some trained sisters, but its pupils are now admitted to its training school. A similar order of Protestant sisters is in Sydney, who also do parish and district work; in order Mt. Marguerite, in the English—in Boston, are noted nurses, and a high price is paid by private patients to enter their hospital. In England the training schools are largely un
der Government patronage, and also receive no little yearly income from a system that might be called a subletting of their nurses to private patients. In Australia, the nurses are entirely detached from the training institutions and receive direct from their patients the money they earn, which ranges from $20 to $30 a week. It was soon felt, however, that something to take the place of the nursing institution in England was needed in America, and enthusiasm for, or directors of, the first established, first in Boston in 1879, next at Philadelphia, and now all cities, even those of Canada, have a similar system. It requires a statement to be left with the registry of name, age, address, qualifications, kinds of nursing, rates of charge, and both family and medical references. If illegal, the nurse is registered and pays a fee of $3. The person needing the nurse pays $1 on application. Detailed inquiries from both families and doctors are kept, and thus the nurse's character and skill are followed throughout.

To correspond also with the system of district nursing throughout England, 'nurses' settlements have of late years been established in American cities. The American women form the most densely populated districts, and among the poor, and do a work in their line similar to that done by the college settlements in another.

The nursing throughout Canada is still most largely in the hands of the Sisters of Charity, but in the English-speaking part of the American system has prevailed since 1831, when a group of 16 nurses with superintendent went from Bellevue Training School to Toronto. Others have branched off from these to Montreal, Ottawa, and other places. Nursing in Australia is also mainly in the hands of Sisters of Charity, but a band of trained women under charge of some ladies from Elgin, Scotland, and the district school, Melbourne. Prince Alfred Hospital, at Sydney, is also a noted training center. There is another training institution at Adelaide, and one at Launceston, Tasmania.

Training schools almost if not quite equal to those of England have also gained a footing in India. In 1872 the first of the Bombay, under the charge of the Protestant Sisters of St. John Baptist. The institution at Oudypore, known as the Lady Dufferin Fund, founded while Lord Dufferin ruled India, is a training school and association for supplying medical aid to women. In 1886 a training school was attached to the hospital at Poona for training native women of all castes for nurses. In 1888 the first detachment of Indian sisters went to Rawalpindi and Bangalore to nurse some of the troops that were suffering with enteric fever. Malta, Goya, South Africa, and other places where once only ayaahs or Kaffir boys could be had to do the work have been acquainted with the modern system of nursing the sick.

Of all countries in the world, the history of nursing is perhaps most interesting in France. It has had for the purpose the oldest and most noted institutions. In no country was so much benevolence toward the sick shown in times before enthusiasm had learned to link itself with science. As early as the eleventh century a nursing sisterhood, the Hospitaliers Hôtel Dieu, were famous, and they extended their work into other countries. The order of Fille de Marie was established in 1443. About the middle of the sixteenth century the Prince of Sedan founded the Demoiselles de Charité, a regularly organized sisterhood, but exempt from vows, to work among rich and poor alike. In the seventeenth century Franches de

Boiset founded the Fille Ste. Geneviève, especially for sick nursing. In 1630 the Hospitaliers de Loche were introduced into 13 hospitals. There were numerous others; even an inspired shepherdess founded a humble order. The most famous and lasting of all, and that which corresponded most nearly to the modern work of deaconesses or sisters of Germany and England, was founded in 1633, the great order of Vincent de Paul, which still dominates most of the nursing world. The women of this order, unlike others, were not bound to perpetual vows. They were free to renew them or leave the order each year, though the freedom was scarcely ever taken advantage of. The words of its founder have often been quoted: "Your convent must be the hospital; your cell, the ward; your chapel, the parish church; your cloister, the streets of the city; your girdle, the fear of God; your veil, holy modesty." This order soon pervaded the world. It suffered persecutions during changes of government, and it was often suppressed during revolutions. It was insinuated in many ways. The doctors often complained that it gave too much attention to the patients' souls to the neglect of minute instructions about the patient's body. But the most blessed women, who knew no fear, and penetrated the thickest of the fray, heedless of their lives.

The doctors of France wanted women wholly in their own service, and they finally got them. The nuns' orders were suppressed, and in 1877 the Municipal Council of Paris appointed an assessor, an ex-official director of a school for training nurses, male and female. The theoretic course included hospital administration, anatomy, minor surgery, physiology, dressings, hygiene, pharmacy, and monthly nursing. Lectures were held twice a week in the evenings, practical lessons were given once a week, and diplomas were awarded to successful pupils at the end of each year. Many experiments had to be tried in rudimentary education before nurses were found who were fit to receive these instructions. At first it was difficult to find women at all, and when they came they were mostly domestic servants out of place, dismissed shopgirls, and their wages were $25 to $30 a year, to 20 francs a week, with food, lodging, and uniform, yet they proved most unsatisfactory.

They evaded rules, they demanded tips from patients, they drank the patients' wine, and even the harder spirits in which the doctors preserved specimens. The same trouble was found in England and America.

The replacing of nuns by trained nurses took place in hospitals in about the following order: Salpêtrière and Bicêtre, 1877; Laennec, 1878; La Pitié, 1880; La Rochefooucauld, Des Ménages, and St. Antoine, 1881; Lourmel and Menon, 1882; the Incurables and Cochin, 1885; the Necker, Enfants Malades, and Enfants de la Charité, 1888. Despite all this, the decree that banished the sisters from Parisian hospitals was repealed in 1889, and they were free to return and undertake nursing wheresoever their services were wanted. A sister in full religious dress is again at the head of some of the hospitals, while under her are many lay trained nurses. The latter have become approved as a class by the instruction received from the Assistance Publique, which included a first course in general education, reading, and arithmetic, to be supplemented by practical instruction in the art of nursing, and a third course of rotation or serving in every department of the hospital. The hospitals of Paris and all the European Continent have only of late taken
up the system of rigorous cleanliness known to those of America and England. In Paris and other French cities, too, many institutions have in late years been established which are in no wise religious, and where trained nurses can be obtained by private patients. There are also two nurses' schools at the military hospital for war invalids and delinquents to wounded soldiers in time of war; these are Les Dames de France, of which the widow of the late Marshal MacMahon is president, and Les Dames de France, whose president is Madame Koechlin Schwartz. There are also Red Cross nurses.

Spain is still in the hands of nuns and Sisters of Charity nurses, who since the suppression of their orders (1835), and confiscations of their property later by Isabella II, are too crippled in resources to take any initiative themselves, and the Government does nothing. Only those who can pay for it receive good nursing. It has been said that for poor and outlying poor the poor have taken place in Spain since St. Theresa worked wonders there in the middle of the sixteenth century. Interested persons some years ago settled an English nurse in a cottage hospital at Cadiz for the use of English people and others taken sick there. It still flourishes. Portugal is not well provided for as to their modern and primitive country kindness is said to be more common than trained nursing. The nuns and monks do what they can, but are reduced to want themselves.

Down almost into modern days Germany held to the traditions of nursing founded by the great orders of chivalry, by the Knights of St. John and of Malta and Ladies of Charity, as hospital nurses became the rule there as in France. The Lutheran parson Fiedner, at Kaiserswerth, already mentioned, made the first break, and he, in choosing a name for his modern nurses, went back to that used by Christians before convents were founded—he called them deaconesses. Their fame spread; they were called to hospitals in Berlin, Frankfort, Kreuznach, London, France, even to Constantinople, India, and Japan. Up to 1883 it was estimated that 627 nurses had been trained at Kaiserswerth, and they were placed at about 200 stations. Since training has multiplied at all home stations, the draw from Kaiserswerth is lessen. Indeed, since the fame of his pupil, Miss Nightingale, went abroad, the way that of Pastor Fiedner has been rather obscured.

Empress Friedrich, daughter of Queen Victoria, founded a noted training place, the Victoria Home and Fatherland Ladies' Society, at Magdeburg. Empress Augusta founded another at Schönebeck. Others sprang up at Dresden, Leipzig, Breslau, Carlsruhe, and elsewhere in the kingdom. The Red Cross has there, as elsewhere, done an immense work in training. Besides, many of the long-established brotherhoods and sisterhoods of the Roman Catholic Church began also to train. There are said to be more than 6,000 nurses in Prussia alone.

Yet throughout Germany in general, even in Prussia, the Catholic societies, having longest concern themselves with nursing, are still mostly concerned themselves with nursing, are still mostly concerned with training. The Red Cross is a world's work, old methods prevail. Vienna, one of the world's foremost cities in surgery, accounted one of the most backward in nursing. The Rudolphinerhaus is reputed one of its best served hospitals, having 18 or 20 Red Cross sisters, assisted by 6 probationers. Red Cross sisters in these countries are drawn from all ranks in life, but an effort is made to secure the most intelligent and refined. They pass through the regular probationary period and curriculum as other nurses. As a rule, they receive the first year board and lodging, and what would correspond to about $3 or $4 a month; the second year about $10; and the fourth year about $14. Pay for nurses on the Continent varies too much, to be stated here, but everywhere it is small compared with what they receive in England and the United States. A strong reason, no doubt, for holding to the old order of nursing is that men or women of religious orders, being supported by their orders, work gratis or from a sense of duty.

The Rudolph Stiftung, in Vienna, was founded, when examined a short time ago, to have 70 Sisters of the Sacred Heart in charge of the wards, answerable less to the doctors than to the head of their order. The Allgemeinen Krankenhaus, with 2,000 beds, had only 250 nurses, without a matron or any system of training; they were not the deaconesses, but in the Red Cross, they are the deaconesses. Their name is known, and people are taken from them. The hospitals at Buda-Pesth are served by Brothers of Mercy, who also carry on a varied and complex system of district nursing without regard to creed. They are said to have had no special system of training, but have been too devoted and reliable. These examples may serve to indicate the nursing system throughout Austria and adjacent German provinces.

Belgium is also in the hands of the religious nursing orders, but better managed. There is more training, and the modern system is growing. Holland, which never had much to do with religious orders, has, not up to a recent period, had any established system of nursing its sick, and seemed somewhat indifferent to adopting any. The enterprise was first attempted about thirty-five years ago by three ladies, one of whom gave a house of hers at The Hague to the experiment. The venture met with unexpected success; the deaconesses, or private nurses soon known as "Sisters of Mercy," order, in common stuff gowns and blouses, with no caps or aprons. The hospitals at Buda-Pesth are served by Brothers of Mercy, who also carry on a varied and complex system of district nursing without regard to creed. They are said to have had no special system of training, but have been too devoted and reliable. These examples may serve to indicate the nursing system throughout Austria and adjacent German provinces.

Sweden, Norway, and Denmark all have adopted the modern system of trained nursing. It is not unlike that of England or America, except that it is on a smaller id more primitive plan, and nominally more to meet the exigencies of war. The best training schools are under the auspices of the Red Cross sisterhood. The Kom iljine Hospital, in Denmark, has a training school of note. The chief nurse—plejemonster—has to live in the hospital and oversee all the sick nursing. The nurses assist the surgeons and prepare all the work for their hands—antiseptic dressings, sublimate, isoform, gauze, etc. There are two classes of nurses. One is taken only from the upper or educated classes, and called damner or ladies; the others only attend to patients under direction of these. The former are trained, not to serve, but to head institutions.

For Sweden and Norway the Diakoniss Institute at Stockholm is in high repute as a place of training. A similar system is established in Denmark. These countries used to be on an equal footing: of late all have head nurses and a superintendent. A system was also established at Copenhagen, and followed elsewhere, by which the Red Cross sisterhood could instruct the people who came to them for useful information in time of sickness.
NURSES, TRAINED.

Every country is now endeavoring to adapt its nursing system to the conditions of its people. Russia has been trying to adapt methods to fit her needs ever since the Crimean war, when she had her eyes opened to the value of nursing. The nurses of all her military hospitals, and most of those of the large cities and towns, are obtained from the Red Cross training schools. The society is paid for the nurses it furnishes, and then pays the nursing a nominal sum, varying, but always small. The Red Cross differs in different countries, adapting its rules to its environment. In Russia it is semireligious, but its members can leave if they please. Some hospitals have a very small force, no more than 6, with gratuitous helpers under them. The Military Clinical Hospital, St. Petersburg, has a surplus of 50 trained nurses, 67 men, with 15 superintendent nurses over them. Okoncon Hospital has 100 nurses and 25 Red Cross sisters. Children's hospitals all have woman nurses. In time of war Russia has a sisterhood unlike that of any other country. Women of the very highest social class train for the purpose, and in need, volunteer, enlisting for the whole war, if necessary. Women were allowed to do this as if they had never been. The tendency is to replace all male nurses by female. Even voluntary male nurses have not only been found wanting in capacity, but also in perseverance and honesty.

Italy, which in early times boasted one of the world's most famous institutions, along with many others since the Crusades, is the country where the Red Cross was founded by Pope Innocent III, has found herself within recent years without any nurses at all. After united Italy's suppression and confiscation of convents and monasteries, when even the irrepresible Sisters of Charity had to fly, there were none to fill their place in all Italy, for the Red Cross was not a factor. After a while, as the clamor of the people for their aid became known, the Sisters of Charity began to creep back again, and although the law was still in force, the Government may be said to have winked at their coming. Many of these women have since qualified as nurses, and are now doing good work in Italy. To escape the law they superintend the hospitals as simply as superintendents. The large hospital of Maggiore, in Milan, furnishes an example of how they work. Each ward of 50 or 60 beds has a superintendent sister, and under her are 4 lay sisters. Yet with this small force their hospital is reported to be very well kept. All helpers in the hospital are under their superintendence. Almost anywhere in Italy can now be found nurses trained on the English or American plan. They can be procured from the training institution at San Remo, presided over by a Bellevue nurse.

Everybody has heard about the rise of the Red Cross Society, which had its inception in the brain of its founder, Captain Drey, who while riding leisurely in his carriage was attracted by the thundering of the guns at the battle of Solferino, obtained admission to the field, and there witnessed suffering so horrible and needless that it inspired him to write his book, Souvenir de Solferino, which created a sensation, and was translated into most of the languages of Europe. At the next yearly conference of the Society of Public Utility, held in Geneva in October, 1863, he presented his idea to the great war-making powers of providing a way by which civilians could reach and care for wounded men from the outside. Next year delegates from every Government in the world came to discuss the proposition of M. Dunant, and after due season the treaty of the Red Cross was entered into.

Meanwhile, the United States was passing through her great civil war. She had no trained nurses, but her Sanitary Commission arose spontaneously, and through her that astonished the world, and then dropped out of sight. Miss Clara Barton has told the world of her endeavors to get the Red Cross treaty's invitation to the United States to join it, noticed, and Secretary Seward's persistent ignoring of the matter, on the ground, as it afterward appeared, that the United States, without peace with the nation did not need to join the treaty. Nor, despite all that individual Americans could do, and although 32 nations were in the treaty, could any response from our Government be obtained until Miss Barton laid the whole matter before Secretary Blaine, and he in turn placed it before President Arthur, who promptly signed the treaty. The United States is the only country that the treaty permits to extend its ministrations into other fields than those of war. This is also the only country where the Red Cross Society takes for its nses nurses already trained, and trained none of its own until the past year, when a Red Cross training school was founded in Geneva.

An account of nursing seems hardly complete without mentioning two women, both of them of France, both equally heroic, and representing respectively the older and newer orders of nursing. Mme. Coralie Cohen, widow of a physician, was first heard of after the breaking out of the Franco-German war. She was one of the first trained nurses to respond, and the campaign proved herself a marvel of devotion and courage, going through the German ranks and nursing their wounded as carefully as she nursed the men of her own beloved France. Yet she found opportunity to proclaim her patriotism. When the French Government had established an ambulance at Vendome after the capitulation of Metz, and was nursing 800 wounded, when German officers hoisted their flag over the ambulance. She at once refused to work except under her own flag, and announced that if the German flag was not removed she and her staff would depart. The Germans, admiring her pluck and determination, replaced the French flag so that the caravans of the ambulance drivers seeking out her countrymen in hospitals and prisons there. The Empress Augusta so admired her philanthropy and courage that she presented Mme. Cohen with the Red Cross of the German order, and in 1889 the French Government presented her with the ribbon of the Legion of Honor.

In the autumn of the same year a Sister of Charity was also presented with the Cross of the Legion of Honor, and in presenting it the general in command made this speech: "Sister Maria Theresa, you were only twenty years of age when you first gave your services to the wounded at Balaklava, and you were wounded yourself. You were carried out of the battle of Magenta. You bravely nursed the wounded through all our wars in Syria, China, and Mexico. You were carried off the field at Wörth, and before you recovered from your injuries you were again performing your duties. When a grenade fell into your ambulance, you without hesitation took it in your hands and carried it a hundred yards from the ambulance, where it exploded, wounding you severely. No soldier ever performed his duty more heroically than you have done, or lived more successfully for his country. I have the honor to present you, in the name of France and of the French army, with the cross which is only conferred upon those who have shown remarkable bravery in action. Soldiers, present arms!"
OBITUARIES, AMERICAN. Alden, Alonzo, soldier, born in Wadham's Mills, N. Y., July 18, 1834; died in Troy, N. Y., Jan. 16, 1900. He was a lineal descendant of the Puritan John Alden. He received his early education at Keeseville Academy and Sand Lake Collegiate Institute. He was graduated at Williams College in 1859, and two years later was admitted to the New York bar. He enlisted as a private in the 30th New York Volunteers, and on May 14, 1861, was commissioned second lieutenant. In 1862 his regiment participated in the first occupation of Falmouth and Fredericksburg. In 1862 Lieut. Alden was invalided home. During his convalescence the 189th New York Regiment was formed in Troy, and he was commissioned major in that regiment, and saw with it the greater part of his military service. He was lieutenant colonel of the regiment in 1867 and colonel in 1868. In 1884 the regiment was transferred to the army of the Pacific Coast, and in 1885 he was transferred to the 4th U. S. Cavalry at Fort Capital, Washington. In 1890 he was transferred to the 8th Army Corps and stationed at Augusta, Ga. In 1892 he was transferred to the 18th U. S. Infantry and stationed at Plum Run, Pa., and at the siege of Charleston. Feb. 13, 1864, he was commissioned lieutenant colonel. He was shot in the head while leading his men in a brilliant charge at Cold Harbor. Returning to his command, he took part in the construction and defense of the Dutch Gap Canal. In June, 1864, he was commissioned colonel. He won special distinction in the attacks on Fort Fisher, and after the capture of that fort he was placed in command, and on the morning of Jan. 16, 1865, was severely wounded by the explosion. Gen. A. H. Terry, in command of the expedition, made a special report to President Lincoln, recommending his promotion, and he was commissioned brigadier general. He was mustered out of the service July 16, 1865. He was unable to return to the practice of his profession on account of his wounds, from which he suffered till the time of his death. He was for a time in the customhouse in New York city, and from 1866 till 1874 was postmaster of Troy.

Allen, John F., inventor, born in England in 1829; died in New York city, Oct. 4, 1900. He came to this country when twelve years of age, and learned the trade of an engineer, but devoted his life to the invention of engines and mechanical appliances. He invented the Allen high-speed engine, also the Allen valve and the Allen air compressor. When he died he had nearly completed a new engine to be used in a motor vehicle.

Angell, George Ransom, merchant, born in Rochester, N. Y., Nov. 27, 1837; died in Detroit, Mich., April 18, 1900. He received a common-school education, and learned the machinist's trade in his father's shop, afterward becoming a partner. At a time of financial depression he left the business and became a newspaper reporter. Finally, in the early sixties, he entered upon a business career in Detroit, where he spent the remainder of his life. He bought and conducted an extensive art store, was at one time president of the National Photographic Merchants' Board of Trade, was for six years president of the Young Men's Christian Association of Detroit, for two years president of the Board of Education, and at the time of his death was president of the Michigan Bankers' Association, president of the City Savings Bank, and a director in several other financial institutions. He was also active in the affairs of the Congregational Church. Mr. Angell was well read in history and general literature, and was a fluent public speaker.

Archer, Belle (Mrs. Herbert Archer), actress, born in Easton, Pa., in 1870; died in Warren, Pa., Sept. 19, 1900. She made her first appearance as a child singer in a juvenile Pinafore company at Ford's Theater, Baltimore, as Josephine, in 1880, under the name of Belle Makenzie. Her family name was Mingle. She remained at Ford's Theater several years, and while there married Herbert Archer, a member of the company. She came to New York, where she became a member of the company of the Madison Square Theater in 1886, and played leading roles in the repertory of that theater. After her marriage with Mr. Archer she was the leading lady of E. H. Sothern's company in his first starring tour, and also played the leading roles with Alexander Salvini when he first ventured out as a star in 1892-93. In 1895 she was engaged at Daly's Theater, New York, and for four years before her death was a member of McKee & Hoyt's company, playing A Conquered Woman, in which she appeared for the last time on the stage at Niagara Falls, Sept. 14, 1900.

Armstrong, Andrew Campbell, publisher, born in Canada, Aug. 16, 1829; died in Stamford, Conn., Oct. 8, 1900. He was one of the oldest publishers in New York city, and in 1870, with his brother, founded Sketchbook Press, to which he later contributed. After the death of his brother, James A. Campbell, in 1901, he transferred his business to Armstrong & Co. In 1878 he retired from that firm to become the head of the publishing house of A. C. Armstrong & Son, which still continues in business. Mr. Armstrong was a director of the Bible Society, a member of the Chamber of Commerce, a director of the Merchants' Clerks' Savings Bank, and a director of the Home Insurance Company.

Atwater, Ernest R., missionary of the American Board, born in Oberlin, Ohio, Aug. 20, 1865; Mrs. Elizabeth (Graham) Atwater, born in England; and four children; all killed near Fen-Chio-Fu, Shensi province, China, Aug. 15, 1900. Mr. Atwater was graduated at Oberlin College in 1887, and at the 18th annual session of the Board as a missionary to China. In 1900 he was sent to the frontier, where he earned a reputation for bravery as an Indian fighter in campaigns against the Crows and Navajos. In an attack on the latter, in 1859, he was severely wounded, and he remained on sick leave until the outbreak of the civil war. May 14, 1861, he was promoted to a first lieutenancy in the mounted riflemen and put on duty with the 1st Iowa Cavalry, and he was in the battle of Bull Run and other actions. Aug. 23, 1861, he was appointed colonel of the 3d Pennsylvania Cavalry, and placed in command of the cavalry defenses of Washington. In March, 1863, he made the first of several successful raids, the nature of which is indicated somewhat, by the following statement: "Dec. 21—My column has marched, climbed, slid, and swum 34 miles since Dec. 8." Later in the year he made a raid near White Sulphur Springs, and was de-
feated after two days of hard fighting; but on Nov. 5 he made another raid, cleared Greenbrier County of Confederates, and captured three guns and a number of prisoners. In the following month he made a descent on southwestern Virginia and cut the Virginia and Tennessee Railroad at Salem, which was the line of supplies of the Confederate army under Longstreet, besides destroying a large quantity of clothing, military equipment, and provisions. The strongest effort was now made to capture him, but, obtaining through a prisoner a knowledge of the enemy's plans, he succeeded in getting through the Confederate lines, reaching the National Army camp with 200 prisoners and 150 horses. In February, 1864, Averell was placed in command of the 2d Cavalry Division, and he fought continuously all that spring and summer. He was wounded in a skirmish at Wytheville, but this interfered with his active duty only a few days. In July and August he was on the Shenandoah, and Martinsburg, and he closed that year's campaign at Mount Jackson, in September. March 13, 1865, he was made brevet major general for gallant action at Moorefields, Va., and, the war ending, he resigned. In 1866 Gen. Averell was appointed United States consul general at Montreal, which post he held three years. In 1888, he was reinstated in the regular army with the rank of captain, and Aug. 31 of the same year was retired. In his latter years he was interested in manufacturing. He was the inventor of a system of conduits for electrical wires, and in June, 1898, after litigation pending for seventeen years, the Supreme Court awarded him nearly $800,000 as a result of a suit he had instituted against Amzi L. Barber for his share of the profits of the Barber Asphalt Paving Company.

Bagnall, Benjamin, missionary, China Inland Mission; Mrs. Bagnall; one child; all killed in Pao-tsing-Fu, Chi-Li province, China, June 1, 1869. Baily, Silas M., soldier, born in Breathsville, Pa., in 1836; died in Uniontown, Pa., May 5, 1900. At the beginning of the civil war he organized a company of the 8th Pennsylvania Reserve Corps, the first company to be mustered into service from Greene County, and in May, 1862, he was elected major of the regiment. In the battles from the battle of Antietam, at Gaines' Mill, and in the latter he was seriously wounded in the head. He rejoined his regiment in Maryland just before the battle of Antietam, Sept. 17, 1862. At Fredericksburg, Dec. 13, he gallantly led the regiment, and was again wounded. He was at once promoted to be colonel, his commission dating from the battle of South Mountain, Sept. 14, 1862. He served also with Grant in the Wilderness. On May 13, 1865, he was brevetted brigadier general of volunteers for gallant and meritorious service during the war. Gen. Baily was a delegate to the National Republican Convention in 1880, and was one of the 306 who supported Gen. Grant. In 1881 he was elected Treasurer of Pennsylvania as a Republican.

Ball, Ebenezer Burgess, born in Loudon County, Virginia, in 1817; died in Washington, D. C., April 12, 1900. In 1843 he became a clerk in a dry-goods store in Washington. In this life, he journeyed westward, settling first on the banks of Osage river in Missouri, and finally in Oregon, on the site of the present town of Jackson. Here he remained several years, taking part in the Rogue river war, acting as Government agent on the Selentary Reservation, and amassing a considerable fortune as a post trader. At the beginning of the civil war he enlisted, and he served till its close. In the meantime he had lost all his savings, and until, through the kindness of Gen. Black, sometime Commissioner of Pensions, he was enabled to establish the little tobacco shop in the Pension Office he had a small fight with Washington; his efforts to obtain a place under the Government meeting with failure. Till the time of his death he was a familiar figure to frequenters of the Pension Office. Col. Ball was related to Washington on both sides of his family, and bore a striking resemblance to the first President of the United States. He always dressed in the uniform of a soldier, and his knowledge of the military art was well known for his practical philanthropy.

Banta, William Sickles, lawyer, born in Pascack, N. J., Dec. 12, 1824; died in Hackensack, N. J., May 7, 1900. He studied under Rev. J. D. Mabon, and was graduated at Rutgers College in 1844. He was admitted to the bar in 1847, and for ten years after 1860 he was public prosecutor in Bergen County, where he first was appointed to the bar. In 1872 he was appointed judge of the Court of Common Pleas, to fill the unexpired term of Judge Ashbel Green, and he served for many years in this office. Judge Banta was, in 1860, county superintendent of public schools, and he held many local public offices. He was a weekly writer, and was well known for his practical philanthropy.

Barbour, John Humphrey, clergyman, born in Torrington, Conn., May 29, 1854; died in Middletown, Conn., April 29, 1900. He was graduated at Trinity College in 1873. In 1876 he was ordained deacon in the Protestant Episcopal Church, in 1878, and in 1879 he was admitted to the bar in Connecticut. From 1876 to 1889 was minister of Grace Chapel, in Hartford. He also served as librarian of Trinity College from 1882 to 1889. In 1889 he accepted the chair of New Testament Literature and Interpretation in Berkeley Divinity School, Middletown, Conn., which he held until the time of his death. He was the author of Beginning of the Historical Epistles, and other religious works.

Barnard, Henry, educator, born in Hartford, Conn., Jan. 24, 1811; died there, July 5, 1900. He was graduated at Yale in 1830, studied law, and was admitted to the bar in 1833. He then spent fifteen months in study and travel in Europe; from 1835 till 1842 he was principal in the New York Academy of Music. In 1837 he was admitted to the Bar in Connecticut. In 1839 he was President of the State Board of Education, from 1835 till 1842. He introduced schoolhouses of improved construction, high schools, teachers' institutes, and other modern methods of instruction. From 1843 till 1849 he was school commissioner of Rhode Island, doing the same service for the schools of the State that he had done for those of Connecticu. In 1850 he returned to his native State, and for four years he was Superintendent of State Schools. In 1850 he was President of the University of Wisconsin, and in 1863 and 1866 president of St. John's College, Annapolis, Md. The National
Bureaus of Education was established in 1867, and Dr. Barnard became the first United States Commissioner of Education. He organized the bureau and issued four valuable reports. In the first of these he advocated nearly every educational reform that has since been introduced in the United States. He resigned in 1869, and devoted the remainder of his life to the writing and publication of educational works. On his eighty-seventh birthday (Jan. 24, 1898), the public schools of Hartford were closed, and a distinguished audience gathered in the Capitol to do him honor as "the father of education"—a title that he shares with Horace Mann, his great contemporary. He was secretary of the school board, established the Connecticut Common-School Journal, and in Rhode Island he issued the Rhode Island School Journal. In 1855 he began the publication of the American Journal of Education. His writings covered the whole range of educational activities, both theoretical and practical. Some of the more important titles are: School Architecture (1839; 10th ed., 1866); National Education (1840); Practical Illustrations of School Architecture; Report on Public Schools in Rhode Island (1845 and 1848); Documentary History of Public Schools in Providence; Education and Employment of Children in Factories; Normal and Teachers' Institutes (1850); Normal Education in Europe (1854); Normal Schools in the United States and Europe; History of Education in Connecticut from 1838 to 1854; Educational Biography (1857); Papers for Teachers; Military Schools; Technical and Scientific Education; American Pedagogy; Discourses on the Life and Character of H. Gallaudet; Tribute to Dr. Gallaudet, with a History of the American Asylum; Hints and Methods for the Use of Teachers; American Teachers; Elementary and Secondary Instruction in Switzerland, France, Belgium, etc.; English Pedagogy; French Teachers, Schools, and Pedagogy; German Teachers and Educational Reformers; Life of Ezekiel Cheever, and Notes on the Free Schools of New England; American Journal of Education (ed. 1856–58); Kindergarten and Child Culture Papers; Object Teaching, and Oral Lessons on Social Science and Common Things (1861); Pestalozzi and Pestalozzianism (1861); Primary and Elementary Instruction; School Codes; Science and Art; Superior Instruction in Different Countries. A collected edition of his works was published in 1886, under the title The American Library of Schools and Education. It is in 52 volumes and contains more than 800 treatises, each being also published separately.

Bartol, Cyrus Augustus, clergyman, born in Freepont, Mass., Jan. 3, 1828; died in Hartford, Mass., Dec. 16, 1900. He was graduated at Bowdoin College in 1832, and at Harvard Divinity School in 1835, and became the colleague of the Rev. Charles Lowell at the West (Unitarian) Church, Boston, in 1837. After the death of the senior pastor, in 1861, he continued in charge of the church till the death of the second pastor, in 1888. In the earlier portion of his ministry he might have been classed with the Channing Unitarians, as the more conservative members of the body were styled; but as time went on he became known as an extremely radical thinker. He was always a fiery exponent, and at all times an enthusiastic advocate of the Reformation and educational reforms. His tender nature and intense spirituality endeared him to all who came within the sphere of his influence. He published Discourses on the Christian Spirit and Life (1860); Discourses, on the Christian Body and Form; Pictures of Europe (1855); History of the West Church and its Ministers (1858); Church and Congregation (1858); The Word of the Spirit to the Church (1860); The Unspotted Life (1864); Rational Problems (1872); The Rising Faith (1874); Principles and Portraits (1880); Spiritual Splendor in Shaded Places.

Beard, William Holbrook, painter, born in Painesville, Ohio, April 13, 1825; died in New York city, Feb. 20, 1900. He began sketching when a very little boy, but his early instruction, beyond such as he could impart to himself, seems to have consisted only of a few lessons from his elder brother. He then began his professional career as a traveling portrait painter in 1846, and after four years settled in Buffalo, where he remained until his departure for Europe in 1857. He took with him several important commissions, and spent three years painting and sketching in Düsseldorf, and in Italy, Switzerland, and France. He returned in 1860, and after a short time in Buffalo made his permanent home in New York city. He was elected to the National Academy in 1862. His father was a judge of the Supreme Court of Connecticut. In the last years of his life Mr. Beard devoted himself exclusively to painting. He was primarily to the humorous painting of animals, in which he was eminently successful. He published collections of his sketches under the title Humor in Animals, and a text-book entitled Action in Art. Among his best-known pictures are: Kittens and Guinea Pigs; Bears on a Bender; Court of Justice; The Astronomers; The Watchers; Bears' Dance; Raining Cats and Dogs; Naugthy Cubs; Death and Chivalry; The Barroom Politicians; Pets on a Spree; Old Time Club Life; Hark! The Wreckers; The Approach of Spring; Oh, My!; Horse Market in Brittany; The Home Comer; The Dance of the Poor Indian; The Dancing Lesson; Who! who-o! How d'100, Wabbit? Ain't you ashamed of yourself? Eavesdropper; Who's afraid? Darwin Expounding his Theories; Bulls and Bears in Wall Street; The Fallen Landmark; and Cattle on a Thousand Hills. His March of Sielius, belonging to the Buffalo Fine Art Gallery, and Lo! the Poor Indian were at the Centennial Exhibition of 1876. To the Paris Exposition of 1878 Mr. Beard sent The Wreckers.

Beecher, Charles, clergyman, born in Litchfield, Conn., Oct. 7, 1813; died in Georgetown, Mass., April 21, 1900. He was the last surviving son of the Rev. Lyman Beecher. He studied at the Boston Latin School and Lawrence Academy, Groton, Mass., and was graduated at Bowdoin in 1834. After a theological course at Lane Seminary, of which his father was the head, he became pastor of the Second Presbyterian Church in Fort Wayne, Ind., in 1844. Owing to some differences of belief between himself and members of the church, he withdrew from it in 1857, and organized a Congregational church in Newark, N. J., from which he went to the First Congregational Church in Georgetown, Mass. From 1870 till 1877 he resided in Florida, and was for two years State Superintendent of Public Instruction. He was
afterward pastor of a church in Wysox, Pa. During his later years he did not preach. He was a gifted musician, and had charge of the music in the compiling of the Plymouth Collection of Hymns and Tunes. He also edited the Autography and Correspondence of Lyman Beecher, and was the author of Redeemer and Redeemed; Eden Tableau; The Incarnation, or Pictures of the Virgin and her Son; David and his Throne; Spiritual Manifestations; and Patmos.

Beecher, Thomas Kinnicutt, clergyman, born in Litchfield, Conn., Feb. 10, 1824; died in Elmira, N. Y., March 14, 1900. He was the sixth son of the Rev. Lyman Beecher. He was graduated at Illinois College, of which his brother Edward was president, in 1843. He completed the Northeast Grammar School in Philadelphia, and then of the Hartford (Conn.) High School. In 1852 he took charge of the Elmira Theological Institute, Williamsburg (now a part of New York City) and organized and assumed charge of the New England Congregational Church in 1854 he settled in Elmira, where he became pastor of the Independent Church (now called Park Church), and remained there till the time of his death. In 1863 he was chosen chaplain of the 141st New York Volunteers, and he served with the Army of the Potomac four months. In 1864-65 he visited South America, and in 1873 revisited England. He was at different times nominated by Democrats, Republicans, Greenbackers, and Prohibitionists, and had been a candidate for nearly every office within the gift of the American people save those of Governor and President. He was fond of mechanics, and for years took care of the Elmira mechanical school. During his time and making the observations himself without cost to the city. When on his way to New York city he would run the locomotive. He was a lover of books and art, a keen critic, and for many years wrote a column of miscellany on current questions, first for the Elmira Advertiser and then for the Gazette. His only published volume is Our Seven Churches (New York, 1870), a liberal estimate of the Roman Catholic, Presbyterian, Protestant Episcopal, Methodist Episcopal, Baptist, Congregational, and Liberal Christian denominations, many parts of which have been printed separately as tracts and widely circulated. He was a member of the First Church. He did his brother, but, like him, was a man of independent and aggressive character, advanced views, and courage in the expression of his convictions. In a city where he was not known and loved as he was in Elmira he would infallibly have been regarded as a crank, and his personal appearance and habits often caused his fellow-countrymen anxiety. Although in receipt of a comfortable salary, he was always impoverished and shabby. All his money beyond what was required for the bare necessities of his household went to charity. His big, sturdy figure, clad in an old and rusty coat, and his handsome face and flowing white hair surmounted by a velvet cap in sad disrepair, were familiar sights as he drove about with his wife (a granddaughter of Noah Webster) in their old-fashioned buggy, distributing potatoes, coal, or other necessities to poor families. The workingmen with whom he was fond of associating called him "Mr. Father Tom." He always presented the respect and affection of the nicknames for being himself minister or preacher, but merely teacher. Park Church occupies an edifice valued at $150,000, and has a membership of 700, with 1,000 Sunday-school children. He made it into an institutional church, the first of its kind, it is said, in the country. In 1871 he was put in a stage for theatrical productions, bowling alleys, gymnasiums, and parlors. It was a great innovation, and caused considerable talk, but it gave him opportunities to exemplify his ideas of practical Christianity. It took years to build, because the pastor would not permit a brick or a stone to go into the structure until it was paid for. The Sunday school he made a remarkable institution. Every lesson was written by Mr. Beecher himself. The school was graded as rigidly as any ward school, and the children had to learn their lessons as thoroughly as in a secular school or leave. In the details the pastor was assisted by Mrs. Beecher, and the ideas were his own. As a result of his personality and his wanderings the school had a phenomenal growth. On the first Sunday of each month Mr. Beecher used to deliver a special sermon to the children, and attendance at this service was made a requirement for promotion. The Beecher home was a refuge for the poor and for those in need of help. This appreciation by his church and its work was written in 1888: "However, over churches may differ in doctrine, methods, and manner from Park Church, probably those churches are few that could not profitably take lessons from her in the care bestowed upon the stranger, on the young man and woman away from home, on the sick, on the poor and disabled. In wise aid and tender helpfulness Park Church is eminent, and her charity is not limited to bestowals upon the usual objects of benevolence. She knows the greater charity that is charitable to peers, which when all is done I have thought outranks the rest. It is comparatively easy to be kind to the suppliant, but to the erect worker, who neither asks nor expects anything, to extend a reasonable assurance and feels able to do full as well as we do, charity is sometimes denied. We too often grow jealous of these and suspicious. When this is true of churches, the cause of Christ bends under useless burdens. These burdens are not so heavy as once they were. That they are not heavier in Elmira is largely accounted for by the generous life and heart of Mr. Beecher and the good fellowship of his church."

Beekman, Henry Rutgers, lawyer, born in New York city, Dec. 8, 1845; died there, Dec. 17, 1900. He was graduated at Columbia College in 1865, and at the Law School in 1867, and became a member of the bar. He was a school trustee in 1884, and in the latter part of the same year he was appointed park commissioner, to fill a vacancy. In 1886 he was reappointed for five years, and was elected president of the Department of Parks. The same year he was elected president of the Board of Aldermen. At the expiration of his term of office, one year later, he was appointed counsel for the corporation, which office he held until Major Grant appointed his successor. While he was corporation counsel he was active in the promotion of rapid transit, and when, in 1894, the subject was taken up by the Chamber of Commerce, he drew the bill that became law. Under the commission created by
OBITUARIES, AMERICAN.

(BEHRENDTS—BINGHAM.)

that bill he was appointed as one of the counsellors, and he served in that capacity until his election to the bench. In 1889 Gov. Hill named him as one of the commissioners for the promotion of uniformity of legislation in the United States with respect to marriage, divorce, and other subjects. In November, 1894, Mr. Beckman was elected judge of the Superior Court of the city of New York on the union ticket headed by William L. Strong, and upon the consolidation of the courts under the new Constitution, Jan. 1, 1896, he became a justice of the Supreme Court in the First District.

Behrends, Adolphus Julius Frederick, clergyman, born in Nynwegen, Holland, Dec. 13, 1839; died in Brooklyn, N. Y., May 22, 1900. In 1860 he was called to the Baptist Church in Yonkers, N. Y., where he was ordained on July 27, 1865. His ministry there was remarkably successful, and in 1873 he was called to the First Baptist Church of Cleveland, Ohio. In the same year the degree of doctor of divinity was conferred on him by Richmon College, Richmond, Va., he being the first Northern man to receive the honor from that institution. He remained pastor of the Cleveland church till Feb. 1, 1876, when, on account of a change in his domestic life, he left the Baptist denomination, and accepted the pastorate of the Union Congregational Church of Providence, R. I., where he remained till 1883. Dr. Behrends was installed pastor of the Central Congregational Church of Brooklyn, March 1, 1883. In 1886 he was chosen as the Ely lecturer in Hartford Theological Seminary, and his lectures were published under the title of Prophetic Christianity. He was the Lyman Beecher lecturer at Yale Divinity School in 1890, and the degree of doctor of sacred theology was conferred upon him by that university the same year. His lectures at Yale on The Philosophy of Preaching were published, and he also published The World for Christ and many pamphlets, and was a contributor to the Christian Herald. In 1896 he was chaplain at large, with the rank of captain, in the National Guard of the State, and was the successor of the Rev. Dr. Talmage as chaplain of the 13th New York Regiment. Dr. Behrends was a fearless and forceful speaker, and his tolerance and liberality in matters of Christian belief made his eloquent in the denomination. During the trolley strike in 1895 he made a strong address from the pulpit, advocating stern military measures to suppress violence. He was a prominent figure in the Ecumenical Conference on Foreign Missions in New York city in 1900, and on May 6 made a notable address before that body—an impetuous plea for the unity of Christianity and the abolition of creeds which excited universal interest and comment.

Benjamin, William H., soldier, born in Wilton, Conn., Oct. 18, 1825; died in Rochester, N. Y., Jan. 5, 1900. He moved with his parents to Rochester, N. Y., when a boy, and was educated in the public schools. At the beginning of the civil war he assisted in organizing the 8th New York Cavalry, and went to the front with the rank of major. He was wounded in the battle of Cold Harbor. He was made lieutenant colonel for gallant conduct at Gettysburg, and in the autumn of 1863 took command of the regiment. At the beginning of the war he was brevetted brigadier general. Afterward he engaged in business. In 1895 he was Deputy Collector of Customs.

Biddle, Horace P., jurist, born in Fairfield County, Ohio, March 24, 1811; died in Logansport, Ind., May 16, 1900. He received only a common-school education, but studied by himself Latin, German, French, Italian, and Spanish. He was admitted to the bar in 1839, and in 1840 began practice in Logansport, Ind. He was elected judge of the Eighth Circuit Court in 1846, and was a member of the convention that framed the present Constitution of Indiana in 1850. He was defeated for Congress in 1852, and in 1857 was elected judge of the Supreme Court, but was not commissioned. He was re-elected by a majority of 33,000 in 1874, and served six years. He was a circuit judge nineteen years. Judge Biddle retired from active life in January, 1881. He published A Few Poems in 1874, and a volume of Poems, American Boyhood, Elements of Knowledge, Prose Miscellany, Glances at the World, and Last Poems.

Bidwell, Dollie (Mrs. Charles Bidwell), afterward Mrs. Overing Kissam), actress, born in Seabrook, N. H., April 13, 1843; died in New York city, Jan. 25, 1900. She made her first appearance in New York in 1866 as Jeanette in the Idiot Witness in the autumn of 1866. She then was engaged by Joseph Proctor to support him in his starring tours, and became very popular throughout New England, where she ultimately became herself a star. For many years she played a drama that was written for her, called The Overing Kissam. In 1878 she retired from the stage.

Bidwell, John, born in Chautauqua County, New York, Aug. 5, 1819; died in Chico, Calif., April 4, 1900. In 1831 his parents settled in Ashtabula County, Ohio. He attended the Kingsville Academy, and taught school in Ohio and Missouri till 1844, when he entered the Union Army, with the rank of major, in the Civil War. In 1849 he was one of the delegates sent in a convention to St. Louis, in the name of the California Territory.

Bingham, John Armor, diplomatist, born in Mercer, Pa., Jan. 21, 1815; died in Cadiz, Ohio, March 19, 1900. He was educated at Franklin College, New Athens, Ohio, and went to Cadiz in
1840, immediately after his admission to the bar. In 1854 he was elected to Congress from the 21st (later the 10th) Ohio District. He was returned to the same seat in 1856, and again in 1858, and as an orator. He was the friend and adviser of President Lincoln, who in 1864 appointed him Judge-Advocate General, and later in the same year solicitor of the United States Court of Claims. The day after the President's assassination he was called from his home in Cadiz by a message from Secretary Stanton, and when, in twenty-four hours after his arrival in Washington he had opened an office and formulated plans that resulted in the arrest, trial, and conviction of the conspirators. He was appointed Special Judge Advocate by President Johnson, and as member of the military commission, and as the ex-officio, cross-examining the witnesses fell largely to him. He also made the principal argument for the prosecution, requiring nine hours for its delivery. Mr. Bingham was a member of the committee to which was intrusted the important duty of drawing up the articles of impeachment against President Johnson, and he was a member of the committee on impeachment proceedings before the Senate. He began the closing argument on Monday, May 4, 1868, and for three days occupied the attention of the Senate and a vast audience. He was in Congress for eight years after 1865, and he held the Japanese mission from 1873 till 1885. Mr. Bingham was killed by 10 men, and a number of women, to which it was referred, was largely responsible for the working of the fourteenth amendment to the Constitution. He left office as poor as when he entered it, and in 1898, by special act of Congress, he was granted a Government pension.

Bird, Rowena, missionary, American Board of Foreign Missions, born in Sandwich, Ill., Aug. 8, 1800. He entered the offices of the old Cincinnati and Chicago Railroad in 1858, and in 1860 began a four years' service as clerk, chief freight clerk, and general freight agent with the Ohio and Mississippi Railroad Company. From May, 1864, till October, 1867, he was general freight agent of the Central Ohio Railroad, and from that time till October, 1872, was chief freight agent of the Baltimore and Ohio Railroad Company. Two years later he left the Baltimore and Ohio to serve in the same capacity with the Erie Railway Company, and in July, 1874, was appointed vice-president of that company, discharging the duties of that office till October, 1884. In February, 1885, he became chairman of the Central Traffic Association with headquarters in Chicago, and in the following spring was made its chairman. He severed his connection with the Central Traffic Association at the close of 1895 to become commissioner of the Joint Traffic Association, holding that office till the dissolution of that company, 1898. After that time Mr. Blanchard devoted himself to work as a railway expert, and was considered one of the foremost authorities in the country. His fatal illness was brought on by overwork while preparing, in the interest of several railroads, an argument against the Cullom bill enlarging the jurisdiction of the Interstate Railroad Commission and against the bill introduced in Congress providing for a reduction of the compensation to railroads for the carrying of the mails. He was a director of the United States Express Company, the Standard Coupler Company, and the Safety Car Heating and Lighting Company, and was president of the American Mutoscope and Biograph Company. He wrote much in both prose and poetry, and composed many pieces of music. His house contained many examples of the best work of modern artists in painting and sculpture.

Bliss, Zenas Randall, soldier, born in Johnstown, R. I., April 17, 1855; died in Washington, D. C., Jan. 2, 1900. He was graduated at West Point in 1874, and joined his regiment, the 1st Infantry, at Fort Duncan, Texas, as brevet second lieutenant July 1 of that year. On March 3, 1855, he was promoted to be second lieutenant of the 8th Infantry, and he served on the Texas frontier till 1861, most of the time in command of a detachment of mounted infantry scouting against hostile Indians. He was promoted to be first lieutenant Oct. 17, 1860, and to the captaincy May 14, 1861. In March, 1861, while in command of Fort Quitman, Texas, garrisoned by a company of the 9th Infantry, he received orders to join the commanding officer of the 8th Infantry, then under instruction to march with 6 companies of the regiment to San Antonio, Texas, with a view of transferring the command to the North. After a march of 600 miles Reeve was met at Adams Hill, near San Antonio, by the Confederate Gen. Earl Van Dorn with more than 100 cavalrymen. On May 9, 1861. Capt. Bliss was killed as a prisoner of war in San Antonio till February, 1862, when he was transferred to Richmond, Va., and on April 3 was exchanged. May 26, 1862, he was appointed colonel of the 10th Rhode Island Volunteers, and on Aug. 17, was transferred to the 9th Infantry, and on April 8, 1863, was transferred to the 7th Infantry, and he held that commission until mustered out of the volunteer service, June 9, 1865. He took part in many important battles, and was recommended several times for promotion to brigadier general on account of his gallantry and his skillful handling of troops under fire; but the honor was deferred. He commanded the 2nd Division, 9th Army Corps, in the battle of the Wilderness, and was brevetted lieutenant colonel, May 7, 1864, for gallant and meritorious services. After the war he commanded at the Schuykill Arsenal; at Fort Porter, N. Y.; and in the district of Chester, S. C., where he acted as assistant commissioner of the Freedmen's Bureau, provost marshal, and provost judge, and also transacted all the civil business of the district. He commanded with distinction in Texas in 1871-72, during the Mexican revolution, and was credited with preventing war between that country and the United States. He was made major of the 29th Infantry, Aug. 6, 1877; and transferred to the 25th Infantry, March 15, 1889; made lieutenant colonel, 19th Infantry, March 4, 1879; and colonel, 24th Infantry, April 29, 1886. April 25, 1889, he was appointed brigadier general, and on May 14, 1897, major general. Gen. Bliss was retired, at his own request, May 22, 1897.

Bolter, Andrew, entomologist, born in Sigmaringen, Prussia, in 1829; died in Chicago, March 18, 1900. He left Germany on account of his supposed connection with the revolution of 1848, and resided in Chicago forty-five years. Although regarded as a high authority, Mr. Bolter contributed no books to scientific literature. He frequently, however, in response to requests for information from instructors and students of insect life, wrote long letters on various phases
of the subject, and his reputation for practical knowledge was widespread. He was a member of the Academy of Science in Chicago, and of the New York Entomological Society. From boyhood Mr. Bolter's chief pursuit outside of business hours was the collection of insects. His collection of beetles, butterflies, and other insects is said to be the finest on the continent, and one of the most complete private collections in the world.

Bowen, Anna Maud, educator, born in Chicago, Ill., in 1872; died there, Jan. 28, 1900. She entered Chicago University in 1881. As a fresh- man, in the philosophical course, she accomplished twice the amount of work required of seniors in 1894, with the degree of bachelor of philosophy. In 1895 she was made a fellow of philosophy at Cornell, and in two years received the degree of Ph. D. After a course at Leipzig she was made dean of the seminary at Martin's Ferry, Ohio, and then became an editorial writer on the National, which place she held until her appointment, in June, 1899, as dean of Woman's Hall, Northwestern University. She was the youngest woman ever appointed to that post.

Bowman, William Spenser, theologian, born in Virginia, Aug. 3, 1830; died at Mount Pleasant, N. C., March 26, 1906. His parents were devout German refugees who settled in the valley of Virginia prior to the Revolutionary War. He was educated in the common schools of his native country, studied languages and theology under private tutors, and was ordained to the office of the ministry by the synod of Virginia in 1856. He served parishes in Virginia, South Carolina, and Georgia, and was a member of the General Convention in Sandwich, and during the last nine years of his life. He received the degree of doctor of divinity from Newberry College in 1870, and was president of the board of the same institution for many years. Besides this, he held many posts of honor and trust in the Southern Church, and received recognition as a literary and scientific writer, for his contributions to the Review of Reviews and the Southern Christian Observer, and as editor of the Southern Church Review.

Boyd, Belle (Mrs. Nathaniel High), actress and drammatic, born in Martinsburg, W. Va., in May, 1843; died in Kilbourne, Wis., June 11, 1900. During the war she was a Confederate spy, and was commissioned captain. She was captured in 1864, and sentenced to be shot, but managed to escape the column of Union soldiers with the aid of Lieut. Hardinge, a Federal officer who had aided her to escape the death penalty, and after her death, in 1869, she married John Hammond, a former officer of the British army. She made her first appearance at the Theater Royal, Manchester, England, in the autumn of 1866, as Penelope, in The Lady of Lyons, under the tutor- ship of Walter Montgomery. After a few weeks of popular success with the Manchester company she came to St. Louis, Mo., where she played her second engagement, and imme- diately afterward began a successful starring tour of the Southern States. In 1868 she became a member of the Miles & Bates stock company in Cincinnati, under the name of Nellie Ben- jamin. In the same year she was engaged as a leading member of the company, playing in Gal- veston and Houston, Texas, and in 1869 was in a similar place in the St. Charles's Theater, New Orleans. On Feb. 22, 1876, she began at Toledo, Ohio, a highly successful dramatization of her own name, under the direction of Captain William R. Bunner, which she played throughout the country for fifteen years. She married in 1885 Nathaniel High, of Toledo. Boucicaut's Belle Lamar is supposed to be a rearrangement of her play Belle Boyd.

Braden, John, educator, born Aug. 18, 1828; died in Nashville, Tenn., June 10, 1900. Dr. Braden was one of the founders of Central Tennessee University, one of the oldest institutions in the South for the education of colored youth, and had been its president since 1869. He was graduated at Ohio Wesleyan University in 1855, and taught for a year in Xenia Female School. In 1854 he was admitted to the Cincinnati Con- ference of the Methodist Episcopcal Church, and he filled Methodist pulpits and preached in Methodist schools until 1868, when he was ap- pointed principal of the city schools of Nash- ville. One year later he became president of Central University, a position which he held with the reputation of the D. D. in 1873.

Brown, John Wesley, clergyman, born in Baltimore, Md., July 7, 1837; died in New York city, Nov. 10, 1900. He was graduated at Dic- kingson College in 1855, as a civil engineer, and was for two years in the Government service. He then entered the Ohio Wesleyan University, and in 1866 entered the Protestant Episcopal Church. His first charge was in Middleton, Del. He was rector of Trinity Church, Philadelphia; Christ Church, De- troit; Trinity Church, Cleveland; and for five years of St. Paul's Church, Buffalo. On June 3, 1859, he succeeded the Rev. Dr. William F. Morgan in the Rectorship of St. Thomas's Church, New York city. While in Buffalo he was president of the Society for Prevention of Cruelty to Animals, and was chaplain of the 65th New York Regiment. He was widely interested in the organizations and charities of his denomination.

Brown, Moses True, elocutionist, born in Deer- field, Mass.; died in Sandusky, Ohio, Sept. 11, 1900. He was educated at the high school, Manchester, N. H. He taught school in his early manhood, and was for six years superintendent of the public schools of Toledo, Ohio. He was for two years critic and literary adviser for the firm of Van Antwerp Bragg & Co., of Cin- cinnati, Ohio, and then in 1868 he married the woman that house to become a teacher of elocution in the schools and colleges of the country. He met with great success, and was known as one of the foremost interpreters of Dickins. He finally settled in Boston, and soon afterward became Professor of Oratory in Tufts College, where he remained many years. He went to England, and was first taught in the Boston School of Oratory, and in 1886 became its president. He resigned in 1894 and removed to Sandusky, Ohio, and devoted his time to lecturing. In 1899 he was elected to the chair of the Philosophy of Expression in Ohio Wesleyan University. He was the author of The Synthetic Philosophy of Expression.

Brown, William Henry, Avon, Conn., born in New York city, June 24, 1828; died in Chichester, W. Va., Sept. 15, 1900. During the Mexican War he enlisted, was made second lieutenant, engaged in all the battles from Vera Cruz to the taking of the city of Mexico, and was promoted first lieutenant and brevetted captain. After the war he returned to New York city, where he became identified with the City Troop, the Fusiliers, and the regiment now known as the 7th. When the Republican party was formed he was active in organizing party clubs, and was chairman of the meeting that nominated John C. Frémont for the presidency. At the outbreak of the civil war he raised the 1st Confederate Cavalry, which he brought to the front. He was at first identified with the City Troop, the Fusiliers, and the regiment now known as the 7th. When the Republican party was formed he was active in organizing party clubs, and was chairman of the meeting that nominated John C. Frémont for the presidency. At the outbreak of the civil war he raised the 1st Confederate Cavalry, which he brought to the front. He was at first identified with the City Troop, the Fusiliers, and the regiment now known as the 7th.

York. He led a mixed brigade at the second battle of Fredericksburg, and was severely wound-
ed at Salem Church. He was appointed a colonel in the invalid corps and assigned to command the 50th United States Volunteers, later the 9th Vermont Infantry. Later he was made brigadier general by brevet. He was station-
ed in Baltimore as Gen. Frye's aid in charge of Maryland and Delaware. After the war he set-
tled in Washington, and built up a practice as a consulting lawyer in trade-mark cases. He was the
compiler of Browne on Trade-marks.

Carman, Elbert S., journalist, born in Hop-
stead, Long Island, in 1836; died in New York
city, Feb. 28, 1900. He was graduated at Brown
University in 1858, and engaged in business in
New York city. He contributed articles on out-
door life to Turf, Field, and Farm and Moore's
Rural New Yorker. He became associate editor
of the latter paper, and in 1876 bought it and
changed its name to Rural New Yorker. In con-
nection with the paper he established the Rural
Grounds at River Edge, N. J., which were de-
voted to the work of testing new plants, vines,
and seeds and to the originating of new varietis.

Carpenter, Francis Bicknell, portrait painter,
born in Homer, N. Y., Aug. 6, 1830; died in
New York city, May 23, 1900. He was mostly self-
taught, receiving his only instruction in art dur-
ing six months in 1844 in the studio of Sanford
Thayer in Syraucuse. He came to New York city
in 1851, and one year later was elected as an
associate of the National Academy. Among those
who sat to him for portraits were Presidents Fillmore,
Pierce, and Lincoln, William Henry Seward,
Charles Sumner, George Williain Curtis, James
Russell Lovell, Henry Ward Beecher, Horace
Greeley, Schuyler Colfax, and John C. Frémont.
His portrait of President Fillmore is in the City
Hall, New York city, and that of President Lin-
colin in the Capitol in Albany. In 1864 he painted
a large historical picture representing President
Lincoln signing the Emancipation Proclamation.
It was exhibited in the principal Northern cities
in 1865, and afterward purchased by Mrs. Eliza-
th threat Thompson for $6000 and presented to
the nation. It hangs in the staircase of the House
of Representatives in Washington. An-
other picture, International Arbitration, was
bought by Mrs. Carson, and presented to Queen
Victoria in 1892. Mr. Carpenter published in
1866 Six Months in the White House with Abra-
ham Lincoln.

Chamberlain, Mellen, lawyer and librar-
ian, born in Pembroke, N. H., June 4, 1821; died
in Chelsea, Mass., June 25, 1900. He was gradu-
ed at Dartmouth College in 1844. After teaching
several years at Brattleboro, Vt., he entered Dane
Law School, Cambridge, was admitted to the bar
in 1849, and practiced his profession, resi-
ing his residence in Chelsea. In the latter city
he held sundry municipal offices. In 1858 and
1859 he was a member of the Legislature, and
in 1863 and 1864 he was a member of the State
Senate. He was appointed a justice of the mu-
cipal court of Boston in July, 1866, and served
till 1876. During part of this time he was chief
justice. In August, 1878, he was elected librar-
ian in chief of the Boston Public Library, and
he served till October, 1890, when he retired
on account of impaired health. He received the
degree of LL.D. from Dartmouth College in 1883.
He was the author of many pamphlets on his-
torical and literary subjects. Some of his pub-
lished works are John Adams, the Statesman of
the American Revolution (Boston, 1884); The

OBITUARIES, AMERICAN. (BRUCE—CHAMBERLAIN) 465
OBITUARIES, AMERICAN. (Chittenden—Clayton.)

Authentication of the Declaration of Independence (Cambridge, 1885); and John Adams, the Statesman, with Other Essays and Addresses, Historical and Literary (Boston, 1898).

Chittenden, Lucius Eugene, lawyer, born in Williston, Vt., May 24, 1824; died in Burlington, Vt., July 7, 1895. He was educated in the common schools, studied law, and was admitted to the bar at St. Albans in September, 1844. He removed to Burlington, where he practiced law for several years. He was prominent in the anti-slavery and free-soil movements, and became a Republican with the birth of that party. From 1855 to 1860 he was State Senator; in February, 1861, he was a delegate to the Peace Conference in Washington. The same year he was made register of the Treasury, and he served four years. At the close of the civil war he went to New York city, where he practiced law till 1897. In July, 1890, he was appointed assistant cashier in the War Department. He had a valuable library, rich in volumes relating to the early history of printing and engraving. His published works include Report of the Debates and Proceedings in the Secret Sessions of the Conference Conventions, February, 1861 (New York, 1864); The Capture of West Point, Recollections of President Lincoln and his Administration (New York, 1891); Personal Reminiscences, 1840-1890 (1893); An Unknown Heroine (1893); and Abraham Lincoln's Speeches (1895).

Church, Frederick Edwin, landscape painter, born in Hartford, Conn., May 4, 1820; died in New York city, April 7, 1897. He became a pupil of Thomas Cole, in Catskill, N. Y., lived and worked in Catskill for several years, and then established his studio in New York city. His work attracted wide attention, and in 1849 he was made a full member of the National Academy. In 1853, and again in 1857, he traveled in South America, gathering the material for his great picture of Tropical America. In mountain secrecy, entitled The Heart of the Andes, which was first exhibited in 1859, and created a sensation. It was bought by William T. Blodgett for $10,000, the highest price that had then been received for a picture by an American artist. A few years later he joined an expedition to Labrador, and from its results a large and painted his Hibernia, which was exhibited in London in 1863. In 1866 he went to Jamaica, West Indies, and in 1868 made his first visit to Europe, going to Palestine and Greece, and painting The Parthenon, Jerusalem, and other important pictures. His best known picture is the Great Falls at Niagara (1857), which was originally purchased by John Taylor Johnston, and at the sale of the Johnston collection, in 1876, was bought by the Corcoran Art Gallery, in Washington, for $25,000. This picture was exhibited throughout Europe and the United States, and was awarded a medal of the second class at the exposition in Paris in 1867. His other important pictures are The Andes of Ecuador (1855); Cotopaxi (1862); Chinuborazo (1864); St. Thomas in the Vale, Jamaica; Niagara, from the American Side (1866); Damasens (1869); Rainy Season in the Tropics; Jerusalem (1870); The Parthenon (1871); El Khasna Petra (1872); Tropical Moonlight (1874); Valley of Santa Marta (1875); El Ayn; Twilight in the Wilderness (1876); Morning in the Tropics (1877); The Monastery (1878); Valley of Santa Marta (1879); and A South American Landscape. The last is owned by the National Academy; Cotopaxi is in the Lenox Library, New York city. Mr. Church was an early admirer of Turner and his work, then being brought into prominence through the writings of John Ruskin, and this influence is traceable in many of the details of his paintings.

Churchill, John Wesley, clergyman, born in Fairfield, Vt., May 26, 1833; died in Andover, Mass., April 13, 1900. He was educated at Phillips Academy, Andover, and at Harvard, being graduated in 1865. In 1868 he completed his theological education at Andover Seminary. He received his official appointment to the professorship of Pulpit Delivery in Andover Seminary on the day of his graduation, which chair he held till his appointment as President of Princeton Theological Seminary in the same institution in 1896. He was the regular instructor in elocution in Phillips Andover Academy and Abbott Seminary from 1867 till the time of his death, and had given instruction for years in Brown University, Amherst, Dartmouth, Smith, Wellesley, and Mount Holyoke Colleges; Lowell and Miford. In 1893, he founded the last ten years of his life. Prof. Churchill attained wide fame as a college preacher, and his services were sought for by institutions in all parts of the country. He was also one of the editors of the Andover Review.

Clapp, Dwight H., missionary, American Board, born in Middlefield, Ohio, Nov. 18, 1814.

Mary Jane (Rowland) Clapp, born in Clarksfield, Ohio, Feb. 18, 1845; both killed in Taku, Shensi province, China, July 31, 1900. Mr. Clapp was graduated at Oberlin in 1879, and at the Theological Seminary in 1884. Mrs. Clapp was graduated at Lake Erie Seminary, Painesville, Ohio. They sailed for China Sept. 2, 1884, and the visited this country on a furlough in 1894.

Clark, Jonas Gilman, philanthropist, born in Hubbardston, Mass., Feb. 1, 1815; died in Worcester, Mass., May 23, 1900. He worked on his father's farm and as an apprentice to the carriage maker's trade, and later he engaged in the manufacture of tinware, and established stores in Worcester and Auburn. The property to endow it is held by the city School during the last ten years of his life. Prof. Churchill attained wide fame as a college preacher, and his services were sought for by institutions in all parts of the country. He was also one of the editors of the Andover Review.

Clark, Lewis Whitehouse, jurist, born in Barnstead, N. H., Aug. 19, 1828; died in Manchester, N. H., May 28, 1900. He was graduated at Dartmouth College in 1850, and was principal of the Pittsfield Academy from August, 1850, till December, 1852. He was admitted to the bar in September, 1852 and began practice in Pittsfield, and later removed to Manchester. He was a member of the Legislature in 1855. He was appointed Attorney-General of the State May 24, 1872, which office he held till August, 1876. May 24, 1898, he was appointed Chief Justice of the Supreme Court, to fill a vacancy. At the time of his death he was United States Commissioner of Bankruptcy. He received the degree of J. D. L. from Dartmouth College in 1888.

Clayton, Thomas J., jurist, born in Delaware County, Pennsylvania, in 1826; died in Chester, Pa., Jan. 30, 1900. He was admitted to practice at the bar in 1851. In 1874 he was elected presi-
dent judge of the courts of Delaware County, after a bitter campaign, and he was twice re-elected (in 1884 and 1894), holding the office at the time of his death.

Charles Joseph Drinkwater, merchant, born in Montpelier, Vt., Jan. 23, 1812; died in Chicago, Ill., April 5, 1900. In 1833 he settled at Fort Dearborn (now Chicago), having worked his way on the Erie Canal to Buffalo, and thence on a schooner. He began work as a carpenter; with his earnings he bought trinkets and traded with the Indians. Late in life he bought his first concern in a small business, which he sold in 1848. In 1848-52 he carried on a general leather, boot, and shoe trade. After 1852 he devoted his attention to real estate and local enterprises. In 1855 he became a director in the Chicago Gas Light and Coke Company, and later an officer. He was president of Chicago City Railroad, and was largely instrumental in the establishment of the cable railway system in Chicago. He was connected with the Chicago and Galena (now the Chicago and Northwestern) Railroad and the Beloit and Madison Railroad. Drinkwater Hall, in connection with the University of Chicago, was erected from a fund of $150,000 given by him.

Conklin, Jennie Maria Drinkwater, author, born in Portland, Me., April 14, 1841; died in New Vernon, N. J., April 28, 1900. She was educated in public schools and at Greenleaf's Institute, Brooklyn. March 17, 1880, she married the Rev. Nathaniel Conklin, for many years pastor of the Presbyterian Church of New Vernon. She was the originator of the "Shut-In" Society, a board of correspondence for invalids, which has a large membership and publishes an annual. She wrote books for girls and for the religions press. Mrs. Conklin was most widely known. She published the following books: Marion's Little Sister; Penny Saved and Penny Earned; Only Ned (New York, 1872); Not Bread Alone (1874); Fred and Jennie (1875); Tuss's Help (1880); Electra (1881); Dek's First Corner (1883); Fifteen (1883); Keenie's Tomorrow (Boston, 1883); Miss Prudence (New York, 1883); Wildwood (Philadelphia, 1884); David Strong's Errand (1884); Story of Hannah (New York, 1885); The Hotel (Philadelphia, 1887); That Quaker (1888); Uncle Seth's Will (Philadelphia, 1886); Roomel's Between Times (New York, 1887); Rizpah's Heritage (1887); From Flax to Linen (1888); Fourfold (1889); Marigold (1889); Other Folk (1890); Second Best (Boston, 1891); Dorothy's Islands (1892); My Lady (1892); Looking Seaward (1893); Growing Up (1894); Three and Twenty (1895); Dolly French's Household (Philadelphia, 1896); Paul French's Way (Boston, 1896); and, with Ella Drinkwater, Set Free (1891).

Conrad, Victor Lafayette, journalist, born in Pine Grove, Pa., Oct. 7, 1824; died in Philadelphia, Jan. 7, 1900. He was graduated at Gettysburg in 1847, was licensed to preach by the East Pennsylvania Synod in the same year, and subsequently was ordained. In 1852 he assumed editorial charge of the Evangelical Lutheran at Springfield, Ohio. In 1856 he became principal of a public school at Pittsburg, Pa.; in 1857 he took charge of Cooper Seminary for young ladies at Clinton, Ohio; in 1859 he became professor of Natural Sciences in Pennsylvania College, Gettysburg, Pa.; and in 1870 he removed to Philadelphia to assume the duties of associate editor, with his brother, Frederick W. Conrad, of the Lutheran Observer, which he held to the end of his life. The degree of D. D. was conferred on him by Wittenberg College, S. Wyandot, Ohio. He was a ready writer and an able editor.

Cook, Clarence (Chatham), author and critic, born in Dorchester, Mass., Sept. 8, 1828; died in Fishkill Landing, N. Y., June 2, 1900. He was graduated at Harvard in 1849; studied architecture, and for a time was a teacher. He first drew public attention by the publication in the New York Tribune, in 1863, of a series of criticisms on American art. He was the Paris correspondent of that paper from 1869 till the breaking out of the Franco-Prussian War, when, after a short period of travel in Italy, he returned home. He renewed his connection with the Tribune, and continued to argue art questions through his advocacy of free trade and free ships. He contributed many articles on these subjects to papers and magazines, wrote on the Mormon question, and was the author of several books of travel. His best known books are Sailors' Life and Sailors' Yarbus; An American Transport in the Crimean War, Winter Sketches in the Saddle, Ten Months in Brazil; The Round Trip; Free Ships; Restoration of the American Carrying Trade; and The Mormon Country.

Cobb, Adoniram Judson, merchant, born in Northampton, Mass., Oct. 16, 1814; died in Boston, Mass., April 6, 1890. He entered Amherst College, and was a classmate and life-long friend of Henry Ward Beecher, but left in his junior year, 1833. In 1834 he made his first voyage as ship's clerk aboard an East Indian man. He passed through all grades from apprentice to master, residing on his first command in 1841. He afterward made many voyages to all parts of the world, and commanded many vessels. He commanded the Indianan on which Adoniram Judson and his second wife were returning to the United States in 1845 because of Mrs. Judson's health, and detained his ship some time at St. Helena; but was deviated from the island, instead of at sea. During the Crimean War he was in command of the transport William Penn, carrying troops from Constantinople to the Crimea. During the civil war he commanded the steamer Quaker City, which was engaged in carrying stores to Port Royal. He left the sea in 1869, and devoted himself to the creation of an industry through his advocacy of free trade and free ships. He contributed many articles on these subjects to papers and magazines, wrote on the Mormon question, and was the author of several books of travel. His best known books are Sailors' Life and Sailors' Yarbus; An American Transport in the Crimean War, Winter Sketches in the Saddle, Ten Months in Brazil; The Round Trip; Free Ships; Restoration of the American Carrying Trade; and The Mormon Country.

Courtney, Edna (Mrs. James H. Caldwell), actress, born in Washington, D. C., Feb. 26, 1866; died in New York city, March 16, 1900. She made her first appearance at Trenton, N. J., June 1, 1882, in The Passing Regiment, as a member of Augustin Daly's company. In the following season she was with that company, and played the parts of Pauline in The Lady of Lyons, Grace Roseberry in The New Magdalen, Dolly Dutton and Clara in Hazel Kirke, Nora in Esmeralda, Edith in Young Mrs. Winthrop, Daphne in The White Slave, and Nakelila in Around the World in Eighty Days. The season of 1883-84 she played with success the part of Olive Skinner in H. C. Miner's Silver King company. In May,
1884, she played Minnie in William Mestayer's production of Madame Pater at Wallack's Theater, New York. In August of the same year she was in a grand production of The Seven Ravens at Niblo's Garden. During 1887-'88 she was leading woman in Crossen's Banker's Daughter company. Her last appearance was at the Windsor Theater, New York, in a drama called Rookwood, in 1889.

Cowell, Anna (Mrs. Anna Cruize Cowell Hob- kirk), actress, born in Belfast, Ireland, April 3, 1824; died near Philadelphia, Pa., Nov. 12, 1900. She was a niece of the Irish composer Balfé, and made her début as a singer, at the age of thirteen, in Glasgow, Scotland. She married in April, 1846, William Cowell, with whom she came to America immediately afterward, and made her first appearance as Rosalind in As You Like It at the National Theater, New York, in June of that year. Her success was instant, and she was engaged soon afterward as the leading woman of the Adelphi Theater, Boston. She remained at that house two seasons, and then went to the National Theater of the same city, where she played pinafore parts, in 1853. She was then known to the public as Anna Cruise, and was a petted favorite with the people of Boston. She was engaged for the Federal Street Theater, and continued her career in Boston until that house was destroyed by fire, when she became the leading actress of the Arch Street Theater, when she played the leading Shakespearian heroines with Edwin Forrest and other tragedians. She returned to Boston in 1854-'55 as leading woman of the Boston Museum, and at the end of the season became a star in a play called The Governor's Wife. In 1864 she became the leading actress of McVicker's Theater, where she remained fifteen years. After Mr. Cowell's death, in 1868, she remained a widow for several years, but finally married Mr. Hobkirk, a banker, and retired from the stage.

Cox, Jacob Dolson, lawyer and soldier, born in Montreal, Canada, Oct. 27, 1828; died in Magnolia, Va., Aug. 4, 1900. He spent his childhood and youth in New York city, which was the home of his parents. When about twenty years of age he removed to Ohio. He was graduated at Oberlin College in 1851, and in 1852 began to practice law in Warren. In 1859 he was elected as a Republican to the State Senate, of which body he was a member at the outbreak of the civil war. He was commissioned a brigadier general of volunteers, and saw much service during the war. He was ordered with his brigade to West Virginia, and placed in command of the district of Kanawha. Here, under command of Gen. Rosecrans, his brigade did effective service. Subsequently he was assigned to the 9th Corps, and participated in the Battle of Gettysburg, commanding the corps after the fall of Gen. Reno. For his services in this campaign he was made major general. In the Atlanta campaign he commanded a division of the 23rd Army Corps, and later the entire corps. He took part in the battles of Franklin and Nashville, and after the war he was ordered to the coast to open communication with Gen. Sherman in his march to the sea. In this effort he defeated Gen. Bragg, with great loss to the Confederate forces, at Kinston, N. C. After the war he superintended the mustering out of the troops in Ohio, and while he was elected Governor of the State, in 1865, by the Republican party, he opposed the party policy on the question of negro suffrage, and favored forcible colonization; he also supported President Johnson, and as a result was not renominated. President Johnson offered him a seat in the Commission of Internal Revenue, but he declined it. He presided at the national convention that nominated Gen. Grant in 1868, and was Secretary of the Interior in 1869-'70, when he resigned to resume the practice of law in Cincinnati. In 1873 he became president of the Wabash Railroad, and made his home in Toledo until 1876, when he was elected to Congress. He was dean of the Cincinnati Law School from 1881 till 1897, and was for a time president of Cincinnati University. The degree of LL. D. was conferred on him by the University of North Carolina and by Davison University. He published Atlanta (New York, 1882); The March to the Meridian (1882); The Second Battle of Bull Run, as Connected with the Fitz John Porter Case (Cincinnati, 1882); The Battle of Franklin, Tennessee, November 30, 1864 (New York, 1897); and Military Reminiscences of the Civil War (2 vols., New York, 1900).

Coyne, Gardiner (Henry Andrew Gardiner), actor, born in Dublin, Ireland, in October, 1833; died in New York, Oct. 15, 1890. He was the son of a wealthy Irishman, and received his education at the University of Dublin, where he was a noted scholar. He made a name for himself in the Irish theatre, and then went to America, where he became a popular actor. He was noted for his singing voice and his ability to portray the characters of Irish dramatists. He retired from the stage in 1882 and devoted himself to writing and teaching. He published a number of plays, including "The Irish Girl," which became a popular success. He was also a respected teacher of drama and acting. He died in New York at the age of 57, leaving behind a legacy of stage work and a love for his craft that continues to inspire young actors today.
ently outgrown some of his early faults of style. He is best known by The Red Badge of Courage, but in the Whitemound Stories, published after his death, he is seen to much better advantage. Mr. Cravath, a native New York city inhabitant, had a daily newspaper story of the child’s attitude toward his surroundings is most faithfully as well as sympathetically depicted. Other works of his not already mentioned are: Maggie: A Girl of the Slums (1896); George’s Mother (1896); The Little Regiment, and Other Epistles of the American Civil War (1896); I and the Whirlwind (1897); War is Kind a book of verse (1898); The Open Boat (1898); The Eternal Patience (1898); Wounds in the Rain, war stories (1900); Great Battles of the World (1901).

Cravath, Erastus Milo, clergyman, born in Hanover, N. Y., July 1, 1833; died in St. Charles, Minn., Sept. 4, 1900. He was graduated at Oberlin College in 1857, and at its Department of Theology in 1860, and settled at Berlin Heights, Ohio, as pastor of the Congregational Church. In June, 1863, he was appointed chaplain of the 101st Ohio Volunteer Infantry, and he served in the Atlanta campaign and in the battles of Franklin and Nashville. He was mustered out of the service of the United States at Nashville in 1865. In 1869 Mr. Cravath received the appointment of field agent for the American Missionary Association, and was sent to open schools in the central South, accompanied by the Rev. E. P. Smith, secretary of the American Missionary Association in Cincinnati, and reached Nashville, Oct. 3, 1863. At that time Gen. Clinton B. Fisk, of the 18th Texas Infantry, was stationed at Nashville as Commissioner of the Freedmen’s Bureau for Tennessee and Kentucky, and had with him Prof. John Ogden as his superintendent of education. Cravath, Smith, and Ogden purchased, on their own responsibility, a block of land on which stood a large hospital erected by the Government for war purposes. Gen. Fisk was most cordial in the interpretation of the act, and secured the transfer of the hospital from the War Department to the Freedmen’s Bureau for educational purposes, and the new enterprise, opened Jan. 9, 1866, was named Fisk School. Prof. Ogden became its principal, and Mr. Cravath assumed the general business responsibility. The American Missionary Association and the Western Freedmen’s Aid Commission bought the land of Ogden, Smith, and Cravath, and united in sending a corps of 20 teachers for the 1,000 children that were gathered into the school. In July, 1866, Secretary Smith was called to New York, and Mr. Cravath was appointed to the secretaryship. In 1867 the school was given a legal charter, and in 1869 the residence and teaching corporation was incorporated, the corporation consisting of the founder, Mr. Cravath, the founder’s wife, the founder’s daughter, and Prof. John Ogden. They became known as Fisk University. From 1907 until 1855 he studied in Italy and traveled in Europe. After two years’ residence in the United States he went to London, where he remained seven years, sending many of his pictures to the Royal Academy and to the International Exhibition of 1862. He returned finally to England in 1863, and in 1866 he started his studio to Hastings-on-Hudson. Mr. Cropsy was a member of the National Academy in 1851, and he was one of the original members of the American Water Color Society. He designed the stations for the Sixth Avenue system of the Manhattan Elevated Railway. As an American artist he is classed with the “old” or “Hudson River school” of painters. His best known pictures are: Jedbury Abbey; Pontine Marshes (1847); Backwoods of America (1857); Richmond Hill—Midsummer (1862); Greenwood Lake (1870); Lake Nemi, in Italy (1879); Old Church at Arreton, Isle of Wight (1880); Warwick Castle, from Ramapo Valley (1881); Autumn on the Hudson (1882); Wawawanda Valley (1883); Springtime in England (1884); October in Ramapo Valley (1885); Autumn on Lake George; Anne Hathaway’s Cottage; and A Showy Day.

Cuberson, David Browning, lawyer, born in Troup County, Georgia, Sept. 29, 1830; died in Brownsville, Texas, July 10, 1890. He was educated at Brownwood, La Grange, Ga., and studied law. In 1856 he removed to Texas, and in 1861 settled in Jefferson. He was elected to the State Legislature in 1859, serving till the civil war broke out. He entered the Confederate army as a private, and was promoted to the rank of colonel. In 1864 he was appointed Adjutant General of the State of Texas, with the rank of colonel, and in the same year was elected to the Legislature. At the expiration of his term he resumed his law practice in Jefferson. In 1873 he was elected State Senator. He resigned in the following year, and was elected to Congress and re-elected continually. He served for many years as member of the Judiciary Committee, and for a long time its chairman. He was tendered a place on the Interstate Commerce Commission by President Harrison, but declined it.

Cushing, Frank Hamilton, ethnologist, born in Northeast, Pa., July 22, 1857; died in Washington, D. C., April 10, 1900. He spent his boyhood on a farm in Barre, N. Y., and there became interested in the collection of Indian relics. When he was eighteen years of age his work was brought to the attention of the late Prof. Baird, secretary of the Smithsonian Institution, who in 1875 called young Cushing to Washington to be an assistant in that institution. He had charge of the Smithsonian ethnological exhibit at the Centennial Exposition of 1876; and in 1879 he was sent with an expedition to investigate the pueblos of New Mexico. At his own request he was left at the Pueblo of Zuñi. He was adopted into the tribe, learned their language, and was initiated into a secret order of medicine men, known as the Priesthood of the Bow. His researches gave him a more intimate knowledge of the life and customs of the Indians than had been gained by any one up to that time. In 1884 he returned to Washington and began the elaborate study of his notes, but was interrupted by his appointment, two years later, to the directorship of the Hemenway Western Southwestern Archeological Expedition. Excavations were made in southern Arizona and New Mexico, covering a period of two and a half years, with the most gratifying results. The greater part of the collection made by this expedition is in the Peabody Museum, Cambridge, Mass. Mr. Cushing then returned to Washington to supervise the
publication of a memoir on the Zuñi myths, printed by the Bureau of Ethnology. He directed the expedition fitted out by Mrs. Phoebe A. Hearst and Dr. William Pepper, sent in 1896, under the auspices of the National Museum Bureau of Ethnology and the University of Pennsylvania, to investigate the remains of the prehistoric peoples of the key islands of the Flores Sea, which resulted in the collection of many remarkable objects, and in the publication of a preliminary report of Mr. Cushing’s researches. The complete account was still in manuscript at the time of his death.

Da Costa, Jacob Mendez, physician, born in the island of St. Thomas, West Indies, Feb. 7, 1833; died in Villa Nova, Pa., Sept. 11, 1900. He was graduated at Jefferson Medical College, Philadelphia, in 1852. He passed two years in the schools and hospitals of Paris and Vienna, after which he returned to Philadelphia, in 1854, and began the practice of medicine, making a specialty of heart and lung diseases. In 1864 he was appointed lecturer on clinical medicine in Jefferson College, and in 1872 was made Professor of the Theory and Practice of Medicine. He contributed to medical periodicals and published the following books: Epithelial Tumors and Cancers of the Skin (Philadelphia, 1852); An Inquiry into the Pathological Anatomy of Acute Pneumonia (1853); The Physician of the Last Century (1857); On Strous Apoplexy (1859); Medical Diagnosis, with Special Reference to Practical Medicine (1864); Inhalations in the Treatment of Diseases of the Respiratory Passages (1867); On Strain and Overuction of the Heart (Washington, 1874); and Harvey and his Discovery (Philadelphia, 1878).

Dame, Captain, Army nurse, born in Barnstead, N. H., July 5, 1815; died in Concord, N. H., April 24, 1900. With her parents she removed to Concord in 1843, and, with the exception of a short time spent in the West, resided there till the outbreak of the civil war. She opened her house in that city as a hospital for the sick volunteers who came from all parts of the State. When the 2d New Hampshire regiment was ordered to Portsmouth to be mustered into service she insisted on going with it, so that she might continue the work she had begun, and when the regiment finally went South she accompanied it, despite the protests of Gov. Berry. She was under fire at Fair Oaks, and at the second battle of Bull Run she was taken prisoner by the Confederates, but was passed through the lines on a Federal prison transport, and was sent to Charleston to be exchanged. The sanitary condition of her services to the men of both armies, Aug. 15, 1862, she was placed in charge of all supplies for sick soldiers sent from New Hampshire. She was at the battle of Gettysburg, and the week following she organized the New Hampshire Soldiers’ Relief Association; later she was sent to Charleston to inspect the sanitary condition of the New Hampshire troops stationed there. In the spring of 1864 she took the field with the Army of the James, and had charge of the field hospital at Broadway Landing on the Appomattox. After the war she returned to Washington, and in 1867 was appointed to a clerkship in the Treasury Department, which she held till 1895. She was president from its organization of the Army Nurses’ Association, and was also a member of the Woman’s Relief Corps.

Davidson, Thomas, philosopher, born in Aberdeen, Scotland, Oct. 23, 1854, died in Montreal, Canada, Sept. 14, 1900. He was graduated at the University of Aberdeen in 1866, as first graduate and Greek prizeman, and till 1868 he was rector of the Grammar (Latin) School of Old Aberdeen. He spent the following three years teaching in various schools in England and Scotland, and during his stay was elected extensively on the Continent. In 1869 he removed to Canada to accept a professorship in the London Collegiate Institute, and in 1867 came to the United States, spending some months in Boston, and finally settling in St. Louis as classical master of the St. Louis High School. He was afterward principal of the branch high schools in that city. In 1875 he removed to Cambridge, Mass., and thereafter made that city his home while in the United States. He traveled and studied extensively in Europe. His interest in Thomas Aquinas led to an invitation from the Pope to settle in Italy and to assist his professors in the preparation of a new edition of Aquinas’s In Media et Minoris, and to the study of philanthropic and educational movements, and was the founder of the Glenmore School for Culture Sciences at Keene, in the Adirondacks. Prof. Davidson was the author of many pamphlets and magazine articles, and was widely known as a lecturer on history, philosophy, and archeology. He completed his splendid work, The Origin of Language (1869); The Origin of Language, from the German of W. H. J. Bleek (1869); A Short Account of the Niobe Group (1874); The Philosophical System of Antonio Rosmini-Serbati, translated, with a sketch of the author’s life, bibliography, introduction, and notes (1882); this work first started Rosmini’s psychological Anthropology; The Parthenon Frieze, and Other Essays (1882); Giordano Bruno, and the Relation of his Philosophy to Free Thought (1886); The Place of Art in Education (1886); Handbook to Dante (1887); Aristotle, and Ancient and Modern Educational Ideals; Prolegomena to Tyndale’s In Media et Minoris; and The Philosophy of the Greek People, and its Influence on Civilization.

Davis, Charles Lindley, actor, born in Baltimore, Md., Oct. 1, 1832; died near Pittsburg, Pa., March 1, 1900. He came of a family of actors, and first appeared in public as a baby in short clothes. In his boyhood he was a business man among the brokers, became a partner in the New York Museum in 1869. He managed successively the Odeon, Baltimore; the theater Comique, Providence, R. I.; the Capital Theater, Hartford, Conn.; and the Metropolitan Theater, New York city. In all these he appeared from time to time as a singing comedian. In 1880 he wrote and produced a comedy of New England rural life, entitled Alvin Joslin. He became at once a great favorite with the lumber audiences in the portrayal of the farmer Alvin Joslin, and was often referred to by the name of that character than by his own. During the rest of his life he played nothing else except for a brief period, when he produced an autobiography of New England rural life, entitled Alvin Joslin. He made a handsome fortune, and in 1891 built the Alvin Theater in Pittsburg which has ever since retained its rank as one of the finest houses of the drama in the world. He
retired from the stage in 1882. His last appearance was at his own house in Pittsburg, as Alvin Joslin, in June, 1882.

**Davis, Charles Wesley Kellogg**, lawyer, born in Henniker, N. H., June 16, 1838; died in St. Paul, Minn., Nov. 27, 1900. He removed with his parents to Waukesha, Wis., and studied at Carroll College, in that town. He was graduated at the University of Michigan in 1857, studied law, was admitted to the bar in 1859, and began to practice law in the city. In 1862 he left the civil war in which he served, and assisted in raising a company for the 28th Wisconsin Volunteers, with which he commanded. He joined the Army of the Tennessee. Later he served as assistant adjutant general on the staff of Gen. Gouram. He was compelled to leave the army in 1864 by an attack of typhoid fever. In 1865 he went to Annapolis, Md., and resumed the practice of law in St. Paul. He was elected to the Legislature in 1867. In 1868 he was appointed United States District Attorney for Minnesota, serving till 1873. In that year he was elected Governor of the State on the Republican ticket. He was an unsuccessful candidate for United States Senator in 1875, and again in 1881, but on Jan. 18, 1887, was elected to the Senate from Minnesota. His most notable act, as chairman of the Committee on Pensions, was the author, in 1890, of the pension act that ended the demand for excessive pension legislation; as chairman of the Committee on Foreign Relations he reported to the Senate, April 13, 1898, the resolutions which were a practical declaration of war against Spain. In August, 1898, he was appointed a member of the Spanish-American Peace Commission. He received the degree of LL. D. from Michigan University in 1896. He was a deep student of French and English literature, and possessed a library rich in Napoleoniana and Shakespeareana. He published *The Law in Shakespeare* (St. Paul, Minn., 1885), and issued an Annual Cyclopaedia for 1898, page 772.

**Davis, Francis W.**, a missionary of the American Board, born in Sparta, Wis., Sept. 8, 1857; killed in Taku, Shensi province, China, July 31, 1900. He was graduated at Oberlin College in 1889, and went to China the same year.

**Dewey, Justin**, jurist, born in Alford, Mass., June 12, 1836; died in Springfield, Mass., March 16, 1900. He received his early education in the public schools, and was graduated at Williams College in the class of 1862. He read law in the office of George A. Wood and was admitted to the bar. He was elected to the Massachusetts House of Representatives in 1862, and again in 1877; and in 1879 he was sent to the State Senate and served on the Committee on Probate and Chanecry. He was appointed judge of the Superior Court of Massachusetts by Gov. Robinson in 1886, and served with distinction till the time of his death.

**Dickinson, Charles Wesley**, inventor, born in Springfield, N. J., Nov. 23, 1823; died in Belleville, N. J., July 2, 1900. He was apprenticed to the machinist trade, and early displayed inventive talent. Later he became a watch-case maker, and turned his attention to fine machinery. He perfected a bank-note engraving lathe, and in 1862 the first of his machines was used by the United States Government. He ran the lathe at Washington for a year and a half, after which he returned to Belleville, where he manufactured his lathe for the United States and many foreign governments. Some of his other inventions were the cycloid attachment to the steel-plate ruling machine, a pantograph tracer, consecutive numbering machines for coupon or railroad, ticket numbering, and improved typesetting and type-distributing machines.

**Dickinson, Pelton H.**, philanthropist, born in Philadelphia, Pa., Aug. 19, 1814; died there, March 23, 1900. He was educated in the schools of the Society of Friends, on leaving which he was apprenticed to the trade of bricklaying. Later he became a builder, and in 1860 retired with a competence. In 1858 he was elected to the City Council of Philadelphia, and in 1859 was chosen a member of the Board of Guardians of the Poor. He was for a time a member of the Republican State Central Committee, and in 1871 was chairman of that body. He was defeated as a candidate for Congress in 1870. He was highway commissioner for many years, and from Nov. 15, 1871, till his death was a member of the Public Building Commission. He was a member of many institutions, and was a visitor to the insane asylums and penal institutions of the State. He studied the manner of treating inmates and made reports to the Legislature, the result of which was the enactment of more humane laws for the government of these institutions.

**Dorion, Thomas Alfred**, clergyman, born in St. Andrews, New Brunswick, March 8, 1849; died in Manchester, N. H., March 30, 1900. He was educated in the academy and college of Pointe aux Trembles, Quebec, and he founded and edited a newspaper in St. Andrews. In 1877 he was licensed as a local preacher in the Methodist Church of Canada. After years of theological studies he was ordained. He held charges in Longueil, Danville, and Sherbrooke, Canada, and in Ware, Mass. From the latter place he went to Manchester, N. H., in 1880, where he founded the French Methodist Episcopal Church, of which he was pastor till the time of his death. He was engaged in music and music instruction in the French of Canada and the United States. He founded the only French Sunday-school paper published in America, and was the author of many tracts, books, and pamphlets. The more important titles are History of the Popes; Romanism and the Gospel; The Beast: A Study in the Apocalypse; and Translations of the Methodist Catechism and Methodist Discipline.

**Dun, Robert Graham**, head of a mercantile agency, born in Chillicothe, Ohio, Aug. 7, 1826; died in New York city, Nov. 10, 1900. He was educated at a local academy, and at the age of sixteen was employed in a country store at a weekly wage of $2 a week. Early in life he became a partner. He went to New York city in 1850, and found employment in the mercantile agency of Tappan & Douglass. There he was steadily advanced, and in 1854, on the retirement of Mr. Tappan, he became a partner of Mr. Douglass, under the firm name of B. Douglass & Co. In 1859 he purchased Mr. Douglass's interest, and since then he had been sole proprietor of the agency, which has come to be an indispensable part of the business world. When he took charge of it only 17 branch offices had been established; this number was increased year by year, till in 1899 there were 150 offices, thoroughly and regularly equipped in as many cities in Europe, Australia, the United States, Cuba, and Mexico. Its rating book is an invalu-
OBITUARIES, AMERICAN. (DUNBAR—ELLIOT.)

able part of the equipment of every branch of business conducting credit accounts, and its system of reporting credits is one of the most interesting mechanisms of trade. During the past ten years Mr. Dun had not been actively connected with the agency, except in the way of giving technical correspondence. He was a constant buyer of paintings, and the walls of his home were covered with pictures. Notable among his collection were The Marsh, by Daubigny; The Adoration of Cupid, by Bougereau; and Pasture bordered by Trees, by Rousseau.

Dunbar, Charles Franklin, educator, born in Augusta County, Va., July 24, 1833; died in Cambridge, Mass., Jan. 29, 1900. He was graduated at Harvard in 1851. After leaving college he engaged in business in New Orleans, and afterward in New York and Boston. He was compelled by failing health to retire from active employment, and became a farmer at Lexington, Mass. When he recovered his health he studied at the Harvard Law School, and in 1858 was admitted to the bar. For several years he had been a regular contributor to the Boston Daily Advertiser, and in 1859 he became part owner and editor of that paper in connection with Charles Hale. From 1864 to 1869 he was its sole editor. In the latter half of his principal period of life for two years he traveled abroad, returning to Cambridge in 1871, where he was appointed Professor of Political Economy in Harvard University. He held this professorship till the time of his death, serving as dean of the faculty from 1876 till 1882, and on the reorganization of that body was elected dean of the university of arts and sciences from 1890 till 1895. He wrote many articles in the discussion of public questions, and was president of the American Economic Association in 1893, and the first editor of the Quarterly Journal of Economics from 1886 to 1896. His published works are The Theory and Practice of Banking and Currency, Finance, and Banking.

Dutton, Everell Fletcher, soldier, born in Sullivan County, New Hampshire, Jan. 4, 1838; died in Sycamore, Ill., June 8, 1900. His parents settled in Sycamore in 1846, and for eleven years he assisted in his father's store. He studied in Mount Morris, Ill., and in Beloit, Wis., worked on the railroad for a year, and then transferred to Sycamore and served as a deputy clerk till April, 1861. At the outbreak of the civil war he enlisted as first lieutenant in the 13th Illinois Regiment. He was promoted captain, then major, and later to lieutenant colonel, 105th Illinois Volunteers. He was made brigadier general by brevet for gallantry and meritorious service in the campaign in Georgia and the Carolinas, and for distinguished service at the battle of Smith's Farm, North Carolina. He was mustered out June 7, 1865, returned to Sycamore, and in 1868 was elected clerk of the circuit court of De Kalb County, serving eight years. In 1877-78 he was clerk of the Illinois House of Representatives. In 1878 he was elected clerk of the Supreme Court of the Northern Grand Division of Illinois, which place he held till 1884. In 1883 he became associated with the Sycamore National Bank, and in a short time became its president, which office he held at his death.

Eby, William Woodbridge, missionary, born in Penn Yan, N. Y., Dec. 18, 1825; died in Beyroot, Syria, Jan. 29, 1900. He was graduated at Williams College in 1845, and taught school in Jacksonville, Ill., two years. He was graduated at Union Theological Seminary in 1850, and in November, 1851, was sent as a missionary to Syria by the American Board. He spent his earlier years in that country in Aleppo, and later labored at Sidon. In 1878 he settled in Beyroot and became an instructor in the theological seminary in that place. From 1892 he taught in the Suk-el-Ghurb school for boys. He had just finished a complete commentary on the New Testament in Arabic.

Egbert, Henry, artist, born in 1826; died in Brooklyn, N. Y., March 12, 1900. He learned the printing trade, and at the age of eighteen he compiled a set of drawing books, which had a great sale. He was the author of a character sketch of George Washington, La Rochefoucauld, Apple Mary, and The Limekiln Man—which attracted attention, and were afterward elaborated by Thomas Worth. During the régime of "Boss" Tweed he was the cartoonist for the newspaper known as The Day's Doings. He printed in this a cartoon entitled The Three Disgraces, which represented Oakey Hall, the school of mines at New York, and Tweed. Oakey Hall, who was then mayor of the city, was so enraged that he issued a manifesto and suppressed the paper.

Egleston, Thomas, mineralogist, born in New York city, Dec. 9, 1832; died there, Jan. 15, 1900. He was educated at Yale in 1854, and was assistant editor of the New York Daily Tribune for two years. The next two years he spent in European travel, and then entered the School of Mines in Paris, where he was graduated in 1860. He returned to the United States in 1861, and soon afterward he was appointed curator of the mineralogical collections of the Smithsonian Institution. In 1863 he prepared the plans that were used in establishing the School of Mines as a department of Columbian College, and in January, 1864, was chosen Professor of Mineralogy and Metallurgy. He held this chair till 1897, when he resigned on account of failing health, and was made professor emeritus. Prof. Egleston was one of the founders of the American Institute of Mining Engineers, and was its president in 1887. He was also one of the founders of the American Meteorological Society, and of the Societies of Mechanical Engineers and Electrical Engineers. He was associated with the agricultural and geological survey of the Union Pacific Railroad in 1866, a United States commissioner to examine the forests of British Columbia, and then represented the United States as a member of the jurors of the International Exposition at Vienna in 1873. He was at the head of several religious and charitable organizations, and rendered New York city a notable service by his efforts for saving Washington Square when it was threatened with obliterating during the Tweed régime. Prof. Egleston published The Metallurgy of Gold and Silver in the United States (2 vols.); A Catalogue of Minerals and their Synonyms; Life of Major-Gen. Paterson, of the Revolutionary Army; and many pamphlets.

Eldridge, George, hydrographer, born in Chatham, Mass., Nov. 27, 1821; died there, Aug. 25, 1900. As a youth he was engaged in fishing. Later he began surveying the shoals near his home, to prepare a chart that would assist in navigating that part of the coast with more safety. He completed valuable charts of the coast from Chesapeake Bay to Belle Isle, and was regarded as an authority on coast navigation; wrote articles on the remarkable history of Pindy, and was the author of a tide book.

Elliot, George H., soldier, born in Massachusett, died in Marmion, Va., March 23, 1900. He was graduated at West Point, July 1, 1853, and commissioned second lieutenant, 1st Artillery; was transferred to the engineer corps, Jan. 20, 1857.
and was promoted first lieutenant, Aug. 3, 1861; captain, March 3, 1863; major, March 7, 1867; lieutenant colonel, Aug. 8, 1862; colonel, May 18, 1864, and was retired, March 31, 1865.

Elwell, John J., lawyer, born in Warren, Ohio, June 22, 1829; died in Cleveland, Ohio, March 13, 1900. He was graduated at Cleveland Medical College, but afterward studied law and was admitted to the bar. He was elected to the Ohio House of Representatives in 1833. He enlisted in the volunteer army in August, 1861, and served till the close of the civil war. He was four times brevetted for meritorious service, and closed his military career as brevet brigadier general. He was badly injured just before the close of the war and partially disabled. He was an eminent author as a speaker, one of his notable efforts being the author of Medico-legal Treatise on Malpractice, Medical Evidence and Insanity (New York).

Emerson, Joseph, educator, born in Norwalk, Conn., May 28, 1821; died in Beloit, Wis., Aug. 4, 1900. He was graduated at Yale in 1841, and was for a time a tutor there. In 1846 he and his elder brother, Professor, were made professors of Beloit College. For more than a year they constituted the faculty, there being only three students in the college, and no college buildings till 1847. Prof. Emerson held the chair of Greek till the time of his death.

Endicott, William Crowninshield, lawyer, born in Boston, N. H., Nov. 19, 1826; died in Boston, May 6, 1900. He was a direct descendant of John Endicott, first Governor of Massachusetts. He was graduated at Harvard College in 1847, and was admitted to the bar in 1850. He was elected to the Salem Common Council in 1852, and in 1857 became city solicitor. In 1870 he was defeated as a Democratic candidate for Congress in the sixth district of Massachusetts, but was subsequently appointed to fill the vacancy from September 1873 to March 1875. In 1873 he was appointed by the Republican Governor, William B. Washburn, a justice of the Supreme Court of Massachusetts, and this office he held till 1885, resigning on account of failing health. In 1884 he was the Democratic candidate for Governor. In 1885 he was appointed Attorney-General, and he served the term. One of the notable events of his term was his appointment of what came to be known as the Endicott Board on Fortifications, whose elaborate plans have been to a great extent carried out in the defenses of the cities on the Atlantic seaboard. Judge Endicott had a high reputation as a speaker, one of his notable efforts being his oration, in 1878, on the two hundred and fiftieth anniversary of the landing of his ancestor on New England soil.

Everett, Charles Carroll, clergyman, born in Brunswick, Me., June 19, 1829; died in Cambridge, Mass., Oct. 17, 1900. He was graduated at Bowdoin College, and during two years studied at the University of Berlin. He was librarian at Bowdoin from 1853 to 1857, and was Professor of Modern Languages there in 1855-57. The next two years he studied at the Harvard Divinity School, and in 1859 he was ordained pastor of the Independent Congregational Church, at Bangor, Me., but he resigned in 1860 to become Bussey Professor of Theology at Harvard University. He was dean of the Divinity School from 1878 until his death. His courses in philosophy at the university were as stimulating as they were highly valued. His latest piece of literary work was a thoughtful paper on James Martineau, in the Atlantic Monthly. His last book was published in 1890, a sequel to The Science of Thought (1869); Religions before Christianity (1883); Fichte’s Science of Knowledge; A Critical Exposition (1884); Poetry, Comedy, and Duty (1888); Ethics for Young People (1891); and The Gospel of Paul (1893).

Everett, Erastus, educator, born in Princeton, Mass., Aug. 3, 1813; died in New York, N. Y., May 7, 1900. He was graduated at Dartmouth College in 1836, and removed to Baton Rouge, La., and subsequently became president of the College of New Orleans. In 1854 he settled in Brooklyn. For several years he was a professor in Rutgers Female College and a lecturer in many educational institutions in New York and New Jersey. He published A System of English Verification (New York, 1849).

Fairfax, John Contee, eleventh Lord Fairfax and Baron of Cameron, in the peerage of Scotland, born in Vaucluse, Va., Sept. 13, 1830; died in Bath, Montgomery, Md., Sept. 28, 1900. He was graduated at Princeton College and at the medical department of the University of Pennsylvania. He was an active practitioner as a physician in his younger days, but in later years lived the life of a gentleman farmer. His right to his title came to him in 1869 on the death of his brother Charles. Although he never attained eminence officially recognized by the court of Great Britain.

Fancher, Enoch L., lawyer, born in Dutchess County, New York, in 1816; died in New York city, Feb. 9, 1900. He was graduated at Wesleyan University and studied law. He was appointed a justice of the Supreme Court in 1872 to fill a King's Bench seat on the expiration of the term of 1870. In 1873 he was nominated on the Republican ticket for the succeeding term, but was defeated. In 1874 he was appointed arbitrator of the Chamber of Commerce, the appointment being made under a special act of the Legislature, giving judicial authority to an arbitrator to settle disputes arising among members of the chamber. He was twice president of the American Bible Society, president of the New York Institute for the instruction of the Deaf and Dumb, and manager of the Missionary Society of the Methodist Church. He published The American Republic and its Constitutional Government.

Fox, Junius C., printer and publisher, born in Lincolnton, N. C., June 7, 1800; died in Staunton, Va., March 27, 1900. He was graduated at Pennsylvania College, Gettysburg, in 1880; was Professor of Mathematics and Natural Sciences at King's Mountain High School, North Carolina, in 1880-82; occupied the same chair in Macon School, Charlotte, N. C., in 1882-3; at King's Mountain, N. C., in 1881-82; in Greene County, Tennessee, in 1884-86; and again Professor of Mathematics and Natural Sciences in Newberry College, South Carolina, from 1880 until a few years ago, when he removed to Virginia. He published Biography of Rev. A. J. Fox, M. D. (Philadelphia, 1883); Experimental Sciences (1877); Modern Spiritualism (1889); Historical Sketches of the Pastors of the Newberry Lutheran Congregations (1888); and numerous newspaper and magazine articles.

Frankan, Joseph Griswold, actor, born in New Haven, Conn., in 1854; died in New York city, April 11, 1900. His first appearance was in New York city as a member of the dramatic company supporting Frederic Paulding in the part of Torrelli in The Fool's Revenge, at the Lyceum Theater, Feb. 17, 1879. He was engaged by the managers of the Madison Square Theater for the stock company there instituted, and was one of the original members of Hazzard's Stock Company. He was the Met. Miggins, Feb. 4, 1880. He played this part several seasons. In January, 1884, he was the original of the part of Bartholomew Jones in Confusion at the Fifth Avenue Theater. He
was the original Hiram Sloane in May Blossom at the Madison Square Theater, April 12, 1884, and retained the part for the long run of the play. In April, 1885, he went to the Lyceum Theater and was the first player of Noel in Datedar. In the spring of 1886 he became a member of the company supporting Richard Mansfield, playing with that actor for several seasons in the United States, Canada, and England. He retired from the stage in 1897 and became private secretary to his brother-in-law, Jacob Hess, commissioner of police of the city of New York.

**Fritschel, Sigmund**, educator, born in Nuremberg, Bavaria, on Aug. 14, 1816; died in Dubuque, Iowa, April 20, 1900. He was educated in his native city, and became connected with the Lutheran theological seminary of the Iowa Synod. For several years he served as a missionary in Iowa, Wisconsin, and Michigan, and in 1858 returned to the theological seminary, which had meanwhile been re-established. He edited *The Wartburg* at St. Schuld, Iowa, and his brother Gottlob had become one of the professors in 1857. He remained in connection with the seminary during the rest of his life, and for many years was its president. In 1860 his synod sent him to Europe to solicit help for its work among the Germans in America. This journey took him as far as St. Petersburg and Moscow. In 1866 he was again sent to Europe to obtain the opinions of Lutheran theologians on the synod’s doctrinal position with reference to the predestinarian controversy with the Missouri Synod, and to represent the synod of Iowa at the second anniversary of the Society of Home Missions at Neuendettelsau, where he was sent to Germany at a critical time, to secure young men for the seminary and for the rapidly increasing work of missions. In the doctrinal controversies of the Iowa and Missouri synods he took a prominent part, and wrote many of the reports and essays in defense of the position of Iowa. In connection with his brother he edited the Kirchenhistorisches Wartberge (established in 1876), and he also wrote numerous theological articles for periodicals. In 1879 Muhlenberg College conferred on him the degree of doctor of divinity. He and his brother Gottlob (died July 13, 1889; see Annual Cyclopaedia for 1889, page 690) were for many years the two most influential educators, editors, and workers in the German Iowa Synod. Their books were published in this country and republished in Germany.

**Fullerton, William**, lawyer, born in Minisink, N. Y., May 1, 1817; died in Newburg, N. Y., March 15, 1900. He was graduated at Union College in 1838, and in 1841 was admitted to the bar. Soon afterward he became district attorney of Orange County. His reputation won for him in 1852 an invitation by Charles O’Conor to remove to New York city and enter into partnership with him. This partnership was dissolved in 1860, and Mr. Fullerton formed the firm of Fullerton, Raymond & Knox, which after several changes became in 1874 Fullerton, Knox & Crosby. Mr. Fullerton was appointed to the Supreme Court bench in 1868, and became ex officio a member of the Court of Appeals, in which he sat till the expiration of his term. He was one of the counsel for the defense in the many noted criminal civil proceedings against William T. Tweed. The most noted incident in his “Sabbath of the Seventh Month” was his cross-examination of Henry Ward Beecher in the famous Titon-Beecher case.

**Fulton, Albert Kimberly**, dramatist, born in Baltimore, Md., in 1836; died there, Jan. 31, 1900. He was a son of Charles Fulton, editor of the Baltimore American, and served during the civil war as an engineer in the United States navy. For three years he served on board the Hartford, Admiral Farragut’s flagship. At the close of the war he became a member of the editorial staff of the American. He was the author of a libretto of Black Sheep, a musical comedy, and a comedy which was very successfully acted by Miss Lotta, called Mademoiselle Nitoche.

**Galloupe, Dwight**, clergyman, born in Stanford, N. Y., in 1871; died in Newark, N. J., July 11, 1900. He was graduated at Alfred University, and studied for two years at the Albany Theological Seminary, and then at Hobart College and at Harvard University. His first charge was at Angelica, N. Y. Then for two years he was an assistant in the cathedral in Portland, Me. He was appointed rector of St. Paul’s Episcopal Church, Newark, N. J., in 1896. He was known as an orator of rare ability. In 1898 he became president of McKendree College.

**Ganz, Lloyd McKim**, author, born in Orange, N. J., May 4, 1876; died at Lenox, Mass., Oct. 4, 1900. He was a grandson of William Lloyd Garrison. He was graduated at Harvard in both the academic and the law departments, and was admitted to the New York bar in 1892. He published Ballads of Harvard and Other Verse (1894), and History of the Hasty-Pudding Club (1897).

**Gear, John Henry**, merchant, born in Ithaca, N. Y., April 7, 1825; died in Washington, D. C., July 14, 1900. At the age of ten he removed with his parents to Galena, Ill.; two years later to Fort Snelling, Minn.; and in 1843 to Burlington, where he began a clerk in a grocery store. In 1849 he was made a partner, and in 1854 became sole owner of the business. In 1852 he was elected alderman, and in 1863 mayor of Burlington. In 1872 he was elected to the Legislature, serving three terms, in the latter two of which he was Speaker of the House. From 1878 till 1881 he was Governor of Iowa. In Congress in 1886, was twice re-elected, and was defeated on his fourth nomination. He was a member of the Ways and Means Committee that framed the McKinley tariff law. In Nov. 19, 1892, he was appointed Assistant Secretary of the Treasury by President Harrison, and in 1894 was elected United States Senator from Iowa; his term would have expired in 1901, and he had been re-elected. At the time of his death he was chairman of the Committee on Pacific Railroads, and a member of the Committees on Agriculture and Forestry, Education and Labor, Interstate Commerce, Post Offices and Post Roads, and Improvements of the Mississippi River.

**Gibber, Leland**, lawyer, born in Sudbury, Mass., June 3, 1823; died there, Sept. 4, 1900. He was graduated at Wesleyan University, Middle-town, Conn., in 1851, and became a teacher in the Boston Mercantile Academy, and later in the Fort Hill School, Boston. In 1877 and 1880 he was a member of the Legislature. He also served in the State Senate for two terms. He was a frequent contributor to periodical literature, and published Meadow Melodies (Boston, 1887).

**Gibson, Charles Hopper**, lawyer, born in Queen Anne County, Maryland, Jan. 19, 1842; died in Washington, D. C., March 31, 1900. He was
Goebel, William, lawyer, born in Sullivan County, Pennsylvania, in 1856; died in Frankfort, Ky., Feb. 3, 1900. With his parents he removed to Covington, Ky., and from that place he went to Cincinnati ten years later. Before completing his apprenticeship he returned to Covington, and entered a law office in 1873. He began practice with the firm with whom he studied, and later became the law partner of ex-Governor John W. Stevenson, and still later of John G. Fairbiss. In 1887 he was elected State Senator for Kenton County, and by successive re-elections he continued to represent it in the Legislature till his death. In 1897 he secured the passage of what is known as the Goebel election law, the aim of which was to put the control of State election returns into the hands of election commissioners, who were the appointees of the Legislature, by which control the Democrats hoped to secure the State government. The election commissioners appoint in each county local canvassing boards, who declare the results, which the State Board approves. With this machinery in Democratic hands, Mr. Goebel believed that nothing could defeat the candidates of his party, and he set out to secure the nomination for Governor. He succeeded in obtaining this nomination in June, 1899, after an exciting convention. The result of the campaign that followed was officially declared as follows: Taylor (Republican), 193,714; Goebel (Democrat), 191,331; Brown (Anti-Goebel Democrat), 14,050. Taylor was inaugurated Governor Jan. 12, 1900. Goebel became a member of the committee of the Legislature, which was Democratic. The committee was to hear arguments before reporting to the Legislature, when Goebel was shot on Tuesday, Jan. 30, by some person unknown, as he was walking to the Capitol. Gov. Taylor, on account of the excitement at the Capitol, adjourned the Legislature. Lt. Col. David Horn, of London, Laurel County. The Democratic members tried to hold a meeting, but were shut out of all the public buildings, and finally the members signed a certificate declaring, on the report of the committee, that Mr. Goebel was the duly elected Governor, and he took the oath of office Jan. 31, on his being declared Lieutenant Governor with him was also sworn in.

Gotwald, Luther A., theologian, born in York Springs, Pa., Jan. 31, 1833; died in Springfield, Ohio, Sept. 15, 1900. He was educated at Wittenberg College, Springfield, Ohio, and at Pennsylvania College, Gettysburg, Pa. He was ordained to the office of the ministry in the Lutheran Church in 1859, and held the following pastorates: At Shippensburg, Pa., 1859-'63; at Lebanon, Pa., 1863-'65; at Dayton, Ohio, 1865-'69; at Chambersburg, Pa., 1869-'74; at York, Pa., 1874-'86; and at Springfield, Ohio, 1886-'88. He was Professor of Practical Theology in Wittenberg Seminary from 1888 till 1895. He was a contributor to the periodicals of the Church. He published pamphlets on doctrinal and practical subjects, and was a frequent contributor to the periodicals of the Church.

Gould, Annie A., missionary of the American Board, born in Bethel, Me., Nov. 8, 1867; killed in Pouting-Fu, Chi-Li province, China, July 1, 1900. She was graduated, the valedictorian of her class, at Mount Holyoke College in 1892. She joined the North China Mission, in Pouting-Fu, in 1893.

Gould, Ezra Palmer, clergyman, born in Boston, Mass., Feb. 27, 1841; died at White Lake, N. Y., Aug. 22, 1900. He was educated in the Latin Schools of Roxbury and Boston, and served in a Massachusetts regiment during the civil war. At its close he was mustered out with the rank of captain. He then entered the Baptist Theo-
logical Institution, at Newton, Mass., and after his graduation, in 1868, became Professor of New Testament Interpretation there, resigning in 1882. After holding the pastorate of a Baptist church in Burlington, Vt., in 1884–88, he studied for the ministry at Union Theological Seminary and was ordained there in 1891. He was New Testament Professor at the Episcopal Divinity School in Philadelphia until 1898, when he resigned to become assistant minister at St. George’s Church, New York city, which post he held at the time of his death. He was the author of Notes on the Lessons of 1885 (Bos-

The, 1887); The Commentary on the Epistles of the Corinthians (Philadelphia, 1887); The Gospel of Mark (New York, 1896); and The Theology of the New Testament (1900).

Green, Henry, jurist, born in Warren County, New Jersey, Aug. 29, 1828; died in Atlantic City, Aug. 16, 1900. He was graduated at Lafayette College in 1846, and was elected to the bar in 1847, and began practice in Easton. In 1879 he was appointed a justice of the Supreme Court of Pennsylvania, to fill a vacancy, and in 1880 was elected for a full term of twenty-one years. He was the first justice of the Supreme Court of Pennsylvania who went directly from the bar to the bench. He was a member of the constitutional convention of 1873.

Green, William Henry, clergyman, born in Groveville, N. J., Jan. 27, 1825; died in Princeton, N. J., Feb. 10, 1900. He was graduated at Lafayette College in 1840, and for two years was a tutor there. He was graduated at Princeton Theological Seminary in 1846, and he was immediately appointed instructor in Hebrew, and during the following three years was stated supply in the Second Presbyterian Church of Princeton. He was ordained May 24, 1848. He was pastor of the Central Presbyterian Church of Philadelphia in 1849–51, when he was chosen Professor of Biblical and Oriental Literature in Princeton Seminary. Since 1859 he has held a professorship in Princeton University, and in 1868 was offered the presidency of Princeton College, but declined it. He was a voluminous writer. His best known books are A Grammar of the Hebrew Language (1861, and many later editions); A Hebrew Chrestomathy (1863); The Pentateuch Vindicated from the Aspersions of Bishop Colenso (1865); The Argument of the Book of Job Unfolded (1874); Moses and the Prophets (1883); Hebrew Feasts (1885); The Unity of the Book of Genesis (1895); The Higher Criticism of the Pentateuch (1895); and a General Introduction to the Old Testament.

Grose, William, lawyer, born in Ohio in 1812; died in Athens, Ohio, May 18, 1866. At three years of age he was taken to the Territory of Indiana. By working in a brickyard he earned money enough to study law. He was originally a Democrat, and in 1854 entered the Republican party. He became colonel of the 36th Indiana Regiment in 1861, and served till the close of the war. He was commissioned a major in the 6th Indiana in 1864, and brevetted major general in 1865. After the war he was assigned to duty as president of a court-martial to try military offenders, and served till December, 1865. In 1866 he was appointed collector of internal revenue for the Fifth District, and he held the office eight years. In 1877 he was a member of the Legislature, and from 1879 till 1883 a State Senator. In 1878 he was defeated as a candidate for Congress.

Grosvenor, William Mason, editor, born in Ashfield, Mass., April 24, 1835; died in Engle-wood, N. J., July 20, 1910. He graduated from Princeton College in 1855, but left to become editor of the New Haven Palladium. At the outbreak of the civil war he enlisted in the 13th Connecticut Regiment, and soon became adjutant. In December, 1862, he was promoted captain. He was shot through the arm at Port Hudson, June 14, 1863, but soon rejoined his regiment. In the 2d Regiment, Louisiana Native Guards (colored), which he commanded till the close of the war. He returned to New Haven and was for a time one of the editors of the Journal and Courier. In 1866 he took editorial charge of the St. Louis Democrat, resigned in 1870, again became its editor in 1872, and finally left it in 1875, when he was ordained deacon on the New York Tribune, which he continued till his death. He wrote on financial and economic topics mainly. In 1885 he began to write weekly articles for the Dun’s Mercantile Agency, and in 1893 he began to edit the weekly Review. His published books include Does Protection Protect? (Boston, 1870); American Securities (1885) and Trades Unions Investigated in the Light of Common Sense (1885).

Hale, Charles Reuben, clergyman, born in Lewistown, Pa., March 14, 1837; died in Cairo, Ill., Dec. 25, 1900. After graduating at the University of Pennsylvania in 1858, he studied for the ministry; was ordained in 1860 and priest in 1861. He was successively assistant minister of All Saints parish, Lower Dublin, Pa., 1861–63; chaplain in the United States navy, 1863–70; rector of St. John’s, Auburn, N. Y., 1870–75; rector of St. Mary the Virgin, Baltimore County, Maryland, 1875–77; assistant minister of St. Paul’s, Baltimore, Md., 1877–80; and dean of the dioecese, Dubuque, Iowa, 1886–92. In the last-named year he was consecrated bishop coadjutor of the diocese of Springfield, with the title of Bishop of Cairo. He was one of the most learned men in his Church, and was an authority on matters pertaining to the ancient liturgies and similar subjects. His chief works were the Mozambic Liturgy (1876); The Universal Episco-

Hale, Lucretia Peabody, author, born in Bos-
ton, Mass., Sept. 2, 1820; died there, June 12, 1900. She was a daughter of Nathan Hale, and the oldest surviving sister of Edward Everett Hale. She was educated at Miss Williams’ school, Elizabeth P. Peabody and George B. Emerson. With the exception of a residence of ten years in Brookline, her entire life was passed in Boston. She served on the Board of School Commissioners, and to her the city is indebted in a great measure for the movement in regard to vacation schools and the use of parks. She also took a deep interest in other schools. She was also deeply interested in the charitable associations of her city. She contributed many short stories to periodicals, and published the following books: Seven Stormy Sundays (Boston, 1858); The Lord’s Supper and its Observance (1865); Service of Sorrows (1868); Art of Knitting (1883); Last of the Peterkins (1886); Pagots for the Fireside (1886); Stories for Children (1892). She edited Plain Needlework (1878) and Point Lace (1879). In collaboration with Mrs. Whitman she wrote Sunday-school Stories for
Little Children; with Edwin Lasseter Byner, The Uncloseted Skeleton (1888); with her brother, Edward Everett Hale, The New Harry and Lucy (1892); and with Harriet Becher Stowe and others, Six of One by Half a Dozen of the Other.

Hall, Thomas Winthrop, author, born in Godesburg, N. Y., Nov. 13, 1862; died in Hannibal, Mo., Aug. 21, 1900. He was graduated at West Point, June 4, 1857, and was assigned as second additional lieutenant to the 4th Cavalry. He served at Fort Huachuca and San Carlos Agency, Arizona, for a time, and was promoted full second lieutenant of the 10th Cavalry, Oct. 5, 1887; he resigned from the service, Jan. 1, 1889. During the Spanish-American War he was quartermaster of the "Rough Riders," and served with them till Aug. 1, 1898, when he resigned and came home ill with fever. At the end of the year, Hall, he was well known as a writer of short, bright sketches, poems, and stories; his published works include When Hearts are Trumps (Chicago, 1894); When Love Laughs (New York, 1897); Experimental Wooing (1898); Little Lady, Some Other People, and Myself (1898); When Cupid Cows the Fun and Fighting of the Rough Riders (1899); Tales (1899); and When Love is Loud (1899).

Hamilton, Louise, actress, born in Havana, Cuba, Nov. 23, 1875; died in London, England, March 3, 1900. She was a daughter of a theatrical family who at the time of her birth were engaged in the Cuban Opera Company. Her first appearance in drama was in the company of Mr. and Mrs. McKee Rankin when they were playing The Dianes. In the autumn of 1899 she began a successful four years' tour of the United States as a star in the dual role of Little Nell and the Marchioness in Old Curiosity Shop. Her last appearance was at The Pavilion, London, in February, 1900.

Hamiln, Cyrus, educator, born in Waterford, Me, Jan. 5, 1811; died in Portland, Me., Aug. 8, 1900. He was graduated at Bowdoin College in 1834, and at Bangor Theological Seminary in 1837. He was a missionary of the American Board in Turkey from 1837 till 1860, when he became president of Robert College, Constantinople, which he had organized after a seven years' contest with the Turkish authorities. In order to give employment to indigent Armenians, he had introduced the making of bread with hop yeast in Constantinople. During the Crimean War this bread was in great demand, and at its close he had cleared $25,000, which he applied to the building of churches and schoolhouses. He resigned the presidency of the college in 1870, and in 1877 became Professor of Dogmatic Theology in Bangor Theological Seminary. He was President of Middlebury College, Vermont, from 1880 till 1885. In the latter year he retired to Lexington, Mass., where, though superannuated, he remained an agent of the American Board. While at Bowdoin he built a post office and made the first steam engine built in Maine. He had made a brass screw for Prof. Smith's theodolite, and he asked the professor if he thought he could sell an engine, if he could make one, for as much as he could earn by teaching in the vacation, and the professor encouraged him. Hamlin never had seen an engine, but went to work in a Portland clock-making establishment. In ten weeks he had completed the engine, and he sold it to Bowdoin College for $175. He could have earned $40 by teaching. It was said of Dr. Hamlin that he had 16 professions, every one of which was subordinate to the one great missionary and educational purpose of founding Robert College in Constantinople. He published, in the Armenian dialect, Upham's Mental Philosophy; Arithmetic for Armenians; and a Turkish translation and critique on the writings of Archbishop Matteos. In English, Papists and Protestants; Cholera and its Treatment; Among the Turks; and My Life and Times.

Hammond, William Alexander, surgeon, born in Annapolis, Md., Aug. 28, 1828; died in Washington, D. C., Jan. 5, 1900. He was graduated at the medical department of the University of New York in 1848, after which he attended a course of clinics in the Pennsylvania Hospital in Philadelphia. July 3, 1849, he entered the army of the United States as assistant surgeon general with the rank of captain, which rank was raised to captain, June 29, 1854. He did duty at various forts and military posts, and acted as medical director of the Sioux expedition and as surgical officer to the troops engaged in laying out a road through the Rocky mountains. Oct. 31, 1860, he resigned from the army to become Professor of Anatomy and Physiology in the University of Maryland. At the beginning of the civil war he resigned his chair and re-entered the army. He was appointed assistant surgeon May 28, 1861, and promoted to the rank of captain, with the rank of brigadier general. He instituted many reforms, but became involved in a controversy, was tried by court-martial, and was dismissed from the service Aug. 18, 1864. In 1868 he was appointed Professor of Diseases of the Mind and the Nervous System in the College of Physicians and Surgeons in New York City; subsequently he filled similar chairs in Bellevue Hospital Medical College and in the University of the City of New York. In 1882 he was one of the founders of the New York Post-Graduate Medical School, in which he held the professorship of Diseases of the Mind for years. In the meantime the President and the Secretary of War had been authorized to review the proceedings of the court-martial that had removed him from the army, and on Aug. 27, 1879, he was, after fifteen years of suspension, restored to his former place on the rolls of the army as surgeon general and brigadier general on the retired list. In February, 1885, Insanity in Its Service in New York and removed to Washington. He wrote many books on nervous complaints and other medical topics, as well as some novels. His published works are Physiological Memoirs (Philadelphia, 1863); Treatise on Hygiene (1863); Lectures on Venereal Diseases (1864); A Chapter on Sleep (1865); Insanity in Its Medico-Legal Relations (New York, 1866); Robert Severne: His Friends and his Enemies (Philadelphia, 1866); Medico-Legal Study of the Case of Daniel McFarland (New York, 1867); Sleep and its Derangements (Philadelphia, 1869); Physiology and Psychology of Spiritualism (New York, 1870); Clinical Lectures on Diseases of the Nervous System (1871); Treatise on Diseases of the Nervous System (1871); Insanity in its Re-
OBITUARIES, AMERICAN. (HARMER—HENRY)

loration to Crime (1873); Spiritualism and Allied Causes and Conditions of Nervous Derangement (1876); Cerebral Hyperemia (1878); Fainting Girls (1879); Neurological Contributions of Studies and Case Records (1879); On Certain Conditions of Nervous Derangement; Southernism to Hysteroid Affections (1881); Dr. Grattan (1884); Lal (1884); A Strong-minded Woman (1885); Mr. Oldnixon (1885); On the Susquehanna (1887); Sexual Impotence in the Male (1886); Sexual Impotence in Male and Female (Detroit, 1887); Spinal Irritation (1888); The Son of Perdition (Chicago, 1888); and with Clara Lanza, Tales of Eccentric Life (New York, 1880).

HARMER, Alfred Crout, merchant, born in Germantown, Pa., Aug. 25, 1825; died there, March 6, 1900. He was educated in the public schools and at the Germantown Academy. He began business as a shoe manufacturer, and later became a wholesale dealer. He was afterward identified with railroad enterprises and mining and land operations. He was elected to the city council of Philadelphia in 1856, and served till 1860, when he was elected recorder of deeds, which office he held three years. He was a delegate to the Republican National Convention that nominated Grant for President. He was elected to Congress in 1870, and re-elected in 1872 and 1876. He was "father of the House" after the death of Representative O'Neill.

HARNDEN, Henry, soldier, born in Massachusetts in 1823; died in Madison, Wis., March 17, 1900. He followed the sea several years, and later served with the Mexican in the civil war, and on May 6, 1865, was ordered by Gen. Wilson, in command of the 1st Division, Cavalry Corps, of the Army of the Cumberland, to take 150 men and pursue Jefferson Davis and his party, who several days previously had been at Macon, Ga. After a chase of four days he overtook Davis and a number of Confederate officers. During the capture there was by mistake a collision between Harnden's men and a small detachment from the 4th Michigan, which caused the death of two men; each party took the other for Confederates. A congressional investigation exonerated Harnden. At the time of his death he was commander of the Wisconsin regiment of the Grand Army of the Republic.

HASKELL, Thomas Hawes, lawyer, born in New Gloucester, Me., May 18, 1842; died in Portland, Me., Sept. 24, 1900. He was graduated at the Norway Liberal Institute in 1862. In 1862-63 he served in the National army. He was admitted to the Maine bar in February, 1865, and began practice in Portland in 1866. He was elected in 1884 Associate Justice of the Supreme Judicial Court of Maine. His term would have expired in 1905. Judge Haskell was known as one of the greatest case lawyers in New England. He published Haskell's Reports (2 vols.) and The New Gloucester Centennial (1874).

HAYES, John Wright, born in Franklin County, New York, April 30, 1846; died in Washington, D. C., June 3, 1900. He enlisted in the volunteer army in 1862, and at the close of the war was colonel of the 142d New York Regiment, and had been brevetted brigadier general. He was badly wounded in one of the battles of the war, and was invalided to the West. He returned to Franklin County, and later he spent some years in California. In 1889 he went to New York city, and became general agent of the Consolidated Coal Company.

HAZEN, Henry Allen, meteorologist, born in Serrur, India, Jan. 12, 1849; died in Washington, D. C., Jan. 23, 1900. He was educated at Dartmouth College in 1871, and was instructor in drawing in Sheffield Scientific School of Yale University till 1875, becoming Assistant Professor in Meteorology, which chair he held till 1879. May 1881 he became Assistant of the United States Signal Service. In October, 1885, he became one of the regular officers in this department, and made forecasts for the whole country. July 1, 1891, he was made Professor of Meteorology of the Weather Bureau. He devised a system for reducing barometric observations to standard pressure, and a thermometer shield. He published Meteorological Tables (1888) and The Tornado (1890).

HEALY, James Augustin, clergyman, born in Macon, Ga., Aug. 6, 1830; died in Portland, Me., Aug. 5, 1900. He studied civil engineering, and began his practice, but later turned to the Church, and in 1869 was graduated at Hotel Cross College, at Worcester, Mass., at the head of his class. He continued his theological studies at the Grand Seminary, in Montreal, and at St. Sulpice, at Paris. June 10, 1854, he was ordained a priest in the Catholic cathedral of Notre Dame. He returned to the United States, and for a time acted as secretary of Bishop Fitzpatrick in Boston; later he became a priest and President. He was elected to Congress in 1870, and re-elected in 1872 and 1876. He was "father of the House" after the death of Representative O'Neill.

HENDRIE, John W., philanthropist, born in South Lee, Mass., Oct. 12, 1821; died there, Nov. 25, 1900. He was graduated at Yale University in 1851, and in 1854 he went to San Francisco, where he became a merchant and a dealer in real estate. After amassing a fortune in California, he returned to his native town. His principal gifts were $15,000 to the Mercantile Library in San Francisco and $10,000 to the Academy of Arts and Sciences of the same city, in 1897; in the same year a gift of $50,000 to Yale Law School was announced, and later contributions made his gifts to that university double that amount. He also made various liberal gifts to local churches and benevolent institutions.

HENDERSON, John, bishop, born in Kincladie, County, Ireland, Aug. 20, 1825; died in Dubuque, Iowa, March 4, 1900. In 1847 he removed to Condelet, Mo., where he studied theology. Nov. 1, 1850, he was ordained a priest, and his first mission was at New Madrid, Mo., where he entered upon his duties, Jan. 20, 1851. A few months later he became pastor of St. Peter's Church, Gra- vois, Mo., where he remained till 1854. He was then called to the duty of preparing priests for missionary work, being installed in the Carondelet Seminary as vice-president and Professor of Dogmatic Theology and Ecclesiastical History. In 1857 he became president of the seminary. In 1858 he was sent to Rome as representative of the American bishops. He returned to Carondelet a year at the St. Louis Cathedral. Jan. 12, 1860, he became pastor of St. Joseph's Church, at St. Joseph, Mo., remaining there six years. April 24, 1866, he was elected Bishop of Dubuque, Iowa, and Sept. 30, 1866, was consecrated. The diocese of Dubuque was created an archdiocese in 1893, and Condelet died Nov. 1, 1894, having been made archbishop. In 1873 he was instrumental in founding the New Melleray Abbey, and in the same year he founded St. Joseph's College, Dubuque.

HENRY, William Wirt, lawyer, born in Red Hill, Charlotte County, Va., Feb. 14, 1831; died in Richmond, Va., Dec. 5, 1900. He was
HINCKLEY, Francis Edward, civil engineer, born in Elmira, N. Y., March 14, 1834; died in West New Brighton, N. Y., Sept. 6, 1900. He was graduated at Rensselaer College, and went to Chicago in 1870, where he was engaged in bridge building and railroad undertakings from 1875 till 1890. Later he became president of the Chicago, Pekin and Southwestern Railroad, and acquired large interests in other railroads. He was connected with the Niagara Power and Development Company, and a projector of a large steel company in Canada. He was an incorporator of Chicago University, and a generous contributor to it.

HINSDALE, Burke Aaron, educator, born in Wadsworth, Ohio, March 31, 1837; died in Atlanta, Ga., Nov. 29, 1900. At the age of sixteen he entered Hiram College, where he met James A. Garfield, who was five and a half years his senior, and they became fast friends. Prof. Hinsdale began teaching in the public schools; later he was principal in an academy, and in 1870 he was made president of Hiram College. His presidency of this institution covered a period of twenty-five years. During this time he published his first books: The Gentleness and Permanence of the Gospels (1875); The Jewish-Christian Church (1875); Ecclesiastical Tradition (1879). Some of his other papers written at this time were afterward gathered into a volume entitled Schools and Studies. From 1882 till 1888 he was superintendent of the public schools, and in 1888 he was appointed to the chair of the Science and Art of Teaching in the University of Michigan. His other books are President Garfield and Education; The Old Northwest; The American Government; How to Study and Teach History; Teaching the Language Arts; Jesus as a Teacher; and he has edited The Works of James A. Garfield (2 vols.).

HITCHCOCK, Hiram, hotel keeper, born in Claremont, N. H., Aug. 27, 1832; died in New York city, Dec. 30, 1900. He prepared for Dartmouth College at the Black River Academy, Ludlow, Vt., but instead of entering college became a store clerk. In 1853 he entered the army and superintended his father's farm for five years. In 1853 he entered Brown University as a student of chemistry suitable for agriculture, and he was graduated there in 1856. He remained at Brown as instructor in chemistry, and in 1859 he was made professor, which chair he occupied till 1864. In 1864, after the Civil War broke out, he returned to the New England back country and investigated the mineral characteristics of Gilpin County, Colorado; he became interested in the processes of extracting gold and silver from the unworkeable ores, and after several trips abroad he organized the Boston and Colorado Smelting Company, and was made its general manager. With an assistant, Mr. From Walmsley, he invented a process of extracting gold and silver from matte which was really the foundation of the great mining industries of Colorado, as previous to this invention all matte had been sent to England. The headquarters of the company were at Black Hawk, Colo. In 1871 he was elected mayor of Black Hawk, and in 1872-73 was member of the territorial council. In 1879 he was elected United States Senator. He was an advocate of the free coinage of silver, and spoke frequently on the subject. In 1891 he was one of the three members of the International Monetary Commission, and also served for a time as regent of the Denver Mint. He was appointed and in 1897 he was president of the United Oil Company, Colorado Smelting and Mining Company, and Demagro Land Company, and proprietor of the Denver Republican.

HODADY, Charles Jeremy, librarian, born in Hartford, Conn., Aug. 1, 1828; died there, Oct. 21, 1900. He was graduated at Trinity College in 1851, and was admitted to the New Hampshire bar in 1853; never practiced law. In 1854 he was appointed librarian of Trinity College, and in April, 1855, was made State Librarian of Connecticut, which office he held until his death. He was the editor.
of 16 volumes of the Connecticut colonial records and of Goodwin's Genealogical Notes. In 1889 he was made a doctor of laws by Trinity College.

Hodge, Cortlandt van Rensselaer, missionary of the Presbyterian Board, born in Burlington, N. J., July 1, 1872; Elsie Campbell (Sclar), born in Cedar Rapids, Iowa, Dec. 15, 1874; both killed in Paoting-Fu, Chi-Li province, China, June 30, 1900. Dr. Hodge was graduated at Princeton in 1893, and at the University of Pennsylvania, medical department, in 1897. Mrs. Hodge was graduated at Bryn Mawr College in 1897. They sailed for China in March, 1899.

Hoffman, David, was born in Sigenstadt, Bavaria, Nov. 5, 1833; died in New York city, July 8, 1900. He came to America in 1855, having been previously employed by the Rothschilds in Frankfort-on-the-Main, engaged in the manufacture of paper collars, and was the organizer of the Standard Collar Company. He was connected with the Department of Agriculture, and was interested in educational and philanthropic organizations. He was a director of the Baron de Hirsch fund, and treasurer and a director of the Borough Houses Company. For fourteen years he served as treasurer of the United Hebrew Charities, resigning a few years ago. The Hebrew Benevolent and Orphan Asylum Society founded his hospital, and named it in his honor. Mr. Hoffman was a trustee of Temple Emanuel-El, and twelve years ago he founded the Hebrew Technical Institute, of which he was president at the time of his death.

Hoffman, Wickham, lawyer, born in New York city in 1821; died in Atlantic City, N. J., May 21, 1900. He was graduated at Harvard College, Class of 1842, and practiced law till the break of the civil war. He was appointed aide-de-camp to Gov. Morgan, and was sent to inspect the New York troops at Fort Monroe. In March, 1862, he entered the volunteer service as assistant adjutant general, and served on the staff of Gen. Williams. He was at the capture of New Orleans, and took part in the expedition to Vicksburg under Gen. Johnston. For a time he served on the staff of Gen. Sherman. In 1863 he took part in the expedition to Texas and in the Red river campaign. In 1864 he was appointed assistant adjutant general of eastern Virginia and North Carolina, and in March, 1865, was assigned to duty in New York City. In 1866 he was appointed assistant adjutant general and chief of staff to Gen. Canby. In 1866 he resigned, and was appointed assistant secretary of legation at Paris. In 1867 he was made secretary of legation, and he filled the office nine years. He was transferred to London in 1875, and in 1877 to St. Petersburg, where for six years he acted as chargé d’affaires. In 1882 he was appointed minister resident and consul general to Denmark; he served till 1884, when he retired to private life. He was the author of Camp, Court, and Siege (London, 1877), and Leisure Hours in America (1888).

Hovey, Richard, poet, born in Normal, Ill., May 4, 1864; died in New York city, Feb. 24, 1900. After graduation at Dartmouth College he studied at the General Theological Seminary in New York, but abandoned his intention of entering the Episcopal ministry after serving for a short while as a lay assistant. During the remainder of his career he was by turns actor, journalist, and lecturer on English literature. He was a student of the works of French and Belgian poets, and published an English translation of Molière, much of which is in dramatic form, exhibits unusual promise, each successive effort being a gain upon that which had preceded it. "That his aim was high," writes Mr. Steedman, "is shown even by his failures; and in his death there is no doubt that America has lost one of her best equipped lyrical and dramatic singers." His works comprise The Laurel: An Ode (Washington, 1889); Launcelot and Guenevere: A Poem in Dramas (New York, 1891); Seaward: An Elegy upon the Death of Thomas William Parsons, (1893); Songs of Vagabondia, with Bliss Carman (1893); More Songs from Vagabondia, with Bliss Carman (1896); Along the Trail (1898); The Quest of Merlin; The Marriage of Guenevere; The Birth of Galahad, a trilogy, the first two parts of which appeared in 1891 as Launcelot and Guenevere and were now reprinted with some revision and amplifications (1895); Ad Astra: Hymns and Songs, his most finished effort (1900), and Last Songs from Vagabondia, with Bliss Carman (1900), were issued posthumously.

Howard, Samuel, naval officer, born near Dublin, Ireland, in 1828; died in Washington, D. C., Jan. 14, 1900. His parents came to the United States when he was a boy, and was educated at port, R. I. At the age of sixteen he ran away to sea, and his life for over half a century was spent upon the water. His first voyage was to the Mediterranean, and for several years he was captain of a merchant vessel sailing between New England and points in Cuba and the West Indies. At the outbreak of the Civil War he was a lieutenant in the volunteer navy and placed in command of the gunboat Neosho, doing patrol duty on the lower Mississippi. Later he was transferred to the Amanda as acting master, to patrol the Atlantic coast south of Norfolk. He reached that port just at the time the Monitor came down to battle with the Merrimac. He was placed in command of the monitor and was ordered to engage the Merrimac. He was the only man in the evening tower with Capt. Worden, and he was a great factor in the successful outcome of the engagement. At the close of the war he resigned from the navy and received a commission as third lieutenant in the revenue marine service. He was stationed for various periods at New Orleans, Savannah, Baltimore, Cedar Keys, and Mobile. He rose to the grade of captain in the Revenue Marine, and in 1891 he was proved physically unfit for promotion, and was placed at the foot of the second-lieutenant grade, out of the line of promotion.

Hoyt, Charles Hale, American dramatist, born in Concord, N. H., July 26, 1860; died in Charlestown, N. H., Nov. 26, 1900. He was graduated at the Boston Latin School, and studied law. He was an appointee to West Point Military Academy, but failed to pass the physical examination. In 1875 he tried stock raising in Colorado, but returned to the East and engaged in journalism on the St. Albans (Vt.) Advertiser. He then became a writer for the Boston Post, of which he was musical and dramatic critic. While in this position his first effort was a sketch called Gifford's Lure, which was produced with success at the Howard Athenaeum, Boston, in 1882. His next work was a melodrama, Cezalina, which also was well received. He then wrote A Bunch of Keys, at the suggestion of Willie Edouin and Alice Atherton, and his first play thus first produced. During this period in Providence, R. I., but was coldly received. The last Charles W. Thomas, who was an intimate friend of Mr. Hoyt's, liked it, and assisted him to improve it. These two thereafter entered into collaboration, and continued as partners until Mr.
Thomas's death, in 1893. The Bunch of Keys, which had been sold for $500 to Mr. Edouin and Mr. Frank Sanger, was first played in New York city at the San Francisco Minstrels' Opera House, March 24, 1888, and by this instantaneous success made the fortunes of its owners, the reputation of its inventors, and a new style of American comedy. A Rag Baby was produced in 1884. A Parlor Match, which made Evans and Hoey famous and rich, was first produced at Tony Pastor's Theater, New York, Sept. 22, 1884. Hoyt and Thomas received by the instantaneous success of Wine was produced by the late Charles B. Bishop at Austin, Texas, Nov. 10, 1884, A Tin Soldier at the Standard Theater, New York, May 3, 1886, and an opera, called The Maid and the Moonshiner, on Aug. 16, 1886, at the same house. The last was a failure, which Hoyt attributed to the fact that its title did not begin with the article "A," and thereafter all his titles began with that useful part of speech. A Hole in the Ground was first presented at the Fourteenth Street Theater, New York city, Sept. 12, 1887. In the winter of 1887-88 a serious play, called A Midnight Bell, in which Maude Adams played the character of "Lotta," which Hoyt and Thomas had created prevented any success of this really well-deserving piece. A Brass Monkey was the next farce, produced May 22, 1888. Then came A Texas Steer, first played April 28, 1890. This play was written for Mr. Hoyt's first wife, Miss Flora Walsh, Sept. 18, 1888. The success of A Midnight Bell, with which the dramatists reached high-water mark. It is said that this farce made for them $500,000 in five years, and it holds the record for the longest continuous run of any dramatic production in America. In 1893 Miss Walsh died, and in 1894 Mr. Hoyt married Miss Caroline Mikel, who had been one of the most popular use, and which was produced March 14, 1892. A Milk-White Flag was produced Dec. 23, 1893. After Mr. Thomas's death in this year Mr. Hoyt entered into partnership with Mr. Frank McKeel and leased the Madison Square Theater, New York, the name of which was changed to Hoyt's Theater. Hoyt's later notable productions of their production were: A Black Sheep, Sept. 10, 1894; A Contended Woman, Sept. 2, 1895; A Runaway Colt, Nov. 12, 1895; A Stranger in New York, Feb. 15, 1897; A Day and a Night, April 18, 1898; and A Dog in the Manger, Jan. 30, 1899. The current of public esteem gradually away from this kind of clever nonsense, and the last-named plays were failures. Mr. Hoyt was twice elected to the Legislature of his native State.

Hubbard, Oliver Payson, physician, born in Poufrett, Conn., March 31, 1809; died in New York city, March 9, 1900. He was graduated at Yale in 1831. In 1836 he was assistant to the elder Prof. Benjamin Silliman in the chemical laboratory of Yale College, and he aided Charles Goodyear in all the early experiments that led to his discovery of the process of vulcanizing India rubber. In 1836 he was appointed Professor of Chemistry, Pharmacy, Mineralogy, and Geology in Dartmouth College, and he filled that chair thirty years. After resigning his professorship he continued his lectures in Dartmouth Medical School till 1883, when he was made professor emeritus. In 1853 he built the Shattuck Observatory. From 1867 till 1895 he was overseer of the Thayer School of Engineering. Prof. Hubbard was a founder of the American Association of Geologists and Naturalists in 1841; also a founder of the American Association for the Advancement of Science in 1848, and its secretary and a vice-president from 1855 till 1892. After 1874 he resided in New York city. He was a contributor to scientific periodicals, and was the author of the History of the New Hampshire Medical Institution; History of the Chandler School, Dartmouth College (1881); Account of Seven Nineveh Slabs; Biographical Sketches of the Class of 1828, Yale (1868); and College Memorabilia.

Humphreys, Frederick, physician, born in Marcellus, Y. X., March 11, 1816; died at Mounmouth Beach, N. J., July 8, 1890. He was educated in the public schools and at Auburn Academy. He served as clerk in a store in Auburn two years, and in 1832 went South for three years. He taught a school three years in Chillicothe, Ohio, and later studied for the ministry in the Methodist Church. He was an itinerant minister five years in New York and Ohio. In 1844 he settled in Utica. In 1846 he began to investigate homeopathy, and he spent the winters of 1845, 1849, and 1850 at the Homeopathic Medical College in Philadelphia, where, in 1853, he became Professor of Homeopathic Institutes and Practice of Medicine, serving four years. For some years he had been maturing a plan for the preparation of homoeopathic medicines, and in 1857 he announced the invention of a number of combinations, which he termed his "homeopathic species." In that year he settled in New York city and there to advertise his specialties. He was a constant contributor to Our Animal Friends, and published Proving of the Aepis Millillia, or Poison of the Honey Bee (1857).

Huntington, Collins Potter, railroad builder, born in Harwinton, Conn., Oct. 22, 1821; died at Pine Knot Camp, near Lake Raquette, N. Y., Aug. 13, 1900. He was educated in a local school, and worked on his father's farm till he was fourteen years old. He then set out for himself, and for several years peddled clocks in the small Connecticut towns. In 1837 he went to New York city, and, having procured credit for $3,000 worth of clocks, went to sell them through the South and West. In 1842 he settled in Oneonta, N. Y., having entered into partnership with his elder brother, and the firm carried on a general merchandise business. In October, 1848, the brothers made a shipment of goods to California, which Collis followed in March, 1849. With others, he was detained on the isthmus, and he improved the time by buying a stock of goods and peddling them back and forth across the isthmus. When he arrived in California he began business in a tent in Sacramento, dealing in the various articles required in mining life. Later he opened a large hardware store in the city, having become associated in business with Mark Hopkins. In 1860 he matured a scheme for a transcontinental railroad, Leland Stanford, Charles Crocker, and Mr. Hopkins having united with him in paying the expenses of a survey across the Sierra Nevada mountains. Five men organized the Central Pacific Railroad Company, of which Mr. Huntington...
was vice-president. After Congress had agreed to aid the enterprise by an issue of bonds, he and his associates carried on the construction of the rail-
road out of their private means till the bonds became available by the completion of a stipulated mileage. The Central Pacific was finished in 1869, the last spike being driven May 10. Having car-
ried through so gigantic a scheme, Mr. Huntington had the confidence of all the great financiers of the coun-
try, and was enabled to command unlimited capital in any of his later undertakings. At the
time of his death there were merged into the
Southern Pacific Railroad Company, of which he
had been the promoter and was the president, 26
corporations, with total capital of $10,000 miles of
teamship line. He had succeeded in completing the
Chesapeake and Ohio Railroad, in which many other contractors
had been ruined. He turned the village of New-
port News, Va., into a thriving town, and
had invested more than $7,000,000 in a shipyard there,
which employs thousands of men. He had the
reputation of being one of the
wealthiest holders in the country, holding title to vast tracts of undeveloped land in California, Kentucky, West
Virginia, Mexico, and Guatemala, as well as valuable
real estate in New York city, and four large
hotels. Some of his vast wealth he used in philan-
thropic ways. In 1886 he erected a massive gran-
te in New York city, in honor of
the memory of his mother. In October, 1891, he gave to the
town of Westchester, N. Y., a library and reading room.
In February, 1897, he presented to the Metropoli-
tan Museum of Art the celebrated portrait of
Washington painted by C. W. Peale. For colored
people he aided greatly in the construction and equip-
ment of Hampton (Va.) Normal
and Industrial Institute; to the latter he gave as
an endowment fund $50,000 on Dec. 6, 1899. His
collection of art objects—paintings, carvings, etc.—was worth $500,000; he left an estate valued at
$35,000,000.

Ingalls, John James, lawyer, born in Middle-
ton, Mass., Dec. 29, 1833; died in Las Vegas, New
Mexico, Aug. 16, 1900. He was graduated at Wil-
liams College in 1855, and was admitted to the bar
in 1857. In October, 1858, he removed to Atchison,
Kan. In 1859 he became a member of the Wyandotte
Constitutional Convention; in 1860 was made secretary of the Territorial Council, and in 1861
of the Kansas Senate. In 1862 he was
elected to the State Senate, and the same year
he was the unsuccessful candidate for Lieutenant
Governor. After his defeat he became editor of the
Atchison Champion, which place he held from 1863
till 1865. He was again defeated as a can-
didate for Lieutenant Governor in 1864. In 1872
he went to the United States Senate, and he served continuously in that body from 1873
till 1891. During the last three years of that time
he was president pro tem. of the Senate. He
gained wide fame as a Senator, his speeches at-
tracting attention throughout the country. When
the Farmers’ Alliance party had gained control of
Kansas, as Senator Ingalls had dealt with that
element in anything but a gentle way, he
was compelled to retire from public life in 1891. He
then devoted most of his time to newspaper work,
and traveled about the country as correspondent for
a New York paper. He also lectured.

Ingate, Clarence L. A., naval officer, born in
Atlanta, Ga., Dec. 24, 1899. He was graduated at the United States
Naval Academy, July 1, 1890, entered the marine
corps as second lieutenant, and was promoted first
lieutenant, April 30, 1892, and captain, Sept. 26,
Mr. Powderly, then the head of the Knights of Labor, was opposed to the strike, and this eventually led to his retirement from the leadership of the organization. Irons entered the contest for the presidency, but failed of election.

**Jackson, Henry Melville**, clergyman, born in Leesburg, Va., July 28, 1848; died, May 4, 1900. He was educated at the Virginia Military Institute and at the Virginia Theological Seminary, in Alexandria, and after taking deacon's orders in the Episcopal Church, in 1873, he was admitted to the priesthood the next year. He was in charge successively of Montgomery parish, Virginia, and Christ Church, Greenville, S. C., and was rector of Grace Church, Richmond, Va., in 1876-91. He was one of the editors of the Southern Pulpit, afterward united with the Pulpit Treasury, and for a time was on the editorial staff of the Southern Churchman. In January, 1891, he was consecrated Bishop Coadjutor of Alabama, which office he resigned in April, 1900.

**Jessing, Joseph**, educator, born in Münster, Westphalia, Nov. 17, 1830; died in Columbus, Ohio, Nov. 2, 1899. He entered the Prussian army at an early age, and attended the royal Military Academy at Hannover. In 1860 he gave up his military studies for an ecclesiastical career, but he returned to the army to serve during the Schleswig-Holstein War of 1864 and the Austrian War of 1866. He then resolved to devote himself to the editorship of a paper, and came to the United States. He completed his theological course at Mount St. Mary's of the West, later St. Edward's College, Columbus, Ohio. Afterward he was assigned to the charge of the Sacred Heart Church, in Pomeroy, Ohio. There he began the publication of a journal, entitled Ohio Waisenfreund, the profits of which he devoted to the support and education of homeless orphan boys. The venture was very successful, and in 1875 he established an orphan asylum in Pomeroy. Two years later he gave up his parochial charge, and removed to Columbus, where he began at once the work of building up an institution that now covers an entire square and is entitled the Pontifical Collegium Josephinum de Propaganda Fide. It has 11 fine buildings, and comprises an orphanage, a house for the Franciscan Sisters, who attend the girls in the duties that arise in connection with the institution, a college for theological training, an industrial school of art, a printing office, and mechanical workshops. Father Jessing also purchased 100 acres near Columbus for farm work, where supplies are raised for the institution. Students who are unable to pay for their board are admitted free. In 1892 the Congregation for the Propagation of the Faith gave the college canonical constitutions, and this action was ratified by Pope Leo XI11. It is also incorporated under the laws of Ohio, and has power to confer degrees. It now has about 170 students. In 1894 Father Jessing was appointed to the dignity of domestic prelate, which gave him the title of Monsignor.

**Judd, Albert Francis**, jurist, born in Honolulu, Hawaiian Islands, Jan. 7, 1838; died there May 20, 1900. His father was Dr. Gerrit Parmele Judd, a medical missionary under the auspices of the American Board. Chief-Justice Judd was graduated at Yale University in 1852, and at Harvard Law School in 1854. He returned to Honolulu and began the practice of law. From 1868 till 1872 he served in the Hawaiian Legislature. In 1873 he was made Attorney-General by King Lunalilo. The following year he became a justice of the Supreme Court, and since 1881 had been Chief Justice. In comment upon this court, in a letter to a friend, he wrote: "I feel that no court has ever had such a diversified mun-

**Jones, Alfred**, engraver, born in Liverpool, England, April 7, 1819; died in New York city, April 29, 1900. He came to New York in 1824. He apprenticed himself to a firm of bank-note engravers, and when still a young man he was put in full charge of a department. Mr. Jones made many of the best plates used by New York publishers of half a century ago. His first piece of art work to attract attention was The Proposal, engraved for Graham's Magazine. In 1839 he took a first prize in the New York Academy of Design for a drawing from Thorwaldsen's Mercury. The Proposal and The Farmer's Wooing also took first prizes. In 1846 he went to Europe and spent several months in perfecting himself in engraving. After 1848 he devoted himself almost entirely to bank-note engraving. He designed the 2-cent, 30-cent, 4-dollar, and 5-dollar postage stamps in the Columbian series for the American Bank Note Company. In 1841 he was made an associate and in 1851 a full member of the National Academy of Design, and he was for many years its secretary and treasurer. Among his engravings are The Image Breaker, after Leutze, a half-sitting of Adolphus William Cullen Bryant; The Capture of Major Andre, after Dantan; Sparking, after Edmonds; The New Scholar, after Edmonds; and Mexican News, after Woodrich. Among his later works were a large portrait of George Washington, and two portraits of Thomas Carlyle for the Grolier Club, New York.
OBITUARIES, AMERICAN. (KEELE—KNOX.)

Keeley, Leslie E., physician, born in 1842; died in Los Angeles, Cal., Feb. 21, 1900. He was graduated at Rush Medical College in 1864. He founded the Keeley Institute system for the cure of insomniac and the use of narcotic drugs, commonly known as the gold or Keeley cure, and was president of the company as such.

Keep-Schley, Emma A., philanthropist, born in Watertown, N. Y., Sept. 19, 1827; died in New York city, May 10, 1900. She was a daughter of Norris M. Woodruff, and married Henry Keep, at one time president of the New York Central Railroad, in 1847. Mr. Keep died in 1869, and in 1876 Mrs. Keep married Judge Schley of Savannah, Ga., and died in 1889. She left an endowment for societies and individuals were numerous and of large amount. She gave to the New York Ophthalmic Hospital $250,000, and endowed the Keep Memorial Home for Old Ladies, in Watertown, N.Y.

The rents from office buildings in Watertown are set aside for the maintenance of this institution.

Keeley, Daniel, as Postmaster, born in Greene County, Tennessee, Jan. 27, 1824; died in Chattanooga, Tenn., Feb. 3, 1900. He spent his early years on a farm, and in 1850 he was graduated at Hiwassee College, in East Tennessee. He studied law, and began its practice at Chattanooga in 1853. During the civil war, although opposed to secession, he betrayed his state and became lieutenant colonel of the 43d Tennessee Infantry. He served through the war, and surrendered under Gen. Joseph E. Johnston in North Carolina. In 1865 he was pardoned by President Johnson, who was his old friend, and resumed the practice of law in Chattanooga. In 1869 he was a member of the Tennessee constitutional convention, and was appointed to the Mount Hamilton observatory as director of the Chattanooga circuit, which office he held until 1875. In 1872 he was a candidate for Congress, but was defeated. In August, 1875, he was appointed United States Senator to fill the unexpired term of Andrew Johnson, but he failed of election to succeed him. In 1877 President Grant appointed him, but he did much for the reestablishment of the Cabinet. In 1878 he was appointed United States district judge for the Eastern District of Tennessee, and he served till 1894, when he retired, having reached the limit of age. In July, 1901, he was made dean of the law school of Grant University, at Nashville, Tenn.

King, James Edward, astronomer, born in Lafayette, Ind., in 1817; died in New York city, Nov. 21, 1900. He was graduated at Harvard in 1835, studied law, and began to practice in New York city. In later years he abandoned the law and was engaged in the real-estate business. He was a Republican presidential elector in 1872, and in 1874-75 he was a State Senator. He was one of the oldest and most enthusiastic members of the New York Historical Society, and was its president from 1887 till the time of his death.

Knee, Charles Eugene, clergyman, born in Knoxboro, N. Y., Dec. 27, 1833; died in Poinv Plesant, N. J., April 30, 1900. He was graduated at Hamilton College in 1856, and studied theology, and was ordained a Presbyterian minister, and Union Seminary. He was ordained to the ministry and installed as pastor of the First Presbyterian Church, in Bloomfield, N. J., June 8, 1864, and continued in charge till 1873. In that year he was chosen president of the German Theological Seminary of Newark, situated in Bloomfield. He received the degree of D.D. from Union College, in 1874, and published A Year with St. Paul (New York, 1862); The Second Year (1864); The Third Year (1865); Love to the End (Philadelphia, 1866); David the King and the Order of the Psalms in his Life (New York, 1876).

Keeley, James Edward, astronomer, born in Louisville, Ill., Sept. 10, 1857; died in San Francisco, Cal., Aug. 12, 1900. In 1869 his parents removed to Mayport, Fla., where his fondness for astronomical studies was developed, and where in 1875-77 he had charge of the Mayport Astronomical Observatory, in which were a quadrant, a two-inch telescope, an instrument to measure time, and a clock. At that time he constructed a meridian-circle instrument, which he subsequently described. He entered Johns Hopkins University in 1877, and was graduated there in 1881. Meanwhile, with Charles S. Hastings, he served on the United States Naval Observatory expedition under Edward O. Holden to observe the solar eclipse of July 29, 1878, from Central City, Colo. Before graduation he was appointed assistant at the Allegheny Observatory, Pittsburg, Pa., under Samuel P. Langley, whom he also accompanied on his expedition to Mount Whitney, Cal., in June to September, 1881. He continued at the Allegheny Observatory two years, and then spent a year in Heidelberg and Berlin, pursuing further scientific studies. In 1884 he returned to the Allegheny Observatory, and aided Dr. Langley in his work on lunar heat and the infra-red portion of the solar spectrum. He was appointed assistant to the Lick trustees in 1886, and proceeded to establish a time system, also aiding in the improvement of the instrumental equipment. When the observatory was completed he was appointed astronomer and placed in charge of the spectroscope work. The large star spectroscope was constructed mainly from his designs, and the results of his observations of the atmospheres of Saturn's rays and of Uranus, and of the spectrum of the nebulae, proving that they are a cluster of meteorites—myriads of little moons. In 1898 he returned to Mount Hamilton as director of the observatory, which place he held until his death. He devoted his observing time to the Crossley reflector, and began a study of the Pleiades and the nebula in Orion. He also began photographing all the brighter nebulae in Herschel's Catalogue, at least half of which he completed. His observations on the great nebula of Orion, published in 1899, gave "an impression of the scope of a work that was designed to distinguish a new epoch in astronomical research." The honorary degree of Sc. D. was conferred on him by the University of California, 1893. He received the medal from the American Academy of Arts and Sciences in 1898, and also received the Henry Draper medal of the National Academy of Sciences in 1899, of which academy he was elected a member in 1900.
Koehler, Sylvester Rosa, art critic, born in Leipzig, Germany, Feb. 11, 1837; died in Littleton, N. H., Sept. 15, 1900. He came to the United States in 1849. He edited the American Art Review during its existence, and in 1887 he was appointed curator of the department of the Museum of Fine Arts, Boston, and he made several trips abroad in the interests of that institution. He was honorary curator of the section of graphic arts in the National Museum, Washington, and a fellow of the American Academy of Arts and Sciences. He lectured on engraving, etching, etc. He published translations of von Betzold's Theory of Color, edited by Prof. Edward C. Pickering (1876), and of Lalanne's Treatise on Etching, with notes (1884). He was made a correspondent of the Art Education and Art Patronage in the United States (1882); Etching, an Outline of its Technical Processes and its History, with Some Remarks on Collections and Collecting (1885); and of the text for Original Etchings by American Artists (1883); Twenty Original American Etchings (1884); and for American Art (1887). He also edited The Art Journal, Dry Points, and Etchings of Albrecht Dürer, published by the Grolier Club, New York, and edited the United States Art Directory and Yearbook for 1882 and 1884. At the time of his death he was at work on a history of color printing, which remains incomplete.

Lawler, Francis Xavarius, clergyman, born in County Cavan, Ireland, June 22, 1822; died in Alexandria, S. D., Sept. 10, 1900. He removed with his parents to Franklin County, New York, in 1824, studied for the priesthood, and was ordained subdeacon in 1844 and priest, Dec. 26, 1845. He was at once sent on missions. He was vice-president four years and president four years of St. Mary's College, Marion, Ky. After a short mission he went to the University of Notre Dame, Ind., where he remained two years. Later he served a year as Superior of St. Pius Seminary, in Kentucky. From 1859 till 1870 he was in charge of the church at Laporte, Ind., and from 1871 till 1878 at Logansport. He later served as priest at Lawrence and other places in Kansas, and in 1881 went to Dakota, where he was superintendent of the Yankton Indian School till December, 1884. He then removed to Alexandria, where he was priest of the Church of Our Lady of Mercy. May 20, 1896, he was appointed domestic prelate to the Pope. He was also vice general of South Dakota, and one of the presidents of the diocese.

Lash, Ralph K., lawyer, born in Philadelphia, Pa., March 16, 1834; died in Vineland, N. J., June 12, 1900. He studied law, and in 1851 was admitted to the bar. He made considerable money in his practice, and in 1857, with the idea of retiring to the country and founding a colony, he established the village of Hamonton, N. J. In 1861 he was made an alderman, but very soon retired to his farm and acquired Sea Isle City, Landisville, New Italy, and other south Jersey towns were also founded by him.

Lane, Thomas Henry, artist, born in Philadelphia, Pa., Feb. 24, 1815; died in Elizabeth, N. J., Sept. 27, 1900. Early in life he made the acquaintance of Edgar Allan Poe, with whom he was connected as business manager in the publication of the Broadway Journal. Later he removed to Washington, where he studied art under Leutze. As an artist Mr. Lane was best known for his dainty and charming miniatures on ivory and porcelain; he did excellent work with his brush till three years before his death. He lived for a time in San Francisco, N. Y., and in 1892 removed to Elizabeth, N. J.

Langlois, Augustus Bartholomew, clergyman, born in Chavancy, Department of the Rhône, France, April 24, 1823; died in St. Martinville, La., July 31, 1900. He came to the United States in 1858, and finishing his studies at the College of Mount St. Mary's, Tarrytown, N. Y., was licensed as deacon, June 18, 1865. In 1866 he was ordained to the priesthood at Point à la Hache, Plaquemines Parish, where he labored thirty years; in 1887 he was transferred to St. Martinville, and he remained its rector till the time of his death. When very young he became interested in botany, and at the age of sixteen he gathered in the neighborhood of Montbrison, France. On his appointment to Point à la Hache he renewed his studies, and he was known throughout the scientific world as a botanist of rare attainment. His studies of the flowers of Louisiana have now received an official report. His collection of plants, the work of more than fifty years, was very large; and in addition he supplied museums with the flora of this region, and in recognition of his work several plants have been named for him. He published several volumes on the fungi of Louisiana, and his Catalogue of Plants Phanerogames de la Basse Louisiane is a standard. All his literary work was written in French, and his name is better known to the scientific bodies of Europe than to those of the United States.

Lester, John Henry, inventor, born in Montville, Conn., Sept. 27, 1815; died in Brooklyn, N. Y., Jan. 10, 1900. He invented a lock-stitch sewing machine, and was one of the pioneer sewing-machine manufacturers in the United States. He also invented a wood-planing machine and several minor mechanical appliances. In the winter of 1859-60, with Samuel C. Robinson, he managed a stock for the manufacture of planing machines in Richmond, Va. This plant was pressed into service by the Confederates, and the firm was directed to alter arms for the Southern army. Mr. Lester, being a Northerner and a loyal man, objected, and had the plant appraised. The value was fixed at $300,000, which was paid in Confederate money. He obtained an assignment as a purchasing agent for the Confederate Government, which enabled him to get through the lines to Washington, where he surrendered his documents to Gen. Benjamin F. Butler, after an interview with President Lincoln. The Government, however, was not satisfied with his loyalty, and he was sentenced by a military commission to ten years' imprisonment. He was pardoned after serving twenty months. He subsequently
brought suit against Gen. Butler in the Supreme Court of the United States. The Government was the defendant, and on the trial Gen. Butler appeared for the Government. After pending twenty years, the suit was dismissed on a technicality.

Lewelling, Lorenzo D., ex-Governor, born in Saloon, Iowa, Dec. 21, 1846; died in Arkansas City, Kan., Sept. 3, 1900. At the age of sixteen he began work as a laborer on the Chicago, Burlington and Quincy Railroad. Later he went to St. Louis and became a driver of cattle for the quartermaster's department of the National Armory, and later an operator and building corps at Chattanooga. After the war he had a varied career; he studied at Knox College, taught in a Quaker institute at Salem, edited a Republican newspaper there, and then for fifteen years had charge of the Iowa State Reform School. He represented Iowa in national conventions as a Democrat and Populist, and was a member and for two years president of the Iowa State Normal School Board. In 1880 he established at Des Moines an anti-ring Republican newspaper. In 1887 he removed to Wichita, Kan., and engaged in the commission business. In 1888 he was defeated as the Liberal candidate for Secretary of State, but was nominated by the Democratic and Populist parties as the fusion candidate for Governor and was elected. In 1894 he was renominated, but was defeated. After the expiration of his term as Governor he engaged in real-estate and dairy business.

Lewis, John Randolph, soldier, born in Edinburg, Pa., in 1835; died in Chicago, Ill., Feb. 8, 1900. At the outbreak of the civil war he was appointed, May 2, 1861, as sergeant in the 1st Vermont Infantry; later he mustered a company, and, Sept. 16, 1861, was commissioned captain. He was advanced to major, July 16, 1862; lieutenant colonel, Oct. 6, 1862; colonel, June 5, 1864; and mustered out of the service, Sept. 11, 1864. He was mustered into the 1st Vermont Reserve Corps, Sept. 12, 1864, and brigadier general by brevet, March 13, 1865. In the regular army he was commissioned major of the 44th Infantry, Jan. 22, 1867, and retired with the rank of colonel, April 28, 1870. He participated with the Army of the Potomac in 12 battles, and lost his left arm at Gettysburg. In 1867 he settled in Alabama; he soon became identified with the public life of that city and was appointed postmaster, and served as secretary of the Atlanta Exposition. Later he settled in Chicago.

Lippincott, Job Hilliard, lawyer, born near Mount Holly, N. J., Nov. 12, 1842; died in Jersey City, N. J., July 5, 1900. He was graduated at Harvard Law School, was admitted to the bar in 1867, and began practice in Hudson City, N. J. He was elected as a Democrat to the Board of Education in 1868, and served as its president till 1871, when Hudson City became a part of Jersey City. In 1874 he was elected counsel of the Hudson County Board of Freeholders, and he was annually re-elected for thirteen years. In 1888 he was appointed United States district attorney for New Jersey. He resigned in 1887 to become law judge of Hudson County for an unexpired term, and in 1888 was reappointed for a full term of five years. During this term as judge he became prominent as a result of his imprisonment of the Democratic Governor of the State for a corrupt election. In 1889 an investigation showed that about 5,000 fraudulent ballots were cast, and Judge Lippincott was one of the most active in pushing the trials of the 67 election officers, who were mainly concerned in the crime. In January, 1893, he was appointed to the Supreme Court bench, and in 1900 was reappointed.

Liscum, Emerson H., soldier, born in Vermont, July 16, 1841; died near Tientsin, China, July 13, 1900. He enlisted May 2, 1861, as a corporal in the 1st Vermont Infantry, and served till August of the same year, when he was mustered out and immediately re-enlisted as a private in the 12th Regular Infantry. On March 22, 1863, he was commissioned second lieutenant, and two months later first lieutenant. For gallant service at the battle of Bethesda Church, and during the campaign before Richmond he was, Aug. 1, 1864, brevete major of volunteers, and in command of the 30th Infantry in September, 1866. March 26, 1867, he accepted a captaincy in the 25th Infantry. His advancement in rank from that time was as follows: Captain, 19th Infantry, July, 1870; major, 22d Infantry, May 4, 1892; lieutenant colonel, 24th Infantry, May 23, 1896; colonel, 9th Infantry, April 23, 1899. He was severely wounded at the battle of Gettysburg. From 1870 till the beginning of the Spanish War he was in service in Louisiana, the Departments of the Missouri and Texas, and the Division of the Atlantic. He was known in the army as one of the best of the old Indian fighters. His regiment, the 24th, was the first re-united of the 1st Brigade, and the first Army Corps before Santiago, and he was brigade-commander after two commanding officers had been disabled. He was badly wounded at the battle of San Juan Hill. For this service he was made brigadier general of volunteers. July 12, 1898, and was honorably discharged from the volunteer service Dec. 31, 1898. His sick leave terminated on May 29, 1899, and he was ordered to active service April 25, 1899, of the 9th Infantry, assigned to duty in the Philippine Islands. He served more than a year there, being twice detached from his regiment to command the 1st Brigade, 2d Division, 8th Army Corps. His name was to have been presented at the next session of Congress for promotion to rank as brigadier general. He sailed from Manila for Takn with his regiment, June 27, 1900, and fell at the head of his men, while leading an attack, in co-operation with the allied armies, on the city of Tientsin.

Little, John Zebulon. American actor and dramatist, born in Philadelphia, Pa., in 1838; died in New York city (Brooklyn), March 9, 1884. Was one of the most prominent actors of the United States, and among the first to engage in the profitable presentation of that class of drama at cheap prices by traveling from city to city with a company under his own management and playing in second-class theaters. He was a member of the company at Wood's Museum (now Daly's Theater) in New York city in 1873, and made his first success as Abbé Faria in The Ocean of Life. In this theater the actors played many parts during the season, and Little won a good reputation as a hard-working and careful man. In 1874 his first original play, called Santiago Avenged, was produced, with Mr. L. M. Swain as the hero. The play was a great success and was produced at Tony Pastor's Theater in August, 1879. He wrote and produced in 1880 The World, in which he starred for years.

Locke, Elbridge W., song writer, born in Stoddard, N. H., Jan. 1, 1818; died in Chelsea, Mass., March 3, 1896. After serving in the 1st Vermont Infantry as a private, Locke, as apprentice, then as country schoolmaster, and taught his pupils music in the evening, often composing his own words and music. A few years before the civil war he was teaching his songs in the large towns of the Northern States.
IMcClernand, when from secretary Lowrie; he which Philadelphia, he died in January, 1863, relieved Gen. Sherman in command of the expedition to Vicksburg. He afterward commanded the force that captured Arkansas Post, and was present at the battle of Champion Hills. In July, 1863, he was relieved from command of the 13th Army Corps, pending an investigation of charges made against him by Gen. Grant. These charges were not sustained, and, in January, 1864, he was restored to active command. He resigned from the army in November, 1864. In 1870 he was elected circuit judge for the Sangamon, Ill., district, and he served till 1873. In 1876 he was chairman of the Democratic convention at St. Louis, and under President Cleveland he served as a member of the Utah Commission. 

McClellan, Daniel, soldier, born in Indiana, in 1830; died in Louisville, Ky., Oct. 31, 1900. He was graduated at West Point, and was brevetted several times for distinguished services. He served behind the lines in the Civil War. He died in 1868. In 1870 he was elected president of the University of Missouri at Columbia. He served as a member of the Peace Conference in 1868, and in 1872 he was a delegate to the Peace Conference of 1871. In 1873 he was elected to the United States Senate, and served for one term. In 1876 he was re-elected. He died in 1900.

Lowrie, John Cameron, clergyman, born in Butler, Pa., Dec. 16, 1808; died in East Orange, N. J., May 31, 1900. He was graduated at Jefferson College in 1829. He attended Western Theological and Princeton Seminaries, was graduated at the latter in 1832, and was licensed to preach in the Presbyterian Church in 1833, but his health failed, and he returned to the United States in 1836. He became assistant secretary of the Presbyterian Board of Foreign Missions in 1838, and served till 1850. He was pastor of the 42d Street Presbyterian Church, New York, from 1845 till 1850. In 1850 he became secretary of the Presbyterian Board, and served till 1851, when he retired on account of ill health. He was moderator of the Presbyterian General Assembly in 1865. Dr. Lowrie published Travels in Northern India; Two Years in Upper India; Memoirs of the Hon. Walter Lowrie; Manual of Foreign Missions; Missionary Papers; Presbyterian Missions; and many articles near in the Review.

Ludlow, George Craig, jurist, born in Milford, N. J., April 6, 1830; died in New Brunswick, N. J., Dec. 18, 1900. He was graduated at Rutgers College in 1850, and in 1853 was admitted to the bar and began practice in New Brunswick. He was counsel for that city, was a member of the Constitutional Convention, and for several years was president of the New Brunswick Board of Education. In 1876 he was elected to the State Senate, and in 1878 was chosen president of that body. In 1880 he was elected Governor of New Jersey on the Democratic ticket. In 1894 he was a member of the Constitutional Convention of New Jersey. He was appointed justice of the Supreme Court, which office he held at the time of his death.

McCatee, Devie Bethune, missionary, born in Philadelphia, Pa., Jan. 13, 1820; died July 17, 1900. He was graduated at the University of Pennsylvania, from which institution he received the degrees of A. M. and M. D., and began the practice of medicine in Philadelphia. In June, 1843, he was requested by the Board of Foreign Missions of the Presbyterian Church to go to China as a medical missionary. In 1844 he opened a mission at Ningpo, and for nearly forty years thereafter devoted his life to work among the Chinese and Japanese. He received a gold medal at one of the world's fairs for the improvement of his services in connection with the suppression of the Macao coolie traffic, and later received the title of consul general for services in the Chinese legation. From the Japanese Government he received the decoration of the Fifth Order of the Rising Sun.

McClellan, John Alexander, lawyer, born in Breckenridge County, Kentucky, May 30, 1812; died in Springfield, III., Sept. 20, 1900. In 1832 he was admitted to the bar, and in the same year he was a volunteer in the war against the Senes and Foxes. In 1835 he established the Shawneetown, Ill., Democrat. From 1837 till 1842 he was a member of the Illinois Legislature. In 1843 he was elected to Congress, where he served till 1851, was re-elected in 1858, and resigned at the outbreak of the civil war. He was appointed brigadier general of volunteers, accompanied Gen. Grant to Belmont, and did good service at Fort Donelson. In March 21, 1862, he was promoted major general of volunteers. He commanded a division at Shiloh, and in January, 1863, relieved Gen. Sherman in command of the expedition to Vicksburg. He afterward commanded the force that captured Arkansas Post, and was present at the battle of Champion Hills. In July, 1863, he was relieved from command of the 13th Army Corps, pending an investigation of charges made against him by Gen. Grant. These charges were not sustained, and, in January, 1864, he was restored to active command. He resigned from the army in November, 1864. In 1873 he was elected circuit judge for the Sangamon, Ill., district, and he served till 1873. In 1876 he was chairman of the Democratic convention at St. Louis, and under President Cleveland he served as a member of the Utah Commission.

McClellan, Joseph W., lawyer, born in St. Louis County, Missouri, Feb. 17, 1818; died in Lebanon, Mo., Dec. 2, 1900. He studied at Oxford College, Ohio. In 1841 he went to Texas, was admitted to the bar, and became clerk of the circuit court. He returned to Missouri in 1848, and engaged in the practice of law. During the civil war he was colonel of an infantry regiment in the National service. He was elected as a Republican to Congress in 1862, 1864, and 1868. In the latter year he was elected Governor of Missouri on the Republican ticket. In recent years he has been extensively engaged in mining.

McCormick, John DeWitt, inventor, born in Walnut Grove, Va., Feb. 8, 1819; died in Chicago, Ill., Feb. 20, 1900. At an early age he became associated with his father in the reaper-manufacturing industry, and in 1846 had a third interest in the 75 reaping machines built and sold by the company. In 1847 he removed to Cincinnati, Ohio, and in 1848 to Chicago, where he and his brother, Cyrus H., formed a partnership in 1849. He supervised the manufacturing department of the business till 1879, when it was incorporated as the McCormick Harvesting Machine Company. He remained actively engaged in the affairs of the corporation till 1889, when he retired. He invented many improvements in the machine that made his family celebrated. In 1871 he presented an observatory and a 24-inch refracting telescope to the University of Virginia.

McGill, Alexander Taggart, lawyer, born in Allegheny City, Pa., in 1843; died in Jersey City, N. J., April 21, 1900. He was born at Sterling, Pa., where his father was a professor, and at the Columbia Law School in 1866. He was admitted to the New Jersey bar as an attorney in 1867, and as a counselor in 1870. He removed from Trenton to Jersey City in 1880. In
1874 and 1875 he was city attorney for Bayonne, N. J. In these years he was also a member of the New Jersey Legislature. In April, 1878, he was appointed prosecutor of the county of Bergen County. In 1883 he became law judge of the same county. March 29, 1887, he was appointed Chancellor of New Jersey, and in 1894 was reappointed, holding the office at the time of his death. In 1895 he was defeated as the Democratic candidate for Governor. He received the degree of LL.D. from Princeton College, and that of LL.B. from Columbia Law School.

McGlynn, Edward, clergyman, born in New York city, Sept. 27, 1837; died in Newburg, N. Y., Jan. 7, 1900. He attended the public schools and the Free Academy. At fourteen he was sent by Archbishop Hughes to the College of the Propaganda, in Rome. He received the degree of doctor of philosophy from the University of Pennsylvania in 1856 and of theology in 1860. He was ordained a priest in March, 1860. In October he was recalled to the United States by order of the Archbishop of New York by Archbishop Hughes, and appointed assistant to the Rev. Thomas Farrell at St. Joseph's Church, on Sixth Avenue. His zeal, learning, and eloquence soon attracted general attention. For a time he was professor of rhetoric at the Academy of St. Francis, in Jersey City; then assistant at St. James's, in Oliver Street; then rector of St. Ann's, in Twelfth Street; and also chaplain of the Central Park Military Hospital; and finally pastor of St. Stephen's, early in 1865. He was in requisition everywhere to speak at the laying of corner stones and dedication of churches, and for lectures for charitable purposes. He aided substantially the Rev. Dr. (now Cardinal) Vaughan in establishing in the United States Catholic missions for the colored race. His artistic taste and judgment are recorded in the enlargement and paintings of St. Stephen's, and he erected its splendid altars. Convinced that the state was wise in bringing the children of all races in the country into contact in the public schools, he maintained that the Church could do its work effectually among the children without competing with the state in their secular education; and, dreading lest the Church should ever have the appearance of being bribed into political partisanship, he favored an amendment to the Constitution providing that state money should be given to state institutions. During the Irish land league agitation in Ireland, Dr. McGlynn's sympathies were strongly enlisted. He was captivated by Henry George's Progress and Poverty, and when Davitt came to New York, in June, 1882, to enlist the people here against landlordism in Ireland, Dr. McGlynn told him that "the new gospel was not only for Ireland, England, and Scotland, but for America too." Henry George shortly afterward paid him a visit, which was the beginning of an intimate friendship. When Cardinal Simeoni, head of the Propaganda in Rome, notified Cardinal McCloskey, in the autumn of 1882, to require from Dr. McGlynn a condemnation of his teachings, the doctor published in the New York Tablet an explanation which was a justification of them, but, by an agreement with Cardinal McCloskey, he refrained from land league agitation. In the autumn of 1888 he took his strongest interest in Henry George's candidacy for the mayoralty of New York, and he was announced to speak at the opening meeting of the campaign, in Chickering Hall, on Sept. 30. Archbishop Corrigan sent him a private prohibition from attending this meeting, but he excused himself because of his appointment to theVatican, and he thereupon suspended him for two weeks. To a summons from Cardinal Simeoni to go to Rome, he replied that his poor health prevented this, but he reiterated the strongest expression of his teaching of the land theory. Archbishop Corrigan renewed the suspension, and in January, 1887, summarily removed him from St. Stephen's. Later, in March, 1887, being assured by Cardinal Gibbons, then in Rome, that neither the Pope nor Cardinal Simeoni had passed judgment on him, but invited him to go to Rome, he agreed to go if reinstated. By a misunderstanding, this message was not properly delivered, and the Pope, persuaded that he absolutely refused, ordered Dr. McGlynn's recall. But within forty days he did not go to Rome. The time elapses on July 2, 1887. This excommunication for his supposed contempt lasted till Dec. 23, 1892, when the Pope's delegate, Mgr. Satolli, released him from it, after Dr. McGlynn had submitted to him the exposition of his economical teaching, which was declared to contain nothing contrary to Catholic faith.

McNair, Frederick Vallette, naval officer, born in Jenkintown, Pa., Jan. 13, 1839; died in Washington, D. C., Nov. 28, 1900. He was graduated at the United States Naval Academy in 1857; made passed midshipman, June 25, 1860; promoted master, Oct. 24, 1860; lieutenant, April 18, 1861; lieutenant commander, April 20, 1864; captain, Jan. 29, 1865; commodore, Oct. 5, 1863; commodore, May 10, 1895; and rear-admiral, July 3, 1898. His first service was on the frigate Minnesota; later he served in China and in the East India service. In 1859 he was attached to the coast survey steamer Varuna. In 1861 he was transferred to the Iroquois, of the Western Gulf squadron, and participated in the bombardment of Fort Jackson and St. Philip, the capture of New Orleans, passage both ways of the Vicksburg batteries, and the destruction of the Confederate ram Arkansas. From October, 1862, till February, 1863, he was executive officer of the Juniatia, and from February till August, 1863, he
OBITUARIES, AMERICAN. (McNuLTA—MAURY.) 489

fought on the Seminole. He was again on the Junta in the April and June, 1864, and took part in several engagements. After the close of the war he was assigned to duty in the Brazil squadron in 1865-'66; from June, 1866, till September, 1867, he was executive officer of the flagship Brooklyn, of the South Atlantic station. From September, 1867, till November, 1868, he was an instructor at the Naval Academy. From 1868 till 1871 he served for various periods as executive officer of the Macedonian and of the Frank- lin, equipment officer at Philadelphia, head of the department of seamanship at the Naval Academy, commander of the Yantic, of the Kearsarge, of the Portsmouth, and of the Constitution, member of the court of inquiry on the loss of the Jeanie Ann of the Omaha, superin- tendent of the Naval Observatory, and commandant of the Naval Officers' Retirement Board. Dec. 21, 1895, he was placed in command of the Asiatic squadron, serving till Jan. 4, 1898, when he was appointed member of the Government Lighthouse Board. In July, 1898, he was made superintendent of the Naval Academy, and served till February, 1899. In the latter capacity he enlisted as executive officer at Vicksburg and Memphis.

John Marble, lawyer, born in New York city, Nov. 9, 1837; died in Washington, D. C., Feb. 22, 1900. In 1852 he settled in Attica, Ind., and in 1858 was made a partner in the firm of Dick & Co., wholesale tobacco dealers. In March, 1859, he removed to Bloomington, Ill. May 3, 1861, he was commissioned first lieutenant in the Illinois Cavalry. Aug. 20, 1862, he was made lieutenant colonel of the 94th Illinois Infantry; he served with this regiment to the close of the war, was promoted colonel, and was brevetted brigadier general. He returned to Bloomington, and in 1866 was admitted to the bar. In 1868 he was elected to the Illinois state legislature. In 1869 he was elected to Congress. In June, 1885, he was made receiver of what is now the Toledo, St. Louis and Kansas City Railway; in April, 1887, he was appointed to the same office for the Wa- bash Railway; in February, 1895, for the Whisky Trust; Jan. 3, 1898, for the Calumet Electric Street Railway Company; and Jan. 4, 1898, for the Chicago, St. Paul and Minneapolis Railway. Because of the success he attained in managing the affairs of these organizations, he became known as the "Great American Receiver."

Marble, Edward Stevenson, actor and dram- atist, born in Louisville, Ky., in 1848; died in Brooklyn, N. Y., Aug. 3, 1900. He was a son of Stanford Marble, one of the first managers of Yankee dialect. His mother was Anna Warren Marble, a sister of William Warren, the actor. As with children of all theatrical families, his first appearance on the stage was made as a child. His first speaking part was that of Count Win- tersen's son in Kotzebue's Stranger, at Ricke's Theatre, Chicago, in 1863. He passed through Vicker's Theatre in 1867. After which he was engaged by Mrs. John Drew for the Arch Street Theatre, Philadelphia. He went in the following season to the Walnut Street Theatre, in the same city, then under the management of Edwin Booth and John S. Clark. While playing important parts in that company he was engaged for the first company of the California Theater, San Francisco, under the management of John McCullough and Lawrence Barret. He played Dolly Spanker in London As- surance at the opening of that theater, and main-ained a popular member of the company for four years of almost continuous work. During the summer of 1874 Marble played Joseph Proctor on a tour through the Pacific States.

Returning to the East, he became in 1875 the comedian of the Macaleury Theater, Louisville, Ky., where he was in the first season with Mrs. Kendal and Juliet. In 1877 he joined Lotta, and played for several seasons the parts opposite her in her plays. He was then three years the principal comedian in Mr. E. H. Sothern's support, when he became comedian of the Madison Square Theater, New York, in which his first appearance was in Berkeley's The War Bride, in Young Mrs. Winthrop. He wrote a burlesque called Patchwork for The Saulsbury Trouba- dours, Tuxedo for Thatcher's Minstrels, Spot Cash for M. B. Curtis, and The New Olympus and The Modern Rip Van Winkle for the students of Lafayette College, all of which were played suc- cessfully. In addition he wrote many ballads that have had temporary popularity. Since 1889 he had conducted a dramatic school in Baltimore.

Mather, Fred, fish culturist, born in Green- bush, N. Y., Aug. 2, 1833; died at Lake Nebago- main, Wiscocin, Feb. 14, 1900. He was educated at an academy in Albany, N. Y. Later he spent several years hunting and fishing in the West. In 1865 he was engaged in a refrigerator box, and about the same time he invented an apparatus by means of which shad eggs were hatched in bulk. In 1884 he succeeded in hatching the adhesive eggs of the smelt. In 1880 he had charged of the American exhibit at the Fisheries Exhibition in Berlin. In 1889 he was appointed by the United States Fish Commission station at Cold Spring Harbor, where he began the hatching of lobsters and cod- fish. In 1877 he became fish editor of the Field, Chicago, and afterward he held a similar place on the staff of Forest and Stream, New York. He was the author of Fish Culture; Ichthyology of the Aed Dunlos (1885); and Men I Have Fished With (1897).

Maury, Dabney Herndon, soldier, born in Fredericksburg, Va., May 21, 1822; died in Peoria, Ill., Jan. 11, 1900. He was graduated at West Point in 1846. He served in the Mexican War, and was brevetted first lieutenant for bravery at the battle of Cerro Gordo, where he was severely wounded. In 1847 he was appointed Assistant Professor of Geography, History, and Ethics at West Point, and in 1850 became assistant in- structor in infantry tactics. In 1852 he was assigned to frontier duty in Texas; from 1856 till 1859 he was cavalry instructor at Carlisle bar- racks and in 1859 became a member of the Department of New Mexico. At the outbreak of the civil war he resigned his commission and became a colonel in the Confederate army. For bravery in the Elk Horn campaign he was brevetted brigadier general, and for gallant conduct at Corinth and Hatchie he was made major gen- eral. He participated in the defense of Mobile and in the operations about Vicksburg. At the close of the war he was in command of the Dep- artment of the Gulf. He returned to Virginia, where in 1868 he organized the Southern Historical Society. In 1885 he was appointed minis- ter to the United States of Colombia, serving till 1889. He was the author of many contributions to periodical literature, and published His- tory of Virginia; System of Tactics in Single Rank (1859); Skirmish Drill for Mounted Troops.
OBITUARIES, AMERICAN. (MAYO—MORGAN.)

(1859); and Recollections of a Virginian in the Mexican, Indian, and Civil Wars (1894).

Mayo, Edwin Frank, actor, born in San Francisco, Cal., March 18, 1854; died in Quebec, Canada, Feb. 18, 1900. He was the only son of the late Nat Mayo, who was famous for his impersonations of Davy Crockett. The family name, abandoned by the father for the stage name "Moyo," was Maguire. Edwin made his first appearance at his father's theater, Rochester, N. Y., in 1868, as the boy in Davy Crockett. For eleven years he played as a member of his father's company, assuming from time to time different roles in Davy Crockett and The Streets of New York, which constituted the elder Mayo's very limited but greatly popular repertory. During the season of 1881-82 he was a member of his father's company in a traveling season of Shakespearean and standard plays, in which he played minor characters. Four years thereafter he was his father's principal support in the latter's play Nordick, first produced at the Union Square Theater, New York, May 20, 1885. On June 13, 1887, he began a series of engagements as a star in his father's play Davy Crockett at the Grand Opera House, New York. He traveled over the country in Illinois engagements for a season. In January, 1889, produced The Silver Age at the Thalia Theater, New York. He rejoined his father's company in May, 1890, and remained with him for a season. Dec. 20, 1892, he began an engagement in a production of After Twenty Years, at Niblo's Garden, in the dual role of Aarons and Major Douglass. After the death of the elder Mayo, in 1896, his son succeeded him as the representative of Pudd'nhead Wilson, which character he played with much success during the regular seasons up to the day of his death. His last appearance was in this character at Montreal, Feb. 17, 1900.

Mayo, William Kennon, naval officer, born in Drummond, Va., May 29, 1829; died in Washington, D. C., April 10, 1900. He was appointed midshipman, Oct. 18, 1841; promoted passed midshipman, Aug. 10, 1847; master, Sept. 14, 1855; lieutenant, Sept. 15, 1855; lieutenant commander, July 16, 1862; commander, July 23, 1866; captain, Dec. 12, 1873; commodore, July 2, 1882; and retired from the Navy, Dec. 1884. He commanded the corvette Tampico and Vera Cruz. He was detailed for special service in connection with scientific observations in the North Atlantic, in surveying a route over the Isthmus of Panama, and in the work of the coast survey. He also served for a time as instructor at the Naval Academy, and wrote the System of Naval Tactics and Fleet sailing, used there as a text-book. He was in command of the blockade of Charleston in January, 1862. In November of that year he was placed in command of the Kanawha, in the Western Gulf squadron. In February, 1864, he was stationed in Washington on special duty, but in July he took command of the Nahant, and made the blockade of Galveston success- sive; he ran ashore nine steamers in seven months, for which he received the commendation of the Secretary of the Navy. After the fall of Charleston he became ordnance officer of the South Atlantic blockading fleet. After the war he spent three years on navigation duty at Boston, and later commanded several vessels in station service. He was commandant of the Norfolk Navy Yard from 1882 till 1885. He was retired upon his own application.

Mestayer, Charles Henry, actor, born in New York city in 1846; died in Ottawa, Canada, Jan. 22, 1900. He was a son of Henry Mestayer and brother of the late William Mestayer, all of a family long connected with the American stage. Charles made his first appearance as an infant in the arms of his mother, who was a popular singer. He was brought to America in 1853, and continued to appear as a mute actor of children until old enough to go to school. He was educated at St. Ignatius College, in San Francisco, and in 1869 became a member of the stock company at the California Theater. He was afterward a member of various traveling companies. In 1875, he moved to Boston and began to lecture as Professor of Theology in the college at Alton, Ill. In 1872 the theological department was transferred to the University of Rochester, where he was appointed as Professor of Hebrew. In 1876 he went to Lon- don as professor in Regent's Park College, serving three years. In 1878 he established a Baptist theological school in Paris; he remained there four years, and graduated one class. In 1883-84 he reorganized the colored schools of the South under the name of the Southern Baptist Theological Seminary. In 1885 he was appointed president of Leland University, New Orleans, which place he filled at his death. He published Principles of Hebrew Grammar (An- dover, 1880); Critical Handbook of the Greek New Testament (1880); Les Sources du Nouveau Testament (Paris, 1882); and Hebrew Introduction (Andover, 1884).

Mitchell, William, jurist, born in Welland County, Ontario, Nov. 19, 1832; died in Alexand- dria, Minn., Aug. 21, 1900. He was graduated at Jefferson College, Pennsylvania, in 1853, and was admitted to the bar in Virginia in 1857. In the same year he removed to Winona, Minn., where he practiced from 1857 till 1873. He was ap- pointed judge of the District Court of Minnesota, and served from January 1874, till March, 1881, when he became a justice of the Supreme Court of that State.

Moore, Marcus Marcellus, clergyman, born near Quincy, Fla., March 15, 1856; died in Jack- sonville, Fla., Nov. 23, 1900. He was the son of a slave. He entered the first private school estab- lished in Florida for negroes, and later studied at Howard University and Cookman Institute, Jacksonville. He was appointed sheriff of Brad- ford County in 1875, but was too young to qualify. He was licensed to preach in 1876, became presid- ing elder, and in 1890 was made general financial secretary of the African Methodist Episcopal Church. He was appointed the first bishop of the Western District of the diocese including the States of Louisiana and Liberia and Sierra Leone, Africa. He was also presi- dent of the American Preachers' Aid Society.

Morgan, William James, editor, born in Peterborough, Canada, Oct. 16, 1840; died in Al- bany, N. Y., Sept. 5, 1900. He was educated in the public schools of Buffalo, N. Y. He entered the printing business as a private in the 116th Regiment, New York Volunteers. He participated in all the battles in which his regiment was engaged, and was severely wounded at Port Hudson, and he was brevetted lieutenant colonel. Returning in 1884, he joined the editorial staff of the Buffalo Commercial, and
remained with that paper twenty years. During the administration of Gov. Cornell he was made a canal appraiser, and served as chairman of the board of the canal, where he had been an ascendant
port of Buffalo by President Harrison, and served four years. In 1894 he was selected by Comptroller Roberts as deputy comptroller. In 1898 he was nominated by the Republican party to succeed Mr. Roberts, and was elected. His death occurred on the day after his renomination for the office, at a convention where he had been an ascendant

Morrill, Mary S., missionary of the American Board, born in Deering, Me., March 24, 1864; killed in Paotung-Fu, Chi-Li province, China, July 1, 1900. She studied at Farmington Normal School, for service in China, March 20, 1889, and was stationed in Paotung-Fu.

Mr. William Hopsin, soldier, born in New York city, April 22, 1827; died in North Long Branch, N. J., Aug. 26, 1900. He was graduated at West Point in 1851, and entered the army as brevet second lieutenant, 2nd Infantry; promoted second lieutenant, Dec. 3, 1851; and resigned on account of ill health, Feb. 28, 1854. He was appointed assistant adjutant general with the rank of captain, Aug. 20, 1861; he was made colonel of staff to Gen. Peck, and served during the Peninsula campaign. Sept. 2, 1862, he was made colonel of the 135th Regiment, New York Volunteers, which later became the 6th New York Artillery. He was in command of the garrison at Fort McHenry, and was ordered to Harper's Ferry, where he was made brigadier general. When Harper's Ferry was abandoned he was ordered to join the 3d Corps, Army of the Potomac; he was in reserve at the battle of Gettysburg, and participated in the action of Wapping Heights and in the Rapidan campaign. He was transferred to the 6th Corps, and took part in the Richmond campaign, being attached to the staff of Gen. Meade. In the Spotsylvania campaign where he was severely wounded, he was mustered out of the service, Aug. 24, 1864, and was made brevet major general, March 13, 1865, for services in the battle of the Wilderness.

Morrow, George Espy, educator, born in Cincinnati, Ohio, in 1840; died in Paxton, Ill., March 12, 1908. He entered one of the oldest academies of the state, and was master of the 2d Regiment, Ohio Volunteers. He was graduated at the law department of the University of Minnesota in 1866, and then became editor of an agricultural journal, serving till 1875. In 1876 he was elected president of Iowa Agricultural College. In 1877 he became dean of the College of Agriculture of the University of Iowa, from which he remained till the close of 1886, when he accepted the presidency of the Agricultural College of Oklahoma, where he served till 1890.

Mullen, Tobias, clergyman, born in Clonady, Ireland, March 4, 1818; died in Erie, Pa., April 22, 1900. He was educated at Maynooth College, came to the United States in 1843, and was ordained a priest in the Church of England at 22, 1844. In 1848, he was consecrated Bishop of Erie, and he served till Aug. 10, 1899, when he was appointed to the titular see of Germanicopolis.

Newell, Charles M., physician, born in Concord, N. H., Nov. 21, 1823; died in Watertown, Mass., May 24, 1900. At the age of fourteen he ran away to sea as a cabin boy. He became captain of the Copia, and spent nineteen years on the Pacific Ocean. He then began the study of medicine in Lowell, Mass., and for thirty-five years practiced the vacuum cure there and in Boston. He was at one time a correspondent of the Boston Transcript, signing his articles Captain Barnacle. His published works are Leaves Are Old Log (Boston, 1877); Kamehameha, the Conquering King (New York, 1853); The Voyage of the Fleetwing (Boston, 1887); The Isle of Palms (1888); and Wreck of the Greymound (1895).

Northrup, George Washington, educator, born in Antwerp, N. Y., Oct. 15, 1826; died in Chicago, Ill., Dec. 30, 1900. He was graduated at Williams College in 1854, and at Rochester Theological Seminary in 1857, where he remained for a time as Professor of Church History. He was ordained a Baptist minister at Rochester in 1857. From 1867 till 1892 he was president of the Baptist Union Theological Seminary, at Morgan Park, Ill., acting also as Professor of Systematic Theology. When the seminary became the divinity school of the University of Chicago, in 1892, he was placed at the head of the department of theology. He received the degree of D. D. from Rochester University in 1864, and that of L. L. D. from Kalamazoo College in 1879.

Oliver, Marshall, educator, born in Massachusetts, April 29, 1843; died in Annapolis, Md., Nov. 23, 1900. In 1869 he was appointed assistant professor in the department of drawing in the United States Naval Academy, and later he became the assistant adjutant general of the department of drawing. In 1878 he was appointed Professor of Mathematics in the United States navy, serving also as instructor in drawing and librarian of the Naval Academy. At the time of his death he was instructor in the department of marine engineering and naval construction. He held the record of captain in the United States navy.

Olsson, Olaf, educator, born in the province of Vermland, Sweden, March 31, 1841; died in Rock Island, Ill., May 12, 1900. He was educated at Fjelsted College, Upsala, and entered the ministry of the Lutheran Church in 1863. For six years he served as assistant pastor in the parish of Karlstad, but the large number of his parishioners, settled in Smoky Hill valley, McPherson County, Kansas. He helped to organize the colony, and served the people in secular and spiritual matters. He was a member of the Kansas Legislature in 1871–72. In 1877 he was called to Augustana College, Rock Island, as Professor of Physics. In 1881 he published a treatise on the use of nonelectrical instruments, which the following year he traveled in Europe, but he was recalled from his travels to take charge of a Swedish congregation at Woodhull, Ill. He served this congregation until 1891, when he was called to the presidency of Augustana College and Seminary, which office he held until his death. He received the degree of D. D. in 1892, and in the following year the University of Upsala conferred on him the degree of Ph. D. He published Det Christina Hoppet (The Christian Hope) in 1888; Till Rom och Hem igen (To Rome and Home Again) in 1891; At the Cross (reprinted in Sweden); Greeting from Abroad (reprinted in England and Germany (also translated into Norwegian). All these are published by the Augustana Book Concern, Rock Island, Ill. He was also the author of numerous articles in the Swedish periodicals of his synod.

Otis, Fessenden Nott, physician, born in Ballston, N. Y., in 1844; died in New Orleans, La., May 24, 1900. He was graduated at the New York Medical College in 1852. From 1853 till 1860 he served as surgeon on the steamers of the United States Mail and Pacific Mail companies. In 1862 he became a police surgeon in New York city, and he was president of the medical board of the Police Department from 1870 till 1872. He served for a time as clinical lecturer, and afterward as clinical professor, at the College of Physicians and Sur-
geons. He was president of the medical board of the Strangers' Hospital from 1871 till 1873, and consulting surgeon to several other hospitals. In 1872 he was president of the American Dermatological Society. He published Lessons in Drawing (1849-'50); Tropical Journeys (1856); History of the Illinois Railroad and of the Pacific Mail Steamship Company (New York, 1862); Stricture of the Male Urethra (1878); Clinical Lectures on the Physiology and Pathology and Treatment of Syphilis (1881); Practical Clinical Lectures on Syphilis and the Genito-urinary Diseases (1883); and Diseases of the Male Urethra (Detroit, 1887).

Ottendorfer, Oswald, journalist, born in Zwittau, Moravia, Feb. 26, 1826; died in New York city, Dec. 16, 1900. He spent his youth at Heidelberg, and entered the University of Vienna. It was intended that he should enter the public service, and he was matriculated in the faculty of jurisprudence. One year later he was transferred to the University of Prague, that he might learn the Czech language. In 1848 he returned to Vienna, and took an active part in the movement for the overthrow of the Metternich Government. He joined a volunteer corps, which in the first Schleswig-Holstein war participated in several engagements with the Danish forces. During the uprising in Vienna he was a lieutenant in the battalion commanded by Robert Blum, and with him was sentenced to death. He escaped, but his sentence remained on the books twenty years, when it was removed by a general pardon. He subsequently joined in the popular revolution in Saxony and Baden, after the failure of which he fled to Switzerland in 1849, and to the United States in 1850. He was employed in the blue-coat-room of the New York Staats-Zeitung, and after the death of Jacob Uhl, its proprietor, in 1852, the management of the paper devolved upon the widow, and the services of Mr. Ottendorfer became gradually more important. He became editor in chief in 1858, and from that time directed the policy of the paper. He married Mrs. Uhl in 1858. In politics he was a reformer, having been a member of the anti-Tammany movements. He was an alderman from 1872 till 1874, and in the latter year was a candidate for mayor. His more important gifts were $300,000 to build and endow an educational institution in his native town; the Ottendorfer Professorship in Second Avenue, New York; the Isabella House for the aged mothers of the anti-Tammany movement; and the woman's pavilion of the German Hospital.

Palmer, John McAuley, lawyer, born on Eagle creek, Scott County, Kentucky, Oct. 13, 1817; died in Springfield, Ill., Sept. 25, 1900. His early education was gained in the common schools. In 1831 he removed with his father to Madison County, Illinois. In the spring of 1834 he entered Alton College, but lack of money compelled him to leave in the autumn of 1835. He worked for a time in a cooper's shop, then became a clock peddler, and finally, in the autumn of 1839, he opened a school near Canton. While teaching he studied law, and in December, 1839, was admitted to practice. In 1840 he entered politics, supporting Martin Van Buren for the presidency. In 1843 he was elected probate judge of Macoupin County. In 1847 he was elected to the Illinois State constitutional convention, and in 1849 was elected to the State Senate for four years. In 1854 he opposed the Nebraska bill, and, differing from his party, he resigned, went before the people on the new issue, and was again returned to the Senate in 1855. In 1856 he was president of the first Illinois Republican State convention. In 1859 he was defeated as a candidate for Congress, and in 1860 was elector at large on the Republican ticket. He was a delegate to the Peace Congress at Washington, in 1861, and favored the compromise measures adopted by the convention. When the second call for troops was made, he was elected colonel of the 14th Regiment, Illinois Volunteer Infantry, and in 1862 was promoted to brigadier general. Early in 1862 he took part in the operations at New Madrid and Island No. 10. He was also present at Corinth, and took part in the operations against Gen. Bragg in the retreat from Nashville. He commanded a division in the battle of Chickamauga, and was promoted to the permanent rank of major general. In 1863 he was engaged in the operations about Chattanooga, taking part in the battles of Lookout Mountain and Missionary Ridge. For gallantry at the battle of Stone River he was made major general of volunteers. Aug. 4, 1864, he was relieved of active field command at his own request. From Feb. 15, 1865, till May 1866, he was in command of the military department of Kentucky. He then settled in Springfield, Ill., and in 1868 was elected Governor of the State, serving four years. In 1872 he left the Republican party, and in 1877 was the Democratic candidate for United States Senator; he was defeated, as he was also twice thereafter; again nominated in 1890, and served till March 4, 1897. In 1896 he accepted the nomination for the presidency by the gold Democrats, as a protest against the surrender of the Democratic party to the free-silver element. In the campaign that began just before his death he declared in favor of the re-election of President McKinley.

Park, Edwards, Amasa, theologian, born in Providence, R. I., Dec. 29, 1808; died in Andover, Mass., June 4, 1900. He was graduated at Brown University in 1826, and at Andover Theological Seminary in 1831. Dec. 31, 1831, he was ordained pastor of the Congregational Church in Braintree, Mass. In May; 1835, he was appointed Professor of Moral and Intellectual Philosophy in Andover College, where he remained till September, 1836, when he became Professor of Sacred Rhetoric at Andover. From 1847 till 1881 he held the chair of Christian Theology at Andover, and at the time of his death was Professor Emeritus of Sacred Rhetoric. Prof. Park contributed numerous papers to periodicals, and was one of the founders of the Bibliotheca Sacra, of which he was chief editor from 1851 till 1884. His published works include Discourses on Some Theological Doctrines as Related to the Religious Character (Andover, 1885). He edited Selections from
German Literature (Andover, 1839); The Atone-
ment; and Preacher and Pastor; and arranged
with Austin Phelps and Lowell Mason the New
Sabbath Hymn and Tune Book.

Parke, John Grubb, soldier, born in Chester
County, Pennsylvania, Sept. 22, 1827; died in
Washington, D. C., Dec. 16, 1900. He was gradu-
ated at West Point, July 1, 1849, and assigned
to the topographical en-
gineers as brevet second
lieutenant; promoted sec-
ond lieutenant, April 18,
1854; first lieutenant, July
1, 1856; captain, Sept. 9,
1861; transferred to the
engineer corps, March 3,
1863; promoted major,
June 17, 1864; Lieutenant
colonel, March 4, 1870;
colonel, March 17, 1884;
and retired at his own re-
quest, July 2, 1889. He
was brevetted major gen-
eral, March 13, 1865. In
the volunteer service he
was commissioned briga-
dier general, Nov. 23, 1861,
and engaged at bull Run, 1862; and mustered out of the service, Jan. 15,
1866. As topographical engineer he was engaged in
1849–50 in determining the starting point of the boundary line between Iowa and Minnesota,
and later on the survey of Little Colorad river.
From March 2, 1857, till the beginning of the civil
war he was engaged at South Mountain and Anti-
tes, and in the pursuit of the enemy to Warrenton. He
took part in the movement of the 9th Corps into Ken-
tucky, and commanded it on the march to Vicks-
burg. He was brevetted colonel for services at
Jackson, Miss. He was engaged at Blue Spring
and Knoxville, Tenn., and was brevetted brigadier general at the Wilderness and Spottsylvania, and from Aug. 13, 1864,
commanded the 9th Corps before Petersburg.
He resumed charge of the northwestern boundary
survey, Sept. 28, 1866. He superintended the con-
struction of fortifications in Maryland in 1867–68;
June 1, 1868, he was placed in charge of a depart-
ment in the office of the chief of engineers in Wash-
ington, and served till June, 1887, when he was
appointed superintendent of the United States
Military Academy. He held this post till his
retirement. He was the author of Government sur-
vey reports, and also of Compilations of Laws
Relating to Public Works for the Improvement of
the Country, and Laws Relating to the Construction of Bridges over Navig-
able Waters (1882); and Compilation of Opinions
of Attorneys-General Relative to Acquisition of
Lands, Bridges, Contraets, etc. (1882).

Parker, Julia (Mrs. J. B. Polk), actress, born
in Baltimore, Md., in 1832; died there, June 20,
1889. She was a daughter of Joseph, an artist
well-known actor. She studied for grand opera in
Italy, and made her début at La Scala in 1875.
She made her first appearance in America as Vio-
etta in La Traviata, at Booth's Theater, Jan. 14,
1879, under the name of Giulia Maria. At Haver-
ny's Theater, New York, Oct. 11, 1889, she created
the part of Rosamond in William A. Crockett's comic
opera Deseret. She was the original Bathilda in
the first production of Olivette in America, at the
Park Theater, New York, Jan. 17, 1881. She
joined her husband, who was a popular comedian,
in a play called Mixed Pickles, in which she played
Charley Brown for the first time at the Fourteenth
Street Theater, New York, Aug. 17, 1885. Mr.
and Mrs. Polk traveled over the country for sev-
eral successive seasons with great financial and
artistic profit. Their last play was The Silent
Partner, produced at the Fourteenth Street Thea-
er, New York; May 10, 1890, in which Mrs. Polk
played Tillie Coombs.

Partridge, Mary L., missionary of the Ameri-
can Board, born in Stockholm, N. Y., March 27,
1865; killed in Taku, Shensi province, China, July
31, 1900. She was educated at Mount Hol-
yoke, Rollins, and Oberlin Colleges, and joined the

Patton, Frank Jarvis, inventor and soldier,
born in Bath, Me., in 1852; died in New York
City, Nov. 12, 1900. He was graduated at West
Point in 1877, and assigned to the 21st Infantry
as second lieutenant; promoted first lieutenant,
Sept. 22, 1884; and resigned, Sept. 28, 1889. He
served in the battles of Wounded Knee and Fort
Hcoat, Montana, 1900, and received the Wound-
web medal. In 1887, he was engaged in the
manufacture of carbide, formed to exploit his invention for
the manufacture of carbide.

Pennington, Samuel Hayes, physician, born
in Newark, N. J., Oct. 16, 1806; died there, March
14, 1900. He was graduated at Princeton College
in 1825, and attended lectures of the Rutgers
medical faculty of Veneva College. He began the
practice of medicine with his uncle, and in 1839
succeeded to the latter's practice. At various
times he served as a member of the Public School
Board, trustee of Princeton College, trustee of the
Theological Seminary, president of the New Jersey
State Medical Society, and president of the New
Jersey Historical Society. He was the oldest
living graduate of Princeton.

Phelps, Edward John, diplomatist, born in
Middlebury, Vt., July 11, 1822; died in New Haven,
Conn., March 9, 1900. He was graduated at Mid-
dlebury College in 1840. He taught school for a
year in Virginia, and
then studied law with his
father. He was ad-
named to the bar in
1843, after spending a
year in the Yale Law
School, practiced two
years in Middlebury,
and then settled in Bur-
lington, where he was
appointed solicitor till
1851. Sept. 30, 1851, he became sec-
ond comptroller of the
Treasury, and he re-
tained that office till
the close of President Fillmore's administration. He
had been in the diplomatic service several years in New
York city, but in 1857 again settled in Burlington,
which continued to be his home and the center of
his activities for a quarter century. Without
giving up his law practice, he held, from 1881 till
1883, the chair of Law in Yale Law School, and
was also lecturer on constitutional law in Boston
University. In 1881 he was elected president of
the American Bar Association. In politics he was
an old-time Whig and a proslavery and antirwar Democrat. He was nominated for Governor of Vermont in 1880, and defeated. In 1885 he was appointed by President Cleveland minister to England, which post he held four years. In 1890 he was defeated as the candidate of the Democrats in the Vermont Legislature, for the office of United States Senator. In 1893 he was appointed senior counsel for the United States Government before the court of arbitration to settle the Bering Sea controversy. On his return to this country he resumed his chair in Yale College. In 1896 he publicly opposed the candidacy of William J. Bryan. He followed the simmering bitter opposition of the war with Spain in 1898, and after the war became a pronounced "anti-expansionist." He received the degree of LL. D. from Middlebury College in 1870, and from the University of Vermont and from Harvard University in 1887. Among his published writings are The Life and Character of Charles Linnaeus, and rear of the Almirante Isaac F. Redfield (in Vol. LXIX of the Vermont Law Reports); and a series of articles on The Constitution of the United States, contributed to the Nineteenth Century in 1888.

Phelps, James, jurist, born in Colebrook, Conn., Jan. 12, 1822; died in Essex, Conn., Jan. 1, 1898. He entered law school and was admitted to the bar in 1845. He was elected to the Legislature in 1853, and re-elected in 1854 and 1856. In 1858-59 he served in the State Senate. In 1863 he was appointed judge of the Superior Court, resigning ten years later to become justice of the Supreme Court. In 1875 he was elected to Congress, served continuously six years and resigned.

Philip, John Woodward, naval officer, born in New York city, Aug. 26, 1840; died in Brooklyn, N. Y., June 30, 1900. He was appointed midshipman, Jan. 1, 1861; promoted acting master, June 1, 1861; lieutenant, July 16, 1862; lieutenant commander, July 25, 1866; commander, Dec. 18, 1874; captain, March 31, 1890; commodore, Aug. 11, 1893. He also served as temporary commodore, March 3, 1887. His first duty was on the frigate Constitution and the Santee. On his promotion to acting master he was attached to the sloop of war Marion of the Gulf blockading squadron, as executive officer; later he was assigned to the gunboat Sonoma of the James river fleet. From September, 1862, till Jan. 18, 1863, he served on the steamer Pawnee, and the monitor Montauk; he took an active part in the siege of Charleston, S. C. While on the Pawnee he was wounded in the leg in an engagement on Stono river. At the close of the war he was sent to the China station as executive officer of the Wachusett, serving from January, 1865, till September, 1867; he was transferred to the flagship Hartford, where he served till August, 1868. From 1869 till 1871 he served on the Richmond, of the European squadron. He was detached in November, 1871, returned to the Hartford in September, 1872, and was ordered to command the Monocacy in June, 1873. He left the Monocacy in February to take command of one of the Pacific fleet, to proceed from Hong-Kong, to Francisco and Hong-Kong. In July, 1876, he was ordered to the command of the Adams, but was again detached in April, 1877, and he received leave to command the Woodruff scientific expedition around the world. In December, 1877, he was placed in command of the Tuscarora, engaged in surveying the coasts of China, and later returned to the Pacific fleet. In March, 1880, he commanded the Ranger from August, 1880, till October, 1883. From April, 1884, till April, 1887, he served as lighthouse inspector, and later he became commandant of the receiving ship Independence, at Mare Island Navy Yard, serving till May, 1890. He was a member of the Board of Inspection at San Francisco early in 1890, in May of that year he was ordered to command the Atlanta, and in December, 1891, was detailed to superintend the construction of the New York; and when that vessel was finished, Aug. 1, 1893, he was placed in command. He filled that position until July, 1896, when he became captain of Boston Navy Yard. Oct. 18, 1897, he was placed in command of the battleship Texas. In the Spanish-American War he made himself famous for his part in the sea fight at Santiago, July 3, 1898. It was the Texas that, with the Minnesota, ran ashore the Almirante Oquendo of the Spanish fleet, and it was on that occasion that he uttered the historic words: "Don't cheer, boys. The poor devils are dying." After the battle was over he called all his men to the quarter-deck and gave thanks to God for the victory. Aug. 30, 1898, he was detached from the Texas and placed in temporary command of the second squadron of the North Atlantic fleet, with the New York as his flagship. Jan. 15, 1899, he was placed in charge of the Brooklyn Navy Yard, where he was serving at the time of his death.

Pitkin, Horace T., missionary of the American Board, born in Philadelphia, Pa., Oct. 28, 1800; died in China, Aug. 1, 1900. He was graduated at Yale University in 1829, and at Union Theological Seminary in 1836, and he embarked for China, Nov. 11, 1840. Before going abroad (1894-95) he was traveling secretary of the Student Volunteer movement.

Platt, Franklin, geologist, born in Philadelphia, Pa., in 1844; died in Cape May, N. J., July 23, 1903. He was educated in the public schools of Pennsylvania. During the civil war he served in a Pennsylvania regiment. In 1864 he was appointed to the United States Coast Survey, and assigned to work with the North Atlantic squadron. Later he was appointed on the staff of Gen. Poe, chief engineer of the military division of the western army. In July 1874, he was appointed assistant geologist of Pennsylvania, which post he held till May, 1881. He then became president of the Rochester and Pittsburg Coal and Iron Company. He was the author of a text-book on mining, and of the following volumes of the geological reports of Pennsylvania: On Clearfield and Jefferson County (1873); Coke Manufacture (1876); On Blair County (1880); and The Causes, Kind and Amount of Waste in Mining Anthracite (1881).

Porter, John Addison, journalist, born in New Haven, Conn., April 17, 1856; died in Putnam, Conn., Dec. 15, 1900. He was graduated at Yale in 1878. He studied law in an office in Cleveland, Ohio, but soon abandoned that profession to engage in newspaper work. He was on the staffs of the New Haven Daily Palladium and the Hartford Courant, and in 1888 purchased an interest in the Hartford Post. Two years later he secured a controlling interest and became its editor in chief. He represented the town of Pomfret in the Connecticut legislature, and in 1892 he was elected a delegate to the Republican National Convention in 1892. On two occasions he was a candidate for the nomination for the governorship of Connecticut, and in each instance received a large number of votes. He was an earnest advocate of the nomination of Mr. McKinley in 1896, and took an active part in the campaign of that year. He ran for the United States Senate in New York, but was defeated. In 1899 he was appointed by President McKinley as the first United States consul at Lhasa, China, for which position he was elected by the Nepal government. In 1897 he was elected to the United States House of Representatives, and he was re-elected in 1898. In 1900 he was appointed to the United States Senate, where he served until his death. He was a noted advocate of the annexation of Hawaii and the Philippine Islands. He was a member of the Board of Education of the University of Vermont, and of the Board of Managers of the Middlebury College.
OBITUARIES, AMERICAN. (PORTER—REILLY.)

495

the author of a monograph on The Corporation of Yale College (1855); The Administration of the City of Washington (1880); and Sketches of Yale Life (1887).

PORTER, Sarah, educator, born in Farmington, Conn., Aug. 17, 1813; died there, Feb. 18, 1900. She was a daughter of the Rev. Dr. Noah Porter, pastor of the Congregational Church of Farmington, and sister of President Noah Porter of Yale College. She began her life work with a small day school for girls, which grew, under her presi-
dency, and attracted students from all parts of the United States. Some years previous to her death she retired from the active direction of her school.

Price, Charles W., missionary of the American Board, born in Richland, Ind., Dec. 28, 1847; Eva Jane (Newby) Price, of Midland, Mich., Aug. 19, 1855; one child; all killed near Wenshui, Shensi province, China, Aug. 16, 1900. Mr. Price studied at Oberlin College, and was graduated at the Theological Seminary in 1889. Mrs. Price was also a student at Oberlin. They joined the Shensi mission in 1885. Frederick Edward, soldier, born in Florence, Italy, Sept. 24, 1829; died in Litchfield, Conn., Aug. 12, 1900. He was graduated at West Point in 1850, and was assigned to work on the fortifications about New York harbor, including the building of Fort Schuyler. At the outbreak of the civil war he was captured at Pensacola, Fla., while on his way to Fort Pickens, but was released in time for duty as assistant engineer on the consti-
tuation of the defenses of Washington. He served in the Manassas campaign in 1861 as captain of engineers, and later was engaged on the defenses of Baltimore. He then became chief engineer suc-
cessively of the departments of Kentucky, of the Cumberland, and of the Ohio. While in the latter he was for some time associated with Col. W. M. Milbank, near Mill Spring, Ky., but was released in the following spring. He was chief engineer in Grant's Mississippi campaign, and was promoted major of engineers, June 1, 1863. He was brevetted major for gallantry at the battle of Corinth, lieutenant colonel for gallantry at Vicksburg, and, March 13, 1864, colonel, for gallantry and for service during the war. After the war he was a member of the special board of engineers in charge of work at Willet's Point about a year, and later he served in connection with the improvements at the mouth of the Mississippi river and at Galveston. He was retired, Sept. 5, 1871.

Pryor, John P., actor, born in Madison County, Ala., July 5, 1820; died in Athens, Ala., Aug. 5, 1900. He was admitted to the bar in 1841, and began practice in Athens. In 1879 he was ap-
pointed United States Senator to fill the unex-
ered term of Senator Houston; he was afterward elected to the office for the full term, but declined. In 1882 he was elected a Representative in Con-
gress. He also represented his county in the Alabama Legislature.

Purcell, Samuel Smith, physician, born in Lebanon, N. Y., June 24, 1822; died in New York city, Sept. 30, 1900. He was graduated at the medical department of the University of New York in 1844. From 1846 till 1848 he was phy-
sician in the New York City Dispensary, and in 1849 was ward physician under the Board of Health during the cholera epidemic. He was vice-presi-
dent of the New York Academy of Medicine from 1870 till 1875, and its president from 1876 till 1880. He was the author of medical works, in-
cluding The Corpus Luteum, Menstruation, Con-
tributions to the Science of Midwifery, and Observations on Wounds of the Heart.

Rademacher, Joseph, clergyman, born in West-
phalia, Mich., Dec. 3, 1849; died in Fort Wayne, Ind., Jan. 12, 1900. He was educated at St. Vin-
tin's College, Pennsylvania, and at St. Michael's Seminary, Pittsburgh. He was ordained as a priest Aug. 2, 1862, at Fort Wayne. After serving about six years at missions in Indiana, he was appointed pastor of the Church of St. Paul of the Cross, at Columbia City. In 1877 he became pastor of the Church of St. Mary, at Fort Wayne. In a short time he was made chaplain of the diocese. Later he was for a short period pastor of the Church of St. Mary, at Lafayette. June 24, 1883, he was consecrated Bishop of Nashville, Tenn., and Aug. 1, 1893, he was transferred to the bishopric of Fort Wayne, which place he held at his death.

Ramsdell, George Allen, lawyer, born in Mil-
o, N. Y., March 11, 1834; died in Nashua, N. H., Nov. 16, 1900. He studied at Amherst College, in 1857 was admitted to the bar, and practiced six years in Peterboro, N. H. In 1864 he was ap-
pointed clerk of the Supreme Court of Hillsbor-
ough, and removed to Amherst, where he resided till 1866, when the records were removed to Nashua. In 1857 he resigned the office and re-
turned to practice. Later he became clerk of the City Guarantee Savings Bank, and at the same time was president of the First National Bank of Nashua. From 1870 till 1872 he was a member of the Legislature, and in 1876 was a member of the constitutional convention. In 1891–92 he was a mem-
er of the Governor's Council. He was elected Governor of the State of New Hampshire in 1892, and remained till 1898. (For portrait, see Annual Cyclopedia for 1897, page 550.)

Reed, George William, actor, born in Phila-
delphia, Pa., in 1844; died there, Aug. 11, 1900. He was an elder brother of Roland Reed, and like his father, who was known as "Pop" Reed, had played with the Walnut Street Theater, Philadelphia, from boyhood. His first appearance was made there when he was a baby, and for many years he played minor parts as a member of the old stock company under the management of John S. Clarke. He enlisted in the navy at the begin-
ing of the civil war, and served through the con-
tinued war, and for some years during the war. After the war he was a member of the special board of engineers in charge of work at Willet's Point about a year, and later he served in connection with the improvements at the mouth of the Mississippi river and at Galveston. He was re-
tired, Sept. 5, 1871.

Reilly, Henry J., soldier, born in Ireland, Sept. 24, 1845; died in Pekin, China, Aug. 15, 1900. In the civil war he enlisted in the navy, joining the Mississippi squadron, and took part in the Red river expedition and in the bombardment of Vicksburg. Sept. 22, 1864, he entered the regu-
lar army as a private in the 5th Artillery. He was promoted several times, and from Dec. 1865, as lieutenant, Sept. 18, 1868; and captain, Jan. 3, 1874. In 1876 he was graduated at the artillery school. In 1894 he was placed in command of Light Battery F, 5th Artillery, and with it was stationed at the Presidio, San Francisco, and later at Fort Riley, Kansas, and at Fort Hamilton, New York. In the Spanish-American War he com-
mended his battery at Santiago, and later he took part in Gen. Miles's expedition to Porto Rico. After a short stay in the United States he was sent to Manila, where he arrived April 23, 1899. He took part in nineteen engagements against the Filipinos, the most important being that at Putol Bridge. His battery was selected for service in China, and he was killed by a stray bullet two days after the fall of Pekin.
Rice, Dan (Daniel McLaren), circus clown, born in New York city in 1823; died in Long Branch, N. J., Feb. 22, 1900. He was the son of an Irishman of the same name, who nicknamed him as a child after the popular old Irish clown Dan Rice. Dan's early life was spent on a dairy farm near Freehold, N. J., under a stepfather named Monahan, whom he ran away from in 1848. After some adventures in western Pennsylvania, he set up in the show business with a learned pig. In 1844 he went to New York and was engaged by John Tryon at the old Bowery Amphitheater, as a song-and-dance man. Among his comrades here were Dan Emmett and Barney Williams. His career as a circus clown began with a firm of G. H. Hower and W. Welch's National Amphitheater, Philadelphia, and in a short time he became the most popular man in the city. In 1847 he went to New Orleans, where he was the principal attraction of Spaulding's Circus. While filling his engagements with Dr. Spaulding he became an enthusiastic student of Shakespeare, and his familiarity with the great poet won for him the name of the "Shakespearean clown." He became a partner with Spaulding in the circus, and the firm was very successful until 1850. He traveled over the entire country during the circus season, and made a large fortune. He was in the South during the first year of the civil war, and on his return to Philadelphia he was accused of so doing. He had been in the circus business in that city for a failure, and the result was bankruptcy. In 1864 he was engaged by Adam Forepaugh at a salary of $3,000 a year. In 1866 he was with O'Brien's Circus at a salary of $1,000 a week. He became careless and dissipated, and in spite of his great popularity throughout the land his career was fast deteriorating. In 1878 his wife and associates. In 1878 he made a strong effort to regain habits of sobriety, but without lasting success. He was fond of doing charity work, and gave away a great part of his money. He built a soldiers' monument in Girard, Pa., his home, at a cost of $35,000, and he gave President Lincoln a check for $2,000 for the benefit of wounded soldiers and their families. He retired from active life in 1882 and occupied his later years in writing his autobiography.

Richardson, Abby Sage, author, born in Massachusetts in 1837; died in Rome, Italy, Dec. 5, 1900. She made her first appearance at the Winter Garden Theater, New York city, in the company of Edwin Booth in 1856, as Nellissa in The Merchant of Venice. She had been married a few years before to Daniel MacFarland, a lawyer, from whom she was divorced in 1868. Soon after her divorce she was engaged to be married to Albert D. Richardson, formerly war correspondent of the New York Tribune and afterward on the editor of that journal that journallist shot Richardson in the Tribune office. Before the latter's death, which followed a few days after the shooting, he and Mrs. MacFarland were married. Mrs. Richardson never appeared on the stage after this tragedy, but devoted herself to literature. Her early books were: Familiar Talks on English Literature, Old Love Letters, Stories from Old English Poetry, and Abélard and Héloïse. She also edited some of Richardson's writings. When the Lyceum stock company was inaugurated by Daniel Frohman in New York city, Mrs. Richardson was engaged to prepare adaptations from the French. Her best work was: A Woman's Character, A Woman's Soul, and A Woman's Silence. In collaboration with Miss Grace Furniss she wrote The Colonial Girl and The Pride of Jennico. Her last work was a dramatization of Weyman's novel, Sophia.

Ridpath, John Clark, historian, born in Putnam county, Indiana, April 26, 1841; died in New York city, July 31, 1900. He was graduated at Asbury (now De Pauw) University in 1863. During his senior year he had taught in the Thornton (Ind.) Academy, and upon his graduation he was made its principal. In 1866 he was editor of the student organ of De Pauw and later teacher at Lawrenceburg, Ind., and in 1869 he was called to the chair of English Literature in his alma mater. Two years later he was transferred to the chair of Belles Lettres and History, and later to the chair of History and Political Philosophy. He continued as an instructor till 1883, and was vice-president of De Pauw University from 1877 to 1883. While in the latter capacity he was largely instrumental in securing the De Pauw endowment. After resigning his professorship he devoted himself to literary work. He was one of the editors of the People's Cyclopaedia (1881), and compiled a library of universal literature. In 1897-98 he was editor of The American Historical Review.

Robinson, Rowland Evans, author, born in Ferrisburg, Vt., May 14, 1833; died there, Oct. 19, 1900. His father, who was a merchant in Philadelphia and a man of great distinction, received a common-school education. After reaching manhood he went to New York city, where he learned wood engraving. His eyesight gradually failed, and in 1893 he became blind. His published works include Uncle Lisha's Shop (New York, 1887); Sam Lovell's Camps (1889); Vermont: A Study of Independence (Boston, 1892); Dave's Folly (1894); In New England Fields and Woods (1896); Uncle Lisha's Outing (1897); A Hero of Ticonderoga (Burlington, 1898); and Davus Pioneer (Boston, 1900).

Rogers, Fairman, civil engineer, born in Philadelphia, Pa., Nov. 15, 1833; died in Vienna, Austria, Aug. 23, 1900. He was a son of Evans Rogers, a merchant in Philadelphia and a member of the University Society of Friends. He was graduated at the University of Pennsylvania in 1853. While an undergraduate he devoted his attention specially to mathematics and mechanics, and on graduating he was appointed lecturer on mechanics in Franklin Institute, which place he held until 1865. Mean while, in 1862, he entered the United States Engineers as a volunteer engineer on the staffs of Gen. John P. Reynolds and Gen. William F. Smith. Under the auspices of the United States Coast Survey in 1862, he completed the survey of the Potomac.
river northward from Blakiston island. He was widely known by his active interest in outdoor sports, being one of the first to introduce polo into the United States. He was for many years a manager of the Pennsylvania Academy of Fine Arts, and he was one of a committee having charge of the erection of the exhibition building at the world’s fair held in Philadelphia in 1876. Beside being a member of the American Philosophical Society and the American Society of Civil Engineers, he was one of the original members of the National Academy of Sciences. His more important scientific papers were Combinations of Mechanism and Processes (1857); Notes on Grant’s Difference Engine (1874); also, he was the author of Terrestrial Magnetism and the Magnetism of Iron Ships (1877; rev. ed., 1883) and Manual of Coaching (1899).

Sargent, Hannah, Mrs. (Hannah Bailey), actress, born in Providence, R. I., in 1850; died in New York City, May 2, 1900. She made her first appearance with Edwin Booth in Richard III, as Edward V, in the Providence Theater, in 1865. She rose to a leading place as a stock actress in a short time, and for several seasons was very popular in the permanent companies of Cincinnati and Columbus, Ohio, and Indianapolis, Ind. In 1877 she married John Sargent Jones, manager of the Columbus Theater. In 1876 they visited San Francisco, and while there saw the first performances of Helena Modjeska at the California Theater, and on his wife’s suggestion Mr. Sargent engaged the Polish actress to play under his management. Mrs. Sargent actively assisted her husband in all his eminently successful productions, and, in 1881, returned with him to the United States and England, during the continuance of which she remained off the stage; but eventual financial misfortune obliged her to resume her work. When her desire to return to the stage became known to Mme. Modjeska, that lady offered her a place in her support. For more than ten years Mrs. Sargent was a member of Mme. Modjeska’s companies, and as such made her last appearance at Wilmington, Del., April 3, 1900.

Sargent, John Singer, artist, born in Florence, Italy, in 1856; died in London, England, April 13, 1900. His parents were Americans residing in Florence. He was educated partly in Italy and partly in France, and was a member of the Fine Arts, in Florence, at an early age, and spent several years in art study. At the age of eighteen he entered the studio of Carolus Duran, in Paris. In 1877 he exhibited in the Salon a portrait of his master, which excited a great deal of comment. In 1879 he received honorable mention in the Salon, and in 1881 a medal of the second class. In 1884 he returned to London, where he exhibited in the Royal Academy and the Grosvenor Gallery, and his pictures met with instant success. In 1894 he was elected an associate member of the Royal Academy, and in 1897 he was made a member. He visited the United States several times, and in 1887 he painted many portraits there. During his visit in 1889 he purchased a picture of Carmen-cita, which was purchased by the French Government. He was commissioned to decorate the ends of the upper corridor of the new Boston Public Library, and chose for his theme the progress of religion. Some of his best known pictures are A Fisherman, Le Poche (1875); Portrait of Carolus Duran (1879); Neapolitan Children Bathing (1879); El Jaleo (1882); Portrait of Two Children (1883); and many portraits. He was a member of the American National Academy of Design.

Saunders, William, horticulturist, born in St. Andrews, Scotland, in 1822; died in Washington, D. C., Sept. 11, 1900. Several of his youthful years were spent in India, where his father was a gardener. He was educated at the college of Madras and the Divinity School at St. Andrews. He studied the cultivation of plants and flowers in New Garden, London, in 1845 he came to the United States, and contributed to the improvement of Fairmount and Hunting Parks, in Philadelphia, and of Clifton Park, Baltimore. In 1862, on the establishment of the United States Department of Agriculture, he was placed in charge of the division of experimental gardens and grounds, which place he held at his death. He was a member of the Park Commission of the District of Columbia, and was interested in beautifying the parks of Washington. It was through the development of his ideas and largely through his labors that the Patrons of Husbandry, known as the National Grange, was organized. Of the plants introduced by the experiment garden under his direction, the most conspicuous is the seedless navel orange, the first trees having been secured by him in Brazil in 1870.

Sawyer, Philetus, manufacturer, born in Whitin, Vt., Sept. 22, 1816; died in Oshkosh, Wis., March 20, 1900. He was removed with his parents from Crown Point, N. Y., in 1817, when he was educated in the district schools. At the age of seventeen he began working as a farm hand. In ten years he had saved $2,000, and in 1847 he removed to Wisconsin, where he engaged in the lumber business. He was elected to the Legislature in 1857 and 1861, and in 1863 was elected mayor of Oshkosh. In 1868 he was elected to Congress, and served continuously for ten years. In 1889 and 1896 he was elected United States Senator. In the lower house he was chairman of the Committee on Pacific Railroad and a member of the Committees on Commerce, Manufactures, and Invalid Pension.

Sayre, Lewis Albert, surgeon, born in Battle Hill (now Madison), N. J., Feb. 29, 1820; died in New York City, Sept. 21, 1900. He was graduated at Transylvania University, Lexington, Ky., in 1839, and at the College of Physicians and Surgeons, New York city, in 1842. In that year he became prosector to the Philadelphia and Surrogates’ Hospital for Insane in Philadelphia, and he held the place till he made emeritus prosector in 1852. In 1853–73 he was surgeon to Bellevue Hospital. In 1859 he was made surgeon to the Charity Hospital on Blackwell’s island. From 1873 he was consulting surgeon for both hospitals. He was one of the active founders of the Bellevue Hospital Medical College in 1851, and was made its Professor of Orthopaedic Surgery; he retained this chair until the college was consolidated with New York University in 1898, when he was made emeritus professor. He was the first American to remove the head of the femur in hip-joint disease. He performed the operation in 1854, and in seven years had created by this and other original methods a practically new department in his profession, orthopaedic surgery. He performed his hip-joint operation before the International Medical Congress at Philadelphia in 1876. He invented numerous instruments and appliances, and was the author of the following medical works: On the years had created by this and other original methods a practically new department in his profession, orthopaedic surgery. He performed his hip-joint operation before the International Medical Congress at Philadelphia in 1876. He invented numerous instruments and appliances, and was the author of the following medical works: On the
OBITUARIES, AMERICAN.

Scott, Robert Kingston, ex-Governor of South Carolina, born in Armstrong County, Pennsylvania, July 8, 1829; died in Charleston, S. C., Aug. 20, 1900. He studied medicine in Navarre, Ohio, and later attended lectures at Starling Medical College, Columbus. He practiced medicine in Henry County, Ohio, from 1851 till 1857, and was then engaged in mercantile business till 1861. In October, 1861, he was commissioned lieutenant colonel of the 65th Ohio Regiment, and was promoted colonel. He served at Fort Donelson, Shiloh, and Corinth, led a brigade at Hatchie river, Tenn., and was engaged at Fort Gibson, Raymond, and Champion Hills, Miss. He was commissioned brigadier general of volunteers, Jan. 12, 1865, and brevetted brigadier and major general. From 1865 till 1868 he was assistant commissioner of the Freedmen's Bureau in South Carolina. He was elected as a Republican, the first Governor of reconstructed South Carolina, and in 1870 was re-elected. In the autumn of 1871, with other State officers, he was charged with a fraudulent overissue of State bonds, but he justified his course, and a resolution for his impeachment was defeated. Dec. 25, 1880, he was appointed judge of the Superior Court of South Carolina, a post which he held till his death. He was acquitted, the defense being that the pistol was discharged accidentally. For several years he was engaged in the real-estate business in Columbia, S. C., and Napoleon, Ohio.

Scoville, John F., educator, born in Sandy Hill, N. Y., May 9, 1812; died in Brooklyn, N. Y., May 17, 1892. He was graduated at Oberlin College in 1832, and in 1833 was appointed the first president of Oberlin College. In 1849 he gave up teaching and removed to Brooklyn, where he engaged in the publishing business. He retired from active business in 1865.

Sewall, Arthur, shipbuilder, born in Bath, Me., July 4, 1809; died in Southport, Me., Sept. 5, 1900. He was educated in the public schools of his native city, and then entered his father's shipyard as an apprentice. In 1834 he formed a partnership with his brother Edward, under the name of E. & A. Sewall, taking over the business of his father's firm. In January, 1835, the two vessels they then had, the Helen, and from that time till 1879 the number of vessels increased to 46 wooden vessels. In 1879, at the death of his brother, he became the head of the business, and as such continued till his death. In 1890 he began the equipment of the firm's shipyards for the complete construction of steel sailing vessels, and in 1894 the iron ship Dirigo, of 3,000 tons, was launched, the first of its class ever constructed in New England. He was a member of the Bath Board of Aldermen in 1876 and 1877. In 1880 he was a delegate at large from Maine to the National Democratic Convention, and again in 1886. He was the Democratic candidate for United States Senator in 1892. He was a member of the National Democratic Committee in 1888, 1895, and 1896; in June, 1895, he declared in favor of free coinage of silver, and in consequence was not continued on the national committee by his colleagues.

At the national convention held July 11, 1896, to which he was a delegate, he was nominated as the candidate for Vice-President, with William J. Bryan as the candidate for President. He became a director of the Maine Central Railroad Company in 1875, and in 1884 its president, serving till 1893. During this time he was also president of the Portland, Mount Desert and Machias Steamboat Company, and of the Portland and Southern Railroad, as well as a director in the Mexican Central Railway, the Boston and Maine Railroad, the New York and New England Railroad, the Portland and Rochester Railroad, and some of the lines of the Atchison, Topeka and Santa Fe system. He was president of the Bath National Bank, and until 1893 of the Bath Savings Institution.

Seymour, Louis Irving, civil engineer, born in Whitney's Point, N. Y., in 1860; died near Bloemfontein, South Africa, June 14, 1900. He was reared on a farm, and studied mathematics and civil engineering at night. His first regular work was with the Laekawanna Steel and Iron Company, Passaic, N. J., in 1880. He completed his studies. In 1882 he was sent by the Dickson Manufacturing Company to set up machinery in a Venezuela gold mine. There he remained three years, becoming superintendent. In 1888 he went to Kimberley for the De Beers Mining Company, and later he spent three years in London as consulting engineer for the Kimberley mine owners. In 1891 he was appointed superintendent of the Rand mines. At the outbreak of the war in the Transvaal he organized a regiment in Cape Town, and was made its major. He designed and constructed aeriel bridges for Gen. Roberts and Kitchener as they advanced northward toward the Transvaal. In the battle at the Zandspruit river, on the Rand Randfontein, he was killed by a shell through an open veldt, he was mortally wounded.

Shakespeare, Edward Oram, surgeon, born in Dover, Del., May 19, 1846; died in Philadelphia, Pa., June 1, 1900. He was descended from Edmund Shakespeare, a brother of the poet. He was graduated at Dickinson College in 1867, and at the United States Medical College of Pennsylvania in 1869. He began the practice of medicine in his native town, but in 1875 removed to Philadelphia, where later he was appointed lecturer on ophthalmic surgery in the University of Pennsylvania. He soon became an authority on diseases of the eye, and was elected president of the Pathological Society of Pennsylvania, and pathological and ophthalmic surgeon to the Philadelphia Hospital. In 1889 he was the representative of the United States Government to investigate the causes and conditions under which cholera thrived in Europe and India; his report was exhaustive, and was published in 1889. In the war with Spain he was appointed brigade surgeon with the rank of major of volunteers, and at the time of a commission attached to the office of the surgeon general at Washington to investigate the causes of typhoid fever in the army. He was a frequent contributor to medical periodicals, and with J. H. C. Simes translated Manual of Pathological Histology (Philadelphia, 1880).

Sharpe, William H., ship's master, born in Kingston, N. Y., Feb. 26, 1828; died in New York city, Jan. 13, 1900. He was graduated at Rutgers College in 1847, studied at Yale Law School, and was admitted to the bar in New York city, in 1851. In 1854 he was attached to the American legation in Vienna. In 1854 he returned to the United States and practiced law. In 1861, at the outbreak of the civil war he entered the National army as a captain in the 20th New York Regiment; in 1862 he was promoted to the colonel
of the 120th New York Regiment. He took part in all the battles from Fredericksburg to Appomattox. He was brevetted brigadier general in 1864, and major general in 1865. At the close of the war he was designated by Gen. Sherman to parole the Army of Northern Virginia. In 1867 he went abroad as a special agent for the Department of State. In 1870 he was appointed United States marshal for the southern district of New York, and against the most violent opposition he took the census that demonstrated the great election frauds of New York city, which led to the overthrow of the Tweed ring. He was surveyor of customs at New York from 1873 till 1878. From 1879 till 1882 he was a member of the State Assembly, and in 1880 and 1881 he was the Speaker of that body during the famous deadlock over the re-election of Senators Conkling and Platt. For a short time in 1889 he was at the head of the consular service in Central and South America, promoting commercial relations with the United States. In 1890 he was appointed a member of the Board of United States General Appraisers, created to exercise judicial and administrative powers on appeals in customs cases; he resigned this office March 1, 1892.

Shearman, Thomas Gaskell, lawyer, born in Jamestown, N. Y., in 1834; died in Chelsea, Mass., Aug. 29, 1900. He was graduated at the United States Naval Academy, June 21, 1875; entered the service as ensign, Sept. 8, 1876; promoted master, Nov. 28, 1882; lieutenant (junior grade), March 3, 1885; lieutenant, May 4, 1889; andlieutenant commander, May 18, 1899. He served on the Hartford, of the North Atlantic station, from 1875 till 1877; on the Passaic from 1877 till 1879. In 1880 he was transferred to the Pensacola, of the Pacific station, where he served till 1885. He was on duty at a torpedo station from 1885 till 1887, when he was placed on the Nipsic, of the Pacific station. The most brilliant of his exploit was his hero-conduct in the hurricane at Samoa, March 16, 1889, which resulted in the wrecking of the Trenton, the Vandalia, and the Nipsic. In 1894 he was attached to the coast survey steamer Blake. In December, 1895, he was at the treatment hospital in Yokohama.

Shearman, Thomas Gaskell, lawyer, born in Birmingham, England, Nov. 25, 1834; died in Brooklyn, N. Y., Sept. 29, 1900. When nine years old he came to New York with his parents; he attended school for a time, and then became clerk in a dry-goods store. In 1857 he removed to Brooklyn, where, after a course under private tutors, he was admitted to the bar in 1859. For six years he devoted himself almost entirely to the literature of the law, and for some time he was secretary to the Code Commission of New York. He also edited a law journal. In 1868 he entered the law firm of which David Dudley Field was the head. At its dissolution in 1873 he became the senior member of the firm of Shearman & Sterling. In 1874 he undertook the defense of his personal friend and pastor, Henry Ward Beecher, in the celebrated case brought against the famous preacher by Theodore Tilton. The trial, with its preparation and entire proceedings, occupied two years, and although the expenses amounted to $180,000, the officer in charge of the case was able to pay its services. Of late years the business of the firm directed toward the management of large estates and the conduct of the affairs of railroad corporations. Mr. Shearman devoted a great deal of his time to public questions and social and political economy. He was a Republican from the organization of that party till 1884, when he supported Mr. Cleveland for the presidency. In 1896 he returned to the Republican party. He was an enthusiastic supporter of free trade and single-tax theories. His writings are voluminous, and include Taxation and Revenue (New York, 1892); Commercial Taxation (Chicago, 1893); Land and Property (1895); and, with Mr. Tillinghast, Practice, Pleadings, and Forms, and, with A. A. Redfield, Treatise on the Law of Negligence.

Sheeleigh, Matthias, author, born in Montgomery County, Pennsylvania, in 1820; died in Fort Washington, Pa., July 15, 1900. His ancestors were among the Palatinate refugees who settled in Montgomery County in 1732. He received his training at Pennsylvania College and Theological Seminary, Gettysburg, Pa., and was ordained in the Lutheran Church in 1852. He was pastor of Lutheran congregations in New York, New Jersey, and Pennsylvania. He was secretary of the General Synod, and in more than a quarter of a century a member of the Lutheran Board of Publication, acting as president of it a few years, and twelve years as reader and reviser of works offered for publication, and for thirty-four years a member of the Board of Directors of the Theological Seminary at Gettysburg. He was editor of the Lutheran Sunday School Instructor from the establishment in 1860 until his death, and editor of the Lutheran Almanac and Yearbook from 1871. He was the author of a thousand poems, including hymns that have found their way into the hymnals. He was also an enthusiastic student of local history, and was an authority in the Montgomery County Historical Society.

Sicard, Montgomery, naval officer, born in Utica, N. Y., Sept. 30, 1836; died in Westerville, N. Y., Sept. 14, 1900. He was appointed acting midshipman, Oct. 1, 1851; promoted passed midshipman, April 15, 1858; master, Nov. 4, 1858; lieutenant, May 31, 1860; lieutenant commander, July 16, 1862; commander, March 2, 1883; captain, Aug. 7, 1881; commodore, July 10, 1894; rear admiral, April 6, 1897; and retired on reaching the age limit, Sept. 30, 1898. At the beginning of the civil war he was on duty on various vessels in the blockading squadron. As executive officer of the Oneida he was present at the bombardment of Fort Pulaski. Jacob Jones was an important part of the destruction of the Confederate flotilla in April, 1862, in the passage of the Vicksburg batteries in June, and in the engagement with the ram Arkansas in July of the same year. He commanded the Seneca in both attacks on Fort Fisher, and had charge of the left wing, 2d Division, in the naval land assault on Fort Fisher, Jan. 22, 1865. After the war he spent two years at the Naval Academy, and after two years more of service on the Pensacola was assigned to the Saginaw on the Pacific coast. In 1876 he was in command of the Swatara. In 1880 he was appointed inspector of ordnance at the Boston Navy Yard. From 1882 till 1888 he served on the Navesink. To him is given the credit for the introduction of steel high-power ordnance into the navy about this time. In January, 1894, he was placed in charge of the Portsmouth Navy Yard, and in November of that year was transferred to the Brooklyn Navy Yard as commandant. April 20, 1897, he was made commandant of the North Atlantic squadron, but at the outbreak of the Spanish-American War was placed on sick leave, having contracted malaria. After partial recovery he applied for active duty, and was made president of the Board of Strategy. After his retirement he continued to serve, acting as chairman of the board for rewarding officers for gallant and meritorious service.
Simcox, F. E., missionary of the Presbyterian Board, born in Bullion, Pa., April 30, 1867; May L. (Gillson) Simcox, born in London, Pa.; both killed in Paoting-Fu, China, June 30, 1900. Mr. Simcox was graduated at Grove City College, Pennsylvania, in 1889, and at the Western Theological Seminary in 1893.

Skene, Alexander Johnston Chalmers, physician, born in Fyvie, Scotland, June 17, 1857; died in High Mount, N. Y., July 4, 1900. He was graduated at the Long Island College Hospital in 1863, and was a surgeon in the National army in 1863 and 1864. He evolved a plan for a hospital corps which is now in use in the army and the National Guard. In 1864 he was appointed adjunct professor in the Long Island College Hospital; in 1872 he made Professor of Gynecology, and in 1886 became dean of the faculty of that institution. He was the author of many medical works, including Diseases of the Bladder and Urethra in Women (New York, 1878); Treatise on the Diseases of Women (1888); Education and Culture as Correlated to the Health and Diseases of Women (Detroit, 1888); Text-book on the Diseases of New York, (1888); and Medical Gynecology (1895).

Smart, James Henry, educator, born in Center Harbor, N. H., June 30, 1841; died in Lafayette, Ind., Feb. 21, 1900. He was educated chiefly at the Concord, N. H., high school. He taught in Concord and other New England schools from 1858 to 1861, and from 1862 to 1867 was principal of the intermediate school in Toledo, Ohio. From 1865 till 1875 he was superintendent of schools in Fort Wayne, Ind., and then for six years was Superintendent of Public Instruction in Indiana. In 1883 he became president of Purdue University, which office he held at his death. Dr. Smart was a member of the Indiana State Board of Education twenty-seven years; was assistant commissioner of Indiana to the Vienna exhibition in 1873; United States commissioner to the Paris exhibition in 1878; and commissioner from the United States Department of Agriculture to the agricultural congress at The Hague in 1891. He was president of the Indiana Farmers' Association in 1871, of the National Educational Association in 1888, and of the Association of Agricultural Colleges and Experiment Stations in 1890. He received the degree of LL. D. from Indiana University in 1883. He was the author of An Ideal School System for a State, The Institute System for the United States, The School Laws of Indiana, Books and Reading for the Young, Indiana Schools, and Manual of School Gymnastics.

Smith, James Cosslett, jurist, born in Phelps, N. Y., Aug. 14, 1817; died in Canandaigua, N. Y., Sept. 26, 1900. He was graduated at Union College, and began the practice of law soon after his graduation. He was a member of the Peace Commission that met in Washington in 1861 before the civil war. In 1862 he was appointed to the supreme bench of New York, and he served till 1887, when he was retired.

Smith, James G., telegraph operator, born in Durham, N. H., April 14, 1836; died in New York city, March 3, 1900. In 1850 he was a messenger in the telegraph office in Durham, where he remained to operate the instrument. In 1862 he went to New York city, and during the civil war had charge of all dispatches sent from New York to the South. In 1864 he was appointed superintendent of a division of the line between Boston and New York, in 1868, with the powers of one commissioner, he purchased the Franklin Telegraph Company, whose wires ran from New York to Boston. Together they invented a duplex system of telegraphy. In 1877 he withdrew from the Franklin Company, and for a few years engaged in the wireless business. He formed the Continental Telegraph Company and established the rapid stock exchange service between New York and Philadelphia. In 1881 he organized the Builders' and Merchants' Telegraph Company as a rival to the Western Union. In 1885 his latest company failed, and from that time he devoted himself to telephony. At the time of his death he was president of the Smith Vassar Telephone Company.

Smyth, Frederick, jurist, born in County Galway, Ireland, in 1852; died in Atlantic City, N. J., Aug. 18, 1900. He came to New York city in 1849, and began work as a lawyer's office boy. In 1855 he was admitted to the bar, and in 1856 he became assistant in the office of United States District-Attorney McKeon, and upon the latter's retirement, they formed a law partnership, which was continued till 1879. From 1863 till 1865 Mr. Smyth was a commissioner of schools; he also served as a member of the Board of Education and as counsel to the Excise Board. In 1875 he was defeated as the Democratic candidate; in December, 1879, he was appointed to fill the unexpired term of Recorder Hackett, and in 1880 was elected for the full term of fourteen years. In 1894 he was a candidate for re-election, but was defeated by John W. Goft. In 1896 he was elected a justice of the Supreme Court of New York, which office he held at his death. He was a member of Tammany Hall from the time he became a voter.

Sonntag, William Louis, artist, born near Pittsburg, Pa., March 2, 1822; died in New York city, Jan. 22, 1900. His youth was passed in Cincinnati, and there he began the study of art in 1845. In 1852 he was elected a member of the Excise Board, and from 1853 till 1857, and in 1861, he studied abroad. He devoted himself to the painting of American landscapes, keeping as far as he could from the realistic school. Some of his works are View on Licking River, Kentucky (1846); four pictures entitled The Progress of Civilization (1848); The Spirit of Solitude (1851); Evangelism (1852); A Dream of the Orient (1850); The Dream of the Orient (1851); and Sunset in the Wilderness, exhibited at the Centennial Exhibition in 1876; and The Fog Rising off Mount Adams. He was a member of the National Academy of Design, of the Water Color Society, and of the Artists' Fund Society.

Stemb, Edward R., chemist, born in Wilminton, Del., July 4, 1819; died in Brooklyn, N. Y., Oct. 26, 1900. He was graduated at Jefferson Medical College, Philadelphia, was appointed a surgeon in the United States navy, and later was placed in charge of the medical station of the Brooklyn Navy Yard. During the civil war his ship was burned by the Confederates, and he was in charge of the distribution of pharmaceutical supplies. About this time he prepared a cholera remedy, which has been a standard ever since. Later he resigned from the navy and established a private laboratory in Brooklyn. In 1885 he retired.

Stallo, John Bernard, lawyer, born in Sierhusen, Germany, March 3, 1822; died in Rome, July 1, 1900. He came to the United States in 1839. He taught in a private school in Cincin nati, and later he was made Professor of German in St. Xavier's College, serving till 1843. In that year he became Professor of Mathematics and Chemistry in St. John's College, Fordham, N. Y. In 1847 he returned to Cincinnati and studied law, and was admitted to the bar in 1849. In 1853 he was appointed judge of the Court of Common
Pleas. After serving two years he resigned to resume his law practice. In political life he was origi- nally a Whig, but he became a Republican during the contest over slavery in the Territories, and again became a Democrat to support Horace Greeley for the presidency. In 1885 he was appointed minister to Italy, which post he filled until 1889. After retirement to private life he resided in Italy. His published works include General Principles of the Philosophy of Science (Boston, 1848); Concepts and Theories of Modern Physics (New York, 1882); and Abhandlungen und Uebertragungen (1893).

Stanton, Thaddeus H., soldier, born in Indiana, Jan. 30, 1833; died in Omaha, Neb., Jan. 23, 1900. At the age of twenty-two he joined John Brown’s band, Aug. 1, 1856, and was elected a member of the Legislature. In August, 1862, he became a captain in the 19th Iowa Infantry, taking part in the campaigns in the border States. Later he was detailed for duty on the staff of Major-General S. H. Curtis, and Dec. 19, 1862, became a paymaster attached to the Army of the Tennessee. Jan. 17, 1863, he was made major and paymaster in the United States army; March 15, 1866, he was made lieutenant-colonel in the department of the paymaster-general; Jan. 22, 1893, he was promoted assistant paymaster-general, with the rank of colonel; and March 27, 1893, was appointed paymaster-general with the rank of brigadier-general. June 20, 1899, he retired. In 1871 he was a member of the Confederate Congress, and afterward was against the United States. In the following years he saw much hard service on the Western frontier. He was with Gen. Crook in the Black Hills expedition in 1873, and later became chief of scouts in his operations against Sitting Bull, Crazy Horse, and other chiefs. He became known as the author of the military principles of the Black Hills campaign; and insisted on a place in the line in the Indian outbreaks. He was brevetted lieutenant-colonel of volunteers, March 13, 1865, and lieutenant-colonel, United States army, Feb. 27, 1890.

Steinitz, William, chess player, born in Prague, Bohemia, May 14, 1856; died in New York city, Aug. 19, 1895. He was educated in his native city and at the Polytechnic School in Vienna. He early attained distinction as a chess player, and took prizes in tournaments in Vienna in 1859, 1860, and 1861. He went to England in 1862 as the Austrian delegate to an international tournament and won sixth prize, successfully playing and beating the best players. He defeated Anderssen in an individual match, and the same year he took first prize in the handicap tournament of the British Chess Association. In 1870 he won a series from Blackburne, but was in turn defeated by Anderssen by half a game. In the London International Tournament of 1872 he won first prize and championship of the world. At the Vienna International Tournament of 1873 he made the greatest run on record, winning 16 straight games. In 1873 he settled in London, and for a time devoted himself to chess literature. In 1882 he removed to the United States. In 1883 he secured second prize at the London International Tournament; in 1886 he defeated Zukertort in a 10-game match in New York city; and in 1889 he won a best-out-of-20 match with Tschigorin in Havana. From 1885 till 1891 he was editor of the International Chess Magazine. In December, 1890, he played with Gunsberg for the world’s championship, defeating him on the 18th game. In 1894 and again in 1896, he met defeat at the hands of Emanuel Lasker, and from that time his mind began to fail. For a time he was confined in an asylum in Moscow, in which city the second match was held. He published The Modern Chess Instructor (New York, 1889).

Stembel, Roger Nelson, naval officer, born in Milton, Mass., Dec. 27, 1810; died in New York city, Nov. 20, 1900. He was appointed to the United States Naval Academy, March 27, 1832; became passed midshipman, June 23, 1838; promoted lieutenant, Oct. 26, 1843; commander, July 1, 1851; captain, July 25, 1866; commodore, July 13, 1870; and retired, Dec. 27, 1872; he was promoted rear-admiral retired, June 3, 1874. As midshipman he was stationed for a time at the depot of charts and instruments in Washington. From 1839 till 1842 he served on the frigate Brandywine, on the Mediterranean station. As lieutenant he was attached to the Coast Survey for several years. In 1849–50 he served on the German coast, and in 1851–52 on the James River. After the outbreak of the civil war he served in various stations on the Mississippi and at the Naval Asylum. During the civil war he was in active service in the Mississippi flotilla, commanding the gun-boat Lexington, and the Cincinnati; he took part in the engagements at Lucas’s Bend, Belmont, and Perryville. He was brevetted major-general in the United States in 1867, and commanded the naval rendezvous at Boston in 1869, and the northern squadron of the Pacific fleet in 1871 and 1872.

Stillé, Alfred, physician, born in Philadelphia, Pa., Oct. 30, 1813; died there, Sept. 24, 1900. He was graduated at the University of Pennsylvania in 1832, and became a noted authority on the diseases of the alimentary system. The same year he was elected resident physician of the Philadelphia Hospital, but resigned to continue his medical studies in Europe. In 1839 he returned and became resident physician of the Pennsylvania Hospital, serving till 1841. From 1854 till 1859 he was Professor of the Theory and Practice of Medicine in Pennsylvania Medical College; he occupied the same chair in the University of Pennsylvania from 1864 till 1884. From 1865 till 1871 he was also lecturer on clinical medicine in the Philadelphia Hospital. He was active in the formation of the American Medical Association, and was a member of various medical and scientific societies. The L.L.D. degree was conferred upon him by Pennsylvania College in 1876, and by the University of Pennsylvania in 1889. His writings include Epidemic Measles (Philadelphia, 1867); Cholera (1886); Epidemic or Malignant Cholera; Therapeutics and Materia Medica---Elements of General Pathology; Humboldt’s Life and Character; Medical Instruction in the United States; Unity of Medicine; War as an Element of Civilization; and National Dispensatory, with John M.Maisch (1879).

Stockton, John Potter, lawyer, born in Princeton, N. J., Aug. 2, 1820; died in New York city, Jan. 22, 1886. He attended the Union College in 1843, and was admitted to the bar in 1847. Soon afterward he was appointed to revise and simplify the proceedings and practice in the courts of the State, and later he was State re-
porter in chancery. In 1857 he was appointed minister to Rome, and in 1861 he recalled at his own request. In 1865 he was elected United States Senator, but the validity of his election was questioned, and he was unseated, March 27, 1866. In 1869 he was again elected, and he served till 1875. He was appointed Attorney-General of New Jersey in 1877, and was re-elected in 1882, 1887, and 1892. He was a delegate at large to all the Democratic national conventions after 1864. He was also a delegate to the Unionist convention at Philadelphia in 1866. He received the degree of LL. D. from Princeton College in 1882. He published Equity Reports.

Stone, John Marshall, ex-Governor of Mississippi, born in Gibson County, Tenn., April 30, 1830; died in Holly Springs, Miss., March 2, 1900. In 1855 he removed to Mississippi. During the civil war he served in the Confederate army. In the battles around Petersburg he commanded a brigade. After the war he was station agent of the Memphis and Charleston Railroad at Iuka. He was mayor of Iuka and treasurer of Tishomingo County, Mississippi, but was removed from the latter office by military authority. In 1869 he was elected to the State Senate, and he served there continuously till 1876. When Gov. Ames resigned, in March, 1876, he became acting Governor. In November, 1877, he was elected for a full term. In 1884 he was appointed Railroad Commissioner. In 1889 he was again elected Governor, and he served till 1895. At the time of his death he was president of Starkville Agricultural and Mechanical College.

Storrs, Richard Salter, clergyman, born in Braintree, Mass., Aug. 21, 1821; died in Brooklyn, N. Y., June 5, 1900. He was graduated at Amherst College in 1840, taught in Monson Academy and Williston Seminary, and later entered the law office of Rufus Choate. But he gave up the study of law, entered Andover Theological Seminary, and was graduated there in 1845. His first pastorate was in Harvard Congregational Church, Brookline, where he was ordained, Oct. 22, 1845. In 1879 he was called to the Church of the Pilgrims, in Brooklyn, where he was pastor emeritus at the time of his death. He was one of the founders of the Independent in 1848, and remained one of its editors till 1861. From 1871 till 1880 he served on the editorial board of the Independent. In 1873 he made president of the Long Island Historical Society. He was well known as an orator throughout the United States. He was president of the American Board of Commissioners for Foreign Missions in 1887–97. The degree of D.D. was conferred on him by Union College in 1853 and by Harvard in 1869; that of LL. D. by Princeton in 1874, and L. H. D. by Columbia in 1887. His published works include a dozen occasional discourses, sermons, and orations, contributed to Broadway Tabernacle sermons (1860); Introductory Essays to Punchard's View of Congregationalism (Boston, 1860); Kindling (New York, 1856); An Oratory Concerning the Life of Presi- dent Lincoln (1869); Conditions of Success in Preaching (1875); Early American Spirit and the Genesis of it (1875); John Wyckliffe and the First English Bible (1880); Recognition of the Supernatural in Letters and Life (1881); Manliness in the Scholar (1883); The Psalter (1883); The Divine Origin of Christianity (1884); The Prospective Advance of Christian Missions (1885); Forty Years of Pastoral Life (1886); Declaration of Independence (1886); The Broader Range and Outlook of the Modern College Training (1887); The Christian Spirit (1889); and Bernard of Clairvaux (1892).

Strong, William L., merchant, born in Loudonville, Ohio, March 22, 1827; died in New York city, Nov. 2, 1900. He was a dry-goods clerk in Wooster and Mansfield, Ohio, till 1853, when he removed to New York city to engage in similar business. In 1860 he became a member of the firm of Sutton, Strong & Co. The name of the firm was then changed to William L. Strong & Co. Mr. Strong was the organizer of business men's clubs in several presidential campaigns, and in 1882 was an unsuccessful candidate for Congress on the Republican ticket. In 1894 he was elected mayor of New York by a combination of Republicans and Anti-Tammany Democrats, and he served till January, 1898. For portrait, see Annual Cyclopaedia for 1894, page 536.

Stryker, William Seddar, lawyer, born in Trenton, N. J., June 6, 1838; died there, Oct. 29, 1900. He was graduated at Princeton College in 1858. In 1861 he assisted in raising the 14th New Jersey Volunteers, and served as an adjutant general. In 1874 he was brevetted major general. He was admitted to practice at the bar in 1866. He was devoted to historical research, and published Official Register of the Officers and Men of New Jersey in the Revolutionary War (Trenton, 1872); Roster of the New Jersey Volunteers in the Civil War (1872); Washington's Reception by the People of New Jersey (1879); Gen. Maxwell's Brigade of the New Jersey Continental Line (1885); The New Jersey Volunteers (1887); The Affair at Egg Harbor (1894); The Continental Army at the Crossing of the Delaware River (1896), and The Battles of Trenton and Princeton (Boston, 1898). He was a son of George S. Stryker.

Sullivan, Timoleon, born in Cork, Ireland, April 14, 1820; died in Oswego, N. Y., April 21, 1900. About 1850 he removed to Oswego, where he had a shoe store. He was captain of the Oswego Guard thirteen years. When the civil war broke out he was commissioned colonel of the 21st New York Regiment. At the battles of Fort Putnam and South Mountain he was brigadier commander, and he was made brigadier general for gallantry. Later he was detailed on recruiting service. He also served a year as president of the examining board of the 1st Army Corps.

Tasker, Stephen P. M., mechanical engineer, born in Philadelphia, Pa., Dec. 21, 1834; died there, March 10, 1900. In early years he practiced in the pattern shop and drawing room of the firm of which his father was a member, and at the age of twenty-one he was taken into partnership. Under his supervision the Newcastle Iron Works were constructed. He perfected and patented several important mechanical inventions. He was mayor of Motley, N. J., in 1846, and of Kingston, Jamaica, in 1821; died there, June 15, 1900. He made his first appearance at the age of eleven with a company that visited his native place. A few years later he went to New York and secured an engagement under the name of Tavares Mor-
ton. He was for several years a useful member
of stock companies in the United States and Can-
ada. In 1870 he went to Nashville, where he was
placed in charge of the Players of the Chambers
Street Theater. During the civil war he was a
member of Harry Crisp's company in the South.
In 1870 he went to London, where he played at
Sadler's Wells Theater. During this engagement
he resumed the use of his real name. From London
he went to Australia, where for ten years he was a
successful actor and manager. His last appear-
ance was in Kingston, where a few months before
his death he played Shylock.

Taylor, George Yardley, a missionary of the
Presbyterian Board, born in Taylorsville, Pa., May
18, 1802; killed in Paoting-Fu, Chi-Li province,
China, June 30, 1867, was graduated from
Princeton in 1834. He served as a sea-captain for
many years on the China seas, and was finally
commissioned a lieutenant in the service of the
Chinese government in the year 1866. He was
promoted to the rank of captain in 1862, and
finally to the rank of commodore in 1867. He
was a man of knowledge and ability, and was a
great favorite with all his foreign associates.

Tomlinson, Jonathan, lawyer, born in Culpeper
County, Virginia, June 9, 1809; died in Terre
Haute, Ind., Feb. 9, 1900. In 1831 he re-
cruited in the 1st Indiana Volunteers, and was
appointed a clerk in a store. Later he went to
Lawrence County, Indiana, where he was admitted
to the bar in 1834. The same year he was elected
to the Legislature, serving two terms. In 1836 he
was elected to the State Senate. In 1840 he was
an election on the Harrison and Tyler ticket, and
in 1844 as a candidate for Congress. In 1847 he
began the practice of law in Terre Haute. In 1847
he was again elected to Congress. He was appointed
minister to Austria in 1849, and later President
Fillmore appointed him general solicitor of the
Land Office, but he declined both places. During
the civil war he was in charge of a recruiting
post near Terre Haute, and was provost marshal
of the City of Lafayette. He was appointed a
collector of the Fifth Indiana Circuit, serving two
years. He was also for one term collector of internal
revenue. In 1877 he became Secretary of the
Navy, but he retired in 1881, before the expiration
of his term of office, to become chairman of the
American committee of the Panama Canal Com-
pany. He wrote The Complete History of the
Protective Power (New York, 1877); The History of
the Protective Tariff (Chicago, 1888); Footprints of
the Jesuits (New York and Boston, 1894); and
Recollections of Sixteen Presidents, from Washing-
ton to Lincoln (2 vols., Indianapolis, 1894).

Tower, Zealous Bates, soldier, born in Cohas-
sac, Mass., Jan. 19, 1819; died at his home March 21,
1900. He was graduated at West Point in 1841,
and entered the engineer corps as second lieuten-
ant; was promoted first lieutenant, April 24, 1847;
captain, July 1, 1855; major, Aug. 6, 1861; lieu-
tenant colonel, Nov. 11, 1863; colonel, Jan. 13,
1874; and retired, Jan. 10, 1885. In the volunteer
service of the Civil War he served in the
Massachusetts Seventeenth Volunteers, which
he entered, Nov. 23, 1861; brevetted major general,
June 12, 1863; and mustered out, Jan. 15, 1866.
From 1843 till 1846 he was engaged in the construc-
tion of the defenses about Hampton Roads. As
deutenant he served with a battalion of engineers in the
Mexican War, and was recommended for gallantry at
Cerro Gordo, Contreras, and Chapultepec. From
1848 till 1861 he was employed in the construction
of defenses on the Pacific coast. During the civil
war he conducted the defense of Fort Pickens, Florida,
Nov. 23, 1861, took part in the first battle of
Bull Run, and also participated in the cam-
paigns of Generals Banks and Pope in northern Vir-
ginia. He was seriously wounded at Chantilly, and
received a wound that incapacitated him for duty
at the front, and he was brevetted major general
for gallantry in that action. For a while in 1864
he was superintendent at West Point. He again
went to the front, and took part in the battle of
Gibson's Hill; after the war he was on duty in
the regular army, for a time in the West and
later in New York.

Tyler, Moses Colt, author and clergyman, born in
Griswold, Conn., Aug. 2, 1835; died in Ithaca,
N. Y., Dec. 28, 1900. He was graduated at Yale
University in 1857, and studied theology at Yale
and at Andover. He was president of the First
Congregational Society, in Poultikeepsie, N. Y., in
1860-'62, and Professor of English in the Univer-
sity of Michigan in 1867-'81. In 1881 he was
ordained deacon in the Episcopal Church, and
two years later was admitted to priest's orders.
He, however, never took up parochial duties, his
time and energy being devoted up to 1887 to literary
work. On leaving the University of Michigan he
became Professor of American History at Cornell Univer-
sity, and he occupied that chair at the time of
his death. The character of his work closely al-
lied him to the best type of English clerical schol-
ars. He had planned a complete history of Amer-
ican literature on a broad scale, but he published only the
first seven volumes. His writing displays great charm of style, his
admirable English being adorned with both wit and
humor. His literary judgments are well
weighted, while his fine sense of literary perspective
is almost never at fault. His published books in-
could be: The Brantville Papers (Boston, 1867); His-
tory of American Literature in the Nineteenth Period (1878; revised, 1890); Manual of English
Literature (1879); Life of Patrick Henry (1887); Three Men of Letters (1895); The Literary History
of the American Revolution (1897); and Glimpses
of England: Social, Political, and Literary (1898).

Van Lew, Elizabeth, postmistress and depart-
ment clerk, born in Frederick County, Virginia,
May 19, 1846, resided briefly in the City of
Washington, where she was postmistress from
1872; she was postmistress of Richmond by President Grant, and
she was reappointed four years later, and held the
office till May 19, 1877. In 1883 she was appointed
to a clerkship in the third assistant postmaster
generals' department, which she held till 1887,
when she resigned rather than accept a reduction
to an inferior clerkship.

Villard, Henry, financier, born in Speyer,
Rhenish Bavaria, April 11, 1835; died in Dobbs
Ferry, N. Y., Nov. 11, 1900. He came to the
United States in 1859, after studying in the schools
of Bonn, Heidelberg, and Freiburg. His full
name was Heinrich Hilgard, his father being Gus-
tav Hilgard, a judge of the Supreme Court in
Munich. The father's opposition to his son's de-
parture caused the latter to adopt the surname of a
French schoolmate, and he became Henry Vil-
ard. He spent the winter of 1854-55 on an
uncle's farm in Belleville, Ill., where he contributed
to the local papers. He next read law in Peoria,
and then went to Chicago, where he became a
newspaper correspondent. In 1858 he reported the
Lincoln-Douglas debate for Eastern newspapers.
In 1860 he attended the convention that nomi-
nated Abraham Lincoln, and in the campaign that
President Lincoln won he served as a correspondent
for the New York Herald. During the civil war he achieved a wide
reputation as a war correspondent, and for a time
he conducted a correspondent's bureau in Wash-
OBITUARIES, AMERICAN. (Vincent—Warner.)

Walworth, Clarence Alphonsus, clergyman, born in Plattsburg, N. Y., May 30, 1820; died in Albany, N. Y., Sept. 19, 1900. He was the eldest son of Chancellor Walworth, and was graduated at Union College in 1838. After studying law he practiced his profession in Rochester a few years, and then entered the General and the Episcopal work in New York city, but before completing his studies he became a Roman Catholic and entered the order of Redemptorists. He studied for the priesthood in Belgium, and then, after two years of church work in England, he returned to the United States. With Father Hecker and others he founded the publican work in New York. He was subsequently transferred to the secular priesthood, and after serving for a short time as pastor of Saint Peter's Church, Troy, N. Y., assumed in 1868 the charge of Saint Mary's Church, Albany, and was its pastor at the time of his death. He was active in the temperance cause, was a practical geologist, and was especially well versed in the study of geology. He published The Gentle Skeptic, The Doctrine of Hell, and Antidiotocrate (1888).

Warner, Charles Dudley, author, born in Plainfield, Mass., Sept. 12, 1829; died in Hartford, Conn., Oct. 20, 1900. His father, Justus Warner, who was of Puritan stock, died while Charles was a child. A Book of Eloquence, culture, died when Charles was four years of age. Charles inherited his father's taste for literature, but in his early boyhood he had access only to the visions and tracts, bi- nomic tracts, biblical commentaries, and the biographies of austere divines. At the age of twelve he became a member of his uncle's household at Cazenovia, upstate New York, and there he pursued his classical studies until he entered Hamilton College, Clinton, N. Y., at which institution he was graduated in 1851, having won the first prize in English. While an undergraduate he had contributed to The Knickerbocker and Putnam's Magazine. Shortly after leaving college he wrote A Book of Eloquence, a compilation for the use of school children, which displayed his keen critical judgment. Although his inclinations were toward a literary career, he spent a year, 1853-54, with a surveying party on the Missouri frontier. On his return to the East he entered the law school of the University of Pennsylvania, and in 1856, and began the practice of his profession in Chicago. He married in that year Susan, daughter of William Eliot Lee, of New York, who survives him. In 1860, at the solicitation of Gen. Joseph R. Hawley, who had known him at school and college, Mr. Warner took up his residence in Hartford, Conn., to aid in the publication of the Courant, a Republican evening newspaper. When Gen. Hawley went to the front in the following year Mr. Warner assumed control of the paper. In 1867 the press was consolidated with the Courant, a morning journal, of which Mr. Warner became part owner. He had traveled extensively in Europe, and was noted as a writer of travel. He never returned to the United States on sick leave.

Wallace, Robert B., soldier, born in Illinois; died at Fort Huachuca, Arizona, March 13, 1900. He was graduated at West Point, June 12, 1890, and assigned to the 2d Cavalry as second lieutenant; promoted first lieutenant, Jan. 4, 1897. In the war with Spain he assisted in the organization of the 1st Montana Volunteers, was commissioned lieutenant colonel of that regiment, and accompanied it to the Philippines. He was severely wounded in the action at Caloocan, Feb. 10, 1899. He was made brevet colonel of volunteers and brevet captain and major, United States army, for services at the battles in front of Manila, Feb. 5 and 6, and at the battle of the Victoria Grande de la Pampagna, April 27, 1899. Later he was appointed colonel of the 37th Regiment, United States Volunteer Infantry, which he commanded till Sept. 25, 1899, when he was compelled to return to the United States on sick leave.

Vincent, James, actor, born in Dublin, Ireland, in 1846; died in Brooklyn, N. Y., Aug. 12, 1900. He made his first appearance at the old Olympic Theater, New York, Jan. 21, 1870, and became a member of several years of the vaudeville company which occupied that house. June 6, 1879, at the Lyceum Theater, New York, he began a long engagement with Rice's Evangeline, in which he played King Boorobola Gal. Oct. 12, 1880, he began an engagement with Henry Jarrett's company at the Orpheum Theater, New York. In the season of 1884-85 he was a member of H. C. Miner's King company. From 1886 to 1890 he supported Pat Rooney in the latter's plays, and for the later years he was a member of Andrew Mack's company. His last appearance was in the rôle of Andy McCue in The Provincetown Boy.
of his life in wanderings through the United States, Mexico, Europe, and the Orient, and his keenness of observation and his present humor will give his books of travel a permanent place in their class. My Summer in a Garden, the book that first brought fame to Mr. Warner, appeared in 1870. It was made up of a series of papers that had appeared in the Courant, and the reputation that he had already won from his My Summer in a Garden and Backlog Studies, published in 1872, brought Mr. Warner's a man of letters. For many years he conducted the Editor's Drawer, a department of the magazine, and was for a time in charge of the Editor's Study. Several of his books were published serially in the magazine, and he was a frequent contributor of essays, sketches, and poems. Mr. Warner's was a man of letters, his poems of life's joys and sorrows being more numerous than is usual with the professional man of letters. The late George William Curtis, referring to American authors, asks: "Shall they be sated with life being more numerous than is usual with the professional man of letters. The education of the Southern negro and the reform of abuses in our prisons were incentives to much of the activity of his latter years. The reader of Mr. Warner's, a man of the people, will find in the author's common sense, a misnamed quality that served him well in his untiring endeavors as a social scientist. Bookish and scholarly although he was, he was also a practical man of affairs, as is proved by the many places of honor and trust that he occupied. Mr. Warner was a man of letters, a man of the people, and a man of principle. He was a member of the Park Board of Hartford, Conn., one of the Connecticut Commission on Sculpture, and a trustee of the Wadsworth Atheneum. He was a member of the Century, the Authors', and the Players' Clubs of New York, the Authors' and the Tavern Clubs of Boston, and the New York Library Association. He was a vice-president of the National Prison Congress, and president of the American Social Science Association. He received the degree of A.M. from Yale in 1872, and from Dartmouth and Hamilton in 1884. Hamilton gave him the degree of B.L. in 1886, and Princeton conferred the degree of D.C.L. from the University of the South in 1889. The list of Mr. Warner's published works is as follows: A Book of Eloquence (1853); My Summer in a Garden (1870); Saunterings (1872); Backlog Studies (1872); The Gilded Age (with S. C. Clemens, 1873); Baddeck, and That Sort of Thing (1874); Mummies and Moslems (1876); reissued under the title My Winter on the Nile; In the Levant (1877); Being a Boy (1877); In the Wilderness (1878); The American Newspaper (1879); Studies of Irving (with W. C. Bryant and George F. Putnam, 1880); Life of Washington Irving (1881); edited American Men of Letters (1882); and published the following: Captain John Smith. Sometime Governor of Virginia and Admiral of New England: A Study of His Life and Writings (1881); A Roundabout Journey (1883); Papers on Penology (with others; Reformatory Press, Elmira, N. Y., 1880); Their Pilgrimage (1886); On Horseback: A Tour through Virginia, New York, and Tennessee, Published with Notes of Travel in Mexico and California (1888); Studies in the South and West, with Comments on Canada (1889); A Little Journey in the World: A Novel (1889); Looking Forward: The Dual Government Realized (1890); Our Italy, Southern California (1890); As We Were Saying (1891); Washington Irving (1892); The Work of Washington Irving (1893); As We Go (1893); The Golden House: A Novel (1894); The Relation of Literature to Life (1896); and The People for Whom Shakespeare Wrote (1897). He edited A Library of the World's Best Literature (1896–98).

Watson, James Madison, author, born in Onondaga Hill, N. Y., Feb. 8, 1827; died in Elizabeth, N. J., Sept. 29, 1900. At the age of sixteen he was teaching in a district school in Oswego County, New York. He gave up teaching to study law, and in 1833 was admitted to the bar at Albany, N. Y. Later he became connected with the publishing house of A. S. Barnes and Company. He was the author of many of their school-textbooks. Among his published works are a notable series of readers, with Richard Green Parker (1883); The Complete Speller (1878); Handbook of Calisthenics and Gymnastics (1879); and The Graphic Speller (1884).

Wells, Henry Horatio, lawyer, born in Rochester, N. Y., Sept. 17, 1823; died in Palmyra, N. Y., Feb. 12, 1900. He was educated at Rome Academy, Michigan, studied law in Detroit, and was admitted to the bar in 1846. From 1854 till 1856 he was a member of the Michigan Legislature. In September, 1862, he became colonel of the 26th Michigan Regiment, and in February, 1863, was made provost marshal general of the defenses south of the Potomac, which office he held till the close of the war. In May, 1865, he was brevetted brigadier general of volunteers. After the assassination of President Lincoln he took part in the investigation that preceded the capture of the conspirators, and was one of the special counsel of the impeachment proceedings against Jefferson Davis for treason. Late in 1865 he settled in Richmond, and, April 16, 1868, was appointed Provisional Governor of Virginia. In 1869 he was defeated as the Republican candidate for Governor of the State under its new Constitution. In 1871–72 he was United States attorney for the District of Virginia, and from 1875 till 1880 was United States attorney for the District of Columbia.

Westlake, William, inventor, born in Cornwall, England, in 1831; died in Brooklyn, N. Y., Dec. 28, 1900. He came to the United States in 1847, and worked as a roller boy in the office of The Evening Wisconsin, Milwaukee. Later he served an apprenticeship as a tinsmith. He was employed by Capt. Ericsson to make the patterns and models for his first hot-air engine. Later he entered the employ of the La Crosse and Milwaukee Railroad Company, and there began the series of inventions that made him famous. These include the Westlake car heater, which damps the fire in case of accident; the globe lantern, patented in 1862; the oil cook stove in 1863; and the stove board in 1869. The first practical car lamp was perfected by him in 1873. He retired with a competency in 1883, from which time he lived in Brooklyn; while in retirement he invented several articles of general utility.

Willey, Waitman T., lawyer, born in Monogalia County, West Virginia, Oct. 18, 1811; died in Morgantown, W. Va., May 2, 1900. He was graduated at Madison College in 1831, and was
admitted to the bar in 1833. In 1841 he was made clerk of the county court of Monongalia County, and later clerk of the circuit court. In 1850 he was a member of the Virginia Constitutional Convention. He was a delegate to the State convention that met in Richmond in February, 1861, and after the adoption of the ordinance of seces-
sion, he was elected to the Unionist Legislature at Wheeling. He was a member of the convention that decided to create the State of West Virginia, and was chosen to represent, that State in the United States Senate, taking his seat Dec. 3, 1863; in the following year he was re-elected. He served on the Committees on Naval Affairs and the District of Columbia, and, in Enrolled Bills, and was chairman of the Committee on Patents and the Patent Of-

**Wilson, George Washington**, lawyer, born in Preble County, Ohio, Sept. 13, 1843; died in Washington, D. C., Nov. 27, 1900. He enlisted as a private in the 54th Ohio Volunteers in 1861, served through the war, and was mustered out as first lieutenant. In 1866 he was admitted to the bar and began practice as prosecuting attorney of Madison County, one term in the lower house of the Ohio Legislature, and one in the State Senate. From 1869 till his death he was engaged in the internal revenue serv-

**Wilson, John Wall**, naval officer, born in 1832; died in Brooklyn, N. Y., Aug. 21, 1900. He was graduated at Annapolis and entered the navy. In 1853 he joined the Kane arctic expedi-

**Wilkerson, Richard Hooker**, clergyman, born in Alexandria, Va., March 15, 1816; died in Spring Hill, Ala., June 14, 1900. He was gradu-

**Wing, Josiah Norris**, librarian, born in Bed-

**Wixg.** (Williams—Wing).
the place of assistant librarian, and where he spent thirteen years. At the end of that time he entered the house of C. S. Williams, as an expert at the head of the library department. Here he carried on an extensive system of correspondence with the managers of small libraries in all parts of the country, who constantly sought his advice as to the choice and purchase of books. His knowledge of books was extensive, intimate, and accurate, not of the titles only, but of the character and contents as well, and of their rank as authorities. On one occasion the proprietor of a large publishing house consulted him about the best books on a certain subject, but neither he nor any of his clerks could tell what they were or where they were to be had. Mr. Wing immediately gave the titles of the books required, and added, "You published them yourself, in such and such a year, mentioning the exact dates. In May, 1872, he was appointed chairman of the Circulating Libraries of New York city. He was a founder of the Booksellers' League, and was active in the work of the Good Government clubs and the Citizens' Union. He lived and died in the house that was the home of Mrs. Parton (Fanny Fern) in her last years.

Wingard, Henry S., theologian, born in 1844; died in Springfield, Ga., Dec. 1, 1899. He was educated at Newberry, S. C., and labored for many years in various Lutheran parishes in South Carolina and Georgia. Newberry College conferred on him the degree of D.D. He was a contributor to the Church periodicals and held a place in the circle which he belonged to. At the time of his death he was vice-president of the United Synod of the South and president of the Board of Directors of the Lutheran Theological Seminary at Mount Pleasant, Charleston, S. C.

Wise, Isaac Mayer, rabbi, born in Steinaub, Bohemia, in 1865; lived in Cincinnati, Ohio, March 26, 1900. He was graduated at the University of Prague and at the Jewish Theological Seminary there, and took charge of a congregation in Radnitz, Bohemia. He came to the United States in 1846. His first charge was the Congregation Beth El, at Albany, N. Y. He also opened a school in that city for the purpose of Americanizing the Jews. He attempted to reform Judaism, and, on account of his utterances, was compelled by the orthodox element to withdraw from his Albany charge. He then founded an independent congregation. In April, 1854, he removed to Cincinnati to take charge of the Congregation B'nai Jeshurun, which place he held until his death. In July, 1854, he established the Israelite, now called the American Israelite, a weekly paper, and in 1855 Die Deborah, a German weekly. In 1873 he was largely instrumental in the organization of the Union of American Hebrew Congregations. He established the Hebrew Union College, from which the first graduation was given in 1883. After many vain efforts to establish a synod, he finally succeeded in 1889 in organizing the Central Conference of American Rabbis, which meets annually. He served six years on the Cincinnati school board. His published works include Combat of the People; First of the McChesneys; History of the Jews of the First Commonwealth; Essence of Judaism (1860); Hebrew Hymn Book and Book of Hymns (1868); Origin of Christianity (1870); Judaism, its Doctrines and Duties (1872); The Martyrdom of Jesus of Nazareth (1874); The Cosmic God (1876); The History of the Hebrews (Second Commonwealth (1880); Moses, the Man, and the Statesman (1883); Judaism and Christianity: Their Agreements and Disagreements (1883); A Defense of Judaism versus Proselytizing Christianity (1889); and Pronaos to Holy Writ (1891).

Wittenmyer, Annie (Turner), reformer, born in Sandy Springs, Ohio, Aug. 26, 1827; died in Saranota, Fla., Feb. 21, 1900. She was the daughter of John G. Turner, and in 1847 married William Wittenmyer. In 1850 she removed to Keokuk, Iowa, where she engaged in charity work and opened a free school. When the civil war broke out she became Iowa's volunteer agent to distribute supplies, and she was the first sani-
and led an adventurous life till he finally settled in business in New York city. In a few years he accumulated a fortune. In the presidential campaign of 1860 he bought the New York Daily News, and used it in support of Stephen A. Douglas. Mr. Wood was elected to Congress in 1860 and 1862. He was what was described in the correspondents' hand, and as such was offensive to the Union men. The issue of the Daily News was suppressed by the Federal authorities from December, 1861, till May, 1863. In 1866 he was elected to the New York State Senate. In 1869 he was again elected to Congress. In April, 1867, he closed the Daily News; from a mine he began to excavate, evened the New York Daily News, and in 1872 the German Sunday News. These papers had a long career of prosperity. In November, 1898, he sold his stock to his wife, but continued to perform the duties of editor in chief till a week before his death.

**Young, Alfred**, clergyman, born in Bristol, England, in 1831; died in New York city, April 4, 1900. He was graduated at Princeton College in 1848, and at the medical department of the University of New York in 1852. In 1850 he embraced the Roman Catholic faith. He practised medicine for a year, and in 1853 went to Paris, where he studied for the priesthood at the Seminary of St. Louis. He was assistant priest in St. Patrick's Cathedral, Newark, N. J., Aug. 24, 1856. In 1857 he was vice-president of Seton Hall College; he was afterward rector of the Roman Catholic Church at Princeton, and later at Trenton. In 1861 he was received as a member of the newly founded Paulist community, and became a great soul, rich in grace, and composed many devotional hymns; he was enthusiastic in restoring the Gregorian chant for the entire services of the Roman Catholic Church, and trained a choir of men and boys to render it in the Church of St. Paul the Apostle in New York city. He was the author of The Complete Solidarity Hymn Book (New York, 1863); The Office of Vespers (1869); The Catholic Hymnal (1884); Carols for a Merry Christmas and a Joyous Easter (2 vols., 1885-86); Catholic Hymns and Canticles (1888); and Catholic and Protestant Countries Compared (1893).

**OBITUARIES, FOREIGN.** Acland, Sir Horatio. English statesman. Born in the Isle of Wight. Died in Oxford, Oct. 16, 1900. He was a younger son of a baronet of ancient family, and was sent to Harrow and Christ Church, Oxford, where he took the degree of doctor of medicine in 1840. He was elected a fellow of All Souls, was reader in anatomy at Christ Church from 1845 to 1854, and in conjunction with Prof. Beale gathered the collection of physiological studies that now forms part of the university museum which he and Dean Liddell brought into existence. When the School of Natural Science was founded he was chosen an examiner, an easy office until the study of science took root in Oxford. In 1837 he succeeded Dr. Oglesby in the medical professorships of the university, the clinical and the regius. He was also Radcliffe librarian and curator of the Bodleian Library and of the university galleries, being himself an artist. As an expert in sanitary science he was appointed a member of the Royal Sanitary Commission in 1809, having previously worked in the Public Space of the British Medical Association, the Social Science Congress, and the British Association he took a prominent part. He accompanied the Prince of Wales on his visit to America, and was president of the General Medical Council in 1874-87. He published a tract on Village Health, and contributed many articles to the press on hygienic and sanitary questions. He took an active interest in sending female physicians to India, in the public health of Egypt, and in medical missions in Asia and Africa.

**Adenis de Colombeau, Jules**, a French dramatist and actor. Born in Paris, June 28, 1823; died there Jan. 10, 1900. He was educated at the Collège Bourbon, and entered upon a mercantile career, which he soon abandoned for dramatic writing. His first work was a piece in one act, Le Fils du Bonneter, played at the Théâtre Comté, Paris, in 1841. He wrote generally in collaboration with others, and in 1853 he was one of the founders of the newspaper L'Orageuse, first played at the Vaudeville, Paris, Sept. 18, 1852; Ne Touchez pas à la Hauche, Folies-Dramatiques, April 15, 1854; Or le Meilleur des Pères, Variétés, June 23, 1854; Philanthropie et Repentir, Variétés, April 25, 1855; Trop Beau pour Rien Faire, Bouffes, Feb. 9, 1856; Une Famille Au Danube, and a number of other plays. Acland—Ahmed ben Musa.)

**Ahmed ben Musa.** Grand Vizier of Morocco, died May 13, 1900. His father was a Grand Vizier, and he himself in the reign of Mulai el Hassan I. He held the commission Loutif. Lord Street, and El Haj Amaati was Vizier. He had freer access to the Sultan at all times than the Vizier. When the Sultan died while on an expedition against revolted tribes, he and a few slaves knew of the death, and he brought the corpse back to the coast in a closed palanquin, issuing orders to the
army in the Sultan’s name as though he were still alive and sending messengers ahead with sealed letters containing directions in accordance with which Mulai Abdul Aziz (a hoy of fourteen) was proclaimed Sultan at Rabat. The Grand Vizier and his brother, the Minister of War, and the high court officials who were their creatures were cast into dungeons before the new Sultan reached Fez, and their property was confiscated. Sri Ahmed had himself proclaims Grand Vizier to fill the chief offices with members of his own family, and till the day of his death was the ruler of Morocco, a masterful and cruel ruler, who kept the wild tribes in order with an iron hand. The Kalilamas were exterminated, an army was quartered on the semi-independent trôses of Sus, and the peace, such as it was, was pointed out to the Sultan Abdul Aziz. He achieved a reputation as a military writer by publishing a history of the Turkish military system. In the Russo-Turkish War of 1877 he had charge of the fortification of Shumla, and on receiving promotion to lieutenant colonel was made chief of staff at the Vizier. He was a member of the Frontier Delimitation Commission, and was raised to the grade of brigadier general in 1884, and was appointed Turkish plenipotentiary to Montenegro, where he remained over four years and contributed a great deal to the improvement of relations with the principality. He was re-appointed to take the post of a military inspector. When the Abdul Medjin was killed he was appointed chief of staff to the troops dispatched to the island, and was made Provisional Governor of Crete. He succeeded in re-establishing order, and was made Mushir in 1890. From this post he was called by the Sultan in September, 1891, to the office of Grand Vizier. His vizierate lasted till June, 1895. He was rewarded with the title of Pasha, a high rank, and an admirable diplomatist. He failed, however, to prevent the interference of the powers in the Armenian question, and when they had presented their demands for radical reforms he was unable to induce the Sultan to yield. The murder of the English and Russian consuls by Bedouins near Jeddah in 1891, he took the view that it was necessary, and he gave up his post to Said Pasha. When in 1897, the last Cretan insurrection broke out he was again appointed to command the Turkish troops in Crete, but was restrained from putting down the rebellion by the intervening powers. Later he commanded a corps in Damascus.

Albert, John, a German violinist, born in Kiel, June 24, 1809; died in Philadelphia, Pa., Jan. 2, 1900. He was in his early years a violinist and organist of high repute among European concert performers. His fondness for mechanics led him eventually to become a maker of violins, and gave him the name of the American Stradivarius. He came to the United States at the time of the civil war, and discovered by accident that certain American woods are the best in the world for violins. He settled in Philadelphia, where he remained until his death. His instruments are much prized.

Altheus, Julius, an English neurologist, born in Detmold, Germany, in 1833; died in London, England, June 11, 1900. He was the son of a clergyman of the Reformed Church, was sent to the University of Bonn, and subsequently studied medicine at Göttingen, Heidelberg, and Berlin. He settled in London, adopting the treatment of nervous diseases as his specialty, and becoming in 1860 a member of the Royal College of Physicians. In 1866 he founded the Regent’s Park Hospital for Epilepsy and Paralysis. He was the acknowledged authority in England on the use of electricity in medical treatment, and his name as a neurologist was world-wide. He wrote extensively on professional subjects, many of his books being translated into French, German, and Italian. A partial list of his writings includes The Spas of Europe (London, 1872); The Value of Galvanism in the Treatment of Paralysis, Neuralgia, and other Affections (3d ed., 1864); Epilepsy, Hysteria, and Ataxy (1866); Electrolytic Treatment of Nervous Diseases (1867); Galvanism and Electro-magnetism in Medical Surgery (1868); Treatise on Medical Electricity (1869); Diseases of the Nervous System (1877); Infantile Paralysis and some Allied Diseases of the Spinal Cord (1878); The Functions of the Brain (1880); Sclerosis of the Spinal Cord (1884); The Effects of Electricity (1887); Failure of Brain Power (6th ed., 1898); The Value of Electrical Treatment (1895); Influenza.

Anderson, John, a Scottish scientist, born in Edinburgh, Oct. 4, 1833; died in Buxton, England, in August, 1880. He was educated at Edinburgh University, and took his degree of M.D. in 1861, and winning a gold medal for his thesis Observations on Zoology. He was Professor of Natural Science at the Free Church College, 1863-'64, and Professor of Comparative Anatomy in the Medical College, Calcutta, 1864-'86. He twice accompanied expeditions to western China in a capacity as a zoologist, and in 1881 was sent to investigate the marine zoology of the Mergui Archipelago. He retired from the Government service in India in 1887. His published works embrace A Report on the Expedition to Western China via Bhami (1871); Mandalay to Momien; Anatomical and Zoological Researches (1878); Catalogue of the Mammalia in the Indian Museum (1879); Handbook to the Archeological Collection of the Indian Museum (1881-'82); Fauna of Mergui and its Archipelago (1888); English Intercourse with Siam in the Seventeenth Century (1890); Herpetology of Arabia (1890); and Zoology of Egypt, Part First, Reptilia and Amphibia (1893).

Argyll, George Douglas Campbell, Duke of, born April 30, 1823; died at Inverary Castle, April 24, 1900. His father, the seventh duke, who succeeded his elder brother, took his seat in the House of Lords as a Moderate Conservative supporter of Sir Robert Peel, breaking with the tradition of the Campbells, for MacCallum More, the chief of the clan, had till then been party chief of the Scottish Whigs also. Without the training of the public school or a university education, but well read and with many intellectual accomplishments and a strong bent for dialectics, he came out in 1840 as a member of the Church of England in its contest with the civil power by printing a pamphlet entitled A Letter to the Peers by a Peer's Son, in 1842, followed by others in which he developed a vigorous controversial style, and
OBITUARIES, FOREIGN. (Argyll)

evined thus his proud independence of character by taking a ground opposed to the opinions of his family. The very title of the first pamphlet revealed as the author Lord Lorne, the heir of the Campbells. His stand led him to become a communicant for a season of the Episcopal Church, because he disapproved of disruption, and would not follow his friends into the Free Kirk that they founded. A Presbyterian he was, however, by nature as much as by birth and environment, and he returned to the Reformed party, and drifted into the Church of Scotland, sharing the Bishop of Glasgow upon his head by his arraignment of the Scotch Episcopalians of the Stuart period in a book called Presbytery Examined. He succeeded to the titles and estates of the main branch of the Campbells on the death of his father, in 1848. On taking his seat in the House of Lords, he gave an independent support to Lord John Russell, and gradually renewed the connection of his family with the Whigs. His first speech was in support of the bill removing Jewish disabilities. He spoke frequently on Scotch subjects, and on ecclesiastical questions he engaged in spirited arguments with Bishop Wilberforce. When Mr. Palmerston formed his coalition ministry in 1852 the Duke of Argyll, connected as he was with both parties, was admitted at once into the Cabinet as Lord Privy Seal. When the Aberdeen ministry was disrupted on the question of war with Russia, and resigned on Feb. 8, 1855, the Duke of Argyll gave his support to Lord Palm- erston and adhered to him after the desertion of the Peers. Only Mr. Gladstone sharing the latter's sympathies for the Christians of Turkey, but convinced that Russia threatened Great Britain's power and prestige in the East. In the Palmerston Cabinet he exchanged his office for that of Postmaster-General at the end of 1855. In those stirring times of war and international politics, he had no opportunity to show his administrative ability. Lord Palmerston gave way to Lord Derby on Feb. 22, 1858, and came in again on June 17, 1859. In his second Cabinet the Duke of Argyll resumed the office of Lord Privy Seal, which he held until the fall of Lord John Russell's Cabinet on the reform question in 1866. He was the most steadfast and sagacious debater in the upper house, not hesitating to measure swords with Lord Derby. He delighted in public controversy at all times, and had a vast fund of knowledge on the most various subjects, from which he forged arguments wherewith to meet the champions in every field; Bishop Wilberforce, Lord Derby, Mr. Gladstone, Mr. Disraeli, Prof. Huxley, Herbert Spencer—all these and many others he challenged on their own ground, his armory that of a keen and polished controversialist, his spirit that of a Highland chieftain. His earnest and independent convictions he would never suppress for reasons of expediency or allow to be hedged in by social or party trammels. He had been long before the civil war broke out in the United States on terms of friendship with Emerson, Charles Sumner, Harriet Beecher Stowe, and other opponents of slavery, and when the South seceded he stood almost alone among the British aristocracy and quite alone in the Cabinet in his consistent and consistent sympathy and support of the Unionist cause. He was the only other member of the Cabinet who approved the Foreign Secretary's demand that the Alabama should be held if she re-entered a British port. His logical mind acquired in the justice of the Geneva award, against which all England murmured. His opinions on the American question made him popular with the advanced Liberals; not so his views regarding Indian policy, which he expounded in 1865 in a book on India under Dalhousie and Canning, defending Lord Dal- houise's annexations, to which as a member of the Cabinet he had indubitably assented. His imperialistic bias won him the position of Head of State for India in the Cabinet constituted by Mr. Gladstone on Dec. 9, 1868, which lasted till Feb. 21, 1874. When in opposition again he took sides with the Conservatives and against Mr. Glad- stone on the Scotch patronage bill, but in 1876 he compromised with Mr. Gladstone in the question of the Newlyn treaty, and took up the cry of Bulgarian atrocities as soon as it was raised by Mr. Gladstone. From the beginning of the Afghan complications in 1878 he assailed the Government not only in Parlia- ment, but in the press, and his polemics contributed to the defeat of the Conservatives after the dissolution of Parliament. He became Lord Privy Seal in Mr. Gladstone's second Cabinet, constituted on April 28, 1880. His resolute atti- tude on the Irish land question had considerable effect on the subsequent history of English par- ties. He accepted the compensation for disturb- ance bill as a temporary charitable measure, but spoke against a measure raised to fix rents, and when the land bill was adopted by the Cabinet in the spring of 1881 he resigned, and became the most severe and ingenious critic of the Irish policy of the leader with whom he had been connected by the closest political ties for thirty years. In 1884 he gave a qualified support to the Gladstone Government on the question of Parliamentary reform, and he approved the negoti- ations with Russia. When Irish home rule was espoused by Mr. Gladstone in 1886 the Duke of Argyll was one of the most active and formidable antagonists of the Liberal policy, although he kept his seat as an independent on the cross benches in the House of Lords. When the Union- isis defeated in Parliament in 1892, he supported the general policy of Lord Salisbury's Government, and gave a hearty approval to Mr. Balfour's Irish administration. In 1887 he moved a vote of confidence in the Irish policy of the Government, and as none of the Liberal peers cared to answer the irresponsible utterances of his former associate it was passed without a dissentient voice. The chamber of which Mr. Gladstone widened after the latter's return to office in 1892. He denounced the home rule bill of 1893 as unsparingly as he had that of 1880. His hostility toward the Irish agrarians grew in- tensestly bitter when Mr. Davitt and his Scotch disci- plines attempted to apply the principles of Irish land legislation in Scotland for the benefit of the crofters on the islands and in the Highlands and thus affect his own great estates. In the begin- ning of 1895 when he was assisting Lord Rose- berry's plan of mending or ending the House of Lords on a public platform he was seized with symptoms of heart failure, which warned him to cast off the old man. His death was in the controversy. His last prominent act in public life was to move the rejection of the deceased wife's sister bill in 1896. The Duke of Argyll sat as an English peer with the unfamiliar title of Baron Sundridge until he was created a peer of the United Kingdom in 1892. His long and continuous political career cannot be classed as a claim to distinction. His broad and many-sided mind and his trenchant and vigorous style earned for him a hearing in theological controversies, in metaphysical speculations, in physical science, in economical theories, in historical research, and in literary criticism. Besides innumerable and in- resent contributions to the reviews and to the
Times and other newspapers, some of the books that he published are The Reign of Law (1866); Primeval Man (1869); The Unity of Nature (1884); Scotland as it was and as it is; Unseen Foundations of Society; The Eastern Question (1879); and The Burdens of Belief (1894).

Armstrong, William George, Baron, an English scientist, born Nov. 26, 1810; died at Rothbury, Northumberland, England, Dec. 27, 1900. He was educated at a school in Bishop Auckland, and adopting the profession of the law, practised as a solicitor in Newcastle from 1832 to 1847. He then became an engineer and founded the since famous Elswick Works, near Newcastle. From 1859 to 1863 he was engineer of rielled ordinance at Woolwich. He was the first to put into practice the principles now almost universally governing the manufacture of heavy ordnance. Among his inventions are the Armstrong gun, the hydraulic crane, and the accumulator, which substituted an artificial head for that gained by mere altitude. He was president of the British Association in 1863. He received the degree of LL.D. from Cambridge in 1862 and D.C.L. from Oxford in 1870, as well as many foreign degrees. He published an essay on the Science of Movement in Air and Water (1897); and many professional pamphlets. He was an enthusiastic lover of art, and his picture gallery at Craigside contained many celebrated paintings.

Arnold, Thomas, an English author, born at Laleham in 1829; died in Dublin, Nov. 12, 1900. He received his law and professional education at Trinity College, Cambridge, a year earlier than his brother Matthew. He went to school at Winchester for a year, then entered Rugby, obtained a scholarship at University College, Oxford, in 1842, took his degree in the first class in 1845, was a clerk in the Colonial Office for a few months, and then, tired of Europe, he sought a life free from false ambition, and shrewdly estimated conventionalities in the distant colony, whither other Oxford idealists had gone before him. After a while he went to Tasmania as inspector of schools, married there the governor's granddaughter, entered the Roman Catholic Church in 1856 as the result of the Oxford movement, which was at the crisis when he was in undergraduate, and refused to go to England to take a professorship in the Catholic college founded by Newman, whom he afterward followed to the Oratory School in Birmingham, where his Manual of English Literature was prepared. Then he conformed again to the Church of England and returned to Oxford, taught English literature and history there, edited Young's translation of Horace, and contributed various articles in the Quarterly Review and other works of archaic literature for the press. In 1877 he became a Catholic once more, and on being appointed a fellow of the newly established University of Ireland he went to Dublin to spend the remainder of his life in teaching, examining, and writing. Mrs. Humphry Ward, the novelist, is the daughter of his numerous children.

Atkinson, John Christopher, an English clergyman, born at Goldhanger, Essex, England, in 1814; died at Danby-in-Cleveland, Yorkshire, March 31, 1900. He was educated at Cambridge, and was ordained in 1841. In 1847 he became vicar of Danby, Yorkshire, and held that living until his death. He was well known and highly respected by his admirable Forty Years in a Moorland Parish (1891), which has often been compared to White's Natural History of Selborne. His knowledge of birds and flowers was extraordinary. Despite his manifold interests outside of his profession, he was a devoted clergyman, and the claims of his remote and rugged parish were always first with him. Besides the book already named, he published Walks, Talks, Travels, and Exploits of Two Schoolboys (1859); Play Hours and Half Holidays (1860); Sketches in Natural History (1861); British Birds' Eggs and Nests (1871); Stanley Graham's Handbook of the Birds of America (1882); and Familiar Birds of the United States (1863); A Glossary of the Cleveland Dialect, the work of nearly twenty years (1898); Lost, or What Came of a Slip from Honor Bright (1869); The History of Cleveland, Ancient and Modern (1872); Additions to a Glossary of the Cleveland Dialect (1874); A Handbook for Antrhop Whity and its Abbey (1882); Memorials of Old Whity (1896); The Last of the Giant Killers; and Scenes in Fairy Land.

Bara, Jules, a Belgian statesman, born in Tournay in 1835; died in Brussels, June 26, 1900. He was a physician's son, and on completing his studies at the Brussels University at the age of twenty-two, receiving a doctor's degree in political science as well as in laws, he began a career in politics and at the bar simultaneously, coming forward as a Liberal of extreme anticlerical views, a frank agnostic. His eloquence and business ability won for him a seat in the Chamber from Tournay in 1862, and at the age of thirty he was called to the French Senate. During the five years that the ministry of Frère-Orban lasted he carried through a reform of the criminal code. He defended the rights of the state against all the ingenuous claims of the Church, and when in the Opposition after 1870 his gifts of humor and sarcasm, his knowledge of law and politics, and the intense and indefatigable attention that he gave to parliamentary business gave him a sure claim to the Ministry of Justice in Frère-Orban's second Cabinet, in which it fell mainly to him to uphold in theory and practice, in the Chamber and in the schoolrooms, the principle of nongovernmental state education and the exclusion of religious influence from the direction of studies or from admission to the schools except in the hours allowed for religious instruction. The Premier received valuable assistance from him in the diplomatic and religious difficulties created by the secession of relations with the Vatican. When the Clericals finally upset the whole religious system, there was a large part in the continued struggle as one of the leaders of the Liberal Opposition. In 1893 he opposed the electoral reform adopted by the Clerical majority on the basis of universal suffrage, and thereby he sacrificed his seat for Tournay, being defeated in the election of 1894. The provincial council then sent him to the Senate, in which body, as the oldest and ablest member of the Opposition, his utterances still had weight and influence.

Barry, Charles, an English architect, born Sept. 21, 1823; died in Worthing, Sussex, June 2, 1900. He studied architecture under his father, whom he assisted when the latter was building Houses of Parliament, and at the age of twenty-six began practice on his own account. In 1858 he was appointed architect to Dulwich College, the new buildings of which were designed by him. Among other works of his are Blyth Hall, Norfolk; Stevenstone, North Devon; the Dulwich Public Library; New Burlington House, London; the London Grammar School and the Civil Engineers' Institute, Westminster. He was a fellow of the Royal Institute of British Architects from 1864, and its president in 1876-79.

Beale, Anne, an English novelist, died April 2, 1900. She was the author of popular evangelical tales for girls, and of a good many novels also. Her published works comprise Poems; Vale
of the Towey, or Sketches of South Wales; The
Baronet's Family: Simplicity and Fascination
(1853); Nothing Venture, Nothing Have (1864);
Country Courtships (1868); Fay Arlington
(1870); The Queen of the Frasiers (1871); The
Daughter (1877); Rose Mervyn of Whitelake
(1879); Gladys, the Reaper (1881); Idonea
(1881); The Queen o' the May (1882); The Young
Refugee (1882); Squire Lisle's Bequest (1883);
Fisher Village (1885); Seven Years for Rachel
(1886); Courtlyor (1887); Restitution (1888);
and many others.

Beatty-Kingston, William, an English jour-
nalyst, born in 1837; died at sea, Oct. 4, 1900. He
obtained an appointment in the Public Record
Office in 1852, and four years later entered the
Austrian consular service as vice-chancellor of
the consulate general in London, but was transferred
in 1857 to Cardington and Ballymena. In
1863, when he became a special correspondent of
the London Daily Telegraph, and in this capacity
he lived in various Continental cities, and was
present in the Austro-Prussian, Franco-Prussian,
and Russo-Turkish campaigns. From 1879 he was
on the editorial staff of the Daily Telegraph. His
book, Aus Politik und Diplomatie (1883), is
written by William I, German Emperor and King of Prussia
(1883); Our Chancellor, translated from the Ger-
man of Moritz Busch (1884); Music and Manners:
Personal Reminiscences and Sketches of Charac-
ter (1887); Monarchs I Have Met (1887); A Wan-
derer's Notes (1888); The Chumpfleunyys, and
Some Other Curiosities (1889); Journal of
Travels in Moslem Cities, and Events (1895).

Benedetti, Count Vincent, a French diplo-
data, born in Buscia, Corsica, April 27, 1817; died
in Paris, March 28, 1900. His father was the
local magistrate, and he went to Paris to study
law. After taking his degree he began his career
in 1840 as a clerk in the consulate at Alexandria,
where he performed his duties so well that in
1843 he was appointed consul in Cairo. In 1848
he became consul general at Palermo, and in 1852
his early chief and patron, on being appointed
ambassador at Constantinople, called him thither
as secretary of legation. He declined the lega-
tion to Persia in 1855, and returned to Paris to take
the direction of the理财 Ministry. In 1857 he
was appointed to the Ministry of Foreign Affairs,
serving in 1856 as secretary of the Congress of Paris.
From 1857 till 1862 he was minister to Turin, whence he
was recalled on account of the active sympathy that
he showed for the cause of Italian unification. In
1864 he was sent as ambassador to Berlin. He
endeavored without success to hinder the ag-
grandizement of Prussia as the result of the
Prussio-Austrian War of 1866, and was even
cajoled into proposing the annexation of Belgium
to France as compensation, furnishing Count Bis-
march with a document that proved very dam-
aging to Napoleon when made public at the be-
ginning of the Franco-Prussian War. In 1872 he
asserted in a pamphlet published after his retire-
ment that the Belgian proposal was Bismarck's,
and that he had written it out from Bismarck's
dictation. The question of French compensation
for the aggrandizement of Prussia was the subject
of negotiations in Berlin and Paris from the time of
the concluding of the Franco-Prussian War. Benedetti was
in a difficult position after he had presented
Napoleon's proposal to obtain compensation in German
territory. The negotiations were spun out by
Bismarck while Prussia was perfecting her arma-
ments. All that Benedetti could obtain was the
neutralization of Luxemburg, with the sugges-
tion that France seek compensation elsewhere
than in German territory. When affairs between
France and Prussia approached a crisis he did
little to avert war. He was unable to fathom
the designs of Bismarck or influence the deci-
sions of Napoleon and his ministers. When he de-
nounced the neutrality of Belgium and the
Hohenzollern candidature for the Spanish throne
should not be renewed he foresaw discomfiture as
clearly as when he proposed French expansion on
the Rhine. He carried out the orders of his Gov-
ernment, and he was not gruffly rebuffed by the
King, as has been reported. He was a diplomatist
of the classic type, an act and thinker, active and
hostile to German unity, but seeking the advan-
tage of his own country, shrewd and capable in
affairs, though unable to match the cunning
of Bismarck, knowing that the King preferred peace,
yet scinting war in the atmosphere of Paris as
well as Berlin. His personal agreeableness and
cleverness enabled him to stave off any rupture
on occasions when a less experienced and less
subtle ambassador would have been entrapped
into the indiscretion that Bismarck and Moltke
desired, so that they finally had to resort to the
device of altering the King's dispatch, making
it read as a decisive announcement when it was
not.

Bertrand, Joseph, a French mathematician,
born in Paris, March 11, 1822; died there, April 3,
1900. He was an infant prodigy. He passed
the entrance examination of the Ecole Polytech-
nique at the age of eleven, and when he entered
at seventeen he astonished his teachers by the
power and maturity of his reasoning faculties.
He served in the mining bureau after leaving col-
lege until he was appointed a professor in the
University of Louvain. He was a quiet and dis-
creetly examiner and then professor in the Poly-
technique, professor in the Ecole Normale, and
professor in the College de France. He was
elected a member of the Academy of Sciences in
1856, and in 1874 he succeeded Élie de Beaumont
as perpetual secretary. In 1884 he succeeded the
brilliant professor Daubrée of the French Academy. Of
his treatise on the differential and integral calculus
the third part never appeared, the manuscript
having been burned in the fires of the Commune.
His lectures on the calculus of probabilities, on
thermodynamics, and on electricity have been
published, and innumerable original papers on
mechanics and geometry printed in mathematical
journals or the reports of the Academy of Sci-
ciences. His principal contributions to literature
are studies of D'Alembert, Lavoisier, August-Comte,
and Pascal.

Betz, Franz, a German singer, born in Mainz,
March 19, 1835; died in Berlin, Aug. 12, 1906.
He was educated at the Polytechnic, in Karlsruhe.
He is credited with the "देबू" (Debut) of the
fatherland, for the operas that he composed
remained in the operatic company of that city
until 1859, when he was engaged for the Royal
Opera in Berlin, where he remained for his
whole life. His Berlin „देबू" was in the rôle of Don
Carlos in Ernani, a part in which he was always
very popular. He was the original Hans Sachs
in Wagner's Meistersinger, singing his part in
1868, and Wotan at the Bayreuth festival of 1876.
In 1862 he visited England and sang at the Crystal
Palace, May 6 and 27. All these occasions were
during his vacations from the Berlin Opera.

Binns, Richard William, an English porcelain
manufacturer, born in Dublin, Ireland, in 1819;
became a partner in the Royal Porcelain Works, at Worcester, in 1851, and under his management a much improved grade of porcelain was manufactured and the fame of the Worcester china greatly extended. He published A Century of Potting in the City of Worcester: A History of the Royal Porcelain Works (2d ed., 1877); and Worcester China: A Record of the Work of Forty-five Years, 1832–1897 (1897).

Blackmore, Richard Dodridge, an English novelist, born in Longworth, Berkshire, June 9, 1825; died near London, Jan. 26, 1900. On the mother's side, descendants of Dodridge, the well-known divine of the eighteenth century. He was educated at Blundell School, at Tiverton, familiar to all readers of Lorna Doone, and at Exeter College, Oxford. He was called to the bar of the Middle Temple in 1852, and for some time practiced as a conveyancer. He subsequently engaged in the business of a gardening at Teddington, a few miles out of London, near Hampton Court, and had several acres under cultivation. His earliest literary efforts were in verse, and attracted no particular attention. He then turned to fiction, but had published two novels before the issue of Lorna Doone (1869) made him quickly famous. Blackmore's disposition was extrêmement fleuri in Les Dames de Musset; the title rôle of Mademoiselle de la Siéglière, by Jules Sandeau; Mme. de Briac in Une Journée d'Agrippa d'Aubigné, by Édouard Fousssier; the leading part in Par Droit de Conquête, by Ernest Legouvé; that of Les Deux Veuves, by Félicien Mallefille; Hélène de Lesnove in Les Dames de Musset; the title rôle of Cécile de la Napoule, by Bernardin de St. Victor; and of the leading rôle in Léon de Bérard, by Jules Leconte; and those of Une Amie et Le Lion Amoureux, by Ponsard. One of her finest performances was the part of Elmire in Tartuffe.

Burton, Sir Frederic William, an Irish artist, born near Limerick, in 1810; died in London, March 16, 1900. He was educated in Dublin, and studied drawing under the brothers Brocas, making such rapid progress that the Dublin Society exhibited works by him in 1834, and elected him an associate in 1837 and a full member in 1839. In 1842 he exhibited at the London Academy The Death of Fisherman. He went to Constantinople in 1848; returned, and afterwards resided in Paris. In 1851 he went to Munich, and his later work showed in consequence the influence of German methods. In 1855 he became an associate of the Royal Society of Painters in Water Colors, and in 1856 a full member, his headquarters being in London henceforth. From 1874 to 1894 he was director of the National Gallery, and was chiefly responsible for the large and important additions within that time. From 1863 Burton was a fellow of the Society of Antiquaries, and in 1884 was knighted. Owing to a malformation of his right hand, Burton painted with his left.

Bute, John Patrick Crichton-Stuart, Marquis of, of a British nobleman, born Sept. 12, 1847; died in Old Church, Westwater, 1884. He succeeded his father, who was the second Marquis of Bute, but of ancient and royal ancestry, in the first year of his life, and was brought up as an Anglican by his mother, though his father had been royal commissioner to the Church of Scotland, and was sent to Harrow and to Christ Church, Oxford, after the death of the Marquis of Bute, who died in 1821, after a dispute between his English and Scottish guardians. Before he could take his degree, however, he was received into the Roman Catholic Church by Monsignor Capel. He was a scholar of retiring temperament, author of several books on ecclesiastical and anti-Quaranian subjects, an authority on Byzantine art.

OBITUARIES, FOREIGN. (BLACKMORE—BUTE.) 513

Brohan, Emilie Madeleine (Mme. Pio Uchard), a French actress, born in Paris, Oct. 22, 1833; died there, Feb. 25, 1900. She was a sister of Josephine Brohan and a daughter of Suzanne Brohan, famous actresses of the French theater. She entered the Comédie-Française in 1851. She graduated with the first prize for comedy, July 25, 1850. Her first appearance was made at the Théâtre Français, Oct. 13, 1850, as Marguerite in Les Contes de la Reine de Navarre, a drama written by Scribe and Legouvè. Her success was instantaneous. She married Mario Uchard, 1854, and retired from the stage in 1857. In a few months she withdrew from the Théâtre Français and went to Russia. Uchard wrote a play called La Fiammina, supposed to present a picture of their unfortunate domestic relations, and it was produced with some success at the Français in 1857. In the same year Madeleine returned to Paris, and was re-engaged with the Comédie-Française, with which she remained as an employee and sociétaire till her retirement in 1885. During this long career she retained her great popularity with the public of Paris and played all the roles in comedy that belong to the famous repertory of France's national theater. Her most notable creations, in addition to her first part, were Mariette in Les Deux Chansons (1872), and in Les Dames de Musset; the title rôle of Mademoiselle de la Seiglière, by Jules Sandeau; Mme. de Briac in Une Journée d'Agrippa d'Aubigné, by Édouard Fousssier; the leading part in Par Droit de Conquête, by Ernest Legouvé; that of Les Deux Veuves, by Félicien Mallefille; Hélène de Lesnove in Les Dames de Musset; the title rôle of Cécile de la Napoule, by Bernardin de St. Victor; and of the leading rôle in Léon de Bérard, by Jules Leconte; and those of Une Amie et Le Lion Amoureux, by Ponsard. One of her finest performances was the part of Elmire in Tartuffe.
OBITUARIES, FOREIGN.

Boutell, William, English architect, born in 1814; died in London, Feb. 23, 1900. He was one of the masters of the Gothic revival in England started by Pugin, who was two years his senior. His work was more original, though not always as successful, as that of Pugin, and bolder and more original than that of Clement Scott. He designed the buildings of King's College, Cambridge, and thereby won the favor of the Tractarians of Oxford. The chapel of Balliol College and the buildings of Keble College; the churches of All Saints and St. Augustine, in London; the chapel and other buildings at Fulham palace; St. Mary Magdalen, in Enfield; St. Augustine, at Bournmouth; the chapel and school building at South Hackney Grammar School, and Exeter, are his principal works. He also restored many ancient buildings, and in doing so destroyed some excellent examples of the architecture of the Renaissance to produce uniformity of style.

Canossa, Luigi di, an Italian prelate, born in 1809; died in Verona, March 12, 1900. He was Bishop of Verona and was created a cardinal in 1877.

Cave, Alfred, an English clergyman, born in London, Aug. 29, 1847; died at Hampstead, Dec. 19, 1900. He was educated at New College, London, prepared himself for the Congregational ministry, and held pastorates at Berkhamstead, 1872-76, and Watford, 1876-80. He resigned the second of these positions in 1882, and pursued a course in the Church History at Hackney College, of which he was made principal in 1882. He held an honored place among biblical scholars, and ranked as an extremely conservative theologian. His writings include The Scriptural Doctrine of Sacrifice and Atonement (1877); The Inspiration of the Old Testament (1879); Consideredly On the Introduction to Theology (1888); The Battle of the Standpoints: The Old Testament and the Higher Criticism (1890); The Spiritual Word the Last of Philosophy and the First of Christ (1894).

Christian Victor, Prince of Schleswig-Holstein, born in Windsor Castle, April 14, 1867; died in South Africa, Oct. 1, 1900. He was the eldest child of the Prince of Schleswig-Holstein, and Princess Helena, fourth child of Queen Victoria of England. He was educated at Wellington College and at Magdalen College, Oxford, then entered the military academy at Sandhurst, and in 1888 joined the army as second lieutenant in the King's Rifles, became a lieutenant in 1890, and in 1896 was raised to the rank of major. He served in India as a special officer to Major-General Elles in the Hazara expedition and in the Miranze expedition in 1891, in the Isazai expedition in 1892, and as aid-de-camp to Major-General Sir Francis Scott in West Africa when the expedition was sent to Ashanti against King Prempeh in 1895. He served again in Gen. Kitchener's South African expedition in 1898 as state officer to the troops on board the gunboat Flotilla, and in October, 1899, went out to South Africa to serve on the staff of Gen. Roberts. He was with a column that lost its guns and a third of its men in a Boer ambush. His death was due to enteric fever.

Clusaret, Gustave Paul, a French soldier, born in Paris, June 13, 1823; died in La Crau, Aug. 22, 1900. He was the son of a colonel, and had a priest for his tutor until he entered the military school of St. Cyr, which he left in 1843. As a lieutenant in the 18th artillery, he distinguished himself by leading a detachment of the Garde Mobile against the barricades of the Republicans, and received the ribbon of the Legion of Honor. In 1851 he was suspected of republicanism himself, and with hundreds of other officers was relieved of active duty. In 1854 he was reinstated on application and sent to Algeria. Disappointed because the services there were not recognized, he resigned his commission, tried farming for a while, emigrated to New York and speculated without success, and then joined Garibaldi's legion in Sicily, and was appointed a colonel. He was disabled by a wound received at Capua, returned to New York, and when the civil war began obtained an appointment on Gen. McClellan's staff, with the rank of brigadier general. After the war he conducted a newspaper, then joined the Fenians in Ireland, escaped arrest by fleeing to France, and was expelled from there as a Republican agitator. He returned to France at the beginning of the war of 1870, started a Socialist newspaper in Marseilles, led his battalion of French troops to the South, went to Paris when the government of the Commune was set up, and received the post in it of Minister of War, but in the last month of its existence was accused of treachery and thrown into prison. On the suppression of the Paris Commune he escaped to England, and thence to Switzerland, and enlisted in the army of the Republic. He was discharged, having undertaken to teach the teaching of Courbet, having been summoned for trial and condemned to death in Paris. In 1878 he joined the Turkish army, and fought against Russia. After the amnesty of 1881 he returned to France, painted pictures, wrote for newspapers, and published a volume of memoirs, in which he charged his countrymen of Hebrew origin and enormities. In 1888 he was elected a Deputy for the Var, and since 1889 he had sat for Toulois.

Cochery, Louis Adolphe, a French politician, born in Paris, April 26, 1819; died there, Oct. 15, 1900. He was admitted to the bar at the age of twenty, and after the February revolution he was appointed to a post in the Ministry of Justice, in which he resigned after a brief while in order to devote himself to pleading and to journalism. In the elections of 1869 he was elected by the Democratic Opposition a member of the Corps Législatif for the department of Loiret, and took his seat in the Left Center, voting against war with Prussia. The Government of the Fourth of September placed him as commissary general in charge of the defense of Loiret, and that department, on Feb. 8, 1871, sent him to the National Assembly, where he sat in the Left Center, attaching himself later to the Republican Left. In 1876 he was elected to the Chamber of Deputies from Montargis, and voted against the Broglie ministry. He was re-elected of the department of Loiret, and when the Dufaure ministry was constituted he became undersecretary in the Department of Finance. On March 1, 1878, he united the posts and telegraphs under one administration, which was transformed into a separate department in 1879, of which he remained the chief until the fall of Ferry's last Cabinet, in 1885. As Minister of Posts and Telegraphs he instituted important reforms in the service. The cheap and rapid means of communication with the postal telegraph card, called the petit bleu, was his invention. On Jan. 5, 1888, he passed into the Senate.

Coghlan, Elizabeth Eily May, an English singer, born in Paris, France, in 1864; died in Stanford, Conn., Apr. 8, 1900. She was a sister (Butterfield—Coghlan.)
of Charles and Rose Coghlan, and was educated at the Conservatory of Music, in Paris, where she attracted the attention of Carl Rosa, who engaged her as the leading contralto of his opera company, which place she occupied for years, singing with great success in England and on the Continent. She came to the United States as a member of Mapleson's Opera Company. In 1889 she married Sydney Battam, secretary of the Leadenhall Bank, London. Her last appearance was at Rochester, X. Y., Feb. 24, 1900, with the Joc Ott Comic Opera Company.

Cowie, Benjamin Morgan, an English clergyman, was born in London, May 1, 1900. He was educated at Cambridge, and took orders in 1841. From 1844 to 1851 he was principal of the College of Civil Engineers, at Putney, and he was Hulsean lecturer at Cambridge in 1853 and 1854. In the year last named he was Professor of Geometry at Gresham College. He returned to the college of his ordination (1858), and from 1872 to 1883 he held the deanship of Manchester. He became dean of Exeter in 1883, and held that office until his death. He was a high churchman, though not an extreme ritualist, and was one of the earliest to introduce choral services in Manchester. He was one of the first to publish, besides lesser works, Scripture Difficulties (1853-54); On Sacrifice (1856); The Voice of God (1870); Ministerial Work (1872).

Del Puente, Giuseppe, an Italian singer, born in Naples, in 1845; died in New York city, May 23, 1900. He was educated at the Conservatory of Music, in Naples, under the famous masters Guglielmi and D'Aniello. He was engaged by Carabba, Garibaldian, and served as a soldier in the revolution in Italy. After resuming his studies he made his début as a baritone at Jassy, Wallachia, in company with Italo Campanini, the celebrated tenor, in 1871. His success was immediate and substantial, and he was successively engaged in the Teatro Napoleone at Naples, General in London, Carlo in Milan, the Apollo in Rome, and the Grand Italian Opera in London. Maurice Strakosch heard him in Rome in 1873 in the rôle of Rigoletto, and engaged him for a three years' visit to America. His first appearance in New York was a triumph, and he remained in possession of the baritone rôle in London at the Opera House for successive seasons until his retirement in 1890, when he took up his residence in Philadelphia, and devoted himself to teaching. His greatest rôles were Rigoletto in the opera of that name and the toreador in Carmen.

Desbordes, Borgnis, a French soldier, born in Paris in 1839; died at Saigon, Indochina, July 14, 1900. He had earned the reputation of a daring and resourceful officer, and had served in various campaigns, when in 1880 he was ordered to occupy upper Senegal as far as Kita, and to make a survey for a railroad to the Niger. He carried on operations against Sumory, defeated his forces on Feb. 20, 1882, reached the Niger and built a fort at Cap_CLASSES.BLOCK.04961143172.14787301166191_0149611172_14787301166191_Ha, and drove Sumory back to the south. In 1884 Col. Desbordes was appointed to the command of the artillery in the Tonquin expedition. He was promoted to be a general in 1886, commanded a brigade in Tonquin and Annam in 1887, and continued in command of the troops in China, rising to be commandant in chief of the forces.

Didon, Henri, a French preacher, born in Toulet, Isère, March 17, 1840; died in Toulouse about the middle of March, 1900. He was trained for the Catholic priesthood in a French seminary, studied in Berlin and Leipzig, joined the Dominicans, ordered, gained fame as an orator, and occupied in succession the principal pulpits of Paris. His resonant voice, free gesticulation, impassioned style, and bold and vigorous language attracted immense audiences. His addresses in the Church of St. Roch made a profound impression, and his freedom of thought and expression displeased his superiors, who in 1880 sent him to a monastery in Corsica to do penance for eighteen months. He held liberal views in religion and politics, and preached that the Catholic Church is not opposed to the fullest liberty, and that religion and science are not in conflict. In his later life he directed the college of Notre-Dame-de-Versailles, was a member of several academies, and was the author of a book on the Germans and of a Life of Jesus, written in response to the work of Ernest Renan on the same subject.

Dixon, Richard Watson, an English clergyman, born in London, in 1833; died Jan. 2, 1900. He was the son of a noted Wesleyan minister, and was educated at Oxford, where with Burne-Jones and William Morris he edited the Oxford and Cambridge Magazine as an exponent of pre-Raphaelite opinions. After being admitted to orders in 1858 he became curate of the parish of Saint Mary-the-Less in Lambeth, and in 1863 was appointed second master of the high school at Crewkerne. He held the same canon of Carlisle in 1874, vicar of Hayton the following year, and vicar of Warkworth in 1883. Dixon was never a popular writer, for although he possessed both sincerity and power, he was prosaic. He was not wanting in poetic insight, and as a historian he was acute and painstaking, but his choice of topics was sometimes infelicitous, and his style suffered from a certain dryness, and his works include The Close of the Tenth Century of the Christian Era (Oxford, 1858); Christ's Company and Other Poems (London, 1861); Historical Odes and Other Poems (1864); Essay on the Maintenance of the Church of England (1875); The Life of James Dixon (1874); History of the Church of England from the Abolition of the Roman Jurisdiction (1877-90); Mano: A Poetical History (1883); Odes and Eclogues (Oxford, 1884); Lyrical Poems (1885); The Story of Eudocia and her Brothers, a narrative poem (1887); Songs and Odes (1886).

Doche, Madeleine (Lady Marie Charlotte Eugénie de Plunkett), a French actress, born in Brussels, Nov. 4, 1823; died in Paris, July 21, 1900. She was the daughter of an Irish family domiciled in Belgium since the migration of the Irish families with the Stuarts. She made her first appearance at Versailles in October, 1837, as Juliette in Moiroud et Compagnie. On Jan. 8, 1838, she made her début at the Théâtre Vaudeville, Paris, in the play of Renaudin de Caen. With this theater particularly Mme. Doche's fame is most intimately associated, for it was her wonderful popularity that made this house one of the principal theaters of France. It was here that she originated the part of Stella in Serment de Charogne. During these first years of her life she used a nom de théâtre, Eugénie Fleury. In March, 1839, she married Pierre Alexandre Joseph Doche, conductor of the orchestra at the Vaudeville. In March, 1845, she left the Vaudeville for the Gymnase, where she first appeared, April 17, as Madeleine in L'Maisie. In December following she returned to the early vaudeville, which she again left in 1845. In February, 1852, she returned once more to the Vaudeville to make an epoch in the history of the French stage, for it was then that she created the rôle of Marguerite Gautier in La Dame aux Camélias of Alexandre Dumas, fils, known to the American stage as
Camille. She was also the principal actress in Louise de Nanteuil, La Vie en Rose, Madame Lovelace, and Pénélope Normande. In 1859 she created Rose Bernard at the Ambigu, and afterward she played successively at the Gaiétè and the Porte St. Martin. She retired many years ago.

Dornton—Charles (Charles Dornton Duff), an English actor, born in Aberdeen, Scotland, Oct. 24, 1837; died in Edgebaston, England, May 11, 1900. He made his first appearance in King John as a page, in his native town, in 1849. He occupied subordinate places in the stock companies of Aberdeen, Belfast, and Jersey successively. In the last of these he played a Creggan in Bouicault's Colleen Bawn. Here he met his first wife, a sister of Tom Robertson and Mrs. W. H. Kendal. He was then at Nottingham, Glasgow, and Bradford. In this last-named theater in 1868 he was associated with Madge Robertson (Mrs. Kendal), Charles Matthews, and E. A. Sothern. His next engagement was at the Prince of Wales's Theater, Liverpool, where he remained as leading man for several years. In 1872 he played the leading parts with Mrs. Scott-Siddons for a tour, and in 1873 held a like place with John S. Clarke. In 1875 he began a long and profitable connection with the play The Two Orphans, which he played over three thousand times. He also made very successful tours with The Silver King and Michael Strogonoff. March 21, 1891, he became lessee of the Theater Royal, Birmingham, and retired from work as an actor. He married as his second wife Miss Amy Balfour.

Christopher, Ernest, an English man of letters, born in Lcc, Kent, Aug. 2, 1867; died in Catford, Kent, Feb. 23, 1900. He studied at Oxford, and after several years' residence in London spent much time in Paris and Brittany. His health had been failing for some time, and he returned to England in 1890 only to die. Besides publishing translations from the French he wrote two novels with Arthur Moore, A Comedy of Masks (1893) and Adrian Rome (1899). His reputation rests mainly upon his small volume of Verses, issued in 1896, which contained poems of great beauty. Still other works by him are The Pierrct of the Minute, a dramatic fantasy in prose, and Decorations, a collection of prose and verse (1900).

Egaca de Queiroz, Jose Maria, a Portuguese novelist, born in Povoa do Varzim, Portugal, Nov. 25, 1843; died in Neufilly, France, in September, 1900. He was educated at the University of Coimbra, and after being editor of a political journal at Evora, was successively consul at Havana, Newcastle, and Bristol, and at the time of his death was consul general for Portugal at Paris. He was the most eminent Portuguese novelist of his time, and was the principal exponent in his country of the realistic school of fiction. His romances were translated into Spanish, German, French, and English. He possessed great powers of observation and description, and was very severe in his portrayal of the failings of Portuguese society. His works include O Crime de Padre Amaro (The Crime of Father Amaro) (1874); O Mandarin (1880); Scenas da Vida Devota (1880); O Primo Basilio, his greatest work, which appeared in French as Etoiles de Baste, as Eine wie Tausend, and in English as The Dragon of Mauve (1885); A Religia (A Relic) (1886); Os Maia's, or Episodias da Vida Romantica, a spirited satire upon fashionable Portuguese life. With Ramalho-Ortigao he wrote a noteworthy story of adventure entitled The Mystery of Cintra Street. He was a member of the Lisbon Academy of Sciences.

Edward, Alphonse Milne, a French naturalist, born in Paris in 1835; died there April 27, 1900. He was the son of Henri Milne Edwards, an eminent zoologist, and grandson of Bryan Edwards, a West Indian planter, ex-member of the British Parliament, and historian, who settled in Barbados. Graduating in medicine in 1858, he became professor in the School of Pharmacy in 1865, and in 1876 acted as his father's deputy as Professor of Zoology at the Jardin des Plantes. He was the colleague of Edmond Perrier in deep-sea explorations on the Travaileur and the Tallisman. In 1877 he succeeded Gervais in the Académie des Sciences, and in 1899 was elected to the French Academy of Medicine. In 1891 he was appointed Professor of Zoology and director of the Jardin des Plantes. He published researches on the fossil birds of France (1866-72), researches on the extinct birds of Madagascar (1866-74), an elementary treatise on the natural history of animals (1881-82), an account of his deep sea explorations in 1881-82 and 1888, and the chapters on mammals and birds in Granddier's historical and geographical work on Madagascar.

Elton, Charles Isaac, an English lawyer, born in 1839; died at Chard, Somerset, England, April 23, 1900. His education was obtained at Oxford, and in 1861 he entered the Middle Temple. He acquired a large practice, and in February, 1881, was returned to Parliament. He failed of re-election the next year, but was returned again in 1886, and sat six years. He published Norway, the Road and the Fell (1864); The Tenures of Kent (1867); Common and Waste Lands (1868); England's Historical and Costly BƱm and Tenant Right (1882); Origins of English History (1882); The Career of Columbus (1892); The Great Book Collectors (1893).

Faed, Thomas, a British painter, born in Kirkcudbright in 1820; died in London, Aug. 17, 1900. He was an engineer and the younger brother of John Faed, whose success as an artist inspired him with a like ambition. He entered the School of Design in Edinburgh and acquired under the tuition of Sir William Allan a thorough training in draughtsmanship and the elementary principles of painting. When he began to paint he at once struck a vein that appealed to the multitude and won for him a wider appreciation and a greater measure of popular and critical success than the greatest of British artists have attained. He chose the field of domestic genre, and in this a class of subjects that appeal to the emotions and sympathies—sad scenes of domestic life or anecdotes conveying moral lessons or stirring religious feelings. The Mitherless Bairn, The First Break in the Fast, and the rest had no technical qualities to commend them except good drawing and conscientious workmanship, but in exhibitions their homely, pathetic sentiment made them the center of attraction. To artists of the younger schools they served as a warning and an example to deter them from seeking the adventitious aid of pathos and story to justify their unoriginal work. From 1847 to 1860, when he settled in London, in 1852, became an associate of the Royal Academy in 1859, a full member in 1864, and for ten years longer continued to turn out pictures that were readily sold for high prices, even the copyrights of the more effective ones being a valuable property. About the time that his firmness of policy in his art's favor was to have been recompensed by his death, his critics condemned his work as of slight artistic value, and his influence as deleterious to the development of sound art, though he has never lacked partisans and admirers. His ideal portrait of Longfellow's Evangeline, engraved, has been very popular in the United States.
Falguière, Jean Alexandre Joseph, a French sculptor, born in Toulouse, Sept. 7, 1831; died in Paris, April 19, 1900. He studied under Jourfroy, whom he succeeded in 1882 at the Academy of Fine Arts, exhibited in the Salon of 1857, obtained the birth of the Empire, was appointed the Vainqueur du Combat des Coqs, his most famous piece of sculpture, which was purchased by the state. Others of his works are a statue of Lamictis at Macon, one of Gambetta at Cahors, Admiral Courbet at Abbeville, Lafayette at Washington, Napoleon at St. Cloud, the Dauphin in this completed immediately before his death. He executed numerous symbolical and historical sculptures of striking merit, designed public monuments, made many portrait busts, and was also a painter of repute. He became a professor in the National School of Art in 1882.

Falk, Paul, a German statesman, born in Metschka, Silesia, in 1827; died in Hamb, Westphalia, July 7, 1900. He was the son of a Lutheran pastor, and was educated for the law at the University of Breslau, graduated as doctor, and appointed in 1847 public prosecutor at Lycc, East Prussia, where he was elected in 1838 to the Prussian Diet as a Liberal. He held a post in the Minister of State and at Glogau in 1862, returned to Berlin in 1868 as a member of the North German Parliament and of the Prussian Diet, was appointed reporter and counsel to the Ministry of Justice, and intrusted with the codification of the laws of the North German Confederation, and of the Ministry of Justice since 1871, was nominated to the Federal Council in 1872, when the conflict began between the German Government and the Roman Catholic Curia that lasted till the death of Pius IX, Bisnark selected Dr. Falk to be his lieutenant and adviser and the representative of the Government in the struggle, having need of a man of firmness and energy and of the most expert knowledge of laws and legislation. He was made Minister of Education and Worship, and in January, 1873, submitted to the Prussian Chamber the comprehensive scheme of legislation known as the May laws because they were drawn up in May 1872, and restricted the jurisdiction of bishops over the clergy, extended the rights of the state regarding the appointment and the discipline of the clergy, and dissolved and expelled some of the religious orders. Under the administration of Dr. Falk these laws were applied with such perseverance and thoroughness that a better religious conflict resulted, rendering difficult the consolidation and development of the new empire. The Kulturkampf began over the school inspection law, which gave the Government the right to inspect private as well as public educational institutions. The bill was carried through both houses of the Prussian Diet in spite of the determined opposition of the bishopric. Falk was created a member of the Prussian Diet, and appointed Knight of the Order of the Red Eagle, and received the degree of Erzbischof der Civitas, and, in October, 1876, was appointed to the Senate of Prussia. Falk next issued an edict rendering members of their society ineligible for positions as teachers in the Prussian state schools. The general body of the May laws followed next, and for resisting their application the Prussian Diet chronicled the multitudes of bishops with fines and to close seminaries as well as monastic establishments. In 1874 the civil contract was rendered compulsory as a part of the marriage ceremony in Prussia. Supplementary legislation extended the May laws. For resisting them the Archbishops of Posen and Cologne and the Bishops of Fulterborn and Treves were sent to prison. The Pope declared the laws invalid and forbade the clergy to conform to them, and the imprisoned Archbishop Ledochowski he made a cardinal. The Prussian Government then suspended the stipends of the priests and bishops until the should appear before the law. Other severe measures followed, until the clergy were brought to terms and only a dozen bishops remained vacant in Prussia when Pius IX died in February, 1878. Pope Leo XIII and Prince Bisnark were alike anxious to bring the conflict to an end, and the French Government declared that if no progress was made, it would support his new commercial and financial policy. Dr. Falk could not remain after the readjustment of amicable relations between the Catholic Church and the Government, especially since he had given offense to the Evangelical Protestant Church by his secularizing policy, and had never pressed the full confidence of the Emperor William I. His resignation was tendered and accepted on July 14, 1879, and from that date he ceased to play a prominent part in politics, although he was a member of the Prussian Chamber of Deputies and of the Reichstag till 1882, when he was appointed president of the provincial court of Westphalia, a post which he filled with distinguished ability and honor.

Ferraris, Count Luigi, an Italian politician, born in Sostegno, March 6, 1813; died in Turin, Oct. 21, 1900. He studied and practiced law, and in 1848 was elected to the Chamber from Turin, in which he quickly attained a high position. In 1871 he was nominated an Italian Senator, having served as Minister of the Interior in the Cabinet of 1869. In the first Cabinet formed by Rudini in 1891 he was Minister of Justice. He was an eminent juriscussent, and during a long period he was mayor of Turin.

Fibich, Zdenko, a Bohemian composer, born in Seborschitz, Bohemia, Dec. 21, 1850; died in Prague, Oct. 30, 1900. He studied at Prague, Leipsic, and was a pupil of Vincenz Lachner. He was appointed assistant musical director of the National Theater of Prague in 1876, and in 1885 director of the Russian church choir. His operas, which were in Bohemian and were produced in Prague, were: Bakowin (1881); The Bride of Cahors (1882); Turin; and other works were: The music of Brechliky's dramatic trilogy Hippodamia (1891), and the symphonic poems Othello, Zoboj and Slavoj, Toman and the Nymph, and Vesna. He was also the author of several orchestral overtures: Lustspiel Ouverture (1852); A Night on Karlstein, etc.; Spring Romanza; and songs and choruses. In 1889 he was appointed dramaturgist of the Bohemian National Theater, Prague.

Forbes, Archibald, a British journalist, born in Morayshire in 1838; died in London, March 29, 1900. He was the son of a Scottish minister, and studied in the University of Aberdeen, and in the University of Leipsic. When the Franco-German War broke out the London Daily News sent out the young Scotch journalist, who had practical experience of military life, to follow the German army. Sir W. H. Russell, by his letters to the London Times from the Crimea, had won a standing for the war correspondent, and it was expected that Forbes would continue this position, and open a new and important field of newspaper activity and influence. Archibald Forbes impressed upon the new profession the character and style, and gave it the direction that its best exponents have followed since he sent his letters from the front in 1870. A vivid and rapid presentation of the broad features of the campaign, of the object of
each maneuver, of the dispositions of each battle, a graphic account of the fighting and of salient or picturesque details of the march, the camp, the reconnaissance, the skirmish, the strategic plans as far as they were disclosed or conjectured, all the evidences of the weather, were all interpreted in attractive, stirring newspaper language, lucid, and eloquent. Wherever he set the example for future correspondents in a still more important matter was in the speed with which he got his copy to London, so that the public could read his details of operations the day after they had happened. He was the first to use the telegraph so extensively for newspaper correspondence. His enterprise, energy, ingenuity, and courage enabled him to see enough of every battle to give a graphic and discriminating account of the operation, and then he rode with the utmost speed, no matter how long the way, to where he could send the dispatches. When the Prince of Wales visited India in 1875, Forbes went out to report in his picturesque style the incidents of the tour, and then was sent to the Balkan peninsula to watch the course of events in Servia and describe the war with Turkey. When Russia intervened he accompanied the Russian army and acted as its correspondent at the important engagements— at Shipka Pass, at Plevna, and elsewhere—and describing them with a military acumen that had grown keener with practice. When he returned to England he lectured upon the events and incidents of the war and its political bearings and results. He went as an eyewitness of Turkey’s acquisition of that island for British occupation, and when the Afghan War began he went to India. The Zulu War took him to South Africa. After the battle of Ulundi he rode 120 miles through an unknown region, reached the telegraph station, and telegraphed the news to London and also to Sir Garnet Wolseley, the commander in chief, and to Sir Harry Erskine, the High Commissioner. When he sent the dispatch to the British Government, and it was read in both houses of Parliament before a line had been received from the official staff. That was the last campaign that Forbes reported. The fatigue and privations of war had sapped his great strength, and he chose a more restful life. He had been for many years associated in a historical narrative of the various campaigns that he had seen, making a large number of books, and he gave lectures in Great Britain, Australia, and America. His wife was a daughter of Gen. Meigs, of Washington. The intelligence and authority with which he was able to describe the greater operations of war is evidence of the training he acquired in the old school of military writers. He was the first correspondent to bring the reader up to date in the course of an engagement. In June 1891, at the aged 56, with the rank of major, he was assigned to the Philippines, where he remained two years. He was dismissed by the Government, in the course of which he was deprived of his allowance. In June 1892, the Archbishop of Aix was condemned for an electoral abuse in publishing a catechism for voters.

Gregory, Benjamin, an English clergyman, born in 1820; died Aug. 24, 1900. He became a Wesleyan missionary and was a conspicuous figure in his denomination. He was the author of Memoir of Emma Tatham (London, 1859); The Thorough Business Man: Memoirs of Walter Powell, Merchant (1871); The Holy Catholic Church, the Communion of Saints (1873); Sermons, Addresses, and Pastoral Letters (1881); Benevolent and Other Spiritual Consecration (1855); Handbook of Scriptural Church Principles of Wesleyan Methodist Polity and History (1888); Side Lights on the Conflicts of Methodism, which revealed the author as not so strictly conservative as he had usually been considered (1898).

Grimaux, Edouard, a French chemist, born in Rochefort in 1835; died May 2, 1900. He studied medicine and was surgeon on a naval vessel before he studied chemistry under Wurtz in Paris, and was appointed assistant in the Polytechnic School in 1874, becoming professor in succession to Cachours, and also holding a professorship in the Agronomic Institute. He was elected to the Academy of Sciences in 1887. He was elected a member of the Polytechnic School because he publicly declared his belief in the innocence of Dreyfus during the Zola trial, and subsequently he became a vice-president of the Rights of Man League. He published a treatise on hashes in 1865, one on equivalents, atoms, and molecules in 1866, organic chemistry in 1871, elementary inorganic chemistry in 1874, chemical theories and notations in 1884, and a study of Lavoisier in 1888.

Grove, Sir George, an English musical critic, born in London, Aug. 13, 1820; died there, May 28, 1900. He was articulated to an engineer after leaving Clapham Grammar School, worked for 11 years, and then was employed in building the lighthouse on Morant Point in Jamaica in 1841, and that on Gibb’s Hill in Bermuda in 1845, and after his return to England in the construction of the Britannia bridge. He became secretary of the Society of Arts in 1846, became one of the managers of the Crystal Palace, and had charge of the concerts which began in 1855, and thenceforth his name was associated with musical matters rather than with the profession in which he had first made his mark, although in music he had only the training of an amateur. He wrote notes and analyses of the Crystal Palace concerts for the programmes that served to impart to friends of
music among the general public something of his own enthusiasm for the higher delights of music to which people of popular tastes had not awakened, and which they could not have caught from the technical criticisms of a writer professionally educated. The French journals (1878-1883) he edited, Histoire Musicale de la Fin du Siècle, a very popular work (1876); La Seizième Siècle en France (1878); and the important Dictionnaire Général de la Langue Française, which occupied nearly thirty years in preparation, the work being completed just in time to receive the Gold Medal Prix at the Paris Exposition of 1900. With Georges Meunié he published Les Critiques Littéraires du XIXe Siècle. He was also the author of a work upon St. Augustine.

Hawkins, Frederick, an English author, born in 1849; died June 30, 1900. He became connected with the London Times in 1863, his father being then employed upon it, and from 1876 to 1894 was on the editorial staff of that paper. He was always greatly interested in matters pertaining to the stage, and was editor of The Theater 1877-79 and 1895-98, the paper ceasing to exist in the last-named year. He published a Life of Edmund Kean (1859); Annals of the French Stage to the Death of Racine, a work of permanent value (1865-78); and The French Stage in the Eighteenth Century (1858).

Heyden, Karel van den, a Dutch soldier, born in Batavia, Jan. 12, 1826; died in Bronbeek, near Arnhem, Jan. 26, 1900. He was taken as a child to Holland and was educated there, enlisted as a common soldier in the Dutch East Indian army at the age of fifteen, and in 1849 was promoted the battlefield, and rose through all the grades to the highest in the Dutch army, that of lieutenant general, which he attained in 1881. He was in the Bali, Palembang, and Borneo campaigns, and from 1874 till 1880 was commander in chief of the troops in Acheen. In the battle of Samalanga he was shot in the eye. No commander before him had met with such success against the rebels of Sumatra. At the stage when they seemed ready to surrender the Government policy changed, and he was removed from his post as Military Governor of Acheen and replaced by a civil official. He returned to Holland in 1881, and retired from the army the following year, and passed the remainder of his life as governor of the military asylum at Bronbeek.

Holm, Adolf, a German historian, born in 1830; died in Freiburg, June 9, 1900. He was educated in German universities, went to Italy to devote himself to the study of classic antiquities, was called to the chair of Ancient History in the University of Palermo, and after several years of residence there took the same chair in Naples, holding it till he retired and returned to his native country a year before his death. He published the first volume of his important historical work on the ancient history of Sicily in 1876, and completed it in 1898. He wrote also a history of Greece, which has been translated into English.

Horner, Ann Susan, an English artist and author; died Dec. 2, 1900. She was the daughter of Leonard Horner, an eminent naturalist, and a niece of Francis Horner. From an early age she devoted herself to painting and sculpture, attaining proficiency in both. He wrote a history of Greece, which has been translated into English.
520

OBITUARIES, FOREIGN. (HUGHES-HUMBERT I.)

bringing it up to 1836 (1858); A Century of Despotism in Naples and Sicily (1860); The Tuscan Poet, Giuseppe Giusti, and his Times (1864); A Translation of Gervinus' Introduction to the History of the Nineteenth Century; Isolina, or the Actor's Daughter (1875); Walks in Florence (with Joanna Horner) (1875; reissued 1877); Greek Vases, Historical and Descriptive (1898).

Hughes, Edward, an English electrician, born in London, May 16, 1831; died there, Jan. 22, 1900. He went to the United States as a boy, showed such talent for music that he was engaged as a teacher in Bardstown, Ky., and afterward became Professor of Natural Philosophy in the college there. In 1855 he invented the type-printing telegraph instrument, which, by means of wheels revolving synchronously at both ends of the wire, enables the operator when he strikes a letter on a keyboard like that of the typewriting machine, to cause the receiving instrument at the other end to print the same letter on a continuous strip of paper. It was adopted in the United States in competition with the Morse system. He went to England in 1857, but could not interest the Government in his invention. It was accepted by the French Government for its important lines in 1861, and subsequently by other Continental governments. In 1878 Prof. Hughes made public his discovery of the microphone, and his experiments in connection with it, which not only enabled the inventors of the telephone to complete their instrument, but to make it to be of practical use, but anticipated in some measure the later discovery of wireless telegraphy. He discovered that a divided electrical conductor, such as metallic particles or wires in loose contact, when introduced into a circuit, are sensitive to sound, and produce an undulatory electrical current. In his experiments with radio waves, the molecules arranging themselves in such manner as to increase or decrease the electrical resistance. By experimenting with such broken conductors he was able to detect electric waves, and succeeded in transmitting signals by such waves for a distance of 500 yards without wires. He was the first to introduce also an electrical contrivance that has been employed to test the sensitiveness of hearing, to detect the position of a bullet in a wounded man, and to locate ores under the earth. He published various investigations in electricity and magnetism, and was admitted into the Royal Society in 1880.

Humbert I, King of Italy, born in Turin, March 14, 1844; died in Monza, July 20, 1900. (For portrait see Annual Cyclopedia for 1884, page 412.) He was the eldest son of Victor Emmanuel II and Archduchess Adelaide of Austria, and as a boy he accompanied his father in the Austrian campaign of 1859. Before the war of 1866 the young prince visited Paris and met Napoleon III as to the attitude he would take in regard to an alliance of Italy with Prussia against Austria, and when hostilities began he took command of a division in Gen. Caldini's army, which was defeated by the Austrians under the Archduke Albrecht at Custozza. He, by his prompt and able tactics and his personal bravery, which he had in common with all the members of the house of Savoy, extricated the army from its desperate situation, forming his regiments into squares to hold back the Austrian cavalry, and inspiring his men by placing himself in the most exposed position in the line. Gen. Bixio brought up his force to help cover the retreat. Humbert, in a crucial part in the reorganization of the Italian army that was the work of the succeeding period. When Rome was occupied in 1870 he received the command of the Roman corps and took up his residence in the new capital with his wife, Princess Marguerite of Savoy, his cousin, whom he had married in 1869. When war was declared with Prussia in 1872, the Russian court in 1873, and in 1875 he went to Vienna, afterward going to England incognito. In 1878 he succeeded his father as King of Italy, in a time of financial embarrassment, economic depression, disappointed national ambition, and internal disaster, when the country was at its height, when the Clericals, the Irridentists, and the Republicans were assailing the Government and its policy, and the socialists and anarchists were lifting their heads, and when the friends of the monarchy felt disheartened and humiliated because Italy, this first-born of the new day, had been called upon to make and the crushing burdens imposed upon them, had gained no apparent advantage from such sacrifices and burdens and had returned empty-handed from the Congress of Berlin. The period of ministerial instability had already begun. King Humbert was personally popular, and when attempts to save the monarchy by the visit of the son of his cousin (1858); walked in Florence (with Joanna Horner) (1875; reissued 1877); Greek Vases, Historical and Descriptive (1898).
a rapprochement with France, and it was he who encouraged the ministers to persevere in the colonial policy, though the reduction of military expenditures was necessary. The King visited Berlin once more to demonstrate adherence to the alliance. With Crispi's return to power the old policy was continued without more vigor until the disaster of Adowa in 1896 caused his final fall, endangered the dynasty even, and compelled the abandonment of the Abyssinian enterprise, and extinguished the hope of a colonial empire. The reverse to Italian arms actually brought about a better situation at home after the popular passions were somewhat damped by the sufferings of all political prisoners and endeavored to consolate the revolutionary elements. Normal relations were restored between Italy and France by the renunciation of Italian pretensions in Tunis, and a commercial treaty was concluded in November, 1898. No sooner were external relations comfortable again than unrest and discord began to disturb the internal situation. When another anarchist, Acciarato, attempted to kill Humbert before the gates of Rome on April 22, 1897, the popular affection and respect for the simple soldier King were shown not less unmistakably than on the previous occasion. In the following year, the language of the King expressing the labor disturbances in Milan and other cities affected the popularity of the King, and when he signed the decrees that Gen. Pelloux considered necessary to give him power to preserve public order in spite of parliamentary obstruction, the King was involved in the odium created by the staticism of the Imperial Council. It is a mystery how the constitutionality of such extra-parliamentary legislation was denied by the Radicals. No reasoned political incentives can be attributed, however, to the murderous acts of fanatical Italian anarchists, who choose as victims the most conspicuous representatives of the ranks and distinctions that excite their malice and hatred, and strike down a shining mark, such as a President of the French Republic or an Empress of Austria, to give distinction to their own exit from a world whose conditions disgust them with life. The assassin who shot King Humbert, going from the United States expressly for the purpose, was not reported to the Propaganda, he was simply unusually affected by the arbitrary acts of the Italian Government that caused the agitation, nor an immediate member of the community in which the grievances were felt, but a skilled workman who lived in the United States, earning good wages and saving money. King Humbert had but one child, Victor Emmanuel, Prince of Naples, who succeeded him as King. His eldest sister, Princess Clotilde, is the widow of Prince Bonaparte. His deceased brother Amadeus, who occupied the Spanish throne from 1870 to 1875, left four sons—Emmanuel, the present Duke of Aosta; Victor, Count of Turin; Louis, Duke of Abruzzi; and Albebert, Count of Salerno. His younger sister, Princess Pia, is the widow of the late King Louis I of Portugal. The House of Savoy is one of the most ancient now occupying a European throne, being traced to a German Count Berthold, whose domain in the eleventh century was in the Alps between Lake Leman and Mont Blanc. A son of Bernhard, Count of Sabaudia, acquired Turin and Susa, Nice, Piedmont, Sicily, afterward exchang'd for Sardinia, and Genoa. The younger branch of Savoy-Carignano succeeded in the person of Charles Albert to the kingdom of Sardinia when the direct male line died out in 1831, and Victor Emmanuel II, in whose favor his father abdicated in 1849, obtained Lombardy in 1859, and assumed the part of unifier of Italy. The annexation of Parma, Modena, the Romagna, and Tuscany to Sardinia was effected by the free vote of the people, who expelled their former rulers and welcomed the liberating army early in 1860, as did the people of Sicily and Naples, a separation of the Papal States, the Marches, and Umbria later in the year, and Rome after the withdrawal of the French garrison in 1870. The King of Italy has a civil list of 15,050,000 francs a year, out of which he must pay the allowances of other members of his family.

Hunter, Sir William Wilson, an English civil servant, born in London, 15.4.1820; died near Oxford, England, Feb. 7, 1900. He was educated at the University of Glasgow, at Paris, and at Bonn, and entered the Bengal civil service in 1862. His energy and ability met with suitable recognition, and by 1871 he had become undersecretary to the Government of India and director general of statistics. He was a member of the Viceroy's Legislative Council, 1881-87, and in the latter year retired from the civil service. He had written largely before his return to England in 1887, and after that event continued his literary pursuits, and was a frequent contributor to the Times. His writings include A Comparative Dictionary of the Languages of the World (1843); The Annals of Rural Bengal, perhaps his best work (1872); The Uncertainties of Indian Finance (Calcutta, 1869); Orissa (1872); A Life of the Earl of Mayo (1875); A Statistical Account of Bengal (1875-77); A Statistical Account of Assam (1880); England's Work in India (1881); The Indian Empire: Its History, People, and Products (1882); A Brief History of the Indian People (1884); Life and Work of the Marquess of Dalhousie; Life of Brian Hodgson (1896); The Old Missionary (1896); The Thackerays in India (1897): A History of British India (Vol. I, 1899).

Jacobini, Domenico, an Italian ecclesiastic, born in Rome, Sept. 3, 1837; died there, Feb. 1, 1900. He was of no patrician family, although the only Roman in the Sacred College, but the son of the steward of an estate. After studying in the Roman seminary he became a tutor in Greek after his ordination, worked for a time in the archives of the Congregation of the Propaganda, was appointed papal house chaplain soon after a canon of St. Peter's, and in 1851 was made Archbishop of Tyre. A year later he was appointed secretary of the Propaganda. While filling this office and previously he took a leading part in organizing the Clerical political forces, hoping to found Catholic workingmen's societies and electoral unions. He alone among the clergy joined Prince Borghese and other laymen in the request to Leo XIII to recall the papal command prohibiting Italian Catholics from voting in the national elections. This act destroyed for the time his influence at the Vatican and brought upon him various embarrassments. In 1891 he was sent away from Rome as papal nuncio at Lisbon, where he won great influence and regained the favor of the Vatican by inducing the Government and King of Portugal to cancel the promised visit of the King to the Italian court in 1893. After this diplomatic success Jacobi­nini was made a senator, and in 1898, when he was protector of the theological academy until in November, 1899, he was appointed cardinal vicar for the Roman diocese.

Johnson, Samuel, an English actor, born in Ayrshire, Scotland, in 1831; died in London, Feb. 15, 1900. He was a son of an actor and manager of the same name, well known in Scotland in the
service before the French intervention in Mexico seemed likely to involve France in a war with the United States, when they resigned and departed. The Prince de Joinville had witnessed the principal actions of the Virginian campaign of 1862, and he wrote an impartial account of them in an article printed in the London Daily News. When the Franco-Prussian War broke out all the Orleans princes offered their services to Gen. Trochu, and were refused. Nevertheless the Prince de Joinville succeeded in entering under the name of Col. Luther, and served with the army of the Loire in the operations around Paris. Gambetta concluded that this scheme was dangerous to the army, and even when finding himself after detaining him five days at Le Mans sent him back to England. When the law of banishment against his family was abrogated on June 8, 1871, he returned to France, having already been elected a member of the National Assembly for the department of Haute Marne, and he took his seat, July 10, 1871, breaking his word. The war was over; 1873, he and the Duc d'Aumale discreetly refrained from speaking or voting on political questions. The repeal of the law of banishment had been carried by an anti-republican majority as a preliminary step toward the restoration of the monarchy, yet after the victories of Saint-Mihiel, of Sedan, and of Longwy, the republican Government relaxed its proscriptions still further by restoring a part of the Orleans properties. Although the Prince de Joinville helped to bring about the fall of Thiers in 1873, he did not vote for the new Constitution, and in 1876 he requested his electors not to send him to the Chamber. He remained in the House of Deputies in support of the Thiers Government in the efforts to bring about a reconciliation between the house of France, as the main stem of the Bourbon family was called by the Legitimists, and the Orleans branch. He went with the Comte de Paris, however, to Frohsdorf to render homage to the Comte de Chambord in token of the acceptance of his nephew, the head of the Orleans branch, as the legitimate heir to the French throne and the consequent fusion of the Legitimists and the Orleans into one political party. When the last representative of the direct line was buried in Frohsdorf, in 1883, he went with the rest of the Orleans family to the funeral. The union of the two royalist parties and the accession of some of the Bourbon exiles to the Chamber, when the Comte de Paris created a new political situation; and when in the elections of 1885 the Conservatives increased their strength in the Chamber from 80 to 210 out of 550 members the Republican majority sanctioned various repressive measures culminating in the renewal of the law of exile in 1886, denying the right to live or remain in France of pretenders or their eldest sons. The Prince de Joinville with the rest of his family went into exile once again. The prince had a finely cultured mind and most affable manners. In military and naval matters he always took the deepest interest, and in all questions of the day he was well informed. The Princess de Joinville died in 1892, leaving two children—Françoise Marie Ameville, born in 1844 and married to the Duc de Chartres, and Pierre Philippe, Duc de Penthièvre, born in 1845, who was a cadet at the naval academy in Annepolis while his father was in the United States. The Prince de Joinville was the author of studies that were highly praised on both sides of the English Channel. When the second law exiling the heads of families that once reigned was enacted it excluded from office all other members of the dynastic families, and thus the Prince de Joinville lost his rank as vice-admiral of the French navy.
JONES, Harry, an English clergyman, born Dec. 8, 1823; died at Bury St. Edmund's, Sept. 30, 1900. He was educated at Cambridge, and after being admitted to holy orders in 1848 was a curate at Baddow, in Essex, till 1850. He held other curacies until his appointment in 1858 to the vicarage of St. Luke's, Berwick Street, near the famous Seven Dials district of London. He remained fourteen years in this parish, then one of the worst of the London slums, and was rector of St. George's-in-the-East, 1873-'82. For the next three years he was vicar of the rural parish of Great Barton, and then, returning to London, was rector of St. Peter's, Great Windmill Street, 1882-'85. The last-mentioned appointment was in the parish of St. Vedast, Foster Lane. He became a prebendary of St. Paul's Cathedral in 1880, and was for ten years a chaplain in ordinary to the Queen. He traveled extensively on the Continent in his various summer holidays, and was a war correspondent at the battle of Sedan. Although he did socially from definitely with any party in the Church, his sympathies lay naturally with Maurice and Kingsley, and he would have been classed with Broad Churchmen, if classed at all. He was an indefatigable worker among the London poor, with whom he was exceedingly popular. He was a favorite, however, with men of all ranks. His Sardines at first looked like a prêtre Conscense versa the Quarterly: A Plea for Fair Play toward the Writers of the Essays and Reviews (1861); The Church of England and Common Sense (1864); Holiday Papers (1864-'89); The Regular Swiss Round in Three Trips (1865); Life in the World (1865); Priest and Parish (1866); The Perfect Man (1869); Early and Last of London: Being Notes of Common Life (1875); Past and Present in the East (1881); Social Science (1887); Dead Leaves and Living Seeds.

Joubert, Petrus Jacobus, a Boer soldier, born in Cango, Cape Colony, in 1834; died in Pretoria, March 27, 1900. He was an orphan child of well-to-do parents, descended from a Huguenot refugee who went to South Africa when the edict of Nantes was revoked in 1687. He received an ordinary education, accompanied traders who traveled with wine and spirits through the Boer republics, and when he arrived at the British Cape he was manumitted and settled in the Wakkerstroom district of the Transvaal as a farmer. His intelligence, shrewdness, and enterprise made him a man of mark in that community, and his knowledge of business and law and his reputation for probity and judicial discrimination led to his being frequently called upon to settle disputes between his neighbors, this to his giving up farming for the law, and this in turn to his being elected, about 1863, to the Volksraad as member for Wakkerstroom. He was re-elected, received the appointment of attorney and solicitor General, and acted as President of the republic during President Burger's visit to Europe in 1874. When the ambitious improvements undertaken by President Burger bankrupted the treasury, and his unorthodox and modern views alienated the old-fashioned Boers, the traders in the towns, mostly newcomers, welcomed British annexation. From the beginning of the British administration Paul Kruger and Piet Joubert, who had withdrawn from political life during the period of confusion and financial insolvency, began a bitter opposition against Sir Theophilus Shepstone, the British Commissioner. Joubert accompanied Kruger and the committee of the Volksraad that went to England in the hope of securing by friendly negotiation the restoration of independence. He refused offers of well-paid posts in the British administration, and took the leading part in getting all the Boers to sign a petition. When the committee went to Sir Bartle Frere in Natal to present the protest, Slim Piet, or crafty Piet, as he was nicknamed, carried on the negotiations with the British High Commissioner as the spokesman and advocate of the burghers. He was more active and determined even than Kruger in keeping up the agitation against British rule, and when the burghers decided on armed resistance and established a Provisional Government in 1880 he became a member of the triumvirate charged with the conduct of the war. While Kruger assumed control of diplomatic negotiations Joubert was made commandant general of the Boer forces, and he distinguished himself as a commander-in-chief, but which he succeeded in thoroughly organizing and impressing with his generalship as the war proceeded. He commanded at Laing's Nek, Ingogo, and Majuba, defeating the British every time. In the last engagement, fought on Feb. 27, 1881, he sealed a table in the mountains forever, at the same time having gained a commanding eminence with his small force without being observed, and opened a sudden rifle fire that caused the British regulars to run in a wild rout from a tenth of their numbers. This ended the war. Joubert conducted the earlier peace negotiations. After the retrocession the In-vincible, as he was now called, was retained in the post of commandant general, and could not attain the presidency because the burghers would not feel safe with any other general at the head of their military organization. He was a member of the commission that superintended the location and government of the natives in the Transvaal. In 1889 he was elected as candidate for the presidency of the party that opposed President Kruger on account of his favoring Hollanders and granting monopolies, and his resistance to the demands of the Uitlanders for a wider franchise and favorable legislation. He received 7,905 votes, only 872 fewer than Paul Kruger, but when he ran again in 1898 he got no more than 2,001. He advocated a policy of greater liberality toward Uitlanders, and thus it came that some of his countrymen suspected him of treachery when the country magazines were found to be filled with ammunition at the time of the Johannesburg rising. His vote in the Executive Council was generally given in favor of co-optative measures, yet he advocated severe punishment for Dr. Jameson and his raiders. Nevertheless, the friends of President Kruger put him out of his office of Superintendent of Native Affairs, and threatened his post of commandant general. There was no open breach in the old friendships of the republic; but it was necessary to himself and to the republic were the good will and assistance of the most popular politician in South Africa, and the only soldier whom the Transvaalers would follow with confidence into battle. Joubert was acting President when Kruger was in Europe in 1883 and 1884 negotiating for the withdrawal of British suzerainty.
over the Transvaal. In 1891 the commandant general went to Europe to select arms for the defense of the independence of the republic. The training and tactics of the Boer army were the work of numbers, was well studied in military science and history, and who studied out the methods of administration, discipline, and fighting that were best adapted to the character of the Boers and the conditions and conformation of their country. When the war came and the Boers marched into the war his general plan of campaign was good, but owing to his own lack of energy and promptitude, the effect perhaps of growing old or of his pacific leanings, owing also to the want of co-operation and obedience on the part of the commanders, always more marked in the Boer army at the beginning of a campaign than in other armies, it was not successful either in Natal or in Cape Colony; and he might have chosen a better plan, more likely to succeed, that of an immediate invasion of Cape Colony, had not sectional jealousy prevented, and the unwillingness of the Boers to leave their homes unprotected. Indecision and excessive caution, undue deference to the opinion of associates, prevent him from independent movements, characterized his conduct of the campaign in Natal, which was carried on with more vigor after he was compelled by infirmity of health to leave the front. His death was sudden and unexpected. Gen. Louis Botha, the victor at Spion Kop and on the Tugela, succeeded him.

Kettelcr, Baron K. von, a German diplomatist, died in Pekin, China, June 18, 1900. He was a nephew of the celebrated Bishop of Mayence, and was trained first for a military life. He resigned his commission as a Prussian officer in 1882 to enter the German legation in China as a student interpreter, was transferred to Canton, and the courage and understanding that he displayed in saving Germans and other Europeans during the disturbances of 1883 gained him the order of the Red Eagle. He returned to Pekin, filled as a substitute for a time the post of consul in Tientsin, was transferred in 1890 to Washington as secretary of legation, was appointed minister to Mexico in 1895 after marrying an American lady, and in 1899 returned to China to succeed Baron von Heyking as minister plenipotentiary at Pekin. He spoke Chinese with ease, and for this reason and because of the German activity in Shantung took the lead in making representations and uttering warnings to the Chinese Government when the Boxer troubles began in northern China. He was engaged in such an errand when he was shot in the street by a Chinese patrol (see CHINA).

Kingsley, Mary H., an English traveler and writer; born about 1865; died in Simonstown, Cape Colony, June 5, 1900. She was the daughter of Dr. George Kingsley, a brother of Charles Kingsley. She was known principally in relation to west Africa through her books and lectures. Her writings and travels were all associated with the study of the native population, and in one of her books, West African Studies, she criticizes with considerable sharpness the system of government adopted for the Crown colonies of West Africa. Early in 1900 she went to South Africa as a special correspondent, and soon after arriving there offered her services as nurse in the military hospital at Simonstown. While engaged in this work she contracted the illness of which she died. Her published books include Travels in West Africa (1897); West African Studies (1889); and The Story of West Africa (1900). Her style was both original and distinctive, displaying at times a peculiar quality that might almost be called sardonic, and is seldom found in a woman’s writing.

Lankester, Mrs. Phebe (Pope), an English writer on popular science, born in Manchester, England, in 1825; died in London, April 9, 1900. She was the daughter of a manufacturer, and in 1845 married Dr. Edwin Lankester, and subsequently studied zoology in London, and in 1897 was sent to Cape Town and the Cape for the Penny Cyclopaedia and the English Cyclopaedia. She was the mother of eleven children, one of whom is the noted scientist, Prof. E. Ray Lankester. Her published works comprise Wild Flowers worth Notice (1861); the literary portion of Sowerby’s British Botany; Talks about Health (1874); and Piet J. T. Lankester, a remarkable old man of the Dutch of South Africa. And he had intellectual gifts of a remarkable kind, and an ability to use them that gave him recognition and weight. There was no malice or depreciation implied in the epithet slim. His mental activity, facility, and versatility, and his thirst for knowledge, made him a master of history, politics, and strategy, and he was the master of a noble, forcible, and eloquent style of writing, and made frequent use of his ready pen.

Lavroff, Pierre, a Russian revolutionary, born in 1821; died in Paris in the beginning of February, 1900. He was of noble birth and entered the army, becoming an eminent professor in the St. Petersburg military academy. His contributions to various Russian periodicals roused the suspicion of the government; he had been already for the Penny Cyclopaedia and the English Cyclopaedia. She was the mother of eleven children, one of whom is the noted scientist, Prof. E. Ray Lankester. Her published works comprise Wild Flowers worth Notice (1861); the literary portion of Sowerby’s British Botany; Talks about Health (1874); and Piet J. T. Lankester, a remarkable old man of the Dutch of South Africa. And he had intellectual gifts of a remarkable kind, and an ability to use them that gave him recognition and weight. There was no malice or depreciation implied in the epithet slim. His mental activity, facility, and versatility, and his thirst for knowledge, made him a master of history, politics, and strategy, and he was the master of a noble, forcible, and eloquent style of writing, and made frequent use of his ready pen.

Lavres, Sir John Bennett, an English agriculturist, born in Hertfordshire in 1814; died there, Aug. 31, 1900. He was educated at Eton and Bransenose College, Oxford, giving more attention to independent scientific studies than to the classics. He acquired a thorough acquaintance with the pharmacopoeia, and after succeeding to the paternal estates in 1834 he experimented upon the agricultural and found the properties of the poppy, hemlock, henbane, belladonna, and other plants the therapeutic action of which was engaging the attention of the medical world. The agricultural crisis caused by the decline of the price of wheat in spite of protection to 30s. a quarter in 1835 roused his interest in this study and suggested investigations and experiments in agriculture for the public good. He took the home farm of 250 acres for his researches in debated questions and unsolved problems of agriculture. From 1837 till 1839 he tested the effects of different kinds of manure on plants growing in pots, and was the first one to discover the value of the process of treating phosphates with sulphurous acid. He obtained remarkable results from the
application of this fertilizer to turnips, continued the experiment in the open field for two years longer, and in 1842 took out a patent for treating mineral phosphates with sulphuric acid and became the pioneer manufacturer of commercial fertilizers. He published in 1857 on the cultivation of peas. In 1843 Dr. J. Henry Gilbert, who was fresh from his studies in agricultural chemistry under Liebig, and together they started the Rothamsted agricultural experiment station, the earliest of all with the exception of Boussingault's station at Bechelbronn in Alsace. Incorporated by royal charter in 1843, the German station at Mõckern, and by the length of a human generation the station at Middletown, Conn. Their experiments covered the field of stock breeding and the feeding of animals as well as farm crops. In relation to the latter their favorite method of investigation was to sow the chief rotation crops, such as wheat, barley, the beans, clover, turnips, or potatoes, each through a long succession of years on the same piece of ground, a crop of each on one plot year after year with no manure at all, on another plot with barnyard manure, on other plots with all the different varieties of manufactured manures. They studied the losses of organic nitrogen without manure and with the various kinds of manures. On one field wheat has been grown every year for over fifty years without any manure, and given an average yield of between 13 and 14 bushels an acre. Experiments in manuring mixed perennial grasses have yielded valuable practical results, especially by showing how greatly meadows are affected by the weather. The benefits of nitrogenous manures to cereal crops of potash to leguminous plants, and of phosphates to roots were first demonstrated at Rothamsted. The relative merits of sulphate of ammonia and of nitrate of soda as a source of nitrogen, the composition of rain and of drainage waters, the utilization of sewage and of silage were other lines of inquiry. In 1861 a memoir on the publications which marks an epoch in the development of physiological botany, proving that plants do not in general assimilate free nitrogen, though in a paper issued in 1891 it was admitted that nitrogen in 1897; it is given to grains in considerable quantities of uncombined nitrogen, Lawes having revised to this extent the opinions that he had reaffirmed ten years previously in his treatise on Fertility, which laid down the principle that the store of nitrogen contained in the soil or supplied by manures is the source of practical fertility, and in vegetation. The experiments on animals were conducted by watching the increment of live weight in cattle, sheep, and hogs obtained in a given time by feeding different quantities, kinds, and combinations of food; also the relative growth and development of different parts and organs of the animals; the role of nitrogen in relation to the food consumed; and the influence of different kinds and quantities of food on the yield and composition of milk. The source of fat in the food and of muscular energy, and the comparative values of animal and vegetable food were also investigated. The fattening qualities of different breeds of sheep, one in 1858 on the composition and quality of various fattened animals, one in 1866 on feeding stock with malted and unmalted barley, one in 1875 on the valuation of unexhausted manures, one in 1884 on unexhausted manures, one in 1889 on growing leguminous crops in succession, one in 1890 on the food of agricultural crops, one in 1891 on the source of the nitrogen of leguminous crops, one in 1892 on allotments and small holdings, one in 1893 on home produce, imports, consumption, and price of wheat over forty harvest years, one in 1894 on crop rotation, one in 1895 on the feeding of animals for the production of meat, milk, and manure and for the exercise of force, one in 1896 on the depression in the price of grain and the production of meal. 

The results of their experiments were published in the Journal of the Royal Agricultural Society from 1847 onward, and in serial publications and in about 130 special memoirs, notable among which are a paper printed in 1847 dealing with turnip culture, one on the amount of water given off by plants that was published in 1850, papers issued in 1851 and 1855 on rooting of the field.
OBITUARIES, FOREIGN. (Léoné—Liebknecht.)

(1877) Old Testament Prophecy: Its Witness as a Record of Divine Foreknowledge (1880); The Foundations of Morality (1882); Characteristics of Christian Belief (1883); and The Law in the Prophets (1891). Preliminary Leadership was a very thorough but extremely conservative scholar, and had little sympathy with the modern school of higher criticism.

Léoné (Nicole), Édouard Théodore, a French actor, born in Paris, in 1820; died in Râzi, Feb. 20, 1900. He was educated at the École de Droit in Paris. He first appeared as a singer at Belleville, whence he went to the Théâtre Vaudeville, Paris, and eventually to the Bouffes, then under the management of Offenbach. He was a very popular figure in all the original productions of that composer's operas, and was especially the principal in Sainte-Hélène, where he was soon forgotten by the world he had so long amused.

Liebknecht, Wilhelm, a German politician, born in Giessen, in 1826; died in Charlottenburg, Aug. 7, 1900. He was educated in the universities of Giessen, Bonn, and Marburg, studying deep into philosophy, and soon became the voice of the proletariat. In 1848 he entered into the political world, and made a name as a strong political controversialist. The revolutionary movement of 1848 drew him into its vortex, and in the insurrection in Baden he took a lively part. On its failure he fled to Switzerland, and from there to England, where he lived for twelve years, concerning himself with the revolutionary work of the proletariat. He entered into the socialist propaganda with a stern energy, a fanatic zeal, a dauntless and uncompromising spirit, that soon made him a leader.

He became an editorial writer after his arrival in Berlin, where he entered into what was known as an Opposition journal, which was later purchased by Bismarck and turned into an official organ. The repression of the labor troubles of 1865 involved Liebknecht among the earliest victims.
party itself underwent a change. It became temperate and more considerate of interests dominating the practical cynicism of the time, as Government became mild and conciliatory. Liebknecht himself no longer laid stress on internationalism as an element in German politics, and some of the Socialist leaders were willing to accept the Prussian military system as temporarily necessary in Germany. They showed themselves sometimes more patriotic and imperialistic in tone than the Socialists, whom the Socialists now overshadowed. In many questions of foreign and domestic policy the Socialists took similar grounds with the Radicals, and Liebknecht advised forming electoral alliances with the Radicals to help them with votes in the forthcoming elections. This he considered as a chance in return for Radical support in districts where Socialists were numerous. Thus it came that Liebknecht, the staunch upholder of pure Socialist theories, was accused of parliamentary opportunism, of compromising the cause by cooperating with the bourgeois parties. A proposal was even made to exclude the Socialists from the Reichstag on the grounds that they were not willing to vote for the budget, a vote that the Socialists had always given in other parliaments to which they were aligned.

Lumley, Ralph Robert, an English dramatist, born in London in 1863; died there, May 27, 1900. He was editor of the Standard. He held premiership in 1870, in which his father and grandfather had held before him. He was a barrister of the Middle Temple, but never practiced. He wrote a comedietta called Palmyra, produced in London, April 13, 1888. His next work was a collaboration with Horace Ledger, called The Deputy Registrar, produced in London, July 25, 1888. The Skirmish in 1874, 1888, and Thoroughbred, Feb. 13, 1889, were produced by him, and brought him a commission from Mrs. John Wood, for whom he wrote Aunt Jack, produced by her with great success July 13, 1890. He then wrote The Volcano, produced March 14, 1891. Mr. Toole produced Mr. Lumley's three-act farce, The Best Man, March 6, 1884, and Thoroughbred, Feb. 13, 1889. His last work was Belle Beulair, a drama in four acts, with Mrs. John Wood in the leading role, May 19, 1897.

McWraith, Sir Thomas, an Australian statesman, born in Ayrshire in 1835; died in London, July 17, 1900. He was educated at Glasgow University, went to Victoria at the age of nineteen, and was employed as an engineer in the construction of the Government's railways. He became interested in land in Queensland in 1861, settled in that colony in 1870, after having been elected to represent Marama in the Legislative Assembly, joined the Macalister Cabinet as Minister of Public Works and Mines in January, 1874, resigning in the following October, was elected for Mulgrave in 1878, and when the Douglas ministry was defeated in January, 1879, he became Premier and Colonial Treasurer, his administration lasting till November, 1883. His annexation of New Guinea on April 4, 1883, was not approved by Lord Derby, then Colonial Minister in England, whose veto led to the intercolonial convention held in Sydney in February, 1884. Sir Anthony Musgrave, with the power of the water, the power of pardon, which the Governor considered a part of the royal prerogative, but which Sir Thomas McWraith, whose view was sustained by the Colonial Office, contended could not be constitutionally exercised except on advice of the ministers. On the death of Sir Antony Musgrave, the Colonial Government was in the hands of Sir Richard Forster, who was followed by Sir Henry Blake, but it had been denied him as private secretary. In association with Harry Parkes he negotiated the surrender of Pehtang and the Taku forts to the Anglo-French expedition. In negotiating for the admission of the embassies to Pekin they were seized and thrown into prison. Peace was not made by the British until the prisoners were released and an indemnity paid in return for the treachery of the Chinese. Loch returned to England with the convention of Pekin and the ratifications of the treaty of Tientsin. He became secretary to Sir George Grey in 1861, and from 1863 till 1851 was lieutenant governor of the Isle of Man, receiving the honor of knighthood in 1860. In 1882 he was appointed Commissioner of Woods, Forests, and Land Revenues. In 1884 he was appointed Governor of Victoria, where he remained till 1889, when he was transferred to Cape Colony to succeed Sir Hercules Robinson as Governor and High Commissioner. The Australian colony had never had a more popular and satisfactory governor. Sir Sir Henry Loch, but in South Africa he pleased neither imperialists nor Afrikanders. He retired in 1895 and was created a peer.
of that year, was in a small part in Claudian. He was a member of Mr. Barrett’s company four years, during which time he was responsible for the Revival of Othello, in London, May 22, 1837, he played Iago with much success. Early in 1838 he joined Mr. Deering’s company, and was in charge of the revival for the renewal of Julius Caesar, in which he played Cassius, Jan. 22. In Ragged Robin, produced by Mr. Tree, June 23, 1898, he was Farmer Stokes; Cardinal Richelieu in The Musketeers, Nov. 3, 1898; and Quince in A Midsummer-Night’s Dream, Jan. 10, 1900. His last appearance in the theatre was in 1901, in the part of Derrick in Tree’s revival of Rip Van Winkle. He married, Dec. 18, 1898, Grace, daughter of the actor Charles Warner.

Marchand, Gabriel, a Canadian statesman, born in St. John’s, Jan. 9, 1832; died in Quebec, Sept. 25, 1900. He was educated in the St. Hyacinthe College which was in his native province, and was elected to the first Legislative Assembly of Quebec in 1867, and represented his town in that body continuously till his death. He was Provincial Secretary and later Commissioner for Crown Lands in H. G. Joly’s Liberal Cabinet of 1878. When the Liberals were in power from 1877 to 1882 he was Minister of Finance, and served as Speaker of the House of Assembly. After the return of the Conservatives he took the place of Mercier as leader of the Opposition, and in 1897, when the Liberals triumphed at the polls, he became Premier of Quebec with the portfolio of Colonial Treasurer, and died in office. He was an active organizer of the will of French Canadians during the Fenian excitement, and commanded a brigade in 1870 when the Fenians invaded the province. He was also a newspaper writer and editor and a dramatist, author of four comedies.

Martineau, James, an English theologian and philosopher, born in Norwich, England, April 21, 1838; died in London Jan. 11, 1900. He was of Huguenot descent. His father was a cannet manufacturier and wine merchant of Norwich. The son was sent to Dr. Lant Carpenter’s school at Bristol, and at eighteen entered Manchester New College, then at York. He was ordained in 1858 as junior pastor of the Presbyterian (more properly Unitarian) Chapel in Oldham, Staffs, in 1860 as a minister. His unwillingness to accept the regimen donum, or annual allowance made to the Irish Presbyterian churches by the Crown, caused him to resign this charge and accept a call to Paradise Street Chapel, Liverpool, in 1832. Here he remained till 1857, and his congregation erected a new chapel for him in 1854. At this time he was known, both as writer and preacher, far beyond the limits of the Unitarian body, and after his removal to London in 1857 to become at first the colleague of his friend Taylor at the Little Portland Street Chapel, and from 1861 to 1872 sole minister, he was ranked among the foremost English preachers. In 1872 his congregation and his friends presented him with a purse of nearly £1,000. He was appointed Professor of Philosophy at Manchester New College in 1840, was principal of the college in 1869–85, president in 1886–87, and vice-president in 1888–90. During the building of his chapel at Liverpool he left many manuscripts, the study of philosophy at Berlin and Dresden, and how greatly he was influenced by this experience may be seen in his own words, in which the change in his thought is described as “a new intellectual birth.” A marked characteristic of his was, in the words of his biographer of 1876, a writer of him in this connection; “His early works are good; incomparably better are his latest, and the best are the monuments of patient work constructed at an age when the most active-minded become weary and long for repose.” As an acute thinker he is perhaps seen at his best in his Study of Religion, which contains a searching examination of agnosticism and elaborate study of the doctrine of causality. As a reviewer he wrote with vigor and even severity on occasion, and in the discussion of speculative theories displayed small patience with verbal evasions of familiar difficulties. Until the age of ninety it was his custom to sit at his desk till the midday luncheon, resuming labor after dinner, and continuing to write or study till midnight. Long before his death he had come to be ranked as the foremost philosophical thinker in Great Britain, and the passage of each year deepened the reverence with which he was regarded. Not only did he bequeath a distinguished sister Harriet, but they were far apart in their convictions, and it is doubtful if she ever comprehended the serenity of his thought. He was a voluminous writer, but he published only a comparatively small part of what he composed, his habit being to subject all that he wrote to the severest critic. It he searched the selections of devotional literature, he published Rationale of Religious Inquiry (1836); Endeavors after the Christian Life (1843–47); Unitarianism Defended, with J. N. Thom and H. Giles (1839); Miscellanies (1852); Studies of Christianity (1858); Essays: Philosophical (first series, 1860; second, 1874), Psychological (1868); New Affinities of Faith (1869); Why Dissent? an address (1869); The Place of Mind in Nature, a lecture (1872); Hymns of Praise and Prayer (1874); Religion as Affected by Modern Materialism (1874); Modern Materialism: Its Attitude toward Theology (1876); Hours of Thought on Sacred Things (1876); Ideal Subserviencies for God, a lecture (1878); Lessons and Gain in Recent Theology (1881); The Relation between Ethics and Religion (1881); A Study of Spinoza (1882); Types of Ethical Theory (1885); A Study of Religion: Its Sources and Contents (1888); The Seat of Authority in Religion (1890); Essays, Reviews, and Addresses (1891–94); To Dr. Martineau’s Memory, an address, by the author, “may perhaps be traced some of the stermer sides of his character—his independence, his ready sacrifice of all and everything for the truth’s sake, his rapier-like thrusts in argument. But the influence exercised by him over the minds and hearts of men, women, children, flowed from his own innumerable utterances, and his whole personality and character utterances lies in the effect they produce when read, and here Dr. Martineau never failed. The printed word has all the charm of the spoken one.”

Martinez de Campos, Arsenio, a Spanish soldier, born Dec. 14, 1834, in Segovia; died in Zarauz, Sept. 22, 1900. He was the son of a general and was educated for the church, but was expelled from the University of Alcalá and College at Madrid, taking a high stand in his studies and leaving in 1852 with the rank of lieutenant. He served as aid-de-camp to Gen. O’Donnell in the campaign in Morocco in 1859, winning a medal by his bravery. In 1864 he was sent to Cuba at his own request, and in the pursuit of marauding Indians he was the only man mounted, with his fearless and tireless devotion to duty, never sleeping twice under the same roof during nine months. His services brought him promotion to
the grade of brigadier, and on his return to Spain in 1870 he led a command with equal activity and skill against the Carlist insurgents. He accepted Don Amadeo, the Italian King, although he had always been identified with the Conservatives. When Aragon was cleared of the public enemies in 1871, the federal republic was set up, Martinez de Campos made himself so conspicuous by his open and contemptuous hostility to the new order that he was not only deprived of his command, but imprisoned in a fortress. When the garrison of Madrid under his command overthrew the federal republic, while Martinez de Campos requested permission to serve against the Carlists in any capacity, and the Government of Serrano released him and made him military governor of Gerona with the rank of general of division. He fought against the Carlist bands until the Salmeron ministry appointed him captain general of Valencia. The city declared itself a canton, and he bombarded it and entered with his troops on the fifth day: advanced soon afterward on Cartagena, but returned to Valencia to suppress a Carlist rising, and when that was accomplished marched to the relief of the garrison of Alichante, to prevent a cantonal government being established there; and was deposed by the authorities to invoke English interference, and when the republican Government in Madrid asserted to such a step he sent in his resignation, which was accepted. After this he scarcely concealed his Alfonist principles, and tried to persuade Gen. Conesa, to whom Marshal Serrano had resigned, to depose him and declare for the King. Conesa hesitated and Canovas del Castillo thought the time not yet ripe. Martinez de Campos commanded a division under the Marquis del-Duezo, and fought the sanguinary battles of Muñecas and Galdanes, extricating himself with difficulty on the day on which Gen. Conesa was deposed, and afterwards covering the retreat to Tafalla. His royalist sympathies were so well known that Serrano recalled him in spite of his services against the Carlists, and again placed him on the retired list. The Minister of War vouched for his fidelity, but his intrigues could not be long concealed, and imprisonment was the only means to preserve the action of the Government by hurrying to Murviedro, where his cousin, Luis Daban, had a command, and with these troops issuing a pronunciamiento for King Alfonso XII on Dec. 29, 1874. The Serrano Government at once gave way to the monarchy, and the general who had brought about the restoration was naturally selected for the most important command, that of captain general of Catalonia, where he had full direction of the operations against the Carlists. As soon as the army was sufficiently organized and trained to take the offensive against the Carlist forces he advanced in the spring of 1876, and when the Carlist army of Berenguer simplicity set out to invade Madrid, the Carlist army out of Arragon, Navarre, and Biscay over the French border, and thus ended the civil war. For this service he was made a field marshal, and by his own desire was sent to put down the revolution in Cuba. He was entrusted with complete discretionary powers, and he had at his command a force rising to secure for the Cubans the removal of their main grievances than by his operations in the field. The Government at home refused to carry out the reforms for which he had pledged his word, and consequently he resigned the post of Captain General of Cuba, and returned to Spain in 1879. Canovas del Castillo, who was then Prime Minister, gave up his post to Martinez de Campos rather than let him communicate his indignation to the army. He did not long remain at the head of affairs, nor did he accomplish the objects he had in view, and the experiment seems to have opened his eyes to the difficulties that beset Spanish statesmen who determined him to remain a soldier to whose political views the chiefs of both political parties paid the greatest deference because he alone could control the army. He controlled the King and afterward the Queen-Regent and all the political powers, and could make Canovas or Sagasta Premier whenever he was displeased with the action of the party in office. To bring about his Cuban reforms he accepted the post of Minister of War in the Sagasta Government of 1881, with no greater success than before, and thereafter he never held a Cabinet office. In September, 1893, an anarchist threw a bomb that slightly wounded him while he was reviewing his troops at Barcelona. In the same year he took command in Morocco when the Moors attacked Melilla. In this campaign he was not successful, but the Government would not venture to recall him, and he negotiated the terms of peace with the Sultan in 1894. In 1895 he was made captain general of New Castle in order that he might defend the American armed forces in Madrid, and when a fresh revolution was started in Cuba the task of dealing with it was given to him. Here he met the same difficulties as before. His troops would not undergo the privations and dangers necessary to deal with the elusive tactics of Gomez and Maecio, and yet the Spanish Cortes would not lend him the money to grant the government to Cuba and by so doing deprive Spanish trade of a monopoly and Spanish politicians of fat offices. His conciliatory measures and promises of reform could have no effect, because the Spanish Government had broken faith before, and when he tried offensive tactics neither he nor his men had the heart for the work. When his army was practically shut up in Havana at the end of a year's fighting he was recalled, and Gen. Weyler was sent out to prosecute the war with more energy. In Madrid he defended his policy of conciliation from his seat in the Senate, and declared that if the Government ever failed him in faith he would make it successful. In the early part of 1899 he was elected president of the Senate, holding that office to the end. He played a singular rôle in Spanish politics, influencing and sometimes deciding the policy of each party in turn, liked quite as well by his political opponents as by his own party, and popular among all classes of Spaniards. He made both of the constitutional parties in Spain after first setting the present dynasty on the throne, but could get neither party to carry out his views. Almost at any moment he could have had the premiership from either party or from a new fusion party of his own creation, which his Premier his successor, the ministers circumvented him, and at all times the subtle politicians frustrated the policy he sought to impose, whether in domestic or in colonial affairs.

Max Müller, Friedrich, a German Orientalist, born in Dessau, Germany, Dec. 6, 1823; died in Oxford, England, Dec. 28, 1900. By Wilhelm Müller, the German poet, but in 1850 took one of his Christian names as a part of his surname. His godfather was Von Weber, the composer, and he was at first destined to become a musician, but Mendelssohn advised him to "keep to Greek and Latin." He was educated at the Universities of Berlin and Leipzig, and in 1844 translated the Hitopadesa into German. During a visit to Paris the next year what proved to be
his life work was happily suggested to him—an edition of the Rig-Veda with a commentary. Intending to study and examine manuscripts in the Bodleian Library and East India Company's house, he went to England in 1846, and two years afterward took up his residence in Oxford. After holding several posts of honor in the university, he was appointed Professor of Comparative Philology in 1885, resigning in 1875. As a lecturer he was very successful. He possessed a clear and at times even brilliant style, and the dullest theme became of interest when handled by him. His scholarship, however, was not of a progressive type, and the adverse criticisms that have been bandied regarding various conclusions of his by contemporary philologists in Germany and America are no doubt due to this circumstance, while specialists in general were disposed to consider that he overestimated the influence of language. His more important writings include The Hitopadesa, a collection of Indian fables (Leipsic, 1844); Meghadutta, an Indian Elegy (trans.) (Kölnsberg, 1847); a translation of the Rig-Veda (Oxford, 1848-74); Essay on Bengali (1847); Essay on Indian Logic (1853); Proposals for a Uniform Missionary Alphabet (1854); Letter to Chevalier Bunsen on the History of the Turanian Languages (1854); The Survey of Languages (1855); The Hymns of the Rig-Veda in German and translation of the Pratisakhya (1857); The German Classics from the Fourteenth Century to the Nineteenth Century (1858); Essay on Comparative Mythology (1858); History of Ancient Sanskrit Literature (1859); Lectures on the Science of Language (1861-64; revised 1891); A Sanskrit Grammar for Beginners (1866); Chips from a German Workshop, a collection of essays (1867-75); On the Stratification of Languages (1868); Rig-Veda Hymns to the Maruts or Storm Gods (trans.) (1889); Introduction to the Science of Religion (1875); Two Texts of the Rig-Veda (1873); The Origin and Growth of Religion (1878); The Upanishads (trans.) (1870-84); Selected Essays on Languages, Mythology, and Religion (1884); A translation of Kant's Critique of Pure Reason (1882); India: What can it Teach Us? (Critical Edition, 1884); The Science of Thought (1887); The Dhammapada and the Sutta Nipata (trans.) (1881); The Laws of Manu (trans.) (1887); The Vedic Ceremonies, Part I (1887); Biographies of Words and the Home of the Aryas (1888); Natural Religion (1889); Physical Religion (1891); Anthropological Religion (1892); Theosophy, or Psychological Religion (1893); Three Lectures on the Vedanta Philosop}
Wood, an actress of Mr. Augustin Daly's original New York company. In the autumn of 1878 Morris went to San Francisco under engagement as comedian of the California Theater, where he scored an enthusiastic success as the Pasha in the first American presentation of the comic opera Patiniza, and then returning in '79 was a favorite. He remained here until 1880, playing the leading comedy parts with Barrett, Bouicault, Lester Wallack, John T. Raymond, Robson and Crane, the Florences, John McCullough, and the usual routine of stock work. On May 15, 1879, he married Miss Wood. The "Old California company," as it was termed, was disbanded by friends, who disbanded forever in 1880, and Morris sought engagement in the East. He was for a time in Lester Wallack's company, and for a longer time endured much ill fortune in various short engagements, including a disastrous trip through the West Indies. During this period he made a very great double-dealing English correspondent in the first productions of William Thackeray's The Lady of Lyons at Booth's Theater, New York, and was finally engaged as a member of the Union Square company. He then adapted the story of Young Mrs. Geoffrey for Miss Helen Dauvray, under the name Mona. The only useful result of this work was that the production of the play first introduced H. Seabright to American audiences. In the summer of 1885 Mr. and Mrs. Morris went to London, but soon became homesick for America and secured passage to return. While waiting for the departure day, Morris was offered and accepted the part of the professor in a version of Ultimo called On Change, which was to be produced for a short time at an amusement park in connection with the launching of his steamer. He played the part with an inimitable Scotch dialect, and, to the astonishment of himself, the author, and all London, the play was so great a success and his own impersonation so captivating, that Morris and the Scotch professor became from that day institutions in the British stage. This production occurred at Toole's Theater in August, and the play ran without interruption for three hundred and sixty performances. While enjoying this success, Morris first entered into the business connection with Miss Rosina Vokes, during the long continuance of which these players delighted thousands of patrons, proving equal to any performances in such plays as The Game of Cards, The Old Musician, and A Pantomime Rehearsal. After Miss Vokes's death he became a member of the Lyceum Stock Company of New York, under the management of Daniel Frohman, and with these players made his last appearance, except in vaudeville, as Walter Hinzelman in At the White Horse Tavern at Wallack's Theater, New York, in February, 1899. He had been for several seasons a great favorite in short performances in the vaudeville theaters throughout the country, and found this kind of work more profitable than a regular stock engagement. His last appearance was at Brooklyn, N. Y., Dec. 24, 1899, in a little sketch called Behind the Scenes, precede by his beautiful personation of Kerry, in a scene from Bouicault's play of that name.

Mulhall, Michael George, an Irish statistician, born in Dublin, Ireland, in 1836; died in Sillimay, Ireland, Dec. 12, 1900. His education was received in the Irish College at Clermont. In 1861 he founded the Buenos Ayres Standard, the first English daily in South America. He was widely known as a statistician, and was a constant contributor to the Contemporary Review. In 1880 he estimated that the population of the United States in 1900 would amount to 76,290,000, and the astonishing accuracy of his forecast was shown when the census of 1900 was reported as 76,295,000. He was the author of Rio Grande do Sul and its German Colonies (London, 1873); Europe to Paraguay and Matte Grosso (1877); The Progress of the World in Arts, etc., since the Beginning of the Nineteenth Century (1880); The Balance Sheet of the World, 1870-80 (1880); A Dictionary of Statistics (1883); History of Prices since the Year 1850 (1885); The Argentine Republic: A Handbook of the River Plate (with E. T. Mulhall) (1899; 6th edition, 1886); Fifty Years of National Progress, 1807-87 (1887); Industries and Wealth of Nations (1890).

Munkacsy, Michael de, a Hungarian painter, born in Munkaes, Oct. 10, 1844; died in Bonn, Germany, May 1, 1900. His original name was Lieb and his early training was as a carpenter. His father, a petty official, and his mother having both died, he was brought out to a trade at the age of ten. He then apprenticed himself to his master that he ran away. He was befriended by a portrait painter, and having learned his artistic gift, made his way to Pesth, where Ligeti, a landscape painter, gave him a few lessons, went on to Vienna, and thence, in 1865, to Munich, earning his living as best he could while studying in the academy, and, by the hope and the knowledge he had acquired knowledge and facility, and finally reached Düsseldorf in 1868. The painters Bautier and Knaus interested themselves in him, and his work found recognition immediately. In 1870 he sent to the Paris Salon Le Dernier Jour d'un Condamné, which by its strong painting and dramatic power, proved Munkacsy to have already been hailed as one of the brightest of the young painters of the Düsseldorf school, and the vigor and boldness of his style had a reflex influence upon the others. His first exhibit was so enthusiastically received in Paris that he went there to work, but for some years he kept up the Düsseldorf traditions, turning out genre paintings giving anecdotes based on types and episodes of his native country, but striking in execution and marked by individuality. The influence of French art showed itself first clearly in his Intérieur d'Atelier, containing his portrait and that of his wife. His Milton Dictating Paradise Lost exhibited for the Brussels Exhibition of 1878, was a remarkable production of the multitude and spread his fame to many lands. His Christ before Pilate, in 1881, made him the most popular painter of the day. The artists of Paris gave him a feast to compliment him on his triumph, and the speculator who bought his painting exhibited it in all the countries of Europe, brought it in 1880 to the Universal Exhibition, and finally sold it to John Wannamaker for $100,000. Christ on Calvary, in 1884, renewed his triumph. Although artists find in him a lack of refinement and invention, and call his work shallow and theatrical, his use of blacks and bitumens vicious, still he is recognized as the strongest of the painters who have undertaken to interpret the Gospel story with modern taste and technique. He painted an Ecce Homo later. These works brought him wealth, enabling him to maintain magnificently in his Parisian mansion. Mozart Dying was the last of his historical paintings in oil. He painted small genre pictures of a brilliant life in bright tones, and some effective portraits. Afterward he devoted himself almost exclusively to decorative allegorical and historical compositions for the Vienna Museum and the hall of Parliament in Buda-Pesth, until his brain became diseased several years before his death.
Muravieff, Count Michael Nikolaeivich, a Russian diplomat, born April 19, 1845; died in St. Petersburg, June 21, 1900. He was the son of the Governor of Lithuania, and grandson of Count Michael Muravieff who stamped with iron hand the Polish insurrection of 1863. He studied for a short time in Heidelberg, and began his diplomatic career without further preparation in the Ministry of Foreign Affairs in St. Petersburg at the age of eighteen, soon afterward was attached to the legation at Stuttgart, where he won the good will of Queen Olga of Württemberg, who was a Russian princess, and then transferred to Berlin, thence to Stockholm, thence back to Berlin as second secretary, and in 1877 in the same capacity to The Hague. In the Russo-Turkish War he took charge of an ambulance train that was furnished to the Red Cross Society by the Queen of Württemberg. As soon as the war ended he returned to the service, rising to be first secretary at Paris, counselor of the Berlin embassy, and minister to Denmark, where he was brought into contact with members of the imperial family, and won the good opinion of the Emperor Nicholas II, who was so impressed with his historical and diplomatic knowledge, judgment, and tact, that when Staal and M. de Staal declined to take the post he was, on Jan. 13, 1897, appointed Minister of Foreign Affairs. Count Muravieff had the subtle art of impressing the great persons with whom he had to do with his ability as a diplomatist, and at the same time pleasing them with his finesse and social charm and the elegance with which he sank his professional ability out of sight. His skill and knowledge in diplomacy was not known except to those to whom he had chosen to reveal himself until he became the Czar's Minister of Foreign Affairs, and then it was soon revealed to the whole world. Prince Lobanoff had made no foray move in China, although he was preparing for a further assertion of Russian influence when the Siberian Railroad should be completed. Count Muravieff saw that the intrusion of Germany into the Chinese problem and the impatience of England necessitated prompt and dexterous action. The leasing of Port Arthur and Kiaochow and the extension of the Siberian Railroad through Chinese territory to the sea and toward Pekin came as a surprise to British diplomacy, and no counter-move could be invented. In the Cretan question he decided on an independent course which did not impair the influence of Russia, and did leave her hands free for all future contingencies. The arrangements for the Peace Conference at The Hague, which was an idea of the Czar's, were carried out with such skill and completeness that Russia gained in prestige and renown, turning the tables on the power that has always posed as the champion of freedom and progress, whereas if liberal sympathies everywhere had not been so thoroughly enlisted and other governments handled so gently it might have placed Russia in a ridiculous position. In the Chinese complications he preserved with admirable skill the independent position of Russia, and without breaking with the powers still preserved the attitude of friend and protector of the Chinese. In Korea, too, also, as soon as Russian affairs, he understood how to strengthen materially the position and prestige of Russia without causing danger to peace or even friction. Count Muravieff died suddenly while working at his desk.

Murucelli, Adelina (Mme. Adelina Murucelli d'Elpeux), a German singer, born in Breslau in 1844; died in New York city, April 10, 1900. She was taken by her parents to Paris in her infancy, and at the age of fifteen was graduated at the Conservatoire. She was engaged by Arditi, and under his management made many tours through Europe, and finally was the principal singer of the Italian opera company in the city of Mexico by Maximilian, on whose death she went first to Havana, then to New York, where she remained as a popular member of the opera at the Academy of Music for several years. In 1870 she married M. Ravin d'Elpeux, French consul at Chicago, and retired from the stage to devote herself to universal instruction in that city. In 1880 she removed her school to New York. She was also a composer of great ability, and her songs have been favorites with Patti, Gerster, and Parepa-Rosa.

Nesville, Juliette (Juliette Leslie), a French actress, born in Paris in 1857; died there, July 26, 1900. She first appeared at the Conservatoire for comic opera, and soon thereafter, in January, 1890, made her first appearance as a page in Sarah Bernhardt's production of Jeanne d'Arc. In February of the same year she joined the company of the Folies-Dramatiques and originated the title role of Ma Mie Rosette with brilliant success, succeeding Weber's Lobanoff to become Miss Helyett in Brussels. She was seen then in that part by Charles Wyndham, who at once engaged her for the same part in the English adaptation called Miss Decimo. After a popular run of that piece she was engaged for the Gaiety Theater, London, and came to the United States as the first singer of The Gaiety, making her first appearance as Mina at Daly's Theater, New York, Sept. 18, 1894. She came again in 1897, and played Juliette Bellevive in In Town at the Kniekkerbocker Theater, Sept. 6. Her last appearance in London was as Suzette in The Elixir of Life, produced at the Vaudeville, Sept. 9, 1899. She then played an engagement at the Folies-Dramatiques in Paris, and was rehearsing for Mariage Princier at the Théâtre de la Renaissance, Paris, at the time of her death.

Nietzsche, Friedrich Wilhelm, a German philosopher, born in Röcken, near Lübben, Oct. 15, 1844; died in Weimar, Aug. 25, 1900. He was the son of a Catholic pastor at the seminarium at Schulpforte, studied philology at Bonn, and under Ritschl at Leipzig, and on the recommendation of his preceptor was called as professor to the Pedagogium in Basle as soon as he obtained his doctorate. A year later came the Franco-German War, to which he went as a nurse, since as a Swiss professor he could not fight. He became early acquainted with Schopenhauer, and formed an intimacy with Richard Wagner, which he broke off in 1876, the year of the first Bayreuth festival. Till then he was a Teutonic enthusiast like Wagner, afterward a European skeptic. Against the Wagnerian tendencies he conceived an aesthetic and ethical repugnance, and repudiated his earnest and strong temperament, rendered morbidly intense by a severe disease of the eye and an irritation of the brain that were themselves the effect of too severe application to work and earnest thought and introspection. About the same time his infirmities made it necessary for him to resign his professorship, and he became a restless wanderer, flitting through Switzerland, the south of France, and northern Italy, writing all the time book upon book, with feverish impulse and hurried speed, in spite of illness, pain, and failing sight. This rushing mental labor in connection with the excessive use of sedatives to induce sleep and alay pain brought on an
OBITUARIES, FOREIGN. (Nott—Osman Pasha.) 533

affection of the brain in 1889 that put a stop to all his productivity, and his later years were passed in a torpid condition of mind, in which he showed some quiet enjoyment of music and the beauties of Nature and appreciation of the tender care of his mother, who nursed him at Baumberg, and of his sister, Frau Elisabeth Förster, who tended him in his final decline at Weimar. Before his mind failed he was such an unconnaisseur skeptic, such an unsparing analyst, that he drove his intellectual companions and admirers away from him, one after another, until he was left in solitude. His earliest published work was an explanation and justification of the Tragödie aus der Geiste der Musik (1872), distinguishing two kinds of art, one of the dream, illustrated by Homer and Greek sculpture, the other the phrenetic kind, to which belongs tragedy.

In his early period he wrote also Unzeitgemässen Betrachtungen, four volumes of essays, the first in 1873, which most truly fitted them. Of warlike and mental rebellion he began with Menschleinh, Alzumenschliches, other illustrated with the other, and which is a failure. He was so described by the works of the whole time, and the ordinary expression of style, to which he seeks to trace historically and to explain by the new theories of natural science, and finds philosophical explanations of later. In his was an event of the age, and with his own growth he unfolded the doctrine of an endless progressive evolution of humanity that is never reached because the same conditions return. In Jenseits von Gut und Böse (1886) and Zur Geologie der Moral (1887) he expounded a new doctrine of morality, heathen and Roman in its origin, the morality of lordship, the glorification of force, far happier and more fruitful in the world, which with its self-abnegation and hope of future happiness is the morality of slavery. This idea he carried to the most cynical conclusions in his ironical contempt for the sentimentalism of the age. In Der Führer Wagner (1888) and Götzendämmerungen; (der, Wie man mit dem Himmel fahren kann, 1890) he attempted to present the problems in a still more radical fashion, applying his the scenes of the stage and in these books the approach of insanity is discernible in this attack and in the predominance given to the examination of moral conditions and questions of decadence. He concludes that we are physiologically false, have inborn impulses and tendencies of a contradictory nature. Der Wille zur Macht, ein Versuch zur Umwertung aller Werte, which was to be his great work, was only begun when his mind became clouded, and Antichrist, the fiercest attack on Christianity written in modern times, was left unfinished.

Nott, Cicely (Mrs. Sarah Ann Adams), an English actress, died in London, Jan. 3, 1900. In early youth she was a singer of remarkable popularity in Julian's promenade concerts. She made her first appearance at Plymouth in 1854, and soon was engaged by Samuel Phelps and played Ophelia, Selma, and other singing characters during that actor's tour of Ireland. She was similarly engaged in Edinburgh in 1856 and 1857. She married in the last-named city Signor Pio Bellini, a singer and composer. With her husband she became a member of Mr. Nye Chart's musical company in Brighton in 1858, and there her husband died. After a term of retirement from the stage, during which she traveled in Germany, she again joined Mr. Chart's company in 1860, and was for a short time a member of the company at the Theater Royal, Manchester. Her first appearance as an actress in London was at the Lyceum with Miss Lydia Thompson in the burlesque Little Red Riding-hood, as Colin, the Little Boy Blue, Dec. 26, 1861. While engaged at this theater, where she played some years, she married Samuel Adams and again retired from the stage, only to return in 1869 at the opening of Charing Cross Theater, where she played Pollio in William S. Gilbert's burlesque of The Beggar's Opera and Cleopatra. She retired to private life again about 1880, and devoted herself to the care of her children.

Osman Pasha, a Turkish soldier, born in Amasia, in Asia Minor, in 1837; died in Constantinople, April 4, 1900. He was of pure Turkish race, and entered the military academy at Constantinople in 1853, leaving it as an officer of cavalry in 1854. In the war with Russia which began soon after he served under Omer Pasha. In 1860 he was engaged in the Lebanon campaign, when under pressure from France and Great Britain the Porte undertook to check the excesses of the Druses and promised a charter of rights for the Christians. In the Cretan campaign of 1867 Osman, who had risen rapidly in a career as a fearless and indefatigable soldier, distinguished himself by capturing the fortified convent of Hagia Georgia. He was marked for promotion, and after taking part in Redif Pasha's expulsion into Yemen in 1874, he received the rank of brigadier general, and in 1876 was appointed to the command of the Turkish expedition against the Servians, who were beaten by him one time after another. The Russians intervened, crossing the Danube in July, 1877. Osman confronted them with his forces at Plevna, where he erected formidable earthworks in an incredibly short time on the plans of Tewfik Pasha, an accoutrement ingenieur, leaving his men to plunge through the investing lines. His troops, drawn from all parts of the Ottoman Empire, and all alike in their devotion to him, who held the position without murmuring when their rations were reduced to a third and there was no wood to cook with or warm themselves, rushed the first Russian intrenchments, were brought to a stop by the enemy's supporting troops, rallied, and renewed the attack, and when the marshal, struck by a fragment of a shell, fell from his saddle, broke ranks and fled. Osman signed the capitulation on his litter, surrendering 40,000 men, and thus virtually ended the war. The Ghazi, whose heroic defense won the admiration of the world, was shot down by his officers, and were held till the conclusion of peace, when he returned to Constantinople and was charged by the Sultan with the task of reorganizing the Turkish army. He fortified Constantino- nople in spite of Russian protests. Afterward he was appointed Minister of War, and was loaded
with honors and gifts by the Sultan. Twice afterward he was recalled to the post of Minister of War. Osman Pasha published a history of the defense of Plevna, and it was carried into the presidency by the Liberal party in 1890, and in 1892 his Government was overturned by a revolution headed by Gen. Crespo, who was the victim of a counter-revolution in 1898. This brought the Liberals again into power, and in the first Cabinet formed by President Cipriano Castro the exiled Palacio, on his return, was given the portfolio of Foreign Affairs. He ceased to be a minister shortly before his death, and was about to depart on a mission to Europe.

Pellechet, Marie Catherine Helene, a French bibliographer, born in Paris in 1840; died at Marly-le-Roi, near Paris, Dec. 11, 1900. Her interest in bibliography manifested itself early. In later years she entirely devoted to the scientific study of incubation. Mlle. Pellechet was held in the highest esteem by all French scholars for her literary attainments, and was an honorary librarian of the Bibliothèque Nationale. She published Notes sur les Livres Liturgiques des Diocèses d'Autun, Chalon, et Mâcon (Paris, 1883); Catalogue des Incunable de la Bibliothèque de Dijon (Dijon, 1884); Notes sur des Imprimeurs du Contant-Venaisin et de la Principauté d'Orange et Catalogue des Livres imprimés par eux, qui se trouvent à Bibliothèque de Carpentras (1887); Catalogue des Incunable et des Livres Imprimés de la Bibliothèque Publique de Vence (1889); Catalogue des Livres de la Bibliothèque d'un Chanoine d'Autun: Claude Guillaud, 1495-1531 (1890); Alphabet des Imprimeurs du XVe Siècle (1893); Catalogue des Incunable des Bibliothèques de Lyon (Lyons, 1895); Les Incunable des Bibliothèque de la Ville de Colmar (1895); Une Association: Parisiens (1897); Catalogue Général des Incunable des Bibliothèques Publiques de France. The last named was her chief work, and the first volume was issued in 1897.

Pellieux, Gen. de, a French soldier, born in 1842; died in Quimper, July 15, 1900. He held one of the highest posts in the garrison staff film and the beginning of the Dreyfus affair, and was one of those chiefly responsible for the prevention of a revision of the trial of 1894. He had charge of the first investigation of Major Esterhazy, and systematically suppressed evidence against that officer. In the Zola trial and in the second Dreyfus trial he maintained the same attitude, and made every effort to save Gen. Castets, President and Gen. Gonse. When the reaction came he was one of the first generals to fall into disgrace.

Peter, Grand Duke of Oldenburg, born July 8, 1827; died in Rastede, June 13, 1900. He was the son and heir of the Grand-Duke August, who died Feb. 27, 1853. One of the most liberal constitutions in Germany came into operation at the dawn of the young grand duke's reign, and under the guidance of excellent ministers who possessed his full confidence the land was developed on a liberal basis, the communes receiving extensive powers of self-government, roads and railroads being promoted, the system of education being brought up to a high standard, and great attention being bestowed by the Government on the improvement of agriculture. The grand duke was a benefactor to art and literature. He was a furtherer of German unity under Prussian headship, rejoining every public treaty from Denmark. His successor is Friedrich August, who enters on his reign at the age of forty-seven.

Pickersgill, Frederick Richard, an English artist, born in London in 1820; died at Yarmouth, Isle of Wight, Dec. 27, 1900. He was the son of a painter of note, and a nephew of H. W. Pickersgill, royal academian, and a brother of Gilbert and the Royal Academy. His earliest work, The Brazen Age, was exhibited in 1839, and in 1841 his Combat of Hercules attracted much attention. He gained a prize at the cartoon exhibition at Westminster Hall in 1843 with The Death of King Lear, and in 1847 a prize of £500 for The 1812 Bombardment of Portoferraio, on which he was purchased at a similar amount for the Houses of Parliament. He became a royal academian in 1858, between 1839 and 1875 he exhibited 50 paintings at the Royal Academy, of which he was keeper in 1875-87. After resigning his office of keeper he lived in retirement on the Isle of Wight.

Pinto, Jose Maria de, born at Lisboa, Jan. 20, 1822; died at Lisboa, Dec. 28, 1900. He studied at the Royal Military College in Lisbon, and entered the 7th Infantry Regiment in 1863, becoming ensign the next year. In 1877 he reached the rank of major, and three years later was made aide-de-camp to the King. He crossed the continent of Africa in 1877-79 from Benguela to Durban, and his narrative of the exploit, entitled How I Crossed Africa, has been translated into many languages. Major Pinto received gold medals of the first class from the geographical societies of London, Paris, Antwerp, Rome, and Marseilles.

Pule, William, an English civil engineer, born in Birmingham, April 22, 1814; died in London, Dec. 30, 1900. He was articled to a civil engineer of his native town, and after the expiration of his time was occupied for several years in gas works construction and ventilating and heating projects. In 1840 he became an associate of the Institution of Civil Engineers. He was awarded the 科解 of the Institution of Civil Engineers at Elphinstone College, Bombay, in 1844-47, and filled the same chair at University College, London, in 1850-67, as well as that of lecturer at the Royal Engineers' Establishment at Chatham for the latter period. He subsequently was secretary to various royal commissions, such as those on water supply and the pollution of the Thames, and was one of the gas referees for the metropolis in 1870-90. He was honorary secretary to the Institution of Civil Engineers in 1865-96, Fellow of the Royal Society from 1861, and its vice-president in 1876 and 1889. He was a learned musician and musical critic, although he composed but little. He was an authority on whist and a specialist in the game. His works include A Treatise on the Cornish Pumping Engine (1844); The High-pressure Engine, from the German of E. Alban (1858); The Status of Civil Engineers in the United Kingdom and Foreign Countries (1870); Iron as a Material of Construction (1872); Life of Sir William Fairbairn (1877); The Story of Mozart's Requiem (1877); The Philosophy of Music (1879); The Philosophy of Whist (1884); Whist (1891); The Evolution of Whist (1891).

Puttkamer, Robert Victor von, a Prussian statesman, born in 1830; died in Karzin, March 15, 1900. He was the son of the president of the imperial chancery. His family has furnished many Prussian officials, and as a
relative and friend of Bismarck his own rise was extremely rapid. He was a strong Conservative, and a prominent member of the party in the German Reichstag, to which he was first elected in 1854. He became president of the provincial government of Silesia, and in 1879 was called to succeed Dr. Falk as Minister of Education and Worship, and carry out the details of the compact which Prince Bismarck had made with the Clericals in order to gain their support for his economical and financial schemes. His music of showing vacant sees and pastorates to be filled did not go far enough to satisfy the Clericals, but too far to please the Liberals. When Count Botho Eulenburg resigned from the Ministry of the Interior on Feb. 27, 1881, Herr von Puttkammer succeeded to that post, and from the beginning he was the target for shafts from the whole Left which looked upon him as the begrzer of reaction and the instrument for carrying out official coercion in elections. When he proceeded with energy, not only to apply the Socialist law against the Socialists and for the prevention of public meetings in Berlin, but to drill the provincial officials into active advocates of the policy of the Government in the spirit of an instrument of the ministry, he was a source of alarm to the views and intentions of the Imperial Chancellor, the Radical leaders constantly assailed him in the severest terms, and he replied with an invective as keen, which rankled the more because it was delivered in an imperturbable, contemptuous tone. He frankly avowed the abuses which they alleged to the new Emperor, and was carrying out the King's wishes. The Puttkamer crisis came after Friedrich succeeded to the throne on March 9, 1888. Eugen Richter, on May 26, delivered a speech exposing the methods of influencing elections to the Reichstag that the Minister of the Interior had introduced. The minister, who was a nephew of the new Emperor, was asked for a memorial defending his conduct. The Emperor expressed strong displeasure at what had taken place to bring about the election of Conservative candidates, and Puttkamer immediately resigned, and the resignation was accepted, whether with the acquiescence of Bismarck, who had been the principal, if not the author, of the misdeed, or against his advice, it is not certainly known. Wilhelm II, who came to the throne on June 15, 1888, was expected to recall the disgraced minister, but he contented himself with appointing him chief president of the province of Pomerania.

Queensberry. Marquis of, a British sportsman, born in 1844; died in London, Jan. 31, 1900. He was the son of the seventh marquis, and succeeded his father at the age of fourteen. His contentions with his successive wives and other relatives, his positive and combative declarations in favor of agnosticism and free thought, and other manifestations of a vigorous mind and militant spirit, have given him a place among sporting men as the author of the rules of the prize ring that bear his name, and as one of the highest authorities on boxing.

Ratibonse. Louis Fortune Gustave, a Frenchman of letters, born in Strasburg, July 29, 1827; died in Paris, Sept. 24, 1900. He contributed hundreds of literary and other articles to the Débats, but his fame rests upon his poems for children, his work partaking somewhat of the character of both Lewis Carroll's and Robert Louis Stevenson's in the latter's Child's Garden of Verses. As a writer of verse for children he excelled no other French author of his time. He published three collections of poems: Impressions Littéraires (1855); Morts et Viants: Nouvelles Impressions Littéraires (1860); Auteurs et Livres (1868); a translation of Dante's Divina Commedia (1859); Hero et Léandre, a drama (1859); and the following books of verse: Au Printemps du Volga (1857); La Comédie Enfantine (1860); Dernières Impressions Enfantines (1862); Les Figures Jeunes (1866); Les Petits Hommes (1868); Les Petites Femmes (1871); Les Grandes Ombres (1900). Ratisbonse was appointed librarian at Fontainebleau in succession to Octave Feuillet, and was transferred later to the Palais du Luxembourg.

Reeves, Sims (John Sims Reeves), an English singer, born at Shooter's Hill, Kent, England, Oct. 21, 1822; died in Worthing, Sussex, Oct. 25, 1900. He came first before the public as a singer when eight years of age in local concerts. His first studies of music were made under his father, John Reeves, who was a sandstone dealer, and was not till the age of fourteen that he became organist and choirmaster of the church at North Cray, Kent. His first appearance on the stage was at Newcastle-upon-Tyne in December, 1839, as the gypsy boy in Guy Mannering, and his success secured for him a continuous management. After a few months of work in the provinces, during which he was known by the stage name of Johnson, in 1841 he secured an engagement as second tenor at Drury Lane Theater, then under the management of William C. Maeredy. He first came into note on account of his singing of the song Come if you dare in the opera of King Arthur. After two seasons at Drury Lane, Reeves went to Paris and studied for some months under Signor Bordogni, then to Milan, where he was under the tutelage of Mazzueto. He was invited to sing at La Scala, and made his début there as Edgardo in Lucia di Lammermoor in 1843. After a season of success in France and other Italian theaters he returned to England, and in December, 1845, made a triumphant début in English opera at Drury Lane in his favorite Edgardo. Hector Berlioz, who was the orchestral conductor of the theater, wrote of him: "He has a charming voice of an essentially distinguished and sympathetic character; he is a very good musician, and his face is very attractive." Early in 1848 Reeves made his first appearance in oratorio as Judas Macae- buens, under the direction of John Hallah at Exeter Hall, London. He next joined the company at Her Majesty's Theater, where he made a great success as Carlo in Linda di Chamouni. In the autumn of the same year he was the principal and singer of all the Italian operas during the musical festivals. Still later in 1848 he achieved great success as Elvino in La Sonnambula in Italian at Covent Garden, and thenceforward he was acknowledged the greatest of English tenors. He sang frequently in Paris at the Théâtre des Italiens, and was almost as much a favorite there as in London. One of his chief successes in 1850 was in Mæsferin's opera Robin Hood, first produced in London in 1860. From that year he devoted himself principally to oratorio and concert singing. He was always the most notable figure at the Handel festivals in the Crystal Palace. In the winter of 1873–74 he sang in The Beggar's Opera and The Waterman at Covent Garden.
Theater, and renewed his earlier triumphs. As a ballad singer he was wonderfully popular. His rendering of Tom Bowling was unequaled by any in sweetness, pathos, and dramatic skill. In recognition of his services to English music, Mr. Reeves was, in the last months of his life, placed on the pension roll of the civil list.

**Rusell, Charles, Baron of Killowen**, an English jurist, born in Newry, County Down, Ireland, Nov. 10, 1832; died in London, Aug. 10, 1900. He studied at Trinity College, Dublin, where his services as an athlete were recognized. In 1880 he was elected as an independent supporter of Mr. Gladstone, and his speeches in support of the compensation for disturbance bill and the land act of 1881, and against the crimes act of Mr. Foster and Sir William Harcourt's more stringent one of 1882, were of great advantage to the Liberal party. He sat as a머니 supporter of Mr. Gladstone's cabinet, and his speeches in support of the compensation for disturbance bill and the land act of 1881, and against the crimes act of Mr. Foster and Sir William Harcourt's more stringent one of 1882, were of great advantage to the Liberal party. He sat as a supporter of Mr. Gladstone's cabinet, and his speeches in support of the compensation for disturbance bill and the land act of 1881, and against the crimes act of Mr. Foster and Sir William Harcourt's more stringent one of 1882, were of great advantage to the Liberal party.

**Ryle, John Charles**, an English clergyman, born in Macclesfield, England, May 16, 1816; died in Lowestoft, June 10, 1900. He was employed for a time in his father's bank, and was a captain in the Cheshire Yeomanry. He was educated at Oxford, and was admitted to orders in 1841. After several years, he became a rector of Stradbrooke, Suffolk, from 1861. He was appointed rural dean of Hoxne in 1869, and honorary canon of Norwich in 1871. While dean designate of Salisbury, he died in 1880; bishop of the newly created diocease of Liverpool. He had long been known as one of the leaders of the evangelical party in the English Church, but he did not bring about such a complete Low Church triumph as was looked for in some quarters, nor did his works favor the erection of a cathedral for the new diocese. He considered the time had not come to provide a cathedral seat in more numerous and fruitful mission rooms than a cathedral, and while he did nothing to prevent the carrying out of the cathedral scheme, he refrained from actively furthering it. Bishop Ryle published more than 200 tracts, of notable excellence for those terse, epigrammatic expressions, which were translated into many European languages, as well as into Chinese and Hindustani. His more formal works include Assurance (1850): Home Truths, Series 1–9 (1850–55); The Young Man's Christian Year (1853); Startling Questions (1853); The Priest, the Puritan, and the Preacher (1855); Plain Speaking, Series One and Two (1855); Expository Thoughts on the Gospels (1879–80). Only One Question: Spiritual Songs (1861); Hymns for the Church on Earth; Coming Events and Present Duties (1867); The Bishops and Clergy of Other Days (1868); The Christian Leaders of the Last Century (1868); Expository Thoughts on St. John (1868); Shall we Know One Another in Heaven? (1869); The Door of Life or the Knocks Untied (1874); Hymn Book for Public Worship (1875); Holiness and Other Subjects; Old Paths (1877); Bible Inspiration; Its Reality and Its Nature (1877); Practical Religion (1878); Church Principles and Church Comprehensiveness (1879); Boys and Girls Playing and Other Addresses (1882); Thoughts on Immortality (1883); Principles for Churchmen (1884); Thoughts and Questions about Holiness (1884); Thoughts on Baptism (1884); Thoughts on Sickness (1884); The Thing as it is: Questions and Answers about the Lord's Supper (1885); Thoughts on Prayer (1885); The Kingdom of God (1886); Points of View (1886); The Upper Room (1887): Christ and His People (with W. H. Freemantle) (1888); Is All Scripture Inspired? (2d ed., 1898).

**Saint Amand, Baron Imbert de**, a French historian, born in Paris in 1834; died there, June 22, 1900. He entered the French Ministry of Foreign Affairs in 1852, and was placed in a large ministry to which he was, however, to be a plenipotentiary of the first class in 1882. In 1875 he published a work descriptive of life at the court of Louis XV, full of interesting details derived from contemporary documents and of glowing sympathetic studies of the royalties and the companies of the courtiers. It was called Les Femmes de Versailles, and was followed by Les Femmes des Tuileries, dealing with the personages of Napoleon's court with the same
Sanclemente, M.A., President of Colombia, born in 1815; died early in January, 1900. He was elected on Aug. 7, 1898, and relinquished the active-duties of his office into the hands of Vice-President Marroquin. His political rôle began when the Conservative party came into power, and, making Nuñez, its most eminent leader, chief of the executive, united under one administration the nine states of the Colombian federation. Sanclemente became Governor of the department of Cauca, was elected a member of Congress, and was called by Acting-President Caro into his Cabinet as Minister of the Interior after the death of President Nuñez. When the term expired Sanclemente was nominated and elected President for the sake of harmony, and from his retreat of Anapoima, in Cauca, he exercised a moderating influence. Nevertheless his administration had to cope with two formidable revolutionary uprisings.

Saxe-Coburg-Gotha, Alfred, Duke of, Prince of Great Britain and Ireland and Duke of Edinburgh, born in Windsor Castle, Aug. 6, 1844; died in Coburg, July 30, 1900. He was the second son of Queen Victoria of England and the Prince Consort Albert of Coburg. Choosing early to follow the profession of a naval officer, he was carefully educated to that end, and was admired for the zeal he showed for his calling and for his practical knowledge of seamanship, gunnery, and naval affairs generally. He received an allowance of $15,000 a year on attaining his majority and of $2,300 granted by Parliament when he married Maria Alexandrovna, the only daughter of the Czar Alexander II on Jan. 23, 1874. As rear admiral, chief of marine artillery, member of the Privy Council, and holder of other offices, he drew pay from the British treasury in addition to his appanage. In 1890 he made a voyage to China and Japan, serving like any other midshipman on board the Euryalus, and receiving royal honors only on shore. When King Otto fled from Athens to escape a revolutionary mob, the Boule unanimously offered the vacant Hellenic throne to the Duke of Edinburgh, who shortly before had visited the Pirinns in his ship. His election was invalid because England, France, and Russia had agreed, at the foundation of the Hellenic kingdom in 1828, that no secon of their royal houses could ever sit on the Greek throne. In 1867 he received command of the frigate Galatea, on which he visited many foreign countries. In New South Wales he, as a prince, offered to the inhabitants a reward of £5 for catching rabbits, and in 1857, when the duchess he became a general of infantry in the Prussian army. His German subjects, who looked coldly on the intrusion of a foreigner, as did also the German princes, grew to like him for complaisant ways that he had never exhibited to the British public. The wedding feasts of his daughters gave much trouble to the German old residence city. Princess Maria married Prince Ferdinand of Roumania in 1893; Victoria was wedded to Ernst Ludwig, Grand Duke of Hesse, in 1894; and Alexandra to the hereditary Prince of Hohenlohe-Langenburg in 1896. The daughters retained the rank and title of princesses royal of Great Britain and Ireland, to be ad-
OBITUARIES, FOREIGN. (SCHNADHORST—SMYTH.)

...dressed as Royal Highness. The duchess won the hearts of the Coburgers by her manifold charity. It was a sad disappointment to the duell pair when their son died, Feb. 6, 1890. The Duke of Saxe-Coburg was attacked by cancer of the tongue, but died from heart weakness without knowing what the malady was that undermined his health. His heir is the youthful Duke of Albany, the posthumous child of Prince Leopold, youngest son of Queen Victoria, who has received a military education at Potsdam to prepare him for the duties of a German prince, which he will not take up before 1905, the hereditary Prince of Hohenlohe-LEiningen being regent so long as he is a minor.

SCHNADHORST, Francis, an English politician, born in Birmingham, Aug. 24, 1849; died in Roch- hampton, Jan. 2, 1900. He was educated in King Edward VI's grammar school in Birmingham, and succeeded to his father's business as a draper and hosier, interested himself in local literary and educational societies, and later in politics, organized in 1870 the nonconformist committee that fought the subvention of Church schools, and in 1873 the Birmingham Liberal Association on the principles of his father's, which secured the defeat of the Conservatives in the town elections and made Joseph Chamberlain mayor. The caucus system was next applied to national politics, with the result that the Liberals carried Birmingham in the parliamentary election of 1874, in which the Conservatives swept the country. Schnadhorst himself was called upon by Mr. Schnadhorst to teach his plan of organization to other politicians, and when more than a hundred such associations united in the National Liberal Federation he, with Mr. Cham- berlain at his back, was its organizer and secreta. The introduction of popular party management and the diversion of political topics were victorious in the general election of 1880. The new system could not be preserved in its purity, and after the desertion of Mr. Chamber- lain and the gradual breakdown of Mr. Schnadhorst's health the Liberal Federation lost much of its independence and influence, while the Unionists with success seconded many of its features and formed closer popular organizations than the Liberals still maintained.

SEDILE, Paul, a French architect and painter, born in Paris in 1836; died there, Jan. 6, 1900. He entered the Ecole des Beaux Arts as a student in 1857, and in 1875 was the laureate of the grand medal of the Societe Centrale, awarded for excelle. In private architecture. Among his works are the great department store at Paris, Au Printemps, and the basilica of Jeanne d'Arc at Domremy. He exhibited many paintings from year to year, and wrote extensively on professional topics.

SHUTTLEWORTH, Henry Cary, an English clergyman, born Oct. 27, 1830; died in London, England, Oct. 24, 1900. He was the son of a Cornish clergyman, and was educated at Oxford. He was ordained curate of St. Barnabas's parish, Oxford, and in 1874 became a minor canon of Oxford Cathedral. From 1870 to 1884 he was a minister in the Church of London, resigning in 1884 and living the last-named year to accept the chaplain living of St. Nicholas's Cole Abbey, London, the represen- tative of six united city parishes. With the design of making his church in Queen Victoria Street the most practical benefit to the working class community in which it was situated, he opened it daily and had midday services, musical and devotional, with addresses on all kinds of sub- jects, "from Dante to Dickens, and from sanita- tion to socialism." He drew a large Sunday congregation also, and on Sunday evenings he him- self conducted a large volunteer choir through a series of oratorios. He much disliked the so-called "irregular services," and contended that a church should train its members to invest time and money in the support of the church. After 1890 he founded the Shuttleworth Club for the benefit of employees in the city warehouses. In politics he was a pronounced Liberal and thoroughly devoted to the cause of Christian socialism. His writings include The Seven Last Words of Our Saviour (Oxford, 1879); Songs (1885); The English Church and the New Democracy (London, 1885); Contemporary Fic- tion (1888); The Place of Music in Public Wor- ship (1892); Some Aspects of Disestablishment (1894); Hymns for Private Use (1895).

SIDGWICK, Henry, an English philosopher, born in Skipton, Yorkshire, May 31, 1838; died in Witham, Aug. 28, 1900. He came of a family of scholars, and had a brilliant career at Cam- bridge. He became a fellow of his college in 1858, but resigned ten years later because the ten- dencies of his philosophy, which attacked logical propositions to which he could not longer subscribe. After being lecturer at Cambridge from 1859 to 1875, he was made prelector of moral philosophy in the latter year, and pro- fessor of the same in 1883. On account of failing health he resigned his professorship not long be- fore, and retired to a small house he had purchased by the generosity of his father, living there, from 1878 to 1894, his intellectual sincerity and stimulating con- verse. His principal works are The Methods of Ethics (London, 1874); The Principles of Politi- cal Economy (1883); and The Elements of Poli- tics (1891). Besides innumerable contributions to reviews and magazines, he published also The Principles of Conformity and Subscription (1879); The Scope and Methods of Ethics (1885); and Outlines of the History of Ethics, for English Readers (1886). Prof. Sidgwick was for some time President of the Society of Psych- ical Research, and one of the founders of Newn- ham College, Cambridge. He was made honorary fellow of his college in 1881, and received the degree of H.L. D. from the universities of Edin- burgh, Glasgow, and St. Andrews, and D.C.L. from Oxford.

SMYTH, Charles Piazzi, an English astro- nomer, born in Naples, Italy, Jan. 3, 1819; died Feb. 21, 1900. He was the second son of the astronomer and hydrographer Admiral Smyth. He was named Piazzi after his uncle, Giovanni Piazzi, a Jesuit astronomer. Ceres was employed in the Observatory at the Cape of Good Hope from 1833, and in 1845 was appointed astronomer royal for Scotland, which post he retained till 1888, when he retired on a pension. To the general public he was best known by his fantastic speculations concerning the Great Sunjam, which he had visited and investigated in 1865. In 1871 he began to prepare an exhaustive star catalogue and ephemeris of all the Edinburgh and best contemporary observations of the same stars, which were issued sub- sequently in the fourteenth and fifteenth volumes of the Edinburgh Observatory's publications. All his publications were written in English and were devoted to solar photographic spectroscopy. He published The
Great Pyramid and the Royal Society (1874); and New Measures of the Great Pyramid (1884).

**Stevens, George Warrington,** an English war correspondent, born in London, Dec. 10, 1869; died in Ladysmith, Natal, South Africa, Jan. 16, 1900. He was the author of Monologues of the Dead (1896); Naval Policy (1896); Stella's Story, a Venetian Tale (1896); The Land of the Dollar (1897); With the Conquering Turk (1897); Egypt in 1898 (1898); With Kitchener to Khartoum (1898); In India (1899); and The Tragedy of Dreyfus (1899).

**Stevenson, Robert Alan Mowbray,** a Scottish art critic, born in Edinburgh, March 25, 1847; died April 18, 1900. He was a cousin of Robert Louis Stevenson, the novelist. He was educated at Cambridge, and after leaving the university studied painting with Ormants at Fontainebleau, and later was a pupil of Carolus Duran. He joined the staff of the art critic in 1855, and was Professor of Fine Arts at Liverpool University College in 1887–93. In the last years of his life he was art critic of the Pall Mall Gazette. His only published books are The Devils of Notre Dame (1894) and The Art of Velasquez, a work of abiding value.

**Stokes, Sir William,** an Irish surgeon, born in Dublin, Ireland, in 1832; died in Howth, Sept. 20, 1900. She was a daughter of the late Dr. William Stokes, and sister of Sir William Stokes, mentioned below. In 1867 she accompanied her father in an archaeological tour conducted by the Earl of Dunraven through Galway, Sligo, and the Isle of Arran, the results of which appear in the earl’s Notes on Irish Architecture, left unfinished at his death, but completed and edited by Miss Stokes. She subsequently traveled in Italy and France, and the record of her investigations there will be found in her Six Months in the Apennines: A Pilgrimage in Search of the Vestiges of Irish Saints (1882) and Three Years in the Apennines (1885), which were the most famous works of hers are Early Christian Architecture in Ireland (1876); Early Christian Art in Ireland (1887); Notes on the Cross of Cong; The High Crosses of Castledermot and Durrow (1900). She also edited Christian Inscriptions in the Irish Language (1872–75).

**Stokes, Sir William,** an Irish surgeon, born in Dublin, March 10, 1839; died at Pietermaritzburg, Natal, South Africa, Aug. 18, 1900. He was the second son of William Stokes, Professor of Medicine in the University of Dublin, and received his education at the Royal School, Armagh, at Trinity College, Dublin, and at medical schools in France and London. He had been in active practice from 1863, and was knighted in 1886. He was president of the Royal College of Surgeons in Ireland in the last-named year, and had been surgeon in ordinary to the Queen in Ireland from 1892. Two months after the outbreak of the Transvaal War in 1899 he was nominated by the Government to the command of the forces in South Africa as a field marshal. He was knighted for his services, and in 1880 was appointed military member of the Vicereyl’s Council. In 1881 he was created a baronet, and succeeded Sir Frederick Haines as commander-in-chief of the Indian army. He planned and initiated the system of defenses by which the whole northwest frontier was brought under command of a strategic series of military railroads and roads connecting fortifications with fortified camps and supply bases, the policy that was carried out by his successor, Lord Roberts of Kanahar. The campaign in Burmah ending with the occupation of Mandalay and the annexation of Thibaw’s kingdom was fought under his supreme command, and he secured the increase of the army in India by 10,500 British and 21,000 native troops. His promotion to lieutenant general was in 1877, to general in 1881. He died of cancer in 1885 and was succeeded in the Indian army, and was a member of the council of the Secretary of State for India till his death, and from 1895 governor of Chelsea Hospital, having in the preceding year received the baton of a field marshal.

**Stone, Samuel John,** an English clergyman and hymn writer, born in Whitmore, Staffordshire, April 25, 1839; died in London, Nov. 19, 1900. He was educated at Oxford, and took orders in 1862. For the next eight years he was a catechist at Windsor, and for the twenty years
succeeding was at St. Paul's, Hoggosten, in the East End of London, as curate 1875-76, and as rector for the remaining period. From 1890 until his death he was rector of Allhallows, London Wall, where in his latest years he practised a singular but very helpful experiment. Having observed that hundreds of working women came up to London on the early trains for workingmen, in order to take advantage of the cheaper fare, and were in consequence obliged to walk about the streets until the hour when the opening of the arcades, he caused Allhallows Church to be opened every early every week day for their accommodation while waiting. The opportunity was taken advantage of by a very large number who otherwise would have been forced to wait in the open air in all weathers. He published Lyra Fidelium (1866); The Knight of International ed. (1892); Sonnets of the Sacred Year (1895); and Lays of Iona (1898). He will probably be longest remembered by his familiar hymn, The Church's One Foundation.

**Sullivan, Sir Arthur Seymour**, an English composer, born in London, May 13, 1842; died there, Nov. 21, 1900. He was a son of Thomas D'Oyly Carte, who was for thirty years the manager of the Royal Opera House, London. By his mother he was of Italian Jewish descent. His youth was spent under the instruction of his father until at twelve years of age he became a member of the boy choir in the Chapel Royal at St. James's. He published his first composition at the age of thirteen, an arrangement of the Air from Don Giovanni, O Lord, the Way of Thy Statutes. In the following year he won the Mendelssohn scholarship at the Royal Academy of Music. He went in 1858 to the Leipzig Conservatory, and remained there until 1861. While in Leipzig he composed his Feast of Roses and music to Shakespeare's Tempest. This last was his return to England, and was sung at the Crystal Palace, April 5, 1862. From that date he was a recognized master among English musicians. His next work was Kenilworth, a cantata sung at the Birmingham festival in 1864. Then followed L'Isle Enchantée, played at Covent Garden in 1864; In Memoriam, an overture, played at the New Year Festival at Leipzig in 1866; The Oratorio (1869); Overture de Ballo (1870); On Sea and Shore, a cantata with words by Tom Taylor (1871); a Te Deum on the recovery of the Prince of Wales (1872); The Light of the World, an oratorio, at the Birmingham festival (1873); The Martyr of Antioch, an oratorio sung at the Leeds festival (1880); and The Golden Legend, a cantata sung at the Leeds festival (1886). Besides these, Sullivan's serious work includes the music of Onward, Christian Soldiers, and The Lost Chord, both world known. Sullivan's work on what came to be a national school of comic opera began in 1866, when in collaboration with Francis C. Burnand he wrote the operetta Beat and Cox, produced in London in 1867. From that date he began to devote his abilities to dramatic work, and in 1871 entered into the famous association with William S. Gilbert. Their first effort was Thespis, or The Gods Grown Old, a burlesque, produced at the Gaiety Theater, London, Dec. 26, 1871, with John L. Toole and Nellie Farren in the principal roles, for which box office succeeded, followed Box and Cox in 1867 was The Contrabandista, produced in New York under the name of The Chieftain. In 1875 they wrote Trial by Jury, a one-act opera, for D'Oyly Carte, manager of the Royalty Theater. This sketch—written, rehearsed, and produced (March 25, 1875)—in three weeks—was enormously successful. For nearly twenty years from that time Gilbert and Sullivan worked together toward the highest distinction in comedy and its music. Their works, nearly all of which were first produced by D'Oyly Carte, at the Savoy Opera, in London, in London, were not only wonderfully popular in England, but speedily passed to equal renown in all civilized countries and languages. The names and dates of these are: The Sorcerer, Nov. 17, 1879; H. M. S. Pinafore, May 25, 1878 (ran two years); The Pirates of Penzance, April 3, 1879; Patience, April 25, 1880; Iolanthe, Nov. 7, 1882; Princess Ida, Jan. 5, 1884; The Mikado, March 14, 1885; Ruddigore, Jan. 27, 1887; The Yeoman of the Guard, Oct. 3, 1888; and the Gondoliers, Dec. 7, 1890. Sullivan and Gilbert separated in 1890 on account of a quarrel between Mr. Gilbert and D'Oyly Carte. Sullivan's grand opera Ivanhoe was produced by the latter at his new theater in Jan. 31, 1891, and ran for one hundred nights. Sydney Grundy wrote the libretto of Haddan Hall, which was produced with Sullivan's music in September, 1892. Sullivan and Gilbert came together again, and Utopia Limited, their united work, was played Oct. 7, 1893. Their next opera was The Grand Duke, March 7, 1896. Pimer and Comyns Carr wrote the libretto for the latter, and it was produced May 25, 1897. He recently composed music for Rip Van Winkle's poem, The Hunchbacked Beggar, and had completed a new opera, to be called The Emerald Isle, in collaboration with Capt. Basil Hood. He was knighted in 1883, and was made a chevalier of the Legion of Honor of France in the same year. He received the degree of doctor of music from Oxford and Cambridge.

**Freytag, Sir George James**, an English meteorologist, born in London in August, 1838; died there, March 10, 1900. He was educated at St. Peter's Collegiate School, and at the age of sixteen offered his services to James Glaisher, founder of the Meteorological Society, who discouraged his scientific aspirations as leading to a life of poverty. But Freytag persisted, and became one of the meteorological reporters for the Registrar General. He assisted Admiral Fitzroy to organize the British system of storm warnings, and independently began to collect records of rainfall, publishing his first annual report in 1869, having found volunteers to furnish the records of 168 stations. For forty years he organized voluntary observers, and in 1898 he had records from 3,404 stations. In 1866 he began his Monthly Meteorological Magazine.

**Tarbé des Sablons, Edmond Joseph Louis**, a French dramatist, born in Paris, Feb. 20, 1838; died there, Dec. 15, 1900. He was first educated for the law, but took up journalism in early life. In 1858 he founded, in association with Henri de Pène, the Parisian journal Gaulois, in 1868. In 1877 he devoted himself to novel writing, in which he became very popular. He wrote, in association with Adolphe d'Ennery, a drama in five acts called Martyre, produced March 4, 1886. His next piece was Monsieur de Morat, or Simply in Love, first produced March 16, 1887. With Pierre Decourcelle he wrote Gigolette, a drama in five acts, first produced Nov. 25, 1893. La Mattresse de l'École and L'Histoire d'Angèle Valoy were also from his pen. His published novels were Les Drame des Parisiens (1884); Monsieur de Morat (1886); La femme de Crime (1887); and L'Histoire d'Angèle Valoy.
Tarleton, Ernest (Ernest Thompson), an English actor, born in London in 1839; died in Toronto, Canada, March 20, 1900. He was a son of Alfred Thompson, an English artist. His first appearance on the stage was in the part of the Hare, and within a few months thereafter he was engaged for the first stock company of the Lyceum Theater, New York city. He was continuously and actively a member of this organization until transferred to the support of Mr. E. H. Sothern, with whom he was playing the part of D'Artagnan in the King's Musketeers at the time of his fatal illness.

Teck, Francis, Duke of, born in Vienna, Aug. 27, 1837; died in Richmond, England, Jan. 21, 1900. He was the only son of Duke Alexander of Württemberg and his morganatic wife, Countess Claudine de Rheley, who received the title Countess of Hohenlohe. He studied in the Royal Academy of Engineers from 1849 to 1853, was commissioned a lieutenant of lancers in 1854, later as a captain of hussars, and in the Italian campaign of 1859 he served with gallantry at Solferino as orderly officer to Field-Marshall Count Wimpffen. After the campaign of 1860 he left the Austrian army, having married on June 12 Mary Rhedey, Countess of Teck, the youngest sister of the Duke of Cambridge. The first years of their married life were passed in Kensington Palace, where the allowance of £5,000 a year granted to the duchess by Parliament proved insufficient. In 1883 they left England, raising money by selling valuables of the duchess at auction, and lived for a time in the Tyrol, afterward at Florence, returning ultimately and taking up their residence at White Lodge, Richmond, the gift of Queen Victoria. In 1882 the duke served on Sir Garnet Wolseley's staff in Egypt, and was present at Tel-el-Mahuta and Tel-el-Kebir. He was made a colonel in the Home Service in 1887, and a major general in 1893. He held the honorary rank of lieutenant general in the German army. The Duchess of Teck died on Oct. 27, 1897, and the duke, whose health was shattered, lived in complete seclusion from that time. Of their four children Princess Mary, born May 26, 1867, married Count Louis of Battenberg; the Prince Adolphus, born Aug. 13, 1868, married the third daughter of the Duke of Westminster in 1894, and served in the Boer war as a captain in the Life Guards; Prince Francis, born Jan. 9, 1870, was educated at Sandhurst, became a captain in 1894, served with the Egyptian army in the Sudan, and saw active service in the war in South Africa; and Prince Alexander, born April 14, 1874, was educated at Sandhurst also, and commissioned a lieutenant of hussars.

Tirebuck, William Edwards, an English novelist, born in Liverpool; died there, Jan. 22, 1900. He was educated in his native city, and after some commercial experience was subeditor of a local daily paper. He subsequently was for six years subeditor of the Yorkshire Post. Afterward he was entirely devoted to authorship. He possessed extensive art knowledge, and his work in fiction was conscientious. His published works comprise William Daniels; Artist (1879); Dante Gabriel Rossetti; His Work and Influence (1884); The Mission of the Duce (1886), a dramatic cantata (1887); and the following novels: Saint Margaret (1888); Dorrin (1891); Sweetheart Gwen (1893); The Little Widow and Other Epistles (1894); Miss Grace of All Souls (1895); Jenny Jones and Other Tales from the Welsh Hills (1896); Meg of the Scarlet Foot (1898); and The White Woman (1899).

Trail, Henry Duff, an English man of letters, born in Blackheath, Kent, Aug. 14, 1842; died Feb. 21, 1900. He was educated at Oxford, and in 1865 was called to the bar. Three years later he was in charge of journals, and in 1877 founded and edited the Pall Mall Gazette in 1873-'80; the St. James Gazette, 1880-'82; the Telegraph, 1882-'96; and the Saturday Review, 1883-'94; and he was editor of the Observer in 1889-'91, and of Literature in 1899-1900. Trail was a sound critic, a man of wide attainments, and the possessor of an excellent style. He edited the first four volumes of the Great Warland (1892-'96), and contributed to the English Citizen Series, Central Government (1882); to the English Men of Letters Series, Sterne (1882) and Coleridge (1884); to the English Worthies Series, Shaftesbury (1886); to the Twelve English Statesmen Series, William the Third (1888); to the English Men of Action Series, Sandford and Mordan (1889); and to the Queen's Prime Ministers Series, Lord Salisbury (1891). His other works are: Recaptures Rhymes (1882); The New Lucian, his finest bit of writing (1884; revised and enlarged, 1900); Saturday Songs, a collection of clever satirical verse (1890); Number Twenty (1892); The Life of Sir John Franklin (1896); From Cairo to the South African Frontiers (1891); Corel's publisher of a novel (1896); Life of Lord Cromer (1897); and The New Fiction and Other Essays on Literary Subjects (1897).

Tuer, Andrew White, an English publisher, born in Sunderland in 1830; died in London, March 24, 1900. Soon after coming of age he entered a London firm of stationers and printers as a partner and, after his invention of "Stickpaste" paste, founded and edited the Paper and Printing Trades' Journal. A little later he engaged in book publishing and became an author himself, his tastes inclining toward antiquarian research. His writings include Luxurious Bathing (London, 1883); A History of the Journal of the Social Service (1891); the publishers' manual of a novel (1896); Life of Lord Cromer (1897); and The New Fiction and Other Essays on Literary Subjects (1897).

Valfre, M., a French journalist, born in 1838; died in Paris, Nov. 23, 1900. He wrote articles on foreign policy and events for the Figaro under the signature of Whist, was called into the diplomatic service by the Duc Decazes and placed on the Committee of Archives, with the rank of a minister plenipotentiary. He lost his sight when the Conservative ministry was driven out in 1877, but was employed by subsequent ministries, first on a mission sent to Portugal to arrange financial matters, and several times afterward to adjust international debts in the interest of French creditors, developing much ability in the negotiation of financial contracts and treaties. While the editor of the Moniteur, an Orleanist organ, and then joined the staff of the Figaro to write the daily article on foreign affairs. In times of popular excitement over international questions his articles had a moderating influence.

Vicaire, Louis Gabriel Chérel, a French poet, born in Belfort, Aug. 24, 1848; died in Paris, Sept. 24, 1900. His earlier years were passed at Bresse and Bugey, but he studied law at a later period and became an advocate. He published in 1884 Emaux Bressans, a successful book, which constitutes his best title to inclusion among the French poets of his day. This was followed by L'Heure Enchantée; Les Déliquescences d'Adore Floupette (1885); La Légende de Saint Nicolas
BO al)aruies, foreign. (Villalune-Wimeperis)

Au Bois Joli (1894); Le Clos des Féés (1898). In 1883 he contributed a long prose introduction to Guillon’s Chansons Populaires de l’Ain, his only prose writing of importance, and in 1888 he obtained a silver medal for his lyric poem, Quatuor-vingt-neuf, Chant Séculaire.

Villalune, Karl von, a German soldier, born in 1840; died in Berlin, June 3, 1900. He was an ordnance expert who served on the staff almost from the time of his entrance into the army. In 1877, as a captain of the general staff, he was attached to the Russian headquarters during the war in the Balkans, and at its close he was appointed military attaché of the embassy in Rome, which post he exchanged in 1882 for that of first military attaché in Paris, having reached the rank of lieutenant colonel. There he obtained documents from a French traitor that revealed the operations of the French spy system, and to the French, who were brought up by suspicions of German spies and angered against military attachés as a class, he appeared to be the head and front of the espionage that they dreaded, and had to give up the post, having won as much credit at home as he lost in France. He was nominated to the Imperial German order, by which he was decorated, and in 1886 he succeeded Gen. von Werder as military plenipotentiary at St. Petersburgh. He served several years in this post to the satisfaction of his Government, was then recalled to take command of an artillery brigade at Stettin, the first time that he was with the troops since he was a lieutenant, and was appointed director of the staff college in Berlin.

Villebois-Mareuil, Col. de, a French soldier, born in 1847; died in South Africa, April 5, 1900. He was educated for the army at St. Cyr, received a commission in 1867, served in Cochin China, was captain of chasseurs in the Army of the Loire in 1870, received the wound of Clos de Bois, and for his brave conduct was decorated on the battlefield. He was attached to the war school in 1871, and in 1882, when Gen. Boulanger became Minister of War, he received an appointment on the general staff. He was sent to Algeria in 1888, having then the rank of lieutenant colonel, was promoted to a divisional command successively in Mayence, Soissons, and in Algeria, and in 1895 resigned from the army on account of a family bereavement and devised himself to old soldiers’ societies. He was the author of a romance entitled Sacrifices, which appeared in the Revue des Deux Mondes in 1890, under the pseudonym of Georges Simony; of one called Entre Civilisés, published in 1896; and of a third, Au-dessus de Tout, printed in 1899. When the war in South Africa broke out he went to offer his services to the Transvaal, and was the chief adviser of the Boer generals on artillery tactics. Passing near Boshof with a small detachment he was overtaken by Boer scorched-earth and killed.

Wilde, Oscar Fingal O’Flaherty W, an Irish poet, born in Dublin, Oct. 16, 1856; died in Paris, Nov. 30, 1900. He was the son of Sir William Wilde, surgeon-ouculist to the Queen, and Lady Jane Wilde, who, as Speranza was a well-known Irish lyrist in the fifties. After a brilliant university career at Trinity College, Dublin, and at Oxford, he traveled in Italy and Greece, returning to London in 1879, originated the peculiar aesthetic movement satirized in the opera of Patience. In 1881 he went to the United States and lectured on art, and afterward lectured in England and in Paris. He met with great social success, and his poems and society plays were popular. In 1894 he was convicted of felony, for which he served a sentence of two years in prison.

After his release in 1897 he lived in the Latin Quarter of Paris, under the name of Sebastian Melnott. In his last hours he was received into the Roman Catholic Church. He published Newdigate Prize Poem Rowenna (London, 1878); Poems (1880); Vera, a comedy (1882); The Happy Prince, and Other Tales (1888); Dorian Gray, a novel; The Portrait of Mr. W. H., a theory respecting Shakespeare’s Sonnets; Intentions, a collection of essays (1891); Guido Ferranti (1890); The Dismissed, a blank-verse tragedy (1891); Lady Windermere’s Fan, a skillfully written comedy (1893); Salome, a tragedy (1894); A Woman of No Importance, a comedy (1893); The House of Pomegranates, poems in prose; The Sphinx, a poem; Lord Arthur Saville’s Crime, a collection of short stories; An Ideal Husband, a play; The Importance of Being Earnest, a play (1895); and The Ballad of Reading Gaol (1898). The last-named work, which appeared anonymously, is a strong poem, and has been called his finest literary effort. His verse is almost always melodious, and abounds in exquisite descriptive passages. The authorship, in part at least, of Mr. and Mrs. Daventry, a problem play (1895), he has denied.

Williams, Frederick, an Irish actor, born in Dublin in 1829; died in New York city, Sept. 5, 1900. He was educated in his native city as an architect. He made his first appearance at the Smock Alley Theater, Dublin, as Tybalt in Romeo and Juliet, in 1856. For two years he played the usual succession of stock plays in companies in Ireland, and in 1852 was engaged at the old National Theater, Cincinnati. His first appearance was Catesby in Richard III, in the autumn of 1852. He remained an active and important member of that company for seven years. He then toured as a star from 1859 to 1861. He was next engaged as an adviser with the company of the late Frank Mayo, and three with the Boston Ideals. In 1887 he was engaged as stage manager of Daly’s Theater, New York, where he remained four years. He then traveled two seasons with the company of the late Frank Mayo, and three with the Boston Ideals. In 1887 he was engaged as stage manager of the Lyceum Theater, New York, the duties of which he performed faithfully up to the date of his last illness. His last important work was the preparation of E. H. Sothern’s productions of Hamlet and Edmund M., an English artist, born in 1835; died at Southbourne, England, Dec. 23, 1900. He went to London in early life, and learned wood engraving under Birket Foster. As an engraver he attained a high degree of excellence, and many exquisite examples of his workmanship may be found in the illustrated books of his time. When engraving declined he turned his attention to water-color painting, and though almost entirely self-taught, met with great success. His taste was almost entirely for landscapes, and he cared little or nothing for human incident. In later life he painted in oils, and was almost equally successful in this branch of art. He followed Haag as vice-president of the Royal Institute of Painters in Water Colors.
OHIO, a Central Western State, admitted to the Union in 1803; area (according to the geological survey), 41,060 square miles, of which 300 are water surface. The population, according to the official decennial census since its admission was: 230,760 in 1810; 581,292 in 1820; 937,903 in 1830; 1,519,467 in 1840; 1,980,329 in 1850; 2,339,511 in 1860; 2,665,260 in 1870; 3,108,062 in 1880; 3,672,316 in 1890; and 4,157,545 in 1900. It ranks fourth among the States in point of population.

Capital, Columbus.

Governor.—The State officers during 1900 were: Governor, George K. Nash; Lieutenant Governor, John A. Caldwell; Secretary of State, Charles Kinney; Auditor of State, Walter L. Gilbert; Treasurer of State, Isaac B. Cameron; Attorney-General, John M. Sheets; Board of Public Works, Frank A. Huffman, Charles A. Goddard, W. J. Johnston; Commissioner of Common Schools, Lewis D. Bonebrake; Judges of Supreme Court, John A. Shauke, Thad A. Minshall, Marshall J. Williams, Jacob F. Burket, William T. Spear, William C. Davis; Clerk of Supreme Court, Josiah B. Allen; Dairy and Food Commissioner, Joseph E. Blackburn.

The term of Office of Governor, Lieutenant Governor, Treasurer of State, and Attorney-General is two years, beginning in January of the even-numbered years; of the Secretary of State two years, beginning in January of the odd-numbered years; of the Dairy and Food Commissioner two years, beginning in February of the odd-numbered year; of members of the Board of Education, and Clerk of the Supreme Court three years, beginning in February; of the Commissioner of Common Schools three years, beginning in July; of the Auditor of State four years, beginning in January of even-numbered years; of Judges of the Supreme Court six years, beginning in February. All are elected in November. The Legislature meets biennially in January; there is no limit to length of the session.

Finances.—The total value of the real and personal property in the State, as returned for taxation, was $1,834,053,228, divided as follows: lands, $390,675,045; real estate in cities and villages, $674,525,676; personal property, $539,849,755.

At the beginning of the fiscal year, Nov. 15, 1899, there was in the treasury $1,179,492.88. The receipts during the year were $8,031,817.75, and expenditures $7,712,567.32, leaving a balance, Nov. 15, 1900, of $1,498,743.28, credited to the different funds, as follows: General Revenue fund, $1,129,050.03; sinking fund, $820,327.62; common school fund, $78,145.06; university fund, $84,220.56.

During the year $300,000 of the funded debt was paid, leaving the debt at the close of the year $701,655, of which $300,000 is due July 1, 1901; $300,000 July 1, 1902; and the remainder July 1, 1903. The debt bears interest at 3 per cent.

The aggregate amount of school funds of which $77,606,261.40 are municipal debts, and $10,521,247.58 debts of counties.

Canal Finances.—The expenditures for the State canals during the year amounted to $220,381.25 and the receipts $86,779.95. The Legislature appropriated $134.500. At the end of the year the balance on hand was $28,148.95.

Educational.—The educational statistics are for the year ending Aug. 31, 1900. The number of pupils enrolled in the public schools was 829,160; number of teachers, 26,017; number of school houses, 13,073; during the year 222 new school houses were built. The value of public school property is $44,017,175. The balance of school funds on hand at the end of the year, $8,560,040.37.
The report of the Commissioner of Schools shows also 27,327 students in private schools and 7,990 in universities and colleges.

Military.—The total strength of the Ohio National Guard is 5,302, organized in 2 military brigades, comprising 6 regiments of infantry, 4 battalions of infantry, 1 battalion of engineers, 6 batteries of light artillery, and a cavalry troop. There is also a naval brigade of 2 battalions, with headquarters at Cleveland and Toledo.

Statutory Institutions.—The State educational, benevolent, and penal institutions include the Ohio State University at Columbus, Ohio University at Athens, Miami University at Oxford, combined normal and industrial department of Wilberforce University, Ohio Institution for the Blind at Columbus, Ohio Institution for the Education of Feeble-minded Youth at Columbus, Girls' Industrial Home at Mansfield, Ohio Soldiers' and Sailors' Home at Sandusky, Ohio Soldiers' and Sailors' Orphans' Home at Xenia, Boys' Industrial School near Lancaster, Athens State Hospital, Cleveland State Hospital, Fremont State Hospital, Mansfield State Hospital, Columbus General Hospital, Longview Hospital at Cartsgage, Macon State Hospital, Ohio Hospital for Epileptics at Gallipolis, Toledo State Hospital, Ohio Penitentiary at Columbus, Ohio State Reformatory at Mansfield.

Railroads.—The railroad mileage in 1900 was 8,026, of which 8,132 miles were main lines and 559 miles branches and spurs. The earnings, as reported to the Commissioner of Railroads and Telegraphs, were $80,040,117.88, being an increase of $13,679,250.20 on the previous year. The Ohio dividends reported aggregated $6,367,746.04, an increase of $983,417.36. There were 312 fatal accidents, an increase of 122 over 1899. Of the whole number killed 11 were passengers, 184 employees, as, 258 trespassers, and 79 travelers on the highway.

Live Stock.—The report of the Auditor, showing the number of domestic stock animals in the State, as returned by the several county auditors, with the changes from the returns of the preceding year, gives these figures: Horses, 711,146, increase, 1,425,894; cattle, 14,521, decrease 148; sheep, 2,254,070, increase 26,710; swine, 1,489,518, decrease 60,596.

Legislative Session.—The seventy-fourth General Assembly organized Monday, Jan. 1, and adjourned Monday, April 16, after enacting into laws 556 bills. Among those of general interest were the following:

Putting foreign stockholders in Ohio concerns under the double-liability law.

Relieving Ohio holders of stock in foreign corporations from double taxation.

Permitting the consolidation of lighting companies.

Requiring all private banking institutions to list their property for taxation in the same manner as incorporated and national banks.

Requiring all insurance companies formed on the stock plan to have a capital stock of not less than $100,000.

Providing that no part of a fire risk shall be renewed in a company not authorized to do business in Ohio.

Supplementing the anti-compact law so as to prevent insurance companies combining for the purpose of controlling agents' rates.

Requiring steam railways to construct suitable waiting rooms at all stations.

Providing for an eight-hour working day.

Creating a State Board of Examiners of Engineers.

Requiring that music be taught in all public schools.

Providing that instruction in the evils of alcohol be given in the public schools.

Providing for the centralization of township schools.

Permitting controlling political committees to purchase voting machines when a majority of the electors voting are in favor.

Granting the right to vote for Toledo and Sandusky at Election Day to the polls.

Regulating the practice of medicine.

Amending the game laws so as to make the open season from Nov. 10 to Dec. 1, and requiring a written permission from the owner of the property.

Providing for the appointment of county game wardens, vested with police powers.

The political complexion of the Legislature was: Senate—Republicans 19, Democrats 11, Independent Republican 1; House—Republicans 62, Democrats 48.

Political.—The Republican State Convention was held at Columbus, April 24 and 25, and the following were chosen as the nominees: The Governor, George A. Gilmore; Lieut. Governor, George W. Voinovich; Secretary of State, Lewis C. Laylin; Supreme Court Judge, John A. Shauck; Member of Board of Public Works, Charles A. Goddard; School Commissioner, Lewis D. Bonebrake; Dairy and Food Commissioner, Joseph E. Blackburn. With the exception of the head of the ticket all these were re-elected. The candidates are named for State presidential electors Myron T. Herrick and W. P. Orr, and for delegates-at-large to the National Republican Convention, Joseph B. Foraker, Charles Dick, George K. Nash, Charles H. Grosvenor. The platform commended the administration of President McKinley, and declared that:

"It has met an unavoidable war for humanity with unyielding tenacity, and the matchless triumph of our arms on sea and land with the courageous acceptance of its high and solemn obligations, has faithfully studied and sought equally the true honor of the nation and the greatest good of the peoples who have come under our flag; and has, through the wise use of authority and the exercise of its just, generous, humane, and fraternal consideration for those over whom the authority of the nation is extended. We advocate for them free schools for their children for life, liberty, and property, the most liberal measures for the development of their agriculture and industry, and the largest degree of local self-rule for which they are fitted.

"We recognize in George K. Nash a Governor worthy of our highest confidence and unqualified support. The administration of our State affairs by him and his official associates has been clean, efficient, and commendable, and its policy tending to good government, economy, and wisdom."

The Democratic State Convention was held at Columbus, June 12 and 13, and the following ticket was nominated: For Secretary of State, Henry H. McFadden; Supreme Court Judge, John Smalley; Member of Board of Public Works, Peter W. Brown; School Commissioner, Joshua D. Simp-
kings; Dairy and Food Commissioner, Ballard B. Yates. The convention also named for State presidential electors Isaac R. Sherwood and A. J. Warner, and for delegates at large to the National Democratic Convention James Kilbourne, Abraham W. Patrick, William S. Thomas, and Horace L. Chapman. The platform declared: We enter our protest against the doctrine that the President or Congress can so govern acquired territory outside and independently of the Constitution of the United States, as a doctrine utterly subversive of every foundation principle of our Government. The Declaration of Independence, the flag, and the Constitution must everywhere stand together as emblems of human liberty and American rights and interests. We challenge to the nation that the General Government shall not only coin the metals, but shall issue and regulate the volume of paper currency also in the interests of all the people.

"We express our deepest sympathies for the Boers of South Africa, who, against such fearful odds, have fought and bled in defense of their flag, for which our fathers fought a century and a quarter ago, and which at so much sacrifice they gained and handed down to us."

"We demand also that the unrighteous, unnecessary, and unjust war now being waged for conquest against the Filipinos, who ask only for the right of self-government, be brought to a speedy close. We demand, and we stand ready to defend and protect the self-government of the people of the Philippines, in accordance with the principles of the American Declaration of Independence."

"We favor an unflinching adherence to the Monroe doctrine and oppose entangling alliances, secret or open, with any foreign powers."

"We favor the construction and control by the United States of an interocean canal as a commercial highway for all nations."

"We favor the election of the President, the Vice-President, and United States Senators by the direct vote of the people."

"We affirm anew our undiminished faith in the acknowledged leader of our party, William J. Bryan, and in the leadership of Kansas City for President of the United States, and the delegates elected by this convention are instructed to so cast their votes."

The Socialist-Labor party held no convention, but nominated a full ticket by the referendum, votes having been sent in from more than 50 sections of the country, and announced by the Executive Committee of the party at Columbus, May 5, as follows: For Secretary of State, Samuel Borton; Supreme Court Judge, Daniel W. Wallace; Member of Board of Public Works, David F. Cronin; School Commissioner, William Garrity; Dairy and Food Commissioner, Go Shnithoff.

The Prohibition State Convention was held at Columbus, May 25, and put in nomination the following ticket: For Secretary of State, J. Knox Montgomery; Supreme Court Judge, E. Jay Pinney; Member of Board of Public Works, Enos H. Brosius; School Commissioner, Samuel A. Gillett; and Food Commissioner, Joseph M. Scott. The platform, expressing the position of the party against the liquor traffic, and also indorsed woman suffrage.

The Union Reform party placed the following ticket in nomination: For Secretary of State, Frank Frankenberg; Supreme Court Judge, Lambert B. Logan; Member of Board of Public Works, Reil Rathbun; School Commissioner, William J. Seelye; Dairy and Food Commissioner, William F. Barr.

There was also a Socialist-Democratic ticket, as follows: For Secretary of State, Louis F. Hemse; Supreme Court Judge, Albert Corbin; Member of Board of Public Works, William C. Edwards; School Commissioner, Harry D. Thomas; Dairy and Food Commissioner, William H. Patterson.

The election, Nov. 6, resulted in the success of the entire Republican State ticket, the vote on Secretary of State being as follows: L. C. Laylin, 454,918 votes; Daniel, 474,078; J. Knox Montgomery, Populist, 9,993; Louis F. Hemse, Socialist-Democratic, 4,650; Frank Frankenberg, Union Reform, 4,647; Samuelorton, Socialist-Labor, 1,707.

In the presidential election, McKinley received 549,918 votes; Bryan, 474,882; Woolley, 10,203; Deffy, 4,847; Ellis, 1,284; Malloney, 1,088; Barker, 251.

OKLAHOMA, a Territory of the United States, organized in 1890; area, 38,715 square miles. The population in 1890 was 61,834; in 1900 it was 398,243. Capital, Guthrie.

Government.—The following were the Territorial officers in 1890: Judge, William M. Jenkins; Treasurer, Frank M. Thompson; Attorney-General, Harper S. Cunningham, succeeded in March by J. C. Strang; Superintendent of Instruction and Auditor, Stuart N. Hopkins; Adjutant General, Bert C. Orner; Bank Commissioner, John M. Pugh (resigned in July, succeeded by J. S. Scarch); Superintendent of Public Health, L. A. Hine; School Land Commissioner, Charles H. Filson; Chief Justice of the Supreme Court, J. H. Burford; Associate Justices, B. F. Burwell, B. T. Hainer, John L. McAtee, and C. F. Irwin. All are Republicans except Judge McAtee, who is a Gold Democrat.

Population.—The Federal census of 1890, giving Oklahoma a population of 61,834, included 12,041 Indians. Add to the figures above given for 1900, embracing only the white population, the 13,873 Indians also returned, and the total population of the Territory is seen to be 412,118. The number of Indians not taxed in 1900 was 5,927. The population of Guthrie in 1890 was 9,981. The population of Oklahoma City, 9,976. The other cities having a population of more than 2,000 were: Shawnee, 3,462; Enid, 3,444; El Reno, 3,383; Perry, 3,351; Ponca City, 2,528; Stillwater, 2,431; Kingfisher, 2,301; Blackwell, 2,293; Norman, 2,225.

Finances.—The fifth biennial report of the Territorial Treasurer for the year ended Dec. 31, 1900, gives the transactions of Oklahoma for the period beginning Dec. 1, 1898, and ending Nov. 30, 1900. The receipts of the treasury for this period were $1,075,387.01; expenditures, $729,493.92; leaving a balance on hand, Nov. 30, 1900, of $345,893.09, as against a balance, Nov. 30, 1898, of $66,110.73. The delinquent taxes were: 1898, $265,488.80; 1899, $294,524.52. Balances from the counties on account of unpaid taxes, Nov. 30, 1900, aggregated $174,167.65; tax levies for all Territorial purposes for 1900 still to be collected, $254,094.23.

The assessed valuation of the property of the Territory for 1900 was $4,338,681. The Territorial tax was $84,430, and the property in the Territory was $48,900, and the general warrant indebtedness $379,054.18.

The proceeds from the lease of school lands since the organization of the Territory aggregate
$1,000,000. The receipts for the last fiscal year were $189,486.44.

Education.—The last school enumeration was 113,736; number in actual attendance, 85,635; number of teachers in service, 2,191; school district, 206. The tax collected for schools amounted almost to $750,000.

The total attendance in 1900 at the five Territorial institutions of learning—the University, Normal School, Northwestern Normal School, Agricultural and Mechanical College, and Colored Agricultural and Normal University—was about 1,700. The attendance at the 18 Indian schools conducted by the Government was 2,100.

The enrollment at the university in all departments was 293. The number graduated in 1900 was 14.

At the Agricultural and Mechanical College the enrollment in September had reached 306. The college has two new buildings—a library and a chemical building.

The graduating class of 1900 at the Territorial Normal School numbered 20.

At the Northwestern Normal School the enrollment in September rose to 335. The dedication of the new building of this school, March 8, was made generally.

Additional purchase of land adjoining the tract of the Langston University made that institution in 1900 the possessor of 160 acres of rich tillable soil. The equipment of the farm with machinery, etc., has kept pace with this expansion of its workable area.

Penitentiary.—The Penitentiary contract for Oklahoma with Kansas remained the same in 1900 as in 1899. The report of the warden at Lansing, Kan., to Gov. Barnes gives these details regarding Oklahoma convicts there confined: Number of prisoners on hand, Jan. 1, 1900, 176; number received to Dec. 1, 1900, 109; number discharged to Dec. 1, 1900, 43; number on hand, Dec. 1, 1900, 233; number remanded for new trial, 2; number pardoned, 10; number died, 2.

Social and Religious Conditions.—This topic is treated by the Governor in his annual report as follows: “There are in the Territory about 900 church organizations, with a membership of 70,000, and church property valued at $500,000. There are about 600 fraternal organizations, with a membership of about 25,000. The deaf-mutes and insane of the Territory are cared for in private institutions by contract. There are 50 in attendance at the deaf-mute institution and 283 in the insane asylum. The cost of caring for the insane for the past year was $67,428.03. During the past year 603,527 acres of Government land were filed on in the Territory by homestead settlers. There are still vacant 5,733,385 acres of Government land. Most of this vacant land is in the western part of the Territory, and adapted more generally to stock raising, although some good agricultural land is still vacant.”

Free Homes.—One of the most important events of 1900 to the people of Oklahoma was the passage in Congress of the free homestead bill, which passed the Senate May 14, having already been passed in the House. This bill provides for free homesteads on the public lands for actual and bona fide settlers; and reserves the public lands for that purpose. The news of its passage was received in the Territory with great rejoicing. It saves about $16,000,000 to the people of Oklahoma.

Banks.—In 1900 there were 79 Territorial and 11 National banks in operation in Oklahoma. There had been no bank failure in three years. The resources of the Territorial banks aggregated $5,147,181.51. Of this, $2,409,202.85 represented loans and discounts and $2,340,250.03 cash in hand. The capital stock of the Territorial banks was $744,588.66; the surplus and profits, $485,570.73; deposits, $3,018,622.12. They had a reserve fund of $100 per $1000 of deposits. The National banks had $1,336,965.34 in loans and discounts, and $363,300 in Government bonds, their aggregate resources being $3,098,377.47. Liabilities included $925 in capital stock; $40,800 in surplus; $82,837.08 in undivided profits; $2,042,235.15 in deposits; $74,900 in other accounts; and $60,000 in national bank notes.

Building and Loan Associations.—There are 6 building and loan associations in the Territory, with an aggregate amount of $60,000 invested in real estate securities, and paying dividends to their stockholders of from 12 to 20 per cent, per annum.

Insurance.—Forty-six insurance companies do business in the Territory, the aggregate amount of fire insurance written in the year being $15,274,519.14; premium collected, $255,425.41; losses incurred, $62,026.36; losses paid, $49,663.45. The 15 life insurance companies doing business in the Territory wrote $4,634,227 of insurance, collected $102,396.86 premium, and paid $39,573 in losses.

Railroads.—There are about 1,000 miles of main-track railway in the Territory, 200 miles having been built during the year. Every county but two has been reached by railroad. The lines operating in the Territory are the Santa Fé, Rock Island, 'Frisco, and Choctaw. Much new construction is projected for the near future, 18 railway companies, aggregating $4,270,000 of capital stock, having been chartered in 1900. The Oklahoma and Southern Railroad Company filed its charter with the Territorial Secretary. The length of this railway is estimated at 400 miles. It will begin at Kiowa, Kan., and pass through Woods, Garfield, Blaine, Kingfisher, Logan, Canadian, Oklahoma, Payne, and Lincoln.

Militia.—In 1900 the Territorial militia greatly improved in strength and organization. For the first time the Oklahoma National Guard grew to a full regiment, well equipped.

Productions.—The wheat crop of 1900 was about 25,000,000 bushels, and the average yield per acre about 19 bushels, while the highest was 50 bushels. Oklahoma, according to the report of the Agricultural Department at Washington, leads all the States and Territories in the estimated yield of cotton to the acre by more than 100 pounds. The estimate for Oklahoma in pounds of lint per acre is 381, Indian Territory ranking next with 280, while Louisiana, Texas, and Arkansas follow in order. The Oklahoma cotton crop of 1900 was 125,000 bales. The yield of oats is estimated at 12,000,000 bales, the peach and apple crops at about 500,000 bales each.

Bulletin 45 of the Agricultural and Mechanical College names nearly 750 native plants of Oklahoma.

The number of horses listed for taxation was 243,293; mules, 49,523; cattle, 990,524; sheep, 43,475; swine, 245,431.

There are in the Territory 117 grain elevators, with an aggregate capacity of 1,850,000 bushels.

The geological survey of Oklahoma was begun in 1900, and indications were revealed of mineral wealth in salt, coal, oil, gas, limestone, copper, etc.

Anti-horse-thief Association.—This organization has 190 subordinate lodges and 5,000 members in Oklahoma, reaching into every county.
OKLAHOMA.

Memorial.—At Blackwell, Nov. 19, a large gathering of people of the Territory held memorial exercises in a church in honor of Capt. David L. Payne, the original "Oklahoma boomer," who died in 1884.

1896 Electoral.—The People's party held its Territorial convention in Enid, April 10. A determined bolt divided the convention, and each faction nominated national committeemen and ten delegates—the "regulars" to the Sioux Falls National Convention and the bolters to that at Cincinnati. The resolutions of the "regulars" recognized the call for the convention and favored the option of the Sioux Falls resolution; the "regularly-split" resolution, adopted at May 9; favored union of all the elements opposed to trusts, imperialism, and monopoly in the interest of the reform candidates in the presidential election and of those in the Territorial elections; reaffirmed adherence to the St. Louis platform of 1896; declared for the initiative and referendum, and for public ownership of public utilities; denounced the Republican party for placing the public money in the hands of banking corporations; regretted the evidence of the Republican administration's sympathy with England in her efforts to crush the Boer republics; deplored the administration's conduct of insular affairs; and pledged loyal support to William J. Bryan.

The convention of the Republican party was held in Enid, May 10, and transacted its business promptly and without unusual incident. Resolutions were adopted declaring belief in all the principles of the Republican party, approving the national administration, favoring expansion, commending Delegate Flynn and the free-homestead law, favoring the Osage and Kaw Reservations, and the allotment and opening of all the Indian reservations to settlement.

The Democratic Territorial Convention met in El Reno, June 5. This convention resulted in a split, two sets of resolutions and of delegates to the national convention being the outcome. Both factions declared in favor of the nomination of William J. Bryan for the presidency. The platform of the "regular" wing denounced the administration of President McKinley, imperialism, plutocracy, and trusts. It demanded statehood for Oklahoma, and favored the organization of the Osage and Kaw Reservations into one county, to be known as Osage County.

At the joint congressional convention of the Democratic and People's parties, which met in Oklahoma City, July 31, Robert A. Neff was nominated for Delegate to Congress. In the platform, anti-imperialism and hostility to trusts were among the most prominent features, the currency legislation of the last Congress was denounced, and free coinage of silver at 16 to 1 demanded.

The Republican Congressional Convention assembled at Guthrie, Aug. 8, and renominated D. T. Flynn for Delegate to Congress. The resolutions approved the Philadelphia platform of 1900; declared that every pledge of the Republican party should be given effect by the People; favored work for the prosperity of Oklahoma on her prosperity, and especially on the extension of the free-homes policy to the Indian lands; extolled the services of Delegate Flynn; pledged the party to strive for the earliest possible statehood of Oklahoma; declared in favor of standing for all the results of the Spanish War, and of the war with Spain; adjourned; recommended the appropriation by Congress of $5,000,000 for the St. Louis exposition; denounced the disfranchisement of citizens in North Carolina in violation of the fourteenth and fifteenth amendments to the United States Constitution; and favored the extension of county rights and government to the Indian reservations of the Territory and the early opening of all the reservations to settlement.

The antifusion wing of the People's party held their congressional convention in Oklahoma City, Sept. 1, and nominated J. S. Allan for Delegate to Congress. The resolutions reaffirmed unique belief in the cardinal tenets of the People's party as set forth in the Cincinnati platform; approved the nominations of Barker and Donnelly for President and Vice-President; denounced the Republican and Democratic parties as tools of plutocracy, and opposed all entangling alliances with the latter; favored the option of Oklahoma and Indian Territory, and the speedy allotment and opening to settlement of all the Indian reservations in Oklahoma; and opposed any legislation looking toward the sale of the school lands of the Territory.

At the election, Nov. 6, the vote for Delegate to Congress gave Flynn, Republican, 38,253; Neff, Fusionist, 33,539; Tucker, Social-Democrat, 780; Allan, Middle-of-the-Road Populist, 780. Flynn's plurality, 4,714.

To the Council of the Territorial Legislature were elected 7 Democrats, 5 Republicans, and 1 Populist; to the House, 16 Republicans and 10 Fusionists.

OLD CATHOLIC CHURCH. The twentieth Old Catholic Synod of Austria met in Vienna, Sept. 8 and 9. Sixty members and a representative of the Government were present. The number of members was returned as 16,885, against 6,113 in 1852. The accessions since 1898 had been 3,620, of which 1,183 had accrued in the first seven months of 1900. The Synod had organized and four churches built during the year. The moderator spoke of growing friendship between Old Catholics and Protestants. It was represented that the Old Catholic movement was gaining ground in Bohemia, where 17 priests and 2,500 people were ready to join it.

ONTARIO, a province of the Dominion of Canada; area, 222,000 square miles; population in 1891, 2,214,321.

Politics and Government.—The early part of 1900 saw the new Ross Government installed in office. It was composed of the following members: Premier and Treasurer, G. W. Ross; Attorney-General, J. M. Ramsden; Ministers of Education, J. A. Mowat; Commissioner of Lands, E. J. Davies; Commissioner of Public Works, F. R. Latchford; Secretary and Registrar, J. R. Stratton; Minister of Education, R. Harcourt; Minister of Agriculture, J. Dryden; ministers without portfolio, W. Harty and J. T. Garrow. As a reorganization of the previous Hardy Government, which in turn had been a reorganization of the Liberal Government of Sir Oliver Mowat, in power since 1872, it had certain elements of weakness which made the session of 1900 very active. The majority was small, and the Conservative Opposition, under the provincial leadership of Mr. J. P. Whitney, had come very near to success in the elections of 1898. By-elections have been only recently won by this Government, and Messrs. Latchford, Dryden, Stratton, and Preston were elected, against Brower, McDairmid, and Robson. The House of Assembly was opened on Feb. 13 by Lieut.-Gov. Sir Oliver Mowat, with a speech from the throne, in which he said:

"The lumbering industry of the province is in a flourishing condition. The legislation of 1898 requiring all pine logs cut under license to be manufactured in Canada took effect first in the season of 1898–99. The practical operation of this legislation has proved wise and timely. While the quantity of pine timber cut last season showed little if any diminution, compared with previous
years, the sawmilling business of the province, on the other hand, has received a powerful stimulus. Many existing mills have been enlarged, idle ones have resumed work, and new mills have been built and will be laid before you.

"The desirability of preserving the forests in districts not adapted for agriculture, so as to constitute a permanent source of timber supply, has been fully recognized in connection with the administration of the Crown domain; accordingly, districts capable of being reforested are being set apart in this wise.

"The healthy condition of the mining industry is shown by the growth of revenue from sales and rents of mining lands, the increase of investments in mining enterprises, and a larger output from mines and mining works.

"The agricultural condition of the province is much more promising than it has been for many years. The great improvement in the quality of all dairy produce has increased the popularity of our butter and cheese in the British market, and has consequently stimulated this branch of industry. Our fruit interests are also increasing in importance and value, as the exports of our orchard fruits for the year making manifest. The attendance at the Agricultural College has reached the highest limit yet attained, and it will be necessary to provide additional accommodation if the attendance continues to increase as it has during the last few years.

"It is to be noted with regret that the increasing numbers of insane tax the accommodation of our asylums beyond their capacity. Notwithstanding the liberal provision already made and the large expenditure incurred in carrying on these services, it becomes imperative that increased accommodation be provided.

"Measures will be submitted for the improvement of public highways, the drainage of swamp lands, the extension of cold-storage stations in rural districts, and the colonization of those portions of northern Ontario best adapted for agricultural purposes. Your attention will be invited to bills respecting the revenue, elections, education, and mining, and also to a measure for a comprehensive exploration of the district between the main line of the Canadian Pacific Railway and Hudson'S Bay, in order that more accurate information may be obtained as to its timber and its suitability for farming.

"Your attention is invited to the present relative jurisdiction of the courts of the province and of their respective judges, and to the suggestions of experience for further promoting the efficient, prompt, and inexpensive administration of justice throughout the province."

On Feb. 19 Mr. Whitney led in an onslaught upon the Government, which may be summarized in the following words, giving the Conservative platform as well as denouncing the Government policy:

"The Government has confessed itself unable to deal with financial questions when it appointed a commission to investigate the financial condition of the province. The Government acted indecently in appointing John Hoskin, a Government official, to the commission.

"If the Government is saving money, why not apply it to the removal of the direct taxation under which the artisan, laborer, and farmer are living?

"Cold storage and transportation are subjects which should properly be considered by the Dominion Government. "The Government regulations on nickel will discourage the development of that metal, and will make the monopoly of the Canadian Copper Company still more powerful.

"No grant should be given to any railroad company without a provision that in the future, when the company arrived at a paying basis, the grant should be returned.

"The question of the Government ownership of public franchises should be carefully considered.

"A member of the Government should not be at the head of corporations which will gain or lose by Government action, and members of Parliament should be disbarred.

"A consultative committee should be appointed to assist the Minister of Education, such committee to be chosen from high school, public school, and separate school teachers.

"The University of Toronto should practically be divorced from the province.

"The timber policy will strangle the saw-wood industry.

"The West Elgin Commission is a farce. The people demanded a judicial committee to inquire into the irregularities in all the constituencies.

"Let the Premier dissolve the house and go to the country for a decision."

Mr. Rochon, in his reply, demanded the appointment of a finance commission, on the ground that the worst should be known, and declared that Mr. Hoskin's appointment was admirable despite the fact of his being a Liberal in politics; declared that under existing conditions of export many of the small products of the farmer went to waste or yielded hardly any profit, while butter and cheese were often spoiled for lack of cold-storage facilities, which he proposed to provide upon a pattern that had proved successful in Australia and New Zealand. Regarding nickel, he declared the policy of the Government to be one of encouraging the local manufacture of the raw material. Large areas of valuable nickel still remained undeveloped. The Commissioner of the Copper Company, "Ontario's products for Ontario's sons will be our policy," said the Premier, as he promised a rebate or bounty on every pound of ore refined in the province. In regard to railways, he purposed to introduce legislation by which settlers on the colonization lands of Ontario, as well as their stock and effects, should be carried free. He denied to a great extent the party corruption alleged by his opponents, deprecated the charges made against the Education Department, and opposed the plan proposed by Mr. Whitney. The two speeches which followed may be summarized as including the whole political discussion on both sides during the session, Mr. Hoskin having been defended by Mr. G. F. Marter, a leader of the Opposition, and included the following proposals and remarks:

"The Opposition is willing to co-operate with the Government in an effort to stamp out bribery. The election law should have the following provisions: (a) Deputy returning officers and clerks must live in divisions for which they act; (b) deputy returning officers should announce on nomination day the deputies; (c) deputy returning officers and clerks should be in attendance half an hour before the polls, to count and examine the blank ballots; (d) deputies should be forced to issue warrants when called by agents, and constables should detain such men until warrants
are served: (c) any person having a ballot paper outside of the polling booth may be arrested and punished; (f) any minister or candidate who intimates that certain public finances shall follow the election may be unseated and disfranchised; (g) this rule would not follow the law (b) make it a criminal offense for a license inspector to attempt to intimidate license holders; (i) all offenses to be punished by imprisonment. The Government should not have gone outside of the house to secure a Minister of Public Works. To appoint a committee to investigate the timber wealth of the province of Ontario, of such magnitude, the province should have been postponed until after the award of the arbitration between Ontario and Quebec.

The reply to these suggestions was made by Mr. Andrew Pattullo, a Liberal member of the house. He declared that the Legislature should not deal with nickel and similar questions as party questions. They are business questions, and should be treated as such. The Government should go still further in the control of railways. There was no more danger in a member of the Cabinet being at the head of a financial corporation than if a private member were in the same position. He had an ardent desire to punish the bribe on his part. Mr. Ross would not, in a minute, if he did not believe that he was sincere on this question. He would support any sensible amendment to the election laws, but hoped that the house would not rush off under popular clamor and pass laws which could not be enforced. The true remedy for corruption was to give people something to fight about. If the Premier had ordered the Provincial judges to make arrests, there would be no need to consider other elements. The Government would have more marked convictions; then there would be no corruption. He would like to get farmers from England into old Ontario.

On March 10 Mr. Whitney proposed various changes in the election law, but they were ultimately voted down by the Government. A few days later he presented to the house a sworn statement by a reputable man named Pritchard which appeared to prove distinctly a condition of gross corruption in the constituency of West Elgin, engineered and controlled by a paid gang of Government party men. The dominant public opinion of the community at the time apparently was that the Government were on the point of bringing the perpetrators of undoubted corruption in the constituencies of West Elgin, Brockville, and South Ontario during the provincial elections. The Commission of Inquiry, which was appointed early in the session and was composed of County Court Judges Barron, McTavish, and Morgan, eventually reported in such a way as to fear the Government of any direct share in the actual corruption. Every confidence was felt in the commissioners, but it was known that they had been limited in their powers, and that the chief men connected with the actual bribery and ballot-box stuffing had fled the country.

On March 13 the Government presented to the house details of their agreement with the Spanish River Paper Company, and a grant of 250 square miles of unoccupied and unlicensed public land for cutting pulp wood and erecting mills. It was found that a right of granting cutting privileges in the tracts of country was included, and that in return the company was committed to $500,000 in erecting a pulp and paper mill within the next three years. In defending the arrangement in the house, on April 10, Mr. Ross said the object of this contract was to promote a very valuable industry in New Ontario. He pointed out that for years the Government had pursued a system of building colonization roads and otherwise encouraging settlement in New Ontario, and he was pleased to say their efforts had met with good success, as he believed at the next census it would be found that there is now a population of 120,000 in that district. In New Ontario there was a great deal of land, but it was of no value unless developed. Much of this land was of little value from an agricultural point of view, but there were some fertile belts, much timber, and considerable mineral wealth. In 1885 the Government had entered into its first pulp-mill contract with Mr. F. H. Pattullo, of Ste. Ste. Marie, and the success of Mr. Clergue's undertaking had been most remarkable. In fact, it showed him to be a very remarkable man, and quite justified the Government in the course they had taken. Mr. Clergue had agreed to expend $400,000 and employ 200 persons. He had already expended over $2,000,000, and now employs more than 700 persons. Mr. Clergue was now engaged in the building of a railway at an estimated cost of $6,000,000, but was not asking the public for a cent. It was true that Mr. Clergue asked a certain land grant; but with the completion of the enterprises he had now under construction Mr. Clergue will have expended from $14,000,000 to $16,000,000, and the Government had no occasion to worry that the industry would falter, for they would be employed in the manufacture of paper, and the province would be benefited.

The agreement was opposed by Mr. Whitney on the ground that it involved giving the lands and privileges to public competition, and an evident lack of knowledge as to the extent of the resources of the province in connection with its stores of timber and pulp wood. But it was approved by a party vote. Some further discussion took place regarding the duties placed upon Canadian lumber by the United States, and the Ontario Lumbermen's Association declared again in favor of "free logs for free lumber." At their annual meeting, on Feb. 22, the following resolution was passed:

"That the Lumbermen's Association of Ontario express their satisfaction with the provincial Government in putting the manufacturing clause in all licenses; and further, that this satisfaction reiterate the opinion, expressed on former occasions, that in the absence of reciprocity in lumber between Canada and the United States the Government of Canada be requested to impose an import duty on lumber corresponding with that imposed by the Government of the United States, and thereby remove the existing discrimination which at present exists to Canadian lumbermen."

On May 1 the Legislature adjourned after a congratulatory speech from the Lieutenant Governor and his assent to the following measures, among many others:

The provincial drainage aid act.
For granting aid to the sufferers by the late disastrous fire in the cities of Ottawa and Hull.
Respecting provincial aid toward the establishment of municipal cold-storage buildings.
Respecting aid for the incorporation of co-operative cold-storage associations.
To amend the act respecting cheese and butter manufacturing associations and companies.
To provide for the incorporation of co-operative cold-storage associations.
To amend the act respecting cheese and butter manufacturing associations and companies.

Licenses and Temperance.—In 1874 there were 4,793 tavern licenses in Ontario; in 1889 there were 2,641. Concurrently with the curtailment of licenses in the province, it may be said that two days after the commencement of the Parliament the Treasurer, in reply to a question, stated that of the annual revenue received he expected $4,758,135.13; from 1881 to 1885 it was 4,016; from 1886 to 1890, 4,311; while from 1891 to 1895 it was only 2,703. During the Scott act period, from 1881 to 1890, the average yearly commitments for drunkenness exceeded 4,000, while under the restrictive license system prevailing since then commitments have only averaged 2,703 per annum.

Crime.—An interesting report was the one prepared by the Inspector of Prisons and Reformatories. In 1899, 8,203 persons were committed to the jails. This was the lowest number in twenty-six years. In 1898, 8,256 persons were committed. Of those committed in 1899, 1,957 were men, 267 were boys under sixteen years of age, and 33 were girls. There was a decrease in crimes against public morals from 354 in 1898 to 247 in 1899. Committals for crimes against the person numbered 638 in 1899, being a decrease of 11 compared with the year previous. For drunkenness, 1,308 persons were committed, while the number in 1898 was 1,707. Seven persons were committed for bigamy, and 1,428 were sent to jail for vagrancy. Of the total of 8,203 committals, there were brought to trial and discharged 1,584. By order of the judge, 806 were let go. The remainder, 5,034, were sentenced or kept for some reason or other. To jail 4,000 of those guilty was a sentence, but when 633 went to prison an increase to Kingston and the reformatories. By the report it is seen that 3,297 of those sentenced were temperate, and 6,855 of the total number of 8,203 could read and write. The total cost of the jails last year was $136,617, while in 1898 the cost was $137,310. The average cost per patient was 29és a day. In 1898 there were 380 lunatics and idiots.

Education.—The financial condition of the University of Toronto, which is in some measure subsidized and controlled by the province, came in for considerable discussion during the year. The Hon. Edward Blake, M. P. (now living in England), resigned the chancellorship which he had held for many years, as did the Hon. William Mulock the vice-chancellorship. Sir W. R. Meredith, Chief Justice of Ontario, and Mr. Justice Charles Moss were elected unanimously to be their successors. The income of the university last year was $127,445.99, of which the larger items were: Interest on purchase monies, $566.33; interest on loans, $10,677; interest on deposits, $180,877; and payments, $187,599.75; city of Toronto grant as rent for Queen's Park, $6,000; legislative grant, $7,000; wild land sales, $8,191.81; interest on advances to Upper Canada College, $7,638.92; university and college fees, $4,441.35; gymnasium fees, $809. There was a deficit for the current year of $7,994.10. The latest official list was available, and regarding general education in Ontario are those of 1898, in the annual report of 1890. They show 5,932 public schools, 478,394 pupils registered, an average attendance of 273,451, 6,466 female teachers, 2,745 male teachers, receipts of $5,219,444, and expenditures amounting to $4,392,714. The Roman Catholic separate schools numbered 345, the pupils
Agreement. — The assets of the farmers of Ontario in 1898 were given in the Annual Report of the Bureau of Statistics, obtained from the universities, had 571 teachers, 23,301 pupils, with receipts amounting to $779,451 and expenses to $729,009, and showed 130 schools, with an average attendance of 14,066.

Agriculture. — The assets of the farmers of Ontario in 1898 were given in the Annual Report of the Bureau of Statistics. They sold 2,412,000 bushels of wheat, 2,400,000 bushels of oats, 2,300,000 bushels of rye, 2,200,000 bushels of corn, and 2,100,000 bushels of barley.

The estimated value of the farms in Ontario was $109,140, and the total receipts from the sale of livestock and dairy products were $4,682,476.

Finances. — Jan. 1, 1897, the State took over the railroad built by the Government of Cape Colony, which was sold by the Republic to the Cape system at Norval's Point, on the Orange river, passing through Bloemfontein, and connecting with the Transvaal railroads at Viljoensdrift over the Vaal river. The net receipts from the railroad in 1898 were £408,078, increasing the Government revenue to £799,758, other items being £293,752 from telegraphs, £27,953 from transfer taxes, £15,421 from quit rents, £121,411 from import duties, £63,981 from stamps, and £19,686 from the native poll tax. The expenditure in 1898 was £505,752, of which £508,478 was railroad expenditure, while salaries amounted to £50,527, police expenses to £14,182, cost of education to £54,995, postal and telegraph expenses to £30,140, and public works to £57,270. The Government had a debt of £23,000 prior to the acquisition of the railroads. This operation involved the payment to the Cape Government of £1,800,000. The length of the railroads is 392 miles, built at the cost of £2,771,845. The telegraphs have 1,700 miles of wire, besides 450 miles of railroad telegraphs, with 1,110 miles of wire.

Defense. — Every able-bodied man is liable to be called out for the defense of the republic from the age of sixteen to that of sixty. In 1899 there were about 22,000. Four batteries of artillery were stationed at Bloemfontein, and 950 officers and men, with a reserve of 550, served as artillers.

Commerce and Production. — There are 10,500 farms in the Free State, containing 30,000,000 acres, of which only 250,000 acres are cultivated. The live stock consisted of 248,078 cattle, 276,073 oxen, 191,092 horses, 1,189,922 sheep, 558,155 goats, and 1,461,000 ostriches. Diamonds were dug in 1898 of the value of £1,508,661. Grain, wool, and horses are imported from Basutoland, and the exports consist of pastoral and agricultural produce shipped to Cape Colony, Natal, and the South African Republic. The general immigration into the country and diamonds exported by way of the Cape. The value of the commerce with the conterminous countries in 1898 was as follows:

OREGON, a Pacific coast State, admitted to the Union Feb. 14, 1859; area, 94,590 square miles. The population was 13,294 in 1850; 52,465 in 1860; 90,223 in 1870; 174,768 in 1880; 313,767 in 1899; and 413,536 in 1900. Capital, Salem.

Government. — The following were the State officers in 1900: Governor, Theodore T. Geer; Secretary of State and Auditor, Frank I. Dunbar; Treasurer, Charles S. Moore; Attorney-General, R. D. N. Blackburn; Superintendent of Instruction, J. H. Ackerman; Adjutant General, C. U. Gantowen; Food Commissioner, J. W. Bailey; Game and Forest Warden, L. W. P. Quimby; Land Agent, L. B. Geer; Fish and Game Protector, F. C. Reed; Printer, W. H. Leeds; Printing Expert, Ross E. Moors; President of the State Board of Agriculture, W. H. Wehrung; and Superintendent of Institutions, H. B. Miller, who resigned and was succeeded in April by E. L. Smith; Biologist, F. L. Washburn; Librarian, James B. Putnam; Chief
Justice of the Supreme Court, Charles E. Wolverton; Associate Justices, Robert S. Bean and Frank A. Moore; Clerk, J. J. Murphy—all Republicans.

The term of the State officers is four years, and they are elected in June of even-numbered years, alternating with the presidential elections. In June of all the even-numbered years members of Congress, the Legislature, and a justice of the Supreme Court are elected. The Legislature meets in January of the odd-numbered years. It consists of 30 Senators and 60 Representatives.

Population.—The population of the State has increased in the past decade 99,769, or 31.7 per cent. Following is the population by counties: Baker, 15,557; Benton, 6,706; Clackamas, 19,055; Clatsop, 12,765; Columbia, 62,373; Curry, 3,860; Douglas, 14,565; Gilliam, 3,201; Grant, 5,946; Harney, 2,596; Jackson, 13,698; Josephine, 7,517; Klamath, 3,970; Lake, 2,847; Lane, 19,604; Lincoln, 3,515; Linn, 18,603; Malheur, 4,203; Marion, 27,713; Morrow, 4,151; Multnomah, 103,167; Polk, 9,923; Sherman, 3,447; Tillamook, 4,471; Umatilla, 8,149; Union, 16,570; Washington, 1,824; Wallowa, 1,851; Wheeler, 14,407; Yamhill, 3,120.

Portland has 90,426 inhabitants; in 1890 it had 46,385. Salem has 4,258.

Finances.—The semiannual report of the Treasurer shows that the balance on hand July 1 was $1,080,944.01; the receipts to Jan. 1, 1901, were $785,279.08, and the disbursements were $921,509.69, leaving at the close of the year a balance of $944,623.40. The receipts of the general fund were $245,145.43, and the disbursements $232,233.67. The receipts of the common-school fund were $330,043.72, and the disbursements $323,068.92; the receipts from the public school fund were $13,324.92; the receipts from the library fund were $23,500; the receipts from the Washington trust estate were $750.49. The receipts in the first half of the year, including a balance from 1899 of $741,316.43, were $1,850,041.94, and the disbursements were $769,097.03.

Valuations.—The gross valuation of taxable property is given as $125,738,761.13; the exemptions amounted to $2,078,857.87; the amount by which the gross valuation was exceeded was the largest ever made and was $921,509.69.

The number of acres of tillable land is 2,092,488, their value $24,258,755; acres of nontillable land 123,612, their value $874,060; miles of railroad bed 1,672.96, value $5,217,229; horses and buggies 104,968, value $2,575,379; cattle 386,431, value $4,993,885; sheep 1,458,098, value $2,260,874. Education.—The report of the superintendent shows the following figures: School population—between four and twenty years—133,181; enrollment, 80,787; average daily attendance, 64,411; number of teachers, 3,742; of school principals, 297. There are 243 graded schools employing 1,026 teachers and giving instruction to 40,791 pupils. Statistics of 1899 show that there were 31 universities, colleges, and academies, with 270 teachers and 4,783 pupils. In 1900 there were 42 of these institutions.

The apportionment of the school fund interest in August was the largest ever made and was $207,457.34. The whole cost of public education in 1900 is given as $1,508,825.53.

The Agricultural College had 405 students in December, and graduated 37 in June. In July the Board of Regents prohibited the participation of intercollegiate contests. The preamble to the resolutions:

"Whereas, Intercollegiate athletic games have passed the bounds of reason and developed into a form of mania that is demoralizing to the moral, mental, and physical well-being of college students; and

"Whereas, The records of all educational institutions show that the standing of those students engaged in athletics compares in nearly all cases unfavorably with the standing of other students; and

"Whereas, The same overtaxing of strength and endurance in dumb brutes that is visited upon athletes is made a misdemeanor, punishable by statute law; and

"Whereas, The doings of the few athletes absorbs the attention and demoralizes the studies of the whole body of students for long periods, to the utter prostitution of the purposes for which colleges of agriculture and the sciences were beneficently endowed; therefore, etc.

The available funds of the college were $937,318, and the expenditures $89,964.01.

The State University, at Eugene, has 8 colleges and schools, namely, the graduate school; college of literature, science, and the arts; college of engineering; school of veterinary science; school of civil, mechanical, and mining engineering; school of political science and history; school of mines; school of pharmacy; school of law; school of medicine. There are 29 departments and 150 courses of instruction, aside from the schools of law and medicine. Many of the departments offer both preparatory and collegiate courses. In June the degree of B.A. was conferred on 41, while 35 made bachelors of law, and 11 doctors of medicine.

Graduates at other institutions were: Monmouth Normal School, 24; Ashland Normal School, 12; McMinnville College, 3; Pacific College, at Newberg, 5; Philomath College, 5; Pacific University, at Forest Grove, 10; Albany College. In all, 113 were graduated, 101 of whom were freshmen.

The text-books for the public schools are hereafter to be selected by a commission of 5 members, who hold office four years after appointment by the Governor. In February, 1901, and every six years thereafter, a circular is to be sent to principals of schools offering for proposals for furnishing books for the ensuing six years. From these the commissioners are to select and report to the State Board of Education, which is then to make the contracts. Each commissioner is to receive $100 for attendance at the meeting and 10 cents for each mile traveled. The Governor appointed five men to serve, but one declined, leaving H. W. Scott, P. L. Campbell, W. M. Ladd, and W. M. Colvig as appointees.

The question of the right of a teacher in a public school to read from the Bible and repeat the Lord's Prayer in school, and to compel pupils to rise and listen to the prayer, came before the Supreme Court of Oregon. In a case involving the Assemblies of God Church, it was decided that the majority of the trustees of any school have the right to prescribe such exercises and compel respectful attention on the part of pupils.

Charities and Corrections.—The Insane Asylum had 1,100 patients Dec. 1, 1898; during the biennial term 679 were admitted, 32 escapes were reported, 217 were discharged and restored, 100 were discharged much improved, 65 discharged not improved, 40 discharged not improved, 2 not insane, 224 died, and 50 escaped, leaving, Nov. 30, 1900, 1,173, of whom 521 were men. The monthly average was 1,106. The financial statement for the term shows that the total expenditures for articles returned and damaged, $3,030; interest, $710.74; pay of Board of Trustees and clerks, $1,333.33; grand total, $281,506.06.

The biennial report of the State School for the
Blind shows that during the term ending in December 34 pupils were enrolled, the present attendance being 20. The expenditures of the term were $37,586.36.

In the two years 82 pupils were enrolled in the State School for Deaf-mutes, and 60 were in attendance at the close of the year. The total expenditures were $13,574.59 for 1899 and $18,138.03 for 1900, or a total of $28,712.62 for the biennial term. Taking 60 pupils as the average attendance, it will be seen that the per capita cost per year is $222.98, or $18.58 per capita per month, allowing twelve months per year. The pupils go home during the summer, so that the expense is really about $22.30 per capita per month during the time the school is in session.

The State Soldiers' Home is full, and many applicants are turned away. Some of these again admission to the National Home. The last appropriation was $20,000 for the two years, and this was exhausted and a deficit of $10,751.71 was incurred.

The number of boys at the State Reform School at the beginning of the biennial term was 99. At the end of the term 91 were enrolled, the average being 90. The total expenditures for the term were $84,753.14, of which $35,574.99 was for general maintenance, $10,429.73 for improvements, and $8,729.43 for lighting. Since the institution was established 443 boys have been received.

The convicts at the Penitentiary at the close of the year numbered 278. Of the appropriations, aggregating $300,000, the expenditures for the term were $97,541.17, leaving balances aggregating $2,465.03. Early in 1899 work was begun in the brickyard, and 1,100,000 brick have since been burned. Convicts also work in the stove foundry and on public roads.

Militia.—The organized strength of the militia in 1900 was 1,433 men, while the number available for military duty was 1,698. The War Department has allowed 84 per cent. of the State's claim for equipment and supplies furnished the Oregon volunteers when they entered the United States service; some of the equipment was worn, and therefore the whole claim was not allowed. The naval battalion is to have from the Government an old schooner, and the loan of a 12-inch mortar and 2 rapid-fire 3-inch naval guns.

Game.—The Game Warden says: "The history of the past two years demonstrates the wisdom of the law passed in 1898 protecting elk for ten years. Even the violations by Indians have been greatly held in check, owing to the vigilance of the fire wardens. Elk are most plentiful in the Cascade mountains, where one deputy reported seeing a band of 80 to 100, while another counted 27 elk in one band. "Deer are yet plentiful in Oregon, and, although many violations of the law are reported, it is extremely difficult to secure convictions. Indians are more difficult to deal with, as they have very little regard for State laws. "Nearly all upland birds are more plentiful this year than ever. This was especially true of the ringneck, or China turquisatous pheasant, which has obtained such a firm foothold in the State that its extermination is not to be thought of. "English partridges will shortly be introduced into the State, a shipment of 100 pairs being en route to Oregon from England." Pheasant farming is now a recognized industry in the State.

Products.—Following are the statistics of the products of the farm, orchard, and range in the State in 1900: Wheat, 16,000,000 bushels, $8,400,000; corn, 282,547 bushels, $141,273; oats, 3,583,062 bushels, $1,361,563; hay, 1,506,316 tons, $10,544,212; potatoes, 1,545,469 bushels, $494,614; wool, 20,000,000 pounds, $2,500,000; hops, 16,900,000 pounds, $2,140,000; silver, $15,000; coal, 90,000 tons, $720,000; total, $4,151,634.

The products of the mines were: Gold, $3,770,878; copper, $9,371,140; silver, $15,000; coal, 90,000 tons, $720,000; total, $14,151,634.

The fisheries produced: Columbia river salmon pack, 358,722 cases, $2,282,295.10; salmon pack, Oregon coast streams and bays, 73,800 cases, $323,321.60; fish consumed locally and shipped abroad, 5,580,138 pounds, $374,967; shellfish, $47,388; total, $35,627,971.70.

From this land of manufactures, goods, including lumber, were estimated at a value of $60,000,000.

Portland.—The foreign commerce of Portland for the year ending Nov. 30 was: Imports, $1,476,801; exports, $8,524,882. The business of Portland's jobbing trade amounts to $110,000,000, and the bank clearings to $106,926,536. A mining stock exchange has been established in Portland.

Lands.—The annual report of the General Land Office shows that in the six land districts of the State entries were made covering an area of 840,975 acres, for which $520,791 was turned in. The heaviest sales were of timber and stone lands. There are now 34,377,907 acres of unappropriated land in the State, of which 23,489,861 acres are surveyed. The reserves are the Cascade Range Forest Reserve, 4,492,500 acres; Bull Run Reserve, 142,080 acres; Ashland Forest Reserve, 18,560 acres. The amount of timber in the State, as estimated by Henry Gannett, is 234,653,000,000 feet.

The biennial report of the State Land Department shows that the receipts for the two years ending Dec. 31, 1900, were 66 per cent. higher than those for the two years preceding. The receipts for 1899-1900 aggregated $562,081, as against $531,586.68 for the years 1897-98. According to the State Land Agent, on April 1, 1899, the State owned 179 farms, which were secured under foreclosure. of the State, of which 23,489,861 acres are surveyed. These farms aggregated 49,514 acres, and represented loans to the amount of $293,395. Since that date the State has secured by similar foreclosures 35 farms, with a total of 8,082 acres, through loans amounting to $57,000.

From this land of 88 entire tracts have been sold for $181,958.71. The cost of those sold was $160,599.17.

The receipts of the office of State Land Agent were as follow: From tracts sold, $181,958.71; from partial sales, $2,781.75; from rents, $16,043.41; total, $200,783.87.

World Scalp Bounty.—Multnomah County refused to levy a tax for the scalp bounty fund in accordance with the law of the last Legislature. Other valley counties, though having few sheep to protect, observed the law. The 10 counties that have comparatively few sheep and goats have a total taxable property of $76,073,388. The 10 counties that have $392,344,477, which if levied, would be $30,290; Multnomah's share would be $7,915. Nearly 50,000 scalps have been brought to the county courts within two years; it is estimated that 47,000 were those of coyotes; the others, wild cats, cougars, mountain lions, and timber wolves.

Political.—At the State election, June 4, a joint of the Supreme Court, a dairy and food
OREGON.

The Republican candidates were successful at the polls. For Justice of the Supreme Court, C. E. L. Haines, Republican, 4,253 votes; Greene, Democrat, 3,388; Bright, Prohibitionist, 4,537. On joint ballot the Republicans will have a majority of 20—10 in each House.

All the five proposed constitutional amendments were rejected. They were as follow: 1. To allow any county, city, town, school district, or other municipal corporation to become indebted to an amount not exceeding 5 per cent. of the value of its taxable property, the present limit being $5,000, except in cases of inscription or invasion. 2. Increasing the number of judges of the Supreme Court from 3 to 5. 3. Permitting negroes to reside in the State. 4. To confer the right of eminent domain upon irrigation and drainage companies, and to declare the "right to collect taxes or compensation for the use of water" a "franchise." 5. Giving women the right of suffrage. The proposition to repeal the constitutional provision in regard to negroes residing in the State, which is a dead letter, since it is nullified by the United States Constitution, was defeated by a small majority—19,074 for and 19,990 against. The woman suffrage amendment was rejected by a vote of 26,265 for to 28,402 against. The vote on the others showed majorities against them of about 10,000.

The vote on presidential electors in November was: McKinley, 40,526; Bryan, 33,385; Woolley, 2,556; Debs, 1,406; Barker, 203.

OSTEOPATHY (from ὄστεον, bone, and σαφές, suffering), a method of treating diseases of the human body without the use of drugs, by means of manipulations applied to various nerve centers, chiefly those along the spine, with a view to inducing the circulation of the blood and lymph, and an equal distribution of the nerve forces. Special attention is given to the readjustment of any bones, muscles, or ligaments not in the normal position.

The system was formulated in 1874 by Dr. A. T. Still, a physician of Baldwin, Kan., who, having become dissatisfied with the results attained through the practice of medicine, determined, if possible, to discover an efficacious method of healing. He reasoned that a body so perfectly constructed mechanically should be able to protect itself against the inroads of disease without the artificial aid of external substances, except those employed as food. His next conclusion was that "a natural flow of blood is health, and disease is the effect of local or general disturbance of blood." With this as a working hypothesis, he made a series of experiments, the results of which convinced him that the various organs of the body were controlled by nerve centers located chiefly along the spine, and that these could be operated upon and controlled by the expansion or contraction of the blood vessels or nerves.

He holds also that if the bones, muscles, arteries, veins, lymphatics, glands, organs, and tissues of the body are in their correct anatomical positions, disease can not exist. Displacement may arise from a variety of causes, such as a fall, a blow, a strain, or atmospheric changes. Pressure from within the blood vessels or muscles in the immediate vicinity of the part affected will follow, and a consequent shutting off of the nerve or blood supply to some organ, which will then become diseased. With a readjustment of the displaced part will come "perfect freedom of motion of all the fluids, forces, and substances pertaining to life, thus re-establishing a condition known as health."
Pennsylvania.

Osteopathy does not confine itself to a treatment of maladies of the bones, nor does it find in diseased bones the origin of all pathological conditions. The name was considered by Dr. Still as applicable to his system because of the relative importance which his theory gives to anatomy, and because of his belief that "the bones could be used as levers to relieve pressure on nerves, arteries, and veins."

Treatments, which do not as a rule occupy more than twenty minutes, are given through thin garments, and not, as in massage, upon the bare flesh. No machines or appliances are used.

To the maintenance of conditions in osteopathy was opened about seven years ago in Kirksville, Mo., under the name of the American School of Osteopathy. Since then a considerable number have been established in different parts of the United States, the most prominent being the Northern Institute of Osteopathy, at Rochester, N. Y.; the American College of Osteopathy, the Philadelphia Institute of Osteopathy, the Still College of Osteopathy at Des Moines, Iowa, the Pacific School of Osteopathy at Los Angeles, Cal., and the Milwaukee College and Infirmary of Osteopathy. Several of these colleges publish periodicals in the interest of osteopathy.

The prescribed course of study covers a period of four terms of five months each. The requirements for admission are an elementary knowledge of English, arithmetic, physics, and the history and geography of the United States. The curriculum includes, in addition to the theory and clinical demonstration of osteopathy, descriptive and demonstrative anatomy, histology, chemistry, physiology, hygiene, pathology, physiological psychology, dietetics, obstetrics, and minor surgery. Upon satisfactory completion of the course, students receive the degree of doctor or diplomate in osteopathy.

It is estimated that there are about one thousand persons practicing osteopathy in the United States. Among the complaints which they say they have treated successfully are heart and lung diseases, nervous prostration, sciatica, lumbago, all forms of neuralgia and paralysis, asthma, cancer, incipient consumption, spinal curvature, eye and ear affections, and all disorders of the liver, kidney, stomach, and intestinal affections.

The following States have by legislative action placed osteopathy upon the same legal basis as the recognized schools of medicine: Vermont, Missouri, Iowa, Illinois, Michigan, Tennessee, North and South Dakota, Ohio, Texas, Colorado, Kansas, and California.

Pennsylvania, a Middle State, one of the original thirteen, ratified the Constitution Dec. 12, 1787; area, 45,215 square miles. The population, according to each decennial census, was 434,373 in 1790; 602,365 in 1800; 810,091 in 1810; 1,047,007 in 1820; 1,348,233 in 1830; 1,724,033 in 1840; 2,311,756 in 1850; 3,900,215 in 1860; 3,381,951 in 1870; 4,228,391 in 1880; 5,258,014 in 1890; 6,302,115 in 1900. Capital, Harrisburg.

Government.—The following were the State officers in 1900: Governor, William A. Stone; Lieutenant Governor, J. P. S. Gobin; Secretary of the Commonwealth, William W. Gries; Secretary of Internal Affairs, James W. Latta; Treasurer, James E. Barnett; Auditor General, E. B. Harrison; Attorney-General, John P. Elkins; Adjutant General, Thomas J. Stewart; Superintendent of Instruction, N. C. Schaeffer; Insurance Commissioner, Israel W. Durham; Commissioner of Banking, Thomas J. Powers; Secretary of Agriculture, John Hamilton; Commissioner of Forestry, J. H. Rothrock; Dairy and Food Commissioner, Andrew L. Miller; Factory Inspector, James Campbell; Veterinarian, Leonard Pierson; Librarian, George E. Reed; Superintendent of Public Buildings and Grounds, T. L. Eyre; Chief Justice of the Supreme Court, J. B. McCollum; Associate Justices, J. Hay Brown, James T. Mitchell, William P. Potter, John Dean, D. New, J. C. Moore, L. E. D. Moore, Charles S. Greene, William Pearson, and George Pearson; Justices of the Superior Court, C. E. Rice, J. A. Beaver, J. J. Wickham, George B. Orlady, P. P. Smith, William Porter, and Dimmer Beecher, N. C. Schaeffer and Judges McCollum and Smith are Democrats; the others are Republicans.

Population.—The population of the State, according to the census of 1900, is 6,302,115, against 5,258,014 in 1890. This is an increase of 1,044,101, or 19.8 per cent. The population by counties is as follows: Adams, 34,496; Allegheny, 775,058; Armstrong, 52,551; Beaver, 56,432; Bedford, 30,408; Berks, 159,615; Blair, 85,099; Bradford, 59,403; Bucks, 71,190; Butler, 56,962; Cambria, 104,837; Cameron, 7,048; Carbon, 44,510; Center, 42,894; Chester, 95,605; Clarion, 34,283; Clearfield, 80, 614; Clinton, 29,197; Columbia, 39,896; Crawford, 63,443; Cumberland, 50,344; Dauphin, 114,443; Delaware, 94,762; Elk, 32,903; Erie, 98,473; Fayette, 110,412; Forest, 11,030; Franklin, 54,002; Fulton, 9,224; Greene, 28,281; Huntongton, 34, 650; Indiana, 42,556; Jefferson, 59,113; Juniata, 16,054; Lackawanna, 193,831; Lancaster, 150,241; Lawrence, 57,042; Lebanon, 53,827; Lehigh, 95, 803; Luzerne, 257,121; Lycoming, 75,066; McKean, 51,343; Mercer, 57,387; Millin, 23,100; Monroe, 21,161; Montgomery, 138,955; Montour, 42,926; Northampton, 90,057; Northumberland, 90,911; Perry, 26,263; Philadelphia, 1,293,697; Pike, 8,766; Potter, 30,621; Schuylkill, 172,927; Snyder, 17,304; Somerset, 49,461; Sullivan, 12, 134; Susquehanna, 40,043; Tioga, 49,086; Union, 17,592; Venango, 49,648; Warren, 38,946; Washington, 92,181; Wayne, 30,171; Westmoreland, 107,173; Wyoming, 1,182; York, 116,413.

Finances.—On Jan. 1, 1900, there was a deficit in the treasury of about $3,000,000. Owing to an unexpected increase in revenues, this deficit was entirely liquidated in 1900. "There is sufficient money to pay all unpaid appropriations as they mature, and there will be on Jan. 1, 1901, a balance available for the sinking fund necessary to liquidate all demands, of about $1,500,000."

The report of the Treasurer shows the total receipts of the treasury department from all sources for the fiscal year ending Nov. 30, 1900, to be $47,494,211.78. Deducting the interest received on securities in the sinking fund and securities maturing and paid into the sinking fund, leaves the balance of receipts available for general disbursements of $47,192,817.91. Taking out the $344,371.50 transferred to the sinking fund, there was a balance of $16,848,443.41 available for general disbursements. From this amount is deducted three fourths of the tax on personal property re-
turned to the counties, tax on premiums on foreign fire insurance, personal fees, annuities for right of way, oleomargarine licenses returned to the agricultural department, and fines for violation of the game laws returned to the Game Commission, amounting in the aggregate to $2,558,613.26, which leaves a balance available for the payment of appropriations of $14,828,820.15. This latter is the amount of revenue not required to meet fixed year appropriations made by the Legislature. From it, together with the revenue for the year 1899, the appropriations made by the last Legislature have been paid and the deficit liquidated.

The sinking fund amounts to $6,021,602.12, while the public debt on Dec. 1, 1899, amounted to $8,181,599.02, leaving a balance of funded State debt of only $783,962.90.

Valuation and Taxation.—The latest report of the Secretary of Internal Affairs shows the value of all real estate at $3,027,649,299, being an increase over the preceding year's total of $46,547,210. The total of taxable real estate is given as $729,739,424, and the total of taxable personal property assessed for all purposes is reported as $55,808,585.32, being an increase for the year of $3,492,714.51.

Banks.—The Commissioner of Banking, in his latest report, gives us for 1899 the following totals: Banks, 91; trust companies, 95; savings institutions, 16. Capital is shown as follows: Banks, $25,748,180; trust companies, $8,303,497.50; savings institutions, $10,300; trust companies, $36,553,497.50. Surplus: Banks, $5,955,419.78; savings institutions, $7,515,626.59; trust companies, $15,124,811.88. Deposits: Banks, $67,151,966.66; savings institutions, $99,261,413.90; trust companies, $158,467,325.28.

Insurance.—The Insurance Commissioner, in his latest report, gives the following figures concerning life and accident insurance as for 1899: In 1899 the companies of the State issued 7,616 policies, insuring $20,095,459 upon the lives of residents of this State, an increase over the business of the preceding year of 1,557 policies and an increase of $2,735,416 insurance. Companies of other States reinsured 6,074,871 in the aggregate, by insuring $1,813,226,321, making an aggregate by all companies of 610,233 policies, insuring $203,321,780, being an increase of 144,457 policies and an increase of $44,784,279. The total losses paid by all life companies in the State during the year 1899 was $12,477,858.61, of which home companies paid $12,362,652, and companies of other States $10,923,507.61.

The insurance in force at the end of 1899 upon the lives of residents of Pennsylvania, including industrial policies of small amounts, aggregated 2,034,017 policies, insuring $867,973,745, of which 52,358 policies, insuring $138,234,318, were in companies of other States, and 1,981,659 policies, insuring $720,739,424, in companies of other States and foreign countries. The Pennsylvania life companies had in force at the close of the year 1899 a total of 102,393 policies, insuring $410,325,423, against 114,483 policies, insuring $304,656,265, at the close of the year 1898. The same companies had a total net premium income of $15,443,531.10 in 1899, against $12,096,481.75 in 1898, and a total income from all sources of $19,498,219.41 in 1899, against $16,286,411.05 in 1898.

Education.—In the year ending the first Monday of June, 1900, the whole number of teachers employed was 29,390, the total enrollment of pupils was 1,511,880, the total receipts for schools and buildings were $24,916,668.69, and the total expenditures were $21,476,994.90. The number of school districts in the State is 2,510; number of schools, 28,330; number of graded schools, 15,720; number of superintendents, 140; number of male teachers, 15,151; number of female teachers, 10,181; number of teachers on salaries, 1,996; whole number of teachers, 29,390; average salaries of male teachers per month, $44.25; average salaries of female teachers per month, $37.74; average length of school term in months, 5.33; average number of pupils in daily attendance, 548,640; teachers' wages, $1,205,492.61; cost of school furniture, $100,148.30; cost of school supplies other than text-books, $422,696.87; fuel, contingencies, fees of collectors, and other expenses, $4,978,540.36. The State appropriation for the school year ending June 5, 1899, was $5,500,000, and the estimated value of school property was $34,797,506.32.

Railroads.—The steam railroads of the State, on June 30, showed a capitalization, including stock, bonds, and current liabilities, of $2,965,077,932, with assets of $3,067,955,557. The companies included in the reports have 25,885 miles of road; own 11,747 locomotives, 10,709 passenger cars, and 512,948 freight cars. On these roads there are employed 357,777 persons, whom the State pays wages of $17,762,448 as compensation for services. The trains of these corporations during the year traversed 257,777,050 miles and carried 203,939,884 passengers and 578,995,338 tons of freight. The passenger earnings amounted to $109,757,426, and freight earnings to $331,015,953. With other earnings this makes a grand total of $438,912,483. The operations of these steam railroads involve an expenditure, exclusive of dividends, of $428,837,899, and result in the payment to the stockholders of dividends amounting to $37,823,306.

Factories.—The latest report of the Factory Inspector for 1899 shows the total number of employees to be 77,340, consisting of males and females, of sixteen years of age, or less than 5 per cent. of the total number of employees being children. Many establishments will not employ children between thirteen and sixteen years of age, on account of the law requiring age certificates and record books to be kept on file.

The number of iron and steel works in 1899 employed 154,422 persons, or 16,437 more than were employed in 1898; $78,179,333 were paid out in wages to 154,422 persons in 1899, as against $62,676,615 in 1898; being an increase of $15,502,718, or 24.73 per cent.

The average yearly earnings of the 154,422 persons employed in the 44 industries, skilled and unskilled, men, women, and children, was $566.27, against $454.52 for the 137,985 persons employed by the same establishments in 1898, an increase of $111,889,851, or 42.96 per cent.

Iron and Tin.—The value of Pennsylvania's production of pig iron for 1899, as officially reported, was $89,209,503. The average earnings for the year for skilled and unskilled labor was $495.18, the average days of employment being 327, or nine days fewer than in 1898.

The aggregated tinned production for 1899 of the black plate and tin plate works was $311,082,734 pounds, and Pennsylvania's share of the entire production of the United States of tin and tene plate in 1898 was about 37 per cent.

In addition to 21 black plate works, the State had seven dipping works in operation in 1899, making, with the 18 black plate works just turned out a tinned production of 25 plants making a finished product of tin and tene plate. The ag-
gregate value of the 331,082,734 pounds of tin and terne plate produced by these 25 establishments for the year was $12,163,879. Black plate for tinning was made in 11 counties in 1899. Of the 36 counties in which an affray occurred in Shenandoah, Schuylkill County, growing out of an extensive strike in the anthracite coal fields. Two thousand men were reported to be marching the streets of Shenandoah, firing revolvers and resisting all attempts of the civil authorities to disperse them. Two persons were killed and 125 persons were arrested. In 1899 the courts of Schuylkill County reported these facts to the Governor, and his inability to suppress the disturbance, and asked that a sufficient number of the National Guard be sent there for the protection of the public peace. This call of the sheriff was seconded by a resolution of the councils of Shenandoah and the persons arrested at large number of citizens. It reached the Governor on Sept. 21. About 7 a.m., Sept. 22, 600 men with their officers were patrolling the streets of Shenandoah, and by noon of that day nearly 2,000 troops were there. No further serious disturbance occurred. By Oct. 31 the strike was adjusted, and the last of the National Guard withdrawn.

Coal Strike.—In August the coal operators refused to accept the scale of wages adopted by the Hazleton Miners' Convention, saying that the scale was too sweeping, and if put into force would reduce producers of coal to bankruptcy in a short time. The miners, on the other hand, declared that the scale was just, and that the coal companies would only be giving the men their rights by signing it. In September 12,000 mine workers in the anthracite region were reported on strike. On Oct. 30 the strike was practically ended, an advance of 10 per cent. in wages until April 1 and an adjustment of the sliding scale being the result.

Political.—The Republican vote for President was 712,665; the Democratic, 424,232; Social-Democratic, 4,831; Prohibition, 27,905; Republican plurality, 288,433. The vote for Auditor General was: E. B. Hardenbergh, Republican, 675,846; Fred. S. Mese, Democrat, 410,746; J. E. Gill, Prohibition, 2,636; D. O. Coughlin, People's party, 917; N. Seward, Social-Democrat, 3,797. The Legislature in 1899 will consist of 36 Republicans in the Senate and 156 in the House; 13 Democrats in the Senate and 49 in the House.

PERSIA, an empire in central Asia. Muzaffer-edin, Shah in Shah, or Emperor, born March 25, 1853, succeeded his father, Nasreddin, on May 1, 1896. The Valiahld, or heir apparent, is Mohammed Ali Mirza, born in 1872.

Area and Population.—The area is about 625,000 square miles, mostly desert. The population is estimated at 9,000,000. The city of Teheran has about 210,000 inhabitants; Tabriz, 180,000; Lepe, 50,000. About 1,300,000 Mohammedans, about 8,000,000 are Shi'ite Mohammedans, 800,000 Sunnites, 45,000 Armenians, 35,000 Jews, 25,000 Nestorian Christians, 9,000 Guebres or Parsees, and there are probably 800 European residents in the cities. Of the Mohammedans, fully 2,000,000 are nomadic Turks, Kurds, Lurs, and Arabs. The Persians, as a nation, are very well educated in Persian and Arabic literature.

Finances.—The revenue of the Shah's Government for 1900 was estimated at £5,000,000 sterling. Towns, villages, and districts are required to pay each a certain assessed amount in cash or kind, these payments constituting about 52 per cent. of the revenue, customs duties 15 per cent., and posts and telegraphs, fisheries, mines, and other concessions furnish the remaining 3 per cent. A loan of £500,000 was obtained in England in 1892 for the purpose of canceling the unpopular Russian monopoly of the Persian Gulf trade. In January, 1900, authorized a subsidized banking company, organized specially for the object, to make a gold loan of 22,500,000 rubles to the Persian Government, secured by the customs receipts with the exception of those of the province of Fars and those of the ports on the Persian Gulf, the loan to pay 5 per cent. rates varying from 11 per cent. to 8 per cent. at the end of seventy-five years. The Government undertakes to pay all existing foreign obligations out of the proceeds of this loan and to contract no others until it is redeemed without permission from the bank. The English loan was paid off by the Russian bank before the end of February. The Governor may give a guarantee for the debt of the Persian Government to the bank, and such bonds will be guaranteed by the Russian Imperial Government.

Commerce and Production.—The foreign commerce is estimated at £10,000,000 for 1900. The estimate is based upon the amount paid by farmers of the revaluation of the Governor's notes from £300,000 in 1899 and the preceding year, and £250,000 for two years previous, having been increased from £170,000 in 1894. The export and import trade for 1899 was estimated at £9,000,000, the average rate of duty being taken at 4 per cent. and the profit of the farmers at 20 per cent. Europeans pay a uniform duty of 5 per cent. ad valorem. Persians' rates vary, to be 11 to 8 per cent. The Government on March 21, 1899, abolished the farm system in Azerbaijan, Kermanshah, and some other provinces. The chief imports are cotton cloth, woolens, glass, sugar, kerosene, tea, coffee, and drugs. The exports are dates, opium, cotton, wool, silks, carpets, pearls, turquoise, and venison. The imports include the ports of Bushire, Langah, Bunder Abbas, and Moghulmerah for 1898 were £2,091,224, and the exports £1,273,770, the bulk of the commerce being with Great Britain, India, Arabia, and China. The imports at Tabriz, amounting to £682,330 in 1899, consist of cotton goods from Manchester, French and German silks, Russian tobacco, and about £210,930, of raisins, almonds, carpets, shawls, and silk. Through Resht, on the Caspian, considerable commerce is carried on with Russia by way of Baku, the imports in 1896 having been £84,655 in value, including sugar, cloth, silkworm eggs, silver, and petroleum; the exports, amounting to £65,342, consisting in amount to rice, fruits, and cotton. From Bushire through Bunder Abbas the value of £89,547 was imported into Khorassan, and exports to India amounted to £19,681; imports through Meshed from Russian territory were £92,547 in value, and exports £80,320; imports from Afghanistan were £6,296, and exports to Afghanistan £15,073 in value. A railroad connection with Russian territory was established in 1899. The concessions should be granted to railroads built before 1901. The Russian Government has negotiated with the Government of Persia for the construction of a railroad from Julfa to Tabriz, Hamadan, and Bunder Abbas, with a branch line to Teheran. The telegraph lines of the Persian Government have a length of 3,390 miles. The government telegraph lines, 675 miles between Bushire and Teheran, with 2,025 miles of wire, are operated by an English staff, and 415 miles, with 1,245 miles of wire, belong to the Indo-European Telegraph Company.

PERU, a republic in South America. The legislative power is vested in a Congress consisting of a Senate of 48 members and a House of Repre-
sentatives containing 108, the term in both being six years, one third being elected every two years. The presidential term is four years. Eduardo L. de Romaha was elected for the term beginning Sept. 8, 1899. Dr. Isaac Alzmanura and Federico Bressani are the two Vice-Presidents. The Cabinet in the beginning of 1900 was composed as follows: President and Minister of Foreign Affairs, Manuel Maria Galvez; Minister of Justice, Worship, and Public Instructions, Eldorado Romero; Minister of the Interior and Police, Col. Domingo J. Parra; Minister of War and Marine, Camillo N. Carriló; Minister of Finance and Commerce, Mariano A. Balannde; Minister of Public Works, Dr. Carlo Basadre y Forero.

Area and Population.—The area of Peru is 695,720 square miles, according to a recent official estimate. The population in 1896 was estimated at 4,609,999. About a fifth of the native-born population is of pure Spanish descent. Lima, the capital, has over 100,000 inhabitants. Education is free and compulsory in the towns. There were 1,152 schools, with 69,892 pupils, in 1897, not including 304 private schools, with 15,700 pupils.

Finances.—The main part of the revenue comes from customs. Land pays a tax of 3 per cent. of the rent. The duties on alcohol, tobacco, and opium and the stamps are farmed out to a company, which engaged in 1896 to pay 126,734 soles monthly and half the profits, and in 1898 renewed the contract for five years, agreeing to pay three fourths of the profits. The Congress in the same year made salt a monopoly, and set aside the revenue derived therefrom for the redemption of the provinces of Tacna and Arica held by Chili. The total revenue in 1898 was 10,783,580 soles, and the expenditure 11,488,240 soles; to cover the deficit in this year and the two preceding years the Government was authorized to raise a loan of 1,500,000 soles, and to arrange with the Tax Collection Company for its repayment. The revenue for 1899 was estimated at 6,000,000 soles from customs, 3,000,000 soles from taxes, 600,000 soles from the salt monopoly, 287,000 soles from posts and telegraphs, and 1,065,000 soles from various sources; total, 11,852,000 soles. The expenditures were estimated at 365,000 soles for Congress, 2,778,000 soles for the Ministry of the Interior, 688,000 soles for the Ministry of Foreign Affairs, 1,244,000 soles for the Ministry of Justice, 3,480,000 soles for the Ministry of Finance, 3,358,000 soles for the Ministry of War and Marine, 340,000 soles for the Ministry of Public Works, and 337,000 soles were for various purposes, the total being 12,600,000 soles.

The foreign debt of Peru consists of two railroad loans contracted in England, the smaller one at 6 per cent. in 1870, the greater one at 5 per cent. in 1872, both secured on the guano deposits afterward seized by Chili. Their amount was £31,579,080, and the payment of interest having ceased in 1876, there were arrears of £22,998,651 due in 1889; when the Grace-Donoughmore contract was made, the Government ceded to the bondholders all its railroads, mines, guano deposits, and lands for the term of sixty-six years, and was released from liability for the loans. Chili agreed to pay to the bondholders a part of

The proceeds of the guano deposits, but detained the sums so set apart on account of a dispute, which is still the subject of arbitration. For the consolidation of the internal debt 36,174,150 soles of bonds bearing 1 per cent. interest were issued in 1889. After 9,416,000 soles of these had been redeemed the civil war stopped amortization, which has not been resumed, although the interest is now paid regularly. The amount due on foreign debt and other obligations made the total internal debt 47,591,760 soles in 1898. The gold standard of currency was proclaimed on Jan. 10, 1898, and the gold libra was adopted as the national coin, having the same weight and fineness as the English sovereign, and exchanging for 10 silver soles. The silver coinage from 1874 till the adoption of the gold standard amounted to 40,510,681 soles. In 1888 there were 40,103 of the new gold coins struck and only 120,000 soles in silver. The military force in time of peace consists of 1,940 infantry, 625 cavalry, and 510 artillery. French officers have been employed to reorganize the army. The navy consists of a cruiser displacing 1,700 tons and several small vessels.
Commerce and Production.—Coffee is grown in the central parts of the country, where the Peruvian Company has introduced colonists on its lands, comprising 2,750,000 acres. There were 1,239 tons of coffee exported in 1897. The cultivation of cotton is increasing. Sugar plantations in the coast districts produce over a ton of raw sugar to the acre. Cacao, rice, tobacco, wine, and spirits are minor products; rubber, cinchona, and various medicinal plants and dyes are obtained from the forests. The mines produce gold, silver, copper, lead, zinc, quicksilver, salt, sulphur, coal, and petroleum. Gold is washed by the natives, but most of the mines have been abandoned. The total silver exports in 1897 were 7,730,000 soles. The export of gold was 1,239 tons, valuing the mineral exports in 1897 at 9,821,213 soles. The total value of all imports in 1898 was 19,279,272 soles, against 16,128,049 soles in 1897; total value of exports, 30,274,775 soles, against 28,168,452 soles. The imports of cotton goods in 1898 were 9,847,680 soles; woolens, 1,376,643 soles; furniture, 1,273,244 soles; hides, 2,724,255 soles; coffee, 541,715 soles; borax, 574,226 soles; rice, 533,405 soles; cane sugar, 651,975 soles. The value in soles of the trade with each of the principal foreign countries in 1898 is given in the following table:

Navigation.—There were 486 vessels, of 581,044 tons, entered and 483, of 922,045 tons, cleared at the port of Callao during 1897, counting none under 50 tons; at Mollendo, 345, of 462,058 tons, were entered, and at Salaverry, 287, of 408,493 tons, were entered and cleared. The merchant marine in 1898 consisted of 4 steamers, of 3,413 tons, and 63 sailing vessels, of 26,752 tons.

Railroads, Posts, and Telegraphs.—The length of railways in Peru in 1897 was 911 miles, on the Peruvian Corporation; the total cost was £3,000,000. A concession has been given for a railroad, 80 miles long, from Oroya to Cerro de Pasco.

The state telegraph lines in 1897 had a length of 1,400 miles, and 533 miles belonged to the Peruvian Corporation. There are 2,500 miles of telephone wires.

Politics.—The growth of enterprise and introduction of capital into Peru since the cessation of civil disturbances have produced a notable increase in production and wealth. The Government in accordance with the democratic theory prevalent among the political offenders in 1900. The territorial dispute with Chile relative to the retrocession of Tacna and Arica, if a plebiscite in those provinces so decides, as was stipulated in the treaty of Aneon, caused a tension of public feeling in Peru in 1900. Owing to differences of opinion on various questions, the Cabinet resigned at the beginning of the latter half of the year. On Aug. 7 the whole Cabinet resigned and a new one was constituted on Aug. 9, as follows: Minister of Foreign Affairs, Riva Agüero; Minister of Justice, Pedro Carlos Olachea; Minister of the Interior, Emirico Ze- garra; Minister of War and Marine, Carlos Molin Carvajal; Minister of Finance, Rafael Quiroz; Minister of Public Works, José Granda. On Aug. 31 this ministry resigned because the Congress in secret session censured the Minister of Foreign Affairs, and a new one was appointed of the following composition: Minister of the Interior, Em- rico Zegarra; Minister of Justice, Pedro Carlos Olachea; Minister of Foreign Affairs, Felipe de Osma; Minister of War and Marine, Col. Diego Canseco; Minister of Finance, José Vicente Larrabure; Minister of Public Works, Miguel Rojas. On Oct. 3 a new ministry was formed by a coalition of the Democrats and the Civilists, the two prin- cipal political parties led by Pierola and Candamano respectively.

Area and Population.—The Philippine archipelago extends over sixteen degrees of latitude, from Borneo to Formosa, and contains as many as 2,000 islands, a few of them large and produc- tive enough to have figured in the world's commerce for centuries. The total area, including the Sulu Islands, is estimated at 115,300 square miles. The population is between 6,000,000 and 10,000,- 000, mostly of the Malay race, crossed with Né- gritos, of whom some tribes remain, and in some parts of the island with Chinese. The population is 3,000,000. The European population, exclusive of the American army, is about 30,000, and there are 100,000 or more Chinese, who carry on much of the trade and industry. In many of the islands the natives were practically independent under the Spanish control. Manila, the capital, had 154,062 inhabitants in 1887; Laoang, 43,058; Bauan, 35,508; Batangas, 35,587; Laoang, 30,642. The sanitary and other improvements wrought in Manila under American administration and the growth of commerce and enterprise already begun promise to make it one of the greatest emporiums of the East.

Finances.—The cedula tax, which was the chief source of the Spanish revenue, was practi- cally abolished by the Americans. Nevertheless, the revenue in 1900 was a third greater than it ever was under Spain. The customs collections were 50 per cent. greater. The military government saved a surplus of $6,000,000 to be devoted to public works, the most needed of which was the improvement of Manila harbor according to plans made by Spanish engineers about 1880, with minor modifications made by Capt. John Biddle and his assistants. Two long breakwaters were partly constructed by the Spaniards. To finish
these and dredge out the inclosed new harbor so as to admit the largest vessels it is estimated will come, $5,000,000. At present vessels drawing more than 16 feet must lie 2 miles off shore, and discharge or load by means of lighters, a process that becomes impossible in rough weather. For this reason freight rates from Manila to Hong-Kong are about the same as they are from San Francisco to Hong-Kong.

Commerce and Production.—The Philippine Islands have long furnished the whole world with the cheap and strong rope fiber known as Manila hemp, and Asia with tobacco, mostly in the form of cheroots manufactured in Manila. Sugar is another important product, and coffee and indigo are cultivated also. Copra is exported from many of the islands. The total value of imports in 1896 was estimated at $10,644,000, and of exports at $20,237,000. Rice, flour, textiles, wines, petroleum, and coal are the principal imports. Coal is found on the island of Cebu, and mines have been opened since the American occupation, yielding 6,000 tons a month. Petroleum has been discovered near the central Cordillera, marble, kaolin, sulphur, and other minerals are found in the islands. A lead mine is in operation in Cebu, and iron is smelted in Luzon. In the fall of 1900 as many as 1,200 prospectors and practical miners scattered through the different islands, nine tenths of them Americans. They penetrated all the most inaccessible regions, furnishing their own protection. At Man- cean and Suyooc in the province of Lepanto immense deposits of gray copper and copper sulphide were discovered, running through which are veins of gold-bearing quartz. Lignite exists in Luzon, Batan, Mindoro, Masbate, Negros, and Mindanao as in Cebu, and large deposits have been worked near the surface only, the quality is superior to Japanese and Australian coals, not clunkering nor soiling boiler tubes. Some of the deposits are very extensive. In southern Mindoro large fields are found within 6 miles of a deep and safe harbor, and some of the Copperas are worked as in Cebu on the long served and rework from rock containing considerable visible free gold by the Igorrotos in the districts of Benguet, Lepanto, and Bontoc, among the mountains of northern Luzon. American miners were received among them soon after the breaking up of the Tagalog rule, and began to work with gratifying results. Dextrous geologists have located extensive deposits of low-grade free-milling ore which they say will yield large and certain returns as soon as concessions can be obtained and machinery put into place. Modern gold-mining machinery has never been used in the Philippines. Extensive deposits of rich iron ore can be utilized as soon as the necessary industries are developed. The Philippine Commissioners have recommended the early establishment of a tribunal by which the legal status of hundreds of claims can be established and the enactment of a mining code for the archipelago at the earliest possible moment. The development of mineral deposits would give increased opportunities for the employment of labor which would benefit the Philippine people. New forestry regulations made in 1900 reduced the high price of lumber by giving impetus to the timber trade. The forests on the islands are of vast extent, and contain a great variety of teak,—12 species of superior qualities, 66 of high commercial value, and others that have been examined, and probably 50 not yet classified. Included in the list are very hard woods, capable of taking a beautiful polish; woods that resist climatic influences and are proof against attacks of white ants; and woods suited for piles, on account of their imperviousness to attacks of the teredo. There is a great variety of trees yielding valuable gums. Rubber and gutta-percha are abundant in Mindanao and Tawi Tawi. At least 17 dyewoods are found, and other trees produce valuable essential oils and drugs. The forestry bureau, organized on April 1, 1900, made an estimate that there are 40,000,000 acres of forests in the archipelago. The forestry regulations of the former Spanish Government have been adopted with modifications. The revenue collected from forest produce on the Government lands was at the rate of $96,000 a year, and was capable of being largely increased. Notwithstanding the estimate of the yield in 1898 was 1,683,212 piculs; of sugar, 2,843,116 piculs; of tobacco, 4,061,540 pounds; and the number of cigs was 129,410,000. The export of copra in 1897 was 898,416 piculs; of sapan wood, 65,485 piculs, but only 19,006 piculs in 1898. The United States takes about half the hemp, and Great Britain and China and Japan half the sugar, and the United States and Great Britain most of the rest. The imports of the United States from the Philippines, which were $4,982,857 in value in 1896, declined to $3,829,003 in 1898, and recovered to $4,409,774 in 1899. The exports from the United States to the Philippines were $102,460 in 1896, and in 1899 the shipment was valued at $494,171. The British were furnished to the Philippines in 1897 amounted to $4,000,000. In the year ending June 30, 1900, the imports into the Philippines were larger than in any previous year since 1890, the total value being $23,039,587, whereas in 1896, 1896, and 1897 they exceeded $10,000,000 in any one year, and in the present year is $17,000,000. The average value of imports from the United States from 1887 to 1901 was $130,662, and from 1892 to 1896 the average was $135,228. In 1900 the imports from the United States amounted to $1,656,465. There was an increase in French imports compared with the last years of $89,000. The Japanese Government's imports from the United States for the year ending June 30, 1900, were $21,766,440 in value, an increase of 6 per cent.; in British, 27 per cent. The principal classes of imports in 1900 were cotton manufactures and cotton; chemicals, drugs, and dyestuffs; meet and dairy products; malt liquors and cider; books and printed matter; glassware; iron and steel manufactures; leather and manufactures of leather. The exports of the Philippines for the year ending June 30, 1900, were $21,766,440 in value, an increase of 6 per cent., over the average from 1880 to 1894. The quantities of some of the principal exports have decreased, but not the value, especially in the case of Manila hemp, of which 94,000 tons were exported in 1896, 243,842 and only 75,000 tons in 1900, with a value of $11,398,543. The decline in production is partly accounted for by the disturbed condition of the country, preventing agricultural and productive development, and partly by the restraints in the producing districts of the hemp until it suits the financial convenience of the interest parties to export it. There is a railroad, 121 miles long, running northward from Manila through Luzon to Dagupan. There were 720 miles of telegraph lines and cables, which have been increased since the American occupation to 3,141 miles. In Negros more sugar was produced than in any other island. The cultivation of rice in some provinces was retarded by the loss of draught cattle through disease and war, and the condition was made worse by the appearance of the rinderpest among the carabos.
Military Operations.—After the first series of encounters with American troops Aguinaldo, the chief of the insurrection in Luzon, who had been proclaimed President of the Philippine Republic, abandoned his military organization, finding that his compatriots, however securely they intrenched themselves, would not stand up against a vigorous charge of the smallest body of American soldiers, and started a guerrilla warfare, for which the conditions of the country offered peculiar advantages, enabling the insurgents to appear and disappear at their convenience. Wherever a patrol or a supply train with a small escort was passing they would gather with arms in their hands for the attack, and immediately after

ward they could return within the American lines in the white garb of the country, and resume the attitude of peaceful natives. A widely scattered formation of Filipinos quickly followed the adoption of guerrilla tactics, and this necessitated a corresponding dispersion of American troops and put a greater strain upon the garrison than regular warfare could. There were 53 military stations in the islands on Nov. 1, 1899. By Sept. 1, 1900, the number had increased to 413. The consequence of this extension of the field of operations was that regular combats were no longer fought, yet the losses were not inconsiderable in the large number of minor affairs. During this period the casualties among the Americans were 268 killed, 750 wounded, and 55 captured; among the Filipinos, 3,227 killed, 694 wounded, and 2,684 captured. The extensive distribution of troops and the apparently desultory work strained the endurance of the soldiers to the utmost, and demanded greater discipline and courage as high as they exhibited during the period of regular operations against concentrated field forces of insurgents. The number of men shot from ambush by small guerrilla bands exceeded the number of fatal casualties of any previous time. For the six months from Jan. 31 to July 31, 1900, the total number of deaths in the army was 24 officers and 971 enlisted men, of whom 4 officers and 304 men were killed in action, 3 officers and 43 men died of wounds, and 17 officers and 724 men died from disease and other causes. The daily average of deaths was 4.7, and it has steadily increased, the men becoming more and more debilitated by service in the tropical climate. In June, 1900, out of a total of 63,284, there were 5,503, or 8.79 per cent, sick in hospital. The most difficult

problem in the commissariat service was that of supplying fresh meat to the military posts. The meat was brought to Manila in naval refrigerating ships, and in transit from there to outlying stations much of it spoiled and was condemned on arrival. The losses of stores were abnormally large, but theft or capture accounts for less than 3 per cent. of the loss. The difficulties of transport increased in proportion to the extent of territory to be protected. The native ponies proved most successful.

The policy of guerrilla warfare was adopted at a council of war held at Bayanbangan on Nov. 12, 1899, which was attended by Gen. Aguinaldo and many other Filipino military leaders. A resolution was adopted that Aguinaldo's insurgent forces, constituting the northern army, were incapable of further resistance in the field, and as a consequence it was decided to disband the army, the generals and the men to return to their own provinces with a view of organizing for resistance by means of guerrilla warfare. Uniforms were thenceforth
discarded, and the American soldiers, who from the first were exasperated by every form of Malay treachery and a total disregard of the rules of civilized warfare and of the restraints of honor as understood by themselves, had now no means of recognizing the foes who were the heroes of the native communities, and often the most forward in their offers of loyalty and services. This made the Americans more relentless and increased their contempt for the Filipino character, which in turn made the Filipinos more bitter in their hatred for the Americans, whom they despised for the drunkenness and debauchery in which some indulged, and more ardent and united in their alleged struggle for national liberty. The army of Trias in the south was still intact, and was only broken up by the campaign of Gen. Bates, in which Gen. Schwan's column got in the rear of the rebels and shut them off when Gen. Wheaton advanced in January, 1900. The policy of the United States Government, which was loyally carried out by the commanders in the Philippines, forbade a resort to the retaliatory measures usually adopted to check the treacherous conduct of an irregular foe. Punishment was not visited on the villages and towns, in which it was attempted to institute municipal government under American auspices. While the guerrilla warfare was at its height most of the towns throughout the archipelago, under the advice and control of the military authorities, organized municipal governments, for which kind of local administration the people evinced such intelligent capacity as to encourage the expectation of rapid progress in the art of self-government when the larger political administrations could be organized. The presidentes and other town officials installed by the military authorities after the people had signified their choice readily subscribed to the obligation of exclusive fidelity to the sovereign power of the United States, and outwardly they complied with all due forms of decorum and loyalty. They acted openly in behalf of the Americans, yet secretly they aided the insurgents. They even appeared zealous for the success of the institutions introduced by the Americans. In all matters touching the peace of the town, the regulation of markets, the building of roads, streets, and bridges, and the institution of schools, their open activity was commendable. At the same time they were exacting contributions and supplies and recruiting men for the Philippine forces and sending all possible military information to the Filipino leaders. Wherever in any part of the islands a group of insurgents was active all contiguous towns contributed to its support, and without their aid it could not subsist. The towns, therefore, although in American occupation and having a municipal organization established and controlled by the American military commanders, were the bases for all military activities of the insurgents, not only furnishing supplies for the flying columns of guerrillas, but affording secure places of refuge. This was true of all parts of the archipelago excepting the part of Mindanao occupied by Moros and the Jolo group. The Moros were in no way subject to Tagalog influence, and while hostility to Americans ran high in Luzon and the other islands they appeared to be satisfied with American control and anxious to maintain existing conditions. The success of the guerrilla system depended upon unity of action among the native population. How such unity was brought about, the American officers could not understand. How the officials installed by the Americans and other Filipinos who professed with apparent sincerity to believe American sovereignty to be beneficial and necessary were influenced to aid the insurgents, was inexplicable. Intimidation accounted for the situation to some extent, and captured correspondence revealed the efforts of the insurgent leaders to intimidate and control the people. Fear, however, could not be the only motive. Gen. MacArthur thought it more probable that the adhesive principle came from ethological homogeneity, which induces men to respond for a time to the appeals of consanguineous leadership even when such action is opposed to their own interest and convictions of expediency. He tried to ascertain by inquiries among the various social classes what were the definite aspirations of the insurgents. The leaders themselves seemed to have no expectation of founding a stable independent Philippine republic except with the support of the military and naval power of the United States.
to preserve and defend it. Their desires, as far as they are based on patriotic ideals and not on personal ambition, greed, and love of power, are compatible with the American policy, as conceived by Gen. MacArthur, which must result in planting republican institutions throughout the archipelago accompanied by the safeguards of personal, political, and religious liberty which are possible only under the auspices of the Constitution of the United States, so that in its ultimate form the archipelago shall assume the appearance of one or more self-supporting commonwealths, with a population attached to their institutions capable of maintaining them, even in the improbable event of the withdrawal of the creative power. At present and for many years to come the necessity of a large American military and naval force is apparent. Education is the means required for bringing about political enlightenment. Considerable progress has been made, and, considering the circumstances, the results are surprising. The almost universal aspiration for education and the specific desire to learn the English language must be regarded as an involuntary expression of friendship and of confidence in American motives and ultimate aims. The people are intelligent, generous, and flexible, and will probably yield quickly to political tuition when thoroughly informed of American institutions and purposes.

The maintenance of a great many widely scattered garrisons, with consequent increase in the perils and hardships of the soldiers and in the cost of administration, transport, and supply, was rendered expedient because the insurgent Tagalogs deliberately adopted the policy of murdering all their countrymen who were friendly to the United States. As rapidly as the American troops occupied territory the policy was followed of inviting inhabitants to return to their peaceful vocations and of aiding them in the re-establishment of their local government, and the protection of the United States was promised. To render efficient protection to peaceful and unarmed Filipinos who submitted it was necessary to maintain the American forces in the Philippines at almost the same strength as was required when Aguinaldo had a large and well-armed army in the field. The actual power of resistance possessed by the insurgents decreased rapidly as the Americans extended the posts, until their military activity was little more than a form of brigandage, but the influence that they exercised over the sympathies or fears of the people diminished slowly. The ladrones, or robbers, who crop up in the islands always in troublous times, took advantage of the rebellion and worked in harmony with the insurgents, who supplied them with arms. A more stringent way of proceeding was adopted later, when the guerrilla war became more desperate and ruthless, the people at large more well disposed and willing to accept American rule, and the officers better acquainted with the people and able to distinguish between those who were active in the rebellion and those whom they blackmailed and intimidated. Houses and barrios, or small villages, from which troops were fired upon or which harbored and hid ladrones or insurgents who were being pursued were destroyed, and hostile natives who were caught red-handed were no longer released after a few days, but were kept confined in great military prisons. The search for arms was so actively and thoroughly pursued that the natives turned in not only bolos, but rifles. The mountain barracks that the insurgents had built as storehouses and shelters in the rainy season were sought out and destroyed, as well as their watchtowers and lookouts, and in these quests quantities of rice, sugar, clothing, and ammunition were captured. To every insurgent who surrendered his rifle $30 was given. The barbarities practiced by the insurgents to obtain contributions when their influence began to wane alienated the sympathies of most of their peaceful adherents. In the early

NATIVE FILIPINOS, AT ANGELES, SEVENTY MILES NORTH OF MANILA.
PHILIPPINE ISLANDS.

insurgent leaders, and presidentes of the villages had frequently to be deposed. The insurgents were strong enough to harass the garrisons daily. The generals led strong expeditious through the country, established posts, and the more the soldiers spread out into small garrisons, the number engaged descended the scale from brigades to regiments, to battalions, to companies, to squads, and while the number of actions increased, the number of casualties diminished. Thus in February, 1899, the first month of the rebellion, there were 94 engagements, in which 66 officers and men were killed and 360 wounded; in the next month 80 were killed and 563 wounded in 61 actions; and in June, when operations grew slack on account of the weather, 32 were killed and 135 wounded in 32 actions. In December, 1899, there were 75 actions, in which 19 were killed and 81 wounded; in January, 1900, when, besides desultory sniping in the north, a regular campaign was proceeding in the south, there were 137 actions in Luzon, in 114 actions 41 Americans were killed and 131 wounded; in February, 30 were killed and 70 wounded in 104 actions; in March, 21 were killed and 62 wounded in 103 actions; in April, 38 were killed and 67 wounded in 121 actions; in May, 88 were killed and 66 wounded in 108 actions; in June, 25 were killed and 56 wounded in 131 actions. The conflict at this point had descended to bushwhacking and brigandage. The distribution of troops in 300 posts dispelled hostility and improved the temper of the people, who had been originally aroused by absurd falsehoods to believe the leaders, such as the statement that the United States Government meant to place them on reservations, where they would die out like the American redmen. Insurgents who did not surrender after defeat divided into small guerrilla bands or became ladrones. The mass of the people longed for peace and were willing to accommodate themselves to the United States. Nearly all the prominent generals and political leaders of the insurrection were either captured in these months or voluntarily surrendered and took the oath of allegiance to the United States. The policy of leniency and the promise of amnesty induced them to surrender. The small bodies of insurgents remaining under arms fled to mountain fastnesses, whence they issued for night attacks, usually harmless, or to ambush small American detachments, or to collect contributions or recruits among the people, whom they terrorized by cutting out tongues, cutting off limbs, or burying alive, and by their murders and robberies. They made themselves detestable, and still they maintained guerrilla power over the people, even in poisoned towns, and whoever gave information to the Americans usually risked his life.

In June the Filipino leaders plotted an uprising against the authorities in Manila, a general massacre of Americans and of the natives serving or friendly to the Government, and the seizure of arms and ammunition to re-arm the insurgent forces. Inhuman conduct marked the general campaign from the beginning on the part of the insurgents. When one of their camps was attacked in January they tried to strike terror into the breasts of the Americans by leading out 5 prisoners and shooting them. Their military power, even as a guerrilla force, was broken before the rainy season began. Yet their reign of terror continued, and the acts of vengeance and rapine that they committed on the amigos, the friends of the Americans, necessitated constant vigilance and activity on the part of the troops.

June 19, 1900, saw the return of the President, a proclamation was issued by Gen. MacArthur granting amnesty to all insurgents who made submission. Many of the leaders took advantage of it, and large numbers of insurgents delivered up their arms.

Aguinaldo and the other leaders who still held out were watching the trend of public opinion in the United States. When they found that the leaders of one of the great political parties seemed ready to commit the fate of the Philippine Islands to their care, and that whereas before only a group of independent politicians and publicists in the United States befriended them, they had a prospect of making terms with the United States Government to suit themselves if the presidential election should be won by that party, they were spurred to a supreme effort. When the issue was once raised in American politics fresh disturbances broke out, not in Luzon alone, but in Leyte, Panay, Samar, Cebu, and other islands where the Tagalogs had introduced their doctrines and authority in the early days of the revolution. In the southern portion of Luzon, which American troops had first occupied in force, the natives had learned to trust Americans and to desire a settled state of affairs under their government. They could not be stirred up anew to any extent. Some of the principal members of Aguinaldo's former government, such as Sanchez, Mabini, and Bonifacio, were in the Philippine, the Malolos administration, Mabini, and Paterno, and some of his best generals were now co-operating heartily with the Americans, and telling the natives to submit. Of the generals, Pio del Pilar, Macabulos, Catalino, Garcia, and others had surrendered or been captured. It was in southern Luzon and the Visayas that the hostilities broke out anew. The departure of two regiments for China, and the prospective return to America of the volunteers forming half the army of occupation in a few months, encouraged the insurgent leaders in the belief that they could by holding out have matters go in any way they would. The inclination of the people not actively engaged in the rebellion against American government became more and more checked by the revival of terrorism. The presidents and municipal councilors appointed in towns where local self-government was being introduced under American auspices were in some instances murdered even in central Luzon. The army of 65,000 men could not guard against such reprisals. The men formerly identified with the Philippine Republic and who had preceded them in the expression of American sympathies were no longer safe in Manila. Many of them went away to Hong-Kong. The high prices of food—40 to 75 cents a pound in gold for meat and rice double the normal price—had much to do with the discontent. In Spanish times the Government used to come into competition with traders when meat sold for more than 10 cents a pound. All northern Luzon, except in Nueva Eslava and Bulacan, was practically free from insurgents in August, and the people were planting and asking for municipal government. In southern Luzon in surrendery bands were doling from one mountain range to another, and in the southern and central parts of Panay; but in Negros, Cebu, Romblon, Masbate, Sibuyan, Tablas, Bohol, and other Visayan islands there was little disturbance. In Mindanao ladrones made the country dangerous near the old Tagalog penal settlement of Cagayan.
and at Surigao. Every effort that the insurgent leaders made to mass together enough men to crush one of the garrisons failed. The recrudescence of disturbances began in August, and in September the situation became so much worse that Gen. MacArthur asked for and received reinforcements to his army of 65,000 men. So many men were required to furnish supplies to distant garrisons, escorts for wagon trains and for military and civil officers, and the protection of peaceful inhabitants of the islands, and the activities of the insurgents, as also the Government property scattered among the numerous stations, that few were left for active operations against the remaining insurgents and robber bands. In September the country north of Pags, including all Bulucan, became disturbed, as well as the south, including Tayabas. At Mavitac, Capt. Mitchell with 140 men attacked 800 insurgents in position, and eventually they were forced to retreat, but the 2 chief officers and 22 men of the Americans lost their lives. Several small engagements took place in the Ilocan provinces. In October the insurgents redoubled their activity, although without having any centralized military organization. Their civil administration had been scattered, and when their army was broken up and the United States troops occupied the provinces, except that wherever municipalities were organized by the Americans rival municipal authorities secretly collected contributions and exercised judicial and executive powers in the name of the Philippine Republic. In some instances they were the very officials whom the American Government had provided to carry out their proper official duties and their treasonable activities with equal zeal. One band of about 400 insurgents the troops pursued vigorously and wiped out because it was led by an American deserter. In an engagement fought on Oct. 24 a small force of Americans was compelled to retreat before them. Gen. Vicente Lukhan and his men had full sway in the island of Samar with the exception of Catbalogan, Calbayog, and Labuan, and the American garrisons in these seacoast towns he worried constantly and defied. Other such freebooters flourished in places where the Americans could not develop military strength, growing rich from the tribute levied on laborers and merchants, but having no communication with each other or with Aguinaldo, who was still in hiding. A Filipino representative, Agoncillo, appeared at this time in the United States and issued a proclamation declaring that the war would last until the Filipinos gained independence; that such was the desire of the entire population; and that even if the Americans triumphed, peace would be only temporary, and a strong army would be required to hold the people in subjection.

After the presidential election was over the extraordinary rebel activity subsided at once. No insurgents were left excepting marauding bands of lawless men and thieves. Insurgents Gen. Vicente Lukhan and his chief friends lived by blackmail. Notorious desperadoes who feared punishment for their crimes kept a few followers together in the mountains. The rest of the insurgents gradually surrendered, and in provinces such as Hollo, in the island of Panay, where the bulk of the people, through rebel sympathy and partisanship, had installed rebel vengeance, had hesitated to take the oath, they came in thousands to swear allegiance to the United States. The Katipunan Tagalogs, who were the backbone of the revolution, and the native padres, who had done most to encourage the spirit of resistance, accepted American sovereignty with apparent sincerity or resignation. The submission of the Tagalogs set the troops free to re-establish peace and introduce orderly government in the southern islands.

Organization of Civil Government.—The Philippine Congress, at its first session, had struggled with the question of civil government for the islands, composed of J. G. Schurman, George Dewey, Charles Denby, and Dean C. Worcester, reported to the President in January, 1900, recommending the appointment of an American governor, to be assisted by a council containing both natives and Americans, and of provincial governors, who should be Americans. The conclusion to the Legislative Assembly was suggested, part of the members of which should be elected and the others nominated, the acts of this body to be subject to veto by the United States Government. The islands should be subdivided into administrative divisions, and natives as well as Americans would be eligible for administrative and municipal offices. A new Philippine Commission was appointed to report to the President on the conditions of the islands, to legislate in civil and financial matters subject to the approval of the military authorities, and to formulate schemes for local self-government and the development of civil institutions to provide for the military authority after the establishment of order. The decree introducing autonomous and decentralized municipal government was promulgated by Gen. Otis on March 29, 1900. The laws for the government of the Philippine municipalities were prepared by a board of civil engineers and a committee of three Filipinos, led by A. J. Blanco, Chief Justice of the Philippines, who was president. The municipal government of each town was vested in an alcalde and a municipal council, to be chosen at large by the qualified electors of the town for the term of two years from the first Monday in January next after the election and until their successors are chosen and qualified. The number of councilors varies from 3 in towns of less than 10,000 inhabitants up to 18 in towns of the first class with over 25,000 inhabitants. Each elector before casting his ballot is compelled to take an oath that he is not a citizen or a subject of any foreign power, and that he recognizes and accepts the supreme authority of the United States of America, and will maintain true faith and allegiance thereto. The electors are three in thousands of Spanish rule as municipal captain, gobernadorcillo, or lieutenant; those who pay $30 or more in taxes; and those who speak, read, and write English and Spanish. Ecclesiastics, soldiers in active service, persons receiving salaries from municipal, provincial, or Government funds, debtors to such funds, contractors of public works and
their bondsmen, clerks and functionaries of the administration, bankrupts until discharged, or insane or feeble-minded persons can in no case be elected or appointed to municipal office. The alcalde is authorized to appoint all nonelective officers of the municipality, exact punctual payment of taxes, and punish violations of municipal ordinances and regulations. The municipal council has power to create the offices of municipal attorney, treasurer, secretary, and such offices as may be necessary to manage the finances and property of the town, maintain municipal prisons, fire department, and schools, and to levy and collect taxes. All ordinances before taking effect are to be approved by the alcalde. Taxation shall be uniform and just, and persons deeming themselves injured by any tax levy may protest to the council and appeal from its decision through the alcalde to the provincial governor. The governor of the province is president of all the municipal councils, and may inspect and supervise the administration of all municipal affairs, hear and determine all appeals against the acts of municipal corporations or their officers, and suspend or remove municipal officers and appoint substitutes until the next general election, or may call a special election, reporting the cause to the governor of the island. As a temporary expedient the commanding officers of military districts were authorized to appoint the first alcaldes if it was not practicable or advisable to have them elected. The municipal governments were soon established under the provisions of this law. In villages presidents were appointed in accordance with the choice of the people. When such officers were detected in seditious acts they were removed and others were appointed. The new Philippine Commission had for its president Judge William H. Taft, with whom were associated Dean C. Worcester, Luke E. Wright, Henry C. Ide, and Bernard Moses. The commissioners formulated new tariff and tax laws. The Spanish tariff law that was still operative were nearly prohibitory for many articles, preventing the importation from America of canned goods, machinery, and other important commodities. The Spanish revenue laws threw the burden of taxation on the poor and gave the wealthy comparative immunity. The inland revenue was derived chiefly from the poll tax, the taxation of small businesses, a fishing license, and the like. The commissioners recommended instead a reasonable land tax and a tax on corporation franchises discharge from the army to remain in the civil service, were exempted from examinations. Reforms in civil and criminal procedure, the criminal code, and the judicial system were adopted on the recommendation of the Filipino bar. A branch railroad into the mining country of Luzon, 43 miles in length, was considered favorably. Calls came from all parts of the islands for public schools, and the supply of English teachers was far short of the demand. Native children showed great aptitude in learning English. Night schools were established for teaching English to adults. Only a small fraction of the people speak Spanish. The creation of a central government like that of Porto Rico, securing all rights described in the bill of rights and the Federal Constitution, promised to bring contentment, prosperity, education, and political enlightenment. The subsidence of the rebellion toward the close of the year gave grounds for the opinion that the disturbances could better be suppressed by the native police of a civil government, with the army as an auxiliary force, than by a continuance of complete military control. The commission was embarrassed in securing good material for judicial and other service by the provisional character of the military government and its uncertainty of tenure. Legislation by congress to create a central civil government was urgently needed. Until such a bill was passed no public franchises could be granted, nor any mining claims, and no substantial investment of private capital in internal improvements was possible. The sale of public lands, forest concessions, and the grant of railroad and other franchises seemed desirable to the commissioners, and especially the starting of mines by hundreds of American miners who were on the ground awaiting a law to perfect their claims. The beginning of
these enterprises would be a good element in pacification, and it was recommended that the operation of the law of Congress to establish civil government be not postponed until the complete suppression of insurrection and until, in the President's opinion, civil government may be safely established. In the first public legislative session of the Philippine Commission $2,000,000 in silver were voted for the construction of roads and bridges, $5,000 for the preliminary survey of the proposed railroad from Dagupan to Benguet, and $5,000 for its subsequent survey.

A strong peace party, called the Federals, was organized among the Filipinos. They favored the adoption by the natives of the Protestant religion, and later another party, the Conservatives, also in favor of peace and American sovereignty, was formed to represent the views of the native priests, and to voice the hope of ultimate national independence after a period of American rule and tutelage. The problem of the friars, which led to the original rebellion against Spanish authority, was the one that agitated the Filipinos most. The friar was the embodiment of all authority, governmental as well as religious, in his locality. The vehemence with which the friars from their places, and the Filipinos whom they had expelled, longed for them to return. Immorality was one of the grounds of complaint, and instances were proved, but this was not the principal one. The Augustinians, the Dominicans, the Franciscans, and the Recollets are owners of 403,000 acres of cultivated ground, besides which they have large sums of money to loan. The United States engaged to protect them in their possessions in the treaty with Spain. They had transferred their property to others, but the transfers are not genuine and they remain the owners. The commission recommends that their estates be purchased for public lands out of the island revenues, by condemnation if necessary, though the orders have expressed a willingness to sell at a satisfactory price.

The secular clergy is composed mainly of Filipinos, while the monks are mostly Spaniards. The important eures have been filled by these monks, and the commissioners would like to see American priests sent to the islands to take their place. The situation in Bicol appeared more serious when the insurrection had subsided declaring public opinion ineligible to public office who were found in arms against the United States authority after March 1, 1901, or who aided or abetted insurrectionists. Sites for penal settlements and for a leper colony were found in the southern islands.

**Physics, Progress of, in 1900.** Constitution and Properties of Matter. Inorganic Life.—Guillaume (Archives des Sciences, February) notes that certain physical processes have close analogies in physiology, and may be regarded as constituting an elementary form of life. Among such processes are fatigue and adaptation to impressed forces. An instance of the latter is the tarrying of the arms when the tendon is relaxed, which may be termed an instance of protective modification. Similarly the gray iodide or chloride of silver in the Becquerel process of color photography assumes the color of the incident light, and thus enables itself to reflect it. If it did not do that it would have to absorb the radiation; in that case, an additional effect would have the effect of reducing the silver salt.

Matter and Ether.—Sagnac (Comptes Rendus, Nov. 20, 1899) shows that Fizeau's effect, in which the ether is apparently dragged along by a column of water in motion, consists of two opposite effects—the mass effect, which, owing to the diminution by its motion of the useful mass of water traversed by the ray, produces an apparent dragging of the ether, and the motion effect, which is the same as if the cylinder containing the water moved with respect to the source, without any water entering or leaving it. The whole effect is a retardation in the time of propagation from Dagupan to Baguio (Magazine, August) has solved mathematically two problems relating to the motion of matter through the ether, namely, to find the orbit of an ether particle disturbed by a moving atom and the path traced through an atom (supposed fixed) while the ether moves uniformly in parallel lines. In a subsequent paper (ibid., September) he shows that gravity may be explained by supposing the positive electron to condense ether in its neighborhood and the negative electron to rarefy it.

Size of Molecules.—Gerstmann (German Physical Society, Oct. 20, 1899) has tried to estimate the size of molecules by determining the heat of solution of a nonelectrolytic substance in a liquid when the former is taken (1) in a lump, (2) in a finely powdered condition, and also the heat absorbed on mixing two such solutions of different concentrations. He used a special modification of Bunsen's calorimeter, but so far has attained no other result than that the two heats of solution were equal, or the solution was imperfect. Exner (Annalen der Physik, August) has studied the velocity of particles in a detailed study on molecular motion of the material, of which potassium chloride he finds $d = 66 \times 10^{-8}$ centimetres, while according to the kinetic theory of gases $d = 96 \times 10^{-8}$ centimetres for chlorine alone. (See also Electrification, under Electricity, below.)

Molecular Motion.—Exner (Annalen der Physik, August) has studied the velocity of particles in a detailed study on molecular motion of the material, of which potassium chloride he finds $d = 66 \times 10^{-8}$ centimetres, while according to the kinetic theory of gases $d = 96 \times 10^{-8}$ centimetres for chlorine alone. (See also Electrification, under Electricity, below.)

**Gravitation.**—Stern (Vienna Academy Sitzungsberichte, 108, 1899) has made observations in mines in Bohemia and Carniola whose results seem to indicate that a downward increase in temperature tends to be associated with an increase in gravity.

**Mechanics. Strength of Materials.**—Guest (Philosophical Magazine, July), in an investigation of the strength of ductile materials under combined stress, subjected steel, copper, and brass to tension and internal pressure, and to various combinations of these. The maximum principal strain was found to be greatest in the simple tension experiments and least either in the torsion tests or when the axial and circumferential tensions are equal. The principal practical conclusion is that a specific alloy stress is a specific alloy to which the initial yield of a uniform ductile material.

**Elasticity.**—Schaefer (German Physical Society, 2, p. 11, 1900) has investigated the elasticity of metals at temperatures as low as the boiling point of liquid air (−180°C). He finds that the lateral contraction of wires increases with the temperature; that the greater the thermal coefficient of
expansion the higher the temperature coefficient (except with gold); and that lowering the temperature raises the limits of elasticity. The results agree well with those of other experimenters.

Impact.—Vincent (Cambridge Philosophical Society, Aug. 13) finds that when nondeformable spheres impinge on plane surfaces of lead, paraffin, and gum, they tend to bounce with the greatest and softest the square of the diameter of the dent is proportional to the velocity. For spheres of the same material and equal velocity the diameter of the dent is proportional to the diameter of the sphere. The volume of the dent is proportional to the energy of motion of the sphere just before impact. For steady loads with rubber the greatest and softest the dent is proportional to the load. The time of impact is directly proportional to the diameter of the ball, other things being equal.

Liquids and Gases. Solution.—Nernst (Göttingen Academy of Sciences, 1, 1900) believes that the validity of the hydrate theory of solution can not be ascertained by study of osmotic pressure or of phenomena peculiar to solutions or colloids but only by dynamic phenomena, such as the movement of a third added substance on diffusion or electrolysis. Results of experiments on these lines indicate that hydration in a solution is either entirely absent or takes place only to a limited extent. Rothmund (Zeitschrift für physikalische Chemie, May 19) discloses with experiment that the diffusion ability of nonelectrolytes caused by the addition to the water of various salts is due not to a reaction between the substance and the dissolved salt—which would be accompanied by some heat effect—but to some action of the salt on the water. Zsigmondy (Zeitschrift für physikalische Chemie, April 1900) concludes and Stoeckl and Vanino, that the so-called colloidal solutions of metals are merely suspensions. He regards them as real solutions, since they exhibit the peculiarities of such solutions, namely, some osmotic pressure and power of diffusion, concentration without apparent change, separation when the solvent freezes, and impossibility of separation. That colloidal gold solutions conduct reflected light which is elliptically polarized, are precipitated by animal charcoal, and behave toward the electric current like suspensions, is not regarded by the author as conclusive proof that they are suspensions. Schumann (Physikalische Zeitschrift, 1, 1899) has investigated the motion of substances with experiment, and deduces to the well-known motion of camphor in water. The substances dealt with are mostly salts readily soluble in water and dilute acids. The motion is always greater in dilute acid than in water, and its nature is characteristic. The crystal generally moves at first in a zigzag, then changes to a curve, and finally rotates in a straight line. The rate of motion depends on the rate of solution. (See also Double Refraction, under LIGHT.)

Surface Tension; Film.—Hall (Dublin Royal Society, 9, 1899) shows that the liquor from the settling of the froth of a soap is stronger in soap than the original solution. There must be a concentration of soap matter after the formation of a film, which agrees with Rayleigh's investigations of the stability of soap bubbles. Donnau (Zeitschrift für physikalische Chemie, Dec. 22, 1899), from experiments on soap emulsions, after comparison with the results of Kraft in the boiling points of soap solutions with those of Rayleigh on the formation of a film at the froth of soap on oil, concludes that surface concentration causes a considerable diminution in the amount of work necessary to increase the surface of separation of an oil and alkali solution, and that it is to this that the formation of small bubbles is due. Malagoli (Nuovo Giumento, May) produces durable films on skeleton figures by dissolving 40 grammes of gelatin and 10 grammes of soap in 500 of water at a temperature not exceeding 80° C. The films are obtained by dipping the skeletons into the solution and drying for twelve hours. They are not thin enough to show interference colors. Vincent (Journal de Physique, February) believes that a thin film of silver on glass is bonded on both sides by what he calls "transition superficial layers," of a different constitution from the rest of the metal. These in the case of silver are of smaller conductivity and other properties. They are not thin enough to show interference colors. Vincent (Journal de Physique, June) combats this idea, and attributes the observed variation of resistance to a variation of density. This author believes that in all cases wedges of solid material are to be preferred to liquid films for the determination of molecular forces.

Condensation.—Barus (Science, Feb. 9) believes that condensation is due always to nuclei primarily, and that whether these are ionized or not is of secondary importance. There is no noteworthy difference between the action of air carrying such dust and that of ionized air.

Air Resistance.—Bryan (Nature, Nov. 30, 1899) describes observations of Le Dantec and of Canovetti on this subject. Le Dantec makes the surface under test slide down a vertical wire. The start releases an electric recording device, and the current is broken when the body strikes the buffer at the end of its descent, which occupies 1, 2, or 3 seconds. A surface 1 metre square in a velocity of 10 metres makes a resistance of 81 grammes. The form of the plate is of importance, and the resistance appears to be proportional to the length of the contour. The law that within certain limits the resistance is proportional to the square of the velocity is verified.

Canovetti suspends his bodies from a wire 370 metres in length, stretched along the slope of a hill. The resistance was found to be 90 grammes (instead of Le Dantec's 81). He also tried bodies of the shape of a Chalais balloon—a long cone and a hemisphere joined by their bases, enveloped in a net; the resistance was 80 grammes, and largely due to the net.

Gases.—Jäger (Vienna Academy. Sitzungsberichte, January—March) finds that the path over which a molecule carries a definite amount of momentum exceeds its mean free path by the diameter of a molecule at most, and is only one half this on the average. As the viscosity is proportional to this path, it is also a function of molecular diameter, and with very large viscosity approaches to infinity. The author shows this more exactly by formula.

Explosive Waves.—Le Chatelier (Comptes Rendus, June 25) shows by photographic methods that in various explosive mixtures ignited by an electric spark the speed of propagation of the flame always assumes a value of several hundred metres a second, and rapidly increases to beyond 1,000. Shortly after the appearance of the flame the explosive wave, with a greater and uniform velocity, is suddenly formed. The distances traveled by the flame before the formation of the explosive wave vary from 80 to 120 centimetres. The greatest observed velocity of the explosive wave was 2,920 metres per second. Vielle (Comptes Rendus, Dec. 26, 1899) finds that explosives are not necessary to produce waves of
velocity much higher than that of sound. When air is shut off by a colloidion diaphragm at the end of a tube, and is compressed by a piston, the was Temperature of Flames, under HEAT) has a very high velocity. Some such diaphragms will burst at a pressure of 27 atmospheres, and the wave is then propagated faster than 600 metres per second. The rate decreases by about 20 metres per second for every metre traversed, until it becomes the ordinary velocity of sound. (See also Temperature of Flames, under HEAT).

*Eflux of Gases.*—Erdman (Wiedemann's Annalen, October, 1889) has developed the mathematical theory of the eflux of gas under pressure, starting from the position that, if the eflux is steady, equal masses and equal quantities of energy must pass the space between two cross sections of the tube in each unit of time. He has at the following important generalizations:

The velocity with which the gas passes the orifice can never become greater than the velocity of sound at that point. The pressure at which a jet begins to pass the orifice with this velocity corresponds to the velocity of eflux at which stagnation occurs, and to the velocity of sound. If a jet this manner sound waves of very small wave length and very high frequency may be formed, possessing greater energy than any jet produced.

**Acoustics. Velocity of Sound.**—Witkowski (Bulletin of the Cracow Academy of Science, 16, p. 138), by experimenting with compressed air in which the pressures, has shown that the velocity of sound varies with the pressure, the variation being greatest at the lowest temperatures. At zero the velocity slowly rises with the pressure, being about 10 per cent. higher at 100 atmospheres than at 1 atmosphere. At 100° the velocity remains nearly the same at all pressures, while at 400° it varies in a still different manner. Bril-louin (Annales de Chimie et de Physique, 18, 1889) shows mathematically that when the transmission of sound with its condensations and rarefactions takes place in a mixture of gases, gaseous diffusion must be taken into account, as it causes variations in composition of the medium.

*Temperature of Flames.*—Kundt finds (Annalen der Physik, November and December, 1889) that Kundt's dust figures can be used to determine pitches high above the limits of audibility. The fork c, placed at the mouth of a tube with a length of some 95 semi-wave-lengths, and a diameter of about one semi-wave-length (1 millimetre) gives pitch figures. The maximum pitch is available up to 9 * (90,000 complete vibrations per second), a pitch which is more than an octave above the extreme limit of audibility. The method of beats ceases to be practicable available two octaves below that limit.

**Phonography.**—Mauro (Journal of the Franklin Institute, 74, 1862) describes a modification of Bell and Tainter's graphophone in which undulations of greater amplitude are insured by increasing the velocity of the style. The style is set at a more acute angle, and the diameter of the cylinder is increased. The increase in velocity also prevents the shank of the style from coming into contact with the wax and so checking the vibration.

**Heat. Thermometry.**—Holborn and Day (American Journal of Science, September, 1899) find that up to 500° C. thermometer bulbs of Jena borosilicate glass No. 5912 with inclosed hydrogren prove most satisfactory, no appreciable changes in the zero point being shown after repeated heatings. Callendar (Philosophical Magazine, December, 1899) advocates the adoption of a new practical temperature scale, to be known as the "British Association Standard." According to this standard any temperature, t, could be obtained by the equation

\[ t = \frac{R_1 t_1 + R_2 t_2}{R_1 + R_2} \]

where \( R_1 = 100 \) (\( R_1 - R_2 \))/(\( R_1 - R_2 \) - \( R_2 \)) and \( d \) is a constant, \( R_1 \), and \( R_2 \) being the electrical resistances of a particular platinum wire at \( t_1 \), 0° and 100° C. respectively, and the value of \( d \) being obtained by taking the boiling point of sulphur under 78 centimetres of mercury at \( t_1 \). C. as 434.5° C. This scale is subject to far less uncertainty, especially at high temperatures, than that practically obtained with gas thermometers as at present constructed and used; it is easily and accurately reproducible, and is a close approximation to Kelvin's absolute scale.

**Conduction.**—Smolan (Vienna Academy) states that at the boundary between a solid and gas, across which a flow of heat takes place, there is an abrupt change of temperature. When the whole temperature difference is small this may be expressed as an imaginary length added to the thickness of gas through which conduction is taking place. These lengths in different gases are proportional to the square root of the pressure. It now so far as for hydrogen at 20 times as long for hydrogen as for carbonic acid, and 1.70 time for air.

**Radiant Heat.**—Planck (Annalen der Physik, April) endeavors to find an expression for the entropy of radiant heat which is in agreement with all the data of thermodynamics and of the electromagnetic theory of light. He has arrived at a numerical value of the temperature of a monochromatic radiation emitted by a small surface and refracted by a system of centripetal surfaces. The temperature of the radiation is completely defined without reference to that of the body which emits it, or to the losses suffered in the way. It is shown that it is impossible to speak of the temperature of a monochromatic beam of sunlight than of the temperature of the sun. Liesegang (Physikalische Zeitsehrift, April 14) has succeeded in making a paper sensitive to long heat waves by painting it with equal quantities of hydroquinone and anhydrous sodium carbonate, which is left for a little time near the radiation of a gas below the blue color of this paper is completely bleached in five seconds, and shadow pictures of coins can be obtained. Kurlbaum (Annalen der Physik, July) finds that the temperature of the surface of a radiating body is by no means that of the interior, as is usually assumed. With a sheet of blackened platinum foil 1 μ thick the difference of temperature is 0.016° when the sheet is heated 4° above its surroundings.

**Convection.**—Bénard (Comptes Rendus, April 9 and 17) finds that a thin layer of liquid heated uniformly from below may assume a stable condition in which the heavier liquid forms a polygonal prismatic cells in each of which the liquid ascends along the axis and descends along the outside. The forms have remarkable permanence and perfection.

**Specific Heat.**—Magic (Physical Review, August, 1889) shows theoretically that the osmotic pressure of a solution is equal to its latent heat of evaporation also points out the special cases (four in number) where the specific heats of the solvent and of the solute in a solution are constant at all concentrations.

**Ebullition.**—Speyers (American Journal of Science, May) shows that if we know the molecular constitution of each of its latent heat of evaporation is mixture of two liquids it is possible to plot the boiling point curve of such a mixture. The equation employed is

\[ n/(N + n) = (p - p')/d \]
where \( p - p' \) is the diminution in vapor pressure produced by the addition of \( n \) molecules of one liquid to \( N \) molecules of the other. Ryland (American Chemical Journal, November, 1899) has examined 80 binary mixtures of liquids mutually soluble in all proportions and two mixtures of liquids whose mutual solubilities are limited. Forty-five of the former give distillates which boil at a constant temperature, the ratio of the components then being nearly that of the products of the vapor densities and vapor pressures of the pure liquids at that temperature. Both of the latter mixtures form distillates with the like property so long as there are two layers of liquids in the distilling flask; these distillates are however not mutually clear. Their density

**Freezing.**—Wildernann (Zeitschrift für physikalische Chemie, Dec. 1, 1899), in experiments on the freezing points of dilute solutions, has obtained the following results, among others: When the freezing point is depressed by about 0.02 °C. needles or flakes of ice separate through- out the solution; if the depression is only a few thousandths the ice separates in bands or in a continuous cap on the bulb of the thermometer. The freezing point of water, freed from ammonia and carbon dioxide by a current of pure air, varies to a noticeable extent owing to the presence in it of a variable amount of dissolved oxygen; these molecules unites so that one may study how to calculate the difference between the observed (or apparent) freezing point and the real freezing point. The error varies, according to methods, from 0.00002° C. to 0.004° C.

**Temperature of Flames.**—Mache (Vienna Acad- emy Sitzungsberichte, 108, 1899) has investigated the temperature gradient in a homogeneous tube, such as a diluting mixture of oxygen and hydrogen. An explosion travels with definite velocity along a tube so filled, the gases on one side of the burning surface having the temperature of combustion, on the other that of ignition. The transition is abrupt. The author shows that the temperature decreases rapidly after ignition, but if the depression is only at 12 centimetres distance, 200° at 65 centimetres, and 50° at 22 centimetres.

**Light Theory.**—Sagnac (Comptes Rendus, Nov. 13, 1899) considers the luminous vibrations in the interior of a body as being propagated by the intervention of a medium identical with the ether and with the different rays having neither density nor elasticity. The phenomena usually referred to mechanical reactions between the ether and matter are explained by taking account of the discontinuity of matter. Carvallo (ibid., Jan. 8) doubts the truth of the received theory that white light is due to a damped vibration. If the white light is obtained by a grating spectrum would give white light over the whole wave. The accepted theory neglects radiation which, although insensible to the eye in isolated regions, becomes of notable amount in the case under consideration. Gouy (ibid., Jan. 29) criticises these contentions. He acknowledges that the resolution of white light into simple vibrations is purely fictitious, but only that other processes distinct from and differing from the simple motions of visible light which the eye is capable of observing are not included. He calculates the total energy spent between two given epochs. Damped oscillations form a workable hyp- thesis, although not the only one.

**Standards.**—From the results of his work on standards of light, Petavel (London Royal Society, 69, 1896) states that the probable variation in the light emitted by different lamps when under standard conditions is not above 1 per cent and the accuracy of this standard is capable of being increased.

**Brightness.**—Lummer and Kurlbaum (German Physical Society, 2, 8, 1900) find that the ratio of the brightnesses of two hollow platinum vessels at different temperatures is equal to the ratio of those temperatures, taken on the absolute scale, raised to a power that grows less as the tempera- ture increases.

**Reflection.**—Hagen and Rubens (Annalen der Physik, February) have determined the reflective powers of various metals and of glass mirrors for the various rays of the visible spectrum by a photometric method. As a general rule, the re- flective power of metals increases with the wave length of the light. Thus the reflective power of gold for rays of wave length 700 is the same as that of silver for waves of 4000 but not for waves of 5000.

**Double Refraction.**—Hill (Philosophical Maga- zine, December, 1899) has studied the double refraction introduced in solutions of colloids, such as gelatin and gum arabic, by stirring, and con- cludes that such solutions are not true solutions in the proper sense of the term, since their behavior is much more like that of an elastic solid, as they are, however, able to sustain strains if not distorted too much. He believes that their structure is similar to that of jelly.

**Interference.**—Lummer (Berlin Academy, May 3) has studied the phenomena observed when one looks at a bright surface through two right-angled prisms; the polarization phenomena are otherwise at the same time so marked, but separated by a thin film of air, and with the eye focused for parallel rays. A system of inter- ference fringes is seen parallel to the line bounding the area of total reflection, and the author has discovered that in reflected light two systems of fringes are obtained, one complementary to the other.

**Polarization.** Foreheimer (Zeitschrift für physikalische Chemie, July 3) has proved experimentally the substantial truth of Perkins's view that the behavior of salts with relation to electro- magnetic rotation of the plane of polarization is analogous to that of the corresponding acids. Sol- utions of the sulphates of ammonium, sodium, and magnesium are like those of metallic salts, but solutions of the molecular rotation independent of the concen- tration, and the same is true of hydrochloric acid and various haloid salts; but with both the sulphate and the chloride of lithium the rotation increases with the dilution, a property that seems to be peculiar to lithium salts. (See also Fluorescence.)

**Dispersion.** Schmauss (Annalen der Physik, June) finds that the general form of the law of optical dispersion can also be applied to the dispersion observed in the Faraday effect, so that the magnetic-rotatory dispersion shows discon- tinuities near the absorption bands of certain substances, just as do the optical rotatory constants of certain other substances, independent of the concen- tration, and that the production of the phosphorescence is less when excitation occurs at low temperatures.

**Fluorescence.**—Hewitt (Chemical Society Pro- ceedings, Jan. 24) finds that the molecules of fluorescent substances are probably those capable of vibrating in two different periods, and that whenever excitation has happened almost without exception. Schineaglia Nuovo (Gi- mento, September, 1899) finds that in isotropic substances the light of fluorescence is never po-
larized; in crystals it generally presents only traces of polarization, except in topaz, in which it is completely polarized. Fluorescence of crystals depends usually upon the distribution of the rays probably distributed in accordance with structure. The color of a crystal has no influence upon fluorescence, except to affect the color. A magnetic field has no effect upon the color of the fluorescent light, and causes nothing analogous to the Zeeman effect.

Becquerel Rays; Nature and General Properties.

M. and Mme. Curie (Comptes Rendus, Nov. 6, 1899) find that the rays from strongly radio-active substances are able to communicate radio-activity to substances that are ordinarily inactive, and that this induced radio-activity persists for a considerable time. The effects seem not to be due to traces of radium salt. On locating again on the normal plate, but an induced radio-activity appears to exist, which is a sort of secondary radiation due to the rays of Becquerel. Becquerel (Comptes Rendus, June 11) notes that two different kinds of the rays bearing his name have up to the present time been discovered. One resembles cathode rays, the other resembles electric and electric forces. The other is deflected by neither, and is absorbed in various degrees by metals and other opaque substances. Radium emits both, polonium only the second, and actinium only the first. It seems probable that uranium has a definite though feeble radiation of its own. The direction of rays of Radium A prepared from the heterogeneous nature of the rays given out by radium preparations, by allowing such rays to pass through a slit in a lead plate, and to impinge at nearly grazing incidence upon two sensitive plates laid one over the other and wrapped in black paper. The rays are exposed to a strong normal electric field. The behavior of rays on passing through the heterogeneous mixture of rays shows two impressions—one devoted and spread out, the other feeble, but absolutely rectilinear and sharp. On the lower plate only one impression is visible—that due to the nondirected rays. The author calls the two classes of rays simply X rays and cathode rays. Mme. Curie (Comptes Rendus, Jan. 5) finds that the rays are more easily absorbed when they have already penetrated an absorbing layer than when they have not, which is due to the absorption of the less penetrating rays in the first layers. Behrendsen (Annalen der Physik, June, 1899) finds that when a radium preparation is cooled to the temperature of liquid air its radio-activity is reduced by more than half. Dorn (ibid., Nov. 20) finds that its behavior on the radiation of radium rays in an electric field, has shown that the rays always deviate toward the positive plate of a condenser, like cathode rays. The observed displacement agrees fairly well with that calculated on the supposition that the rays consist of electrically charged masses moving with great velocity.

Induced Radio-activity.—Rutherford (Philosophical Magazine, January) finds that thorium, besides ordinary Becquerel rays, continuously emits radio-active particles of some kind, which retain their powers for some minutes. This emanation ionizes gas in its neighborhood, and can pass through thin layers of metal and can be easily absorbed in paper. It is also unaffected by bubbling through water or sulphuric acid. It can not be vapor of thorium, for the emanation from thorium oxide was not sufficient to appreciably alter the pressure of the gas in an exhausted tube, and the spectrum of the gas was unchanged. The same writer finds that electrically charged particles produce radio-activity in all solid substances in their neighborhood if the bodies are uncharged. With charged conductors the radio-activity is produced on the negatively charged bodies. In strong electric fields the radio-activity can be concentrated on the surface of thin wires. The radiation excited to half value in about eleven hours. With time of exposure the induced radio-activity at first increases nearly proportionally, but tends to a
maximum value. Mr. Rutherford suggests three possible explanations: (1) A kind of phosphorescence excited by the radiation; (2) deposition of the positively charged gaseous ions produced in the gas; (3) deposition of particles of a radiolytically produced gas. The first appears insufficient, and between the others the evidence is not conclusive, though the last seems somewhat more tenable. (See also Röntgen Rays, under Electricity.)

Magneto-optics.—Armour (Cambridge Philosophical Society Proceedings, 10, 1899) points out the possibility of magneto-optical effects deduced from the Zeeman effect by general reasoning, without introducing any special dynamical hypothesis. Voigt (Annalen der Physik, February) also has extended his magneto-optic theory, which involves very complicated formulæ. Reese (Elec
trical World and Engineer, Aug. 18) has attempted to experimentally realize the phenomena, and the first spectra in the spectral lines in the Zeeman effect is strictly proportional to the strength of the field. Photographs show that it is very nearly so with sharp triplets, less so with sextuplets, and still less with diffuse triplets, the separation increasing less rapidly with the field when the latter becomes intense.

Spectroscopy.—Beckmann (Zeitschrift für physikalische Chemie, Sept. 7) obtains colored flames for spectroscopic work by first forcing air through the pores of a porcelain tube impregnated with the salt to be examined and then passing it through a Bunsen flame. With aqueous solutions the necessary pressure is about 1.5 atmospheres, but with alcohol, acetone, or acetic acid it is only about half as great. Cantor (An
nalen der Physik, March) finds by experiment that there is no perceptible absorption of the light from an electric arc by glowing gas in a vacuum tube. As by Kirchhoff's law the ratio of the emission to the absorption equals the emission of a black body at the same temperature of the glowing gases should have an extremely high temperature. But since they have not, Kirchhoff's law does not hold for electrically glowing gases.

Microscopy.—Deschamps (Comptes Rendus, April 30) has given the name telemicroscope to an instrument which enlarges by about 12 diameters the object placed in front of it, whether it be a fraction of a millimetre or centimetres. It thus enables the observer to study insects without disturbing them from their normal surroundings. The objective consists of two Dollond achromatic lenses separated by a distance less than the focal length of the most converging lens. The eyepiece is a lens of short focus, chosen so as to give the maximum enlargement and field. The depth of focus of the instrument is very great, and it gives effects of relief similar to stereoscopic effects.

Phototropv.—This name is given by Markwald (Physikalische Zeitschrift, 1, 1899) to change produced by light when the removal of the active rays is the substance acted upon to return to its original condition. A new example is afforded by chino-chinolin, whose yellow crystals become green in the light, but turn yellow again in the dark. Direct sunlight changes them in a few seconds; diffuse daylight in several minutes. The rate of return depends on temperature. E. and Hoff
mann (Annalen der Physik, August) find that ice acquires a positive charge by friction with a metal and imparts a negative charge. The colder and drier it is, the greater this action. This may account for the electric effects of polar snowstorms, including atmospheric luminousness and even the aurora; and the phenomenon should be allowed for in all experiments with liquid air, which usually carries minute particles of very cold ice suspended in its vapor. Campetti (Acad
ey of the Lincei, July 13) finds that when a crystal of a salt is dropped into a negatively charged solution, the surrounding liquid becomes negatively charged, and the crys
tal positively charged. This he believes to be due to the fact that the negative ions fly off more rapidly than the positive. The resulting charges accelerate the outflow of the positive ions and retard the others, so that the whole liquid is negatively charged, and this action continues. The results of an investiga
tion of the masses of ions undertaken by J. J. Thomson (Philosophical Magazine, December, 1899) suggest that the ionization of a gas con
tsists in the detachment from the atom of a negative ion—same for all gases—whose mass is about \( 3 \times 10^{-19} \) g.\textsuperscript{m} and which the normal atom this assemblage of eorpuse is electrically neutral. The electrification of a gas may be the detachment of a corpipe from some of the atoms. The remainder of the atom forms the positive ion, and is of course of much greater mass. An atom might be split up indefinitely but for the fact that each detachment of a pipe increases the free positive charge of the remainder, and so increases the force of cohesion. Dis
dissipation of Charge.—Pochettino and Sella (Academy of the Lincei, July 1) conclude that the evaporation of a charged liquid does not dis
sipate the charge, thus confirming the conclusions of Schwalbe and controverting those of Pellat. The power of the surrounding air is an atomic of hydro
gen. This negative ion may be the fundamental quantity in terms of which all electrical processes can be expressed. In an electrical theory embodying this conception the atom would be regarded as containing a large number of similar bodies, which Thomson calls "corpuse." The mass of this corpuse is equal to that of the air, and the remanent atom this assemblage of corpuse electrically neutral. The electrification of a gas may be the detachment of a corpuse from some of the atoms. The remainder of the atom forms the positive ion, and is of course of much greater mass. An atom might be split up indefinitely but for the fact that each detachment of a corpuse increases the free positive charge of the remanent, and so increases the force of cohesion.

Dissipation of Charge.—Geitel (Annalen der Physik, July 1) finds that the dissipation of an electric charge is due to ions in the atmosphere, and that it is reduced by fog, smoke, and dust. It takes place equally for positively and negatively charged ions. The rate of dissipation, where the rate may be two to ten times greater for the negative than for the positive. The authors believe that the higher strata of the air are ionized by the sun's rays, the ultra-violet rays, which produce this effect, being reduced in the lower strata by absorption.

Continuous Discharge.—Toepfer (Annalen der Physik, July) finds that there may be four dif
erent forms of continuous discharge in air—glow, brush, brush-are, and flame-are. Each may be either positive or negative. Usually an in
crease in the strength of the current brings about a change from glow to brush, and then to brush-are, and finally to flame-are. "Flashing" or "ball lighting" is due to a con
tinuous discharge analogous to the brush-are, the way for which has been previously been cleared by a discontinuous discharge of ordinary or "forked" lighting. The luminous globe is simply a portion of the continuous track where there is a particularly strong electric field. This motion may be due to electrostatic forces or to the motion of the air, carrying the whole track with it. Generally the phenomenon ends with another discontinuous or spark discharge, and the resulting detonation is ascribed to the "bursting" of the ball. The current intensity may be as high as 10,000 amperes, but usually does not
exceed 5 ampères, and probably a faintly luminous globe as large as one's head might be formed with a current as weak as 0.01 ampère. Leduc (Éclair Electrique, Oct. 28, 1899) reports that fine polished metallic points from 5 to 10 centimetres apart, at right angles to a photographic plate or glassy gelatino-bromide paper, and connected with an electrostatic machine, will, especially if the paper rest upon a piece of glass and this upon a plate of metal, produce an effluvium round the positive and a luminous globule at the negative point. When the globule has attained a certain size it detaches itself from the negative point and is observed by the eye or by a photograph or paper, by a more or less irregular path, sometimes dividing as it travels, toward the positive point. When it reaches this, all luminosity is extinguished and the charges disappear as if the terminals of the machine had been connected by a conductor.

Flame by Flame.— Villard (Comptes Rendus, Jan. 15) asserts that a flame placed in an electric field acts as a bundle of Röntgen rays, cutting the lines of force, and the gases produced by the combustion are active like Röntgenized air. In the absence of an electric field the flame is inactive and the gaseous products, transported into an electric field, have the same character as before. The ordinary air the incandescent particles gave out cathode rays, while in a field they gave out Röntgen rays; or rather analogous to these. This way of looking at the facts is believed by the author to explain a very large group of phenomena, including flame discharges, discharges by incandescent bodies and phosphorus, the radiation given out by electric sparks, the electric discharge by ultra-violet light, the Edison effect (current between the positive end of the filament of a glow lamp and an electrode fused into the lamp), and the production of ozone by flames, incandescent bodies, the electric arc and sparks, by the oxidation of phosphorus in the cold, and by radiation.

Spark Discharge.— Ruhmer (Elektrotechnische Zeitschrift, Feb. 22) finds two distinct forms of discharge with a Wehnelt interrupter and a spark gap between a point and a disk. At large distances single strong sparks cross the gap, while at short distances a curved flame crosses from the point to the disk, and finally, having reached the number of thin spark lines branch out from the point and extend toward the disk like a brush. Every one of the lines has a sinusoidal wave shape, due to a spiral form of the spark path. By chronophotography it is seen that the sparks are similar in outline, but are successively displaced in the direction of the disk. West (ibid., Oct. 26, 1899) has made a photographic analysis of spark discharges from a Wehnelt interrupter by means of a "photograph" in which the film moved continuously at a rate of 1 to 7 metres per second. The sparks traveled along approximately the same paths during successive discharges, but did not succeed each other regularly. Their diameter is not uniform, and they are frequently brighter in the middle than at the ends. Some of the sparks are double or multiple—an appearance due to several sparks in rapid succession, as shown by their tracks. Continuous current sparks do not show these doublings or branchings. Abraham and Le- mmer (Annalen der Physik, Feb. 8) states that the duration of the electric spark by a method already devised by them to test for a retardation in the disappearance of the Kerr phenomenon. The total light emitted by the spark is less than 40 times that emitted during the cessation of the Kerr effect, and as this latter has been proved not to exceed 0.01 micro-second, the spark probably does not last more than 0.4 micro-second.

Electric Arc.— Child (Physical Review, March) discusses Brown's discovery, made by photography, that the arc is formed by the coalescence of two light fronts, starting from the positive and negative carbon, respective electrodes. As moving with the greater velocity. This is accounted for by the author on the supposition that the negative ions move more slowly than the positive ions—the reverse of what happens in the case of dissociation by Röntgen rays. The greater velocity of the positive ions would not only explain the fact that the arc is formed, but also the difference in potential at the positive pole. Mrs. Ayton (Journal of the Institute of Electrical Engineers, 28, p. 400), after many experiments to determine the cause of the hissing of the electric arc, concludes that it is caused by air coming in contact with the crater, and is due to the carbon's burning instead of electric conduction under the same theory. The assumption that the ratios of charge to mass in the positive and negative electric conductors are the same, results in agreement with the negative electrons respectively are two absolute constants in all metals is not in order, according to the optical behavior of the latter. In and copper it is necessary to assume the presence of bound electrons, having a peculiar inertia from the body, and bound to the material particles. This is these bound electrons which play a part in optical processes. The author assumes the existence of different kinds of electrons with various charges, each a multiple of an elementary charge. These movable electrons or "nuclei" obey the kinetic theory of gases. Positive and negative electrons do not coalesce, owing to their high kinetic energy, as in the case of a comet which never returns to the solar system. The author investigates contact electricity and thermo-electricity, with the aid of his theory, and believes that all galvano- and thermo-magnetic effects may be explained and calculated with its aid. Lodge (Philosophical Magazine, May) suggests that condensation in the metal is due to passage of isolated charged corpuscles from one atom to the next. This does not cause any chemical change, because each atom on gaining one negative corpuscle loses a similar one. In electrolytes, however, the charged corpuscles are continually lost and new chemical changes occur. Reinganum (Annalen der Physik, June) finds that the ratio of the conductivities of a metal for heat and electricity respectively may be calculated from the electro-chemical equivalent and the velocity of gaseous hydrogen atoms. He obtains thus the value
0.7099 × 10⁻⁸, which agrees remarkably well with those found by experiment, such as that found by Jäger and Dieselhorst for aluminum (0.706 × 10⁻⁸). He concludes that the principles of the kinetic theory of gases may be applied also to liquids and to metals.

Resistance.—Lussana (Nuovo Cimento, August, 1899), in researches on the resistance of metals and alloys when immersed in oil and subjected to pressures up to 1,000 atmospheres, finds that with increasing pressures the resistance diminishes, tending to a minimum value at very high pressures. If sufficient time elapse between the compression and the measurement of the resistance—usually an hour—the curves taken with increasing and diminishing pressures are practically coincident. The coefficient is much smaller for the alloys than for the pure metals, and he concludes that the specific resistance of a metal depends not only on the proximity of the molecules, but also on their velocity of vibration.

Vacuum Tubes.—Wilson (Philosophical Magazine, June) studies potential gradient in a vacuum tube by means of a newly invented probe capable of being shifted along the tube and gas escapes through a Torricellian vacuum, and an open glass tube containing the two electrodes floats on the mercury, whose surface can be raised or lowered by means of an India-rubber tube. Thus the vacuum tube proper floats up and down in the vacuum, and through a slit in this side the probes fixed into the side of the barometer tube are capable of entering. Among other results, the author finds a sudden drop of potential near the anode, often amounting to as much as 35 volts. He attributes it to the great rate at which positive ions are shot off from the anode. Phillips (Electrician, Sept. 29, 1899) finds that when the electrodes in an exhausted bulb are magnetized after the positive charge has been withdrawn, the discharge being at the same time shut off, rotating luminous rings appear in the bulb in planes perpendicular to the axis. Kelvin (ibid., Aug. 4) explains these by supposing that after the current is shut off the space is filled for some time with negatively electrified particles, remaining suspended in the rarefied gases, and that the impressed electric field grows to a limit, experience an electrostatic force proportional to its distance from the axis of the field, and in a direction perpendicular to the axis. This is just what is required to explain the rotating rings. Wien (Physikalische Zeitschrift, 1, 1896) has undertaken to measure the velocity of the radiating energy due to electric discharge in gases, which can be measured by the difference between the electric energy supplied to vacuum tubes and the heat produced in the tubes. The results show that within the limits of experimental error the electrical and heat energy are equal. Bonty (Journal de Physique, January) agrees with Wiedemann in that the electrical energy is not equal to the heat produced in the tube. He finds that the apparent conductivity of a rarefied gas is related to its luminescence, and is directly connected with a violent action that follows dielectric equilibrium, as the rupture of a stretched wire follows its elastic equilibrium when the stretching force exceeds a certain limit. The ether in a perfect vacuum possesses perfect dielectric elasticity, but gaseous molecules introduce weak points into it.

Cathode Rays.—Starké (Annalen der Physik, September) has attempted to measure the direct force exerted by cathode rays when they strike on light, movable bodies. The results of Riecke, who estimates the force in the motion of a propeller-shaped cathode, would show an amount of energy surpassing the whole amount possessed by the rays, and such estimates are therefore inadmissible. The author used a fixed propeller-shaped cathode whose tips or blades the rays, impinging upon suspended aluminum plates. The results were almost entirely negative, except that a very powerful influence machine gave a deflection indicating that the force to be measured is less than 10⁻⁸ dynes. Röntgen Rays (see also Beecurert Rays, under Liofft).—Gratz (Annalen der Physik, April) believes that these rotations produced by the cathode rays under the action of cathode rays may not be directly due to the impact of projected particles, since they appear at low pressures before the cathode rays, and they cease at exhaustions at which these rays are still present. The author has also discovered that light dielectric bodies, un­suitable for the rays, when placed opposite the anode, are subjected to the Röntgen rays. Small spheres, bells, and vanes mounted on needle points in an electric field traversed by Röntgen rays continue to rotate while the rays continue, the direction depending upon the initial tendency. The rotations are strictly analogous to those described by Quincke in the case of rarefied gases. Towbridge (American Journal of Science, June) has succeeded in generating Röntgen rays by means of a battery current, using 20,000 storage cells with an electro-motive force of more than 40,000 volts. The advantage of this method is the possibility of exactly regulating the current and difference of potential necessary to excite the rays, which is not possible with any other method. Zeleny (Philosophical Transactions, Nov. 9) determines the velocity of ions produced by Röntgen rays by comparing it directly with that of a stream of gas. In a field of one volt per centimetre the following velocities in centimetres per second were obtained:

Campanile and Giomme (Physikalische Zeitschrift, June 23) find that at all potentials the discharge of a condenser is accelerated by X-rays, though they are more effective at lower potentials. Patekn (Electrical Times, March 8, 1909) (London] Royal Society, 63, 1899) show that the absorption of Röntgen rays produced by normal aqueous solutions of metallic salts having the same acid radical increases with increase of atomic weight of the base. Wind (Wiedemann's Annalen, August, 1899) denies that it follows from the low wave-lengths obtained from diffraction images that these rays are truly X-rays, as the wave-lengths are of the order of magnitude of the wave-length of yellow light. He asserts that diffraction images like those obtained can also be produced by proper vibrations of any frequency, even that of ordinary light, if only these vibrations experience quite irregular changes of phase, with intervals between them corresponding to the frequencies relating to the Röntgen rays. Quincke, and others, finds that no changes of volume and length are observed when dielectrics are placed in an electrostatic field. Bonty (Comptes Rendus, Aug. 20 to Sept. 10) has measured the dielectric constant of gases at various pressures by observing the value of the uniform
field between condenser plates, at which electricity first passes. He finds that hydrogen is a worse insulator than air or carbon dioxide at high temperatures. Water vapor in itself (apart from deposited films of moisture) insulates perfectly. As between different gases, the critical value of the potential gradient has an absolute term that is nearly the same for all, and a term proportional to the pressure whose coefficient varies from gas to gas; but if it does not seem to be radiated either to the mean free path or to the specific inductive capacity. The author attributes this discrepancy to the fact that other experimenters used systems of rigid recording levers which interpreted mere distortions as alterations in length. In his own observations he used optical methods.

Luminous Effects on Conducting Wires.—Borgman (Comptes Rendus, April 30) finds that a noninsulated metallic wire becomes covered with a luminous aureole when it is inserted in the circuit of an induction coil containing a spark gap or a vacuum tube. When the wire traverses a gradually exhausted tube, the luminous phenomenon shows a peculiar development. The aureole decreases in intensity, and is gradually replaced by a series of equidistant stars, around which luminous disks are formed with their planes at right angles to the wire. The number of stars and disks increases until the latter touch each other and fill the whole tube with a slightly stratified light. This approach of a magnet to the electrified tube, the author says, is often followed by a striking stone effect on the plane of the rings. Tommasini (Comptes Rendus, May 28) notes that rhythmical crepitations may be heard along the "antenna" or radiating prolongation of one of the branches of a Hertzian primary. In the dark, mobile luminous aigrettes may be seen around the radiation wire, and with reverse motion the effect consists not with the sparks of the oscillator, but with the movements of the interrupter of the induction coil.

Photo-electricity.—Buisson (Comptes Rendus, May 14) finds that sunlight causes a diminution in rapidity of discharge from an amalgamated zinc plate. The potential of a plate also varies under the action of sunlight, a large number of metals becoming more negative after illumination, while platinum becomes more positive. In general a plate has two definite potentials, one in darkness and one in light, and there is an inversion in wave length. Light affects not only the metal, but causes a negative variation of potential, and less refrangible ones a positive variation. For zinc this wave length is 0.310 μ.

Electro-photography.—Nipher (Electrical Review, Aug. 10), after exposing a photographic plate to the light of an ordinary room for several days, placed the inductive action of a brass or copper plate that is connected to one electrode of an influence machine. A coin is connected to the other electrode, and in four to ten minutes an electro-photograph of the coin is made. Development is carried out by a moderate light. Schaffers (Comptes Rendus, April 2) has shown that images may be obtained by the inductive effect in an induction coil, using two needles as poles. The positive needle touches the plate, while the negative is about half a millimetre off the plate, and a sheet of metal below facilitates the action. The image consists of small black lines directed from the positive to the negative pole, and appears to be due to a first to the formation of the secondary and after prolonged action to the reduction of the bromide.

Magnetic Field produced by Motion of an Electric Body.—Crémon (Comptes Rendus, June 5) has repeated Rowland's experiments that indicate that an electrified body in rapid motion produces a magnetic field in its neighborhood. He has examined the inductive action of a revolving charged disk upon a neighboring circuit, and
concludes that the motion of an electrified body does not appear to produce any magnetic effect in its vicinity.

**Magnetism.** Theory.—Lang (Annalen der Physik, July) interprets the so-called “amperian” molecular currents as convection currents produced by the revolution of negative electrons as satellites around the heavier positive electrons. The usual velocity is that of light, and if it becomes larger the satellites may change the electron around which they revolve.

**Magnetization.**—Maurin (Comptes Rendus, Aug. 13) finds that on electrolyzing a solution of ferrous sulphate in sodium pyrophosphate inside a magnetizing spiral adherent brilliant magnetized deposits of iron are obtained, the intensity of the magnetism increases, and the deposit is arranged in different layers of the deposit, but is greater as the field in which it is obtained is stronger. The coercive force is enormous, and the reversal of the magnetization may be effected suddenly for a very small variation in the field.

**Hysteresis.**—Sheldon (Electrician World and Engineer, June 29) testifies in support of the retentivity and coercivity of magnetic substances (the two factors of hystericity quality) might be dependent on the distance between their molecules, experimented with different arrangements of compass needles. When these were placed in line the magnetizing force required to break up the iron increased, as the distance between the pivots of the needles increased. The decrease does not become zero, however, but approaches a constant value. When the needles are arranged in multiple rows the polarity is more easily reversed owing to the influence of the rows on each other. As the distance between the rows is increased, the magnetic cluster of force is increased, because the demagnetizing influence of the rows on each other is decreased.

**Loss of Electric Charge.**—Phillips (Royal Society Proceedings, 65, 1899) finds that under certain conditions an electrified body loses its charge in the neighborhood of a magnetic field. This only occurs at pressures below 0.01 millimetre of mercury.

**Effect on Fluids.**—Jäger (Vienna Academysitzungsberichte, 108, 1899), in experiments on the behavior of fluids in the magnetic field, could not observe the least change in the capillarity constant of a liquid in a powerful field. Theory indicates, however, that when such liquid is a solution in a nonmagnetic solvent a change may be observed, accompanied by a calculable potential difference. An attempt to confirm this experimentally was indecisive.

**Effect on Elasticity.**—Stevens and Dorsey (Physical Review, August, 1899), in experiments on the effect of magnetism on the elasticity of rods, find that the modulus of elasticity of wrought iron and steel little difference was observed for loads of 1 kilogramme and ½ kilogramme, but in wrought iron the smaller load gave the greater displacement when equal magnetizing forces were used.

**Diamagnetism.**—Meyer (Annalen der Physik, April), noting the fact that in some diamagnetic compounds the molecular magnetism shows a greater diamagnetic value than would correspond to the sum of the atomic magnetisms, and that this is so in every case where the combination is accompanied by considerable expansion, has investigated increases with magnetization. In the case of contraction. Measurements made on copper salts show that the diamagnetic character of a substance, and contraction enlarges its paramagnetic character. The magnetic properties of the elements can therefore only be obtained from the elements themselves, or from compounds whose formation entails no change of volume.

**Instruments.**—Du Bois (Zeitschrift für Instrumentenkraft, April and May) describes a new form of his magnetic balance, for which he claims an accuracy five times that of the original type. The most important improvement lies in a compensation of the pendulum outside the main exciting coil, which neutralizes the strong field between the test-rod and the outer windings.

**Miscellany.** Range of Observable Phenomena.—Stoney (Dublin Royal Society, 9, p. 79) classifies the various measurable distances as stellar distances, planetary intervals, laboratory measures, and molecular quantities. Each stands to the next in the same ratio as the general results obtained partly in the morning, when no fatigue had been undergone, and partly on subjects who were more or less exhausted after muscular or mental effort. Wine or pure alcohol mixed with sweetened lemonade was administered in moderate doses. In most cases much drowsiness or even sleep so slight as to go undetected was attained in men who were not fatigued were that in one experiment there was no alteration in the volume of air inspired, in 9 experiments there was a diminution, and in 54 cases there was an increase after the use of alcohol, but with much individual variation. In 29 cases in which pure alcohol was ingested, 7 showed diminution of respiratory activity, but when the alcohol was taken in the form of wine only 2 showed such diminution, while the amount of increase in every case where it occurred was greater. The difference, Dr. Wendelstadt thinks, is attributable to the presence of ethereal oils in the wine giving it its bouquet. It should be borne in mind that, although it has been found that the harmful effect of alcoholation, or contraction of pure water does not augment the volume of air inspired in a given time the same quantity of water with sugar and lime; on these causes, at least in some instances, a slight increase. In persons who are exhausted by fatigue, the effects of alcohol in causing an increase in the volume of air breathed are much more marked. Since in fatigue and debilitated states of the body the condition of the nervous system resembles that of a person exhausted by fatigue, Dr. Wendelstadt’s experiments may be regarded as corroborating the conclusions arrived at by most clinical observers, that in such conditions alcohol is the best stimulant that can be given.

Dr. Leonard Hill, having subjected cats and dogs to conditions of atmospheric pressure similar...
those to which workers in deep bridge caissons are exposed, found that under rapid increase of pressure amounting to two atmospheres and rapid dissolution to ordinary pressure no effects occurred beyond slight increase of the respiratory oscillations and slightly diminished frequency of the pulse. He therefore regards the mechanical congestion theory of caisson disease as untenable. But how, the Lancet asks, does he explain the hemorrhages from nose and ears that have been observed when the pressure is too suddenly released?

Experiments on the temperature of the animal body during fasting and the rate of assimilation of carbohydrates conducted at the University of Genoa and described by Prof. Ugolino Mosso are particularly interesting in that they establish the absolutely normal and was on and slowly particularly marked form oscillations exposed, temperature, which was confirmed by auscultation, and the second pulmonary sound was distinctly heard. In the case of a half-mile runner, twenty-two years of age, in whom the heart sounds during the preceding meal, a distinct systolic thrill at the apex of the heart was perceived at the conclusion of the race. A trained walker, twenty-three years of age, in regular "form" for three years, showed an increase of the first sound of the heart, together with a pulling systolic murmur after the race. The right border of the heart in one subject who was observed at the conclusion of the exercise, the left border was displaced to the nipple line after exercise. The author is of the opinion that a preliminary overdistention of the right side of the heart occurs after exercise, and is attended with a certain amount of discomfort or distress; but this eventually subsides when the athlete is said and have recovered from the exertion. A distinct pulsation is likewise often felt in this situation. The cardiac systolic murmurs are, as a rule, due to mitral regurgitation, but others are possibly of cardio-pulmonary origin. Certain remote after-effects are also mentioned as appearing in middle-aged persons who have indulged freely in athletics during youth. The author concludes that overdistention of the heart is frequent in athletic contests, and may cause harm if the person is in ill health or badly trained, and that permanent hypertrophy with symptoms of palpitation or distress are results not seldom met with.

Having determined the percentage oxygen capacity (between 18 and 21 in healthy men) and the total oxygen capacity of, a distinct systolic murmur was found to develop over the heart. In a special trial of 9 football players in the summer, the prompt development of a very evident cardiac murmur after a little exertion was noticed. But during the succeeding meal, the systolic murmur, tested under similar conditions, gave no evidence of cardiac murmurs. In one young man an expansion of the cardiac limits was observed after a half-mile race. The left border of the heart was displaced to a point somewhat beyond the nipple line, and the right border to a distance of about two thirds of an inch beyond the corresponding edge of the sternum. After the race a diffused thrill was felt over the apex of the heart and in the epigastrium, which was confirmed by auscultation, and the second pulmonary sound was distinctly heard. In the case of a half-mile runner, twenty-two years of age, in whom the heart sounds...
In pernicious anemia the total oxygen capacity was diminished in a marked degree as compared with the normal, as also was the percentage oxygen capacity. The volume of the blood was markedly increased. The decrease in the number of red corpuscles and in the amount of hemoglobin was greater than could be explained by the increase in the volume of the blood.

In the automic section of the lecture on The Influence of Influenza upon the Heart and Circulation, Dr. Sansom noticed as the chief disturbances observed the rapid heart, cardiac dilatation, the irregular heart, the slow heart, and pain in the heart, all following or dependent upon the influenzal infection. In connection with the rapid heart other phenomena were observed, such as the diaphoresis of the head, the tendency to rapid analysis, the salivation, and the emaciation shown off the vessels of the kidney and limbs are but slightly affected, while those of the spleen undergo moderate, and those of the liver considerable, stimulation coincidently with the fall of blood pressure.

**Digestion.**—The problem of the process by which the materials ingested into the stomach and intestine are liberated and transmitted to the rest of the body, by which various explanations have been offered, is the subject of a memoir in the Philosophical Transactions by Prof. E. Waymouth Reid. The experiments were performed on anaesthetized dogs. Two loops of intestine of equal length were withdrawn from the abdomen and covered during the whole duration of the experiment with cloths heated to 98° or 100° Fahrenheit. The one arm of the loop was injected were solutions of sugar, peptone, and sugar at the temperature of the body. The main results of the author's inquiry are stated in the propositions that a physiological activity of the intestinal epithelium is demonstrated, first, by the adsorption capable of being effected by the animal mucous membrane of certain solutions in conditions in which filtration into blood capillaries or lacteals, osmosis, or absorption, are excluded; and, second, by the cessation or diminution of the adsorption of serum when the epithelium is removed, in spite of the fact that removal must at any rate increase the facilities for osmosis, and that the permeability of the "membrane" is used by Prof. Reid in the sense of "a simple soaking with some degree of assimilation, a sort of dyeing of the gut membrane" with the solutions. The state of nutrition of the cells is regarded as the main factor in their activity, and this is intimately associated with the blood supply. The activity of the cells was characterized by the excretion of the blood of the mixture, and a rather quicker uptake of the salts, than of the water. No evidence of the existence of specific absorptive fibers in the mesenteric nerves was obtained. The bile did not have a stimulant action on the cells. Weak alcohol acted as a stimulant without any concomitant increase of blood supply being shown. Distilled water was found in the course of the experiments to act very deleteriously upon protoplasm, a simple washing out with it causing detachment of the epithelial cells. It appeared in experiments made with those substances that the chief factor in the absorption of peptone was an assimilation on the part of the epithelial cells, and in the absorption of glucose, diffusion variable according to the permeability of the cells.

From a research upon the digestibility of some non-nitrogenous constituents of certain feeding stuffs, G. S. Fraps finds that sugars occur in all feeding stuffs; that they are completely digested as a rule; and that their determination is of especial importance in the case of hays and cotton seed meal: that the average digestibility of pentosans in 34 samples is 64.2, and the average for timothy hay (8 samples) is 53.9. The constituents of the nitrogen-free extract may be arranged in the following order, according to their digestibility: (1) pentosans; (2) nucleic acids; (3) mucilage; (4) residua. The pseudopentosans of crude fiber are less digestible than the residua.
The residue is sometimes, sometimes less digested than the nitrogen-free extract. Crude fiber may be changed during digestion so as to appear as nitrogen-free extract in the excrement. The residue remaining after digestion is theoretically more important than that of crude fiber.

The observations of V. Harley indicate that the digestive power of pepton is not affected by dry heat—that is, by three hours' exposure, at 106°C., over sulphuric acid. The action of heat on pepton in solution, on the other hand, is very different, however, a ten per cent. solution of 82°C. in the expectation of the expected results caused its destruction. At temperatures below 75°C. the disaggregation of fibrin was complete in twenty-four hours, but at 81.5°C. the fragments of fibrine were only softened superficially; and at 82°C. the pepton had no effect whatever, even after twenty-four hours.

In 1898, Dr. Carl Schlatter, of Zurich, reported a case of complete extermination of the stomach, and proved from the physiological condition of the patient several months afterward that only the slightest effects on the function of digestion had followed the operation. He has more recently described a case of microfibrosis in the intestine without the patient suffering serious injury. The patient was an Italian who had been stabbed in a brawl, and was found, upon examination about nine hours afterward, to have a protrusion of the bowel, the exposed part of which was already dying. The affected part was cut out, and the ends of the other parts were sutured together. The patient rallied fast, and steadily improved in health and weight, so that he left the hospital in good condition. The chemical examination of his diet excretions showed that the percentage of absorption of nitrogen was fully up to the normal, but that there was a greater loss of the fat in the food than should be the case with a reabsorbtion of fat, and the patient's weight, however, was not quite so favorable. Eight months after the operation his weight had decreased, and he was not able to tolerate the solid food to which he had previously been accustomed. Yet, while he felt unequal to much work, he was regarded as on the whole in a good condition.

In his Hunterian lectures on the Surgery of the Stomach, Prof. Mayo Robson has more fully shown that large portions of the stomach may be excised, or even the whole removed, with no very great mortality, and in successful cases with little effect upon the patient's digestion. In the presentTF opinion of the medical profession the stomach hardly occupies so important a position in digestion as it formerly held. It is now regarded as rather a preparer for the exercise of the digestive powers of the pancreas than as itself an active digestive agent. One of its functions is to render innocuous many of the micro-organisms which enter the food.

The relation of the cell to the enzymes or soluble ferments which originate from cells was touched upon by J. Burdon Sanderson in the address he delivered before the International Medical Congress at Paris. Formerly, the speaker pointed out, each kind of cell was regarded as having a single special function proper to itself, but the progress of investigation has shown that each species of cell possesses a great variety of functions, and that it may act upon the medium which it inhabits and be acted upon by it in a variety of ways. Thus, for example, the colorless corpuscles of the blood (or, as they are now called, leucocytes) are considered not merely as agents in the process of suppuration or as typical examples of contractile protoplasm, but rather as living structures possessing chemical functions indispensable to the life of the organism. Similarly, the blood disk, which formerly was thought of merely as the vessel for haemoglobin, is now regarded as a living cell possessing various susceptibilities which render it the most delicate agent that can be employed for the detection of abnormal conditions in the blood. The tendency of recent research is to show that the reactions referred to as chemical functions of the cell (activity of enzymatism, or the excretion of the environment on the cell) are the work of ferments, which are products of the evolution of the living cell, and therefore to which the term enzymes may be applied. Recent researches have plainly indicated that in the case of the disease-producing micro-organisms the specific functions of the one cell, as regards its action on the other to acids inseparable from the cell, belong essentially to the enzymes which they contain. It has been further shown that similar statements can be made as regards ferment processes which differ widely from each other, and no less widely from those induced by bacteria. So that in the domain of enzymatism the term "cell" may with certainty be said to have "dethroned the cell."

In the first part of his Microscopic Researches on Glycogen, published in 1896, Dr. Charles Creighton gave the details of his observations on the character and functions of glycogen in the embryos of mammals, and showed how he had been led to regard it as the precursor, the temporary substitute, or the accessory of red blood cells.

In the second part of the memoir, published in 1899, he has described the distribution of glycogen in the invertebrates, the mode in which and the period when it is deposited in various examples, and has developed the view which he has been led to adopt. The solid carbohydrate starch or glycogen found in the tissues of arthropods, and in the author's opinion glycogen or animal starch is co-ordinate in value with the blood or lymph of animals. He finds it not unreasonable to look upon stach as a fixed instead of a fluid nutriment. A substance resembling starch in composition but differing from it in giving a red reaction with iodine is in many low animals. Evidence is adduced from the observations of chemists and biologists showing how much attention has been given to the subject, and how wide is the distribution of animal starch. It has been found in protozoa, less distinctly in cestodera and worms, very clearly in the chief families of mollusks, and in arthropods. In the higher mollusks which have been the special object of the author's investigations, it is accumulated around the vessels and is contained in the large plasma cells, around those of the nerve centers and of the digestive and nerve tracts, or exactly in those parts which are nearest to the sources of supply and those in which the most active processes are taking place. In the arthropods it is also found in the organs of reproduction, as well as elsewhere, at certain stages of development. The plasma cells in the mollusks mentioned here, with their contained zo-amyline, occupy the position of the vascular sheaths of the vertebrates; and as the tissue in the whole of experiment the lymph which circulates in the perivascular sheath, so the tissues of the mollusc show their nourishment from the carbohydrate stored up in the plasma cells. In the vertebrates the original vascular system of the mollusc series no longer contains a lymphlike fluid, but is filled with red blood.

M. Boucheard reports to the French Academy of
Sciences having found that an animal gorged with fat and then deprived of food may still gain in weight, the increase resulting from the oxidation of the fats of the tissues, a glycogen, which accumulates in the muscles instead of in the liver.

J. Skene has found reason from results of experiments with liver extract to believe that the proteid undergoes a disintegration in the liver which leads to the detachement of a molecule of a sugarlike substance containing nitrogen, and this by a subsequent change in a liver ferment undergoes further changes terminating in the production of glycogen.

Similar conclusions have been arrived at by Dr. Berkhard Schoendorff, while M. C. Bouchard and M. A. Desgrez have satisfied themselves that muscle glycogen can be formed in the body from incompletely oxidized fats. The experiments of R. Chisson and C. A. Noel have been of considerable interest and valuable further work is expected from these laboratories.

It is certain that glycogen is formed from leucine, and derived from leucine, and Dr. Martin Jacoby has pointed out that there are probably many fermentations in the liver.

Secretion.—Physiologists have not been agreed as to whether a connection exists between the lymphatic and the blood vascular systems. A number, including Mascagni, Halliburton, and others, have shown that the veins in the neck, while a considerable number of others have observed cases in which the lymphatics directly opened into the venous eave, the portal renal, axillary, and internal iliac veins. Mr. Cecil R. Leaf has now recorded in the Lancet other examples of connection between the lymphatic and venous trunks. He has found that direct communication exists between the small arteries in the thorax and the lymphatic vessels in that region, although the connection is not so free as between the lymphatics and the veins.

It has been known for some time, he says, that the lymph often assumes a reddish tint, and that the veins and vessels further away from the exit of the blood from the body have a slight, and reddish color, which would materially quicken the movements of the lymph. However, it is only right to add that the arteries apparently do not communicate directly with the lymphatics nearly so frequently as do the veins. If the communications between the veins and lymphatics can be shown beyond a doubt to exist, it will mean that the body—and already they have been observed to exist to a very considerable extent—it follows that we ought to regard the venous system as a part, and that no inconsiderable part, of the absorbent system.

On examining the extract of the adrenal capsules Mr. John Abel found that by the employment of a slight excess of albumen and a 10-per-cent. solution of soda he was able to extract a fluid which is present in the proportion of about 1 part in 10,000 parts of the gland substance, to which he gave the name of epinephrin. This substance is a base which has a bitter taste and produces a slight local anæsthesia. Its formula is C<sub>11</sub>H<sub>17</sub>N<sub>4</sub>O<sub>3</sub>. It is precipitated from its acid solutions by picric acid. The author found that when solutions of the salts of epinephrin are applied to the normal conjunctiva or to one which by stimulation is more or less congested, the vessels immediately contract and the contraction persists for a long time.

The same holds good for other mucous membranes. It should be observed, however, that this is true only of the salts of epinephrin, and that the base itself has very slight, if any, physiological properties. The salts when injected into the veins cause great and persistent increase of blood pressure. They first excite and then paralyze the peripheral and sphincter nerves, and when the substance is given in larger doses, the heart is paralyzed. Evidence has now been obtained that the blood returning from the adrenals also contains the substance that raises the blood pressure, and that this is not present in the blood of any other part of the body. Its formation appears to be under the influence of the splanchnic nerves, which may thus be regarded as containing secretory as well as vasodilator fibers. Electric stimulation of the splanchnic nerves occasions an increase in the production of epinephrin.

The author further considers the relations of epinephrin to Addison's disease.

The controversy concerns the theory of Horbaæzewski, that uric acid is derived from the disintegration of proteids containing nuclein, notably of the leucocytes, made by Dr. Carstairs C. Douglas, of Glasgow, from the results of 95 simultaneous quantitative determinations made upon 7 persons in good health and 35 persons suffering from organic disease of the liver. It includes that on the whole there is a discrepancy between the amount of uric acid thrown off from the body and the number of leucocytes, and his observations do not support the view that normally the source of uric acid is found in the nuclein of the leucocytes. His analyses showed, among other things, that uric acid varies much less with the diet than does nuclein.

The results of an investigation described by Francis W. Goodbody go to show that sodium salicylate causes an increase in the quantity of urine excreted and in its specific gravity. The latter increase is ascribed principally to the augmented elimination of the nitrogenous substances, especially ammonia, and the author has also shown that sodium salicylate causes an increased breaking up of proteids in the body, and that it has no influence on general metabolism so far as absorption of the proteids and fats is concerned, notwithstanding its known cholagogue action.

Assuming that in plants and the lower animals the simple inorganic compounds of phosphorus are used to synthesize the sugar and the fats, and that this remains true of the higher animals, an investigation by one of the authors having shown that a similar synthesis is effected in fishes, Noel Paton, J. C. Dunlop, and R. S. Atchison have undertaken an investigation of the progress of such synthesis in mammalia—of which little is known. As a preliminary to the study of the metabolism of phosphorus a knowledge of its channels of absorption and secretion was required. Carrying on their studies upon the dog and the goat, the authors found that in the normal condition, with the animal in phosphorus equilibrium, the absorption and excretion of phosphorus by the intestines were in normal proportion. The excretion of phosphorus by the bowels was diminished to meet the demands of milk formation; while in the dog during lactation a diminished excretion of phosphorus in the urine was remarked. The milk of the goat contained a very high proportion of phosphorus, while the percentage of organically combined phosphorus was lower than in the milk of the human subject or of the cow.

The administration of the soluble glycero-phosphate of lime by the mouth causes no increased excretion of phosphorus in the urine of the dog and in the urine and milk of the goat.

The general conclusion from a discussion in the British Medical Association of the origin of uric acid, in which Prof. W. D. Halliburton...
Prof. D. Milroy, Dr. Alexander King, and others participated, appears to have been that it is double, a part of the acid being the result of the disintegration of the nucleus taken in with the food, and a part of the alkaline being the constructive changes of the nucleus contained in the body; or, as Prof. Halliburton expressed it, part of exogenous and part of endogenous origin. The latter portion is derived from the metabolism of the leukocytes that are so abundantly formed after the ingestion of food.

The research of Prof. A. Herzen, of Lausanne, into the function of the spleen is reviewed in the Lancet by Henry T. Bellamy, who finds that from the bulk of the evidence collected by M. Herzen there is little room for doubt that, apart from the haematopoietic and possibly allied functions possessed by the organ, it furnishes a product of "interrupted" which proceeding from the pancreas the transformation of its inert zymogen into active trypsin.

After a long series of experiments and observations, E. O. Hultgren and O. A. Anderson report that extirpation of the suprarenal capsules in cats, dogs, and rabbits occasioned death within a few hours, but removal of the suprarenal glands on the side was followed by the animal becoming thin for a short period. Retention of a small fragment was found sufficient to preserve life, but when both organs were removed death supervened, with great fall of temperature. The metabolism of albumin, the quantity of haemoglobin, and their physiological activity diminished, or, to use the term of Manasse, disintegrated, as far as the metabolism of albumin is concerned, by the organ, it furnishes a product of "interrupted" which proceeding from the pancreas the transformation of its inert zymogen into active trypsin.

After a long series of experiments and observations, E. O. Hultgren and O. A. Anderson report that extirpation of the suprarenal capsules in cats, dogs, and rabbits occasioned death within a few hours, but removal of the suprarenal glands on the side was followed by the animal becoming thin for a short period. Muscular System.—The physiological effects of creatin, a normal constituent of flesh, and one of the principal constituents of most meat extracts, and of creatinin, its anhydride, a normal constituent of human urine, and the value of these substances for the treatment of disease have been investigated with much pains by Prof. J. W. Mallet. From his experiments the author draws as his main conclusion that by far the larger part of the flesh bases ingested, if not absolutely the whole, does not undergo metabolism with the production of urea or anything else, but, on the contrary, is eliminated by the kidneys. In the case of creatin, it is excreted unchanged, while creatin is changed wholly or very largely into creatinin. The fact of the quantitative recovery of creatin and creatinin from the urine evidently accords fully with the generally accepted belief that these substances can not serve to build up proteins, and are therefore not to be regarded as forming food materials. On the whole, the investigation is unfavorable to the idea of the creatin of living muscle being the antecedent of urea in nitrogenous metabolism. Admitting that it is still an unsolved problem what nitrogenous substance or substances may properly be regarded as fundamental in forming food materials, and that the researches into the relations between muscle proteins and urea, it may fairly be considered established for investigation that the so-called flesh bases creatin and creatinin occurring in food may be entirely disregarded as sources of energy. In the discussion of the results of analyses of meat and forms of food prepared from it, such as soups and the like, it is evidently wrong and misleading to confound together, under the head of protein or proteid materials, the proteins proper, capable of building up the nitrogenous tissues of the living body, and of furnishing muscular heat and energy by oxidation, and these small débris, or as they are called flesh bases, which, although part of the food, are not available for either of these important purposes. Even if viewed in the light of nerve stimulants only, and thus to be classed with tea and coffee as adjuncts to food rather than as true food itself, meat extracts, so far as the flesh bases creatin and creatinin are concerned, are shown by the investigations to be very much less active as to their effects upon the nervous system than they have been commonly reported.

Experiments made by Prof. Angelo Mosso with his ergograph indicate that in soldiers after forced marches the power of the muscles of the arm and the hand is diminished; so that, as Ito has observed, voluntary exercise of the psycho-motor centers produces increased activity of both sensory and dynamogenic centers, exhaustion of one center, such as that affecting movements of the lower limbs, causes depression of all centers, and has a tendency to become generalized. Prof. Mosso suggests that fatigue is due to some toxic entering the blood current.

Prof. Bellamy has observed that the integrity of the psycho-motor centers produces increased activity of both sensory and dynamogenic centers, exhaustion of one center, such as that affecting movements of the lower limbs, causes depression of all centers, and has a tendency to become generalized. Prof. Mosso suggests that fatigue is due to some toxic entering the blood current.

In his Croonian Lecture on Degeneration of the Nervon, Dr. Frederick Nott expressed himself in favor of the view that the terminal arborization of the axis-cylinder process of a neuron does not anatomically fuse with the cell body and dendrons of another, and that trophically and genetically the two are independent; yet that there is a physiological connection between adjacent neurons. He also pointed out that the integrity of the sensory moiety of a reflex as important as that of the motor segment—in other words, that sensation must be acute and perfect if the corresponding muscular movements are to retain their delicacy and precision.

Nervous System.—In a Leonard and Raper Memorial Lecture, at the Royal Hall, London, on the Effect of Alcohol on the Human Brain, Victor Horsley limited himself to the effects of small doses of the drug. He began by saying that all drugs had what is called a selective action, insomuch as they act by virtue of a chemical affinity with the different parts of the structure, and that the effects of alcohol on these same parts differed. In regard to the effect of small quantities of alcohol on the central nervous system it was necessary to consider the results of the drug on the higher psychical functions of the brain—that is, on ideation or the intellectual thinking apparatus. The effect on the centers in the brain for voluntary action and the effect on the cerebellar membrane for
PHYSIOLOGY.

Kraepelin, who had made the most accurate investigations of this subject, had found that the simple reaction period was slightly quickened after the ingestion of a small amount of alcohol, but that very speedily a slowing began, and became more marked, and as long as the alcohol was in active operation in the body; so that the time spent by the complex reaction—or a reaction in which there was an association of ideas—was never quickened by the alcohol. On the whole a very distinct and depressing effect on the highest centers of the brain was produced. With reference to the effect of alcohol on muscular movement, it should be remembered that the energy producing a single contraction of a muscle was manifested in an intermittent manner; it was not one impulse, but a succession of impulses. Under the influence of alcohol the normal summation of these impulses was interfered with, and what was known as a tremor, a shaking motion, was produced. Kraepelin's dynamometer measurements of the effect of small doses of alcohol on the voluntary centers showed, as in the former case, that an apparently additional amount of work was put out at first, but the acceleration or stimulation was quickly followed by the lowering or depressing effect. That this was a process of fatigue was evidenced by the marked contrast with this. No lowering effect is seen when tea is taken beyond the one due to normal fatigue common to all experiments. The apparent acceleration induced at first by alcohol has not been explained, but it may result from a loss of control. It "was not to be regarded as a real thing but as an evidence of the paralyzing and deleterious effect of alcohol." The next subject for consideration was the influence of the drug on the cerebellum. A close association has been found to exist between the muscles of the lower limbs and this organ, and one of the further effects of alcohol in slightly larger doses than those had been under consideration was to destroy the special function of the cerebellum and produce a sensation of tremor and weakness in the legs, causing the victim to stagger and find standing difficult. While it is extremely difficult to demonstrate scientifically the immediate chemical effect of alcohol on the nerve cells, it has been ascertained that under its prolonging action on the brain, the pyramidal cells disappear, the protoplasm of the body of the corpuscle loses its distinctive structure, and the nucleus is very greatly altered and distorted in shape. Under the toxic influence of tonic alcoholism the dendrites of the pyramidal cells exhibit swellings and shrinkages. A remarkable constancy of degeneration in the alcoholic person's brain is widespread pigmentation in the nerve cells—an exaggeration of a normal fact, accompanied by shrinkage of the protoplasm of the cell. The author gave as his conclusion that from a scientific point of view the contention so often put forward that small doses of alcohol, such as people take at meals, have practically no pernicious effect could not be maintained.

It is an established fact that the extinct mammalia of the middle and lower Tertiaries had, as compared with their nearest living congers, an enormous proportion of the brain. The result of this was that in comparing anthropoid apes and man. The significance of the difference has been studied by Prof. E. Ray Lankester, who regards the fact as associated with the development of the faculty of educability. The earlier animals were possessed of the instincts and the faculties of performing certain acts appertaining to their species, but were quite incapable, or nearly so, of individual development. The growth of this faculty—which the author calls educability—is associated with increase in the size of the cerebrum. "A mere spoonful of cerebral tissue is sufficient to carry abundant and highly efficient instinctive mechanism from generation to generation. The only way in which the brain may become elaborated in the individual as the result of the individual's experience of surrounding conditions a very much larger volume of cerebral tissue is needed." Prof. Lankester applies this view to biological development and evolution, and to the question of the inheritance of acquired characters.

In an evening lecture, delivered at the meeting of the British Association, Prof. F. Gotch said that animal electricity, if strictly interpreted, had a most extensive scope commensurate with all forms of animal life. This large scope gave the study of electro-physiology all its importance, an importance accentuated by the belief that electrical disturbance was the safest index as to the state of the living molecular poise, the poise which obscured, if it did not constitute, the mystery of life. The study had, however, a special significance in connection with one class of living structures, namely, those which constitute the nervous system. There was no doubt that organs of an essential nervous nature, destruction of which is the production of electrical disturbance. Of these the author considered especially the electric organs of certain fishes, concerning which he discussed four successive questions: First, what are the peculiar structural features which all electrical fish show, and how far account for their extraordinary powers? Second, what are the effects of electrical shocks which these fish are able to give? Third, what are the characters of the relatively insignificant electrical effects produced in a nerve when traversed by a nervous impulse; and, fourth, whether the two classes of electrical effects, those of the electrical fish and those of all nerves, could be regarded as fundamentally the same phenomena, in spite of their apparent dissimilarity. After describing the electric organs of fishes and their power, the speaker said that the nerve electrical effect was very similar to that present in each disk of the electrical organ. He then brought forward evidence to show that there must be an electrical disturbance in the nerve endings of an organ which is the cause of electrical phenomena produced outside the nerves. The astounding effects produced by the electric organs of fishes thus have their physiological counterparts in the nerves, and in this as in other departments of natural science Nature shows no gulf.

Studies of the centripetal and centrifugal medullated nerve fibers arising in the spinal ganglion of the mammal were made by H. H. Dale for the two purposes of determining the relative number of medullated fibers centrally and proximally of the spinal ganglion and of finding the relative number of the fibers of any given size in the same situations. An exact knowledge of these points would go far toward deciding whether any or all of the cell processes divides in the ganglion or not.
after its exit from the same; and whether the central and peripheral processes of any or all of the spinal ganglion cells are unequal in diameter. The author's conclusion is that in the cat there are more medullated fibers in a nerve immediately distal to the spinal ganglion than in the nerve immediately proximal to the ganglion; that is, that there are a few more medullated fibers in the trunk than in the nerve roots. The excess is on an average about 0.5 per cent. of the total number of nerve fibers. The excess nerve fibers in the trunk as compared with the root fibers apparently caused by fibers not more than 6 μ in diameter. These fibers are in all probability medullated fibers which pass to the trunk by way of the gray rami communicantes, and end in connection with the vessels or other tissue of the ganglion. Allowing for these fibers, the author finds that the number of fibers close up to the ganglion is the same as the number several millimeters from it both proximately and distally—that is, none of the medullated fibers given off by the ganglion cells end in the nerve or roots close to the ganglion. There are more fibers of 6 μ and upward in the anterior root close to the spinal cord than in the anterior root close to the ganglion—or, in other words, the fibers smaller in diameter give place to larger in diameter as the nerve passes from the ganglion towards the spinal cord. The transition appears between the size of the nerve fibers in the roots and that of those in the trunk. Probably, then, the posterior root fibers also taper slightly. The tapering of the motor fibers makes it impossible to draw conclusions as to the relative size of the central and peripheral processes of the spinal ganglion cells, but the evidence against the view that the central processes are in general conspicuously smaller.

The objects of certain experiments described by J. N. Langley were to ascertain the extent of the pilomotor reflexes which are obtained on stimulating different portions of the sympathetic chain, to determine the mechanism by which the reflexes are produced, and to point out certain deductions which are to be drawn from the facts as to the arrangement of the preganglionic nerve fibers. It was shown that each efferent nerve fiber (preganglionic nerve fiber passing from the spinal cord to the sympathetic) divides into branches and supplies several, probably many, nerve cells. The nerve fibers composed of the preganglionic fibers of the superior cervical ganglion, the ganglion stellatum, and the coccygeal ganglion, may send all their branches to one ganglion. The fibers which run to single symmetrical ganglia send their branches to more than one ganglion. In the lower thoracic, the lumbar, and the sacral regions of the sympathetic in the cat the great majority of the fibers send branches to three ganglia; a few send branches to four. In the corresponding regions of the dog the single nerve fibers appear commonly to send to four ganglia, and probably to more. In the upper cervical region many of the preganglionic fibers run to five or six ganglia in addition to the sympathetic chain ganglia. The sensibility is not lost upon severing the spinal roots. The ganglia to which a single nerve fiber gives branches are ordinarily consecutive. But if a ganglion contains no nerve cells of a given class, the fibers of this class will ordinarily pass over the ganglion without making connection with it, and send their branches to the next ganglion peripheral to the point of degeneration in the nerve of this class. Stimulation of a preganglionic fiber at any part of its course sets up a nervous impulse which travels to all the branches of the fiber and stimulates the nerve cells with which the branches are connected. This stimulation peripherally of a fiber of one or more branches will excite nerve cells centrally in one or more ganglia of the point stimulated, and will produce a preganglionic axon reflex. The author thinks that these results support the view he had previously put forward that no reflexes save axon reflexes occur from the ganglion of the sympathetic system. As a result of a study of the regeneration of the preganglionic fibers of the sympathetic system, the superior cervical ganglion in a cat was excised, leaving a gap in the nervous tissue of less than a centimetre. The cervical sympathetic nerve did not recover its function for a year and eleven months. The result was regarded as establishing a possibility that the preganglionic fibers are unable to form direct functional connections with the peripheral tissues. Direct stimulation of the sclerotic, on the side on which the ganglion had been excised, did not give local dilatation of the pupil. This had already been observed. The fact affords evidence that all the fibers for the radicular contractile substance (dilator muscle) of the pupil pass through the superior cervical ganglion and have no nerve cells on their course beyond this ganglion. Although the cervical sympathetic did not recover its function, the nerve strands beyond the place of section contained numerous normal nerve fibers. After section of the hemilumbar nerve of the cat the majority of the fibers contained in the entire division was found for thirty days, a very slight return was found in thirty-five days, and a considerable though not complete return in forty-eight days. Broadly speaking, the pilomotor fibers in regenerating establish functional connection, first with the nearest ganglion, then with the next, and so on until they are made up of fibers from their cells, a marked tendency is observed for the normal complex relations to be re-established. But some abnormal connections are made. On the side away from the origin of the fibers from their nerve cells, it appears probable that one factor in bringing about a re-establishment of normal connection is a tendency of the several cut fibers to grow to a certain definite length—in other words, that the axon process of each nerve cell, whenever it is cut, will in favorable conditions grow to its original length, neither more nor less.

It was observed by Von Monakow that after hemisection of the spinal cord just below the pyramids, the nucleus of Deiters underwent complete atrophy on the same side as the lesion. This author concluded, from an experiment on a single animal, that the nucleus of Deiters has no special connection with the eighth nerve, but is situated on the path of the sensory or afferent fibers passing from the spinal cord to the brain. Ferrer and Turrer, in 1893, obtained in cases of cerebellar lesion complicated by a lesion of Deiters's nucleus, degeneration of some fibers in the antero-lateral region of the cord on the same side as the lesion, and the fibers in question were probably derived from the cells of Deiters's nucleus. In this view they were supported by the observations of Risieau Russell, while they were opposed by the conclusions of Marché and Thomas that removal of the cerebellar hemisphere alone without any injury of Deiters's nucleus affected the degeneration of some of the fibers of the antero-lateral region of the cord. Such fibers had been recognized by Löwenthal as undergoing a degeneration below a hemisection of the upper part of the spinal cord. A further investigation of the subject has been made by R. E. Lloyd, the result of which goes to show that hemisection of the upper part of the cord is followed
by chromatolysis of the cells of Deiters's nucleus on the same side as the lesion, and to render it probable therefore that the fibers of the antero-lateral descending tract are derived from the cells of that nucleus, and not in the anterior horn.

Nicolas Alberto Barbieri has found that in cats, dogs, rabbits, and guinea pigs the unipolar or bipolar cells of the spinal ganglia do not form any connection with the nerve tubes of the posterior roots. These cells may be dissolved by chemical means without altering the form, contour, or even the continuity of all the tissues of the posterior roots. Each spinal ganglion contains from 200 to 500 cells, while the number of nerve fibers that traverse the same ganglion is from 1,000 to 3,000. This number is about double that of the nerve fibers found in the anterior roots, which varies from 500 to 1,500. All the nerves of spinal origin contain a far larger number of fibers derived from the radicular ganglia than from the posterior root. Besides the ordinary fibers of the posterior roots, others of smaller diameter may be found enveloped by a thinner sheet of connective tissue, with less granular, more transparent, and almost limpid contents. The medullary and ependymal origin of the sympathetic is established to the satisfaction of all observers. The evolution and relations of the small fibers which are described in the paper. The cells of the spinal ganglia are found to be cells of the sympathetic from which the rami communicantes proceed. The whole number of the nerve fibers of all the roots of the spinal nerves is in the rabbit about 70,000, and the number of nerve fibers of the whole animal is approximately in the same. All the tissues of the animal, while it is too large to come into relation with the surface of the section of the cocle du bulbe. The posterior roots spring from the posterior collateral fissure by small fasciculi. Each fasciculus contains a certain number of nerve fibers, and several fasciculi form a root, and several roots form a radicular root. All the radicular roots or the spinal filaments separated from one another by the spinal dura mater are found on the superior surface of each spinal ganglion. The posterior roots penetrate the ganglion largely provided with connective tissue, or in the condition of a nerve. The anterior roots which arise from the ventral collateral grooves have an analogous origin, and unite eventually by a narrow way to form the great anterior fibres of the mixed peripheral fibers. The mixed peripheral nerve of each pair of spinal nerves, after having given rise to the small meningeal branch, divides into two branches, the one anterior and large, the other posterior and small.

It has been observed that after reunion of a divided nerve by means of suture, function may return sooner or later, and that this restoration of function implies not only simple return of sensation and the capacity to make voluntary movements, but also the re-establishment of complete localization of sensation and of co-ordination of movements. This has been shown in a series of experiments in which a divided nerve was brought to the two segments into as close an approximation as possible to their old relationship. Thus the perfect recovery of localized and co-ordinated functions might perhaps be due to a majority of the fibers being so placed in position for a union of corresponding ends to be established. This was the conclusion held by Dr. Robert Kennedy, of Edinburgh, in three experiments on dogs, in which the celiac nerve was divided at the level of the trochanter, and in two of them rotated before suture to the extent of a semicircle, while in the third experiment accurate coaptation by suture in normal position was effected. In the matter of recovery of function, the three experiments followed a practically identical course. Under microscopic examination the central segments showed the character of the normal sciatic nerve with the exception that the lymphatic spaces were somewhat extended. The peripheral segments agreed in showing no old nerve fibers in any part examined either close to the seat of reunion or in the terminal divisions of the nerve. In their place were abundant young nerve fibers with well-defined character. All the motor fibers of the degenerated remains of the young nerve fibers were found to be of the so-called Wallerian degeneration had taken place. The eiacoteral segments were also all three practically identical in structure. In no case could continuity of nerve fibers from the central to the peripheral segment be traced. The author's conclusions were (1) that after section and immediate coaptation of a nerve restoration of conductivity and of voluntary function may be effected in a few days; (2) that this early restoration of conductivity need not be the result of the reunion of the old nerve fibers—that is, reunion by so-called first intention, or without Wallerian degeneration, but may be the result of regeneration of young nerve fibers in the peripheral segment; (3) that in the cases where reunion of the segments are regained equally soon, whether the two ends of the divided nerve are united as accurately as possible, so as to bring the corresponding ends of the nerve fibers into as near contact as can be attained, or whether, previously to reunion, the peripheral segment is twisted so that when united the central segment noncorresponding ends of the nerve fibers are brought into contact; (4) that in the latter case it is left doubtful whether the restoration of function is due to the re-establishment of the old paths by decussation in the nerve celiac or to the reunion of ends of nerve fibers which do not correspond but which happen to be brought into apposition; (5) that in suturing a divided nerve no trouble need be taken to secure the coaptation of the two segments in the old relationship, for the simple approximation of the two ends, no matter in what relationship, seems to be all that is required.

In experiments on the work of the spinal nervous centers Mlle. J. Ioteyko has found that the inhalation of ether, carbonic oxide or chloroform, produces a depression of the fatigue possessed by the terminal organs—giving twice the work in response to the same excitation; and, second, that it is capable of remaining excited four times as long as the muscle without betraying any sign of fatigue. In short, the results obtained by the author indicate a great proportion of resistance in the special nervous centers, and go to show that they are able to furnish, without fatigue, an amount of work at least four times more considerable than the terminal apparatus.

From studies made upon rabbits, it is concluded by Ivor L. Tuckett that after section of the vagus nerve usually there is no return of function; that the recovery is more rapid and probably more complete in the case of fibers supplying striated muscle than of those supplying cardiac or unstriated muscle; that the inhibitory fibers recover function at least as rapidly as the motor fibers; that the recovered function is that of "a long after-effect," even at an end of three years, less than normal.

Prof. Hitzig, of Halle, discussing, in a Hulingson Jackson lecture before the Neurological Society, the localization of functions in definite areas of the cortex of the brain, advocated the view that such centers exist, and further contended that two sets of motor centers might be
distinguished—viz., a lower, subcortical, or reflex set called into play by impressions of hearing, vision, or other special senses; and a higher, cortical set, concerned with conscious, arbitrary motion.

The sheath of Schwann of medullated nerves has been shown by Dr. A. Gudden to be genetically an exogenous and quite foreign mesodermal formation. The observation was made that it did not in the first instance closely embrace the medullary sheath, but that the space between the two was gradually filled up by the growth in girth of the axis cylinder and of the medullary sheath. 

Special Senses. A case of the cerebral lesions observed in an instance of complete acquired color blindness while achromatic vision was retained is described by Dr. George Mackay and Dr. J. C. Dunlop, of Edinburgh. The patient, a man of great mental capacity, sixty-two years of age, whose color sense had always been good, and who especially appreciated the beauty of flowers, having become anemic, all at once experienced serious defects in his eyesight, finding himself unable to read his letters or to recognize vivid colors in some children's dresses. On examination, Dr. Dunlop found him completely color blind, while his distant form sense was good. The eyesight of the right eye was normal, but every color appeared gray to him. The diagnosis was double homonymous hemianopsia, complete for color sense, incomplete for form sense about the point of fixation. During the two months following the examination the patient acquired greater facility in reading, but had no recovery of color sense. In little less than four months from his attack he suddenly developed a right-sided hemiplegia, and in five days afterward died. The post-mortem examination disclosed an atrophy of the temporal occipital convolution on both sides, affecting the lower edge of the occipital radiation. This atrophy was found to be due to a hyaline degeneration of the nerve fibers. M. Lloyd Morgan, having a modified method, has found that lateral difference of place that is just perceptible by vision has been given as from about 50 to 1° angular magnitude. The method, being a modified method, has found that lateral difference of place of about 7" can be directly perceived. In the old method of determination, employed by Helmholtz and others, two parallel lines were brought together until they were just finally distinguished as two. In the experiments of Prof. Stratton, instead of using lines or points side by side, lines were so arranged end to end that the upper of two perpendiculars could be moved at will to the right or left, while still remaining exactly parallel to the lower line. The observer had simply to judge whether the upper line was continuous with the lower line, or to which side it was displaced. The method, however, has the limit of space distinction under these conditions, is interesting as explaining the experiments of Bourdon, according to which a difference of position amounting to only 5" gives a perceptible stereoscopic effect.

In a study of the effects of repeated detonations on the ear, made during the firing at a camp in Natal, the German Dr. Müller examined 96 tympanums before and after the exercise. He observed notable alterations in 44 cases. Seven times multiple hemorrhages were remarked, manifesting themselves as minute droplets of blood, the flow in one case being as large as a lentil. In 37 other cases there was merely a diffused, more marked redness on the margin of the tympanum. As a rule, the ears on which alterations were remarked had been previously not quite normal. With 40 subjects the distance at which the tuning fork was heard was diminished. Rings were always given positive results. In 26 cases words spoken in a low tone were not heard at 8.6 metres, the normal mean. Only four subjects complained of hummings and tinnitus. The author believes that serious lesions are extremely rare with men who perform their two years of service. On the other hand, officers and underofficers whose duty it is to give instructions in firing, having long been partially deaf, and are afflicted with hummings. Retraction and bluntness of the tympanum are detected in such cases. Dr. Müller draws the conclusion from his experiments, that only men with perfectly sound ears should be received in the artillery.

The experiments of Weber on the least observable differences in the action of weight as interpreted by sensation led to the conclusion that to obtain an observable difference in sensation we must always add one third. Fechner, assuming that the increase is always the same proportionately, deduced the Weber-Fechner formula by stating that if sensation be measured in quantitive terms, which may be thus expressed. To obtain an arithmetic series of sensations a geometrical series of stimuli is required. To give the former, equal increments of sensation are added; to obtain the latter, we must multiply the successive stimuli by the common factor. C. W. Strum, on the number of carefully conducted observations were not in accordance with this formula, has made continued studies of the subject, which are described in the Psychological Review and in Nature. From them he deduces a modification of the Weber-Fechner formula as follows: For the former, equal increments of stimulation are in geometrical progression. This differs from the Weber-Fechner formula in that it assigns the geometrical progression to the successive increments of stimulus.

Miscellaneous.—Researches by Prof. F. T. Paul on the development of dentine confirm the view that the process is practically similar to the formation of bone in membranes. Among the points brought to light is the fact that the young pulp contains a complete fibrous basis composed of delicate wavy fibers interlacing in every direction. These fibers are found to be directly derived from the cells, and are of a gelatin-yielding character. It is also shown that the first layer of cells found on the surface of the pulp beneath the ameloblasts are not odontoblasts, but develop into fibers, and on the actual surface these fibers blend together and form a membrane which lies just beneath the ameloblasts. The later layers of cells grow successively, and insert themselves, as it were, between these fibrous surface cells, the nuclei of the latter undergoing atrophy. The odontoblasts are represented as being invested with a complete network of fibers derived from the connective tissue.
of the pulp, these fibers meeting over the dentinal end of the odontoblasts so as to form a thin fibrous layer between these cells and the dentine matrix. The matrix is supposed by the author to be secreted by the odontoblasts into this layer of the pulp.

As results of his studies of the development of the primordial cranium, Dr. Giuseppe Levi, of Florence, concludes that the first rudiments of the primordial cartilaginous cranium in man occur in the form of isolated groups of closely compressed connective tissue, smaller than that which forms the membranous primordial cranium. A certain homology appears between these aggregations of cell groups and those of the future bone; but there is no homology between these rudiments of the skull of man and those described in mammals as parachordals and trabecular.

The rudiments persist for some time, even after their conversion into cartilage, by the possession of a perichondrial layer. They do not all coalesce till just before the chondrocranium has attained its highest development, when the chondrocranium for the first time forms one continuous whole. In the order of formation of the rudiments, the prominence of the occipital bone is the earliest; after it follow those of the sphenoid and of the auditory capsules; and lastly that of the ethmoid.

The differentiation of the several rudiments, progressing with unequal rapidity, is, as a rule, most rapid in the latest formed parts, and it presents characteristic features in each case, advancing quickly in the cephalic region and almost contemporaneously throughout its whole extent, while in other instances it begins at a definite spot in a kind of cartilaginous nucleus and spreads uniformly outward. The enlargement of the rudiments is at first rapid, but afterward extremely slow. The development of the cranial region in man, that of the vertebral column. The histological features of the formation of cartilage are particularly identical with those of this column, while they are different from those of all other segments of the skull.

Moreover, there is one distinct rudiment of a vertebra—the occipital—which has a symmetrical origin and formation and, as such, a determinate number of vertebrae. The ossification region, like the vertebral column in the first stages of its development, is in connection with the chorda, but becomes distinct from it as the cartilage develops. These facts support Frolich's view that the occipital region represents the true spinal segment of the skull in man. "The symmetrical rudiments of the body of the occipital vertebra become the condyles of the occipital, the unsegmented portion represents the porio basilaris, and the lateral portion of the arch of the occipital vertebra the processus jugularis." Some changes of form take place in the development of cartilage through the rapid growth of mass of the rudiments and through alteration of the position of and relations between the occipital and sphenoid rudiments; and the floor of the sella turcica is the only segment of the skull which preserves its original position throughout the process of development.

In the preliminary experiments made by W. S. Hall, on the action of atropine on the heart, and on the effects of injections of extracts of nervous tissues, all the extracts used produced a fall of blood pressure, partly by their effect on the heart, and partly by dilatation of vessels in the splanchnic area. The effect was more marked in the greater proportion of gray matter in the tissue used. It was not abolished by the section of both vagi, but was abolished, as a rule, after atropine. The substance that produced the fall was not proteid, but was soluble in alcohol.

From the alcoholic solution the author always obtained yellowish-brown crystals of a salt of choline. Though the choline thus proved to be present was undoubtedly one cause of the fall in blood pressure, there were probably other substances that might be present as well, but they had not yet been fully identified; lactic acid was probably one. The depressor effect of lactic acid was not due to the formation of lactic acid and the fact of its alteration of the blood pressure, which is suggested, may account for those cases in which the fall was not completely abolished by that substance. Glycerin itself (1 in 20 of saline solution) generally produces a fall of blood pressure, which is not abolished by atropine.

The name spermine is given to certain needle-like crystals which Charcot noted for the first time in the blood of leuko-erythemics, which Leyden had discovered in the expectoration of asthmatics, and which Schreiner found in sperm, and which were analyzed, identified, and characterized by Poehl. The object of a research by Walter E. Dixon was to ascertain the effect of injections of spermine formed by the fact that the substance is responsible for the effects produced by injections of Brown-Séquard's fluid. It was shown by experiments made on cats that spermine produces a fall of blood pressure from which recovery is rapid and the normal level is soon reached. The effect is largely cardiac, but is also partly due to dilatation of vessels in the splanchnic area. The effect of the use of atropine is to cut out completely the fall of pressure, without, however, influencing the splanchnic dilatation. The vessels of the kidneys seem quite passive to the change of blood pressure. The effect on the splanic vessels is marked by the constriction of the splenic muscle. A stimulant effect of spermine is noticeable in the intestine as well as on the isolated strip of frog's stomach is also noticeable. Spermine produces a gradual rise in the body temperature. A close resemblance exists in the effects upon the heart and circulatory system of the action of choline and of spermine, and the two substances are chemically related. The fact that spermine depends on the fact that it is constantly present in all tissues of the body, and in certain pathological conditions (leuko-erythemia and some nervous diseases) is increased. It is said to be present in the normal animal in greatest quantity in the testis and nervous tissue.

The presence of arsenic in the body has been studied by M. Armand Gautier, who communicated a paper on the subject to the French Academy of Sciences, Dec. 4. The author found this substance normally present in the thyroid gland in the proportion of 0.075 milligramme to 100 grammes of the dried gland. It is found also in the skin, hair, and nails, and in ox horns; in the mammalian animal, arsenic is a constituent of milk which it elaborates. The brain of the fetus contains arsenic, as also does the brain of the newly born infant, but no trace of it was found in the adult brain of hospital patients. It also occurs in the blood, and was not found in the liver, pituitary, and spleen, but was present in the heart, intestine, and kidneys. The latter fact of considerable importance, as it bears upon toxicological researches, for there results from it an immediate consequence that if arsenic is found at any time in the stomach or an intestine it is not normal.

The remarkable changes made in recent years in the diameter and velocity of rifle bullets have
been followed by as remarkable changes in the character of the wounds produced by them. The subject has been experimentally investigated in the case of wounds inflicted in the South African War by Sir William MacCormac, who has been aided in his study by the light of observations which he made during the Franco-Prussian War. According to a summary of the author’s observations given in the Lancet, the damage caused by the modern bullet, especially by the Mauser bullet, can not be compared in severity with that inflicted by the needle gun or the chassepot. The projectile bores a small clean hole right through the part, and the exit opening can hardly, if at all, be distinguished from the entrance. The wounds are on the whole aseptic, and heal readily under a simple antiseptic dressing. When only the soft parts of a limb are perforated and no important vessels have been torn, the shock at the time of infliction of the injury is slight, and recovery is rapid and complete. Even when a bullet has penetrated the chest, the cells resumed their hole through it without any, or with only a very little, splintering. This is naturally more common in the case of flat bones, such as the scapula, than in the long bones; but it has also occurred in the case of the bones of the limbs. In many instances, even when important structures have been perforated and the tissues of the wound walls have resulted. In one case where the direction of the wound indicated that the bullet must have pierced the stomach, no symptoms of any such injury appeared. In another case, where it seemed almost certain that the colon was perforated, while obstrnate constipation followed the injury, the peritonitis of the colonic wound in the region of the small intestine resulted. Nevertheless, the peculiar effects of this slight bullet is the very slight hemorrhage resulting from the perforation of the lung. A little more hemoptysis may result, but it soon ceases and convalescence ensues. Even when a comminuted fracture of a bone has been produced, complete consolidation of the broken bone may result. A slight external wound, produced by the exit of a bullet, that a slight synovitis may follow. These effects are very different from the havoc produced by a large-bore bullet.

"Plastic activity" is the term used by M. L. Ranvier to denote a phenomenon of change of form exhibited by cells in contact with an air bubble. He has shown that the fluid contained in the serum of a rat which contained some air bubbles, the author noticed that the lymphocytes of the fluid moved toward the bubble, and on arriving at their surface became flattened, just as the cells would have done if they had impinged against a solid substance. When the temperature was allowed to be increased, and that of the joint shell of only a spheraloidal shape; but on increasing the temperature they again became flattened. He regards the change of form as a consequence of the activity of the cell—that is, as a vital phenomenon, and looks upon it as showing that cells are highly sensitive and possess extremely delicate motor reactions.

By means of a process described by F. G. Hopkins a crystalline albumin may be separated from egg white which upon repeated fractional crystallization shows absolute constancy of rotatory power (30.7 °) and a constant proportion of sulphur. The product is obtained with great ease and facility, and the yield is 50 grammes and upward per litre of egg white. The albumin has the percentage composition: Carbon, 52.75; hydrogen, 7.12; nitrogen, 15.43; sulphur, 1.57; oxygen, 23.13. It is obtained practically ash free. Albumin crystals obtained by the use of ammonium sulphate may, as was shown in the investigation, be washed free from sulphate by means of a saturated sodium chloride solution containing 1 per cent. acetic acid, the crystals meanwhile retaining their form and their solubility in water. The crystals, being thus freed from adherent sulphate and dissolved in water, coagulation of the dissolved proteid liberates no further trace of sulphur. It is therefore unlikely that ammonium sulphate enters into the formation of the original crystal.

The results of two experiments made by John Haldane to test the supposition of Helmholz that carbonic oxide is oxidized or otherwise destroyed in the living body of the entire negative, and the author was convinced by them that no destruction of the kind takes place to any appreciable extent.

Among the more notable books of the year on physiology are the two important cyclopedias of Prof. Schäfer, on the lines of the Handbuch der Physiologie, which have been added to the hands of experts, of Prof. W. H. Howell, of Johns Hopkins University, who has been assisted in the preparation of the work by several American physiologists of repute; one edited by Prof. Richet, of Paris, to extend to nine volumes, of which four are completed; the second volume of the standard Physiological Textbook of Professor Richet and Prof. Doyon; a text-book by Dr. Winfield Hall, of the University of Chicago; new editions of the Manuals of Weller, Stewart, and Starling; and a translation by Miss Emma Bistlein of the well-known text-book of Storr.

**PORTO RICO.** an island of the West Indies, formerly a colony of Spain, ceded to the United States by treaty signed at Washington December 10, 1898. In the beginning of 1900 it was under military rule until Congress should provide for the establishment of representative civil government. Gen. George W. Davis was the military governor.

**Area and Population.**—The area of the island is 13,888 square miles. The population in 1887 numbered 399,022 males and 399,554 females. In 1899 the total population was estimated at 957,000.

**Commerce.**—Since the tariff relations with the United States were settled commerce has increased rapidly, although the results of war and the hurricane of 1899 have lessened for the present the value of the exports of the island. Exports from Porto Rico into the United States were $3,179,827, already double as much as in 1895, and the exports from the United States to Porto Rico were $2,685,848, nearly 50 per cent. greater.

**Political and Economical Reconstruction.**—The general condition of Porto Rico in the first period of American rule was unfortunate. The war had paralyzed the trade of the island, and when Spain surrendered the sovereignty she closed her ports to Porto Rican products, while the occupation of Cuba destroyed the only other important market. The trade in coffee and tobacco was ruined, and nothing was provided to take their place. In most cases money could not be procured by the planters to pay the interest on mortgages. Then in August, 1899, a terrible hurricane wrecked the plantations, destroying the food supplies and resources of the lower classes, killing over 2,000 and injuring over 3,000 persons, and doing $200,000 worth of damage to private property, including nine tenths of the coffee crop. The principal work of the army was to distribute 30,000,000 rations of one pound each to the famishing natives during the greater part of a year, and organize relief work on the roads, by which
wages could be earned by the idle men in improving the roads of the island, to which nearly $1,000,000 were allotted by the Secretary of War. For the seaward defense of the island the military turned over to the civil service provision for emplacing 300 heavy guns, 368 rapid-fire guns, and 372 mortars. Local officials were properly elected in September, 1899, and before the middle of February, 1900, mayors, town councils, municipal judges, and boards of education had been chosen and installed in all the towns. The military exercised supervision over the teachers, which were the ability to read and write Spanish, English, or any other language, or the payment of $1 in taxes during eighteen months preceding the elections. Under these conditions the number of votes polled reached 51,179, equal to 5.375 per cent of the population. Although no armed soldiers appeared in public, the elections were conducted with a great degree of order and in the absence of any disturbances.

The machinery of civil government was already in charge of experienced public officers, and in every municipality were officers chosen by the voters and exercising practically autonomous government. The insular treasury contained a balance of $300,000. Much had been done to improve the dietary conditions of the people, compulsory vaccination saved the people from an epidemic of smallpox, and sanitary boards with large powers were established everywhere. Gov. Allen appointed a Cabinet. An Executive Council consisting of 6 Americans and 5 Porto Ricans is the upper house of the Legislature. Courts were organized, striking a blow at the old practice of appealing to the army in cases of doubtful law. The police were reorganized, an additional force was added to the insular police, which already had 400 men. These measures, together with the sanitary condition of the island, were most improved.
each district an American supervisor was appointed. The insular Board of Education consisted of 2 Americans and 3 Porto Ricans. Instead of schools, the throngs of the towns and the island, dependent on the schools, the Government has made education perfectly free, but not compulsory, because there are not yet schoolhouses and teachers enough. Children are taught the English language and American history.

PORTUGAL, a kingdom in southwestern Europe, is bounded on the north by France, on the east by Spain, on the south by the Atlantic Ocean, and on the west by the Bay of Biscay and the Atlantic Ocean. The kingdom is divided into 18 provinces.

The name Portugal is of uncertain origin. The earliest known reference to the name is in the 12th century, and it is believed to be derived from the Latin word "Portus," meaning port.

The country is hilly and mountainous, with a coastline of about 1,500 miles. The climate is mild, with mild winters and warm summers.

Area and Population.—The area of Portugal is 35,350 square miles, with 309,000,095 inhabitants in 1890; area of the Azores and Madeira, 1,510 square miles, with 389,634 inhabitants; total area of the kingdom, 38,038 square miles, with a total population of 5,049,729. The population included 27,000 Spaniards, 5,000 Brazilians, 2,500 French, 1,786 English, 900 Germans, and 800 Italians.

The emigration in 1898 was 14,336, of which 4,176 went to Asia, 21,006 to the Americas, and 1,554 to Africa; total, 23,516. The birth rate in 1898 was 31.24 and the death rate 23.71 per thousand.

Finances.—The revenue for 1890 was 52,288,835 milreis, and expenditure 56,307,080 milreis; the estimated revenue for 1890 was 52,373,581 milreis, and expenditure 509,006 milreis. The state and municipalities for 1901 make the revenue from direct taxes 12,249,370 milreis, from stamps and registration 5,506,000 milreis, from indirect taxes 24,294,650 milreis, from additional taxes 1,098,700 milreis, from national property and miscellaneous sources 3,506,935 milreis, revenues d'ordre 4,383,070 milreis, extraordinary revenue 1,150,000 milreis; total revenue, 52,182,125 milreis. The estimated expenditures for 1901 are 9,774,954 milreis for the civil list, the Cortes, and various purposes, 19,545,004 milreis for the consolidated debt, 500,000 milreis for losses by exchange, 3,990,852 milreis for the Ministry of Finance, 2,411,273 milreis for the Ministry of Interior, 1,389 milreis for the Ministry of Justice, 5,950,754 milreis for the Ministry of War, 4,377,128 milreis for the Ministry of Marine and the Colonies, 333,006 milreis for the Ministry of Foreign Affairs, 4,597,562 milreis for the Ministry of Public Works, and 69,338 milreis for the deposit and consignment office; total ordinary expenditure, 52,736,728 milreis, extraordinary expenditure, 2,112,229 milreis; total expenditure, 54,848,957; deficit, 2,060,832 milreis.

The public debt of Portugal, which was less than 9,500,000 milreis in 1833, had grown in 1890 to over 429,000,000 milreis. In 1892 the interest on the internal currency debt was reduced 50 per cent, and that on the external gold debt was reduced 66 2/3 per cent in 1893. In 1890 the external debt outstanding amounted to £2,901,275, consisting of £38,472,991 of consolidated 3 per cent, debt, £1,511,497 redeemable and paying 4 per cent, the tobacco loan of £8,559,800, also paying 4 1/2 per cent. The consolidated internal loan of £558,511,812, paying 3 per cent, was largely held abroad likewise, and there were £6,143,426 of other internal debts besides £27,579,446 of internal and £2,518,819 of external debt partly in the hands of the Government. The floating debt amounted to 43,822,549 milreis. The gold standard was adopted by Portugal in 1854, and 7,590,000 milreis of gold coins were struck, but none since 1891. The silver coinage amounts to 30,232,436 milreis; the circulation of Bank of Portugal notes, 68,175,157 milreis.

The Army.—The peace effective of the Portuguese army is 48 officers and 795 men in the engineers, 298 officers and 4,419 men in the artillery, 276 officers and 4,020 men in the cavalry, 1,001 officers and 19,912 men in the infantry and chasseurs, and 10 officers and 557 men in the train and subsistence and health departments, making the total 1,801 officers and 30,000 men, with 5,404 horses and mules and 144 guns. This does not include 80 officers and 2,176 men in the municipal guards, nor 136 officers and 5,019 men of the fiscal guard. The war strength is stated to be 3,476 officers and 145,639 men, with 9,649 horses and 93,550 guns obtained by raising the strength of the active army to 2,029 officers and 82,543 men, with 10,736 horses and mules and 216 guns, and calling out the reserve troops, numbering 1,447 officers and 62,766 men, with 5,113 horses and mules and 46 guns. The troops maintained in the colonies, the majority of them native laborers, numbered 10,824. The Portuguese navy has 1 old ironclad, 5 protected cruisers, not all of them completed, 2 new and 4 old third-class cruisers, 10 river and 16 seagoing gunboats, and 15 first-class and 30 small torpedo boats. A national defense committee has raised funds by private contribution to help the Government strengthen the fleet. The Royal Hospital at Lisbon and the ships of the fleet are manned.

Commerce and Production.—In the south of Portugal land is held in large estates and tenant farming prevails. In the north the holdings are small and are more highly cultivated because the peasants either own their land outright or hold it by the ancient custom of aframento, subject only to a quit rent, for which payment is made, but not paid a the term, though he can not evict unless it remains unpaid for five years. The holder can do what he pleases on the land, and he may sell his tenant right and improvements, as the owner may have his right to the quit rent, but in either case the other has the option of purchasing in preference to a third party the tenant's claim.

The value of exports in 1898 was £7,171,828 milreis, consisting of copper precipitate and ore, sulphur ore, lead, arsenic, tin, manganese, antimony, and iron ores, wolfram, and a little gold and silver. Salt, gypsum, lime, and marble are exported. The total value of special imports in 1898 was £5,022,766 milreis, and of exports £3,207,165 milreis. The
The imports of live animals were 3,141,096 milreis in value, and exports 3,350,568 milreis; imports of raw materials 20,155,397 milreis, and exports 5,109,554 milreis; imports of textiles 5,663,041 milreis and exports 2,725,866 milreis; imports of food and drink 13,333,898 milreis, and exports 15,015,928 milreis. The imports of machinery and implements were 2,913,336 milreis, and exports 10,131,111 milreis; imports of various manufactures 3,541,521 milreis, and exports, 1,820,663; tax on imports, 72,861 milreis; total imports of merchandise, 48,626,935 milreis; total exports of merchandise, 31,127,990 milreis; imports of coin and bullion 2,185-825 milreis, and exports, 2,079,130 milreis. The total imports of the value of wheat was 3,655-152 milreis; raw cotton, 3,532,007 milreis; cotton goods and yarn, 2,866,055 milreis; sugar, 2,042-165 milreis; codfish, 1,193,818 milreis; coal, 1,873-192 milreis; iron, 1,335,508 milreis; cattle, 1,219-317 milreis; leather and hides, 1,193,818 milreis; wool, 1,149,837 milreis; woolen yarn, 1,556,055 milreis; coffee, 670,580 milreis; leaf tobacco, 467,513 milreis. The wine exported in 1898 was valued at 11,490,712 milreis, consisting of 52,402,630 litres of common wine and 34,006-900 litres of liqueur wine, of which 2,430,150 litres were Madeira and 31,328,410 port. The common wine is shipped mainly to Brazil and Portugal, and in the United States are the United States, the United Kingdom, and a few other countries. The total principal other exports were the value of 3,030,273 milreis; cotton goods, shipped to Portuguese colonies, 2,347,963 milreis; sardines, 1,523,766 milreis; copper ore, 766,696 milreis; cattle, 636,142 milreis; olive oil, 511,487 milreis; almonds, 482,076 milreis; figs, 368,057 milreis; herring, 164,000 milreis; capelin, 32,800 milreis; tunny fish, 291,698 milreis; onions, 263,829 milreis; pineapples, 241,413 milreis. The total value of imports 32 per cent. came from Great Britain, 14 per cent. from the United States, 14 per cent. from Germany, 10 per cent. from France, 9 per cent. from Spain, and 21 per cent. from other countries; of the total exports 26 per cent. went to Great Britain, 20 per cent. to Brazil, 16 per cent. to Portuguese colonies, 13 per cent. to Spain, and 23 per cent. to other countries. Of all the wines imported by Great Britain in 1898, the wines of Portugal formed 24.6 per cent. of the quantity and 21.6 per cent. of the total value.

Natives of the number of vessels of the foreign trade entered at Portuguese ports during 1898 was 6,555, of 8,923,129 tons; cleared, 6,502, of 8,981,434 tons. Of the number entered, 4,182, of 6,113,127 tons, had cargoes; of those cleared, 5,160, of 7,187,000 tons, had cargoes. In the coasting trade, 4,909 vessels, of 1,303,167 tons, were entered and 4,217, of 1,299,055 tons, cleared. In the coaster trade on Jan. 1, 1899, comprised 63 steamers, of 60,000 tons, and 573 sailing vessels, of 69,522 tons, inclusive of vessels in the colonies.

Railroads, Posts, and Telegraphs.—There were 1,464 miles of railroad in operation in 1898, of which the Government owned 507 miles. The number of passengers carried in that year was 11,384,737; tons of freight, 2,034,003; net receipts, 3,377,835 milreis. The length of telegraph lines was 4,854 miles, with 9,475 miles of wire. The number of telegrams sent in 1898 was 1,272,042 in the internal and 1,065,309 in the international service.

The total number of letters, newspapers, etc., forwarded through the post office during 1898 was 55,201,810 internal and 10,202,493 foreign and colonial.

Politics.—The derangement of the Portuguese finances and the measures adopted to meet the obligations of the Government have caused widespread discontent without loosening the control of the Government over the electorate, which returned the usual local majority in the elections of November, 1898, although the Opposition was less subservient in character and included three Republicans. From Oporto the Government has gained many adherents, especially among the working classes. When the Cortes met on Jan. 2, 1900, the Government could boast of the success of a military expedition over the tribes in northern Mozambique that make Portuguese territory a base for raids upon the British semicivilized natives. The result of 20,155,307 milreis of tax revenue of the Government involved an increase in taxation. A proposal of Ferreira Almeida to sell certain colonies in order to relieve the financial embarrassment was rejected by a majority of 64 votes after a statement of the Ministry of Marine that the Government would maintain the integrity of the colonial territory. A meeting of Republicans in June, as well as against the passage of British troops through Portuguese territory in South Africa to operate against the Boers was dissolved by the authorities. The Progressist ministry retired on June 21, having incurred the King's displeasure by submitting a measure attacking hereditary right, meant to apply to the peerage system, but not, as one writer states, the passage of British troops through Portuguese territory. The passage of British troops through Portuguese territory. The Progressist ministry retired on June 21, having incurred the King's displeasure by submitting a measure attacking hereditary right, meant to apply to the peerage system, but not, as one writer states, the passage of British troops through Portuguese territory. The Progressist ministry retired on June 21, having incurred the King's displeasure by submitting a measure attacking hereditary right, meant to apply to the peerage system, but not, as one writer states, the passage of British troops through Portuguese territory.
General Assembly that its total receipts for the year had been $733,124, and its expenditures $730,548; hence it had closed the year with a balance of $2,576. It had employed 1,371 missionaries, including 25 Mexican and Indian helpers, with 372 missionary teachers, and returned a total membership in the mission churches and stations of 77,181, with 58,510 attendants in the congregations; 1,641 Sunday schools, with 177,773 members thereof; 223 Sunday schools organized during the year; 3,229 baptisms of adults and 3,523 of infants; 1,776 additions on examination; 33 churches organized, and 16 reached self-support; 57 church edifices built, at a cost of $115,483, and 273 repaired and enlarged, at a cost of $334,331, 1,519 church edifices in all, having a total value of $2,943,234; 390 parsonages valued at $412,530; and $89,275 of church debts canceled.

The Board of Education had under its care 294 students in colleges and 390 in theological seminaries. Its entire receipts had been $93,194, and its expenditures $57,477.

The Board of Relief had had 903 names on its list—of ministers, widows, orphan families, and other beneficiaries. One hundred and eleven names had been added during the year to the roll of annuitants. The honorably retired roll of ministers more than seventy years old who had been in the ministry and had contributed to the Board for annuitants (each) had exhibited the value of $2,576. The average amount paid to ministers on this roll was $282.57, and the average amount paid to all annuitants was $199.48 annually. The total roll of the board from all sources had been $194,900.

The total resources for the year of the Board of Aid for Colleges and Academies had been $181,576.

The Board of Missions for Freedmen had under its care 199 ministers, 330 churches and missions, 19,585 communicants, 1,841 of whom were added on examination during the year, 234 Sabbath schools with 10,582 scholars, and 64 day schools with 231 teachers and 9,132 pupils. Its entire receipts for the year had been $155,033, or $6,600 more than the receipts of the preceding year. The board had nearly $1,000,000 of permanent property. The freedmen had raised more than $71,763 for schools during the year, none of which was included in any of the accounts of the board. Industrial instruction was given at all the important schools.

The total receipts of the Board of Foreign Missions had been $957,521, and its total disbursements $935,531. The board had under its care and in connection with 720 American missionaries (including 233 ordained ministers, 46 physicians, 13 lay missionaries, 253 married women, 149 single women, and 26 woman physicians), 1,701 native missionaries (including 170 ordained ministers, 398 licentiates, and 1,153 other workers), 626 organized churches, 57,580 communicants, 66 students for the ministry, 702 schools having 23,929 pupils, and 26,011 pupils in Sabbath schools. The number of additions during the year was 4,442. The missions were supplied with 8 printing establishments, and 35 hospitals and 47 dispensaries where 321,536 patients had received treatment.

The total receipts of the General Missions in its annual report returned 126 schools and missions and 372 missionaries and teachers, with 8,440 pupils. Its total receipts had been $345,837, of which $55,730 were for the freedmen's department. During the twenty-one years of its existence the board had secured $3,082,990, of which amount $750,000 had been invested in buildings.

The one hundred and twelfth General Assembly met in St. Louis, Mo., May 17. The Rev. Charles A. Dickey, D. D., was chosen moderator. The special committees on the celebration of the advent of the twentieth century appointed by the previous General Assembly reported the details of the plan which had been adopted in general by that body for the observance. They included special religious services during the week of prayer of 1901; the setting apart of the first Friday of the meeting of the General Assembly in that year for appropriate exercises, including a review of the financial work of the boards during the nineteenth century at the morning session; a forecast of the outlook for the twentieth century at the afternoon session, and popular addresses at a session to be held in the evening; the raising of a special memorial twentieth century fund for the endowment of Presbyterian academic, theological, and technical institutions, for the enlargement of missionary work, for the erection of church buildings and the payment of debts upon churches and educational institutions, and for the other work of the boards at the option of the donors; and the constitution of a committee of four ministers and three elders, with the committee of one hundred and one, to have a general supervision of the entire enterprise. It was arranged that the meeting of the General Assembly of 1901 should be held in Philadelphia, where the body was organized. Numerous overtures having come to the Assembly respecting a revision of the Confession of Faith, the subject was referred to the Committee on Bills and Overtures. This committee reported concerning the overtures that, of 38 presbyteries sending them in, 8 asked for revision as their first preference, 1 asked for a new declaratory statement, 20 asked for a new and shorter creed, and 9 asked for a committee to consider the subject and report to the next Assembly.

"Your committee recommends the reception of these overtures of such nature and number as to justify some action on the part of the Assembly. But the overtures are of such variety and suggest so many paths of process that they hardly furnish sufficient data to justify a distinct trial of any of the plans propounded. To select at once either the basis of our present creed or the preparation of an explanatory statement would be to commit ourselves to undertaking some one of the proposed methods of creedal change, without sufficient knowledge of the mind of the Church to warrant reasonable expectation of approval. On the other hand, to determine all in one action, or to fall into a situation that seems to demand attention, and which involves a wide misrepresentation of our doctrinal position. We therefore recommend, first, that a committee of 15—8 ministers and 7 elders—be now appointed by the moderator to consider the whole matter of a restatement of the doctrines most surely believed among us, and which are substantially embodied in our Confession of Faith. Second, that this committee be enjoined diligently to pursue their inquiries, seeking light and knowledge from every available source, and to report to the next General Assembly what specific action, if any, should be taken by the Church. Third, that the Furthering of Mission this committee the presbyteries be and are hereby invited by the Assembly to take action at their approaching fall meetings and through the Assembly's stated clerk to report said action to
the committee, whether suggestive, revisional, supplemental, or substitutional changes, or no change at all." The recommendations of the committee were adopted. The committee appointed in pursuance of them consisted of the Rev. Drs. Charles A. Diekey, moderator, chairman; Herrick Johnson, Samuel J. Nichols, Stephen Dana, Daniel W. Fisher, William McKibbin, Samuel P. Sprecher, George B. Steward; and elders E. C. Humphrey, Daniel W. Noyes, William R. Crabbe, John E. Parsons, Elisha Frasher, Benjamin Harrison, and John H. Harlan. A change in the method of appointing the committees of the Assembly was recommended by the presbytery of Peoria in an overture sent to the preceding General Assembly, but had not been acted upon by it. The plan had become known throughout the Church as "the Peoria overture." The committee to whom the subject was referred presented majority and minority reports upon it. The minority report was the Peoria overture itself, and was as follows: "For the purpose only of electing standing committees the General Assembly shall be divided into 22 electing sections of as nearly as practicable equal size, by combining the smaller synods and dividing the larger by presbyteries where necessary. The committees, except those on mileage and finance, shall be numbered consecutively; the electing sections shall be numbered in like manner. "The standing committee shall consist of 11 ministers and 11 elders, except those on mileage and finance, which shall each consist of 11 members. On odd-numbered years the odd-numbered section shall elect 1 minister for each odd-numbered committee, and 1 elder for each even-numbered committee, and 1 elder for the finance committee. On the same year, each even-numbered section shall elect 1 minister for each even-numbered committee, and 1 elder for each odd-numbered committee and 1 elder for the mileage committee. On the even-numbered years this order shall be reversed. The standing committees shall elect their own chairmen."

The minority report was substituted by amendment for the majority report, and was adopted. In the matter of vacancy and supply the Assembly provided for the constitution of a committee in each presbytery to have supervision of all vacant churches within its bounds, whose duty shall be to prepare and keep a list of such churches and of the effective unemployed ministers of the presbytery, and to arrange for the supply of the churches from the list of available ministers and from such other sources as may be suggested by correspondence. No attempt was made to form similar committees with like duties for the synods.

The case of the Rev. Dr. A. C. McGiffert, charged with having published doctrines contrary to the Presbyterian faith in his book The Apostolic Age (see Annual Cyclopaedia for 1896, page 729), having been removed from the purview of the General Assembly, there remained for him only his withdrawal from the Presbyterian Church, a minute was adopted declaring that "the case be and is hereby closed." An amendment proposed to the section of the Form of Government defining the constitution of a presbytery prescribing that only active members shall vote was sent down as an overture to the presbytery. The resolutions on Sabbath observance pronounced any and all secularization of the Christian Sabbath day destructive of its benevolent design and inimical to both public and private welfare. It was declared that the Sabbath to be dependent on the action and influence of members of the Christian Church; and after particularizing various current forms of secularization, affirmed that "any and all efforts to promote commercial or business interests and financial gains at the expense of the sacred character and religious uses of the Christian Sabbath are inimical to the best interests of society and the state."

The McGiffert Case.—The case of Prof. A. C. McGiffert, of Union Theological Seminary, charged with the publication of heresies in his book on The Apostolic Age, was referred by the General Assembly of 1899 to the Presbytery of New York for action. When it was afterward brought up at a meeting of the presbytery the charges were dismissed. At the semiannual meeting of the presbytery, April 9, Prof. McGiffert presented a letter requesting that his name be dropped from the rolls. In making this request, the writer declared that his purpose in bringing the charges of heresy preferred against him as well founded, or because he recognized the justice of the accusations that had been made—for he still believed that his views were in harmony with the faith of the Presbyterian Church and of evangelical Christendom in all vital and essential matters; but he could not feel that it was his duty to remain in a body in which there was no place for an appeal from the action of the presbytery would precipitate, and needlessly to prolong the agitation of the subject. He regarded the principles on which heresy trials are conducted and their judgments governed as, from the point of view of the honest seeker after truth, fundamentally unsound. Only by patient study and a free discussion can the truth be reached, and the attempt to determine the correctness or incorrectness of historical conclusions by their conformity to a confessional standard tends to obscure truth's supremacy and to promote indifference to its claims. Prof. McGiffert had felt it his duty to maintain his own views, but the attacks of the Christian scholarship and the historic liberty of Christian thought and speech within the Presbyterian communion by refusing to withdraw even at the suggestion of the General Assembly. "For while it can matter little whether the particular views I hold are pronounced sound or unsound by an ecclesiastical tribunal, it matters much whether a great Christian communion like the Presbyterian Church, which has stood in the past for stalwart, intellectual Protestantism, shall commit itself irrevocably to the unprotestant policy of closing its eyes to all new light, and so make it increasingly difficult, if not impossible, for honest seekers after truth to do within its ranks their part of the same task was not because he thought his people. He had therefore remained within the Presbyterian Church, and had even been prepared to face a trial, but the action of the presbytery in dismissing the charges against him had relieved him from the particular responsibility resting upon him, and made it possible for him to withdraw without detriment, and even, he believed, with advantage to the cause of truth and liberty. The presbytery unanimously, by resolution, expressed the sincere personal affection of the members for Prof. McGiffert.
Prof. McGiffert's name was presented for admission to the Manhattan Congregational Association April 11, and was referred according to the rules of the body.

Revision of the Confession.—The committee of the General Assembly on revision of the creed in August sent out a note to the presbyteries reciting the action of the General Assembly, and asking them a number of questions the answers to which would be helpful to a full and clear description of the Clarion. These questions, the committee explained, were simply suggestive, putting no restrictions upon the presbyteries except that it should be remembered that the committee was not empowered to consider any suggestions conflicting with the system of doctrine taught in the Holy Scriptures and contained in the Confession of Faith. The questions were:

1. Do you desire a revision of our Confession of Faith? or (2) do you desire a supplementary, explanatory statement? or (3) do you desire to supplement our present doctrinal standards with a briefer statement of the doctrines 'most surely believed among us,' expressing in simple language the faith of the Church in loyalty to the system of the Bible? These answers were expected from the Clerks of the Synods, and (4) do you desire the dismissal of the whole subject, so that our doctrinal standards shall remain as they are, without any change whatever, whether revisional, supplementary, or substitutional? If your preference is for revisional action, state in what direction and to what extent you would have revision undertaken.

The revision reported to the Assembly in 1892 might be helpful as a basis for judgment. If your preference is for an explanatory statement, indicate what specific points in the Confession the statement should cover. The committee considers it as quite evident that due regard to the above questions and suggestions may be of great service in the revision.

The committee would respectively request the presbyteries, in reporting their action, to state the votes both in the affirmative and the negative.

The committee met Dec. 8 to examine and compare the answers made by the presbyteries to the preceding questions. It turns plainly indicate that the Church desires some change in its creedal statement. 2. These returns indicate plainly that no change is desired which would in any way impair the integrity of the system of doctrine contained in the Confession of Faith. 3. These returns also indicate that a large plurality desire that changes should be made by some new statement of present doctrines. 4. These returns also indicate a desire upon the part of many presbyteries for some revision of the present Confession." The committee unanimously agreed to recommend to the General Assembly that some revision or change be made in the confessional statements. The determination of the many candidates of ministers and changes that seemed to be desired was referred to a sub-committee of the committee, and a meeting was appointed to be held Feb. 12, 1901, when it was expected the preparation of a statement to be presented to the General Assembly would be considered.

II. Presbyterian Church in the United States (1895) Reporting is a summary of the statistics of this Church from the table published by the stated clerk, William A. Alexander, with the journal of the General Assembly of 1900: Number of synods, 13; of presbyteries, 79; of churches, 2,959; of ministers, 1,461; of candidates, 317; of licentiates, 70; of ruling elders, 8,545; of deacons, 7,753; of communicants, 225,890; of baptized noncommunicants, 40,029; of teachers in Sunday schools, 20,881; of pupils in the same, 141,507; of members added on examination during the year, 7,733; of baptisms, 3,651 of adults and 4,583 of infants; of licenses, regular, 3,932; of dismis- sions, 48; of churches organized, 60. Amount of contributions: For home missions (assembly's), $26,658; for evangelistic work (local), $123,016; for the Invalid fund, $13,030; for foreign missions, $141,507; for education, $90,612; for publication, $5,978; for education and evangelization, $11,352; for the Bible cause, $4,803; for exceptional gifts, $860,945; presbyterian, $16,052; congregational, $667,658; miscellaneous, $122,575.

The increase in the number of communicants for the year was 4,696, or about 2 per cent. of the membership. The average contribution was about $8 per member.

The Executive Committee of Home Missions reported to the General Assembly that its total receipts for the year, including the balance of $12,088 from the preceding year, had been $43,690. Its expenditures on field work had been $30,433. It had supported, fully or partly, 137 missionaries for the whole or part of the year. Six hundred and fifty-five dollars had been loaned to four churches, making the total amount of loans to white churches during the fourteen years since the fund was instituted $7,905. Of this sum, $3,078 were outstanding and the Assembly had canceled $404 on two loans. Two hundred and fifty-five dollars had been loaned about ten years ago for five colored congregations, of which $128 had been returned, and the Assembly had canceled the rest. From the Moore Church Erection fund, the total assets of which were given as $5,244, $1,450 had been loaned to five congregations. Since this fund had come into the treasury loans amounting to $6,275 had been made to 24 churches, and $5,799 had been paid back. The regular loans for churches and other debts had been paid in full interest; the loans from the Moore fund were secured by mortgage on the church property. The resources of the Invalid fund for the year had been $15,370, and from it $13,856 had been paid to 149 beneficiaries—ministers and widows and families of ministers. Ten new ministers and five families of ministers were added to the list during the year. In addition to the ordinary work of the committee, the report presented the conditions of its work in the Indian Territory and New Mexico, and among Mexicans in Texas.

The Executive Committee of Education for the Ministry reported all but two of the presbyteries as co-operating with it—the larger number than for many years before. It had received from all sources $18,335, the receipts resulting from the regular collections having been the largest since 1895. One hundred and ninety-five beneficiaries had been enrolled, or 20 less than in the previous year. The proportion to the entire number of candidates for ordination and dismission was more than ever before. The percentage of those who were deacons was marked upon as being very large. Three of the persons aided were strangers, a fact which suggested doubts to the committee as to the eligibility of extending aid to such persons. On this subject the Assembly advised sessions and presbyteries not to receive candidates who had been rejected or dropped by other presbyteries or ecclesiastical bodies without correspondence with such bodies.

The Executive Committee of Colored Evangelization had received $8,454 on the general fund for colored evangelization and $539 on the special or improvement fund of Stillman Institute—the whole being an increase of about $1,000 over the
previous year. Its work had been extended by entering new fields, and it had aided in the construction of new churches and the purchase of one manse. Work done by white people in the mission Sunday schools for colored people was especially mentioned, and comprised 179 teachers instructing 1,987 pupils in 37 Sunday schools. Fifty-three ministers had been sustained in whole or in part by the committee, some of them having been otherwise supported by white presbyteries. The total sum of $3,094 had been paid to colored ministers and churches. Report was made of the work of Stillman Institute, Tuscaloosa, Ala.; Ferguson-Williams College, Abbeville, S. C.; and North Wilkesboro Industrial Institute, North Carolina. A preachers' institute of colored ministers and teachers had been held in June, 1899, at Stillman Institute; but while the object of instructing the ministers was successfully pursued, the committee had failed to accomplish the other object which they had hoped to promote there, namely, the completion of the organization of the Independent Colored Presbyterian Church. This organization, which had taken the name of the "Afro-American Presbyterian Church," was opposed as a separate church by the two largest and most influential colored presbyteries—those of Ethel and Central Alabama—and it was doubtful whether those adhering to it would be able to sustain it as a vigorous, independent body. The Assembly's standing committee on this work in its report of May 13, 1899, directed that independent organization was the wisest solution of the questions relative to colored Presbyterians, and that that end should be kept in view by the Church.

The Executive Committee on Publication reported that the net assets of the publishing house were $116,942. An increase of a little more than $25,000 over the previous year in the beginning. The colportage work, also, had nearly doubled, and grants to an increased amount had been made. Four young men had been employed during the vacation of the Theological Seminary, and reports of 18 Sabbath schools organized, with 76 teachers and 692 pupils. The work of the year of the Executive Committee of Foreign Missions had been $161,511, an increase over the previous year of $16,171. The number of additions to the mission churches was 642. The committee expressed the conviction in its report that the principle of the subordination of the educational to the evangelistic side of the missionary work should be adhered to. Steps which had been taken to call the attention of the King of the Belgians to certain acts committed by the Zappo Zaps in the Congo Free State were approved by the General Assembly; and that body voted acknowledgments to the Methodist Episcopal Church, South, and to the Presbyterian Church in the United States, and also acknowledged the services given in the mission fields, and to the Baptists for desires expressed in favor of co-operation and comity.

Seventy-four presbyteries reported 2,063 Sunday schools, with 18,791 officers and teachers and 131,561 scholars enrolled, and an average attendance of 94,163. These schools had contributed for all objects $87,100. The General Assembly recommended that a general collection be taken in the Sunday schools for the advancement of the Sunday-school interests of the Church, and that at least one Sunday-school institute be held each year within the bounds of every presbytery.

The General Assembly met in Atlanta, Ga., May 17, 1899, the Rev. Geo. H. Ferguson, of Wilkesboro, N. C., being moderator. The "permanent committee" appointed by the previous General Assembly to consider certain overtures on the subject of the Church and Christian education, reported that its work had been mainly directed to securing the attention of the synods and presbyteries to the paper which had been adopted by the Assembly (see Annual Cyclopedia for 1899, page 730). Fifty-seven presbyteries had approved and recommended the paper and appointed permanent committees on Church and Christian education. Six presbyteries had indorsed or approved of or commended the constitution and plan of organization proposed, but declined for the present to appoint permanent committees, while other presbyteries had failed to take definite action. Only one had expressed disapproval of the paper. Five of the 12 synods had approved and commended the plan, but had not appointed permanent committees. The result of canvass was regarded as indicating a greater interest in the subject than had been anticipated. Along with its report, the committee submitted a draft of a constitution for the proposed educational organization. It also communicated an enumeration of existing schools actually or virtually under Presbyterian control, which included, among other institutions, 20 theological seminaries for young men, 41 colleges and seminaries for young women, 23 co-educational schools and colleges, 33 academies and high schools for young men, 7 orphanages, 9 Indian schools, and 6 colored schools. The committee was reappointed. The committee engaged in the preparation of a new Book of Psalms and Hymns, and found a basis for the building of new institutions for negroes, to be called "Institutes for Negro Peoples." The task of preparing a new translation of the Holy Scriptures and the Book of Psalms and Hymns was made the basis of the new collection, and a brief formal statement was presented of the rules and principles by which the committee had been guided in selecting and arranging the hymns and tunes. An effort to raise $1,000,000 for the permanent work of the Church, to be known as the Twentieth Century fund, was approved by the General Assembly and directed to the Synod and an elder from each synod, was appointed to have general management and oversight of it. The object of the fund was defined to be "to promote and put upon a surer basis the cause of Christian education; to endow and equip more fully our theological seminaries, our schools, colleges, and other educational institutions; and finally to found such new institutions of similar character as may seem advisable." The Assembly advised that this movement should not interfere with or displace plans that were now in operation in different parts of the Church looking to the same end, but should rather seek to unify all these local efforts and stimulate and encourage them through sympathetic co-operation. The synods were invited to appoint each a committee of three to cooperate with the Assembly's committee. A committee was appointed to prepare a catechism on the nature and government of the Church. The Assembly declined to grant the prayer of an overtures of the Presbyteries for a change of the "Confession of Faith," declaring that all dying infancy are elect infants and regenerated, on the ground that "the present language of the Confession can not, by any fair interpretation, be construed as teaching that any of those who die in infancy are lost"; and this answer was ordered printed as a footnote in future editions of the Confession of Faith. The report of the Permanent Committee on the Sabbath, finding the desecration of the Lord's Day generally increasing, urged upon all the presbyteries the duty and responsibility of holding up the subject of more faithful observance constantly before the churches, without any interference with the right of private judgment of the people of the Church against the great danger of becoming through their patronage "partakers of other men's sins" by having anything to do
with any of the great agencies of Sabbath desecration. A special pastoral letter on worldly amusements (including the dance, the theater, and the card table) affirmed that "Christians can not afford to do those things which are looked upon as belonging peculiarly to the world, and by doing which the line of separation between the world and the Church is erased or obscured . . . because experience shows that persons engaging in worldly amusements are easily led into such indulgences and errors. We trust that the efforts made by the Minutes are effective, and the company into which they often bring those engaged in them are not favorable to growth in grace and loving service of God in the Church. It can not be denied that those who indulge in worldly amusements do not become eminent for piety, do not hunger or thirst after God, and do not excel in Christian work. It is touching such matters as these, not things evil in themselves only, but also things considered evil or associated with evil, that Christians must practice self-denial and lead lives which will mark them as separate from the world." In answer to an overture touching the introduction of the theatrical and spectacular into the programmes for Children's Day, the Synod directed the members to give the greatest care in the preparation of such programmes, "to provide only that which is scriptural and appropriate."

Afro-American Presbyterian Synod.—The Synod of the Afro-American Presbyterian Church met at Bethel Church, near Dillon, S. C., Nov. 15. The Rev. J. M. Coleman was chosen moderator. At a popular meeting held in the interest of education, Ferguson-Williams College and the Academy at Wilkesboro, N. C., were reported as doing well except that Ferguson-Williams College was burdened with a debt of $5,000. A popular meeting was held in the interest of home and foreign missions. All the presbyterian records were examined and found in good condition. The next meeting of the Synod was appointed to be held in Abbeville, S. C., in November, 1901.

III. United Presbyterian Church in North America.—The statistical reports of this Church for 1900 give it 13 synods, with 68 presbyteries. The whole number of ministers is 957, of whom 386 have been granted the degree of Doctor of Divinity, and 313 as "without charge"; number of licentiates, 75; of licensures during the year, 26; of students of theology, 69; of ruling elders, 3,919; of congregations, 996; of pastoral charges, 821; of congregations organized during the year, 20, while 7 were dissolved; of mission stations, 486, of which 41 were in the foreign field; of members, 125,536, of whom 115,901 were in America and the rest in the foreign missions; of members received on profession during the year (in the whole Church), 6,517; of baptisms, 3,961 of infants and 1,326 of adults; of Sabbath schools, 1,171, with 12,653 officers and teachers and 116,091 pupils; of Young People's Societies, 1,029, with 40,011 members. Among the actions of the Synod were:-the dismission of ministers, $607,456; for congregational purposes, $587,118; for the boards, $282,202; for general purposes, $1,375,518; total for America according to the footings of the table, $1,614,294; total for the Church, $1,637,423; average per member in America, $14.06; average salary of pastors in America, $1,029; number of houses of worship which had been erected during the year, at a total cost of $125,755, and 9 parsonages at a total cost of $17,197.

In the list of presbyteries, the Presbytery of Egypt, having been constituted a synod, appears divided into three new presbyteries, those of the Delta, Thebes, and the Thebaid.

The forty-second General Assembly met in Chicago, Ill., May 23. The Rev. Dr. J. P. Sankey was chosen moderator. Much attention was given to discussion concerning the administration of the article of the testimony of the Church concerning the separate and distinct places of ordination and admission to the ministry of the Church. The subject had already received a large degree of consideration by pastors in their regular work, but had only within the past year become a matter of public discussion. While there had not been any material change in the sentiment against the societies, their multiplication had been considered desirable to the administration of the new members. A number of memorials on the subject had been sent in to the previous General Assembly, and it had appointed a committee to take it into consideration and report to the present Assembly. The report of this committee emphasized the importance of the question, and insisted that no backward step should be taken in the administration of the Synod's approval of the separate and distinct places of ordination and admission to the ministry of the Church concerning it, but that its unanimous judgment was that if changed at all, the expression should be strengthened rather than weakened. Only a change in the provision for administering the testimony was demanded to bring the Church into a closer alignment with Christ's teaching of discipleship. Certain modifications in the writings of the articles of the Synod were asked. The questions asked candidates for membership were recommended. The paper was referred after discussion to a special committee for revision and amendment, and its report was referred to a committee to report to the next Assembly, its conclusions to be published in the papers three months before the meeting of that body. A committee appointed by the previous General Assembly on the promotion of spirituality reported setting forth what they had endeavored to do through the Church papers to awaken members to a deeper sense of their obligations and a better use of their privileges. The Committee on Union with the Associate Reformed Synod of the Synod, found that no progress had been made toward organic union, but evidence appeared that the union sentiment was growing, and the relations of the two bodies were becoming more intimate and cordial. A report was made upon a question from a synod concerning divine healing, to the effect that no doubt much of the sentiment expressed in the principal view from a misrepresentation of Scripture on the subject of Christ's redemption and the function of Christian faith, and was repugnant to sanctified common sense. It was proper to inquire of persons holding to such doctrines whether their opinions were founded on ignorance of Biblical teaching or were heretical pervisions of the principles taught in the word of God, and whether the non-use of recognized means of relief or cure was an error of judgment or criminal negligence. Only in the latter case, after due trial, should members holding these mistaken views be deprived of their good standing in the Church. Great interest was shown in the work of the Board of Education, toward which Young People's Societies had made contributions. A report on reform covered the subjects of temperance, the Sabbath, secret societies, and polygamy. The part relating to the Sabbath urged the responsibility of members, and seconded the request of the Presbyterian Assembly asking Congress and State Legislatures not to pass unjust laws. The Young People's Societies had made contributions. Appropriations were made to the various enterprises of the Church as
follow: To foreign missions, $132,822; to home missions, $94,141; to Freedmen's missions, $55,000; to church extension, $55,000; to education, regular work, $8,000; colleges and seminaries, $25,000; to ministerial relief, $8,000; to Assembly fund, $14,500; to publication, $500. In addition to these amounts, $32,000 were pledged to foreign missions by the Women's Board, and other parties.

The contributions made by the Woman's Board of Missions to the funds of the Church amounted for the year to more than $82,000. The reports made at the annual meeting for 1900 show that since its organization, in 1886, this society had contributed more than $500,000. The board publishes a general missionary magazine and a magazine for juniors, and sustains a training school at Xenia, Ohio.

The Freedmen's Mission returned nearly 800 members, with 14 schools, having an enrollment of 3,024 pupils; 10 Sabbath schools, with 138 officers and teachers; and 89 missionaries, 11 of whom were ordained ministers. The contributions had increased during the year from $857 to $2,024. The policy of the board had been to provide ministers and teachers from among the colored. A charter had been obtained for Knoxville College, empowering it to confer academic degrees. The debt of the board was $16,082.

The annual meeting of the Young People's Christian Union was held at Denver, Col., late in June. A gain of 47 senior and 31 junior societies was returned, with a large increase of contributions by the junior societies. The reports showed that the number of professions of faith among the juniors was equivalent to two thirds of the net gain in membership of the Church. The reports of the Board of Education were filled with suggestions urging the keeping of the Sabbath holy, opposing the use and traffic in narcotics and alcohol in any form, and regretting the existence of the army canteen in opposition to the wishes of the great majority of Christians.

IV. Reformed Presbyterian Church in North America—Synod.—The following is a summary of the statistics of this Church for the synodical year 1899-1900, as given in the report made to the Synod in May. The numbers from 12 congregations are taken from the reports of the preceding year: Number of congregations, 113; of mission stations, 8; of ministers, 124; of licentiates, 5; of deacons, 7; of elders, 72; of deacons' assistants, 9,790; of attendants upon Sabbath schools, 10,449; of attendants of Young People's Societies, 2,169; total amount of contributions, $104,718.

The Synod met at Cedarville, Ohio, May 30. The Rev. F. M. Foster was chosen moderator. Mr. Foster, who had been one of the delegates to the Ecumenical Council of YMCA, had not attended on account of the use of instrumental music and of hymns other than the Psalms in worship, reported concerning his "attempt and failure to secure the silencing of the organ and the use of the divine Psalms in worship." The delegates to the General Council of the Reformed Presbyterian Alliance in Washing- ton in 1899 reported to the effect that the character of the proceedings of the council was conservative and thoroughly biblical, and that the Psalms were used exclusively in worship without the organ. Yet the opinion was expressed by the speaker that the Alliance was manifestly at variance with the Reformed Presbyterian principle as to praise. A committee on an International Convention of Covenanter which it was proposed to hold in America in 1901 reported that after having cor- responded with all the ministers of the Reformed Presbyterian Synods of Scotland and Ireland on the subject, they did not consider the information received such as would encourage the synod to decide upon holding the convention at the time designated. A special session was given to the report of the national revision which was desired by one of the speakers as being a movement not so much to get the word God into the Constitution (as the public regarded it) as "to get God in Christ into the hearts of the people so completely that they will themselves put Christ into the Constitution and laws of the world." A memorial was presented to Congress asking for legislatures asking that they make no more appropriations for expositions in this country or other countries without the proviso that such expositions shall be closed on the Lord's Day. The officers of the Synod were appointed a committee to prepare a memorial to the next Congress asking the abolition of all Sunday mails and mail trains, the closing on the Christian Sabbath of the Post Office Department at Washing- ton and of all post offices in the United States, and the prohibition of all business and labor in the entire Post Office Department on the first day of the week, the committee in person to attend to the presentation of the petition.

V. Cumberland Presbyterian Church.—The statistical reports of this Church, made to the General Assembly in May, give it 180,192 mem- bers, a gain of 2,614 over the previous year. They show also gains of 4 in the number of churches with installed pastors, 36 parsonages, 117 Sunday schools, 10,000 in Sunday-school enrollment, 125 in the number of members, 113 in the number of baptisms, and 33 ordained ministers, while the number of missions and congregations awaiting organization had nearly doubled. Reductions appear of 22 in the number of churches without ministers, of 85 in that of churches without Sabbath schools, and of 22 in the number of min-isters without charge. Thirty-six churches had been dedicated during the year, costing in all $97,895, all but $4,810 of which was paid. The contributions for education, ministerial relief, synodical missions, and miscellaneous causes had increased, while those for foreign missions, home missions, and church erection had fallen off consi- derably, entailing a decrease of $55,265 in the total contributions of the church of $537,452, the cause of which the actual amount was $677,491.

The seventieth General Assembly met at Chat- tanooga, Tenn., May 17. The Rev. H. C. Bird, of Uniontown, Pa., was chosen moderator. The report of the Educational Society represented that an unusual interest in education had been manifested during the year, consequent upon the reappointment of the college by the University of Virginia. The board and its committee appointed the previous General Assembly reported a plan for four grades of schools above the primary, to include academies, colleges (of which there are five), one uni- versity for the whole Church, and a theological seminary, all adequately endowed and connected to one common fund. The Board of Missions and Church Erection reported concerning the missions in Japan, China (Hunan), Mexico, the Indian Territory, and home missions. The offerings for church erection had amounted to $2,303, and the
total contributions of the Church for missions had been $87,757. The Board of Ministerial Relief had on its list of beneficiaries the names of 47 ministers and 59 widows of ministers. Its total receipts from all sources had been $10,074, and the endowment funds amounted to $19,674. The Board of Publication returned gross receipts of $31,069, besides rents from its real estate. The Permanent Committee on Sunday Schools reported upon the condition and work of those bodies, with plans for their more complete organization. The Permanent Committee on Christian Endeavor returned the offerings of the Old Scots congregation of $4,322. The Committee on Systematic Benevolence represented the interest in the subject to be increasing, their correspondence having quadrupled during the year, and submitted a scheme of measures for the further extension of the principle. The Historical Society had endeavored to interest the presbyteries and synods in its enterprise, had prepared a constitution and by-laws, and had fitted up suitable quarters for its collections. A memorial asking that the Rev. Dr. R. V. Foster be removed from his position as professor in the Theological Seminary was denied, Dr. Foster having appeared before the committee of the Assembly and affirmed his commission to that post. An amendment to the constitution of the Church permitting the election of elders or deacons for a limited time when any church may so desire was adopted for submission to the presbyteries. A plan was adopted for a systematic endowment of the educational institutions of the Church, to be carried out by the Synod of the Old Scots. The Assembly, adhering to a former decision that installation is essential to the pastoral relation, directed that ministers not installed be hereafter entered upon the minutes as "minister in charge." It also ordered that a ministerial letter shall not be accepted as valid after the lapse of one year, and that after two years from the date of such invalid letter the holder shall be regarded as having demitted the ministry. Constitutional amendments submitted by the previous General Assembly providing for special meetings of synods and of the General Assembly were found not to have been adopted. In the case of the enrollment of the name of Mrs. L. M. Wooley as a deacon, Synod directing the withdrawal of the name was affirmed. The report on Sabbath observance mentioned an improvement in the mind of the Church on the subject, and specified an increase in spiritual life rather than legislation as the means by which reform is to be brought about. The report on temperance condemned the licentious system, and urged voters to antagonize everything identified with the liquor interest.

Memorial of the Earliest Presbyterian Meeting in the United States.—A historical monument was inaugurated June 14, at Free Hill, Wickatunk station, near Freehold, Monmouth County. It was the first Presbyterian meeting house, where the first presbytery of which any minutes exist was held, Dec. 29, 1706. A large assembly was present, in which the Northern and Southern Presbyterian Churches were officially represented. The Rev. Dr. A. N. Hullfield, moderator of the Synod of New Jersey, presided. The Rev. Gen. Drs. W. Wright, Dr. Allen Boyd, and other addresses were made.

VI. Presbyterian Church in Canada.—The statistical reports made to the General Assembly of this Church in June accounted for 2,942 pastoral charges, with 113,141 families connected with the churches and mission stations, 210,776 members, 10,118 of whom had been received during the year on profession of faith, 160,105 attendants upon Sabbath schools, showing an increase of 1,608, and 11,046 baptisms during the year. The total revenue of the Church amounted to $2,384,897, an increase of $114,241. The membership of the Young People's Societies had diminished by 3,765. A credit balance was returned in favor of every fund of the Church. The reports of Queen's, Halifax, Montreal, Knox, and Manitoba Colleges showed increase in almost every department, except in attendance of first-year students, where a decrease appeared. Morrison's report of the Young Men's Societies was published, and the Board of Governors was considering what disposition should be made of the endowment fund.

The General Assembly met at Halifax, Nova Scotia, June 13. The Rev. Allan Pollok, principal of Halifax College, was chosen moderator. The report represented that, notwithstanding the unusually large number of receipts, the contributions of the year had been greater than those of any year in the past, the investments yielded an average of more than 5 per cent. interest, while the expense of administration was less than 3 per cent. Seven hundred and sixty thousand dollars were contributed for the contemplated Fund of $1,000,000. The information obtained from the answers to circulars sent out to congregations asking for estimates of the amounts they would probably raise indicated that the subscriptions would exceed the latter sum. The agent of the Ministers' and Deacons' Funds in connection with the Church of Scotland—Fun had but little success in this respect of special account when the union of the churches constituting the Presbyterian Church of Canada was consummated—announced that the fund would in a short time be wound up, having fulfilled its purpose, when the capital of nearly $100,000 would accrue to the general fund of the Church. The proposed new Manual of Aids to Social Worship was subjected to criticism, and objections on account of features which were regarded as ritualistic, and was returned to the committee to report to the next General Assembly in a modified form. A proposition to take such steps as would secure ministers qualified to speak the languages of the Doukhobors, Galicians, and other settlers in the northwest who do not speak English was not favored in the Assembly. An overture asking for the establishment of a term service in the eldership was likewise rejected. These two measures were desired by churches in the western provinces to meet conditions temporarily prevailing there.

VII. Presbyterian Church in England.—The statistical returns of this Church, as reported to the Synod of 1900, give it 318 congregations, 74,541 members, 7,555 teachers, and 82,488 pupils in Sunday schools, and 8,929 members of young men's societies, on the sixth day of the last year. The income for foreign missions in 1899 amounted to £29,141, against £28,918 in 1898. Nineteen European ordained missionaries were employed, mostly in China, with 12 medical missionaries, 28 woman missionaries besides missionaries’ wives, 28 native pastors supported by
their own congregations, 162 native evangelists and 48 native theological students; and 81 organists, 1,283 teachers, 1,355 students, with 6,703 communicants, and 12 hospitals were connected with the missions. The income of the society had been £24,002. The Woman's Missionary Association had an income of £3,000 a year, and supported a large staff of woman missionaries in the foreign field. A plan it had in contemplation for the establishment of hospitals in China was approved by the Synod.

The Synod met in London, April 30. The Rev. John Watson, of Liverpool, was chosen moderator. The report of the Committee on Religion and Morals spoke of the widespread indifference prevailing in the land, as shown in diminished attendance at places of worship and diminished interest in the works and welfare of the Church.

An overture asking the Synod to declare it legal for elders to dispense the Lord's Supper at home mission churches was "passed from," the proposition being regarded as illegal. A proposition to mark the opening of the twentieth century by a special movement for deepening the spiritual life of the Church was also defeated. A special meeting of ministers and elders for prayer and conference was appointed to be held in Liverpool in October. A proposal to appoint a large commission of Synod to deal with matters which might arise during the intervals between the meetings of the body was referred back. Presbyterians and worthies were advised to cooperate with local councils in the simultaneous missions contemplated by the National Council of the Free Evangelical Churches to mark the opening of the new century. A resolution was passed expressing regret that "the influence of the authorities of the Anglican Church Presbyterian school at Liverpool did not lead to the establishment of garrison churches in that city at the public expense for the religious worship of the Protestant soldiers, or have been hampered in the use of them by intolerable restrictions," and urging the Government to take steps to remedy the injustice complained of. It was announced that in view of the use of the denomination of the Church of Scotland by some of the Unitarian churches, a committee had decided to issue a brief explanatory and historical tract for use in districts where the Church of Scotland was represented.

VIII. Church of Scotland.—The statistical returns for this Church for 1899 were as follows: 20,834 churches and mission stations, with about 2,000 ministers, 648,476 communicants, and in 2,200 Sunday schools 20,834 teachers and 227,452 pupils.

Seven new churches, 3 halls, 2 manses, and 2 mission houses had been added to the property of the Church through the operations of the Highlands and Islands Commission. The amount available for the Church through the Augustan Loan, and Smallen Living was £9,916, or £1,306 more than in 1899. The capital fund had reached £85,936. The Jewish mission reported that of 2,188 children attending its schools, 1,402 were Jews. Eight thousand pounds sterling had been raised for the Jubilee Thank Offering fund, for which it was sought to raise £14,000. The Endowment Committee reported that 408 churches had been endowed since the institution of the scheme. The combined income of the funds for foreign missions amounted to £50,681. One hundred and fifteen foreign agents were employed in the mission fields, from which were returned 9,891 baptized converts, 12,554 pupils in schools, and 1,065 under instruction in zananas.

The General Assembly met in Edinburgh, May 24. The Rev. Norman MacLeod was chosen moderator. The report on education showed that the number of pupils enrolled, 20,000, in 1899, and so far only 34 men had applied for license in the present year. The report of the Probationers' Committee, however, showed no improvement. There were only 108 students in the divinity halls, the number having fallen to that figure in 1896. The committee was free from debt, and the amount of a correspondence (mentioned in the Annual Cyclopaedia for 1899) with the Indian authorities respecting the use of the churches in India by Presbyterian soldiers, satisfactory assurances had been received from Lord George Hamilton. The closing address of the moderator contained a forecast of the outlook for the new one, in the course of which the speaker claimed that the ecclesiastical constitution of the Established Church combined state alliance with spiritual alliance in a manner more perfect than had ever been attained by any other church in Christendom.
PRESBYTERIANS.

During the past four years by upward of 12,000, the number of Sunday-school scholars had fallen off to almost exactly the same extent. The increase in the missionary effort was at first maintained, and articles of union with the United Presbyterian Church were brought up for final action, and were adopted by a vote of 592 against 29 for a motion that the Assembly take no further steps toward union—giving a majority of 563 in favor of union, as compared with 257 in 1899. Previous to this a protest was offered declaring that the signers, in taking part in the discussion, did not admit the right of the Assembly to deal with union. This was tabled, but a declaration, presented after the vote was taken, setting forth that the signers refrained from further opposition on the understanding that no existing principles were to be abandoned. The report of the Church and State Committee, including a resolution in favor of religious equality, was carried by a vote of 337 to 96. On the presentation of the address to the Queen expression was taken to the use of the word "unavoidable" in describing the war in South Africa, and it was struck out.

X. United Presbyterian Church of Scotland.—The statistical reports to the Synod of 1900 represent 594 congregations and 199,089 members, showing gains of 5 congregations and 1,613 members, with 185,193 young people under instruction; an income from congregational sources of £349,440—£6,100 less than in 1898—and a total contribution of £392,116.

The Foreign Mission Board returned 115 congregations, with 30,431 members. The missionary staff included 163 fully trained agents, of whom 65 were ordained European missionaries, 17 medical missionaries, 23 ordained native pastors, 15 European evangelists, 45 zenana missionaries, and 182 students.

The report of the Committee on Union with the Free Church of Scotland, including the basis that had been accepted by the joint committees, was presented, with a verbal explanation that the standards accepted by both churches formed the basis of union, and that there was nothing in the proposals that impaired the rights of either church. The report was then adopted, after a brief discussion, by a rising vote. It was agreed that the Synod should meet again, Oct. 30, finally to dispose of the matter of union, the moderator being empowered to call a meeting previous to that time if it should be necessary. The Synod decided to continue the negotiations for the union of its presbytery in Ireland with the Irish Presbyterian Church. A resolution was passed in support of the disestablishment and disendowment of the state Church.

Union of the Free and the United Presbyterian Churches.—The General Assembly of the Free Church and the Synod of the United Presbyterian Church met in London, and held special sessions for the purpose of completing the arrangements for union and consummating the act. A final report was made in the Free Church Assembly that 75 home presbyteries had voted in favor of union and 4 against it. A protest was then presented against the act, signed by 500 elders and connected with 150 congregations, which was rejected. Some protestations made against the acting in favor of union and 4 against it. A protest was then presented against the act, signed by 500 elders and connected with 150 congregations, which was rejected. Some protestations made against the acting in favor of union and 4 against it. A protest was then presented against the act, signed by 500 elders and connected with 150 congregations, which was rejected. Some protestations made against the acting in favor of union and 4 against it. A protest was then presented against the act, signed by 500 elders and connected with 150 congregations, which was rejected. Some protestations made against the acting in favor of union and 4 against it.

XI. Reformed Presbyterian Church.—At the annual meeting of the Synod, held in Glasgow in May, the Rev. John McKee was chosen moderator. The reports on the schemes of the Church showed balances of £564 in favor of foreign missions, £40 of ministerial aid, £26 of the Synod fund, £15 of the Free Church fund, £5 of the Union fund, £2,336 of home missions, and £407 of the general fund. A balance was also returned in favor of the publication enterprise.

XII. Original Secession Church.—The annual Synod of this body was held in Glasgow, Scotland, in June. Prof. James Spence, who was chosen moderator. The financial secretary reported that the total sum of £5,353 lay to the credit of the various funds. A member of the Synod took exception to the policy of keeping so large a sum in hand, and advocated a generous and judicious expenditure on Christian work. The moderator, referring in his address to the subject of union, said that the church had been held by Synods closed than by the union of two churches which had so much in common as the Free and United Presbyterian Churches, and regretted that all the Presbyterian churches had not been included in the scheme of union.

XIII. United Original Secession Church.—The Synod of this body was convened to make some relaxation in the formula of questions used at the examination of ruling elders, in which an indorsement of the action of the fathers, and especially an acceptance of the descending obligation of the covenants taken during the history of the Church, are required. It refused to grant the petition.

XIV. Presbyterian Church.—The General Assembly of this Church met in Dublin, June 4. The Rev. J. M. Hamilton, of Dromore, was chosen moderator. The financial reports showed as to the advance made by the Church during the past ten years, that the number of families had increased by 393, of communicants by 3,746, of pupils in Sabbath schools by 9,388, and the annual contributions for Sabbath school, missionary, and religious and charitable purposes by £12,219. There were now returned 754 ministers, 51 of whom were retired, and 166,630 communicants. The total income for ministerial support, £109,187, gave an average salary of £160 per minister.

XV. Welsh Calvinistic Methodist Church.—The statistics of this Church, presented to the General Assembly in June, give the following total numbers in the several items: Of churches, 1,345; of chapels and preaching stations, 1,557; of Sunday-school buildings, 889; of manses, 170; of ministers, 820; of deacons, 2,346; of communicants, 166,083; of children, 69,573; total in the churches, including 2,336 probationers, 228,147; with the
hearing included, the aggregate is given as 315,182. Increase is shown in all these items, that of ministers being 28, and that of communicants, 2,346. The total contributions of church members were £284,180, giving an average of £1 16s. 41/2d. per member, and an increase of £37,815 over the contributions of 1898. The contributions for foreign missions and established churches in India returned 355 chapels and preaching stations, 28 ministers, 52 preachers, 4,237 communicants (an increase of 641), 3,573 candidates, 6,182 children (a total in the churches of 13,992), 18,587 hearers, and £4,872 of contributions by the native members. The report showed that on the Khamna hills in India the natives in the collection of church dues and offerings have shown an increase. The question of putting the churches on a self-supporting basis had been considered. The native churches had established a home missionary fund, in aid of which they were making a centenary collection. A report was also made of the mission in Brittany. The book room had become a source of financial profit. Nearly £4,000 had been given toward the proposed centenary fund of £100,000.

The General Assembly met at Llanberis, Wales, June 19. The Rev. Thomas Roberts, moderator-elect for 1900, having died since his election, the Rev. J. J. Roberts, of Portmadoc, was chosen moderator. A report was presented concerning the work of the newly-formed presbytery in West Columbia, and a report was made of the mission in London and the large towns of England and Scotland, and in the United States and Canada. Resolutions were adopted calling attention to the difficulty experienced in obtaining for the soldiers in service the privilege of worshiping in the non-conformist way.

PRINCE EDWARD ISLAND, a province of the Dominion of Canada; area, 2,133 square miles; population in 1891, 109,088.

Government and Politics.—The political year in this little island province of the Dominion was very stormy. It began with the ministry of the Hon. D. Farquharson, a continuation of the Liberal Government of the Hon. P. Peters (which lasted from June 19, 1898, to May 8, 1899), reorganized because Mr. Peters had removed to British Columbia), holding office by a majority of two. The other members of his ministry were Hon. Angus McMillan, Provincial Treasurer; Hon. James R. McLean, Commissioner of Public Works; Hon. D. A. MacKinnon, Attorney-General; Hon. Edward Rogers, A. McLaughlin, Peter Sinclair, and Peter McNutt without office or portfolio. Mr. MacKinnon, against all British and Canadian constitutional precedents, had held his office of Attorney-General, and continued to do so during the session, without a seat in the Assembly. He had been defeated in the provincial election of 1898, and did not contest that office, by A. P. Prowse, while another Conservative in a similar by-election had also won a seat. On May 8 the Legislature was opened in due form by Lient.-Gov. P. A. MacIntyre, and it was adjourned on June 9 after a session in which the legislation attempted or effected was slight and the dominant feature was party contention. Of the majority of two never possessed by the Government, one was Mr. Peters, who had not yet resigned his seat, though living 3,000 miles away. The other was lost by Mr. Wise, who had been originally elected as a Liberal, repudiating the Farquharson Government and resigning his seat with a view to having his position approved by his constituency. He declared that his resignation was handed to the Speaker on a distinctly understanding with the Government that the election would be held at once. Even without such an understanding, however, the unwritten constitution and permanent practice is to hold such an election within a short time. But the Government received the resignation, refused to hold the election during the session of the Assembly, and for a time held office by the casting vote of the Speaker. Finally it obtained the support of a Conservative member named Pinetin. An exciting matter was an attempt by Mr. Wise to withdraw a resignation which he said had been given under false pretenses on the part of the Government, and to take his seat. Had he done so, the Government would have been beaten. They then held a by-election, on the casting vote of the Speaker. In July, 1900, Mr. Wise was defeated by a large majority.

Finances.—The receipts of the province for the year ending June 30, 1899, were $228,678, and its expenses $276,759. The former amount included the Dominion subsidy of $181,592, the provincial land tax of $30,136, and the sale of leventures for $7,089. Total revenue was $125,531 for education, $20,108 for the insane asylum, $19,076 for interest on the debt, $15,574 as subsidies to ferries and steamers, $32,553 on roads and bridges, and $15,317 on the administration of justice. The gross debt of the island was given in 1899 as $300,000.

Prohibition.—The only legislative measure of importance marking the year was a prohibition bill similar in many respects to that of Manitoba. It was introduced by Premier Farquharson as a Government measure, and, after some criticism, was finally approved by the Opposition and carried. It prohibits the retail sale of liquor except for sacramental, medical, scientific, or mechanical purposes, and rigidly enforces the act. Whole trade is also prohibited except to physicians and druggists, and for consumption outside the province. It will go into effect on June 5, 1901. The penalties for unlawful sale are $100 or three months in jail for first offense; $200 or four months in jail for second offense; six months in jail, without fine, for third offense, and subsequent offenses. Provision is made for appointment of inspectors to enforce the act, and for one or more vendors for the city of Charlottetown and for each county electing to come under the influence of the act. The fines are to go into the provincial treasury excepting those collected in Charlottetown, one third of which will go into the city. No appeal is possible from any conviction or judgment rendered in the ordinary courts. Where the prosecutor is other than one of the inspectors provided by the act, such prosecutor is to receive one fourth of the fines collected.

Agriculture.—In 1898 there were 44,703 acres in wheat, with a product of 596,761 bushels; 43,521 acres in oats, with a product of 123,924 bushels. In potatoes, with 2,922,522 bushels; 43,521 acres in potatoes, with 7,071,308 bushels; 4,411 acres in turnips, with 2,005,436 bushels. There were also 84,460 bushels of buckwheat and an estimated product of 150,000 tons of hay. The live stock in the island in 1898 included 44,600 horses, 110,000 cattle, 170,000 sheep, and 170,000 swine.

Education.—The number of schools in 1899 was 582; teachers, 582; enrolled pupils, 21,550; average attendance, 12,941. The Government expenditure was $125,531, and the school board (local) expenditure $1,537.

Prince Edward Island Railway.—This chief feature in provincial transportation runs the whole length of the island, 154 miles, and has a total mileage of 211. Its earnings in 1899 were $165,012, its working expenses $218,053, its deficit
Fisheries and Shipping.—The yield of the fishery and the cargoes shipped during the year at $1,070,206—a slight increase over the preceding year—and included a product of mackerel, $36,504; herring, $182,214; cod, $101,488; lobsters, $468,374; hake, $432,246; smelts, $32,424; oysters, $105,936. The Dominion bounty received by the fishermen was $10,188; the number of vessels was 24, with 135 men. The highest number ever reported with 199 men. There were 230 lobster canneries, employing 3,120 men and having a plant valued at $367,712. The fish exported were valued at $541,585.

The tonnage of seagoing vessels carrying cargoes to and from the island was 118,187.

PROTESTANT EPISCOPAL CHURCH IN THE UNITED STATES.

A summary of the statistics of Church progress in the year shows the following: The number of dioceses in the United States is 50; missionary jurisdictions in the United States, 17; missionary jurisdictions in foreign lands, 8; clergy (bishops, 84; priests and deacons, 4,863); 1,497; parishes and missions, 6,167; catechists, 12,820; boys, 12,882; and communicants, 1,674,575; marriages, 19,854; burials, 35,300; Sunday-school teachers, 46,222; Sunday-school pupils, 430,901; total of contributions, $16,102,467.52.

The gross receipts for missions for the fiscal year that ended Aug. 31 were $1,004,549.69, a gain for the greater part over previous years. The contributions for the work for which the board made itself responsible by appropriation were $439,824.33; the amount received from legacies designated by the testators, either for domestic or foreign missions or for the use of the society, was $253,104.59, of which sum $1,863,754.59 was applied to the current work of 1900 and $30,000 was permanently invested. The number of parishes and missions contributing—217 more than the year before, and more than in any previous year—was 3,963, and the amount of church offerings was larger by $51,791.98 than last year. The Lenten offering from Sept. 1, 1900, to Nov. 20, 1900, was the largest yet made, and was an increase of $9,618.66 over last year's offering. The number of schools contributing was 3,338, a gain of 220 as compared with the previous year. Seven of the foreign mission schools gave a total of $175,81—an average of $25.54—a showing worthy to be compared with the average gift from the Sunday schools in the United States.

The receipts for domestic missions (including a balance from 1899 of $81,306.45) were $544,312.91. The payments on account of white, Indian, and colored mission work amounted to $375,247.04; special gifts were $77,028.33; portion of Woman's Auxiliary united offering of 1898 appropriated for domestic missions, $9,084.76; legacy expenses (one half), $103.75; one half amount paid to annuities, $926; one half cost of administration and collection, $913.93; half cost of printing reports of the board, $926; portion of Spirit of Missions for the clergy, pamphlets and leaflets for gratuitous distribution, $838.80; cost of bishops to New York for their discretion, $2,500; returned to Standing Committee on Trust Funds, $53,000; making the total payments for domestic missions $446,925.57; and leaving for domestic missions and special portions of the fiscal year a balance of $97,537.34. The salaries of the bishops and the stipends of the missionaries in 17 missionary jurisdictions were paid, and in addition assistance was given to 40 dioceses and in Porto Rico. The general missionary work of the Swedes and 2 missionaries among deaf-mutes in the West and South also were continued. The whole number of missionaries in the domestic field during the year, clerical and lay, male and female, receiving salaries or stipends, was 1,115, and the amount appropriated to the whole work (including the sums not directly chargeable to the dioceses) was $316,861.17. The number of parishes and missions contributing for domestic missions was 3,728, 137 more than ever before.

The receipts for foreign missions (including a balance of $64,101.21 for foreign missions and special gifts from 1899) were $470,279.23. The payments on account of mission work amounted to $227,552.90; special gifts were $47,029.30; portion of Woman's Auxiliary united offering of 1898 applied to appropriations for foreign missions, $5,000.53; legacy expenses (one half), $103.75; one half amount paid to annuities, $926; one half cost of administration and collection, $9,135.93; one half cost of printing reports of the board, $192.60; portion of Spirit of Missions for the clergy, pamphlets and leaflets for gratuitous distribution, $32,424; legacies for investment paid to standing committee, $4,000; legacies paid to certain bishops at their discretion, $2,500; to Mexico, $850; returned to Standing Committee on Trust Funds, $86,189.48; making the total payments on account of foreign missions $339,577.81, and leaving for foreign missions and special portions of the fiscal year a balance of $87,001.42.

The reports of the missionary bishops are encouraging. Though retarded by obstacles, substantial progress has been made everywhere. With the means at their disposal the bishops are reaching out as far as it is possible to go, and the outlook is far more encouraging than had been the case in the past, but all expects the need of means to extend their work.

The statistics of work among the colored people in the 24 dioceses in which such work is done show that during the year the baptisms numbered 1,070, and the confirmations 712; there were 5,420 pupils in the day schools, 3,332 in the Sunday schools, 1,472 in the Boarding schools, 297 in the mission schools, and the marriage of which amount to several thousand dollars annually; the contributions amounted to $46,737.57, and the number of communicants was 7,865. There are about 80 colored clergymen laboring in the South, and more than 60 white clergymen. The appropriations for the work of the year amounted to $61,520.

Church work in Porto Rico has been carried on by 2 missionaries—the Rev. George B. Pratt, at San Juan, and the Rev. Frederick Caunt, at Ponce—the latter of whom was appointed this year. They have had constant help from Chaplain Brown, U. S. A., formerly a missionary in the domestic field. Pratt succeeded the chaplain of the Bishop of Chicago, and he having resigned, it is now under the care of the Bishop of Sacramento, and has been visited by the Bishop of Minnesota, who confirmed 12 persons.

In the Philippines one appointment has been made, that of the Rev. James L. Smiley. He has the cooperation of workers sent out by the Brotherhood of St. Andrew, of which there are 8 chapters, composed entirely of soldiers working among their fellows, and of Chaplain Pierce. U. S. A., who has raised more than $30,000 toward establishing the work. Church work in the Philippines has been placed in the charge of the Bishop of Shanghai, who has visited the field.

The reports of work among the Swedes show
that 3,586 public services were held in the year, and nearly $28,000 contributed; more than 1,000 persons were baptized, and nearly 300 confirmed, and the communicants number more than 8,000.

For mission work among the Indians $54,158.89 was paid out by the board.

In Liberia 4 priests—young men of African descent, educated in the mission schools—were ordained, and 22 new parishes were formed for the orders were admitted, 13 lay readers were licensed, and 3 additional catechists and teachers were commissioned; the corner stones of 1 school and of 2 church buildings were laid; 2 churches were consecrated; 329 persons, many of whom were adults, were baptized, and 184 confirmed; the contributions were $2,538.24; and the number of communicants was 1,647, of whom 975 were aborigines.

Spiritual progress, and material as well, marked the course of the year in China until the outbreak of the disturbances there, after which time all missionaries and native workers were withdrawn from the mission stations. One native deacon and a graduate of the theological school, was admitted to the order of deacon; 3 of the foreign clergy also were advanced to the priesthood. The baptisms of natives were 411; confirmations, 151; communicants, 1,139; day-school pupils, 778; boarding-school pupils, 448 (all these pupils have lessons equivalent to a Sunday-school course in the United States); contributions, $2,709.02 (Mexican dollars). Science Hall, St. John's College, was completed and formally opened; the college chapel was inclosed and made the pro-cathedral; St. Hilda's, school, at Wu-Chang, was erected and opened for the work of female education; and a seven-story, four-story building was added to the schoolhouses. The translation of the Bible was continued, an abridgment of the Old Testament published, a translation of Gwynne's Catechism made, and the hymnal was revised and enlarged by the translation of additional hymns.

In Japan the most noteworthy event of the year was the consecration of the Rev. Sidney Catlin Partridge as Missionary Bishop of Kioto, the missionary district set apart in 1898. Statistics for the Japan mission give: Natives baptized, 260, of whom 173 were adults; confirmed, 207; communicants, 1,757; day-school pupils, 1,561; boarding-school pupils, 318; Sunday-school pupils, 1,092; contributions, $5,518.02 (Mexican dollars). Three native priests and 2 deacons were ordained in Japan, and the missionary staff was strengthened by the arrival of 4 missionaries.

Three churches were consecrated, and land for mission buildings was bought. It has been made clear that the intention of the rescript issued in 1899, which forbade any religious instruction in an orphan asylum, by the Department of Education, was to forbid religious instruction as part of the curriculum established by the department, but that there was no intention of interfering with such instruction if given either before or after the hours prescribed for the regular curriculum. A bill for the regulation of schools, aiming to bring all institutions, secular and religious, under the control of the Government, was introduced in the last Diet, but because of the opposition of the principal Buddhist sects it failed to receive a majority vote. Many of the provisions of this bill are calculated to hinder Christian work.

The baptisms in Hayti during the year numbered 141, the confirmations 31, and the contributions were $2,388.77. At Léogane, the stronghold of Voodooism, a church was consecrated, and the chief Voodoo priest, or sorcerer, has become a convert. The bishop asserts that the time now is fully come to put into effective movement the auxiliary means of evangelization for which preparation has been made during the past twenty years—medical missions and industrial schools.

The routine work of the Mexican Church continues to be carried on by 7 presbyters and 5 deacons who, with lay readers, make up the working force. The baptisms in the year were 83, and the confirmations 49; the offerings amounted to $1,062; and the number of communicants was 727. The work in Mexico among English-speaking people has not been as successful as might have been anticipated.

The statistics of the chaplaincies in Europe show: Clergy, 14; organized chaplaincies, 9; baptisms, 5; confirmations, 40; communicants, 1,400; contributions, $15,025.

On March 14, 1899, the Assyrian Mission Committee, which was organized in February, 1895, was merged with the American Foreign Missionary Society. The amounts collected for this mission since March, 1899, aggregating $2,603.69, have been applied to their respective purposes.

The receipts of the American Church Missionary Society amounted to $68,353; the cash on hand Sept. 1, 1899, was $4,658.17; the expenditures were $4,765.35. The contributions for the year 1900—$10,282.65—with the special investments of $26,362.50, gives $36,045.15 as the real amount of available funds on hand for the society's general work and the beneficiaries of its trusts. Of this amount there is available and unappropriated for the general work $3,102.20. The missionaries of the society, under the direction of Bishop M. E. March 20, who minister in 60 stations to 1,500 communicants, of whom 95 have been added during the year. The disbursements for Brazil for missions were $14,115.55; for "specials," $2,200.43; for church building, $7,000. The Brazilian mission continues to develop, and from all established missions in church work there has come pronounced expression of an interest in the faith of the year a theological school has been opened, and a new mission has been instituted; 101 persons were baptized; 147 confirmed; the communicants were 443; Sunday-school teachers, 27; pupils, 378; and contributions, $4,991.32.

For Cuba the disbursements were: For missions, $4,574.71; for "specials," $1,670; for Matanzas Orphanage, $3,337.07; for Havana Orphanage, $4,827.70; for Guantanambo Orphanage, $822; for church building in Bolondron, $1,025.26; for church building in Havana, $2,434.23; for Matanzas Cemetery certificate, $500. In spite of the difficulties and small means good work has been done, due principally to the indefatigable labors of a deaconess and a candidate for holy orders; these are assisted by 2 laymen and 5 or 6 ladies. The Bishop of Pennsylvania made a visitation to the island and confirmed 118 persons.

The Society for Promoting Christianity among the Jews continues, though slowly, to make conquests; it is hampered by lack of means. The amount at its disposal during the year was $6,268.88, the expenditures were $5,827.41, and a cash balance of $414.47 remains in the treasury.

The summary of work accomplished in the year by the Woman's Auxiliary and its junior department, in which 3,408 parishes and missions took part, shows contributions and boxes valued at $191,434.96. Of the total of $402,276.51 the junior department gave money and boxes to the amount of $31,148.23.
The American Church Building Fund Commission reports that in the year gifts amounting to $4,725 were made to 27 churches, and loans to the amount of $19,575 to 13 churches. The contributions to the permanent building fund were $60,000; in the loan lotteries and invasions, $604,603.02; loans returned by parishes and missions, $33,008.00. The fund now amounts to $356,158.01.

In Honolulu no transfer of the rights of the Independent Church there has yet been effected by the ecclesiastical authorities. The statistics of the diocese for 1900 show: Number of clergy, 6; church edifices in which it has pledged itself, 119; confirmations, 75; communicants, 590; Sunday-school teachers, 22; Sunday-school pupils, 270; parish-school teachers, 15; parish-school pupils, 435; contributions, $8,095.

The Right Rev. Mahlon Norris Gilbert, Bishop Coadjutor of the diocese of Minnesota, died March 2, 1900. The Right Rev. Henry Melville Jackson, bishop, whose resignation was accepted April 19, 1900, died May 4, 1900. The Right Rev. Richard Hooker Wilmer, second Bishop of Alabama, died June 14, 1900. Also the Church lost by death 97 other clergymen.

On Feb. 2, 1900, the Rev. Sidney Catlin Partridge, having been elected first bishop of the missionary jurisdiction of Kioto in Japan, was consecrated. Feb. 24, 1900, the Rev. Robert Codman, Jr., rector of St. John's Church, Roxbury, Mass., having been elected on Jan. 9, 1900, by a special convention of the diocese, Bishop of Maine, was consecrated. On the same date the Rev. Charles Palmerston Anderson, rector of Grace Church, Oak Park, Ill., having been elected, on Jan. 9, 1900, by a special convention of the diocese, Bishop Coadjutor of Chicago, was consecrated, the Rev. Dwight Seward Barnwell, rector of St. Paul's Church, Selma, Ala., having been elected Bishop Coadjutor of Alabama, and the Right Rev. Richard Hooker Wilmer, bishop of the diocese, having died subsequently to the election, was consecrated, and became the third Bishop of Alabama. Nov. 8, 1900, the Ven. Reginald Heber Weller, Jr., B.D., Archdeacon of Stevens Point and rector of the Church of the Intercession, Stevens Point, having been elected, on Aug. 30, 1900, at a special convention of the diocese, Bishop Coadjutor of Pond du Lac, was consecrated.

QUEBEC, a province of the Dominion of Canada; area, 228,900 square miles; population in 1891, 1,488,535.

Government and Politics.—The Government of Quebec fell into the hands of M. G. Marchand, facing the opening of a new year with a substantial majority and no serious shadow upon its future. The Legislature met on Jan. 18, 1900, and was opened by Lieut.-Gov. L. A. Jette with a speech from the throne, in which he said:

"You will be called upon to consolidate our health and license laws, and amendments to the laws governing Crown lands, factories, and mining corporations will also be laid before you.

"As you will see by the public accounts, equilibrium is at last restored in our finances, and the ordinary receipts of the year show a surplus over all expenditure. With the kind assistance hitherto afforded my Government by the members, I am confident that this exhibition of affairs will continue; but to maintain this position it will be necessary to keep the expenditure within its present limits for some time. The settlement of accounts between the Government of the Dominion and that of the provinces of Ontario and Quebec has made marked progress during the year. Our province has obtained from the board of arbitrators an important award condemning Ontario to pay into the common-school fund an amount of nearly $300,000. The Ontario Government has, however, notified my Government that it intends to apply to the Supreme Court for leave to appeal from that award. The question of the perpetual annuities to be paid to the Ojibway Indians, under the Robinson treaties, presented considerable difficulties which, by means of an agreement with the two other governments interested, my Government has been able finally to settle to its undoubted advantage.

"My Government has neglected none of the underlierings of the Canadian school movement to promote. The education of youth has been the object of its particular care. It has increased the yearly grants to poor municipalities and to night schools; it has subsidized a normal school for female teachers which has just been founded in Montreal. The providing of free schoolbooks for primary schools continues to receive its attention, and the system will shortly be inaugurated by the distribution of an excellent map of our province to all the schools in municipalities desirous of benefiting by the scheme. The session has been marked by theological lectures in their several districts, which were attended by a great many teachers, at the Government's expense; and in order to encourage them in the performance of their scantily remunerated task my Government has distributed money bonuses to the most deserving.

"To encourage colonization, my Government has made considerable efforts to open new roads in regions suitable for settlement, and many settlers have taken advantage of this to establish themselves there. Agriculture has also received a liberal share of encouragement from my Government, which has paid attention to improving the quality of butter and cheese, to propagating the best kinds of fruit trees, to providing municipalities with better highways.

"In consequence of a judgment of the Privy Council, which was communicated last year to the Legislature, my Government has become vested with the ownership of a portion of the fisheries formerly under the administration of the Federal Government. The judicious application of the law passed on the subject last session, and of the game law, together with the part taken by the province in the New York Sportsman's Exhibition in 1899, have resulted in a marked increase in the provincial revenue.

"My Government has devoted its particular attention to the pulp and paper industry and profitably utilizing our immense forests, our splendid water powers and mineral resources. Thanks to its assistance, new industries continue to be established and populous manufacturing centers are springing up in regions until recently uninhabited. Within the past few years pulp wood has assumed such importance in connection with the prosperity of our population and the public revenue that my Government has deemed it advisable to take steps to increase the manufacture of pulp in this country, to the benefit of our industrial and laboring population.

"One of the pledges made by the Government when in opposition was a promise to abolish the
official residence (Spence Wood) at Quebec of the Lieutenant Governor. Since attaining office they had done nothing in this direction, and during the main session they came in for much criticism—not because they should have abolished the residence, but because they had promised to do so and not tried. Messrs. Le Blanc and Nantel and other Conservative leaders declared themselves in favor of the maintenance of it. They could not, however, give no definite expression from members of the Government. On March 10 Mr. Marchand introduced a measure proposing to abolish the upper house of the Legislature. His resolution merely stated that "in the opinion of this house, it is desirable that the composition of the legislature of this province be modified by abolishing the Legislative Council." He referred to various attempts made in previous years to effect this end by both himself and the late Mr. Mercier. He declared that the Council cost about $40,000 a year, which might be better expended on colonization; that Ontario and Manitoba got on very well without such a body, and so could Quebec; that it did not represent the people; that it changed the law, that it did the House of Lords in England, that its members were mainly political partisans; that the Assembly did not need such a correcting and modifying influence; and that the people were in favor of its abolition. Mr. E. J. Flynn, leader of the Conservative opposition, declared, in reply, that the Government measures were important, but the people, otherwise, they would have introduced a specific measure instead of an academic expression of opinion; that the Council was an essential part of the Constitution; that the English minority in the province was almost unanimously in favor of its maintenance; that it was the safety valve of the Government; and also represented the sober second thought of the people; that in the past it had defended important interests, and was regarded by the city of Montreal as the safeguard of its manufactures, capitalists, and property rights; that it represented the Quebec aristocracy of merit and intelligence in professional, industrial, and agricultural life; and that it was an exception to legislation subservient of public order and the Constitution. He moved an amendment as follows:

"That this house is satisfied with the present Constitution of this province, which is based on that of Great Britain, and does not desire any such innovation as that proposed, which would have but one result—that of imperilling our provincial institutions and very seriously affecting the interests of this province as an integral part of the Canadian confederation."

The original motion was carried by a party vote—38 to 21. In the Council itself a more formal bill was introduced and debated at length, the provisions being made by the Hon. Marquis Archambault and T. Chapais. Eventually an amendment moved by the Hon. C. B. de Boucheville, a former Conservative Premier of the province, declaring that the Council should be maintained "in the interest of wise legislation and as a safeguard for precious privileges" accorded by the confederation act, was carried and the bill was defeated. On March 23 the Legislature adjourned after the Lieutenant Governor had assented to a large number of measures, among which were the following:

To consolidate and amend the license law.
To amend the law respecting industrial establishments.
Respecting the construction of telephone lines.
To amend the law respecting taxes upon commercial corporations and companies.
To incorporate the Montreal Mining Exchange.
To incorporate the Great Northern Elevator Company.
To amend the law respecting admission to practice medicine.
To incorporate the Labrador Electric and Pulp Company.

Concerning the Board of Catholic School Commissioners of Montreal.

Important changes took place in the personnel of the Government. On Feb. 13 the Hon. Joseph Shehyn retired from his office of minister without portfolio in order to accept a Dominion senatorship. Late in September the Hon. F. G. Marchand, who had been an honorable and much respected Premier, died, and on Oct. 3 a new Liberal ministry was sworn in under the leadership of Mr. N. H. Trudeau. The new young man who had been Commissioner of Lands, Forests, and Fisheries in Mr. Marchand's ministry and Mayor of Quebec city several years. Mr. Parent retained his old portfolio in the Government, and Mr. Shehyn resumed his office. The Hon. H. Archambault as Attorney-General, the Hon. F. G. M. Desrosiers as SolicitorGeneral, the Hon. Charles Doucet as Attorney-General, the Hon. G. W. Stephens as member without portfolio, the Hon. A. Turgeon as Commissioner of Colonization and Mines (with the addition of the provincial secretaryship), and the Hon. J. J. Guerin, member without portfolio, retained their posts. Mr. Lomer Gouin came in as Commissioner of Agriculture in place of Mr. H. T. Dufty, who took the treasurership, and the Hon. J. E. Robidoux retired and was appointed to a provincial judgeship.

Finances.—On Jan. 25, 1900, Mr. Marchand presented his annual budget as Provincial Treasurer. His estimated expenditure for the year ending June 30, 1901, was $4,750,652, an increase of $1,006,822 on the budget for the year 1899. He declared that on June 30, 1899, the total liabilities, including the funded debt and its increase by the conversion, the temporary loans, trust and railway deposits, outstanding warrants, increased railway subsidies, etc., amounted to a total of $37,320,504, and the total assets to $10,054,942, leaving on that date an excess of $29,265,562 of liabilities. Compared with the previous year's statement, the increase of the excess of liabilities was $795,038, while the increase of the capital of the funded debt conversion was $915,280, so that actually there had been a decrease of $120,241 in the excess of liabilities, apart from the increase by conversion of the debt.

On June 30, 1898, the funded debt outstanding amounted to $34,238,841, and on June 30, 1899, to $35,128,847, an increase of $845,006 also due to the conversion. There was invested during the year for the sinking fund $21,070, bringing that fund up to $10,035,747 and leaving the net amount of the funded debt $25,103,000. On June 30, 1899, the floating debt, made up of temporary loans, trust deposits, railway guarantee deposits, outstanding warrants, unearned railway subsidies, amounted to $1,991,056, against which the Government held $201,970 cash in banks and $267,257 claims for loans and advances to individuals and corporations lying unappropriated, giving the Government an amount of funded debt at $1,522,402, and constituting a decrease of $18,897. The total amount of the debt converted was $3,961,743, which added $915,280 to the princi-
pal of the debt. In all, the total amount converted to that date was $7,333,297, increasing by $1,715,427 the principal of the debt. But the annual saving in carrying the interest on the British high-duty silver coins went to more amount to $34,292. Against this, however, must be put the commutation of the stamp duties on the $9,048,725, amounting to $306,653. The Treasurer further said that the contract executed between his predecessor and the Bank of Montreal for the conversion of the debt, which was entered into in 1893, was still in force until July 1, 1899. An arrangement was concluded, under authority of an order in Council of June 30, 1899 with the bank, to take charge of the conversion for the province at a commission of one half of one per cent, on the nominal value of bonds converted, the province to pay all expenses and brokerages, which would probably be about three eighths of one per cent. Thus, the price for the 3 per cent, in-
scribed stock was advanced from 90 to 95 per cent., but owing to the depression that had taken place in the money market there had been no transactions so far, and the Government would wait more favorable opportunities to authorize any further conversion. On March 15 the following Opposition amendment was moved in the house, but was de-
feated by 36 to 18 votes: "That this house, while ready to vote the supplies to her Majesty, regrets to see that the party now in power has altogether failed to keep the solemn engagements made by it when in opposition, especially as regards the ordinary expenses of carrying on the Government and its institutions, in fact, according to page 212 of the journals of the house, Hon. Mr. Dechene, now Commissioner of Agriculture, in 1896 laid before the house a proposition regretting that the expenses of Government, under Conserva-
tive administration from 1893 to 1896 inclusive, were as follows: 1893, $3,925,238.75; 1894, $3,876,900.86; 1895, $3,951,203.04; 1896, $3,973,349.11; and yet, ac-
cording to public account for the fiscal year end-
ing June 30, 1899, the ordinary expenses under the present Government were $4,201,023, an in-
crease of $139,501.53 over 1896, and of $222,508.50 over the average above given for the four years of Conservative Government from 1893 to 1896 in-
cluding.

The actual receipts of the province for the year ending June 30, 1900, were $4,539,736, and in-
cluded $1,273,991 from Dominion subsidy; $1,299.71 from lands, forests, and fisheries; $241,733 from law stamps, legal fees, etc.; $580,129 from liquor licenses; $186,598 from taxes on com-
merce and corporations; $270,563 from succession duties; $79,713 from insane institutions: $300,0048 from the Quebec and Ontario Railway. The total actual expenditure was $4,026,472, showing a small deficit and including such items as expenses of public debt, $1,538,039; legislation, $1,098,563; civil government, $265,872; administra-
tion of justice, $204,000; education, $349,200; public works and buildings, $97,209; agriculture, $193,759; lands, forests, and fisheries, $149,704; colonization and mines, $184,845; lunatic asylums, $340,400; railway subsidies, $89,276.

Education.—One of the questions of the year was the cutting off of certain Government grants to the universities and their application to ele-
mental education. Early in February Dr. W. W. Heneker, Chancellor of the University of Bishop's College, Lennoxville, resigned the chairmanship of the Protestant Committee of the Council of Public Instruction. In explaining his reasons he referred to the marriage-license fees of Protestants in the province, which for thirty years had been allowed to go toward the support of the two universities—McGill and Bishop's College—just as a sort of Government grant, and spoke of the strong protests of the committee as well as of the universities against the legislation in question. Speaking of his re-
maindment, he thus said: 'The leading educational institutions for the training of the Protestant youth of the province, must henceforth carry on their high-class work without any assistance from the public purse. All who are acquainted with university work know that the arts course is the foundation course of all learning, and can not without difficulty be main-
tained with satisfactory results without state aid, and it is in these institutions that the statesman, the professional man, the high-class merchant, and the teacher of high class get a proper preparation for the duties of life.'

The Rev. Dr. W. J. Shaw was elected chairman in Dr. Heneker's place, and a motion of censure upon the Government for its policy in this con-
nection was shortly afterward put to the com-
mitee and lost.

The provincial branch of the Dominion Prohibition Alliance, on March 1, declared that: "From information given, we are of opinion that the pro-
visions in our school laws and regulations are en-
ough to prevent the introduction of intoxicating
and high-class instruction in our elementary and high schools. We have reason to believe that it is now entirely ignored in a large proportion of our schools, and very inadequately taught in many of the others.'

In the House of Assembly, on March 26, on a motion of Hon. E. J. Flynn, Member A. W. At-
water, the following resolution regarding the Gov-
ernment's attitude toward education was pre-
sented, but of course was defeated by the party vote: "That this house finds that in spite of all the self-praises of the Government as regards educa-
tion the actual facts disclosed for the fiscal year just ended show that the grantees have not taken credit were thus accomplished only for the greater part at least in virtue of an act passed under the previous administration, to wit: 60 Vic-
toria, chapter 3, respecting 'elementary schools,' which appropriated the sum of $30,000 to be ap-
plicated, under the direction of the Lieutenant Gov-
ernor in Council, by only depriving elementary school of the aid to which they were entitled, and particu-
lary poor school-teachers of the bonuses or gratifications which the law authorizes, and which they had the right to expect for the said year, to the amount of $14,000."

Mr. Marchand, in his budget speech, defended the Government, pointing out that the withdrawal of the marriage-license fees from the universities helped the poor municipalities and weak elementary schools, and that his Government had been unjustly accused of practicing an undue economy by depriving public instruction of its legitimate share of the expenditure. He declared that if the amounts of the special grants of certain educational institutions and to night schools, entered under other headings, were taken into account with the Government's expenditure for public instruction, it would be found that the present Government had laid out last year upon the cause of education $412,657, as compared with $389,759, the amount expended by the Conservatives on it in 1893–96, the last full year of their régime. Not only had the ordinary appropriations for elementary schools, for higher education, and for literary, scientific, and industrial institutions been fully employed, but this present Government had added considerably thereto for the purposes just indicated. In addition, they founded at Montreal a normal school for female teachers, which was actually in full operation. They had also made provision for distributing a geographical map of the province to all the public schools. This map was ready, and its distribution would be effected as soon as it had been approved by the Council of Public Instruction. They were, moreover, preparing to distribute a free series of elementary-school text-books to primary schools. The Roman Catholic elementary schools in the province, on June 30, 1899, included 4,203 under control of municipalities and 53 independent. The model schools were 347 under municipal control and 140 independent. The academies under the former head numbered 35, and under the latter 96. The independent Catholic normal schools, classical colleges, universities, etc., numbered 25. Of the Protestant academies of any kind, there were under municipal control, together with 52 model schools and 29 academies. There were 7 universities, colleges, and normal schools. The Catholic pupils in Roman Catholic schools of all kinds numbered 276,988; the Protestant pupils in Protestant schools numbered 36,608. There were 1,040 students at Laval and 1,320 at McGill and Bishop's College. The expenditure by municipalities upon education in 1899 was $1,418,695.

Railways and Bridges.—The mileage of railway track in the province in 1899 was 3,343 miles. A new railway was subsidized for colonization purposes, between Labelle and Lake Nominini, with $5,000 a year for twelve years. The South Shore Railway Company was granted $8,900 annually for ten years, to build bridges over St. Francis and Yamaska rivers. The great event, however, was the large Dominion grant of $1,000,000, and a promise of another million, to the proposed bridge over the St. Lawrence, near Quebec. The provincial subsidy was $250,000, and a grant of $500,000 came from the city of Quebec.

Mines.—The iron ore produced by the province in 1899 amounted to 1,510,000 tons. The gold production was only $4,916 in value in 1899. The silver production was $43,655. The phosphate was valued at $9,200.

Colonization.—The amount spent in 1899 for colonization, including grants to colonization societies, was $79,000. Much of this was spent on 527 miles of road and 19,047 feet of bridges. Causes of the total amount of $258,061 were: some $4,367 for the Metropolitan, Lake St. John, and Ottawa districts alone. All bridges are constructed under the immediate supervision of the Department of Mines and Colonization. Its annual report for 1899 recommended that lands for settlement be sold only where they would be easy of access, in order to group colonies of settlers, and as possible to the Department to see readily who were bona fide settlers. About 278,105 acres of land were surveyed, at a cost of $36,037. The expenditure of the department for 1898–99 amounted to $140,493. The Quebec office handled 3,146 immigrants and the Montreal office 2,550, the great majority of them being English, Scotch, and Irish. The number of repatriated French Canadians was 5,561 for the year.

Reformed Churches.

The Committee on Domestic Missions reported that it had closed its year free from debt, with a balance of several hundred dollars in its treasury. Of the 650 churches, 227 were aided by the committee.

The Board of Education reported itself for the first time in half a century out of debt.

The Committee on the Disbursed Ministers' Fund returned a slight increase of contributions from the churches, but no increase of income from invested funds. Of its 46 beneficiaries, 34 were women. A proposition from the mayor and citizens of Pekin, Ill., for the establishment of a ministers' home of the Reformed Church in connection with a hospital contemplated in that city was referred by the General Synod to the Board of Direction.

The present total capital of the Widows' Fund was returned at $107,928, showing an increase for the year of $1,044. The year's receipts had been $11,782, and the payments $10,185. The full amount of $290 had been paid in 1898. The year's contributions for the Theological Seminary at New Brunswick, N. J., had been $4,095 for current expenses, and $27,036 for ex-
The Bishop of Albany, represented persons foreign to the Bishop for $25,000. A committee observed fifteen.
The General Synod met at Asbury Park, N. J., June 6. The Rev. Edward P. Johnson, D. D., of Albany, N. Y., was chosen moderator. The Committee on the State of the Church presented statistics of the growth of the Church during the past fifty years, showing that the number of communicants had increased from 2 in 1850 to 4 in 1900; the number of classes, from 24 to 35; of churches, from 292 to 643; of ministers, from 293 to 715; of communicants, from 33,553 to 109,899; of Sunday-school scholars, from 19,791 to 124,248; and the amount of offerings for foreign missions, from $6,606 to $155,943, and of those for domestic missions, from $4,573 to $49,034. A report stating that in fifty years the number of churches and ministers had more than doubled; the number of communicants had multiplied more than threefold, and of Sunday-school scholars more than sixfold; and the offerings for foreign and domestic missions were more than sixteen times as large as in 1850. The average offerings received on confession in 1850, $325, represented an average of $41 to each church; the number in 1894, 6,114, an average of about 10. But the number received on confession during the past year was less than for any one of the ten preceding years, while within the past six years, with one exception, the number had been from 6,114 in 1894 to 4,656 in 1900. A similar tendency to slackening of increase in membership was observable in other denominations. The Synod, in view of the approaching beginning of the twentieth century, resolved to observe the first week in January, 1901, as a special season of thanksgiving and prayer, and especial attention to the institution of voluntary offerings, $250,000 being the amount desired, for the endowment and proper equipment of the Theological Seminary, at New Brunswick, N. J. A special committee was appointed to consider the system of instruction in the Sunday schools and propose methods for making it more efficient in training the minds and hearts of children and youth. Other special committees were appointed to revise the forms or prepare new forms for ordination and installation of ministers and of elders and deacons; to revise the baptismal forms; and to devise some plan of oversight and regulation for bringing vacant churches and unemploying ministers and candidates together. In order to maintain the moral standards on which the Church depends for its soundness and influence, and to furnish enlarging opportunities for preparation among the graduates of the theological seminaries, the larger churches were recommended to employ younger ministers, wherever it was practicable, as assistants to the regular pastors. The classes were requested to appoint proper presiding elders and to establish committees on estates and probate, and to employ such persons as shall be found most efficient in the performance of these duties. Steps were directed for securing a full endowment for the Western Theological Seminary. One two-year post-graduate course was instituted for each of the seminaries, and a number of other measures were advised for the extension and improvement of ministerial education. The support of individual missionaries or of particular fields by single churches or groups of churches and by individuals having means was commended. In order to extend the usefulness of the particular synods, the giving of them more the character of conventions, and to advise the representation of all general church activities, was advised, to which end arrangements were suggested for holding in connection with the regular work of the synod public meetings in behalf of the enterprises of the Church. The report on the Sabbath and religion ended allusion to the observation of the Lord's Day's Day of Injunction of its beneficent design and inimical to public and private morality. A resolution of sympathy with the Reformed Churches of South Africa was passed.

This resolution, having been transmitted to the envoy of the South African republics to the United States, P. Latane, reporting, the treasurer said: "The Dutch Reformed is a very strong Church in our country. The majority of the Boers are members of that Church, although they are granted absolute facilities and freedom to join any other denomination. The Dutch Reformed Church has its houses of worship established in every city and village in South Africa, and many of its missionary services well attended. Several theological institutions are established, where the ministers have to spend several years in preparation for the ministry. The influence of our Church educational and missionary work is advanced on every hand." 

Reformed Episcopal Church. The Committee on the State of the Church, reported to the General Council of this body in May, 1900, that the number of communicants was 10,000, and that of members of Sunday schools 19,782. A distinct gain in three years was shown. The churches had raised for all purposes $165,811, and held property having an aggregate value of $1,573,535. The building capacity of the churches was 20,000 persons. The sixteenth triennial General Council met in Baltimore, Md., May 16. Bishop James A. Latane, D. D., was chosen presiding bishop. The treasurer reported that his receipts had been $17,991, and that no liabilities existed, while a balance of $40,718, and the appropriation of $40,718 was received for the Theological Seminary, and its accounts showed a balance in bank of $2,420. A resolution was unanimously passed urging the clergy to present to their parishes the subjects of a better support of the seminary, and of inducing a larger number of young men to enter the ministry. The report of the special Church Extension Trust reported that $21,884 had been received for it, and a balance of $1,364 stood to its credit. The Council voted, in accordance with the wishes of the creator and donor of this trust, to dissolve and reorganize it. The Board of Foreign Missions had received $14,017 during the year, of which $5,000 was expended in the purchase of $5,000 of stock, with business done during the year to the amount of $7,011. The sessions of the Council were largely devoted to the consideration of questions relating to the constitution and canons. A proposition to insert a clause requiring from all candidates for the ministry a pledge of absolute abstinence from the use of alcoholic liquors and tobacco was withdrawn, after a debate which revealed a considerable difference of opinion among the members of the Council.

Rhode Island, a New England State, one of the original thirteen, ratified the Constitution May 29, 1790; area, 1,250 square miles. The population, according to each decennial census, was 68,825 in 1790; 69,122 in 1800; 76,931 in 1810;
1820; 97,199 in 1830; 108,830 in 1840; 147,545 in 1850; 174,020 in 1860; 217,333 in 1870; 276,531 in 1880; 345,506 in 1890; and 428,556 in 1900. Capitals, Providence and Newport; after 1900, Providence only.

Government.—The following were the State officers in 1900: Governor, Elisha Dyer, succeeded March 29 by William Gregory, Lieutenant Governor, William Gregory, succeeded by Charles D. Kimball; Secretary of State, Charles P. Bennett; Treasurer, Walter A. Read; Attorney-General, Willard B. Tanner; Auditor and Insurance Commissioner, Charles C. Gray; Superintendent of Education, Thomas B. Stockwell; Adjutant General, Frederick M. Sackett; Railroad Commissioner, Daniel Comstock; Commissioner of Industrial Statistics, Henry E. Tiepke; Record Commissioner, R. Hammett Tilley; Factory Inspectors, J. Ellery Hudson, Helen M. Jenks; Surgeon General, George H. Kenyon; Inspector of Beef and Pork, James R. Chace; Inspector of Lime, Herbert Harris; Commissioner of Sinking Funds, John W. North Providence; each elected for the first Tuesday in January. Annual sessions of the Legislature have been held at Newport beginning the last Tuesday in May, and annual adjourned sessions at Providence beginning in January. By the amendment to the Constitution, there will hereafter be but one annual session, at Providence, beginning the first Tuesday in May. The length of the session is limited, but the pay of legislators ceases at the end of sixty days; it has been increased from $1 to $5 a day. The Legislature consists of 38 Senators and 72 representatives. The Constitution provides that a new apportionment may be made after a census has been taken by authority of the United States. Providence consists of 110,160

Population.—The increase of population in the last decade was 83,050, or 24 per cent. In the decade next preceding the increase was 24.9 per cent. The population by counties is as follows:

Among the towns and cities, Cranston shows the largest percentage of gain, 64.79. East Providence shows the greatest increase, 44.91 per cent., and Pawtucket 41.08. The census returns of the larger places are as follows: Providence, 175,597; Pawtucket, 39,231; Woonsocket, 28,204; Newport, 22,034; Warwick, 21,316; Central Falls, 18,167; Cranston, 13,343; East Providence, 12,133; Lincoln, 8,957; Cumberland, 8,925; Westerly, 7,541; Newport, 6,900; Barrington, 6,317; Coventry, 5,279; Warren, 5,108; South Kingstown, 4,972; Johnston, 4,305; North Kingstown, 4,194; Sultana, 3,361; North Providence, 3,016; Tiverton, 2,977; East Greenwich, 2,775; Hopkinton, 2,602; North Smithfield, 2,422; Smithfield, 2,117; Portsmouth, 2,106.

Finance.—The balance in the treasury at the beginning of the year was $32,557.28; the receipts during the year, $1,481,479.73; total, $1,543,037.03. Among the sources of revenue were: Tax assignments, $206,603.58; State tax, $347,424.79; institutions for savings, $351,066.46; State insurance companies, $373,012.85; foreign insurance companies, $83,363.27; building and loan associations, $401.21; town councils, $116,257.76; State institutions in Cranston, $50,325.75; State home and school, $275.58; school fund dividend, $87,710.95; exclusive of clerks and committees, $2,392; peddler’s licenses, $2,485; auctioneer licenses, $294,730.80; National Home for Disabled Volunteer Soldiers, $12,179.81; Supreme Court, $22,653.46; tax on street railways, $24,485.80; on telephone companies, $4,259.29; on telegraph companies, $881.79; on express companies, $449.80.

The disbursements for the year amounted to $1,355,447.95. Among the items are: Salaries, $137,409.22; expenses of General Assembly, exclusive of clerks and committees, $17,159.46; support of the State institutions in Cranston, $300,323.78; interest on Statehouse construction, $37,500; interest on money borrowed, war with Spain, $5,800; militia and military affairs, $375,500; readjusting ward lines, city of Providence, $4,560.31.

The military and naval expenses occasioned by the State’s connection with the late war with Spain appear to be kept as a separate account. Under this head the total receipts, including the balance on hand at the beginning of the year and a check on account from the United States Treasury Department for $32,601.46, were $34,340.30. The payments include the cancellation of a note for $10,000 and the payment of $20,000 on another note, and amount in all to $30,472.47, leaving a balance on this account of $3,567.92. The notes of states amounting to $180,000. The War Auditor held $44,776.80 of the State’s claim for additional evidence, and recommended that $37,300.41 be rejected as being for charges not deemed proper by the department.

The balance in the treasury at the close of the year was $175,959.08.

The bonded debt of the State amounts to $2,300,000.

Education.—The Legislature appropriated $140,000 for the support of public schools, $57,500 for the normal school, $800 for institutes and lectures, $6,000 for evening schools, $3,500 for the School of Design, $4,000 for purchase of school books, $4,000 for libraries, $600 for the care of imbecile children, $136,700 for the Institute for the Deaf, $15,000 for the College of Agriculture and Mechanic Arts, and $7,000 for free public libraries.
Eight towns took advantage of the new law for granting State aid to high schools. The Normal School graduated a class of 32 in June.

The endowment fund for Brown University had reached $1,051,100 at the time of commencement. In addition, a bequest of $35,000 had been left by Mr. Van Wickle for a gateway and administration building, and Mrs. H. N. Slater had given her residence for a home for students of Pembroke; it will accommodate 20 students. The whole number of students in 1899-1900, including graduates and special students, and those of Pembroke Colored High School, who graduated after the last commencement was 5,267, of whom 172 were women.

Fifty free public libraries are receiving aid from the State.

The report of the trustees of the School for the Deaf shows: Number of pupils, 68; number of boys, 39; number of girls, 29; present attendance, 66.

Militia.—The annual return of the organized Naval Militia shows 15 officers, 32 petty officers, and 157 enlisted men, a total of 204. The annual return of the organized militia shows 156 officers, 237 noncommissioned officers, 47 musicians, 386 privates, a total enlisted force of 509, with an aggregate strength in the whole militia, a Brigade and general staff, 19; cavalry, 111 chartered companies, 342; batteries, 57; infantry, 740; signal corps, 5; hospital corps, 41; machine gun battery, 41.

The appropriations for the militia during the year amounted to $31,500.

The county asylum was attended by about 84 per cent. of the brigade, the largest attendance in recent years. The Naval War College opened at Newport, June 4.

Charities and Corrections.—Of the State institutions at Cranston, the Governor said in his message: "The most important step taken by the Board of State Charities and Corrections in the year now closed is the signing of the contract for the construction of the dining hall and service building at the State Hospital for the Insane, work on which has begun. The need of additional accommodations at the State Prison and Providence County jail has been referred to in the annual reports of the board for a number of years, and the work has been divided 483, move of which there were 189 State prisoners, 65 of whom had to be placed in the jail wing, leaving but 50 cells and the temporary building to accommodate 245 men, 114 men having to be placed in the 59 cells. The total capacity of the 5 homes, or cottages, at the Sockanosset School for Boys is 250 beds, 30 in each home. On Nov. 1 the number of boys at the school, 334, exceeded the capacity of the homes by 104. The superintendent of the Oaklawn School for Girls reports the same overcrowded condition as that of the Sockanosset School. There are now 42 girls at the school, with about 20 outside, in families. The building has accommodations for 60, but the number is 53, although it holds all who are now there."

The annual report of the Board of Soldiers' Relief shows that the membership of the school, Dec. 31, 1899, was 186, and that there was a net gain of 8 members during the year. Since the opening of the home 400 have been admitted. The average daily attendance during the year was sixty, on Dec. 31, and the average number present during the year 1899 was 156. The average cost of maintenance per capita was $247.69. There were 131 pensioners in the institution at the end of the year, and the total amount of pension money received during the year was $13,430.80.

The State Society for the Prevention of Cruelty to Children reported having investigated 300 new cases, involving 631 children. It investigated 100 more cases than in 1899, and bettered the condition of 185 more children.

Banks.—There were 337 banks and institutions for savings, of which 6 are in process of liquidation, filed reports for 1900. The following items furnish data as to these institutions: Number of institutions for savings, 33; amount of deposits, $7,434,759.30; number of depositors, 148,655; number depositing $500 and under $1,000, 10,600; number depositing $1,000 and upward, 2,400; number depositing under $1,000 and average rate per cent. of annual dividend for 1900, 3.93; amount of reserved profits, $2,393,934.31; increase of deposits from previous years, $1,600,133.29; increase of depositors, 2,874; average deposits to each depositor, $303.36.

Several banks were consolidated in 1900 with the Industrial Trust Company. Eleven trust companies filed statements this year, 3 more than last year. The aggregate capital of these companies amounts to $4,107,634, against $2,808,529 in 1899—an increase of $1,299,104. A large portion of this increase—viz., $1,100,000—represents the capital stock of the three newly organized companies.

The aggregate deposits in the participation account to the amount of $16,852,88, and in general account $23,293,561.65.

Railroads.—From the commissioner's report it appears that the capital stock of the steam roads owned and operated in this State is $805,582,475; total indebtedness, $1,855,919.04; total receipts, $14,389,651.32; net earnings, $8,614,602.44; miles of road in this State, 209; miles single track, 435.

The capital stock of the electric roads are $16,582,000; total indebtedness, $4,410,054.70; total receipts, $2,609,572.26; expenditures, $1,644,029.26; net earnings, $806,543; miles of road in this State, 208; miles single track, 285.

Products and Industries.—The report of the factory inspectors for 1900 says: "We have inspected 595 establishments during the year 1900. This is an increase of 46 over the number visited in 1899. The new establishments are pretty evenly distributed among the varied industries of the State. The number employed in the various establishments has been found to be as follows: Males of sixteen years of age and over, 44,337; females of sixteen years of age and over, 23,151; whole number of adults, 76,552. Males under sixteen years of age, 2,844; females under sixteen years of age, 2,409; whole number of children, 5,233. Total number employed, 1,580. A comparison of the foregoing figures with those reported last year shows an increase of 2,502 in the number of men employed, an increase of 1,754 in the number of women employed, an increase of 289 in the number of boys employed, and an increase of 298 in the number of girls employed, a total increase of 4,549."

There have been many strikes during the year at the Lonsdale mill, and at Warren, Westerly, and Pawtucket, the most serious being at the Lorraine mills, in Pawtucket. This began about April 11. The cause, as stated by the weavers' committee, was that, while there was a general increase in wages throughout the country about six months ago, there was no such increase in the Lorraine mills. When the weavers applied for an increase, the treasurer offered advances on certain kinds of cloth, which amounted to about 1 per cent. of a general advance; but he proposed that the weavers take 4 looms instead of 3, which would give $12.00 a week instead of $10.80, pro-
vided a man could run the 4 and turn off the specified amount of cloth; but this they said they could not do.

The oyster industry has shown great prosperity in the past three years. There are 3,226 of the State acres leased; 1,892 return to the State $10 an acre, and 1,335 $5 an acre. With land yet to be leased the income to the State for the current year from this source is estimated at nearly $90,000.

It is reported that valuable mineral deposits have been discovered at Foster. One sample tested $250 to the ton, containing gold, silver, nickel, and copper. The average assay tests show from $25 to $70 a ton.

The number of business failures in the State in 1900 was 256, with liabilities amounting to $722,888; while in 1899 there were 98 with liabilities of $1,817,747.

**The New Statehouse.**—The new Capitol, at Providence, in which all the legislative sessions are hereafter to be held, was ready for occupancy Jan. 1, 1901. It is a fine and costly marble structure, the front, in rich East Greenock marble, being the sole decoration and, while the frieze around the dome bears the quotation from Tacitus: "Rara temporum felicitas ubi sentire quae velis et dicere quae sentias licet." (O rare felicity of the times when it is permitted to think what you wish, and to say what you think.)

In early colonial days in Rhode Island the General Assembly, or what corresponded to the present body of that title, met in the four towns—Newport, Portsmouth, Providence, and Warwick. Newport was made, by the terms of the royal charter, the principal seat of government in 1663. But the Assembly still met in the four towns, within whose limits it was thought fit to place the circuit on account of its proximity to Newport, and in the early part of the eighteenth century South Kingstown was added to the list of meeting places. Later, East Greenwich became an occasional meeting place, while Warwick was dropped. The Constitution of 1842 made Newport the permanent seat of the General Assembly, and South Kingstown the meeting places of the General Assembly, but twelve years later an amendment was provided for the holding of an annual session at Newport and an adjournment to Providence. The Legislature has met at Newport in May, and after a brief sitting has adjourned to meet in Providence in January. The first session at Providence has been more extended than that at Newport, and the State offices have been there.

**Providence.**—The city celebrated this year the centennial of the establishment of its free public schools. A bequest of about $300,000 has been made to the city by Anna H. Man, providing a trust for the benefit of the Willard Park. She left $10,000 to the Society for the Prevention of Cruelty to Animals. Charles H. Smith left the income of about $200,000 of property to be used for increasing the botanical collections at the park.

The bank clearings for 1900 amounted to $326,299,706, which is nearly $8,000,000 less than those of 1899. The number of building permits issued was 1,122, against 1,268 the year preceding, and a new public library building was opened in March.

**Newport.**—The new city hall was formally turned over to the city in October.

**Pawtucket.**—A bequest of $40,000 has been left to Pawtucket institutions by Moses Pierce, of North Pawtucket. Pawtucket's debt amounts to more than 10 per cent. of its total valuation.

**Watch Hill.**—The assessors' books at Westerly show that the assessed valuation of property at Watch Hill in that town is approximately $1,000,000. Within the last five years the cottage settlement has steadily increased, until now there are probably 60 villas.

**Political.**—The State election took place April 4. The Republican convention, at Providence, March 13, made the following nominations: For Governor, William Gregory; Lieutenant Governor, Henry J. King; Attorney General, Willard B. Tanner; Secretary of State, Charles P. Bennett; General Treasurer, Walter A. Read.

The resolutions, after praising the national administration and the acts of Congress, approved the State administration and the action of the General Assembly in proposing to alter the Constitution by specific amendments, and said further: "We, the people of the State of Rhode Island and Providence Plantations, hereby appear in its denunciation of monopolies and trusts, while leading members of its own organization are actively engaged in their promotion, both within and without the State; in its denunciation of imperialism and centralization of power while selecting as its nominee for Governor a man who, during his term of office—" three years of the Constitution that no person holding an office of trust or profit under the United States shall act as Governor or other general officer in its boastful pretense of favoring the purity of the ballot while so fraudulently stuffing the ballot boxes in the Fifth Ward of Pawtucket at its caucuses to cause the Democratic chairman of the Board of Canvassers of that city, upon an appeal taken by a Democrat under a Republican caucus act, to decide his own party caucus was fraudulent and void; and in assuming to be the special friend of the workman while seeking the defeat of William Gregory, who as boy and man has been a mill operative and wage-earner."" One of the resolutions nominated the named candidates: For Governor, Nathan W. Littlefield; Lieutenant Governor, Joseph H. Boucher; Secretary of State, Clark Potter; Treasurer, Fayette Bartlett; Attorney General, Dennis J. Holland.

After criticising the colonial policy of the administration in Pawtucket, and reaffirming the principles of the party, the resolutions said: "In the words of the Father of his Country we declare that 'the basis of our political system is the right of the people to make and alter their constitutions of government.' This, the first and most important provision of our State Constitution, is now held by some of our citizens, and by many of the people, to be the most important part of municipal government.

"Second, the giving to the 30,000 registered voters residing in our five cities the right, which justly belongs to them as bearers of all the burdens of citizenship, to vote for members of city councils, constituting, as those bodies do, for the most important part of municipal government.

"We demand protection for the public and for street railway employees by a ten-hour law, and also that vestibules be placed upon all new cars.

"We call the attention of the voters of the State to the new established habit of the Republican governors in suspending all important business until after their successors have been elected."
The Republican candidates were elected. The vote for Governor stood: Gregory (Republican), 260,738; Matteson (Democrat), 17,184; Reed (Socialist-Labor), 2,858; Metcalf (Prohibitionist), 1,484.

On joint ballot the Republicans have 96 votes in the Legislature, to 14 of the Democrats.

The amendment to the Constitution changing the time of election was carried by a vote of 24,351 to 15,246, and the proposition to issue bonds to finish the Statehouse was carried by 28,253 to 15,246.

At the November election the vote was: McKinley, 33,784; Bryan, 19,812; Woolley, 1,529; Malloney, 1,423.

Legislative Session.—The adjourned session at Providence was opened Jan. 30 and closed May 4. The Newport session began May 29 and ended June 13. Frank E. Holden was Speaker of the House. The Governor presides over the Senate.

A constitutional amendment was passed and carried at the November election. It provides that the annual election of State officers shall be held in November instead of in April, and votes for these officers registered must be on the list before July 1. The method of procedure for filling vacancies was changed. The provision requiring votes for State officers to be sent sealed to the Secretary of State, and to be counted and declared by the Legislature in grand committee, was repealed. It is provided also that there shall be held one session of the Legislature, which is to be in Providence, beginning the first Tuesday in January, and members are to receive $5 a day instead of $1, as heretofore.

A voting-machine commission was created, and $15,000 appropriated. It is to examine machines and report to the General Assembly. The Secretary of State, which is to be in Providence, beginning the first Tuesday in January, and members are to receive $5 a day instead of $1, as heretofore.

An appropriation of $5,000 was made for an exhibit at the Pan-American Exposition; the Governor is to appoint five commissioners, who are to serve without compensation, and an executive superintendent of the fair.

The game laws were amended. A penalty not to exceed $500 was prescribed for the killing of a deer before Feb. 1, 1905, except in the case of a person killing a tame deer of his own. It was made unlawful to take or kill a rabbit, hare, or gray squirrell between Jan. 1 and Oct. 15. The open season for hunting birds was changed also. A fine of $20 or imprisonment for thirty days or both was imposed for fishing otherwise than with a single hook and line, or taking fish from any private waters for breeding fish without the owner’s consent, and a fine of $15 for taking or having in possession black bass less than 8 inches long.

A law was passed to prevent importation of diseased cattle. A bounty of $5 was to be paid for every wild fox killed.

A State commission of five members, to be appointed by the Governor, was created for constructing side paths and keeping them in order. The paths are to be 3 to 6 feet wide, and a license fee of 30 cents to $1 is to be charged for its use. A crime in obscene literature was raised from one to two years’ imprisonment, and the fine, formerly $500, was placed at $100 to $1,000; and it was made unlawful to use an instrument uttering language or showing pictures tending to corrupt youth.

Other enactments were:

Prescribing a penalty for counterfeiting or imitating trade-marks, labels, etc., which are to be filed with the Secretary of State.

Providing a penalty of $20 for wearing a badge of Spanish War veterans without right.

Extending for 30 days the time that persons arrested without warrant for cruelty to animals may be kept in custody.

Permitting manufacturing corporations to increase or reduce their capital stock only on a three-fourth vote of all the capital stock, all shares to have equal right to vote.

Permitting judges and administrators to provide for perpetual care of burial lots.

Requiring insurance companies to pay 2, per cent. on gross premiums and assessments on property and lives.

Making the salary of the Railroad Commissioner $2,500 instead of $1,000, and providing $500 for the railroad corporations to provide for the salary and expenses of the commissioner, not more than $4,000.

Defining the legal weight of measures of certain commodities—apples, oats, coal, wheat, etc.—46 in all.

Providing for an issue of additional Statehouse bonds, not to exceed $700,000, for finishing and furnishing the new Statehouse at Providence and laying out the grounds, to be voted upon in November.

An act creating a police commission for Newport was passed. The commission, which is to be appointed by the Governor, can appoint the chief of police, and has power to compel the production of books and papers, to punish for contempt, and is to have general control of the department.

The question of the constitutionality of this act, so far as the power of appointment of the chief of police is concerned, was brought before the Supreme Court in August, and the Chief Justice decided that there was nothing contrary to the Constitution in that.

The law exempting manufacturing corporations from taxation for a certain number of years came before the court, and was upheld.

The act of 1899 prohibiting the use of trading-stamps was pronounced unconstitutional by the Supreme Court.

Appropriations were made, among which were:

For expenses of the General Assembly, $30,400; judicial expenses, $184,500; education, $235,300; for free public libraries, $7,000; for the indigent insane, $10,000; State printing and binding, $42,000; military affairs, $47,500; Board of Charities and Corrections, $275,500; salaries, $139,500; clerical assistance, $11,200; interest on Statehouse bonds, $76,500.

At the Newport session George P. Wetmore was elected United States Senator, to succeed himself. John H. Stiness was chosen Chief Justice, succeeding Charles Matteson, resigned, and John T. Bledgett was elected an Associate Justice.

ROMAN CATHOLIC CHURCH. General.

The closing year of the century, consecrated by the Pope to solemn homage to the Divine Redeemer, was notably chief for the pilgrimages which flocked to Rome during the entire twelve months of jubilee. It was formally inaugurated on Christmas eve of 1899 by the ceremony of opening the holy door, and closed again a year later by a celebration in which the porto sacra was sealed up by his Holiness in person, to remain closed until the dawn of the twenty-first century. But within the twelve months begun on Dec. 24, 1899, Rome welcomed an influx of visitors greater than in any year since it was the mistress of the world. No count was kept of the jubilee pilgrims, but even in the summer season
their number never fell below 10,000 a week, and in the months when the atmosphere was tolerable the total rose at times to 30,000 a day. The pilgrims came from all over the world, and few if any were disappointed by failing to obtain a sight of the Pope. When it is considered that his Holiness is ninety years of age, his receptions to the pilgrims, occasionally as many as six a week in the Sistine Chapel to the body of a pilgrimage, followed by a private audience to the leaders, can be considered as little less than miraculous.

Among the receptions extended by the Pope was one on April 7 to 75 sailors from the American training ship Dixie. His Holiness received them in the Sistine Chapel, and the scene was repeated the American day, and greeted the Pontiff with what the official account described as "reiterati altissimi hurrah."

The special ceremonies of the jubilee year included the erection on 20 Italian mountains of monuments in memory of twenty centuries of Divine redemption; the blessing of the Agnus Dei at the closing of the holy door; and the universal celebration of midnight mass, by his Holiness's permission, on the eve of the new century.

The ceremony of blessing the Agnus Dei, which is peculiar to years of jubilee, was performed by his Holiness on June 17, assisted by a cardinal bishop and a cardinal priest, and after the ceremony at the papal palace. These historic little pieces of wax were all decorated with allusions to the present holy year. The ceremony itself consisted of the immersion of the Agnus Dei into blessed water and the blessing of them with balsam and chrys. On the obverse of several of the Agnus Dei was a figure of the Redeemer adorned by bower of his Holiness: "Nil sit dule magis quam corde quiescere Jesu—Leo XIII, P. M." and on the reverse a figure of the Lamb of God with the words: "Ecce Agnus Dei qui tollit peccata mundi—Leo XIII, Pont. Max. Anno MDCCXC, Pont. XXIII."

On other of the Agnus Dei was a representation of the holy door with the words: "Haec porta pietatis, et Judicii Intrahis in Eum. Leo XIII, P. M." and on one side, "Anno Jubilee," and on the other, "Roma." On the reverse of these was a figure of the Lamb of God. The ceremony began at half-past five on Sunday afternoon with the blessing of the holy water by the papal sacristan, Mgr. Pifferi, O. S. A., Bishop of Pistoia, who presided over this part of the ceremony. The preparations made in the Hall of Consistory were tables covered with white cloths and bearing silver basins with water and silver scoops. The sacristan performed the blessing of the water according to the usual rite, assisted by the Augustinians of the papal chapel. His Holiness put on the stole, received some prayers at the throne and descended to the tables, where he stood before the central basin, blessed the water a second time, and poured into it, using the form of a cross in pouring, balsam and chrys. He removed some of the water with the scoop into the two basins on either side, returned to his throne, and inclined the Agnus Dei, which filled three large coffers to the left of his throne, to the two cardinals next put on aprons of gauze descended from the throne, and immersed the Agnus Dei in the three basins of consecrated water. The action of each was identical. The Agnus Dei were handed to the celebrants by the Cistercian monks of Santa Croce in Gerusalemme and San Bernardo alle Terme and the ordinary pontifical chaplains; immersed by the Pope, the cardinal bishop, and the cardinal priest in the blessed water; removed by these with scoops, and delivered to the Cistercian monks, who took them to a large table at the side, and there dried them with towels.

The most important papal utterance of the jubilee year was the encyclical letter, Jesus Christ Our Redeemer, issued on Nov. 1, and directed to the Universal Church. It expressed most strongly the lifelong wish of his Holiness for the unification of Christendom. Its tenor may be summed up in a few characteristic paragraphs:

"How is it that, in spite of all the zeal for the welfare of the masses, nations are in such straits and even distress, and that the evil is daily on the increase? We are told that society is quite able to help itself; that it can flourish without the assistance of Christianity, and attain its end without any spiritual bond. Do not the popes prefer a purely secular system of government. All traces of the religion of our forefathers are daily disappearing from political life and administration. What blindness! Once the idea of the authority of God as the judge of right and wrong is forgotten, law must necessarily lose its pristine power, and society can only be preserved out of bounds of charity. There are the two most powerful and most necessary bonds of society. Similarly, once the hope and expectation of eternal happiness is sought away, temporal goods will be greedily sought after. Every man will strive to secure the largest share for himself. Hence arise envy, jealousy, hate, wars. The Pope, however, in his sway of the world, dried up, and there is neither peace abroad nor security at home. Public life is stained with crime."

Another important utterance of his Holiness was the address to the cardinals on the occasion of his ninetieth birthday, in which he gave the public the first intimation of his attitude on the South African question. The cardinals would pray with him for the termination of the conflict and the agreement of both sides engaged. Others were a letter from his Holiness to Cardinal Respighi, Vicer of Rome, asking for prayers for the safety of the Christians in China, and an address to the American pilgrim, in which he made assurances of the affection in which he held this country, after which he touched and blessed the American flag.

Two saints were canonized in the course of the year, the greater of whom was Jean Baptisté de la Salle, the founder of the order of the Christian Brothers, and the first to put upon a practicability basis all the works in which he engaged. St. Rita of Cascia, of the order of St. Augustine, was canonized at the same time. An idea of the thoroughness of inquiry which precedes canonization may be gained from the fact that the cause of Jean Baptisté de la Salle had been before the Sacred College since 1839, and his beatification, which is the second step in the process of which canonization is the third, is thirteen years old. St. Rita de Cascia was beatified in 1627, her cause having then been before the Sacred College for two hundred and twenty-five years. Seventy-six martyrs who died in China in the beginning of the century were beatified absolutely, which is the second step in the process of which canonization is the third.
and Jeanne de Lestonnac. The last named was foundress of the Filles de Notre Dame. She was born a Calvinist, and received her instruction in the Catholic faith, curiously enough, from her uncle, Michel Eyquem de Montaigne.

In 1613 Cardinal Richelieu, taking advantage of the material order was concluded in October by the consecration of the abbatical Church of St. Anselm, on the Aventine Hill. The building was not only designed and planned by his Holiness, but the funds to erect it were supplied by him. The ceremony of consecration was performed by Cardinal Rampolla, Holiness's uncle, representing the Pope, and the important basilica was present from all parts of the world, for the new abbey is an international school. In accordance with a Benedicetine custom, the consecrating prelates began the ceremony with a vigil which lasted all night.

The entrance of the Pope upon the nineteenth year of his age was celebrated by the presentation to the Pontiff of an address signed by more than 600 nonagenarians, and a dinner to 900 of the poor of Rome in the Belvedere courtyard of the Vatican.

A Congress of Christian Archbishops was held in Rome, April 17 to 25. Among the most important of the subjects discussed was a motion for the rediscovery of the stairs leading to the crypt in which lie the remains of St. Peter, upon the theory advanced that the ancient entrance was utilized in the building of Constantin's basilica, and that under the tribune to the chapel of the confession would be found the door. It was determined to begin explorations at this point, in case the Pope's consent could be obtained.

Pursuant to a summons from the Holy See, the Friars Minor Capuchin, the Friars Minor Conventual, the Friars Minor, and the Third Order Regular met in Rome in September to some 10,000. These four orders comprise all three of the Third Order of St. Francis. The end of the congress was the social regeneration of the world, especially by means of the re-establishment of domestic life among the poor, the raising of wages, the equalization of taxation, and opposition alike to socialism and the tyranny of capital. In Rome the different branches of the order were united, a superior general elected, and constitutions for all houses of the order agreed upon. The initiative to this movement was given by the Pope, who has in the past few years unified many of the great religious orders.

An International Catholic Scientific Congress was held at Munich in September, and was attended by scientists and theologians of all religions to the number of about 1,000.

Five cardinals died in the year: Cardinal Trombetta, aged seventy-nine; Cardinal Jacobi, Vicar General of Rome, aged sixty-three; Cardinal di Cesnosa, aged ninety, the Dean of the Sacred College, and senior to his Holiness; Cardinal Mazella, aged sixty-seven; and Cardinal Haller, aged seventy-five.

The United States.—Early in the year the Pope approved the decision of the Propaganda forbidding the Christian Brothers to teach classics. This was the official spirit of the original rule, and the Sacred Congregation saw no alternative but to compel them to return to it. By the decision the teaching of classics by this order was permitted only to the end of the year.

Considerable agitation took place among Catholics as a result of the efforts of Bishop McFaul, of Trenton, to redress the grievances suffered by his coreligionists in the United States. Organization was the means suggested by his lordship of giving strength to any Catholic plea for equal civil and political rights. In support of his thesis that members of the Roman Catholic Church have not a fair chance for political office, or even for the enjoyment of civil freedom and possession of property, he cited some important events of the year. Upon neither of the Philippine commissions was a Catholic appointed, although the great body of the Philippine people belonged to the Catholic faith, and one of the gravest questions to come before the commissions was that dealing with the disposition of ecclesiastical property. His lordship further instance the fact that while in 1901 the Catholics of the country numbered 1,200,000 out of a total of 70,000,000, or about one sixth, their representation in the House of Representatives consisted of 24 members out of 355, and in the Senate 2 out of 8. A congregation of Catholic societies under the direction of an advisory board was the plan outlined by Bishop McFaul. Although the scheme was met with considerable favor, little had been accomplished before the end of the year toward the organization planned.

The need of better Catholic representation in high political circles was manifested by the failure of Congress to renew its appropriation for the Jesuit contract schools in its annual Indian appropriation bill. Senator Vest, of the Committee on Indian Schools, addressed the Senate in favor of the appropriation, giving it as his view that, apart from religious and moral grounds, he could not subscribe, the Jesuits were giving the Indians the only form of education which produced any results. Under the system the Indians received an industrial education, while in the Government schools only the usual elementary branches were taught. The percentage of attendance in the latter was 3 per cent. of the enrollment, and in the former 85 per cent. The appropriation was defeated.

The formal protest of the superioress of the Order of the Sacred Heart against the seizure of the convent of the order in Porto Rico by the military authorities was laid before President McKinley in high favor. The government authorities seized the convent, and returned without action on their part. Meanwhile the convent, which was appropriated by the military authorities for use as a barracks during the war with Spain, was still so occupied at the close of 1900, the owners having been compelled to erect another building to take its place. The protest of the superioress of the order asked either the return of the building or some compensation for its seizure.

A similar protest was made in October by Archbishop Chappelle against the continued holding by the Government of the College of San José in Manila. The college was seized during Gen. Otis's administration, and the archbishop asked that the property be restored to the Church, to which he declared it belonged. The question as regarded this and other similar institutions was, whether the United States could succeed to the rights enjoyed by Spain as patron of ecclesiastical institutions under a contract, which he protested against. In other words, whether the present government could claim the rights of a contract without assuming its burdens. The college by the will of its founder was put in charge of the Jesuits. When they were suppressed the Spanish throne claimed the right to succeed them as patrons under a grant from the papacy to interfere in church matters as a
return for support of ecclesiastical institutions. To this grant the United States could hardly fall heir because of its divorce of church and state. Since a number of institutions in Cuba and the Philippines are similarly situated, it is likely that the decision will ultimately be sought from the Supreme Court.

The edict of Gen. Wood prohibiting ecclesiastical titles in Cuba was revoked on Aug. 13 by Gen. Brooke, and the church ceremony recognized as of the same validity as the civil contract. The edict had been issued in the preceding year, and its revocation was due to a petition signed by 30,000 Cuban citizens. By permission of the American authorities, the Dominicans established their house in Cuba.

Important decisions of State and United States courts apparently affecting ecclesiastical rights were as follow during the year: That of the Supreme Court of Michigan (April 10), holding that the title to all church property was held by the bishop of the diocese in fee simple, and not merely as trustee, as held by the Supreme Court of Pennsylvania (April 23), holding that the united Greek Catholic congregations in America owed allegiance to the Roman Catholic Church and not to the Orthodox Greek Church; and that of the United States Circuit Court, New York (May 31), holding that statutory and sculpture infringement to secure the use of a society established solely for religious and charitable purposes were free from duty.

The centennial of the founding of the Society of the Sacred Heart was celebrated at every convent of the order, Nov. 21–23. The semicentennial or golden jubilee of the diocese of Savannah was celebrated on Nov. 28, with the archbishop of Savannah, Cardinal Archbishop Martinelli, papal delegate. The Cathedral of St. Patrick, Newark, N. J., celebrated its golden jubilee March 17.

Trinity College, in Washington, D. C., for the higher education of women, was solemnly dedicated, Nov. 22, by Cardinal Gibbons. The college was formally placed in charge of the Sisters of Notre Dame.

The work of Most Rev. Archbishop Keane toward securing funds for the Catholic University at Washington resulted in gifts to the institution of more than $500,000 in the year. Endowments for six chairs were also received.

Rev. Dr. McGlynn, who was removed from his chair at St. Louis University, New York city, in the eighties because of his strong advocacy of the principles of Henry George, excommunicated for disobeying a summons to Rome, and later pardoned and restored to his offices, died in Newburg, N. Y., Jan. 7. Right Rev. Joseph Rodemacher, Bishop of Fort Wayne, Ind., died on Jan. 12. Other losses by death in the apointments in the United States were: Right Rev. Most Rev. John Hennasy, Archbishop of Dubuque, Iowa; Right Rev. Tobias Mullen, D. D., formerly Bishop of Erie, Pa.; and Right Rev. James A. Healy, D. D., Bishop of Portland, Me. (For sketches of all these, see OHIBIURES, AMERICAN, in this volume.)

The number of Catholics in the United States was reckoned at 10,129,677, an increase of 2,222,265 upon the preceding year. They were ministered to by 8,600 secular and 2,976 regular clergy in 6,400 churches, 3,930 missions, and 1,723 chapels. There were 3,811 parochial primary schools, with 854,523 children; 30 episcopal seminaries, with 2,630 students, and 79 seminaries of religious orders, with 1,958 students.

Canada.—The question of the Manitoba schools which had been a grievance of the Catholics of the province for ten years was raised again during the visit of Mgr. Falconio, apostolic delegate to Canada, to Winnipeg in October. While sympathizing with the Catholics of the province under their triple burden—for the existing law not only requires them to support the public schools as well as the Catholic schools, but also to secure their own school buildings besides—his Excellency recommended a course of patience and mildness until full justice was obtained.

The Right Rev. Bertrand Orth was appointed Bishop of Vancouver Island, Feb. 26.

England.—Dr. St. George Mivart, whose articles in two English periodicals for January aroused much excitement, is now in London, where he advocated the views of the Roman Catholic hierarchy.

The Right Rev. Dr. Mullen, D. D., Metropolitan of the See of Toronto, was appointed by His Holiness in the month of January, the diocese of which was separated from that of Quebec, and he was consecrated by Cardinal Vaughan, on Jan. 24, from approaching the sacraments. The objectionable articles contained statements denying or attempting to explain dogmas of the Catholic religion regarding the virgin birth of Christ, the perpetual virginity of the mother of God, the assumption of the Virgin, the sanctity of the Eucharist, the everlasting punishment of the wicked, the inspiration of Scripture, and the authority of the Church. A formula containing a profession of faith and a retraction of his heresies was thrice presented to the aged and infirm scientist—he had been in the last stages of diabetes for more than a year—by his bishop; but, on April 1, at the age of seventy-three, furnished a substantial reason for the belief of his friends that his published opinions during the last year of his life were the result of mental aberration.

The agitation for a sufficient number of Roman Catholic chaplains in the navy to minister to the Roman Catholic sailors, discussion of which began in the laying of the foundations of the new navy at a focus in February in the House of Commons in the nature of an amendment offered by an Irish member to reduce the naval appropriation unless the relief demanded was afforded Catholic sailors. It was asked that the Admiralty provide a Catholic chaplain for every squadron, with similar rank, pay, and allowances as those given to chaplains of the Established Church; to have a certain number of acting Roman Catholic chaplains where the number of their coreligionists among the sailors was large enough to meet their ministrations; and to have a Catholic schoolmaster aboard every training ship. Considerable acrimony marked the discussion of this question of the House, the Right Hon. the First Lord of the Admiralty, assuming theLearn more about Catholicism and the papal visit to Cuba. Catholic Church in the United States. The number of Catholics in the United States was reckoned at 10,129,677, an increase of 2,222,265 upon the preceding year. They were ministered to by 8,600 secular and 2,976 regular clergy in 6,400 churches, 3,930 missions, and 1,723 chapels. The Right Rev. Bertrand Orth was appointed Bishop of Vancouver Island, Feb. 26. England.—Dr. St. George Mivart, whose articles in two English periodicals for January aroused much excitement, is now in London, where he advocated the views of the Roman Catholic hierarchy. The Right Rev. Dr. Mullen, D. D., Metropolitan of the See of Toronto, was appointed by His Holiness in the month of January, the diocese of which was separated from that of Quebec, and he was consecrated by Cardinal Vaughan, on Jan. 24, from approaching the sacraments. The objectionable articles contained statements denying or attempting to explain dogmas of the Catholic religion regarding the virgin birth of Christ, the perpetual virginity of the mother of God, the assumption of the Virgin, the sanctity of the Eucharist, the everlasting punishment of the wicked, the inspiration of Scripture, and the authority of the Church. A formula containing a profession of faith and a retraction of his heresies was thrice presented to the aged and infirm scientist—he had been in the last stages of diabetes for more than a year—by his bishop; but, on April 1, at the age of seventy-three, furnished a substantial reason for the belief of his friends that his published opinions during the last year of his life were the result of mental aberration. The agitation for a sufficient number of Roman Catholic chaplains in the navy to minister to the Roman Catholic sailors, discussion of which began in the laying of the foundations of the new navy at a focus in February in the House of Commons in the nature of an amendment offered by an Irish member to reduce the naval appropriation unless the relief demanded was afforded Catholic sailors. It was asked that the Admiralty provide a Catholic chaplain for every squadron, with similar rank, pay, and allowances as those given to chaplains of the Established Church; to have a certain number of acting Roman Catholic chaplains where the number of their coreligionists among the sailors was large enough to meet their ministrations; and to have a Catholic schoolmaster aboard every training ship. Considerable acrimony marked the discussion of this question of the House, the Right Hon. the First Lord of the Admiralty, assuming the
prompt, seemed likely to be more complete and satisfactory, was that looking toward the unifica-
tion of the educational system for England and Wales. Under the sys-
tem which had grown up in the past fifty years, Catholics had been allowed to build their own or voluntary schools, toward the support of which, as regards secular education only, a special aid grant had been annually made by Parliament, which amounted to about five-sevenths of the whole cost of the secular education furnished. In addition to the subscriptions necessary to defray the extra two sevenths of expense, rates for the support of board schools in which nonconformist religious instruction was given were also levied upon Catholics. The Government before the elections announced its readiness to unite the central board as regards inspection and control, and (2) to provide a uniform system of secular education and uniform taxation to support it as soon as the different denominations concerned should agree upon the exact form of the measure. At a meeting of the English Catholic hierarchy resolutions were adopted calling for support of the schools out of the imperial exchequer on account of the inequality of rates. Accordingly a bill was introduced in October into Parliament providing, as regards secondary schools, for some of the reforms demanded.

Sunday, Oct. 7, was celebrated throughout England the golden jubilee of the restoration of the English hierarchy in 1850 by Pius IX, when Cardinal Wiseman was created Archbishop of Westminster.

For the first time for many years the Government, in forming a new administration, omitted to include a single Catholic, the Duke of Norfolk, who resigned his post as Postmaster-General to go to the House of Commons, to fill the vacancy by the death of the temporary successor. The new Parliament, however, had 4 Catholic members for England and 73 for Ireland, an increase of 1 and 4 over their representation in the Parliament preceding.

The estimated Catholic population of the United Kingdom was 5,500,000, and of the empire 10,500,000.

Charles Russell, Lord Chief Justice of England and its greatest Catholic layman since Thomas More, died Aug. 10, aged sixty-seven. With the exception of More, his was the highest judicial post ever held by a Catholic, and had he lived he would have doubt no doubt have succeeded More in the chancel-

Ireland.—The educational claims of Scotch and Irish Catholics were presented on the last Sunday in September in all the churches in Scotland by Archbishop Eyre of Glasgow, as forming an important issue in the general election then at hand. In Scotland all schools are denomina-
tional; but while the Presbyterian teaching is supported by the Government, the Catholic schools were not.

The archiepiscopal see of St. Andrew's and Edin-
burgh was made vacant by the death of Most Rev. Angus McDonald, April 28, aged fifty-six. To succeed him, Right Rev. James A. Smith, Bishop of Dunkeld, was appointed Sept. 15. An-
other appointment of interest to the antiquarian was that of Rev. Francis McManus to the curacy of a church erected during the year at Bannock-
burn, less than a mile from the battlefield.

Ireland.—The university question still held the center of the Irish stage, and as far as anything in the way of a practical settlement greater than wide discussion was concerned seemed likely to continue before so for a number of years. Speeches on the question were made without number, meetings by the score were held, and uncounted resolutions passed. These, as far as they went, were valuable as showing the temper of the people and the amount of sympathy the cause enjoyed. Chief among them was the pastoral of the Irish bishops, in synod assembled, in which the whole question was carefully gone over, and the argument ably pre-
sented. That the demand for a Catholic university for Ireland, Catholic in the sense in which Trinity College is Protestant, was entirely reasonable and just, was a case tried in the courts, and Chief among those who opposed it in the House of Commons when on March 23 the matter was brought to a vote. The university side was ably presented by Mr. Balfour and by the Irish members. There was no bill before the house, and the matter arose on a resolution that the Speaker leave the chair on the civil service estimator. Mr. Balfour urged Mr. Healy not to move for a division on the question, and instead called for a strict party question, division upon which fur-
ished no criterion of the amount of sympathy the merits of the question commanded. Mr. Healy insisted, however, and the division disclosed 177 against the measure to 91 in support of it. The Second Plenary Synod of Maynooth was held from Aug. 28 to Sept. 11. The first best synod was held twenty years ago. Numerous ecclesias-
tical questions were discussed, and the pastoral already mentioned issued, in which the history of the Church in the island for the past twenty-five years was considered. The pastoral, besides its advocacy of the Irish national university, went on to demand the abolition of the present system of national education was strongly condemned as antichristian. The agriculture act, providing for technical instruction in farming, was commended, though considered hardly radical enough to stop the drain of Irish emigration. The whole system of land laws, "in which rents are arbitrarily fixed, which tribunals are resorted to, their enactments by a tribunal in which neither side has confidence," was denounced, and in its place the bishops hoped to see as the solution of the Irish question a system of peasant proprietorship by which the great plains are made, then almost worthless might be reclaimed, and the peasant himself restored to industry on his own land. The pastoral further condemned, obscene literature, horse racing on Sundays, and secret political societies. The pastoral was published both in English and Irish.

Two questions of intermediate education, the first that of state support of denominational schools and the second the compulsory teaching of the Irish language were represented to the House of Commons by the Irish members. As to the first, complete support of Catholic schools by the state seemed as far off as ever when the debate ended. The plan for teaching Irish in the schools of the district where it was still the common language, while not formally adopted, was turned over to the Commissioners of National Education with permission to allow such teaching in exceptional cases.

The relief of Mafeking was celebrated by Orange-
men in Belfast by breaking in the door of the Mater Hospital, and doing damage to Catholic churches and schools which cost the city corporation £3,000. Mr. Birnie, the captain of Pretoria, was similarly celebrated.

France.—The persecution of the religious con-
gregations which took up so much of the time of
the French Chamber in 1809, was resumed in 1900 with singular ferocity. It began in January with the trial of the Assumptionist fathers. Like all French trials, the proceedings ranged from the merely offensive and irrelevant to the broadly comic. Twelve of the fathers were accused of being an association of more than 20 persons, and of dealing with questions of a political, social, and religious nature. In explaining the case for the prosecution, M. Bulot declared that 1,800,000 francs were said to have been seen at the Assumptionist headquarters, and that there were grave reasons for supposing that the premises they lived in belonged to them. The gravamen of the charge, however, lay in the publication of certain satirical articles in a newspaper which the Government had been repeatedly criticised. The defendants were convicted and fined 16 francs, and their community was ordered dissolved as illegal. Although the priests appealed from the verdict and the Foreign Office practically promised to prevent the dissolution of the order on account of its mission work in the East, yet Cardinal Richard, who visited the fathers while under trial, was reprimanded by the Prime Minister, and the salaries of 6 bishops who had written letters of sympathy to them were stopped. When the Archbishop of Aix, Mgr. Gouth Souillard, who was one of the victims, denounced this official interference as a satiric affair paid by the Government to the clergy under the terms of the concordat are part of the compensation due by the state and accepted by the Church in lieu of the confiscated ecclesiastical property, the contumaciousness of the archbishop, for whose punishment no law existed, caused M. Walddeck-Rousseau in a bill amending the penal code and punishing with trial prison any member of the clergy criticising the Government or any public authority. It was on the face of it so incompatible with all principles of popular liberty that the committee appointed to examine it recommended its abandonment.

A much graver matter, however, was the loi de 1850 on missions. In January into the Chamber, the object of which was to kill off the Catholic secondary schools. The bill proposed to make an attendance of three years at a lycée condition precedent to admission to such institutions as the Polytechnic, the Naval School, Saumur, Versailles, or Fontainebleau. In other words, if a young man desired to enter in any of the military service academy, he must have spent three years in a lycée. Achievement or excellence acquired elsewhere could not avail him, since it was not so much a point what he learned as where he learned it. The committee to which this bill was referred gave it a rebuff.

These two bills were introduced, however, and with them two others worse than the first, and to the passage of all four the ministry was committed. The third provided for the regulation of religious congregations. Its terms were, briefly, that six months would be allowed for congregations not "regulated" to become so; failing which, their property would be confiscated. The fourth measure presented the other horn of the dilemma.

Those already regulated and those who might be driven into regulation by bill No. 3 met a heavy special tax, whose conditions would be certain to drive them into bankruptcy within a short time. None of the bills had been passed when the year closed, and the Interregnum continued. To inflame the Socialists, M. Walddeck-Rousseau had an inquiry made as to the property of the congregations. The result of the examination showed a total of 1,060,530,630 francs. While this was probably exaggerated for political purposes, and because the phrase "a milliard of francs" made such a comfortable and impressive mouthful, still the sight of so much wealth at their disposal sharpened the appetites of the Socialists, and made exceedingly probable the passage of one or all of the bills before the session should end.

But what the Government could not accomplish in one way toward injuring and insulting the Catholics of France it could in another, and no reasonable opportunity was neglected. The acts ranged from mere comedy to the height of blasphemy. It had been the immemorial custom of the French navy to lower the flags and deck the vessels with grape on Good Friday. This year a telegram from the minister of Marine sent a message to the Minister of Marine to forbid the ceremony. M. Walddeck-Rousseau in April issued a ukase forbidding missions and special sermons by religious orders. And following their chiefs, the prefects and mayors joined in the hue and cry. In Tours Hospital the mayor ordered the crucifixes removed from the walls, and priests were lost, were conscripted of any religious book, even a Catholic almanac being confiscated. In St. Florine the mayor issued an order interdicting the wearing of vestments by priests at funerals. Numerous cases of similar petty tyranny were reported, none, however, showing a more luminous conception of law and logic than the following. In Brest, early in February a man named Jean Barthelane was seized as he left the Jesuit College, having in his possession several articles which he had stolen from that institution. On his being brought to trial the public prosecutor held that the Jesuits had no legal existence, and that therefore there could be no theft of any articles belonging to them, and the prisoner was set at liberty.

The Pope in February conferred upon M. Brune tière the rare distinction of the order of Commander of Pius IX, in return for his signal services to the Catholic religion.

On the third anniversary of the fire which consumed the Charity Bazaar in Paris, May 4, 1897, and in which 11,405 persons were burned, a searing passages of a memorial chapel in the Rue Jean-Goujon. The entire expense of it, 300,000 francs, was contributed by the Countess de Castellane.

By a brief dated Sept. 13, the Pope sent to the Archconfraternity of Our Lady of Compassion, organized for prayer for the conversion of England, our native blessing of the order of the Most Holy Left of the Chamber of Deputies immediately made outcry, saying that it would disturb international relations between England and France. But the affair was not so regarded in Downing Street, where no notice was taken of it. Between Sept. 10 and 14 a clerical congress was held at Bourges, the first since the Revolution, attended by more than 18,000 clergymen.

Archbishop Ireland delivered the address at the unveiling of the statue of Lafayette presented to France by the United States. The ceremony was performed on July 4, and the archbishop's address was a long panegyric on Lafayette, the keynote of which was praise of liberty.

Pere Daudet, one of the most famous preachers in France, died suddenly in Toulouse March 10. Other vacancies in the ranks of the clergy were caused by the deaths of Mgr. Mando, Bishop of Angoulême, July 15; of Mgr. Gouth Souillard, Archbishop of Aix, Sept. 8; and Mgr. Bap tifolier, Bishop of Mende, Oct. 1.

In spite of the Vatican's efforts, the conflict was started in February between the Catholics of Al sace-Lorraine and those of the rest of the empire over the proposed erection of a Catholic faculty of theology at the University of Strasbourg.
question was one party of educational methods, but more largely of national sentiment, since such a faculty at a thoroughly German university like Strasburg would be a powerful agent in Germanizing the clergy of the two dissident provinces. Count Kolln, therefore, was still in the Holy Office by the Bishops of Strasburg and Metz on the one hand and the Catholic press and clergy of Alsace-Lorraine on the other. At last accounts the advantage was with the German element, represented by the bishops.

The eightieth and fiftieth anniversary of the translation of the relics of St. Quirinus to Neuss, in the diocese of Cologne, was celebrated with great pomp and enthusiasm by the inhabitants of the town for a week in the middle of May. St. Quirinus is represented as the Roman tribune to whose care the Pope and other Christian captives were intrusted by Hadrian in 119 A. D., and who was converted by the Pope and died in martyrdom with him.

The dancing pilgrims of Echternach this year celebrated their pilgrimage to the shrine of St. Willibrord on Whit-Tuesday. Although the distance traversed was more than a mile, it took three hours for any part of the troop of over 50,000 people to make a mile, but the music, five steps forward and three back, which considerably lengthens their journey.

The Prussian Minister of Cult in February refused to recognize attendance at Fribourg, in Switzerland, as equal to attendance at German universities—a privilege theretofore accorded all German students. Discrimination was publicly declared to have been made because Fribourg was under Dominican control.

The forty-seventh annual Catholic Congress of Germany met at Bonn in September, and drew up a number of resolutions, under eight different heads, as the outcome of its discussions. Of these the most important was that calling for the freedom of the Holy See and that outlining a plan for denominational education.

The statistics of the Catholic population of the empire, published in August, showed a falling off of more than 6 per cent. in Baden, about 8 per cent. in Prussia, and a less fraction in the other duarchies.

Italy.—Although the feeling between Church and State was a modified one, the Pope and the King of the year, the two moved together throughout twelve months with comparatively little friction. The stoppage of a French pilgrimage from Marselles, ostensibly for quarantine purposes, was probably as much a national demonstration as a religious one. His Holiness, in an informal manner, sent to Queen Margherita the expression of his sympathy and regret at the death of King Humbert. The Queen sent to Mgr. Bonamelli, Bishop of Cremona, a prayer for which she sought ecclesiastical approbation. It was refused, however, on account of its form.

In a letter to the Cardinal Vicar of Rome the Pope expressed in August against the prosecution being carried on by the Holy Office against the Italian missionary societies. Although as a reprisal the Liberals proposed removing police protection from occasions of military and official celebration in St. Peter's, the new King promptly prevailed any such unwise measure. His Majesty, however, even in his accession proclamation declared his intention of continuing his father's policy of Rome Intangibile, or the preservation of the city from the aspirations of the papal see.

Austria-Hungary.—The evil of dueling in the Austrian army was accentuated in August by the trial and dismissal from the army of Marquis Taclot for refusing to fight a duel. The marquis had occasion to protest against the utterances of a slanderer, whom military etiquette required him to challenge. He refused to do so on the ground that he as a Catholic objected on principle to dueling. The officers' court of honor thereupon convicted him of cowardice, and the Ministry of War canceled his commission. It developed on the inquiry that another officer had written to the marquis commending his stand. The writer, who turned out to be Captain Ledochowski, a young headquarters officer of distinction, and a nephew of the cardinal prefect of the Propaganda, was also dismissed from the army. The investigation of a second letter of congratulation to the marquis disclosed the fact that it was written by the Infant Don Alfonso de Bourbon. There was no talk of dismissing him from the army, and under the stimulus of his advice and the influence of the personages affected by the two dismissals a movement began for the abolition of compulsory dueling.

Under the direction of Countess Maria Teresa Ledochowski an anti-slavery congress was held in Vienna, Nov. 22 to 27.

Pope Leo XIII in September addressed a letter to the Archbishop of Salzburg warmly encouraging the protection of the Propaganda in his diocese. The draft of the letter was written by the Infant Don Alfonso de Bourbon. There was no talk of dismissing him from the army, and under the stimulus of his advice and the influence of the personages affected by the two dismissals a movement began for the abolition of compulsory dueling.

The nine hundredth anniversary of the Church in Hungary was celebrated in August in the Cathedral of St. Stephen, where St. Stephen was baptized and crowned King with a crown sent him by the Pope. The celebration was attended by the Hungarian Premier and all his Cabinet.

Archbishop Julian Kinowski, Uniate Greek Metropolitan of Lemberg, died May 4, aged seventy-four years.

Belgium.—On Sunday, May 25, the new system of elections in Belgium received a fair trial, and resulted in a Catholic majority of 18 members in the Chamber of Representatives and a substantial majority in the Senate. The result in the Chamber represented a decrease from a previous majority of 72, but the better tone prevalent among among the army of the Catholic party, and the forlorn of additional strength by the Catholic party, and justified the workings of the new law.

The Belgian Chamber in April began work on its project for raising the salaries of ecclesiastics of all ranks. The scale proposed ranged from $160 to $420 per annum, conditioned on length of service.

The Catholic family of Arenberg, the most illustrious in Belgium, removed entirely during the year to Germany, where it has extended possessions. Its residence in Brussels, the ducal palace built in 1548, where Count Egmont once resided, was sold to the Government. The family is descended from Jean de Ligne (1442), and the heads of it have been counts of the Holy Roman Empire since 1549.

A committee formed in Belgium in November presented an appeal to the Holy Father to condemn anti-Semitism, and especially to dispel the legend of the curse of ritual murderers.

Holland.—In the face of a promise of a Government subsidy to Catholic schools, the Liberals refused to allow any appropriation for the purpose, declaring the promise not binding. Mgr. Schaeppman, the leader of the Catholic party, was induced by the promise to join the Liberals on the question of compulsory education, and owing to his defection the compulsory school
bill passed by one vote. The law is to come into effect Jan. 1, 1902, when Catholic pupils will be enrolled in the state schools, unless the promised subsidy is made, since their own schools are not large enough for all Catholic pupils who come under the provisions of the law.

Latin America.—The work of reviving and reorganizing the Church in Latin America, inaugurated by his Holiness by the Apostolic Constitution of June 25, 1889, was continued by him throughout the following year. In March the Sacred Congregation for Extraordinary Ecclesiastical Affairs issued a decree to the bishops regulating fasts, and providing for the promulgation of an eighty days' indulgence. In May the secretariate of state by brief conveyed to Bishops of Latin America held at Rome in 1899, was renewed by the Holy Father, that in each ecclesiastical province a meeting of the ordinaries be held at least as often as once every three years; and asked a strict observance of the enactments of the council, especially the ordinances relating to the conversion of the Indians, the study of the vulgar tongue, the deferring of Indian legislation and of the influence of foreign priests, and the训练 of the sick. The Pope also sent an apostolic letter to the bishops of Brazil, urging the establishment of ecclesiastical seminaries, the organization of literary mediums to educate the people, an intelligent interest in politics, and proper and systematic provision for the support of the Church. The Pope's interest was marked by a great Catholic revival in South American countries. A congress held at Bahia in June was attended by clergy from all parts of the continent, and practical methods were adopted of carrying the Pope's recommendations into effect.

China.—The outrages in China by the Boxers for their especial severity upon the Catholics, who were the first victims of the antiforeign fury. That part of this fury, as regards the Catholic priests especially, was due to the anti-Christian crusade in France, was asserted by those most familiar with the situation, Lord Curzon, Vice-roy of India, who visited Peking in 1894, thus speaking of the China crisis: "China resents the foreigner at best, and the missionary in any case must take his life as well as his crucifix into his hands. This he well understood. But in aggravation of the normal anti-foreign feeling of the Chinese population came the knowledge that France herself had ousted those Jesuits, those orders, whom China was to be made to receive at the mouth of the Mauser, whom China herself was forbidden to eject. The castaways of a European country were to be her enforced guests—the refusal of France was to be made welcome by the stranger. Insult was thus added to the injury of the intrusion. The nation could not be expected to accept that plain fact before it that the soul physicians France would not permit to practice on its own people were to be thrust upon the devotees of another creed, that the men whom France accused of preaching to the state were to be let loose on a Government to whom no loyalty was owed. This is not the deed that France has done; and the horrors of to-day, in which we and the other countries of Europe suffer an undue share, are but the sequel of the expulsion of religious orders from the republic.

The number of Catholic priests and bishops who fell before the Boxers had not been counted at the end of the year, and the number of native Christians who perished can only be guessed at. Among the more prominent victims were Right Rev. Laurence Guillen, Vicar Apostolic of South Manchuria; Bishop Ferdinand Hamer, Vicar Apostolic of Mexico; Father Castelli, Vicar Apostolic of South China; Father Gregory Grassi, Vicar Apostolic of North Shensi; and Bishop Francis Fogolla. The known massacres included 32 European priests and 10 nuns. Much missionary property was destroyed, including the Pekin cathedral. The Catholics in China before the outrages numbered 762,708, with 945 European priests and 93 bishops. The total number of priests, including 32 European priests and 10 nuns, was 1,800; while the number of bishops was 93, and 4,054 schools with 63,990 pupils.

Other Missionary Countries.—Leo XIII, on Feb. 5, gave 500,000 francs for the Church of the Copts in Egypt, and on the same day he made a similar gift on behalf of the provincial seminary at Kandy in Ceylon.

The Latin American Church of Mesopotamia received a new head by the election, July 8, of Mar Joseph Emmanuel Thomas, Bishop of Seerit, to the vacant patriarchal throne of Babylon, which embraces 3 archbishoprics and 9 bishoprics situated in Asiatic Turkey and Persia.

On May 13 was solemnly consecrated the basilica newly erected in the Upper Church at Jerusalem by the Empress Eudoxia in the fifth century to mark the spot where St. Stephen was stoned to death.

By a decree issued in June, and signed by the Viceroy of Szechuan, the first and second chiefs of Bathang, and the superior of the mantunery of Tim Lin-Te, the door of Tibet, which has long been closed to the Church, was opened to missionar- ies. By the decree, which was engraved on wood, the natives are not only allowed to become Christians, but are freed from any taxation in support of the national religion.

The work of reunion among the schismatics of the East received great impulse from the recon- ciliation of the Armenian Vicar General of Tauris, who was followed into the Church by 6 entire villages and more than 1,500 families.

A Eucharistic Congress was held at Goa, in Portuguese India, the second week in December, and was attended by all the Catholic bishops of the Indian hierarchy, as guests of the Queen of Portugal. The Bishop of Dharwar was the chief bishop of the congress. By the decree, which was engraved on wood, the natives are not only allowed to become Christians, but are freed from any taxation in support of the national religion.

The work of reunion among the schismatics of the East received great impulse from the recon- ciliation of the Armenian Vicar General of Tauris, who was followed into the Church by 6 entire villages and more than 1,500 families.

A Eucharistic Congress was held at Goa, in Portuguese India, the second week in December, and was attended by all the Catholic bishops of the Indian hierarchy, as guests of the Queen of Portugal. tion precedent, apparently, to their receiving any attention from the Viceroy. They also called to his notice that one poor Christian was as much entitled to the protection of the law as a million wealthiest khan in any redress from him they presented the matter to the Crown.

ROOSEVELT, THEODORE, twenty-fifth Vice-President of the United States, born in New York city, Oct. 27, 1858. His father, also named Theodore, a merchant and philanthropist, was of Knickerbocker stock, and his mother was a descendant of Archibald Bulloch, the first President of Georgia, in the Revolution. Their son was a sickly boy, but rigid discipline and systematic exercise brought him vigorous strength. He was prepared for college in private schools, and was graduated at Harvard in 1880. After traveling in Europe he began the study of law, but abandoned it for politics. In 1881 he was elected by the Republicans to the Assembly from the Twenty-first District of New York city, and was twice re-elected. The first two Legislatures in which he sat were Democratic. In his second year he was leader of the minority in the Cities Committee, and he became its chairman in the Republican Legislature of 1884, after being an unsuccessful candidate for Speaker. He was active in promoting the passage of the first New York civil service laws, was chairman of a committee that investigated abuses in New York city, and secured acts abolishing the fee system in county offices and depriving the aldermen of veto power over the mayor’s appointments. He favored a bill reducing elevated railroad fares, but when Grover Cleveland vetoed it he sustained the veto.

After retiring from the Legislature he bought a ranch in North Dakota, being an enthusiastic sportsman, and for many years he has spent his vacations in hunting trips.

In 1884 he was a delegate at large to the Republican National Convention, where he advocated the nomination of George F. Edmunds, but the Republicans nominated him for mayor of New York in 1886 against Henry George, the United Labor candidate, and Abram S. Hewitt, the Democratic candidate, who was elected. President Harrison appointed him a civil service commissioner in 1889. He served efficiently until 1893, and then became president of the New York city Board of Police Commissioners in the administration of Mayor Strong. He established a policy of strict enforcement of liquor and Sunday laws, and this aroused much opposition, but it stopped police protection of vice and restored discipline to the force.

Mr. Roosevelt was appointed Assistant Secretary of the Navy in April, 1897, and took an important part in the preparations for the Spanish War. At the outbreak of hostilities he resigned his office and raised, largely among the Western cowboys, one regiment of the volunteer cavalry, who were known as Rough Riders. He became lieutenant colonel, with Dr. Leonard Wood, of the regular army, in command. From 1884 to 1888 he had been a member of the Eighth Regiment, National Guard of New York. The Rough Riders (unmounted) were with the army before Santiago, and took part in the fight at Las Guasimas, June 24, 1898, and in the capture of San Juan Hill on July 1. Col. Wood was pro-

THEODORE ROOSEVELT.
taken with the regulars to Porto Rico because they were "as well as any regulars, and three times as good as any State troops" that were "armed with black powder, Springfields, or other archaic weapons." The Secretary likewise published his own reply: "I suggest that, unless you want to spoil the effects and glory of your victory, you make no invidious comparisons. This was no longer protested, but the Governor, the National Guardsmen against the colonel, and was used in subsequent political campaigns. The letter was generally interpreted, however, not as a reflection on the volunteer soldiers, but merely as an impulsive statement of the truth concerning the comparative inefficiency of the weapons with which they were armed. When it returned with his regiment to Montauk Point in August, 1898, was nominated for Governor of New York by the Republicans at Saratoga, Sept. 27, 1898, and was elected for the two years' term beginning Jan. 1, 1899, by a plurality of 17,786 over Augustus Van Wyck, Democrat. As Governor he reformed the administration of the State, established the superintendence of an improved civil service law, and applied the merit system in county offices. By a special message he induced the Legislature of 1899, at the end of the session, to pass an act taxing as real estate the value of railroad and other franchises, to use public streets. Corporations and Republicans accepted, but the Governor, who signed the act, gave it as a New York University mad Gov. Roosevelt a doctor of laws in 1899. Early in 1900 he was mentioned for Vice-President, but he desired a second term as Governor, and repeatedly announced that under no circumstances would he accept the vice-presidency. The New York party leaders, however, did not want him to be a candidate again for Governor; and, though pledged to resign his office, they sent Wesley C. Chamberlain to negotiate with the Governor about the nomination of Adlai E. Stevenson, the Democratic candidate. In 1882 Mr. Roosevelt published a Naval History of 1812. This was followed by Hunting Trips of a Ranchman, in 1885; a Life of Thomas H. Benton, in 1886, and a Life of Governor Moore of Illinois, in 1887; State and Series; and in 1888 by Essays in Practical Politics and Ranch Life and Hunting Trail. The first two volumes of his most important work, The Winning of the West, were issued in 1889. In 1890 he wrote a History of New York City, for the Historic Towns Series; in 1893, The Wilderness Hunter; and the next year published the third volume of The Winning of the West. In 1897 he collected a volume of essays entitled American Ideals, which he followed with The Rough Riders in 1899, and Oliver Cromwell and a volume of addresses entitled The Strenuous Life, in 1900. He is also the author, in collaboration with Henry Cabot Lodge, of American History, and he was one of the assistants of William Laird Clowes in the preparation of The Royal Navy.

**ROUMANIA.**, a kingdom in eastern Europe. The legislative power is vested in a Senate of 120 members, of whom 109 are elected by two classes of property holders, 2 by the universities, 8 are bishops, and 1 is the hereditary throne, and a Chamber of Deputies, containing 183 members, elected for four years by all taxpayers, divided into three classes. The reigning King is Carol I, born April 20, 1855, Prince Karl of Hohenzollern-Sigmaringen, elected Dom of Roumania in 1866, and proclaimed King on March 26, 1861. The Cabinet, constituted April 23, 1899, was composed in the beginning of 1900 as follows: President of the Council and Minister of the Interior, George Cantacuzene; Minister of Finance, Gen. G. G. Cantacuzene; Minister of Foreign Affairs, Gen. Alix Cantacuzene; Minister of Justice, C. G. Dissesco; Minister of Agriculture, Industry, Commerce, and Domains, N. Fleva; Minister of Foreign Affairs, J. N. Laho- voy; Minister of Public Works, Dr. C. I. Istratii.

**Area and Population.**—The area of Roumania is 45,307 square miles, with a population of 5,500,000, in 1900, 620,000 in the Dobruja. The people of Roumanian race number about 4,950,000 in the old provinces of Wallachia and Moldavia and 90,000 in the Dobruja. There are about 300,000 Jews, 200,000 gypsies, 50,000 Bulgarians, 38,000 Austrians, 20,000 Germans, 20,000 Greeks, 15,000 Armenians, and 7,000 French, Hungarians, English, Italian, Turks, and Tatars, with a population of 30,000 in the Dobruja. In the native province, and 40,000 Bulgarians, 30,000 Turks, 20,000 Russian sectarians, 10,000 Greeks, 4,000 Jews, 3,000 Germans, and 3,000 others in the Dobruja. Education is free and compulsory where schools exist, but for the rural population there are not half enough schools. The rural public schools, 221,935 in 1897, the urban schools 1,333 teachers and 77,563 students, including 15,459 in private schools. There are 8 normal schools, with 770 students; 52 secondary and high schools, with 1,143 teachers and 18,969 pupils; and the universities of Bucharest and Jassy, with 110 professors and 1,650 students. The state maintains besides special schools, an agricultural college and a school for the education of teachers.

The sum appropriated for primary instruction in 1896 was 91,450,327 lei, and for secondary instruction 5,970,942 lei.

**Finances.**—The revenue for the year ending March 31, 1899, was 221,935,617 lei, and the expenditure 220,642,202 lei. For the financial year 1900 the estimates were 228,376,000 lei of revenue and of expenditure. For the year ending March 31, 1901, the budget estimate of revenue is 242,599,000 lei, of which 41,450,000 lei are derived from direct taxes, 76,260,000 lei from indirect taxes, 55,260,000 lei from state monopolies, 23,772,000 lei from the Ministry of Agriculture, Industry, Commerce, and Labor; 8,772,000 lei from the Ministry of Public Works, 11,385,000 lei from the Ministry of the Interior, 4,690,000 lei from the Ministry of Finance, 1,113,000 lei from the Ministry of War, 260,000 lei from the Ministry of Instruction and Worship, 286,000 lei from the Ministry of Foreign Affairs, 421,000 lei from the Ministry of Justice, and 11,209,000 lei from other sources. The estimate of expenditure for 1901 is also 242,599,000 lei, of which 91,333,592 lei are for the public debt, 71,300 lei for the Council of Ministers, 50,240,009 lei for the Ministry of War, 29,446,792 lei for the Ministry of Finance, 30,900,574 lei for the Ministry of Worship and Public Instruction, 19,355,677 lei from the Ministry of Agriculture, Industry, Commerce, 5,500,000 lei for the Ministry of Public Works, 8,716,056 lei for the Ministry of Justice, 5,043,588 lei for the Ministry of Agriculture, Industry, Commerce,
merce, and Domains, 1,816,200 lei for the Ministry of Foreign Affairs, and 1,573,900 lei for supplementary financial loans.

The public debt on Dec. 1, 1899, amounted to 1,280,719,683 lei, more than half of it borrowed for railroads and other public works, and the remainder for purchasing lands for the peasantry, reducing unfunded debt, and covering deficiencies of revenue. A loan of 175,000,000 lei was issued five per cent, in November 1899, to construct additional railroads and public works.

The Army and Navy.—The permanent army has a peace strength of 3,280 officers and 60,000 men, with 11,930 horses and 390 guns. The period of service is three years in active service and seven years in the reserve, and Roumanians who are not drawn at the age of twenty to serve in it or members of the territorial army for five years, or four years in the cavalry, and then of the territorial army reserve until they are thirty years old. The strength of the territorial army is 72,000 men on a peace footing, and its war strength 3,948 officers and 168,000 men, with 36,604 horses. After the age of thirty all belong to the militia for five years, and are then called to the draught for the general levy. The infantry weapon is the Mannlicher rifle of the model of 1893.

The naval force of Roumania consists now of a protected cruiser, a training brig, 7 gunboats, 6 coast guards, a dispatch steamer, and 6 first-class and 2 second-class torpedo boats. Additional gunboats are completed, and the dredging of a light from Scotland, and 2 armor-clad vessels are projected.

Commerce and Production.—The yield of wheat in 1899 was only 9,184,930 hectolitres on 1,661,360 hectares, against 20,690,100 hectolitres on 1,433,600 hectares in 1898. The production of rye in 1899 was 700,700 hectolitres; of barley, 1,360,920 hectolitres; of oats, 2,204,410 hectolitres; of hemp, 551,920 hectolitres, from 2,120,070 hectares; of plums, 929,320 hectolitres were produced in 1898; of wine, 517,280 hectolitres; of tobacco, 25,500 quintals; of colza, 123,150 hectolitres; of flaxseed, 238,135 hectolitres; of hemp, 62,130 hectolitres; of hay, 13,947,250 quintals. The state lands sold from 1866 down to 1896 were 89,118 hectares, or 908,439 lei for imports and 283,181,507 lei for exports.

The European Commission of the Danube.—The Danubian Commission, created in 1836 and composed of delegates of Germany, England, Austria-Hungary, France, Italy, Roumania, Russia, and Turkey, has power to collect tolls from vessels navigating the Danube below Braila, and to apply them to improving the navigation of the river. The dredging operations at the Sulina mouth deepened the water over the bar from 293 feet in 1897. The work of the Sfântul Gheorghe channel, near the mouth, was completed in 1899, and the 2 vessels had to complete loading out in the roadstead, against 142 in 1894. The cutting through one of the loops of the great double bend of the river near the mouth was finished in 1894; in 1897 a channel was thrown open, straightening the river farther up; in 1898 still another cutting was completed, and the dredging of a channel through Lake Obsetin was then begun, and will be completed in 1902. This will make the river from Sulina up to Tulcha almost as straight as a canal. The depth of water in the channel has not only been maintained, but improved by means of groins, and the danger of the formation of the Sulina channel is thereby reduced to a minimum.

Exodus of Roumanian Jews.—The education law of 1869 barring Jews from the public schools has the most serious results. The disability that the Roumanian Government has imposed upon the Jewish race, but it is only one of the political, social, and economical wrongs that make life for the Roumanian Hebrew difficult and bitter in the best of times, and almost impossible in a period of commercial and industrial depression such as was witnessed in 1894 by the failure of Jewish commerce in the previous year. The Jews of Roumania must serve in the army and bear all other civic burdens. They are of Roumanian nationality before the law, and yet are aliens, foreigners by law though born in the land, capable of acquiring citizenship only by naturalization, which is generally denied to them. They have been driven out of all the honorable professions, excepting those of lawyers, doctors, and in the right of living in the rural districts and earning their support by agriculture. As a corollary to their civic ostracism they have frequently been assailed by riotous bands of students and workmen, reviled with incendiary violence by the press, and subjected to the insults and menaces of the Anti-Semitic League, with which it is charged, to which the Jews have yielded. The Government has attempted to suppress the pretext that the Jewish method of slaughtering animals is inhuman. From the normal and the professional and art schools the Jews are excluded, and in the universities, by a new law for aliens, which means Jews, for Christian foreigners can obtain naturalization without hindrance, the fees, especially in the medical faculty, have been fixed at prohibitive rates. Though Jews must perform military service in the ranks like other Roumanians, they can not receive commissions nor serve as one-year volunteers. No Jew can hold a post in the hospitals, nor an office on a Roumanian railroad, nor practice as a lawyer, an architect, a veterinary surgeon, or an apothecary, nor take part in the direction of
the schools or universities, nor belong to the Chamber of Commerce, nor be employed in the national bank. From all offices in the Government civil services Jews are of course excluded. No Jew may sell tobacco or salt. The hawking law of 1854 has been enforced year by year with more rigor, and 29,000 Jews affected by it have been reduced to beggary. Under a series of vagrant acts applied oppressively to Jews they have been expelled from rural districts and compelled to settle in the congested towns. An identical note was presented in 1880 by England, France, and Germany protesting against the requirement of individual naturalization from persons belonging to a non-Christian faith. Under a series of vagrant acts applied oppressively to Jews they have been expelled from rural districts and compelled to settle in the congested towns. Some with impressed Semitic Jassy to Jassy in May, 1899. Apologists for the Roumanian Government argued that the injustice and persecutions could not be as severe as they seemed because the Jews did not leave the country. The famine and business stagnation of 1900 suddenly impressed masses of the Jewish population with a sense of the impossibility of continuing to subsist by the trade from the risk and cost. The constantly growing Anti-Semitic League bound its members to give no employment to Jews nor to have business dealings with them. In the severe winter of 1898 the Government gave generous aid to the destitute and vanishing peasantry, while the poor Jews had to depend on the charity of the Government. Some of the townspeople in Moldavia started emigration societies during the winter, and the movement spread over the whole kingdom. The emigrants started out in bands, some without money, some on foot, to seek new homes under benign conditions. One stream of emigration was directed to Anatolia, one to Cyprus, another to Canada, the last one being composed of Jews of the Cantacuzene Cabinet, in the administrative division of Botoshani, who, in 1898, went out of Roumania. They were naturally in sympathy with the Roumanian national movement in Macedonia and opposed to the plans of the revolutionary Bulgarians, who aimed to annex Macedonia to Bulgaria and would recognize no nationality there except their own. When these Roumanian citizens of Macedonian origin declined to co-operate with the Roumanian Business and Commerce Committee they were first threatened, then some of them were assassinated, and one of their leaders was kidnaped and put to torture, while an-

the
you so long expected, and what all your best friends so heartily wished? My reason for telling this in this place was chiefly to explain how my mother obtained her perfect skill in English real clear language which only can relate lovely things. After years of waiting, she made to efface the faults and supply the defects of her early education: effort which was aided and directed unerringly by her natural—its intensity I might justly call it supernatural—purity of heart and conduct, leading her always to take most delight in the right and clear language which only can relate lovely things. Her unquestioning evangelical faith in the literal truth of the Bible placed me, as soon as I could perceive or think, in the presence of an unseen world, and set my active analytic power early to work on the questions of conscience, free will, and responsibility, which are easily dealt in days but hard in years that have approached too often with prejudice, and always with disadvantage, after men become stupefied by the opinions or tainted by the sins of the outer world; while the gloom, and even terror, with which the restrictions of the Sunday, and the doctrines of the Pilgrim's Progress, the Holy War, and Queer Questions oppressed and incongruously put my time to use as the only form of vexation I was called on to endure, and redeemed by the otherwise uninterrupted cheerfulness and tranquility of a household wherein the common ways were all pleasantness, and its single and strait path of perfect peace.

"To our neighbors we saw nothing, with one exception. I went for the most part well-do London tradesmen of the better class, who had little sympathy with my mother's old-fashioned ways, and none with my father's romantic sentiment. The routine of my childish days became fixed, as of the sunrise and sunset to a nestling. It may seem singular to many of my readers, and perhaps to the plainest person in the world, when it was most regular and most solitary. Great part of my acute perception and deep feeling of the beauty of architecture and scenery abroad was owing to the well-formed habit of narrowing myself to happiness within the four brick walls of our 50-by-100 yards of garden, and according to the restrictions of our external surroundings of a London suburb, and yet more of a London chapel—an oblong, flat-ceiled barn, lighted by windows with semicircular heads, brick-arched, filled by small-paned glass held by iron bars, like fine-threaded halves of cobwebs, galleries propped on iron pipes up both sides, pews well shut in, each of them, by partitions of plain deal, and neatly brass-latched deal doors, filling the barn floor, all but its lateral, straw-matted passages; pulpit sublimely isolated, central from sides and clear of altar rails at end; a stont, four-legged box of well-grained wainscot, high as the level of the front galleries and decorated with a curtain dividing it, yellow in color, painted with gold tassels at the corners, which was a great resource to me when I was tired of the sermon, because I liked watching the rich color of the folds and creases that came in it when the clergyman thumped it. Imagine the change between one Sunday and the next, from the morning service in this building attended by the families of the small shopkeepers of the Walworth Road in their Sunday trimmings; our plumber's wife, fat, good, sensible Mrs. Good, sat in the pew next in front of us, sternly sensitive to the interruption of her devotion by our late arrivals—fancy the change from this to high mass in Romish cathedral, its nave filled by the white-capped peasantry of half Normandy, or the contrast less enchanting or marvelous between the street architecture familiar to my eyes and that of Flanders and Italy. The reader may by effort, though still dimly, conceive the effect on my imagination of the fantastic capes and wigs and triplets in those days of the partisan struggle, which had been carried on between Genoa. I can scarcely account to myself for the undimmed tranquility of pleasure with which, after these infinite excitements of travel in foreign lands, my father would return to his desk opposite the brick wall of the brewery, and I to my niche behind the drawing-room chimney-piece. The sick thrill of our styles of art and poetry. He soon got used with which, after even so much as a month or two of absence, I used to catch the first sight of the ridge of Herne Hill, and watch for every turn of the well-known road and every branch of the familiar trees, was, though not so deep or overwhelming, more intimately and vitally powerful than the change which took place in my mind and was often in some way or other occasioned by my coming into the city again.

"I think it must have been early in 1832 that my father, noticing with great respect the conduct of all matters in the Fall family, wrote Mr. Fall a courteous request that the 'two boys' might pursue their holiday tasks together. Richard Fall was entirely good-humored, sensible, and practical, but had no particular tastes; a dislike, if anything, for my styles of art and poetry. He still clung to the old-fashioned arbitration on the merits of my compositions: took rather the position of putting up with me than of pride in his privilege of acquaintance with a rising author. He was never unkind or sarcastic, but laughed me inexorably out of writing bad English for rhyme's sake or demonstrable nonsense in prose rhyme. We got gradually accustomed to be together, and far on into life were glad when any chance brought us together again."

"The year 1834 passed innocuously enough, but with little profit, in the quadruplicate industries before described, followed for my own pleasure—writing a little for the London Magazine or《Quarterly Review》, and a little for local periodicals, in which I neither felt nor foresaw the least good. Innocuously enough, I say—meaning with as little mischief as a well-intentioned boy, virtually masterless, could suffer from having all his own way, and daily confirming himself in the serious impression that his own way was always the best, I can not analyze the mixed good and evil in the third-rate literature which I preferred to the Latin classics. My volume of《The Forget-Me-Not》, which gave me that precious engraving of Verona (curiously also another by Prout, of St. Mark's in Venice), was somewhat above the general cast of annuals in its quality of letterpress, and contained the Red-haired Lieutenant, by Rev. George Croly; Hans the Kelddy, by the The Chronicles of London Bridge; and The Comet, by Henry Neele, Esq.—which were in their several ways extremely impressive to me. The partly childeh, partly dull, or even idiotic way I had of staring at the same things all day long carried itself out in reading, so that I could read the same thing in the year repeating the year."

"I do not know when my father began to read Byron to me, all primary training, after the illad having been in Scott; but it must have been about the beginning of the 'teen period, else I should recollect the first effect of it. Manfred, evidently I had got at, like Macbeth, for the sake of the witches. Various questionistic changes were made
however, at that 1831 turning of twelve, in the hermitage discipline of Herne Hill. I was allowed to dine, taken to the theater, and on festive days even dined with my father and mother at four; and it was then, generally at dessert, that my father would read the Noctes Ambrosianae regularly when they came out, and at last the shipwreck in Don Juan, of which, finding me highly appreciative, my father went on with nearly all the rest. By the end of 1834 I knew my Byron pretty well. After taking me at least six times straight through the Bible, my mother was not afraid of plain words to or for me; she had as much sympathy with all that is noble and beautiful in Byron as my father himself; her Puritanism was clear enough in common sense to see that, while Shakespeare and Burns lay open on the table all day, there was no reason for much mystery with Byron, though until later I was not allowed to read him for myself. I never got the slightest harm from Byron; what harm came to me was from the facts of life and from books of a baser kind, including a wide range of works of authors popularly considered extremely instructive—from Victor Hugo down to Doctor Watts. I said that my mother was an "inoffensive prude." She was herself as strict as Alice Bridgenorth, but she understood the doctrine of the religion she had learned, and without ostentatiously calling herself a miserable sinner, she knew that Madge Wildfire was no worse a sinner. She had sympathy with every passion as well as every virtue of true womanhood. There was a hearty, frank, and sometimes even irrepressible laugh in my mother. If, however, there was the least bitterness or irony in a jest, my mother did not like it; but my father and I liked it all the more, if it were just; and so far as I could understand it, I rejoiced in all the sarcasm of Don Juan. Only two things I conscientiously recognized, that Byron's truth of observation was the most exact and his chosen expression the most concentrated that I had yet found in literature. By that time my father had himself put me through the first two books of Livy, and I knew, therefore, what close-set language was; but I saw then that Livy, as afterward Horace and Tacitus, was studiously, often laboriously, and sometimes obscurely concentrated, while Byron wrote as easily as a hawk flies and as clearly as a lake reflects the exact truth in the precisely narrowest terms; nor only the exact truth, but the most central and useful one. I saw then that both Byron and Turner were right in all things that I knew right from wrong in, and that they might thenceforth be my masters, each in his own domain.

"I had a sharp attack of pleurisy in 1833, and during the period of nursing and petting afterward I read The Fair Maid of Perth, learned the song of Poor Louise, feasted on Stanfield's drawing of St. Michael's Mount and Turner's Santa Sabina; Pool of Bethesda, and Corinth, engraved in the Bible series, an Irishman's own, and a quantity of useful learning out of those four plates. Moreover, I planned all my proceedings on my journey to Switzerland, which was to begin the moment I was strong enough. I shaded in cobalt a cyanometer, to measure the blue of the sky with; bought a rumpled notebook for geological observations, and a large quarto for architectural sketches, with a square rule and a foot rule ingeniously fastened outside, and I determined that the events and sentiments of this journey should be described in a poetical diary in the style of Don Juan, artfully combined with that of Childe Harold. Two cantos of this work were finished, carrying me across France to Chamouni, where I broke down, finding that I had exhausted on the Jura all the descriptive terms at my disposal, and that none were left for the Alps.

"In this journey of 1835 I first saw Rouen and Venice—Pisa not till 1840. There have been three centers of my life's thought—Rouen, Geneva, Pisa. All that I did at Venice was by-work because her history had been falsely written before, and not even by any of her own people understood, and because in the world of painting Tintoret was virtually unseen. Veronese unfelt, Carpaccio not so much as named when I began to study them.

"My father's Spanish partner, Mr. Doneeq, was living in 1835 in the Champs Elysées with his
English wife and his five daughters, the eldest on the eve of her marriage with one of Napoleon's officers and the four others, much younger, at home on vacation from a convent school. We had a happy family dinner with them—played afterward in the house a long game of euchre, and dined out. I don't remember whether I was the necklace or the gar- ters. Then Clotilde and Cécile played Les Échos and other fascinations of dance melody, only I couldn't dance. It puzzles me that I should have no recollection of my first opera, but I then heard four great musicians, all rightly to be called of genius, give their services together at the top of the arches. The lectures were on early English literature, of which, though I had never read a word of any before Pope, I thought myself already a much better judge than Mr. Dale. His quotation of 'Knout the king came sailing by' stayed with me, and I think that was about all I learned during the summer; for, as my adverse stars would have it, my father's partner, Mr. Domecq, asked if he might leave his daughters at Herne Hill. Clotilde, a graceful, oval-faced blonde of fifteen; Cécile, a dark, finely browed, beautifully featured girl of thirteen; Élise, fair, round-faced like an English girl, a treasure of good nature and good sense; Caroline, a delicately quaint little girl, who at one dreamt of the Champs Élysées had sealed itself in me, for they were the first well-bred and well-dressed girls I had ever spoken to. I was thrown, bound hand and foot, in my unaccomplished simplicity, into the fiery furnace or fiery cross of these four girls, who of course would have me, if I were one of their ashes in four days. Four days, at the most, it took to reduce me to ashes, but the Mercredi des cendres lasted four years. Anything more comic in the externals of it, anything more tragic in the essence, could not have been invented by the skillfullest designer in either kind. In my social behavior and mind I was a curious com- bination of Mr. Traddles, Mr. Toots, and Mr. Winkle. I had the real fidelity and single-mindedness of Mr. Traddles, with the conversational abilities of Mr. Toots, and the heroic ambition of Mr. Winkle—all these illuminated by imagina- tion, like Mr. Copperfield at his first Norwood dinner. Clotilde (Adéle Clotilde in full) her sisters called her Clotilde, after the queen saint, and I Adèle because it rhymed with shell, spell, and knell) was only made more resplendent by the cirlelet of her sisters' beauty, while my own shyness and unresentableness were further stiffened, or rather sanded, by a patriotic and Protestant con- ceit. with good acentt, thinking of what I read, and even asking troublesome questions about it, to the extent of being one day eagerly and admir- ingly congratulated by the usual class the mo- ment we got into quad, on the consummate man- ner in which I had floored our tutor, I having no more intention to floor, or consciousness of hav- ing floored, than a babe unborn. A few weeks after coming up my tutor announced to me, with a look of triumph, that he was to read my essay in hall on Saturday. I descended from the ros- trum to receive, as I doubted not, the thanks of the gentleman commoners. Not in envy, but in fiery disdain, varied in expression through every form and manner of the English language, they explained to me that I had committed lèse-majesté against a gentleman; for, generally, this is only forgiven to such a greenhorn, but that Covenny- try wasn't the word for the place I should be sent to if I ever did such a thing again.

"I went back to Oxford in January, 1840, for the last push. The work had come by that time to high pressure, until twelve at night from six in the morning, with little exercise; and no practice, no sense of the use in what I read, to myself or anybody else. One evening a short, tickling cough surprised me, because preceded by a curious sensation in the throat, and followed by a curious taste in the mouth, which I presently perceived to be that of blood. My mother steady-ly maintained there was nothing serious the use of tobacco had kindled, and that their ex- aminers forgave it because the divinity, philo- sophy, and mathematics were all above the average, and they gave me a complimentary double fourth. What should I be or do? My utterly indulgent father was ready to let me do anything, with my room always luxuriously fumi-led, mon; my house my expenses if I chose to travel. I had not the least love of adventure, but liked to have comfortable rooms always ordered, and a threecourse dinner ready by three o'clock. Although no coward under circumstances of accidental dan- ger, I extremely objected to any vestige of danger at Cambridge, and the schools; and I was not to go to India for fear of tigers, nor to Russia for fear of bears, nor to Peru for fear of earthquakes. This year I did not draw much; the things I now saw were beyond drawing; but I took to careful botany, while the month's time set apart for Chamouni was spent in merely finding out what was to be done, and where. We went home by the Rhine and Flanders.

"Perhaps my mother had sometimes admitted into her quiet soul the idea that it might be nice to have a larger garden. Sometimes a gold-tas- seled Oxford friend would come out from Caven- dish or Grosvenor Square to see me, and there we would sit—like two skulk room opposite the nurs- ery for him to wash his hands in. As his bank balance enlarged, even my father thought it pos- sible that his country customers might be more impressed by enjoying their after-dinner sherry with more room for their legs. And now that I was of age, and H.A., and so on, did not I also want a larger house? No; but ever since I could drive a spade I had wanted to dig a canal, and make looks on it, like Harry in Harry and Lucy. And in the field at the back of the Denmark Hill house, now, in this hour of all our weaknesses, I saw my way to a canal with any number of locks down, with surmounts and Dues.

"At last the lease of the larger house was bought, and everybody said how wise and proper, and my mother did like arranging the rows of pots in the big greenhouse; and the view from the breakfast room into the field was really very lovely. And we bought three cows, and skimmed covered our own cream, and churned our own butter. And there was a stable and a farmyard and a haystack, and a pigsty, and a porter's lodge, where undesirable visitors could be turned back before startling us with their knock. But for all these things we never were so happy again—never more at home; and I never got my canal done, after all!"

"The next year there was traveling enough for us up and down the new garden walks. Also, the first volume of Modern Painters took the best of the winter's leisure. The house itself had no specialty, either of comfort or convenience; the breakfast room, opening on the lawn and farther afield, was remarkably pretty when its walls were covered with lakes by Turner and doves by Hunt; the dining and drawing rooms were spacious enough for our grandest receptions—never more than twelve at dinner, with perhaps Henry Wat- son and his sisters in the evening—and had decora- tion enough in our Northcote portraits, Turner's Slave Ships, and other pictures with John Lewis and two Copley Fieldings, and every now and then a new Turner drawing. My own workroom, above the breakfast room, was only distinct as being such, in its large, oblong table, occupying so much of the fifteen by twenty-five feet of available space within bookcases that the rest of the room was visually surrounded it. I always wrote on the flat of the table, a bad habit, enforced partly by the fre- quent need of laying drawings or books of refer- ence beside me.

"I had two distinct instincts to be satisfied, rather than ends in view, as I wrote day by day with higher kindliness feeling of Modern Painters. The first, to explain to myself, and then demonstrate to others, the nature of that quality of beauty which I now saw to exist through all the happy conditions of living or- ganisms, and down to the minutest detail and fin- ished material structure naturally produced. The second, to explain and illustrate the power of Tintoret has never obtained the purchase of any good example of him for the National Gallery. But I permit myself—perhaps with vain com- placency—the thought that I have had consider- able share in the movement which led to the use- ful-work of the Arundel Society in Italy, and to the enlargement of the National Gallery's already valuable series of fourteenth century reli- gious paintings. The style of the book was formed on a new model, given me by Osborne Gordon. I was old enough now to feel that
neither Johnsonian balance nor Byronic alliteration were ultimate virtues in English prose, and I had been reading with care, on Gordon's counsel, both for its arguments and its English, Richard Hooker's Ecclesiastical Polity. I had always a trick of imitating more or less the last book one had read while advancing in one's events. I did the best I then knew how, leaving no passage till I had put as much thought into it as it could be made to carry, and chosen the words with the utmost precision and tune I could give them."

Ruskin began his study of social conditions in Switzerland, and physical deformity from the "noon wind," which he came to realize as the distortion of trees, he believed to be associated with warped lives and dwarfed opportunities. He made many fruitless efforts to establish a center of beneficial influence. He writes: "Up to the year with which I am now concerned, 1849, when I rushed in anything I was about. Nevertheless dawned on me; but the journeying of the year, mostly alone, for the work necessary for the fourth volume of Modern Painters, gave me the melancholy knowledge of the agricultural condition of the great Alpine chain, which was the origin of the design for St. George's Guild, and virtually closed the days of youthful happiness and of true work in the world—for what it is worth."

In the closing chapter of his autobiography Ruskin says: "In blaming myself, as often I have done, and may have occasion to do again, for my want of affection to other people, I must also express continually more and more wonder that ever anybody had any affection for me, thought they might as well have got fond of a camera lucida or an ivory foot rule. All my faculty was merely in showing that such and such things were so; I was no orator, no actor, no painter but in a minute and generally invisible manner; and I couldn't bear being interrupted. I really thought it was not worth. But when once the potatoes and beans were set, I got no outlet nor inlet for my exccavatory fancy or skill during the rest of the year. The thistle field at Crossmount was an inheritance of amethystine treasure to me; and the working hours in it are among the few in my life which I remember with entire serenity, as being certainly, could have spent them no better. For I had wise—though I say it—thoughts in them, too many to set down here (they are scattered afterward up and down in Fors and Munera Pulveris), and wholesome sleep after them, in spite of the owls, who were many in the clumps of pine and yew, and the deer, and the thistles, and the lakes, and within and without the Lindo. I had learned to manage a boat—an extremely different thing from steering one in a race—and the little two-foot steps of Tummel were, for scientific purposes, as good as falls twenty or two hundred feet high. I found that I could put the stern of my boat full six inches into the air over the top of one of these little falls, and hold it there, with very short sweeps, against the level stream, with perfect ease for any time I liked, and any child of ten years old may do the same. Half my power of ascertaining facts of any kind connected with the arts is in my stern habit of doing the thing with my own hands till I know it myself."

When Ruskin turns his analytical powers upon his childhood it makes profoundly interesting reading, although something in the dramatic but simple fashion of the telling makes one doubt whether he really conceived his own character more accurately than he did that of the world he afterward so savagely and so sorrowfully desired and failed to aid. He says: "The thoughtful reader must have noticed with some displeasure that I have scarcely, whether at college or at home, used the word 'friendship' with respect to any of my companions. The fact is, I am a little puzzled by the specialty and singularity of poetical and classic friendship. I get distinctively attached to places, to pictures, to dogs, cats, and girls, but I have had—Heaven be thanked—many and true friends, young and old, whom I have had of boundless help and good to me—nor I quite helpless to them—yet for none of whom have I ever obeyed George Herbert's mandate: 'Thy friend put in thy bosom; wear his eyes still in thy heart, that he may see what's there; if cause rears, thou art sacrificed."

I found nothing in my heart that seemed to me worth anybody's seeing; nor had I any curiosity for insight into those of others; nor had I any notion of being a sacrifice for them, or the least wish that they should exercise, for my good, any but the most pleasurable accomplishments—Dawtrey Drewitt, for instance, being further endeared because he could stand on his head and catch vipers by the tail; Gershon Collingwood, because he could sing French songs about the Earthly Paradise; and Alie Wedderburn, because he could swim but I have taken with fat and took out water like a good water spaniel. And I never expected that they should care much for me, but only that they should read my books; and looking back, I believe they liked and me nearly as well as if I hadn't written any. First, then, of this Love's Meenie of my own age, or under it, William Meenie's Dale, and his irreclaimable house, he come to him at Crossmount, where it was his evangelical duty to do some shooting in due season. After once walking up Schehallien with him and his keepers, with such entertainment as I could find in the mewing and shrieking of some seventy or eighty gray hares who were brought to me in with entire serenity, as being certainly, and forming a final opinion that the poorer tenantry might better have been permitted to find the stock of their hare soup for themselves, I forswore further fashionable amusement, and set myself, when the days were fine, to the laborious eradication of a crop of thistles which had been termed 'growing by northern agriculture in one of the best bits of the old Tummel. The ambitions in practical gardening of which the germs had been blighted in Herne Hill, nevertheless still prevailed over the contemplative philosophy in me so far as to rekindle the original instinct of liking to dig a hole whenever I got leave. Sometimes, in the kitchen garden of Denmark Hill, the hole became a useful furrow, but when once the potatoes and beans were set, I got no outlet nor inlet for my excavatory fancy or skill during the rest of the year. The thistle field at Crossmount was an inheritance of amethystine treasure to me; and the working hours in it are among the few in my life which I remember with entire serenity, as being certainly, could have spent them no better. For I had wise—though I say it—thoughts in them, too many to set down here (they are scattered afterward up and down in Fors and Munera Pulveris), and wholesome sleep after them, in spite of the owls, who were many in the clumps of pine and yew, and the deer, and the thistles, and the lakes, and within and without the Lindo. I had learned to manage a boat—an extremely different thing from steering one in a race—and the little two-foot steps of Tummel were, for scientific purposes, as good as falls twenty or two hundred feet high. I found that I could put the stern of my boat full six inches into the air over the top of one of these little falls, and hold it there, with very short sweeps, against the level stream, with perfect ease for any time I liked, and any child of ten years old may do the same. Half my power of ascertaining facts of any kind connected with the arts is in my stern habit of doing the thing with my own hands till I know it myself."

Learning from an Irish street-crossing sweeper what he could teach me of sweeping, but found myself in that matter nearly his match; and again and
again I swept bits of St. Giles's foot pavements, showing my corps of subordinates how to finish into depths of gutter. I worked with a carpenter until I could make an even shaving six feet long of the body of the Egyptian. I swept, and delightfully sloppy green paint to feel the master's superiority in the use of a blunt brush. But among all these and other such students the instrument I finally decided to be the most difficult to manage was the trowel. For accumulated months of my boy life I watched bricklaying and paving, but when I took the trowel into my own hand I abandoned at once all hope of the least real skill with it unless I gave up all thoughts of any future literary or political career. But quite the happiest bit of manual labor I ever did was for my mother in the old inn at Sixt, where she alleged the stone stairs to be filthy and become unpleasantly dirty since the last year. Nobody in the inn appearing to think it possible to wash it, I brought the buckets of water from the yard myself, poured them into a beautiful image of Versailles waterworks down the fifteen or twenty steps of the great staircase, and with the strongest broom I could find cleaned every grain of dust of the marble, and then worked to wash the water and drive the mud from each with accumulating splash down the next one. "The admiration of tree branches at Fontainebleau led me into careful discernment of their species; and while my father, as was his custom, read to my mother and me half an hour after business hours, he painted the leaves and branches of a tree beside me, of which the mode of growth, with a single leaf full size, had to be done at that sitting in fine pen outline, filled with the simple color of the leaf at one wash. On fine days, when the grass was dry, I used to lie down on it and draw the blades as they grew, with the ground herbage of buttercups, daisies, and other native plants, and the square foot of meadow or mossy bank became an infinite picture and possession to me, and the grace and adjustment to each other of growing leaves a subject of more curious interest to me than the composition of any painter's masterpiece. The love of complexity and quantity influencing my preference of flowers before the pure, true nature was due without qualifying sense of wasted labor by what I felt to be the constant working of Omnipotent kindness in the fabric of the food-giving tissues of the earth; nor less, morning after morning, did I rejoice in the traceries and the painted gloss of the sky at sunrise.

My study had advanced since 1842, when it began, until in 1847 it had proceeded into botanical detail, and the collection of material for Proserpina began with the analysis of a thistle top, as the foundation of all my political economy was dug down to, through the thistle field of Crossmount. Analysis of thistle top. I say, not dillennium, nor dillennium, think correctly, treating like everything else that is lovely in the visible world, are only to be seen rightly with the eyes which the God who made them gave us, and neither with microscopes nor spectacles. These have their uses for the curious and the aged. But in health of mind and body men should see with the naked eye, hear and speak with the trumpet, walk on their feet, not on wheels, and work and war with their arms, not with engine beams nor rifles warranted to kill twenty men at a shot before you can see them. And far more difficult work than this was on foot in other directions. Too sorrowfully it had now become plain to me that neither George Herbert, nor Richard Hooker, nor Henry Melvill, nor Thomas Dale, nor the Dean of Christ Church, nor the Bishop of Oxford could in any wise explain to me what Turner meant by the contest of Apollo with the python or by the repose of the great dragon above the garden of the Hesperides. I felt that if men nearer to the earth might wreath themselves against my own now gathering strength, for such serpent of eternity as might reveal its aye to me amid the sands even of Forest Hill or Addington Heath, I was yet wholly unprepared.

Has the great analyst laid bare in these few pages the secret of his lamentable failure in the world of men and of the social forces? He mistook the former for dwarfed and distorted physical creations. He "saw men as trees walking," and he mistook the great plantation of society for a field of thistles and a meadow or woodland, where the uprooting was to be ruthless and the blendings of light and color given full play in heaven's own atmosphere. He forgot that no amount of patient study could show him the "noon wind" from the great mountain chains of the spiritual world; that the minglings of mental and moral powers were as much hidden from human searching as is the growth of a flower from the peeping and probing root. But the explanation of part of it was that right there, where he felt called of God to apply all his powers to the good of men whom God had made, he threw away all the noble lessons he had learned and taught so well to others, and forgot his long patience and its results. He spent years over the same few pages of literature, him the study of such details in landscape as was so fitting and right. He made no study of that world of humanity from which his own had been shut out as if by a invisible wall. He should have known and taken nothing in Nature for granted, but turn a patient and devout eye and ear to watch and listen through silence and through storm, he now nate it, with scorn, bitterness, and an agony of impatience, heed only his teaching and his practical methods of transforming society. The mental, moral, and physical world is not produced, but made for himself, often at the cost of the love or sympathy of his fellows, he imperiously denied to others. The science of fitting things to their own places through faithfully learning how they had come into such relations, he threw contempt upon by his unscientific methods of using his influence and his wealth. He had learned to break some humble stonebreakers, but he came to heaven's own atmosphere. He forgot all, it may be, that "in health of mind and body men should see with their own eyes, hear and speak without trumpets, walk on their own feet, and work and war with their own arms;" there
will be fewer attempts to establish philanthropic hospitals. If they will remember that "a flower is to be watched as it grows, in its association with the earth, the air, and the dew; its leaves are to be seen as they expand in the sunshine; its colors as they embroiler the field or illumine the forest," there will be less reason to think that the eye of earth's children to social hothouses. This is the present problem, and if Ruskin's fidelity and faith remain and overbalance his passionate unwisdom in their application, it will be well to the thousands to whom his prolific brain has spoken.

Here let Ruskin present his own explanation and apology. He says, in his own book, "Of course in this last I have to pray my readers to note that this continually increasing arrogance was not founded on vanity in me, but on sorrow. There is a vast difference, there is all the difference, between the vanity of displaying one's own faculties and the grief that other people do not use their own. Vanity would have written and drawing what every one praised, and disciplining my own already practiced hands into finer dexterities. But I had no thought but of learning more and teaching what truth I knew, assuredly then and ever since, for the student's sake, not my own fame's."

And, in the instance of the strange inconsistencies of perception and emotion which characterized Ruskin's mind is seen in his essay on War, in the volume entitled The Crown of Wild Olive. In the opening paragraphs he says: "All the pure and noble arts of peace are founded on war; no great art ever yet rose on earth but among a nation of free men. When we find evidences of the truth of his statement, he says: "You are to remember, in passing to the next phase of history, that though you must have war to produce art, you must also have much more than war, namely, an art instinct or genius in the people; and that, though all the talent for painting in the world won't make painters of you unless you have the gift for fighting. So, you may have the gift for fighting and none for painting. 'It may be so,' I can suppose that a philanthropist might exclaim. 'Perish then the arts, if they can flourish only at such a cost. What worth is there in toys of canvas and stone if compared to the joy and peace of artless domestic life?' And they are right. But the other side of the story is that the expressions of the highest state of the human spirit worth their infinite. As results they may be worthless, but as signs they are above price. For it is an assured fact that, whenever the faculties of men are at their fullness, they must express themselves in art; and to say that a state is without such an expression is to say that it is sunk from its proper level of manly nature. So that, when I tell you that war is the foundation of all the arts, I mean also that it is the foundation of all the high virtues and faculties of men. It was very strange to me to discover this, and very dreadful, but I saw it to be quite an undeniable fact. The common notion that peace and the virtues of civil life flourished together I found to be wholly untenable. Peace and the vices of life only flourish together. We talk of peace and learning and of peace and plenty and of peace and civilization, but I found that those were not the words which the Muse of History coupled together; that she put her lips on her lips with the words of war, peace and selfishness, peace and corruption, peace and death. I found, in brief, that all great nations learned their truth of word and strength of thought in war; that they were nourished in war and wasted by peace, taught by war and deceived by peace, trained by war and betrayed by peace—in a word, that they were born in war and expired in peace. Yet now note carefully, in the second place, it is not all war of which this can be said. It is not the ravage of a barbarian wolf flock nor the habitual restlessness and rapine of mountain wolves, as we could think that every war was but an occasional struggle of a strong, peaceful nation for its life, as in the wars of the Swiss with Austria; nor the contest of merely ambitious nations for extent of power, as in the wars of France under Napoleon or the just terminated war in America [the civil war in the United States]. None of these forms of war from which all the rest flow. But the creative and foundational war is that in which the natural instincts of self-defense are sanctified by the nobleness of the institutions and purity of the households which they are appointed to defend. To such war as this all men are born; in such war as this any man may happily die; and forth from such war as this have arisen throughout the extent of past ages all the highest sanctities and virtues of humanity."

Ruskin was addressing the men of the Royal Military Academy at Woolwich. In closing, after pleading with them to live clean and manly lives, and after apostrophizing the mothers, wives, and lovers of these men, he says: "But truly, if it might be true, I fancy, we should feel the power of hammer strokes that should beat swords into plowshares; and that this can not be is not the fault of us men. It is your fault, wholly yours. Only by your command or by your permission can any contest take place among us. And the real, final reason for all the poverty, misery, crime, and injustice in the world is simply that you women, however good, however religious, however self-sacrificing for those you love, are too selfish and too thoughtless to take pains for any creature out of your own immediate circles. You fancy that you are sorry for the pains of others. Now I just tell you this, that if the usual course of war, instead of unroofing peasants' houses and ravaging peasants' fields, merely broke china upon your own drawing-room tables, no war in civilized countries would last a week. I tell you more, that at whatever moment you choose to put a period to war you could do it with less trouble than you take any day to go out to dinner. You know, or at least you might know if you were watching the world. Your country has made many widows and orphans. We have none of us, truly, heart enough to mourn with these. But at least we might put on the outer symbols of mourning with them. Let but every Christian lady who has conscience toward God vow that she will mourn, at least outwardly, for his killed and wounded. Your praying is useless and your churchgoing mere mockery of God if you have not plain obedience in you enough for this. Let every lady in the upper classes of civilized Europe simply vow that while any cruel war proceeds she will wear black, a mute's black, with no jewel, no ornament, no excuse for or evasion into prettiness—I tell you again, no war would last a week. And, lastly, you women of England are all now shrieking with one voice—you and your clergymen together—because you hear of your Bibles being attacked. If you choose to obey your Bibles, you will never care who attacks them. It is just because you never fulfill a single downright promise. Your reading is for its credit, and just because you don't care to obey its whole words that you are so particular about the letters of pity on the poor, and you
In the reply and last English inal Salsette 1843.

This passage gives the key to much of Ruskin's faith and action. He was brought up with his fellow-men. Clear and just of vision when his eye was fixed on a distant and pure ideal, he was purblind and cross-eyed when gazing upon the every-day scenes of life about him. He walked with a free stride on alpine heights that dazzled the brains of common mortals, but fell sprawling in a muddy pool for which a child might have regard. But so transient and slight that skirts it. Even Ruskin's iron will and true desire and financial power could not make a home for workingmen where their heart had laid no gift on the altar. A sacred fire will not blow to order.

He discerned and pointed out the fact that warfare in a noble cause is humanity's effort to lay upon the earth the noblest gifts; and that as such it advances the cause of true and lasting peace infinitely more than can a supine and meretricious truce with evil. He recognized the power of woman's influence, and then he poured forth commonplace and ridiculous denunciation against all war and against woman-kind as its sole instigator and abettor. And the remark was heard asapeut as the breeze:

The present confusion of thought on this subject of war and woman's responsibility concerning it are perhaps partly due to the errors of this magnetic writer and speaker.

In 1830 Ruskin gained the Newdigate prize for English poetry, at Oxford, by a poem entitled 'Satirical Epistles'. He published A Modern Painters, in 1843. He studied painting under Copley Fielding and Harding, but he says himself that his real masters were Rubens and Rembrandt. The first volume of his Modern Painters appeared in 1843. He says it was called forth by a desire to reply to a criticism of Turner's works which appeared in The Guardian. His object was to show the superiority of Turner to all the modern landscape painters, and to show, as well, the superiority of modern landscape painters to the old masters in that branch of art. He spared no reputation that seemed to himself undeserved, and condemned old and new alike with such severity that he created bitter animosity. But so transcendent was the beauty of his style, and so original and sincere the criticism, that he held the public and began to have great weight in swaying opinion. In 1846 he republished the volume in a greatly altered form. Three other volumes on the Modern Painters appeared later: the fifth and last was not published until 1860. The whole work had been written or revised in practically a decade, and the whole treatment of the principles of art, an artistic and symbolical treatment of natural scenery and life, imaginative and poetic descriptions illustrated with drawings from his own hand. A revised and altered edition of the whole work appeared in 1860—67, and an edition of 15 volumes, with some additional chapters, an epilogue, and a new index, in 1889. In 1849 he published The Seven Lamps of Architecture, and in 1851—53 The Stones of Venice. Both were exquisitely illustrated by himself, and they were designed to present lofty and beautiful ideals of domestic architecture.

Preraphaelitism meant to have assumed the form of a distinct phase or school of art in England, and Ruskin espoused its cause with his usual ardor. He wrote notes, pamphlets, and letters on the Academy Exhibition from 1855 to 1890. Indeed, Ruskin may be said to have made a cult of what was merely an opinion. He defined the underlying principle of preraphaelitism to be the determination "to paint things as they probably did look and happen, not as, by rules of art developed under Raphael, they might be supposed gracefully, deliciously, sublime, and harmoniously." He published Lectures on Architecture and Painting and The Two Paths, these being lectures on art and its application to decoration and manufacture. In 1857 appeared The Elements of Drawing, and in 1859 The Elements of Perspective. Among his other books on art are Aratra Penelope; or, the picture of an expedition to the island of Fesolc, the elements of painting and drawing; Frondes Agrestes, which is made up of readings from Modern Painters; Giotto and his Works; Val d'Arno, lectures on the art of the thirteenth century in Pisa and Florence; Pleasures of England, containing lectures on the modern art of the island and city of Venice, published in Florence, studies of Christian art for English travelers; and St. Mark's Rest, on the history of Venice. Kindred to the books on art were the books on the studies of Nature made while Ruskin was studying and wielding his art material. These include Ethics of the Dust, lectures on crystallization of and experiment with volcanic engraving; Love's Meinie, on birds; Deulation, studies of the lapse of waves and life of stars; The Eagle's Nest, which directly discusses the relation of natural science to art; and Prosopina, studies of wayside flowers. Of other general writing, striking instances are seen in Notes on the Construction of Sheepfolds, which deals with the air, a study of the Greek myths of cloud and storm; Sesame and Lilies, two lectures on the education of men and women; The King of the Golden River, a fairy story with a moral and a study of Nature. This series of works presents one side of Ruskin's nature, or rather one phase of his life work, for, in reality, all his work is one, though from the subjects treated and the methods of working them out they appeared to be at war with one another or to have no relation. Such as they are, they belong together. Side by side with the art and Nature study and literature is the life social conditions. While actively engaged, after studying painting and architecture abroad, in writing at home from the gathered material, Ruskin for several years taught drawing at the Workingmen's College, and began to lecture to the workingmen. He became widely popular in the latter field, and delivered courses of lectures, which were freely and lovingly given, at South Kensington Museum, Manchester, Bradford, to members of the Architectural Association in Lyon's Inn Hall, and at Tunbridge Wells. His Two Paths was meant to teach the dependence of all noble design on organic form, and to test the conventional or dead, and the organic or living, in art. He said his writings on art had not been matters of choice, as it had always seemed to him they might have done more good in other ways, but of necessity. He believed he saw injustice done, and
heard falsehood taught: he must needs try to remedy the one, and was compelled to deny the other. He believed his work to have grown to its natural shape and size in his social writing and effort. He says: "Of that tree, if any fruit grow such as you like, you are welcome to gather it without thanks; and so far as it is poor or bitter, it will be some justice to refuse it without reviling." The rhetoric is charming, but the truth is that those who would have been glad to gather such good as they could make use of had their heads broken because they did not gather and use it all just as it was shaken or flung at them; and if denunciation is reviling, then that was not reviling, but a truth with the wicked. During the years from 1860 to 1870 Ruskin's interest in social matters encroached more and more upon his art life and work, and finally overwhelmed it utterly. In 1857 he had proclaimed the power over him of Thomas Carlyle, my master, as he always called him, and the influence of the great cynic and dogmatist is but too painfully evident upon the naturally sweet and tender and truly Christian character of Ruskin. What the rude thought and uncouth literary style of Carlyle could not do in pressing home his opinions upon his countrymen, that Ruskin tried to do for him with initial greater effort, but it all is wasted with the wicked. It was the solemn feeling with both writers, but one hated while he detested, and the other loved.

Ruskin's Manchester lectures first revealed him as a political economist of a novel type. In these lectures he treats of the duties of the nation in relation to its trade, its labor, its industries, its agriculture, its accumulation, and distribution of them. Here may be found the germ of nearly all his later work in this direction. The topics dealt with were co-operation, contentment, legislation, expenditure, entertainment, the authority of the Bible, thanksgiving, demonical influence, dictatorship, and the necessity of law; the proper offices of bishop and overseer; the nature and duty of the magistrate, and the like. The inevitably distinctions of rank; and necessary submission to authority. In 1862 some of the teachings of these lectures had been expanded in Unto This Last. Time and Tide by Wear and Tyne, which contained 25 letters to a workingman in Sunderland, appeared in 1867. Its general theme was the nature of the laws bearing on employment and honesty in work and exchange. "I tell you this," "You may take this for granted," "I know," "Believe me," he reiterated in all these letters, with delightful obliviousness of the fact that one, or ten, or twenty years before he had been equally positive that exactly the contrary of many of his statements were true.

In 1871 Ruskin began the publication of a periodical, issued monthly, called Fors Clavigera. This he kept up until he was overtaken by serious illness, caused by overwork, while writing the number for March, 1878. He resumed them after his convalescence, and in the discussions that the title, Fors Clavigera, meant "the fate which bears the club, the key, or the nail," the overpower, the guiding or the compelling forces of human life. In the opening article he says: "Consider the ridiculousness of the division of parties into Liberal and Conservative. There is no opposition whatever between those two kinds of men. There is opposition between Liberals and Illegitimates—that is to say, between people who desire liberty and who dislike it. I am a violent Illegitimate, but it does not follow that I am a Conservative. A Conservative is a person who wishes to keep things as they are; and he is opposed to a destructive, who wishes to destroy them, or to an improve, who wishes to alter them. Now, though I am an Illegitimate, there are many things I should like to destroy. I should like to destroy most of the railroads of England, and all the railroads in Wales. I should like to destroy and rebuild the Houses of Parliament, the National Gallery, and the East End of London. I should like to pull down the new suburb of Edinburgh, the new suburb of Geneva, and the city of New York. Thus in many things I am the reverse of conservative; nay, there are some long-established things which I hope to see changed before I die; but I want still to keep the fields of England green, and horses and cart, and that girls shall be taught to courtesy and boys to take their hats off when a professor or other dignified person passes by; and that kings should keep their crowns on their heads, and bishops their crosses in their hands, and should duly recognize the significance of the crown and the use of the crook."

Near the close of the fifth number of the periodical he wrote: "There are three material things, not only useful but essential to life. No one knows how to live 'till he has got them. These are pure air, water, and earth. There are three immaterial things not only useful but essential to life. These are order, love, and conduct. We are to get them also. These are order, love, and conduct. These are the six chiefly useful things to be got by political economy when it has become a science. I will briefly tell you what modern political economy—the great 'savoir mourir'—is doing with them. Heaven gives you the main elements of the first three. You can destroy them at your pleasure; and great almost without limit, the available quantities of them. You can vitiate the air by your manner of life, and of death, to any extent. You might easily vitiate it so as to bring such a pestilence on the globe as would end all of you. You or your fellows, German and French, are at present busy vitiating it to the death. Heaven gives us the main elements of the last. You can destroy them at your pleasure; and only having no possible return, you can do it with infinite ease, and cause it to happen under the most deplorable circumstances. RUSSIA.

of land in England, which shall not be built upon, but cultivated by Englishmen with their own hands, and such help of force as they can find in wind and wave. If any come to help me, it is to be on the following conditions: We will try to make some small piece of English ground beautiful, peaceful, and fruitful. We will have no steam engines upon it, and no railroads; we will have no untended or unthought-of creatures on it; none wretched but the sick; none idle but the dead. We will have no liberty upon it, but instant obedience to known law and appointed persons; no equality upon it, but recognition of every man's servitude. We will have no emigration of every worseness. When we want to go anywhere we will go there quietly and safely, not at forty miles an hour in the risk of our lives; when we want to carry anything anywhere, we will carry it either on the backs of beasts, or on our own, or in carts, and we will have plenty of flowers and vegetables in our gardens, plenty of corn and grass in our fields, and few bricks."

From 1869 till 1879 Ruskin was Slade Professor of Art at Oxford. His superintendence of the practical work of art teaching was close and unwearied until it was terminated by his long and dangerous illness—a complete breaking down of his nervous system and a short, paralyzing illness. He was appointed and returned to the thankless post in 1883. He found large and increasing audiences, and was compelled to hold his lectures in the theater of the museum. This was crowded to the doors twice a week, and he was obliged to repeat each lecture. Graduates, undergraduates, and numbers of ladies attended. It might have been said of these lectures as Lowell said of Emerson's: "It was chaos come again, but it was a chaos full of shooting stars, of creative forces."

No one who heard Ruskin could tell what the lectures were about from their titles, and hardly from their subject-matter, so disjointed were they and mingled of fanciful ethics and more fanciful theology, violent criticism on art and letters and life, all given with the marvelous beauty of diction and flood of emotion that never failed to astonish and move the hearer. But at last all this became too strange to be endured by those who cared most for Ruskin's reputation, and he was driven from the chair of the second time. In doing so he sent a characteristic letter to the vice-chancellor, in which he said that his reasons were that the university would not buy Turner's The Crook of Lune, and that by a recent vote it had sanctioned vivisection. As to the former, it may be said, in passing, that the university could not get its rents and had not paid its debts, so that £1,200 for a Turner was not forthcoming.

Ruskin had endowed munificently, from his own fortune, a mastership for the art school, and given it a series of valuable educational drawings. He did the same thing for the Fitzwilliam Museum in Cambridge. His gifts to every object that seemed to him worthy were generous and frequent. He had inherited £175,000, and he died comparatively poor. St. George's Guild, which was founded as the result of the appeals in Fors Clavigera, was intended to be a return to primitive agricultural life where the old simple virtue should prevail. He declined, however, where the old and homely methods of hand work should do all that was required, without aid from any modern machine or manufacture.

In the later numbers of Fors Clavigera Ruskin used to publish the accounts of his own private income and expenditure and of the Order or Company of St. George, which he had endowed, and for which he was constantly appealing to his countrymen for sympathy and support. The object of the association was to promote good and honest work. The vows taken, founded on belief in the goodness of God and the dignity of human nature, inculcated honor, honesty, industry, frugality, gentleness, and obedience. As the hopelessness of this struggle against the world as it is, and mankind in its daily need and real desire, was gradually borne in upon a mind that was blind to the causes of its failure, Ruskin became more bitter in his denunciation of the art and manners, trade and commerce, impulse and movement that do not have a civil influence of every worseness.

Ruskin has never said the final word concerning art, even if he has said many that stand as final truth; he certainly has not said a final word as to social economy, or to the influence of advice and example in the education of ships and railways, cities and manufactures, although he has presented noble ideals of thought for those who can grasp real conditions; but as a master of written language his place seems to be assured. His last volume is not his least beautiful one, and the charm of his character is more apparent here than anywhere else. He has seen the past, and faithful friends made the decline of life pleasant to his sensitive spirit. The Ruskin Society, London, was founded in 1881; the Ruskin Reading Guild, in 1887. The Society publishes a quarterly magazine called Idrisad, a title as strange and noncommittal as are most of Ruskin's own. He was D. C. L. of Oxford, and an honorary student of Christ Church College. In 1871 the degree of LL. D. was given to him by Cambridge. He founded a museum at Walkley, which was transferred to Sheffield in 1890. Here he placed part of his priceless library and treasures of art. He made his home in Brantwood, Coniston, more than seven years; he died, and where, in accordance with his wish, he was buried. This paragraph, written at Coniston in one of his periods of illness, was happily unfilled, for love of moorland and wood and sleeping village did serve him to the last, while friendship gave what love had long withheld.

"Morning breaks, as I write, along those Coniston fells, and the level mists, motionless and gray beneath the rose of the moorlands, veil the lower woods and the sleeping village and the long lawns by the lake shore. Oh, that some one had but told me in my youth, when all my heart seemed to be set on these colors and clouds, that appear for a little while and then vanish away, how little my love of them would serve me when the silence of lawn and wood in the dews of morning should be completed; and all my thoughts should be of those whom, by neither, I was to meet more."

RUSSIA, an empire in northern Europe and Asia. The empire is hereditary in the dynasty of Romanoff-Holstein-Gottorp. The system of government is an absolute monarchy in which the legislative, executive, and judicial powers are united in the Emperors, or Tsars, who are assisted by a Cabinet of Ministers, each of whom has charge of an executive department; by a Council of State, which examines and passes upon projects.
RUSSIA.

of law submitted by the ministers; by a Ruling Senate, which watches over the general administration and superintends the judiciary; and by a Holy Synod, which directs ecclesiastical affairs. The Czar is the head of the Russian Church, which in its doctrines and ritual is identical with the Orthodox Greek, maintaining the relation of a sister Church with the patriarchates of Constantinople, Jerusalem, Antioch, and Alexandria; and with Moscow, with 3,063; Kazan, with 781; Kharbork, with 1,059; Odessa, with 492; Kieff, with 2,558; Warsaw, with 1,085; Yurieff, with 1,326; and Tomsk, with 477. There are 117 gymnasia, with 51,582 pupils; 58 progymnasia, with 6,510; 104 realschools, with 24,279; 67 normal schools, with 3,851; 15 girls' gymnasia, with 4,755; 174 girls' progymnasia, with 22,767; 53 girls' middle schools, with 452; 4 girls' normal schools with 366; 4 technical military and naval schools, with 936; 6 military academies, with 3,502; 25 cadet corps, with 8,118; 65 Cossack gymnasia, with 2,446; 22 Cossack girls' gymnasia, with 1,208; and 11 agricultural schools, with 1,449. The Ministry of Railroads and Communications, the Grain Committee, the Ministry of Finance, and the Ministry of Finance 16 commercial schools. The institution of the Empress Marie provides for 10 gymnasia and 34 institutes. Of the elementary schools under the direction of the Ministry of the Interior, nine tenths are supported by the local authorities, a few by private individuals, and the remainder by State aid. The total number was 32,708 in 1896, with 53,215 male and 16,783 female teachers and 1,775,561 male and 564,073 female pupils. The Ministry of War had charge of 10,270 schools, with 13,186 male and 363 female teachers and 252,373 male and 48,720 female pupils. Other ministries supervised over 500 schools, and 402 schools, with 7,511 male and 12,564 female pupils, belonged to seminaries for boys and girls. The Holy Synod had 34,836 primary schools, with 24,153 male and 4,893 female teachers and 910,760 male and 205,732 female pupils. The religious seminaries of the Holy Synod were 55 in number. The training schools for teachers numbered 78, with 4,867 male and 360 female pupils.

The density of population is 193 to the square mile in Poland, 51 in Russia proper, 64 in Transcaucasia, 43 in northern Caucasus, 20 in Finland, 15 in Turkestan, 4 on the steppes, 4 in western Siberia, 2 in the Transcaucasian territory, 1 in Sakhalin, 0.7 in eastern Siberia, and 0.3 in the Amur territory. In Russia proper there are 162.8 women to 100 men; in Poland, 98.6; in Finland, 102.2; in the Caucasus, 89.5; in Siberia, 93.7; on the steppes, 89.4; in the Transcaucasian territory and Turkestan, 83; in the whole empire, 99.8. The immigration of Russians, including Jews, into the United States from 1873 to 1897 inclusive was 722,472. In the seven years from 1890 to 1897 it was 292,032 from Russia proper, 91,994 from Russian Poland, and 24,977 from Finland. The emigration from Russia to Siberia has grown from 26,000 in 1888 to about 150,000 a year. In 1896 the net immigration of foreigners into the Russian Empire was 47,701, and in 1897 it was 79,345; the net emigration of Russians was 75,118 in 1896 and 86,875 in 1897.

The Government appropriations for education in 1899 amounted to 51,062,842 rubles, of which 4,108,045 rubles were for universities and 9,390,053 rubles for intermediate schools. The universities are at St. Petersburg, with 2,234 students; Moscow, with 3,063; Kazan, with 781; Kharbork, with 1,059; Odessa, with 492; Kieff, with 2,558; Warsaw, with 1,085; Yurieff, with 1,326; and Tomsk, with 477. There are 177 gymnasia, with 51,582 pupils; 58 progymnasia, with 6,510; 104 realschools, with 24,279; 67 normal schools, with 3,851; 15 girls' gymnasia, with 4,755; 174 girls' progymnasia, with 22,767; 53 girls' middle schools, with 452; 4 girls' normal schools with 366; 4 technical military and naval schools, with 936; 6 military academies, with 3,502; 25 cadet corps, with 8,118; 65 Cossack gymnasia, with 2,446; 22 Cossack girls' gymnasia, with 1,208; and 11 agricultural schools, with 1,449. The Ministry of Railroads and Communications, the Grain Committee, the Ministry of Finance, and the Ministry of Finance 16 commercial schools. The institution of the Empress Marie provides for 10 gymnasia and 34 institutes. Of the elementary schools under the direction of the Ministry of the Interior, nine tenths are supported by the local authorities, a few by private individuals, and the remainder by State aid. The total number was 32,708 in 1896, with 53,215 male and 16,783 female teachers and 1,775,561 male and 564,073 female pupils. The Ministry of War had charge of 10,270 schools, with 13,186 male and 363 female teachers and 252,373 male and 48,720 female pupils. Other ministries supervised over 500 schools, and 402 schools, with 7,511 male and 12,564 female pupils, belonged to seminaries for boys and girls. The Holy Synod had 34,836 primary schools, with 24,153 male and 4,893 female teachers and 910,760 male and 205,732 female pupils. The religious seminaries of the Holy Synod were 55 in number. The training schools for teachers numbered 78, with 4,867 male and 360 female pupils.
The actual expenditure in 1898 amounted to 1,358,276,000 rubles for all ordinary purposes. The debt service took 273,514,000 rubles, of which 107,522,000 rubles were for railroad debts. The expenses of the higher institutions of the state were 2,540,000 rubles; of the Holy Synod, 20,430,000 rubles; of the Imperial house, 12,740,000 rubles; of the Ministry of Foreign Affairs, 5,018,000 rubles. The expenditures of the Ministry of War were 303,277,000 rubles, out of which 19,580,000 rubles went for rearmament and food stores and 4,819,000 rubles for the Transcaspian Railroad. The navy cost 67,290,000 rubles for maintenance. The communications department was supplied with 214,332,000 rubles, including 1,235,000 rubles for loans to railroad companies, etc. The expenditures of the Ministry of Domains and Agriculture were 35,015,000 rubles; of the Ministry of the Interior, 80,176,000 rubles; of the Ministry of Public Instruction, 36,921,000 rubles. The Ministry of Ways and Communications expended 264,935,000 rubles, out of which 187,992,000 rubles were for the exploitation of state railroads and 41,137,000 rubles for a new feeding line and improvements. The expenses of the Ministry of Justice were 42,335,000 rubles. The cost of state control was 7,086,000 rubles, of which 3,480,000 rubles were for railroads. The ordinary expenses of the state finances, exclusive of extraordinary, were 308,812,000 rubles. The ordinary expenditures have increased 308,812,000 rubles since 1888, owing to the gradual purchase of railroads, the additional expenses being for railroad debts, guarantees to shareholders, improvements, and the cost of exploitation and control. This increase has been balanced by additional revenue from railroads. The cost of loans and new railroad expenses out of the ordinary budget. The extraordinary receipts in 1898 amounted to 87,818,000 rubles, of which 77,655,000 rubles were from state loans, 5,101,000 rubles from perpetual deposits at the Bank of Russia, 3,476,000 rubles from payment of debts by railroads, 1,540,000 rubles from sales of state property, and 46,000 rubles from other sources. The extraordinary expenditures were 114,283,000 rubles for building new railroads and increase of rolling stock, 138,509,000 rubles for payment of state debt in the conversion operation, 190,000 rubles for operations for purchase of railroads, 24,800,000 rubles for payment of railroad bonds, and 136,153,000 rubles to the Fund of Extraordinary Limitation of Expenditure. The revised accounts make the total ordinary revenue for 1898 1,584,774,000 rubles and the ordinary expenditure 1,361,575,000, leaving a surplus of 223,199,000 rubles, but the deficit of 325,816,000 in the extraordinary budget left a minus balance of 102,017,000 rubles. For the six years ending with 1898 the ordinary budget shows a surplus of 1,877,383,000 rubles, but the extraordinary budget a deficit of 297,384,000 rubles, giving a balance of 58,449,000 rubles in receipts over expenditures for the entire period. The estimates for 1899 made the total ordinary revenue 1,699,128,203 rubles, the direct taxes being reckoned at 113,554,051, indirect taxes at 667,182,782, land taxes at 4,608,345,758 rubles, and 360,298,198 rubles, sale of spirits at 92,141,000 rubles, reimbursement of railroad and other loans at 58,879,369 rubles, receipts from mint, mines, posts, and telegraphs at 52,875,500, state peasants' redemptions of land at 40,433,397, liberated serfs' redemptions at 37,290,403 rubles, wars at 7,490,000 rubles, sales of mines at 902,302 rubles, and miscellaneous receipts at 5,652,796 rubles. The ordinary expenditure for 1899 was estimated at 1,462,659,233 rubles, the principal items showing an increase, being 318,691,539 rubles for war, 233,381,888 rubles for fi-
excise duties on spirits and sugar were raised, and some necessaries were taxed for the first time. The direct taxation could yield no more, and even indirect taxes seemed to have passed the limit of elasticity when M. Vishnegradsky became Minister of Finance in 1857. He refrained from taxing severely the rich capitalists and large manufacturers and the landowners, and conceived the plan of nationalizing the state itself a capitalist institution.

The annual increase of revenue from 1877 to 1883 was 25,000,000 rubles. During his five years of office, M. Vishnegradsky began the nationalization of railroads and developed the royalties and state properties, with the result that, while the indirect taxation yielded an average yearly increase of 12,500,000 rubles, the increase of the state property was only one of 18,000,000 rubles. The net increase in the five years averaged 27,000,000 rubles annually. M. de Witte, who entered upon office in 1892, gave a further powerful impetus to the development of royalties and state property, and in that way completed the change in the character of the Russian financial policy. In the six years from 1892 to 1898 the average annual increase of revenue was over 100,000,000 rubles. The revenue from state railroads, which amounted in 1887 to scarcely 1,500,000 rubles, rose to 18,000,000 rubles in 1897, to 277,000,000 in 1897, and to 348,000,000 in 1898. The general income from royalties and state property rose from 51,000,000 rubles in 1877 to 192,000,000 rubles in 1887, and to 352,000,000 rubles in 1898. The tendency to make the treasury self-supporting and independent of taxation is growing constantly stronger. The first steps have been taken toward the creation of a petroleum monopoly. The state monopoly of the sale of spirits in certain provinces gave the treasury in 1897 a return of 102,000,000 rubles, and the Russian peasantry, forming nearly nine tenths of the population, are directly affected only by the land tax and the payments for redemption of land, giving less than 10 per cent. of the revenues of 1898. These taxes are about 10 rubles a year for each family possessing 1 1/2 acres, and yet the arrears of payments for redemption of land have gone on increasing during the last few years. Coercion is used to enforce payments. In the five years from 1871 to 1875 inclusive the arrears averaged 30,000,000 rubles annually, and in the period from 1891 to 1895 they had grown to 98,000,000 rubles, in 1897 to 105,000,000 rubles, and in 1898 to 110,000,000 rubles. In 1899 M. de Witte, besides lessening the duty on metals, endeavored to make direct payments by the peasants lighter. The exigencies of the Chinese situation and other untoward circumstances compelled the Government to return to the former taxation, even to increase it in some instances, and to reduce expenditures on education and public works. In 1899 the excess of ordinary revenue over extraordinary expenditure was the figure of 209,740,545 rubles, sufficient to balance the extraordinary expenditure and leave a net surplus of about 84,000,000 rubles, notwithstanding a bad state of trade and a general financial depression.

The amount of the state debt on Jan. 1, 1899, was 6,108,792,117 rubles. On Jan. 1, 1890, it was 6,150,134,874 rubles, consisting of 413,755,133 rubles of gold debt paying 3 per cent., 148,382,812 rubles of gold and 6,250,000 rubles of paper debt paying 3 1/2 per cent., 85,247,400 rubles payable in currency and bearing 3 7/9 per cent. interest, 684,234,198 rubles of consolidated gold 4-per-cent. debt, 1,100,000 rubles of paper, 1,100,000 rubles of consolidated gold 4-per-cent. debt and 2,438,753,838 rubles payable in currency, 237,750,000 rubles of 41-per-cent. currency debt, 73,255,800 rubles payable in gold, and 187,137,538 rubles in paper paying 5 per cent., 139,901,195 rubles of other currency debts, 101,754,993 rubles of 3-per-cent. gold bonds, 1,616,821,278 rubles of 4-per-cent. bonds payable in gold and 1,269,300 rubles payable in paper, and 6,871,500 rubles of 5-per-cent. gold bonds. During the ten years ending in 1897 the state debt payable in gold increased 792,921,505 rubles, while that payable in paper decreased 65,500,822 rubles, and the interest paid on gold between 1887 and 1897 increased 15,565,113 rubles. Bond annuities also increased 350,558 rubles and currency annuities increased 16,364,464 rubles, the whole movement showing a growth of 1,075,881,425 rubles of debt reckoned in paper, with an increase of 19,340,296 rubles in the annual interest and a decrease of 13,583,558 rubles in the annuities payable each year. Between 1880 and 1897 the debts bearing from 4 1/2 to 6 per cent. interest were converted into the 4-per-cent. debt, 944,790,858 rubles payable in gold and 1,654,220,600 rubles payable in paper, the total sum amounting in paper to 3,671,406,887 rubles, reckoning gold at the legal rate of 150. The cost of conversion was the 106,301,507 rubles in gold and 129,307,025 rubles in paper, besides 263,301,277 rubles in gold and 31,278,167 rubles in paper, to cover paper currency, the total amounting to 717,990,968 rubles. New loans concluded are a gold debt of the nominal amount of 910,448,375 rubles and a silver debt of 1,674,000,000 rubles, together equal to 2,644,448,375 rubles. The interest of all the debts, both gold and silver, came to 112,928,296 rubles, of which 39,233,474 rubles were for redemption of land, 91,519,196 rubles in paper from local treasuries, 12,940,896 rubles for the nobility, and 6,086,346 rubles in gold and 129,490,458 rubles in paper from various debtors; total value in paper, 2,403,644,873 rubles. The famine, pension, military, philanthropic, special agricultural, scientific prize funds and others in the treasury amounted to 314,994,844 rubles. The year, 1898, was one of continual and enormous fiscal steps and railroad debts in 1900 amounted to 274,726,164 rubles, of which 60,052,754 rubles were on external loans, 6,554,839 rubles on external bonds, 30,925,306 rubles on internal loans, 102,335,601 rubles on internal bonds, 20,608,175 rubles on obligations of state railroads, 51,080,000 rubles on obligations of private railroads, 23,229,273,390 rubles for the payment of interest not yet called for, and 112,880 rubles for banking expenses, all calculated in paper rubles at the rate of 1 1/2 for 1 gold ruble.

The reform of the Russian currency began in 1895, when the Minister of Finance announced that the currency and the railroads would pay out gold at a certain ratio to be determined from time to time between the paper currency and gold changes. It was first fixed at the rate of 1 ruble 48 copecks for the gold ruble, and before the end of the year at 1 ruble 50 copecks in paper or silver or 15 paper rubles for the new imperial, which contains two thirds as much gold as the old imperial of 15 rubles. The ratio was confirmed in the following year, and the paper rubles and copper rubles in the exchange value of the paper ruble were arrested. In 1897, instead of marking the new
imperial 10 rubles, the mint stamped it 15 rubles and the half-imperial 7 rubles 50 copecks, and a new 5-ruble coin of one third the size of an imperial was minted. A law was passed on Sept. 10, 1897, authorizing the Bank of Russia to issue paper currency according as the needs of commerce are indicated on this condition that a reserve in gold must be held against half the total issue up to 600,000,000 rubles and covering the whole of it beyond that amount. The treasury accumulated gold before gold payments were ventured upon, and from time to time since, receiving gold for the foreign loans placed in Paris and elsewhere. In the first years, the condition that a reserve in gold and in the state bank amounted to 1,315,000,000 rubles, exceeding the entire note circulation by 316,000,000 rubles. Of the accumulated gold, 575,000,000 rubles, equal to 822,500,000 rubles in paper, is held as a guarantee fund for the protection of the paper currency, which has been reduced to 122,300,000 rubles since 1896. In January, 1887, the amount of paper in circulation was 620,000,000 rubles, against 1,046,500,000 rubles in 1887; amount of gold at the bank and in the treasury, 1,566,400,000 rubles in paper value; amount of silver in circulation, 220,500,000 rubles; guarantee fund, 927,000,000 rubles. The old gold coinage, minted between 1897 and 1898, amounted to 183,305,630 rubles. Since the value of gold was reduced a third the mints coined in the first two years, 1897 and 1898, gold coins of the paper value of 595,467,647 rubles, silver 900 fine of the value of 105,615,391 rubles, and 4,500,066 rubles of base coins; total, 765,585,244 rubles. The gold at the bank and treasury in January, 1899, was 393,000,000 rubles. Silver at the bank and treasury, 56,300,000 rubles; silver at the bank and treasury, 56,300,000 rubles; silver at the bank and treasury, 164,200,000 rubles; paper at the bank and treasury, 112,700,000 rubles; paper in circulation, 517,300,000 rubles.

The Army.—Out of 870,000 young men who reported for service on reaching the age of twenty in 1898 and passed the physical examination, 287,000 were taken into the active army and the navy. Of the rest part were assigned to the reserve and part to the zaps, or secondary reserve. In 1900 the annual contingent of recruits was increased to 197,000. In the active army a soldier in European Russia serves nominally five and really four years, then thirteen years in the reserve and five in the zaps; in the Caucasus, three years in the active army and fifteen in the reserve; in Asia, seven years in the active army and six in the reserve. The opolchenie, or militia, has been reorganized, and training is provided for those who have not served in the army, and the first division, composed of men who have been in the army for five years, and the second division, composed of men who have served in the first and men freed from army service for some infirmity or because they are the support of families, can only be organized as militia for national defense. The Cossacks of the Don, Kuban, Terek, Astrakhan, Orenburg, Ural, Siberia, Semiryetchensk, Transbaikal, Amur, and Ussuri are bound to provide their own horses, arms, and clothing in return for various privileges. Besides those in active service, a second class must stand ready with horses and arms and a third class with arms. The Russian army is composed of 18 infantry corps, including a corps of guards, 1 of grenadiers, 2 of Cossacks, 2 in Turkestân, and 2 cavalry corps. No statistics of the strength of the Russian army are made public. The approximate strength of the active field army is 27,400 officers and 1,269,000 men, composed of 19,300 officers and 984,000 men in the infantry, 3,900 officers and 120,000 men in the cavalry, 3,000 officers and 100,000 men in the artillery, 800 officers and 40,000 men in the engineers, and 400 officers and 25,000 men in the train; strength of the fortress troops, 4,000 officers and 262,000 men, composed of 2,500 officers and 170,000 men in the infantry, 1,200 officers and 82,000 men in the artillery, and 301 officers and 10,000 men in the engineers; reserve of the active army, 14,300 officers and 789,000 men, composed of 10,700 officers and 650,000 men in the infantry, 2,500 officers and 100,000 men in the cavalry, 900 officers and 30,000 men in the artillery, 120 officers and 4,000 men in the engineers; recruiting reserve, 5,900 officers and 346,000 men, composed of 4,400 officers and 270,000 men in the infantry, 800 officers and 40,000 men in the cavalry, 600 officers and 30,000 men in the artillery, and 100 officers and 6,000 men in the engineers; militia, 10,400 officers and 740,000 men, and 100 officers and 6,000 men in the engineers; frontier guards, 1,000 officers and 34,000 men; total war strength of the Russian army, 63,000 officers and 3,440,000 men.

The Navy.—The Russian navy on Jan. 1, 1900, consisted of 5 first-class battle ships in the Baltic, with 2 building, and 2 in the Black Sea, where 1 was building; 10 of the second class in the Baltic, and 4 more building, and 5 in the Black Sea; 1 of the third class in the Baltic; 12 coast guards in the Baltic and White Sea, and 1 under construction; 10 armored cruisers in the Baltic, with 2 more building, and 9 more building, in the Baltic; 1 third-class cruiser in the Baltic, 1 in the Black Sea, and 3 unfinished in the Baltic; and 30 gunboats in the Baltic and White Sea, 2 more building, and 8 afloat in the Black Sea. There are 12 destroyers and 12 more not yet complete, and 50 submarine boats are projected, and some of them begun. Of torpedo boats Russia has 39 of the first class and 6 not quite finished, 41 of the second class, and 101 of the third class. The inland water communications permit these to be used either in the North Sea or in the Euxine. The Oslavia and Persyevet, launched in 1898, displacing 12,674 tons, battle ships of the class of the Majestic, 12-inch guns in turrets, 6-inch quick-firing guns in case-mated batteries and 1 in the bow, and 20 3-inch quick firers, have Harvey steel armor, Belleville boilers giving a speed of 18 knots, and coal bunks for a long cruise. The Pobieda is a sister ship, The Retvisan, of 12,700 tons, armed with 4 12-inch guns in turrets and 12 6-inch and 20 3-inch quick firers, have British steel armor, Imperial, and the Tsarevich is similar. The Borodino, Alexander III, and Orel may be of either of these types. The Kniaź Potemkin and Tavrichesky, of 12,480 tons, are of the same size as the Tri Svytiteła, and combine the merits of that vessel, which is of the British Trafalgar type, with those of the Poltava class, which includes the Tri Svytiteła and the Sevastopol. The Poltava, of 10,960 tons, launched in 1894, carries 4 12-inch guns in turrets, 8 6-inch quick firers in 4 turrets on the upper deck, 4 other 6-inch, and 34 smaller quick-firing and machine guns. The same arrangement is followed in the smaller Rostislav, of 8,800 tons, which has 10-inch breechloaders, 16 12-inch and 8 6-inch quick firers, and with no guns mounted on the main deck. The protected cruisers Diana, Pallada, Aurora, and Bogatyr, launched in 1898 and 1899, carrying 8 6-inch, 20 3-inch, and smaller quick firers, and steaming 20 knots with engines of 11,610 horse
power, will be excelled by the Waryag and Boyarin, one built in Philadelphia and the other in Copenhagen, which have the same displacement (6,500 tons), a more powerful armament, consisting of 12 6-inch, 12 3-inch, and 6 smaller quick-firers, and engines of 20,000 horse power, giving a speed of 23 knots, advantages obtained, however, at the cost of the cruising radius. The armored cruiser Burik, launched in 1892, having a displacement of 10,933 tons, is protected at the water line by 10 inches of armor for four fifths of the vessel's length, carries a powerful armament, and has capacity for 2,000 tons of coal, sufficient for a cruise of 20,000 miles at a speed of 10 knots. The Czar, of 12,130 tons, launched in 1896, has most of her guns in armored casemates and a more powerful quick-firing armament, consisting of 20 3-inch and 24 smaller guns in addition to the 16 6-inch quick-firers, which both vessels have besides 4 8-inch guns in the main battery. The Bayan and Askold, of 7,800 tons, built in France, have their armament consisting of 2 8-inch, 8 6-inch, 20 3-inch, and 7 smaller quick-firers. A recent type of coast-defense armor clads is seen in Admiral Ushakov and Admiral Semianiyn, of 4,126 tons, having 10-inch armor, a strong battery, consisting of 4 9.4-inch guns and 4 4.7-inch and 36 smaller quick firers, and a speed of 16 knots. The new steel warship Admiral Admir, launched in 1901, only in having 3 10-inch in the place of 4 9.4-inch guns in the turrets. A new ship will be of greater strength, having a displacement of 6,000 tons. A new type of river gunboat is exemplified in the Gilyak, built for service in the Chinese rivers, with 10 feet draught, carrying 1 4.7-inch and 5 3-inch guns, and having a displacement of 1,300 tons. In the naval budget of 1901, amounting to 97,000,000 rubles, about 37,000,000 rubles go for construction and armament. Besides the 3 battle ships of 13,516 tons, the Borodino, Orel, and Alexander III, ordered to be built at St. Petersburg, a fourth has been authorized, the Prince Survoroff. A new coast-defense armor clad of 4,000 tons will be built, having 10-inch armor to have a displacement of 5,000 tons; also a cruiser of 3,000 tons for the Pacific, a coal transport of 7,200 tons, a new imperial yacht, and 2 torpedo boats, 60 feet long, for escorting the Czar's yachts. At Nikolaiieff, on the Black Sea, will be constructed a first-class cruiser of 6,250 tons and 6 torpedo vessels of 550 tons each; at Sebastopol, another cruiser of 6,250 tons and 12 torpedo boats for Port Arthur. The new vessels will carry 12.4-inch and 8.45-inch guns, and numerous 6-inch quick-firers.

Commerce and Production.—The crops of cereals and pulse in European Russia in 1898 amounted to 2,542,190,600 tons of 36 pounds, that is, 92,137,396 acres; while the production had been 2,737,297,000 pouds. The wheat crop was nearly 10 per cent, above the average, and barley and minor crops were better, but in rye and oats there was a falling off. The main crop is rye, of which 986,970,000 pouds were grown in 1898; of wheat, 553,557,000 pouds; of oats, 496,153,000 pouds; of buckwheat, millet, mixed grain, peas, lentils, and beans, 255,188,000 pouds. In Poland, 36,039,000 pouds of wheat, 111,696,000 of rye, 25,892,000 of barley, 49,192,000 of oats, and 16,929,000 of various crops were produced; in northern Caucasia, 86,513,000 pouds of wheat, 8,640,000 of rye, 33,372,000 of barley, 11,062,000 of oats, and 2,000 of various crops; on the steppes, 24,829,000 pouds of wheat, 1,247,000 of rye, 3,627,000 of barley, 7,464,000 of oats, and 10,245,000 of various crops; in Siberia, 60,075,000 pouds of wheat, 35,087,000 of rye, 6,518,000 of barley, 45,420,000 of oats, and 4,107,000 of various crops. The total production of wheat for the empire, as shown by these figures, was 763,091,000 pouds, compared with an average of 701,321,000; of rye, 1,143,640,000 pouds, compared with 1,219,392,000; of barley, 407,951,000 pouds; of oats, 660,231,000 pouds; of various and mixed grains and pulses, 53,740,000 pouds. The crop of potatoes in 1898 was 1,037,358,000 pouds in European Russia, 384,580,000 in Poland, 22,359,000 in northern Caucasia, 20,279,000 in Siberia, and 1,838,000 on the steppes; total, 1,466,063,000 pouds, compared with an average of 1,355,677,000 for the five years last preceding. In 1898 there was a net export of pulse and grains, 2,325,740,000 pouds; tea, 33,915,000 in Poland, and 84,533,000 in northern Caucasia; a rye crop of 1,170,693,000 pouds in Russia, 110,814,000 in Poland, and 9,705,000 in northern Caucasia; a barley crop of 247,911,000 pouds in Russia, 25,892,000 in Poland, and 26,401,000 in northern Caucasia. The crop of flax in Russia in Europe for 1898 was 694,349,000, and of linseed 27,055,000 bushels on 5,173,000 acres; of hemp, 221,000 tons of fiber and 13,293,500 bushels of seed on 1,046,300 acres; of hops, 1,936 tons. The crop of hay was 33,912,000 tons in Russia, 9,111,000 tons in Poland, 4,975,000 tons in northern Caucasia, 6,670,300 tons in Siberia, and 2,202,400 tons on the steppes; total, 49,730,700 tons, from 92,994,000 acres. The wine of table and made from grapes was 25,210,000 pouds from 250,675 acres of vineyards, and 10,295 acres there yielded 3,872,000 barrels of tobacco in 1897, while in Kaban 29,400 acres yielded 12,830 tons. There are large plantations of tea in Transcaucasia, and silk is also produced. In Transcaucasia 20,400 tons of cleaned cotton were produced in 1898. The Ministry of Agriculture, after 38 experiments in different parts of the empire, found that more than a third of the area of European Russia is covered with forests, which have an extent of 422,307,000 acres, while in Poland there are 6,706,000 acres. Finland has 50,498,000 acres, and Caucasia 18,066,000 acres. The total forest area under the management of the Government in 1898 was 2,078,412,700 acres, and of 7,891,305,400 pouds; but the Ob port will be established for the shipment of the timber from these Crown forests, which are in Tomsk and Tobolsk. Manufacturing industries have made rapid strides in some parts of Russia and in Poland, especially the iron, cotton, naphtha, and sugar industries, and the manufacture of paper, leather, various textiles, ceramics, chemical products, iron, sugar, and tobacco. There were 39,232 industrial establishments reported in 1896, employing 1,742,181 work people, and producing goods valued at 2,745,149,000 rubles a year. The production of refined sugar in 1898 was 754,755,000.

The imports of Russia in 1898 had a total value of 662,881,000 rubles; exports, 709,984,000 rubles. The imports of food substances were valued at 60,803,000 rubles, and exports at 433,496,000 rubles; imports of raw and partly manufactured articles at 302,134,000 rubles, and exports at 238,397,000 rubles; imports of animals at 1,511,000 rubles, and exports at 10,848,000 rubles; imports manufactured articles at 388,563,000 rubles, and exports at 21,243,000 rubles. The exports of wheat were 57,047,464 hundredweight; of rye, 21,553,718 hundredweight; of barley, 34,108,714 hundred-
weight; of corn, 14,886,321 hundredweight. The exports of eggs, 1,531,000,000 in number, were valued at 31,620,000 rubles. The value of cereals and flour exported was 370,463,000 rubles; of dairy produce, including eggs, 38,325,000 rubles; of spirits, 1,774,000 rubles; of sugar, 7,175,000 rubles; of timber and wood wares, 57,715,000 rubles; of linseed, grass seed, and other seeds, 26,905,000 rubles; of flax, 57,786,000 rubles; of hemp, 10,- 867,000 rubles; of tallow, 507,000 rubles; of bristles, hair, and feathers, 7,716,000 rubles; of wool, 6,894,000 rubles; of furs, 4,920,000 rubles; of cotton goods, 1,233,000 rubles; of metal goods, 2,967,000 rubles; of naphtha and naphtha products, 25,630,000 rubles. The export of illuminating oil increased from 15,998,000 hundredweight in 1894 to 17,349,020 hundredweight in 1898; of lubricating oil, from 2,092,000 to 3,382,900 hundredweight. The number of horses exported in 1897 was 58,300; the export of oil cake was 12,769,000 rubles in value.

The imports and exports by the frontier of Asia are not included in the above figures excepting those from the Black Sea coast of the Caucasus. The imports amounted to 49,043,000 rubles and the exports to 21,042,000 rubles. The main part of this trade is by the frontier of Manchuria. The imports consist of British wares (chiefly of silk, cotton, and wool, 30,888,000 rubles in value, and exports 7,888,000 rubles); imports of raw and partly manufactured articles were 10,897,000 rubles, and exports 2,513,000 rubles; imports of manufactured goods were 5,433,000 rubles, and exports 10,149,000 rubles; imports of animals were 1,865,000 rubles, and exports 3,340,000 rubles.

The chief imports of Russia are raw cotton, raw metals, machinery, raw wool, metal goods, tea, leather, coal, wines, silk, textile goods, chemicals, colors, gum and resin, fish, fruits and nuts, coffee, cotton goods, watches and clocks, and tobacco. The value of imports from Germany in 1898 was 202,117,000 rubles; from Great Britain, 113,066,000 rubles; from the United States, 49,430,000 rubles; from France, 27,087,000 rubles; from Austria-Hungary, 24,123,000 rubles; from Belgium, 23,621,000 rubles; from China, 22,630,000 rubles; from Egypt, 22,630,000 rubles; from Italy, 10,149,000 rubles; from the Netherlands, 9,775,000 rubles. The value of the exports to Germany was 179,254,000 rubles; to England, 103,447,000 rubles; to the Netherlands, 79,072,000 rubles; to France, 63,424,000 rubles; to Italy, 54,447,000 rubles; to Austria-Hungary, 41,652,000 rubles; to Belgium, 28,788,000 rubles; to Turkey, 13,956,000 rubles; to Roumania, 12,673,000 rubles; to Denmark, 9,839,000 rubles.

Many parts of the Russian Empire are exceedingly rich in minerals. The coal and iron industries have made great progress, and duties have been placed on imported coal to increase the consumption of the domestic product. The gold production of the Urals has declined to a fraction of what it once was. Platinum is still produced there, and in increasing quantities. The gold mines of Siberia are becoming more productive. In order to increase the wealth and development of the country, the introduction of modern methods and machinery and thus obtain a larger supply of the precious metal to support the gold standard, the Russian Government in 1900 granted to an English syndicate a concession of 8,200 square miles of auriferous land on the imperial property in the Nertekinsk province, which is particularly rich in coal. Belgians have developed the coal mines and other industries, especially glass making. Large numbers of Belgian workmen took up their residence in the Donetz, and the prosperity of the Belgians awakened the resentment of both the peasantry and the nobility who had sold their lands to Belgian capitalists without being aware of the wealth existing under the soil. In 1900 disturbances occurred from this cause. On Aug, 5 the general tariff was raised on many articles as a temporary measure for providing means to defray the extraordinary expenses necessitated by the Chinese troubles. On flour, wine, beer, fruit, spices, tobacco, fish, and gums it was increased 50 per cent.; on coffee, boots and shoes, and lumber, 50 per cent.; on porcelain wares, fancy cutlery, gold watches, vehicles, linens, clothing, and ornaments, 20 per cent.; on wines and spirits, 10 per cent. on a long list of articles. In order to check the rise in the price of naphtha due to trade combinations the Government determined to enter into competition with the merchants, requiring the lessees of the oil wells on the Crown lands of the Baku district to pay 40 per cent. of their receipts in taxes for naphtha and petroleum.

**Navigation.**—The number of vessels in the foreign trade entered at White Sea ports during 1898 was 712, of 395,262 tons; at Baltic ports, 5,809, of 3,554,879 tons; at ports of the Black Sea and the Sea of Azof, 4,426, of 663,111 tons; the number cleared at White Sea ports, 703, of 570,370 tons; at Baltic ports, 5,780, of 3,775,777 tons; at ports of the Black Sea and the Sea of Azof, 4,374, of 6,615,890 tons; total number entered, 10,947, of 4,615,752 tons; total number cleared, 10,813, of 10,758,037 tons. The ports of the Caspian were visited in 1896 by 18,055 vessels in the foreign and coasting trade, of 233,714, and 8,360,269 tons respectively. In 1897, 23,283 vessels, of 349,413,727 tons, and 11,093,026 tons went to and from the ports of Astrakhan, Samarkand, and Tiflis. In 1898, 22,777 vessels, of 313,531,239 tons, and 10,758,037 tons went to and from the ports of the Caspian in foreign and coasting trade. The number of coasting vessels that visited White Sea, Baltic, and Black Sea ports was 38,943, of 13,794,870 tons; and Caspian ports, 17,284, of 8,360, 269 tons.

**Railroads, Posts, and Telegraphs.**—On July 1, 1898, there were 29,853 miles of railroad in operation in the Russian Empire, including 1,611 miles in Finland. The lines owned and operated by the Government had a total length of 16,414 miles; lines belonging to public companies, 9,365 miles; isolated and unconnected railroads, 1,691 miles; short local lines, 774 miles. The Siberian trunk line to Lake Baikal, 1,201 miles, was already in operation in 1897, and the line from Samarkand to Andijan, 335 miles. There are 28 lines in the empire connecting with each other, 16 of which, containing 90 per cent. of the mileage, are worked by the Government. An order from the control of the Minister of Ways and Communications. The isolated lines are 7 in number. Whereas 76 per cent. of the network belonged in 1889 to companies, of which there were then 42, and the state had a deficit of 30,000,000 rubles in the railroad account, in 1899 the remaining 9 companies operated, and in 1898 added 8.4 per cent. of the railroad, by taking over the railroads, reached a balance in the railroad budget in 1895 and earned a net profit of 11,300,000 rubles in 1896, 12,500,000 rubles in 1897, and 12,100,000 rubles in 1898. The introduction of the zone tariff in 1894,
RUSSIA.

reducing the fares for long journeys by 60 per cent., increased receipts from passenger traffic by 18 per cent. in three years. In 1898 there were 70,877,406 passengers, 39 per cent. more than in 1894. The freight traffic increased from 69,848,000 tons in 1891 and 88,916,000 tons in 1894 to 97,174,162 tons in 1898. The gross income of the Government from railroads increased from 301,709,000 rubles in 1892 to 437,350,000 rubles in 1898. The net receipts in 1896 were 176,733,000 rubles, compared with 107,677,000 rubles in 1892. The capital cost to the state of its railroads up to the end of 1898 was 2,744,923,577 rubles. The expenses of the Government lines in 1898 were 157,366,692 rubles. The net receipts were 119,666,619 rubles. Deducting 116,655,598 rubles, in the first instance, from 157,366,692 rubles, the net profit of the Government was 9,030,921 rubles. The railroads operated by the subsidized companies had a length of 8,101 miles, including 516 miles leased from the Government, and 2,463 miles were under construction in 1897. The capital cost of the companies’ lines was 317,215,000 rubles, making the net receipts 58,973,055 rubles, from which 41,608,695 rubles of interest on capital is deducted to arrive at the net profits of the companies, which were 17,304,300 rubles. The debt of the companies to the state was reduced by additional Government securities of 15,000,000 rubles, 819,170,204 rubles to 253,683,615 rubles on Jan. 1, 1898. The traffic of the Transcaspian Railroad is not included in the reports of the Ministry of Ways and Communications. It was built for military transport primarily, and is managed by the Ministry of War. The freight traffic increased from 292,500 tons in 1896 to 390,100 tons in 1897, the passenger traffic from 3,400 to 4,250,000. The line of the Siberian Railroad with Vladivostok by a direct route across Manchuria from the Onon station in Transbaikalia, was undertaken by a company formed in 1896 under the auspices of the Russian Government. By arrangement with the Chinese Government a branch has been built from the Manchurian Railroad at Doron to Port Arthur and Dalnii. The line to Vladivostok, however, has not been completed. Its length is estimated at 1,273 miles, of which 945 miles are in Chinese territory. Engineering difficulties must be surmounted in the Sungari valley, though not so great as on the longer route selected for the main line through Russian territory from Svatensk to Pokrovsk. Of the total length, 6,000 miles, of which 22,000 are to be built in the Transcaspian railroads there were nearly 37,000 miles of railroads completed by the end of 1899, the construction during the year having been about 2,700 miles. The prosperity of Russian industry and commerce has been generally attributed to the bringing of the railroads under the control of the state, which has extended the net work with a view to the general advancement of the country and wrought great improvements in the way of unifying tariffs and cheapening fares and freights all over the empire. Recent acquisitions have made the extent of the state-owned net work to 1,922,000 miles, of which 57,000, whereas in 1898, out of 19,000 miles, were capitalist, only 4,250 miles belonged to the Government. In equipment, roadbeds, and speed, as well as in uniformity of charges and cheapness, there have been great improvements. The new line of course of construction on Jan. 1, 1900, amounted to about 6,000 miles, while 1,500 miles were authorized but not yet begun. On the Siberian line large sections had to be rebuilt and relaid and new bridges be put up because the freight traffic was much greater than had been anticipated. In the construction of this line the estimates were not exceeded on any of the sections, and the work was all done within the time calculated. In 1902 the entire line is expected to be completed. In 1897 freight exceeded 490,000 tons, double the amount anticipated. In that and the following year 200,000 arrived in addition to the ordinary passenger traffic of 400,000. A new great Asiatic line is projected from Tashkent, on which work was begun in 1899, will connect the Transcaspian and the Amur railroads. A new line of the Transcaspian Railroad, be carried from there to Kashgar, in Chinese Turkestan, thence through Yarkand to Khotan, near the Polu pass leading into Tibet, then eastward to the headwaters of the Cherchen Daria and Lob Nor, whence it would pass through the Altyn mountains and over the scrub, then drop down to Ho, then down the valley of that river to Lanchow and on to Singan-Fu, and from that place to some point on the Pekin-Hankow Railroad, the total route being in the neighborhood of 2,000 miles. The line from Orenburg to Tashkend, on which work was begun in 1899, will connect the Transcaspian and the Irkutevsk railroads. A line of political importance is being constructed from Alexandropol, in the southern Caucasus, to Tabriz, in the Persian province of Azerbaijan, passing by Nakhitchewan, near the Persian frontier, where there are extensive deposits of coal, iron, copper, and other minerals.

The state telegraph lines had a total length on Jan. 1, 1898, of 2,746,700,000 rubles, 58,760,776 miles of wire. There were 17,661,656 private telegrams transmitted during 1897. The telephone lines had 25,900 miles of wire in 1897, and 89,509,831 conversations were held, an increase of over eightfold since 1894. At the end of 1898 St. Petersburg and Moscow were placed in telephonic communication.

The postal officials are known as the Post-offices, and are under the Department of Finance of the Russian Government. The Post-office is the official agency of the state for the conveyance of all letters, documents, books, and newspapers, and also as the receptacle of the public revenue, derived from the post-office, including money orders, stamps, and telegrams. It has a general supervision over all the postal and telegraph establishments in Russia, over all the money order offices and over the telegraph service, which is known as the telegraph department. During the year 1898, 12,054,000,000 letters, 2,885,000,000 postcards, 1,230,000,000 telegrams, and 2,566,000,000 postal orders were dispatched. The revenue of the postal service, including money orders and telegrams, amounted to 237,000,000 rubles, and the expenses to 174,000,000 rubles. The postal service of Russia is carried on by more than 8,000 post-offices. In 1898, 357,000,000 rubles were expended for the purchase of stamps in Russia, and 74,900,000 rubles for the purchase of stamps in foreign countries. The number of persons employed in the Russian postal service was 80,000.
way, 8,200,000 marks from Denmark, 4,400,000 marks from France, 2,100,000 marks from Spain, and 11,500,000 marks from other countries. The value of exports was 175,000,000 marks, of which 99,000,000 marks were exports to Russia, 53,900,000 marks to Great Britain, 17,000,000 marks to Denmark, 16,100,000 marks to France, 15,000,000 marks to Germany, 7,600,000 marks to Sweden and Norway, 5,300,000 marks to Spain, and 14,100,000 marks to other countries. The export of timber was 91,200,000 marks in value; of butter, 27,000,000 marks; of paper pulp and paper, 17,200,000 marks; of iron, 2,300,000 marks; of iron manufactures, 19,200,000 marks; of cotton and cotton goods, 13,000,000 marks; of woolens, 8,900,000 marks; of coffee, 8,600,000 marks; of sugar, 7,600,000 marks. The number of vessels entered at the ports of Finland during 1898 was 1,985,675 tons, of which 1,927,697 tons, were Finnish; 606, of 90,575 tons, Russian; and 2,082, of 963,403 tons, foreign. The number of vessels cleared was 8,588, of 1,927,605 tons, of which 5,904, of 874,471 tons, were Finnish; 608, of 89,919 tons, Russian; and 2,076, of 963,213 tons, foreign. The mercantile marine of Finland consisted on Jan. 1, 1899, of 1,800 sailing vessels, of 271,824,300 tons, of which 1,230,867, or 41,043 tons. The length of railroads on Jan. 1, 1898, was 2,553 kilometres, all the property of the Government excepting 80 kilometres; the number of passengers carried in 1897 was 4,263,775; tons of freight, 1,662,290; capital cost, 205,536,051 marks; receipts, 19,523,972 marks; expenses, 12,281,560,164 marks; the number of letters and parcels carried in the mails in 1897 was 14,053,794; parcels, 2,685,499; newspapers, 13,380,810; registered letters, 1,005,005; receipts, 2,612,777 marks; expenses, 2,246,076 marks.

The protests of the Finnish estates against the military service law incorporating the Finnish contingent with the Russian army were disregarded, and in an imperial message they were warned that they must confine their attention to local and economical questions. On the reassembling of the Diet at Helsingfors, in February, 1900, the representatives of all the four estates firmly declared that they could not renounce their right to self-government, to equal justice, and to the rule of law. A number of meetings in the several provinces by forcing the censorship more rigorously against Finnish newspapers. The Finnish estates held that a law, whether fundamental or general, to be valid in the country can be enacted only with the consent of the estates; that neither the institutions of Russia nor its autocratic system have been introduced into Finland, nor have they any force there; that the Russian Council of State can not act as a legislative organ for Finland; that the imperial manifesto and the statutes based upon it are inconsistent with the right of making their own laws, which, according to the Constitution of Finland, belongs to her people; that if a change in the Constitution should actually become expedient, this can only be brought about, unless the sanctity of the fundamental law be violated, with the co-operation of the estates. The Finns were aware that the law requiring Finnish soldiers to serve in Russian regiments was the prelude to a process of Russification such as has been carried out in Poland and in the Baltic provinces, and that in defending, as well as they could by passive resistance, their constitutional right to legislative autonomy they were fighting for the preservation of their nationality. An imperial ukase published on June 26, 1900, commanded the gradual introduction and the use of the Russian language in all the official departments and public offices of Finland, beginning with the Chamber of the Senate and the Diet. Five years were given for the minor and provincial officials to prepare for the adoption of Russian exclusively in their communications with their superiors. Private individuals, however, would be allowed to use the native tongue freely in all their business with public departments.

SALVADOR. A republic of Central America. The legislative power is vested in the National Assembly, a single chamber of 42 members, 3 from each department, elected every year by universal suffrage. The President is elected by the direct popular vote for four years. The President was elected for the term beginning March 1, 1899, is Gen. Tomas Regalado. The Vice-President is Dr. Prudencio Alfaro. The Cabinet in 1900 was composed as follows: Minister of Foreign Affairs and Justice, Dr. F. A. Reyes; Minister of the Interior, War, and Marine, Dr. Rubén Rivera; Minister of
Charity and Public Instruction, Dr. J. Triqueros; Minister of Finance, Public Credit, and Public Works, Dr. F. A. Nova.

Area and Population.—The area of Salvador is 7,225 square miles. The population in 1894 was 803,554. The capital, San Salvador, has about 65,000 inhabitants, including most of the natives of pure Spanish descent and the Europeans. Education is gratuitous and compulsory. There are 2 normal, 3 technical, and 13 other higher schools, besides the national university, and 585 elementary schools attended by 29,427 children. In the university are 180 students.

The postal revenue for 1900 was estimated at $4,992,520, of which $3,004,420 came from customs and $1,988,100 from excise duties, stamps, a tax on gunpowder, a road tax, and registration fees. The expenditures estimated for 1900 were $31,515 for the Legislature, $82,800 for the presidency, $751,392 for the Ministry of the Interior, $390,640 for the Ministry of Fomento, $338,852 for public instruction, $256,080 for public charity, $294,838 for justice, $306,969 for finance, $1,639,500 for the public debt, $76,080 for foreign relations, and $1,031,860 for the army and navy; total, $5,201,720.

The foreign debt in 1890 amounted to $726,120, and in 1900 to $1,031,860. The Railway Company, an English corporation, undertook to defray the expenses of the debt and with the aid of a subsidy from the Government to complete before June 30, 1900, the railroad from Sitio del Niño to San Salvador. This company succeeded to the railroads and concessions formerly held by the Central American Public Works Company of London. There is an internal debt of about $8,000,000. The gold standard was proclaimed by the Government in August, 1897, and the importation of debased silver coin was prohibited. The mint, which was formerly a private enterprise, was transferred to the Government in October, 1899. Gold is at a premium of 15 or 16 per cent.

The Army.—The number of active troops is about 3,000 men, varying greatly at different times. The number in the militia approaches 18,000. In case of war every able-bodied Salvadorian is liable to service up to the age of fifty.

Commerce and Production.—Coffee is the chief export, after it come sugar, indigo, rubber, balsam, and tobacco. Silver and gold, and some copper, gold, and mercury. The exports of coffee in 1898 were 38,826,479 pounds; of sugar, 1,996,408 kilogrammas. The chief imports are cotton goods, liquors, iron manufactures, flour, silks, and yarn. The United States have the largest share of the import and export trade, but Great Britain is not far behind, and Germany and France have also important shares.

Railroads, Posts, and Telegraphs.—A railroad runs from the port of Acajutla to Santa Ana and Tecla, having a length of 72 miles. Other railroads are building.

SAMOA.—The Thames Valley in 1897 amounted to 1,600,000 letters. The telegraph in 1899 had 1,850 miles of wire, and there were 750 miles of telephone wire.

SAMOA, a group of islands in the Pacific, a part of them belonging to Germany and a part to the United States. At a conference held in London in representations of Germany, the United States, and England signed an act guaranteeing the neutrality of the islands and their independence under their native kings. International complications and native disturbances following upon the death of King Malietoa in 1898, a joint commission was appointed which recommended the abolition of the kingship and the termination of the joint protectorate. Germany and England made an agreement on Nov. 14, 1899, by which England renounced in favor of Germany all rights over the islands of Upolu and Savaii, and in favor of the United States all rights over Tutuila and minor islands. In January, 1900, this arrangement was accepted by the United States, which in return for the sole dominion in Tutuila and dependencies resigned to Germany all rights over the other islands.

The German Islands.—Savaii is the largest island of the group, 47 miles long and 28 miles wide. Its north end is a small peninsula which joins the main island of the group. The United States occupied and began the improvement of Pago Pago harbor in 1898, before the division of the islands was settled. The harbor is completely landlocked, and is the only safe one in Samoa. It is very deep and roomy, and is entered through a passage cut in

The German Islands.—Savaii is the largest island of the group, 47 miles long and 28 miles wide. Its north end is a small peninsula which joins the main island of the group. The United States occupied and began the improvement of Pago Pago harbor in 1898, before the division of the islands was settled. The harbor is completely landlocked, and is the only safe one in Samoa. It is very deep and roomy, and is entered through a passage cut in
the coral reef outside. Commander Tilley was appointed to the governorship of Tutuala as well as to the command of the naval station at Pango Pango. Peace and contentment prevailed on all the islands after the division, and especially on Tutuala, where native chiefs were appointed to rule districts and villages under the guidance and control of the naval governor, but according to their native customs. A steel building was constructed for the storage of coal at Pango Pango.

**Santo Domingo.** a republic in the West Indies, occupying the eastern part of the island of Hayti. The Congress is a single chamber of 24 members, elected by direct qualified suffrage for two years in the province, and for three years for each maritime district. The President is chosen by an electoral college for four years. Gen. Juan J. Jiminez was elected President, and Horacio Vasquez Vice-President, after the assassination of President Ulises Heureaux and a subsequent revolution, for a term ending in 1903. Gen. Carlos Jiminez, Secretary of War, was appointed by the following: Secretary of the Interior and Police, Gen. J. Pickard; Secretary of Foreign Affairs, Enrique Henriquez; Secretary of Justice and Public Instruction, S. E. Valverde; Secretary of Fomento and Public Works, Gen. T. Cordero; Secretary of Finance and Commerce, J. de J. Alvarez; Secretary of War and Marine, Gen. T. D. Morales.

**Area and Population.—** The republic has an area of 10,045 square miles and a population estimated at 610,000. The people are a mixed race of Spanish, Carib, and African blood, with a much smaller proportion of pure negroes than in the adjoining islands of Cuba and Hayti. The capital, the most ancient town in North America, has 14,150 inhabitants. Many Cubans have settled in the country in recent years. Elementary education is free and nominally compulsory. About 10,000 children attend school.

**Finances.**—The revenue in 1898 was $1,550,294 in gold, mainly derived from duties on imports and exports. The foreign debt was converted in 1897 into a unified loan of £2,273,750 paying 2½ cent. interest, and a loan of $7,500,000 paying 4 per cent, both secured by the customs and other assigned revenues, the collection of which was intrusted to the Santo Domingo Improvement Company of New York, which company was intrusted to construct roads and harbor improvements for which these sums had been borrowed. The contracts with the company were not carried out, and in April, 1899, the Government defaulted in the payment of interest. The United States gold dollar was adopted as the legal standard on July 1, 1897, and in international transactions and in the customshouse it alone is accepted, though in the country debased silver coins and the depreciated paper currency are all the money that is in circulation. The silver circulating on March 31, 1899, was estimated at $2,200,000; old bank notes, $600,000; the new note issue, $3,600,000. It was attempted without success to raise a foreign loan of $1,375,000 for the refurnishment of the paper currency, and subsequently more bank notes were issued. The financial difficulties of the new Government prevented President Jiminez from instituting the reforms that the people hoped for. A new arrangement was made with the Santo Domingo Improvement Company, for the redemption of the Government's debts. The Congress approved the contract in April, 1900. Belgian bondholders objected to it on the ground that it deprived them of the lien on a part of the customs duties that they possessed as security for their bonds. In December the National Bank failed, which by the authority of Congress had issued all the paper money with which the country was flooded, and for the redemption of which the Government was responsible. A change in the Cabinet followed this new development of the crisis, Señor Hernandez becoming Secretary of the Interior; Señor Cuello, Secretary of War; Señor Brache, Secretary of Finance; Señor Despradel, Secretary of Agriculture; and Señor Joubert, Secretary of Posts and Telegraphs.

**The Army and Navy.**—The permanent army is employed to garrison Santo Domingo and the provincial capitals—Azua, Macoris, Samana, Santo Domingo, La Vega, and Vicenza—a regiment in each place. The naval force consists of the gunboat Independencia, of 350 tons, armed with 5 Hotchkiss and 3 revolver guns; El Presidente, of 888 tons, carrying 9 guns; and the Restauracion, of 1,200 tons, carrying 9 guns.

**Commerce of Santo Domingo.**—The chief products are sugar and coffee. The coffee plantations have increased, and caoba has been planted with success; tobacco, too, by the Cubans, and bananas with American capital. The rearing of cattle is another new industry. Over 85 per cent. of the land is suitable for cultivation, and a considerable amount is rendered profitably exploited. The high duties retard foreign commerce. The total value of imports in 1898 was $1,696,280. Exports amounted to $5,789,997. There were exported 49,300 tons of sugar, 929,980 feet of mahogany, 7,533 tons of tobacco, 2,616,908 pounds of coffee, 5,758,438 pounds of rice, 2,627,802 tons of logwood, 98,448 bales of cotton, 25,863,600 bunches of bananas, and in addition to these staples hides, honey, beeswax, divi-divi, and rum. The chief trade is with the United States and the islands of the West Indies, but with Germany, England, Spain, and France there is also considerable. During 1898 there were 554 vessels entered at the port of Santo Domingo and 380 cleared. In 1899 the value of imports was $1,867,702; of exports, $4,539,185. Iron, copper, and coal exist in Santo Domingo, but are not worked. Salt is mined profitably, and other minerals are found. Gold has always been obtained in dust and nuggets from the beds of streams in the Yaque valley and elsewhere.

**Railroads, Posts, and Telegraphs.**—The railroads from Sancti Spiritus to Sanata Bay, to La Vega, 62 miles, is being extended to Santiago, 54 miles having been built. Another line is to be built from Barahona to Cerro de Sal, the salt mountain.

The number of letters, newspapers, etc., dispatched through the post office in 1897 in the internal service was 342,081, and in the international 286,051; in 1898, in the internal service, 396,946, and in the international 238,897.

The telegraphic lines constructed by the Antilles Company have a total length of 430 miles, connecting with the French cables.

**Servia.** a kingdom in southeastern Europe.

The legislative body is a single chamber called the Skupština, composed of 198 members, elected by all male Servians who pay 15 dinars of direct taxes. The reigning King is Alexander I, born Aug. 14, 1876, who succeeded to the throne abdicated by Milon I, his father, on May 6, 1899, and on April 13, 1900, assuming the regency and assuming the kingly authority. The ministry constituted on Oct. 23, 1897, and with some changes still in office at the beginning of 1900, was composed at the later date as follows: President of the Council and Minister of Foreign Affairs, Dr. Vla-
The Army—Servia has a system of compulsory military service, the duration of which is two years from the age of twenty-one, followed by eight years in the reserves, and then ten years each in the first and second ban of the militia. There are 6 guard battalions, 15 regiments of the line stationed in 5 territorial divisions, 5 regiments of the cavalry, 1 in each division, 1 regiment of fort artillery, 2 battalions of engineers, a battalion of pontoniers, and 5 companies of train, the total effective on a peace footing being 661 officers and 14,000 men in the infantry, 270 officers and 4,000 men in the artillery, 65 officers and 1,000 men in the engineers, and 151 officers and 800 men in the train and sanitary corps. The war strength is 22,019 men for each division or 110,245 men in all the divisions, outside of which are 14,863 cavalry, fortress, and special troops, and 35,043 reserve troops attached to the depots, making the total strength of the regular army and reserves 161,751 men, which can be supplemented by 126,010 men in the first and 66,005 in the second ban of the militia, bringing the fighting strength of the nation up to 333,366 men.

Commerce and Production.—Out of 4,830,260 hectares, the total area of Servia, 1,214,370 hectares belong to farms, 409,326 are orchards, 599,140 hectares meadows, 484,172 hectares forest, and the rest marsh or unproductive. Wheat and corn are the principal crops, besides which the other cereals are grown, and tobacco, hemp, and flax, with grapes for wine and from 7,000,000 to 8,000,000 quintals of prunes, which are dried and exported to many countries. There are 438,611 inhabitants. There are 3,003,900 sheep, 904,446 pigs, and 325,901 goats in 1896. About 64,000 tons of coal are produced annually, and iron, lead, silver, zinc, quicksilver, antimony, and various minerals are mined to some extent. The total value of imports in 1899 was 46,420,000 dinars, and of exports 65,744,000 dinars. Of horticultural and agricultural products, the receipts from 1,302,000 dinars was for wine, and 29,420,000 dinars exported; of food and drinks, 1,217,000 dinars imported and 2,968,000 dinars exported; of colonial produce, 3,419,000 dinars imported; of animals and animal products, 502,000 dinars imported and 27,413,000 dinars exported; of hides, leather, and rubber, 3,227,000 dinars imported and 3,157,000 dinars exported; of wool and woollen goods, 4,528,000 dinars imported and 106,000 dinars exported; of seeds and seed products, 1,918,000 dinars imported and 2,000 dinars exported; of timber and wood manufactures, 2,727,000 dinars imported and 422,000 dinars exported; of metals, 5,027,000 dinars imported and 560,000 dinars exported; of stone, pottery, and glass wares, 2,470,000 dinars imported and 364,000 dinars exported; of drugs, chemicals, and colors, 1,069,000 dinars imported and 154,000 dinars exported; of machines and instruments, 1,805,000 dinars imported and 8,000 dinars exported; of cotton and linen goods, 10,237,000 dinars imported and 1,027,000 dinars exported; of silks, 900,000 dinars imported; of hardware, 1,329,000 dinars imported; of clothing and millinery, 2,976,000 dinars imported and 41,000 dinars exported; of fertilizers, 2,000 dinars imported and 96,000 dinars exported. The values of the imports from and exports to the principal foreign countries in 1899 are given in dinars in the following table:

Total 46,420,000 65,744,000
Railroads, Posts, and Telegraphs.—The railroads completed up to the end of 1899 had a total length of 554 miles, consisting of the Servian section of the trunk line to Constantinople, 230 miles, and 98,950 miles ordered and orders amounting to 117,114,000 francs in 1899, and in the external service 3,933,000 ordinary letters and 191 money letters and postal orders amounting to 60,437,000 francs, besides 1,600,000 ordinary letters and orders amounting 31,179,000 francs in transit. The telegraphs have 2,562 miles of line and 5,041 miles of wire. The number of messages in 1899 was 1,078,420, of which 901,929 were internal, 155,298 international, and 21,193 in transit. The postal and telegraph receipts were 2,242,802 ducars, and expenses 2,097,527 ducars.

Change of Cabinet.—King Alexander, by announcing his intention to marry a civilian lady, a Servian subject, Mr. Meschin, so long discredited his father, who resigned his post as commander in chief of the Servian army, and vexed his mother, but caused much dissatisfaction at first in Servia. His ministers resigned, and on July 25 the King appointed a neutral Cabinet, as follows: President of the Council and Minister of Foreign Affairs, Alexa Jovanovich; Minister of the Interior, Lazar Popovich; Minister of Justice, Nastas Antonovich; Minister of Finance, Dr. Mika Popovitek; Minister of War, Lieut.-Col. Milos Vassich; Minister of Public Works, Col. Andrews Jovelitch; Minister of Agriculture, Dr. Yusup Snarsky; Minister of Worship and Public Instruction, Paul Manichoviech. The new minister were judges, departmental chiefs, and army officers who had no party ties. A partial amnesty for political offenses was proclaimed, those who had been sentenced to hard labor having their sentences commuted. The sentence of fifteen years which condemned to imprisonment having their sentences reduced. The defection of most of his prominent and influential supporters, who were identified with the Austrophil policy instituted by King Milan, drove the young King to seek friends rather among the Radicals, to whom his choice of a Queen from among the 21 was not displeasing, and by drawing nearer to the Radicals, who have always leaned toward Russia, he attracted the good will of the Czar, who hastened to congratulate him on his approaching marriage. Draga Meschin, born Sept. 23, 1867, was the daughter of a Servian magistrate and the widow of a surgeon in the army who formerly been a lady in waiting at the court of Queen Mentr. She took place on Aug. 4.

SHERMAN, JOHN, an American statesman, born in Lancaster, Ohio, May 10, 1823; died at his residence in Washington, D.C., Oct. 22, 1900. Mr. Sherman came from the noted Connecticut family of that name. He was the adopted son of the late John NIcholas, whose members in colonial days was the stern Puritan Roger Sherman. His father, Charles Sherman, of Norwalk, Conn., married Mary Hoit, of that place, in 1810, and they immediately emigrated to Ohio, then a frontier State, a large portion of its territory being an unbroken wilderness. He died in 1829, leaving eleven children, of whom William Tecumseh, who became the famous general, was the fourth, and John, the subject of this notice, the eighth. The family was left with but scanty resources, and soon scattered, John going to live with a relative at Mount Vernon, Ohio, where he attended school several years, when he returned to Lancaster and entered upon Mercantile, studying mathematics, in which he became proficient. Becoming impatient of the restraints of school, after two years of academical life he secured a place, though hardly fourteen years of age, as junior rodman in a survey then being made of Muskingum river from Zanesville to Marietta. In this work he remained about two years, when he was turned adrift on account of politics. It was then arranged that he should study law with his brother Charles at Mansfield, but, as he could not be admitted to the bar until he was twenty-one, he read meanwhile much of history, especially that of the United States, travels, and general literature, writing deeds and contracts, later dabbling in politics and looking after cases arising in the office, and earning enough to pay his expenses. His admission to the bar changed the course of his life but little. Mansfield was his home for the rest of his life. His interest in politics grew widely, and his success in 1842 appointed a delegate to the Whig National Convention that nominated Zachary Taylor for the presidency, and in 1852 he was a delegate to the Baltimore Convention that nominated Gen. Scott as presidential candidate. Two years later he became a candidate for Congress as a Whig, and was elected. Hardly had he familiarized himself with his new surroundings when he became conspicuous as a staunch opponent of the scheme to extend slavery over the Territories. Before the end of his first term, by direction of the House, a committee of its members, of which Representative Howard, Mr. Sherman, was one, was appointed to investigate the turbulent conditions in the Territory of Kansas, where the importation of slaves from Missouri (consequent on the repeal of the Missouri compromise) was being strenuously opposed by the settlers from the free States. Mr. Howard became ill, and Mr. Sherman, second on the committee, with the report which was to be widely circulated, and became the substance of the creed of the Republican party then crystallizing into form out of the disintegrating elements of the two old parties, both of which were seeking to avoid the impending storm. The Buchanan administration, which followed, if not friendly to slavery, was opposed to taking any steps to prevent its spread into the new Territories, a policy satisfactory to the slave owners. The debate in Congress on this matter became very angry. Mr. Sherman, to checkmate the moves of the administration, offered an amendment to the army bill then pending, which was adopted, providing that the United States troops not be quartered in the areas where the enactments of the so-called Legislature of Kansas which had been organized in the interest of the proslavery settlers. This measure thwarted for a time the purpose of the administration, but it served to inflame the discussion on the floor of the House, where the tall form of Mr. Sherman has become the rallying point of the new party, who began to align themselves for the impending struggle which could not be long deferred, and which was destined in the end not only to give freedom to Kansas, but to uproot the institution of slavery in the States where it already existed. On the opening of Congress in December, 1859, Mr. Sherman was elected Speaker, and these were withheld because of his
When the civil war was at an end, the problem of restoring the seceded States to their former places in the Union demanded solution. Congress, owing to diversity of views among its members, drifted along aimlessly. Presidents Lincoln and Johnson had already ceded all of the South excepting the Ku-klux Klan, in several sections of the South, aroused the North and united the loyal States in a strong determination to prevent the establishment of a Southern government. The House, reported a bill which set forth that the rebel State governments were instituted without the authority of Congress and the sanction of the people; that these pretended governments afforded no protection to life, liberty, or property; that they encouraged lawlessness and crime; and that peace and order ought to be enforced until loyal State governments could be legally established, and therefore the bill made provision for strengthening the administration of the military government existing throughout the seceded States. After considerable debate the bill unchanged passed the House. In the Senate the measure was bitterly denounced as a declaration of war against the South. Several amendments were offered but were voted down. Mr. Sherman, after consulting with a few of his friends, brought forward an amendment, which he offered as section 5 to the bill under consideration, saying in explanation: "In regard to the fifth section, which is the main and material feature of this bill, I think it right that the Congress of the United States, before its adjournment, should designate some way by which the Southern States may reorganize loyal State governments in harmony with the Constitution and laws of the United States and the sentiments of the people, and find their way back to these halls. My own judgment is that that fifth section will point out a clear, easy, and right way for these States to be restored to their full power in the Government. All that it demands of the people of the Southern States is to extend to all their male citizens, without distinction of race or color, the elective franchise." The discussion that followed was extremely acrimonious. At last it was finally decided that the enactment of the bill into a law would be the death knell of the Republican party. The bill, however, carrying Mr. Sherman's amendment, passed the Senate, and became a law unchanged, over the veto of President Johnson, March 2, 1867. Under the provision of its fifth section, ten States were restored to the Union as anticipated by Mr. Sherman, and suffrage was given to 600,000 freedmen.

While visiting Paris in 1867, Mr. Sherman received at his hotel a request from the Monetary Conference, then in session in that city, for an expression of his views on a proposition so to change the weight of the English sovereign and gold guinea, as to make it equal in value of the French gold franc. Mr. Sherman immediately replied, approving, and incidentally discussing the theory of a double standard, exposing in strong terms what he believed to be its fallacy. Later he made a report from his committee on the project that had engaged the attention of the conference, and his objections to any attempts at operating a double standard, assuming that the gold unit, which had been in use since 1834, would continue indefinitely as the standard of this country. The Senate was favorable to changing the weight of our gold dollar as proposed, but England objected
to the slight change in the weight of her gold sovereign, and for this reason nothing came of the scheme.

In view of Mr. Sherman's opposition, as stated in the letter and report mentioned, his action in 1873 in pressing through the Senate the coinage act, by which the gold dollar was permanently made the standard of value and the unit of account in the United States, and no further authority given for the issue of the silver dollar, must be examined.

In 1869 Mr. Sherman was made Chairman of the Senate Committee on Finance, in place of Mr. Fessenden, who had resigned from the Senate, which place he held until called to the Treasury in 1877. Meanwhile a great clamor had arisen for payment of the public obligations in legal tender, the kind of money the Government received for them when they were issued. The law controlling their payment was not explicit on this point, but Mr. Sherman argued that, waiving all technicalities, by making the bonds payable without question in coin their value would be so appreciated that as they matured the Treasury would be able to refund them at par at a lower rate than they would have paid to redeem them. This view was not greater than any possible gain from forcing their payment in the depreciated notes, and at the same time there would be no opportunity for an imputation of repudiation. To that end he reported a bill, which became a law March 18, 1869, explicitly declaring the bonds payable in coin. Experience justified the policy still further, as Mr. Sherman, the bonds being subsequently refunded with much advantage, and the credit of the country greatly strengthened.

In 1873 the country suffered from a financial panic arising from the unsatisfactory condition of the paper currency, and relief in some way was urgently needed. Mr. Sherman urged that provision should be made for redemption in coin of the legal-tender notes, thus increasing the circulation of the country to the extent of the hoarded gold, which would then doubtless come into use and stimulate business; but the plausible advocates of paying the bonds in depreciated paper declined to go that way, and said that, instead of such redemption, there should be a discount on the notes, and they were able to get a measure to that end through Congress. It was promptly vetoed, however, by President Grant, and this gave Mr. Sherman an opportunity to press his scheme of relief. At his instance, a Republican caucus directed him to present to the Senate and put upon its passage a bill authorizing the Secretary of the Treasury to use the surplus revenues of the Government, and to sell bonds for gold as necessary, with a view to the accumulation of a fund to enable him to redeem at the New York sub-treasury all United States notes presented for that purpose on and after Jan. 1, 1874. The bill became a law April 15, 1873, Mr. Sherman being the only man in either house that spoke in its favor. The bill was not popular, and its enactment was received with little approval in any quarter. Even the friends of resumption doubted its sufficiency to bring about that result. When, two years after its passage, Mr. Sherman became Secretary of the Treasury, the premium on gold had not much diminished, and no steps had been taken by the officers of the Treasury toward accumulating the required reserve for resumption. Mr. Sherman lost no time in forecasting his policy. From a syndicate of bankers subscribing under a contract for bonds for re-funding, he obtained, in the spring, permission to retain $15,000,000 of gold for the resumption reserve, and soon thereafter $25,000,000 more from the same parties for a like purpose. Adverse conditions prevented for a while further accumulations. There was little faith, even among his party, that the needed gold could be obtained. Congress gave no encouragement, and called him before one of its committees. In response to an inquiry from a member of the House as to what he proposed to do about resumption, Mr. Sherman replied that, unless the law should be repealed, he should redeem the notes in coin as directed; that as Secretary of the Treasury he had no other alternative; and, as far as he deemed prudent, he explained where the necessary gold could be found, and how he proposed to obtain it. Four days later he had secured $50,000,000 of gold by the sale of bonds above the market price, and resumption was assured. On Jan. 1, 1879, the gold premium had disappeared; gold was offered for the notes, but nobody wanted it, just as Mr. Sherman had predicted. With resumption came the promised relief. Capital, assured of its return in money of equal value, sought investment; labor found employment, and throughout the land every hearth rejoiced in the nation's prosperity.

Incidentally, Mr. Sherman, during his term in the Treasury, greatly reduced the annual interest payment on the public debt by funding more than $800,000,000 of the war bonds at a lower rate of interest; but his crowning work was the resumption of specie payments, the great effects of which, so far as they extended to the nation honor and credit throughout the world.

Consequent upon Mr. Sherman's successful administration of the Treasury from 1877 to 1881, his friends brought him forward as a Republican candidate for the presidency at the conventions held in 1880 and 1888, and in both instances he received a strong support.

Upon the change in administration, Mr. Sherman in 1881 returned to the Senate, where he was made Chairman of the Committee on Foreign Relations, from which place he resigned in 1897 to become Secretary of State. But, failing in health, after a short time he returned to private life. He published his Recollections (2 vols., 1890) covering the period of forty years, and became a prominent actor in the drama of American history.

In announcing Mr. Sherman's death, President McKinley said: "In the fullness of years and honors John Sherman, lately Secretary of State, has passed away. Few among our citizens have risen to greater or more desired eminence in the national councils than he. The story of his public life and services is, as it were, the history of the country for half a century. In the Congress of the United States he ranked among the foremost in the House and later in the Senate. He was twice a member of the Cabinet, first as Secretary of the Treasury, and afterward as Secretary of State. Whether in debate during the dark hours of our civil war, or as the director of the country's finances during the period of rehabilitation, or as a trusted counselor in framing the nation's laws for forty years, or as the exponent of the policy, the course was ever marked by devotion to the best interests of his beloved land, and by able and conscientious effort to uphold its dignity and honor. His countrymen will long revere his memory and see in him a type of the patriotism, the uprightness, and the zeal that go to molding and strengthening a nation."

SOUTH AFRICAN REPUBLIC. See TRANSVAAL.
SOUTHERN CAROLINA.

SOUTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution May 23, 1788; area, 30,570 square miles. The population, according to each decennial census, was 249,673 in 1790; 345,391 in 1800; 415,115 in 1810; 552,741 in 1820; 581,185 in 1830; 504,398 in 1840; 608,507 in 1850; 703,706 in 1860; 705,606 in 1870; 905,377 in 1880; 1,131,149 in 1890; and 1,340,316 in 1900. Capital, Columbia.

Government.—The following were the State officers in 1900: Governor, Miles B. McSweeney; Lieutenant Governor, R. B. Scarborough; Secretary of State, Marion R. Cooper; Treasurer, W. H. Timmerman; Comptroller, John P. Derham; Attorney General, Joseph B. Brinley; Superintendent of Education, John J. McMahon; Adjutant General, J. W. Floyd; Railroad Commissioners, Messrs. W. D. Evans, Wiborn, and Garris; Phosphate Inspector, S. W. Vance; Dispensary Commissioner, H. H. Crum; Directors of the Dispensary, Leon J. Williams, H. H. Evans, and A. F. H. Dukes; Chief Justice of the Supreme Court, Henry McVeer; Associate Justices, Eugene B. Gary, Ira B. Jones, and J. J. Pope; Clerk, U. R. Brooks. All are Democrats.

The State officers are elected in November of the even-numbered years, for terms of two years. The Legislature meets annually in January. It consists of a Senate and a House of Representatives.

Population.—The Federal census gives the following returns by counties: Abbeville, 33,400; Aiken, 39,032; Anderson, 55,728; Bamberg, 17,296; Barnwell, 35,504; Beaufort, 35,495; Berkeley, 30,454; Charleston, 88,006; Cherokee, 21,359; Chester, 28,616; Chesterfield, 20,401; Clarendon, 28,366; Darlington, 22,952; Dorchester, 16,294; Edgefield, 25,478; Fairfield, 29,425; Florence, 28,474; Georgetown, 22,846; Green- ville, 53,490; Greenwood, 28,343; Hampton, 23,738; Horry, 23,364; Kershaw, 24,696; Lancaster, 24,311; Laurens, 37,382; Lexington, 27,264; Marl- on, 33,181; Marion, 27,639; Newberry, 30,182; Oconee, 23,094; Orangeburg, 59,663; Pickens, 19,375; Richland, 45,589; Saluda, 18,966; Spartan- burg, 65,650; Sumter, 51,273; Union, 25,501; Williamsburg, 31,683; York, 41,684.

The population of Charleston is 55,807; in 1890 it was 54,855.

Finances.—The report of the Comptroller, submitted in January, gave the following statements: Cash balance in the treasury, available for expenses of the State government in 1900, $129,574.96; to this amount add uncollected taxes of 1899, $625,000; insurance license fees, Comptroller General's Office, $12,000; additional insurance licenses, $13,000; fees of Secretary of State's office, $5,000; total, $784,524.96. The estimated expenses of the State government for 1900 were $906,518.90, leaving $121,943.94, which must be paid from the taxes of 1900. From insurance companies, $12,925 was collected in annual license fees, and paid into the State treasury. The amount of $13,635.14 was realized from additional license fees. The Legislature appropriated $283,832.51 for interest on the State debt.

The report of the dispensary for 1899 showed the total net profits to be $414,181, of which the towns and cities received $220,492, and the State $193,689. The school fund received $100,000 of this sum. The effect of the new law, it is said, will be to give counties and towns more of the profits, and reduce the share of the school fund to $75,000. An act of the Legislature provides that each school district in the State, where the sum realized from the 3-mill tax and the poll tax is not sufficient to give $75 to each school in the district, shall have the deficiency made up to it by the Comptroller from the dispansary profits. The State has 4 classes of claims against the Government, arising from the several wars. The Revolutionary War claims aggregate the largest sum, amounting, with interest, to $316,495.35. To be paid by the State issued in 1856 to complete the Statehouse—$125,000 principal and $125,750 interest. They matured in 1851. Suit was brought in the United States Supreme Court in June to recover the amount, but it was afterward found that the act requiring the suit to be instituted had been repealed. From the returns of a census began, and justice was given that on the opening of the court in October a motion would be made by the Attorney-General to have the case dismissed. The United States holds a claim against the State for $404,478.89, for the value of ordnance stores belonging to the Government, which were seized by order of Gov. Pickens in December, 1860, after the adoption of the ordinance of secession, recently described in a Charleston paper as "the obsolete cannon, round cannon balls, and muzzle-loading muskets, and paper cartridges of one ball and four buckshot that were stored away in the United States arsenal in Charleston, or picturesqueely arranged about the grounds of that famous and Hawthorne's representative." The legality of the act of the Legislature appropriating $175,000 from the sinking fund to complete the Statehouse was questioned, but the Attorney-General decided that the commissioners had no responsibility but to obey the Legislature, and the contract for the work was let in August. The valuation of the claims was made in October it appears that the valuation placed upon real property amounts to $102,137,777, and that upon personal property to $53,120,833. Railroad property is valued at $27,771,973. The total, $183,030,013, shows a considerable increase over the total of 1899, which was $176,432,288.

Education.—The Superintendent's report has the following general information regarding the schools, together with recommendations for manual training, especially in negro schools:

"The best proof of interest in education is the willingness to bear an extra local burden. The number of extra levies made this year, although not available for publication in this report, is known to be remarkable. Numerous towns have tried to make this levy and failed by only a few votes. That town is an exception that has not for some years borne an extra tax and maintained an efficient system of graded schools, and this year's record has considerably reduced the number of exceptions. We have 3,000 white teachers and 2,300 negro teachers in this State, many of them poorly fitted for their work. The normal colleges in the State can not in this generation supply even a considerable proportion of teachers, to take the places of those now in the schools. The statute now secures too great a privilege to the holder of a nominal college diploma. This has encouraged high schools to classify themselves as colleges and secure an advantage over academies that are more efficient and more honest. But from good colleges come graduates that are no credit to them. "Many districts and some entire counties are held in their school funds a year or more. The collectors have been encouraged by schools thinly settled. To the extent that such tax is thus squandered, the teachers are not paid, and the schools are starved. A few county superintendents have lately brought their schools to a cash basis by careful management, setting aside a part of the funds each year so as to accumulate a sinking fund."
The State Board of Education, appointed in April, is constituted as follows: Henry P. Archer, Graves L. Knight, J. L. McCain, H. T. Cook, A. R. Banks, W. A. Brown, and T. M. Raysor. Under the law, the Governor is chairman and the State Superintendent of Education is vice-chairman. The board had adopted a set of text-books by Southern authors; the United State history is one approved by Confederate veterans.

At Clemson, the Agricultural College, 463 students were in attendance in September. Many applicants were turned away for want of room. The textile department, lately added, has met with approval and success. A new chemistry building and a new electrical laboratory are provided for, but all departments need enlarged room and equipment. Clemson receives the proceeds of the tax on fertilizer tags.

The Citadel Military College, with 185 students enrolled, is one of the finest military institutions in the country, and that of Charleston, with 180 students enrolled, is one of the finest sea-island tile-drained lands unfit for the production of cotton. Although this disease has appeared on all the islands and in Christ Church parish, its effect is far more extended on James island. The tobacco crop is 20,000,000 to 25,000,000 pounds.

The report of the Phosphate Inspector shows that the condition of that industry to be better than it has been for several years. The number of tons of rock mined in 1898 was 99,315; in 1899 it was 121,073; in 1898, 94,008 tons were shipped, in 1899 134,094. The royalties paid on this to the State amounted to $34,928.90.

Work on the new prison had progressed so far at the close of the year that it was expected to be ready in January. The reformatory was opened late in the year to receive the 20 boys transferred from the Penitentiary.

The militia, both of the militia, was given in July as 2,653; the number of men liable for service, but unorganized, is 100,000. The State's share of the Government appropriation for militia will be about $20,000.

**Railroads.**—In 1899 123 miles were added to the tracks in the State, and 86 in the six months ending June 30, 1900. The building of short connecting lines between main lines is going on in many parts of the State. The total mileage is 2,830.44. The taxes amounted to $341,000. The gross earnings of the principal roads of the State, as reported, amounted to $8,916,384.

**Industries and Products.**—A report made in March, showing the cotton crop, in the spring, after the cotton was declared a crop, the state government, and the cotton mills, had filed declarations, and 5 others for increases of capital, making a total of new capital of $4,890,000. Four cotton-seed-oil mills were closed on account of the high price of seed, $20 a ton.

The cotton acreage this year was given as 2,975,661, an increase of 112,361 over that of 1899. The cotton crop is 20,000,000 to 25,000,000 pounds.

The report of the Phosphate Inspector shows the condition of that industry to be better than it has been for several years. The number of tons of rock mined in 1898 was 99,315; in 1899 it was 121,073; in 1898, 94,008 tons were shipped, in 1899 134,094. The royalties paid on this to the State amounted to $34,928.90.

The commercial crop of cotton of the season was given as 921,000 bales; the consumption in mills of the State, 497,496 bales; the number of spindles, 1,794,657.

**Exposition.**—Preparations are being made for the South Carolina Interstate and West Indian Exposition to be held in Charleston beginning Dec. 1901, and continuing for six months.

**The Naval Station.**—This is to be removed from Port Royal to Charleston. In recommending the removal Admiral Endicott wrote: "To make the Port Royal station accessible for the larger vessels of the navy at all times of the day would involve a very large outlay for dredging, and to complete the deep-water basin immediately in front of the basin, where vessels can be moored and lie afloat at low tide, which is now under construction, would cost probably $500,000, in addition to the $200,000 already appropriated. As no commercial city is reached through this harbor, this work would be solely for the naval station, while the Charleston interests are looking for deeper and deeper navigation to the sea, and such improvements would directly and largely benefit the commercial world through the commercial metropolis of the State."

**Lawlessness.**—Two riots occurred at polling places at the August primaries. At Midway, Bamberg County, 1 man was killed and 2 mortally wounded, and at West Duncan, Greenville County, 1 man was killed and 2 severely injured.

A negro, for an assault and attempt on the life of a white woman, was lynched near Ninety Six, Greenwood County, in February.

Citizens of Neecees, in Orangeburg County, telegraphed to Columbia in March, begging for troops...
to protect them from white regulators, who had twice visited the town, beaten people, white and black, and promised to return and kill them. Work on the surrounding farms had been stopped, and people driven from their beds.

A trial at Orangeburg to collect damages from the county for a lynching, under the law that allows such damages to be recovered by the legal representatives of the victim, resulted in a verdict for the county, which was set aside, and a new trial was had, with the same result. It is not deemed possible to enforce the law, but it is said that its effect has been to decrease the number of lynchings.

**Historical.**—Among some rubbish in the office of the Secretary of State was found in January a venereated wooden case about 3 feet long by 2 feet wide, and printed upon the top was "Proceedings of the Convention, 1832-33. Secretary of State's office." On opening it, he discovered the original ordinance—"To nullify certain Acts of the Congress of the United States," as it is generally known. The manuscript of the convention, the original ordinance as it was drawn up and presented to the convention, Chancellor Harper's original draft of the ordinance, a certified copy of President Jackson's proclamation as printed, and a certified copy of Gov. Robert Y. Hayne's proclamation in reply as printed in the Columbia Telescope, the manuscript journals of the conventions for 1832 and 1833, both beautifully bound, and 2 printed copies of the same journals, and the original ordinance resceding the first ordinance.

One of the flags carried in the Mexican War by the Palmetto regiment was turned over to the Secretary of State after the war, with the regimental records. These and the 2 flags were sent from Columbia to Chester at the time of Sherman's march. The State flag was lost; the army regulation flag is the one just brought back to the Capitol. It passed through 4 battles of the Mexican War, and 5 officers were shot down while carrying it—2 mortally wounded. It went to Cuba in 1898 with the Second Regiment of South Carolina infantry. The "Jackson vase" was also sent by the survivors of the Mexican War to the Capitol.

The Columbia Chapter of the D. A. R. have placed in the State Capitol a marble tablet to the memory of Major William Sumter, and his Companion, Major John Geiger, who in 1781 took a perilous ride of more than 100 miles through forests and across rivers to carry a message from Gen. Greene to Gen. Sumter. She memorized the written message given to her, and, when taken on suspicion before Lord Rawdon, tore up and swallowed the paper secretly, so that nothing was found when she was searched, and she was allowed to go on her way. The result was that Gen. Sumter joined Gen. Greene as he was desired by the message, and Ninety Six, the most important point in upper Carolina held by the British, was evacuated, and Lord Rawdon was compelled to retreat to Orangeburg. It was desired to mark her grave with a monument, but its place was not found.

Walhalla celebrated its semicentennial this year. A monument to the memory of Gen. John A. Wagener, founder and president of the German Migration Society, was unveiled.

**Legislative.**—The session met for the annual session Jan. 9, and adjourned Feb. 17. Frank B. Gary was Speaker of the House.

**Association.**—E. B. Gary was re-elected.

The number of acts and resolutions passed was 188. The Governor sent a special message asking for legislation providing for the draining of the swamp lands of the State, and a resolution was passed for submitting to vote, in November, a constitutional amendment giving the Legislature power to provide for condemnation proceedings and assessment of lands drained. Another constitutional amendment proposed was one providing that the 8-year limit in the proportion of bonded indebtedness a town may assume should not apply to Charleston, Columbia, Rockhill, and Florence, if bonds are issued only to provide water and sewerage, nor to Georgetown, if they are only for water, sewerage, and light. These were voted upon in November and carried; but only after the Senate had voted not only after being ratified by the Legislature of 1901.

A proposed amendment changing from annual to biennial sessions passed the House, and lacked but one vote in the Senate. One extending the term of members of the Legislature to four years was proposed and lost.

Changes were made in the dispensary law. The Board of Control was abolished, and a board of three directors elected by the Legislature to have charge, with the assistance of a commissioner. They are removable by the Governor. The county boards of control, formerly chosen by the State board, are to be chosen by the delegations in the Legislature from their respective counties. The State Capitol has changed hands twice, and the masons must be reported to the General Assembly, thus doing away with the secret service. The liquor is to be sold to the county dispensers at 10 per cent. above cost.

The State will hereafter insure its own buildings and county public buildings, except schoolhouses. If it is decided that a building is left with the State, the cost will be paid to the commissioners of the sinking fund for an insurance fund. When the insurance fund reaches $200,000, no further premiums will be paid except to maintain the fund at this amount. Foreign insurance companies are prohibited from taking insurance through unlicensed agents; polities must be countersigned by resident agents.

A reformatory for male convicts under sixteen was provided for. It is made a misdemeanor for sheriffs to neglect to arrest escaped convicts.

The Secretary of State may, on a majority vote of members, amend the charter of religious, educational, social, fraternal, or other associations not for profit. Regulations were made for the chartering of continuing building and loan associations.

Two bills affecting railroads became laws. One requires separate coaches for white and colored passengers, allows no second-class cars, and provides for a uniform charge of 5 cents a mile. For purely private lines, only diagonal or compartment cars were required to provide separate compartments in the coaches.

A law was made permitting homoeopathic physicians to have an examining board of their own school, and creating such a board. Registration of births, marriages, and deaths is required by another act.

The military law was amended, and a new pension act was passed designed to restrict the pensions to those really needy. An appropriation of $80,000 was made for a monument to South Carolina soldiers at Chickamauga, and the erection of a monument to the women of the Confederate on the Statehouse grounds was authorized.

A new law was passed, though some of the first importance, changing the uniform or statute law in the State at large.

Provision was made for completing the Statehouse, the money to be taken from the sinking
fund. The levy for county purposes was reduced to 15 mills.

Other measures passed were as follows:

Providing that a mortgagee may pay a delinquent tax on all the property of the mortgagor, and add the amount to the mortgage debt of such mortgagor.

Making partners liable for their own acts only after notice of dissolution has been given.

Providing for quarterly examinations by joint committees of the Legislature of the accounts of State financial officers.

Providing that the citizens may be analyzed free of charge at Clemson College.

Authorizing Clemson College to build a railroad to connect the college with stations on other lines.

Giving the board of the South Carolina Military Academy power to confer the title of bachelor of sciences.

Requiring barbed-wire fences within 50 feet of a public highway to have planks along the top.

Providing for the completion of Winthrop College.

Making it a misdemeanor to sell or ship partridge or quail out of the State for five years.

Fixing the weight of a bushel of bolted cornmeal at 46 pounds; of unbolted at 45.

Inquiring into reports and records of criminal statistics.

Providing for the assessment of railroad property that has been escaping taxation, and for the collection of the taxes past due.

Granting to the United States title to and jurisdiction over certain lands on Sullivan's island.

A proposition to appropriate $100,000 to the support of public schools came near passing, but was finally rejected by a vote in the Senate of 18 to 17. The institutions for higher education received appropriations: South Carolina College, $27,000; Winthrop College, $33,000, and $3,450 for free scholarships; the State colored college, $8,000; the Military Academy, $20,000, and $3,530 for deficiency and $1,500 for a library; the Deaf, Dumb, and Blind Asylum, $30,000.

The total of appropriations, not including the $175,000 for completing the Statehouse (which amount is to be borrowed from the sinking fund), was $654,571.76. It includes the appropriations for the extension of the State debt, the $100,000 for Confederate pensions, the expenses for elections, the pay for the State officers, the support and special appropriations for the State colleges, the pay for the judiciary, the pay for the health departments of the State, and the monument at Chickamauga. The aggregate in 1899 was $842,151.82.

Political.—State officers were elected in November. The Democratic ticket was the only one in the field. There was the usual speech-making campaign, beginning in June, the candidates for the office of United States Senator and for the nominations for State offices holding joint debates in the various counties before the primary elections. These debates were held on the first Tuesday in September. The chief issue was the State dispensary law: James A. Hoyt was the candidate for Governor of those favoring prohibition instead of the dispensary; Gov. McSweeney, F. B. Gary, A. H. Patterson, and the Rev. G. Walter Whittman were the other candidates.

A prohibition convention was held at Columbia, March 20, when four delegates to the national convention were chosen and instructed to vote for the renomination of President McKinley. The resolutions approved his administration, favored American shipping for our commerce, condemned lynching, and said: "We still protest against the suppression of the ballot of the citizens of South Carolina by the criminal nullification of the Constitution and laws of the United States, enacted under the color of law by the so-called Constitutional Convention of 1895. And we contend that the unjust deprivation of 100,000 citizens of the State of their right to vote for the Government, which we call upon Congress to place the seal of condemnation upon, by enacting such laws as will protect the citizens of the United States in the highest right of citizenship—a voice in the selection of their public officers—and thus preserve in its purity the American doctrine that all governments derive their just powers from the consent of the governed."

A second Republican convention was held Oct. 3, but no State nominations were made.

The prohibitionists held a conference Jan. 12, and issued an address to the people, in which was said: Those who manage it say the dispensary paid last year $130,000 to the education of the children of the State, but they did not tell the startling fact that the dispensary had drawn from the people of the State at least twenty times as much and spent it in fat salaries and other expenses, purchases, etc., of the liquor system. It may be said that in addition to the $130,000, the counties and the State received in taxes from those who buy liquor. To this we reply: The expenses incurred by the counties and towns in the trial, punishment, and support of criminals, who have been made such by the liquor sold them by the State, will far more than balance the money received from the dispensary. We state it moderately when we say that the present system of liquor selling is a crime against the people of the State of $20 for every dollar paid to the State Treasurer for educational purposes.

The State Board of Control is sending out of our State each year at least $1,000,000, and in exchange for it bringing into the State and distributing to our people five times the amount in property, wretchedness, disease, and death.

A convention was held May 23, at Columbia, and James A. Hoyt and James L. Tribble were nominated for Governor and Lieutenant Governor, to stand for nomination at the Democratic primaries, as there is a large body of Prohibition Democrats opposed to the dispensary.

The Democratic delegation selecting delegates to the national convention met at Columbia, May 16. The resolutions favored the candidacy of Mr. Bryan and approved of Senator Tillman's course in the Senate. They also expressed sympathy with the Boers, and condemned the administration for "not extending an offer of its good offices to terminate the unholy war of subjugation." They denounced the imperialistic policy of the President and the financial policy of Congress, and the "hypocritical attitude of the Republican leaders, who abuse trusts and combines while they use the money obtained from them and stolen from the people to debauch the ignorant voters of the country."

At the select primary, Aug. 28, Gov. McSweeney received 39,097 votes and Mr. Hoyt 33,833. As these were the highest two, their names were voted upon at the second primary, Sept. 11, and the result stood: McSweeney, 51,363; Hoyt, 37,411. The ticket, as settled by the primaries, was: For Governor, James A. Hoyt; Lieutenant Governor, James H. Tillman; Attorney-General, G. Duncan Bellinger; Secretary of State, Marion R. Cooper; Superintendent of Education, John J. McMahon; Adjutant General, J. W. Floyd; State Treasurer, R. H. Jennings; Comptroller General, J. P. Derham; Railroad Commissioner, J. H. Wharton.

There was no opposition to the candidacy of
R. Tillman for United States Senator, though the vote for him was 18,213 less than the total vote for Governor.

At the election in November the above-named ticket was chosen by a vote nearly as large as that for Mr. Bryan, who received 47,236 to 3,579 for President McKinley.

Two constitutional amendments were submitted and both were carried. They are given under Legislative Session in this article. For that on drainage, 21,339 voted yea and 9,917 nay; for that on bonded indebtedness there were 22,550 yea and 8,108 nay. It was found, however, that an error had been made in the tabulation of the latter, the number of the votes having been given to one of the articles to be amended, and the validity of its adoption was questioned.

SOUTH DAKOTA, a Western State, admitted to the Union Nov. 3, 1889; area, 77,550 square miles. The population, according to each decennial census since admission, was 328,585 in 1890 and 401,570 in 1900. Capital, Pierre.

Government.—The following were the State officers in 1900: Governor, Andrew E. Lee; Lieutenant Governor, John T. Keen; Secretary of State, William H. Roddle; Auditor, James D. Reeves; Treasurer, John Schamber; Attorney-General, John L. Pyle; Superintendent of Schools, E. F. Cusick; Commissioner of Lands, David Eastman; Adjutant General, H. A. Humphrey; Mine Inspector, James Cusack; Oil Inspector, R. E. J. Meyer; Public Examiner, Maris Taylor; Insurance Commissioner, F. G. King; State Surveyor, William L. Bruce; Veterinarian, J. W. Elliott; Secretary Board of Charities and Corrections, G. W. Kneal; Treasurer, William B. Ayres; Secretary of State’s Office, the Hon. F. A. Custer; Treasurer State Board of Regents, H. H. Blair; Chief Justice of the Supreme Court, Dighton Corson; Associate Justices, Dick Haney, Howard G. Fuller; Clerk, Miss Jessie Fuller. Gov. Lee is a Populist; all the other elected officers are Republicans.

State officers are elected in November of the even-numbered years, for terms of two years. The Legislature meets biennially, in January of the odd-numbered years.

Population.—The State has gained 72,762 in inhabitants, or 22 per cent., in the past decade. The number of Indians not taxed is 10,592. The census of 1890 is incorrect in that there were 6 black hills counties: Butte, 2,907; Custer, 2,728; Fall River, 3,541; Lawrence, 17,897; Meade, 4,907; Pennington, 5,610.

Finances.—The Governor’s message says the financial condition of the State is good. June 30, 1900, the Treasurer had a cash balance of $555,769. The message criticises the policy that compels the State to pay 7 per cent interest on registered warrants, while it receives no interest whatever on its funds deposited in banks, such interest, if any, being paid to the Treasurer as a personal perquisite and amounting possibly to $12,000 or $15,000 annually. There was a reduction of the State debt in 1900 of $248,000. The net indebtedness, July 1, 1900, was $849,811.09. The counties owe the State in delinquent taxes $908,207.54. The defalcation of w. W. Taylor in 1895 is still unsettled, $140,544.66 having been collected and $220,842.64 being still due.

Valuations.—The total assessment of the State and county is $1,350,380; of which $1,289,289 will be taxable. Of this amount, acre property is assessed at $101,730, 85; town lots at $181,100, 798; merchandise, $1,373,671; manufactures, $755,002; horses, $7,509,575; cattle, $15,793,103; sheep, $398,643; hogs, $830,400, 712; carriages and vehicles, $1,112,659; moneys and credits, $1,408,759; household furniture, $1,654,340; stocks or shares, $1,512,282. The railroad companies are assessed at a total valuation of $12,743,567; telegraph companies, $187,575; telephone companies, $174,151; express companies, $113,500; and sleeping-car companies, $10,000.

The tax levy of 2 mills for the general fund will furnish $146,544.66, if collected in full.

Under a recent ruling of the Attorney-General, mortgages held by resident money lenders are to be assessed and taxed the same as other property.

Education.—The school population in 1899 was 116,278. The apportionment of the permanent school fund in December, 1900, gave $45 cents per pupil; $1,112,659. The high court decided that the Board of Education had power to compel obedience to the order of the State Board of Health requiring vaccination.

In the Indian schools there was an enrollment this year of 3,946, and an average attendance of 3,439. A bill was introduced in Congress for a free school on the Indian reservations. An appropriation of $50,000 from the school fund was recommended by the Secretary of the Interior.

The State University, at Vermillion, has had an unusually prosperous year. College presidents in conference decided upon two rules affecting athletics. The "striving of one college to attract athletes away from another institution by offers of any kind of compensation, it is believed, will be thoroughly rooteded out. A rule depriving any student who has changed from one college to another from participating in inter-college contests for twelve months after date of such change. The other matter regarding which a rule is to be made is the number of hours of school work required per week. According to this rule, no student who does not pass in twelve hours of work a week will be allowed to enter inter-college contests."

Yankton College had an offer of an endowment of $50,000 from Dr. Pearson, of Chicago, on condition that the debt of $80,000 should be cleared off, and that the institution should hereafter be kept free from debt. Friends of the college subscribed $34,703, and in March the students celebrated the event with noise and blare. Subscriptions from other States than South Dakota amounted to $20,425. By commencement time the entire addition to the college funds had reached $90,000. The expenses are about $15,000 yearly.

The State Institution for the Blind was opened at Gary, March 1. During the first term 14 pupils were admitted, 2 of whom were from North Dakota.

Charities and Corrections.—The Insane Hospital, at Yankton, is overcrowded. The last Legislature appropriated $70,000 for buildings. The laundry and the plant for light and power are completed, but the addition to the main building was still unfinished. Nov. 1, the Northern Hospital for the Insane, at Redfield, the building for which was accepted in December, is designed for the feeble-minded. It is the finest public building in the State.

In the past two years there has been a decrease in the number of prisoners in the Penitentiary. July 1, 1898, there were 145 inmates. July 1, 1899, this had dropped to 130, while on July 1, 1900, the number was 134, showing an increase of 4 over last year but a decrease of 11 over two years ago. The total number of prisoners confined during the period July 1, 1899, to July 1, 1900, was 2,161; of which 1,345, or 62.76 per cent. of the subjects were women. The percentage of the life prisoners is greater than ever. In the year about 75 per cent. of the prisoners were employed during the day in the quarries outside the prison, getting out rough stone for new State buildings. The
SOUTH DAKOTA.

value of the stone produced at the Penitentiary quarries and used in State buildings during the fiscal year ended June 30 was $15,147.

Railroads.—In 1900 the railroad mileage in the State was increased by 136.66, divided among 4 lines. The construction of the roads for assessment was $12,753,867.

Banks.—Under the law for organizing national banks with capital stock of less than $50,000, three have been organized in the State. The Yankton Savings Bank, which failed in November, 1899, had liabilities of $8,000,000, and was organized by county funds. The State bank, at Plankinton, failed Jan. 9; Aurora County was said to have had about $6,000 on deposit. The establishment of the first bank in Selby is described in a dispatch of Aug. 22: "The extension of the Chicago, Milwauk ee and St. Paul, from Bowdive, has reached this town and is being pushed west 100 miles. The business buildings of Bangor are about half here, and the remainder will come before the week closes. A hot race occurred when the two banks started—the Farmers' and Merchants' and the Walworth County and State. They left Bangor about the same time. The latter had about a quarter of a mile the start and was much the better for the first two stories in height, while the Farmers' and Merchants' is 30 by 20 and two stories. The latter soon began to gain, and when about a mile and half out passed the State bank and steadily increased the distance between them. The State people sent back for re-enforcements, and soon added two more teams, making four in all. Then they began to gain steadily on the Farmers', who, seeing they would be losers unless help soon arrived, dropped the wagon in which they had the safe and added 4 horses to their 30-horse team. It was then an even thing for some distance, but the Farmers' and Merchants' pulled into town several lengths ahead. Then the race for lots began. The Farmers' were declared winners as the first bank in Selby."

Products.—The values of products of 1899 are given as follows: Wheat, 35,000,000 bushels, $18,000,000; corn, 40,000,000 bushels, $9,000,000; gold and other minerals, $11,131,450; live stock, $30,000,000; oats, barley, and rye, $12,000,000; flax and flax products, $1,000,000; barley, $1,000,000; dairy and other products, $6,000,000; wool, hides, and furs, $3,500,000; sundry items of agriculture, $10,000,000; total, $119,631,436. In 1900 the wheat crop was small in the northern part of the State. The estimate for the entire State was about 23,000,000 bushels. But the corn estimate was from 60,000,000 to $80,000,000 bushels.

Political.—State officers were chosen at the November election. Nominations were made by the Republicans, the Prohibitionists, the Mid-Road Populists, and by the other wing of the Populists and Democrats. The resolutions recommended the adoption of a system of party organization which was opposed by the Populists.

The Republicans met at Sioux Falls, May 23. The resolutions condemned the administration and reaffirmed the party principles. The ticket follows: For Governor, Charles N. Herreid; Lieutenant Governor, George W. Snow; Secretary of State, O. C. Berg; Treasurer, John Schamber; Superintendent of Public Instruction, E. E. Collins; Land Commissioner, David Eastman; Attorney-General, John L. Pyle; Railroad Commissioner, Frank Leeceq.

A Democratic convention, at Chamberlain, June 6, elected delegates to the national convention, instructing them for Bryan; declared allegiance to the Chicago platform, opposition to imperialism and to trusts, expressed sympathy for the Boers, and commended Senator Pettigrew. "Admiration for the honorable record of C. A. Towne" was expressed, but delegates were not instructed as to the candidates for the vice-presidency.

A second convention of Democrats was held at Yankton, July 11. The People's party was in convention at the same time and place. Confer ence committees were appointed, and a fusion ticket was arranged. It was: For Governor, Borre H. Lien; Lieutenant Governor, Abraham L. Van Pella; Secretary of State, Fred B. Smith; Auditor, F. J. Tracy; Treasurer, Charles A. Tedrick; Superint endent of Schools, Miss M. H. Aasved; Commissioner of Lands, Edmund Cook; Attorney-General, A. E. Hitchcock; Railroad Commissioner, W. T. Lafollette. Both platforms denounced the policy of the administration in the Philippines, and proposed that all the trusts, commended the administration of Gov. Lee and the course of the Railroad Commission, favored the re-election of Senator Pettigrew, and expressed sympathy for the Boers. The People's party condemned the policy of the pension commission, instructed the electors to vote for Bryan and Towne, and said: "We condemn the outrageous abuse of the military power at Wardner, Idaho, by a civilian authority was set aside and peaceable citizens imprisoned for months by armed Federal soldiers without the due process of law, as one of the most dangerous attacks on the liberties of the people in the history of this country. We charge that this attack on the rights of the honest workingmen made by the War Department, with the full knowledge of, and presumably by the order of the President. "We condemn the action of the State Board of Equalization for so largely increasing the personal property valuation of the farmers, in some cases more than doubling such valuation, while leaving the valuation of railways and other corporation property, and the credits of banks and other large property holders, without material increase."

The Mid-Road Populists convened at Yankton, Oct. 4, and nominated the following candidates: For Governor, E. W. Stair; Lieutenant Governor, C. J. Maynard; Secretary of State, Fred. Nystrom; Auditor, Frank Wardner; Treasurer, Frank W. Bailey; Superintendent of Schools, O. I. Husbabe; Commissioner of Lands, I. I. Sterns; Railroad Commissioner, A. D. Blundin. Mr. Maynard withdrew, and the place of Lieutenant Governor was left vacant. The resolutions approved the Sioux Falls platform and the candidacy of Mr. Bryan, favored the re-election of Senator Pettigrew, and opposed a legislative appropriation for the State fair.

The Prohibitionists also named a ticket, as follows: For Governor, F. J. Carlisle; Lieutenant Governor, K. Lewis; Secretary of State, N. J. Davis; Auditor, J. E. Gamble; Treasurer, H. H. Curtis; Superintendent of Instruction, G. H. Grace; Commissioner of Lands, F. S. Rhodes.
The returns of the presidential election were: McKinley, 54,530; Bryan, 39,544; Woolley, 1,542; Barker, 339; Debs, 176.

The Republican candidates for State offices and for Congress were elected. The vote for Governor stood: Herred, 53,803; Lien, 40,001; Carlisle, 1,331; Stair, 316.

The changes in the Constitution were submitted: One was the repeal of the dispensary amendment, which was adopted in 1898, but had not gone into effect for lack of legislative action to prescribe a method of administering it. The other was to allow the State to loan $1,000 on a single quarter section of land, the limit having been reduced from the original dispensary provision 48,673 votes were cast and 33,972 against. The second amendment was carried by a vote of 49,949 to 5,653.

The Legislature will be constituted as follows: Senate, 39 Republicans, 6 fusionists; house, 78 Republicans, 9 fusionists.

**SPAIN**, a kingdom in southwestern Europe. The executive power is vested in the Cortes, consisting of a Senate of 36 members and a Congress of 432 members. Of the Senators half are life and official members and half are elected by the provincial and communal assemblies, the ecclesiastical bodies, universities, and academies, and the most highly assessed taxpayers, prescribed by law, and the other half are royal princes, grandees of Spain who have an income of 60,000 pesetas or more, captains general of the army, admirals of the navy, archbishops, and presiding judges of the superior tribunals, numbering altogether 80. The Crown appoints 100 life Senators.

The elective Senators sit for ten years, half being renewed every five years, but if the Cortes are dissolved all go out. Every Spaniard twenty-five years of age enjoying full civil rights and a citizen of a municipality for two years possesses the right of suffrage. The Congress is composed of 10 Deputies at large receiving over 10,000 votes in several districts, 88 Deputies elected by 26 electoral colleges in which a system of minority representation is carried out, and 334 Deputies elected by districts. The present King of Spain is Alfonso XIII, born May 17, 1886, posthumous son of Alfonso XII and Maria Cristina, an archduchess of Austria, who during her son's minority acts as Queen Regent. The Council of Ministers consists of 24 members appointed by the President of the Cortes, elected in the beginning of 1900 of the following members: President of the Council and Minister of Foreign Affairs, Francisco Silvela; Minister of Justice, Count Torrecamaza; Minister of War, Gen. Azcarra; Minister of Marine, Gomez Imaz; Minister of Finance, Señor Villaverde; Minister of the Interior, Señor Dato; Minister of Public Works, Agriculture, and Commerce, Marquis Pidal.

**Area and Population.—**The area and population of the 49 provinces at the census of Dec. 1, 1897, is given in the table on this page.

The population consisted of 8,775,730 males and 9,315,770 females. The legal population was 8,884,309 males and 9,341,651 females; total, 18,226,940.

The population of Madrid on Dec. 31, 1897, was 512,150; Barcelona, 509,589; Valencia, 204,768; Sevilla, 146,205; Malaga, 123,579; Murcia, 108,408.

**Finances.—**The revenue for the financial year 1897-98 was 803,045,003 pesetas, having increased from 751,993,033 pesetas in 1895-96. The expenditure was 869,102,225 pesetas, having grown from 780,242,373 pesetas. The provisional results for 1899 made the revenue 842,533,002 pesetas and the expenditure 907,189,184 pesetas. Señor Villaverde's budget for 1900 calculated the revenue at 937,980,415 pesetas, of which 391,342,909 pesetas were to come from direct taxes on land, mines, trade, industry, Government salaries, registration, etc., 350,000,000 pesetas from indirect taxes, customs, and excise, 156,150,024 pesetas from the tobacco monopoly, the lottery, the mint, and other sources, 10,753,254 pesetas from property of Government, 2,020,000 pesetas from sales of property, 9,755,000 pesetas from the public treasury, and 84,147 pesetas from Fernando Po.

The total expenditures were estimated at 937,178,134 pesetas, of which 9,250,000 pesetas were for the civil list, 1,038,055 pesetas for the Cortes, 421,923,882 pesetas for the public debt, 1,038,176 pesetas for the courts of law, 71,075,389 pesetas for pensions, 812,883 pesetas for the Council of Ministers, 4,754,290 pesetas for the Ministry of Foreign Affairs, 54,453,919 pesetas for the Ministry of Justice, 174,329,539 pesetas for the Ministry of War, 28,341,013 pesetas for the Ministry of Marine, 24,319,802 pesetas for the Ministry of the Interior, 88,603,104 pesetas for the Ministry of Public Works, 10,152,019 pesetas for the Ministry of Finance, 29,951,020 pesetas for collection of taxes, and 690,851 pesetas for Fernando Po. The Cortes refused to sanction the scale of taxation proposed by Señor Villaverde, and demanded economies. Some of the new taxes were therefore stricken out, and the expenses of all the departments were curtailed. The appropriations for the Ministry of Justice were cut down to 53,466,537 pesetas, those for the Ministry of the Interior to 23,441,097 pesetas, of the Ministry of Public Works to 80,756,422 pesetas, and of the
Ministry of Finance to 18,238,083 pesetas, the cost of tax collection to 29,759,904 pesetas, and each additional operation to 353,974 pesetas. The army budget was reduced to 165,974,331 pesetas, that of the navy to 25,002,973 pesetas. An act was passed taxing the interest on the public debt 20 per cent., which lowered the expense of the debt to 418,557,135 pesetas, the sinking fund being reduced along with the proposed scheme of taxation accepted by the Cortes made the revenue from direct contributions 376,020,790 pesetas; from indirect taxes and customs, 323,640,000 pesetas, from stamps and monopolies, 156,600,024 pesetas. The total revenue according to the revised budget was 883,908,215 pesetas, and the budget of 1886 was 885,451,622 pesetas, that of 1887 was 885,998,215 pesetas. The Budget Committee of the Cortes, which was composed of a large number of the most important people at large were still extremely dissatisfied with the new taxes, although they fell far short of the sacrifices required to meet the additional burden caused by the wars with the colonies and the United States and by the loss of the colonies. In January, 1900, representatives of all the organizations of a faithful debt of 1,445,400,000 pesetas, that of the Cortes prior to Jan. 1, 1901, ratified the agreement, the convention would be null and void. On Feb. 9 the Chamber agreed to an increase in the octrois duties. The Cortes authorized the conversion of the Cuban 6-cent. mortgage bonds of 1862, amounting to 365,-000,000 pesetas, from 4-cent. to 6-cent. The Spanish Government promised to restore the interest up to the full rate if ever the tax of 20 per cent. on the interest of the internal debt should be suppressed; and if this were diminished to diminish proportionately the tax on the foreign bonds. It was also agreed that the amount was reduced from 150,000,000 to 100,000,000 pesetas. the Cortes prior to Jan. 1, 1901, ratified the agreement, the convention would be null and void. On Feb. 9 the Chamber agreed to an increase in the octrois duties. The Cortes authorized the conversion of the Cuban 6-cent. mortgage bonds of 1862, amounting to 365,-000,000 pesetas, from 4-cent. to 6-cent. The Spanish Government promised to restore the interest up to the full rate if ever the tax of 20 per cent. on the interest of the internal debt should be suppressed; and if this were diminished to diminish proportionately the tax on the foreign bonds. It was also agreed that the amount was reduced from 150,000,000 to 100,000,000 pesetas. The conversion was effected at the rate of 113 per cent. for the Spanish internal bonds, 120 per cent. for the Cuban bonds of 1886, par for the Cuban issue of 1890, and 127½ per cent. for the Philippine external bonds. The Philippine mortgage bonds were converted at the rate of 82½ per cent. The amortization of the redeemable bonds was suspended indefinitely by laws passed in 1897 and 1898 and the law of Aug. 2, 1899, which fixed a tax of 20 per cent. on their coupons and those of the internal and the unstamped external 4-cent. bonds. The conversion added over 3,000,000,000 pesetas to the nominal amount of the Spanish internal perpetual debt, which was 2,543,361,578 pesetas. The conversion of the mortgage and internal bonds in the same amount of the internal bonds was authorized previously. A loan issued in the beginning of June was subscribed many times over, so that when popular subscribers had received each one bond the banking houses received less than 4 per cent. of the amount.
they applied for. The consolidation of the debts incurred during the colonial war was proposed in the budget for 1901, in which an increase of the spirit tax and a revision of pensions were provided for. The total revenue for 1900, was 56,955,910 pesetas, or an expenditure at 925,442,150 pesetas, leaving a surplus of 7,930,230 pesetas, to be used for the purchase of quick-firing guns. The increase in the yield of direct taxes was estimated at 16,506,940 pesetas, that of direct taxation at 21,500,000 pesetas, of monopolies at 7,650,000 pesetas, of state, 1,023,420 pesetas, and of miscellaneous receipts at 250,000 pesetas, the total increase of revenue over 1900 being calculated at 48,433,166 pesetas, and that of expenditure at 21,046,329 pesetas.

The amount of the state debts of Spain in 1899 was stated to be 5,820,755,998 pesetas, that of the floating debt of the treasury to be 2,175,288,000 pesetas, and that of the colonial debts to be 1,175,388,000 pesetas, making a total debt of 9,535,339,873 pesetas. The interest on the state debt was 270,554,906 pesetas, on the treasury debt 93,020,556 pesetas, and on the colonial debts assumed by Spain 34,681,877 pesetas; total interest charge, 413,577,139 pesetas. The external debt, including the proposed moratorium, amounted to 35,918, consisting of a loan of 214,450 secured on the quicksilver mines, perpetual rentes amounting to 760,887,638, and 559,685,060 of redeemable bonds.

The Army. The decree of July 18, 1899, fixed the strength of the regular army at 45,770 infantry, 12,441 cavalry, 12,834 artillery, 4,115 engineers, 1,681 army hospital officers and 300 sanitary troops, 405 men in the Royal Guard, 554 in the military academy, and 1,534 in special services; total, 80,000 men, not including 18,140 in the gendarmerie. The war strength is 132,000 infantry, 17,156 cavalry, 12,166 artillery, 11,072 engineers, 11,140 administrative troops, and 453 sanitary troops; total, 133,972 men. In peace there are 14,300 horses and 1,500 mules and 500 guns. The army is organized in 8 regional corps, 3 containing 1 division, 3 containing 2 divisions, and 1 containing 3 divisions of infantry, with a division of cavalry for 3 of the corps and for 1 a brigade. In the Balearic and Canary Islands and Ceuta 3 infantry regiments and 1 marine battalion form a separate 1 brigade. Spaniards, when drawn for the army at the age of nineteen, may obtain exemption by paying 1,500 pesetas. There are 13 military colleges, and the youths from aristocratic families have enjoyed by custom the privilege of entering the army without regard to the needs of the service. The consequence is that there are officers every grade who could not find employment even in war, no fewer than 28,000 altogether.

The Navy. The Spanish war fleet after the losses in the American war was reduced to 1 second-class turret ship of 9,918 tons, 2 coast guards of the second class, 4 first-class, 2 second-class, and 3 protected cruisers, 1 third-class unarmored cruiser, 5 destroyers, 4 torpedo gunboats, and 4 first-class and 7 second-class torpedo boats, and 7 second-class gunboats and small vessels of special types. There were in 1900 under construction 2 second-class cruisers, 1 third-class cruiser, 1 gunboat, and 4 first-class torpedo boats, and 3 protected cruisers. The commissioned list of matches, castile soap, licorice, cream of tartar, perfumery, ornamental metal work, silver jewelry, carved woodwork, shoes, and guitar strings. Spain also exports onions, sponges, almonds, raisins, and Malaga grapes. There were 800,000 barrels of grapes exported in 1898, and in 1900 the shipments would have as well as to the demand for the confectious, and the new is attained. The manufacture and sale of tobacco are a monopoly that was granted to the Bank of Spain in 1887 and extended in 1896 for a period of twenty-five years longer. Although the cultivation of tobacco in Spain is forbidden by law, the managers of the monopoly have begun experiments with different varieties.
districts, expecting to obtain an exemption for the monopoly in the event of their proving successful.

The total value of imports for the fiscal year 1899 was 8,567,000,000 pesetas, with exports of 8,943,206 pesetas. The imports of cotton were 71,914,000 pesetas in value; of coal, 43,216,000 pesetas; of timber, 30,908,000 pesetas; of chemical products, 25,908,000 pesetas; of machinery, 24,048,000 pesetas; of animals, 23,536,000 pesetas; of tobacco, 23,195,000 pesetas; of codfish, 22,770,000 pesetas; of coffee, 17,292,000 pesetas; of wine, 15,669,000 pesetas; of hides and skins, 13,112,000 pesetas; of cacao, 10,227,000 pesetas; of wool, 9,007,000 pesetas; of vessels, 9,813,000 pesetas; of silks, 5,799,000 pesetas; of linen yarn, 3,833,000 pesetas; of petroleum, 7,528,000 pesetas; of raw silk, 6,614,000 pesetas. Exports amounted to 13,974,400 pesetas; of iron, 78,198,000 pesetas; of copper, 60,546,000 pesetas; of lead, 57,675,000 pesetas; of olive oil, 46,404,000 pesetas; of cotton cloth, 38,317,000 pesetas; of cork, 31,829,000 pesetas; of oranges, 23,772,000 pesetas; of animals, 23,375,000 pesetas; of hides and skins, 20,087,000 pesetas; of dried raisins, 16,904,000 pesetas; of hemp, 10,050,000 pesetas; of tobacco, 11,037,000 pesetas; of quicksilver, 9,404,000 pesetas; of shoes, 8,067,000 pesetas. The imports of alimentary substances, including wine, were 200,050,015 pesetas in value, and the exports 203,542,057 pesetas. Imports of metals and manufactures thereof were 27,924,541 pesetas, and exports 101,930,638 pesetas. Imports of minerals, glass, and pottery were 75,583,290 pesetas, and exports 157,793,063 pesetas. Imports of cotton and its manufactures were 104,418,813 pesetas, and exports 39,835,541 pesetas. Imports of other textile fibers and manufactures were 22,770,000 pesetas; imports of wood and its manufactures were 53,722,551 pesetas, and exports 38,970,797 pesetas; imports of animals and animal products were 82,130,984 pesetas, and exports 50,623,895 pesetas; imports of machinery, vehicles, and vessels were 101,930,639 pesetas, and exports 731,976 pesetas. The imports of gold and silver in 1899 amounted to 73,596,518 pesetas, and the exports to 14,288,290 pesetas.

The imports from and exports to the principal foreign countries in 1899 were in pesetas as follows:

**Navigation.**—The number of vessels entered at Spanish ports during 1899 was 18,726, of 14,630,115 tons, of which 10,381, of 7,459,819 tons, were with cargoes; the number cleared was 15,418, of 15,265,103 tons, of which 15,504, of 13,989,889 tons, were with cargoes. Of the total number entered 9,096, of 6,203,314 tons, and of those cleared 7,762, of 6,717,698 tons, were Spanish.

The merchant navy in 1899 consisted of 1,052 sailing vessels, of 151,946 tons, and 454 steamers, of 66,932 tons.

**Railroads, Posts, and Telegraphs.**—The length of railroads in operation in 1899 was 8,120 miles, all belonging to companies, most of which have received subsidies or guarantees of interest from the Government.

The post offices in 1898 carried 121,565,000_internal, 19,146,000_international, and 296,000_transport letters, 940,000_internal and 303,000_international postal cards, 96,315,000_internal, 25,417,000_international, and 95,000_transport newspapers and circulars, and 197,000_internal and 59,000_international money letters, containing 253,534,000 and 30,886,000Pesetas respectively. The receipts were 24,817,094 Pesetas; expenses, 11,411,988 Pesetas.

The length of telegraph lines in 1898 was 19,870 miles, with 45,800 miles of wires. The number of internal messages was 4,213,250; of international messages, 1,061,165; of service dispatches, 177,611; total, 5,432,026. The receipts were 8,074,808 Pesetas, and the expenses 7,613,185 Pesetas. The telephone lines had a length in 1898 of 4,900 miles, with 22,650 miles of wire, besides 1,300 miles of long-distance telephones, with 4,295 miles of wire.

**Colonies.**—In December, 1898, Spain by the treaty of peace signed in Paris relinquished Cuba and ceded to the United States the island of Porto Rico, the Philippines, and the islands of the Philippine archipelago. The United States Government therefore offered to purchase the sovereign rights of Spain over these islands for $100,000, and the proposal was accepted by the Spanish Government in July, 1906. The remaining colonial possessions of Spain are territories in Africa having an aggregate area of about 243,977 square miles and an estimated population of 136,000. The island of Fernando Po, with Annabon, Corisco, Elобey, and San Juan, has an area of 830 square miles and 30,000 inhabitants. Hmн, near Cape Nun, is a Spanish settlement with 6,000 inhabitants, covering 27,000 square miles. The territories of Barbados, 243,777 square miles in extent, with an estimated population of 100,000, are administered from the Canary Islands. The territories on the Muni and Campo rivers, having an area of 69,000 square miles and 500,000 inhabitants, are claimed both by Spain and France.

**Political Events.**—The Silvella Cabinet underwent many changes on account of the difficulties of the financial situation and the various opinions regarding military matters and political and administrative reforms. The portfolio of Foreign Affairs which Senor Silvella had taken himself he gave to the Marquis Pidal, who was succeeded as Minister of Public Works by Senor Cardenas. Admiral Lazaga became Minister of Marine. On April 18 the Cabinet was reconstituted as follows: President of the Council and Minister of Marine,
SPAIN.

Francisco Silvela; Minister of Foreign Affairs, Marquis Aguilar de Campo; Minister of Justice, Marquis del Vado; Minister of Finance, Señor Villaverde; Minister of the Interior, Señor Dato; Minister of War, Gen. Azcarra; Minister of Public Instruction, Señor Garcia Alix; Minister of Public Works, Señor Gasset. Other modifications occurred in May. On July 6 Señor Villaverde resigned the Ministry of Finance, and was succeeded by Señor Allen de San Lazar, who carried to completion the negotiations with the foreign bondholders regarding a reduction of interest. The temper of the Spanish people was such that had the foreign owners of Spanish reales not consented to this concession Spanish war debts would have been driven to exact the full tax that Spanish bondholders had to pay, as the Cortes had decreed, although it was a breach of faith to demand any tax from them. On Oct. 16 Gen. Azcarra resigned his portfolio and Gen. Linares became Minister of War, having first stipulated that he be allowed time to liquidate the war, and then to entirely reorganize the army, and that he should have a free hand in dealing with the army and its reform. One of his first acts was to appoint Gen. Weyler as General of Madrid, and to make other important military changes without consulting the Cabinet. The appointment of Gen. Weyler, whose name was unsavory in the mass of the liberties of every citizen of the capital was so unpopular that a dangerous tension in the public mind was created. The ministers were not pledged, although the Premier was, to let Gen. Linares do anything he liked to do with the army. Señor Silvela found himself confronted with so many resignations that he saw no path to secure his government's existence but to obtain the resignation of the whole Cabinet in the hands of the Queen Regent. Gen. Azcarra was then invited to form a Cabinet, which was constituted on Oct. 23 as follows: President of the Council, Gen. Azcarra; Minister of Foreign Affairs, Marquis Aguilar de Campo; Minister of Justice, Marquis del Vado; Minister of Interior, Gen. Garcia Alix; Minister of Finance, Allen de San Lazar; Minister of the Interior, Señor Ugarte; Minister of Public Works, Commerce, and Agriculture, Sanchez Toca; Minister of Public Instruction, Garcia Alix; Minister of Marine, Admiral Mozo. When he found that his colleagues would not agree to an increase in the tariff, Admiral Mozo tendered his resignation, and Marquis Arrellano accepted the post, but he resigned directly, and Admiral Ramoz Izquierdo became Minister of Marine. Gen. Li- nares secured the assent of his colleagues to a series of decrees making radical changes in the army organization and effecting many economies by which money can be obtained for improving the armament and instituting maneuvers and firing practice. The ministers decided, however, that all plans for army reform must be laid before the Cortes.

A new extradition convention was arranged between Spain and the United States, and negotiations were carried on during the year for a general treaty of friendship, commerce, and navigation to replace the old treaty, which lapsed by reason of the war. In November a Spanish-American congress assembled in Madrid. All the Spanish republics of Central and South America were represented, and it was decided to hold similar congresses every five years. One of the most important decisions of the congress was to establish a tribunal for the arbitration of any differences that may arise between Spain and any of the republics or between the republics themselves; and to facilitate the working of this tribunal it was resolved to seek to bring about the greatest possible uniformity in the commercial, extradition, maritime, trade-mark, and other laws affecting international intercourse. Emigration from Spain is to be directed hereafter exclusively to Spanish-American countries, which will grant special advantages to Spanish settlers. With the aid of academies and societies an active, intellectual intercourse will be kept up, and the science, literature, and art of the Spanish-speaking countries will be made as far as possible the common property of all. Special attention will be given to the preservation of the common language in its purity, and it is hoped that the American will become a foundation of the highest authority, and will send over every year some of their best scholars to study Spanish. In order that professional diplomas shall have the same value and recognition in all the countries uniform standards of education in all the schools will be promoted. By preferential tariffs, subsidies to steamship lines, reduction of postage and telegraph rates, the establishment of bonded warehouses, the laying of a Spanish-American cable, the founding of a great commercial exchange bank with headquarters in Madrid and branches in all the capitals of Spanish America, and other similar means, the commerce between the Spanish countries will be encouraged and the advantages of a common market and a medium of exchange will be sought. The press of the different countries will be brought into closer relations by reducing postage and telegraph rates.

STEEL CARS.

About thirteen years ago began in a small way the manufacture of pressed steel cars to take the place of cast iron in freight service. The cost was much lower, the cars lighter and cheaper, and effected a large saving in the weight of a car. After continued use had demonstrated the practical utility of the smaller steel parts, other parts—such as center plates, side bearings, cross-ties, and bolsters—were made. Then came the all-steel truck, which saved from 35 to 75 per cent. in weight of a car. The all-steel underframing soon followed.

Starting with the principle that the ideal object should be to transport the heaviest possible loads with the smallest possible dead weights, Charles T. Schoen invented and designed the all-steel car. These cars were first introduced early in 1896. In the course of the 1896 season much was accomplished, and from the following year the manufacture of steel cars made rapid strides. Details of the car as it appeared in the details, most of which are covered by patent. Steel cars are built in the following types: Flat cars, gondolas, coke cars, ordinary coal and ore cars, and also what is known as a self-clearing hopper car, which is perhaps the most important type. A very few steel box cars have been built, but they are still regarded as experimental.

Passenger cars are not made of steel, the only distinct advance toward metallic coach work being seen in the sheathing of a considerable number of passenger-car bodies with copper. The construction of steel cars differs from the construction of wooden cars in that steel requires an entirely different treatment in design. There are several different shapes of material used in building steel cars; for example, standard rolled shapes, special pressed shapes, and a combination of cast-steel parts, rolled shapes, and pressed shapes. There are also built many cars which in a measure may be classified as steel cars. In this class the underframing is steel, while the body of the car is of wood. Steel cars are built with a carrying capacity of 30 to 55 tons, and while many of the smaller old style wooden cars carry as little as 20 tons, the maximum carrying capacity of modern wooden
cars runs as high, in a few instances, as that of the steel car, although the average capacity of wooden cars is less.

The advantages of steel cars over wooden cars are many. They are practically indestructible in case of fire. They are stronger, and therefore can withstand shocks in a collision which ordinarily destroys a wooden car. It is generally acknowledged that thirty years is a very conservative estimate for the life of a steel car, while long ex-
perience has shown that the average life of a wooden car is about fifteen years, at the end of which time the car has practically been rebuilt. The scrap of a retired steel car is always marketable. Wood scrap is valueless except as fuel for boilers. The approximate cost of a wooden car of 80,000 pounds capacity is about $525, while a steel car of the same carrying capacity would cost about $810. But the difference in the first cost of a steel car is soon made up by the difference in cost of carrying dead weight and in the saving in repairs.

The difference in weight between a number of 80,000 pounds capacity wooden cars and steel cars, recently figured on, showed the wooden car to weigh 18.2 tons and the steel car 16.1 tons. Putting the cost for hauling per ton-mile at 3 mills, shows a saving per ton-mile of 6.3 mills per car-mile in favor of the steel car. The average freight-car mileage on the Pennsylvania Railroad system last year was 10,000 miles per car. Multiplying this by 6.3 mills, would show an annual saving of $863 per car in favor of the steel car.

As published in advance sheets of the report of the Interstate Commerce Commission for 1900, the total number of freight cars of all kinds in use in the United States on June 30, 1899, was 1,293,510, not including 46,556 cars which were used in private service of the railroads. If these cars were all steel, the estimated saving on the basis of 80,000 pounds carrying capacity would be a sum far in excess of $80,000,000, but not all cars are of 80,000 pounds capacity. Another great saving, as previously intimated, is in the cost of repairs of a steel car. The average annual cost of repairing a wooden car is from $35 to $40, while the average cost of repairing a steel car per annum is from $10 to $15.

Steel cars for export are generally shipped in sections, and on reaching their destinations are assembled under the supervision of a foreman sent out by the builders. The rapid growth of the steel-car industry can readily be seen by the following figures: In 1900 the total number of all-

SUNDAY REST.

A STEEL CAR—SELF-CLEARING HOPPER.

steel cars turned out was 14,464, of these 447 being for export. In 1899 the total number of steel cars turned out was 10,500, while in 1898 but 2,700 were built. In addition to this, 4,140 wooden freight cars for domestic use had steel underframes. The accompanying illustration shows a representative type of steel car now in use.

The largest makers of steel cars are the Pressed Steel Car Company of Pittsburg, Pa., their shops having a capacity of 100 cars a day. The Sterlingworth Railroad Supply Company, of Easton, Pa., makes what is known as the rolled-steel car. In this construction the body of the car is made up of steel channels bound by malleable castings at the corners and riveted at intermediate points throughout their length. Other makers of steel cars are the Cambria Steel Company, Johnstown, Pa.; the American Car and Foundry Company, St. Louis; and the National Rolled Steel Car Company, of Pittsburg, Pa. The Goodwin Car Company, of New York, build steel dump cars. These are used for ballast, ore, etc.

SUNDAY REST, INTERNATIONAL CONGRESS ON. An International Congress on Sunday Rest was held at Paris, France, in connection with the Universal Exposition, Oct. 9 to 12, and was attended by men from different countries representing labor and Sunday rest associations, manufacturing and commercial industries, and other clients. M. N. R. Berrenger, Senator of France, presided. Papers were read on different phases of the Sunday question as related to commerce, railroads, manufacturing, and the state. The experi-

ment of the complete closing of the Magasin du
Louvre on Sunday, where goods have for several years been neither bought nor delivered on that day, was the subject of a special paper, and was represented as having been found satisfactory in its working. Differences of opinion were manifested in the discussion of the question of social legislation for the protection of men employed in industries, the principal ground of opposition to such action being that it would be in effect an interference with personal liberty; but complete agreement existed as to the duty of the state to give the weekly rest to its own men. A resolution was passed after long debate by the state to protect its citizens in their privilege of rest, but recognizing the principle that each state should judge as to the expediency and extent of the intervention it might exercise. On the presentation of the report of the Woman's National Sabbath Alliance (United States), the congress advised the formation of similar associations of women in Europe. Other meetings were held in Paris about the same time with this one, but not connected with the exposition, on the religious observance of the Lord's Day, among them the meeting of the International Federation for the Observance of the Sabbath.

**Sweden and Norway.** Two kingdoms in the north of Europe united by a treaty, a sovereign. The throne in both descends to the heirs of the house of Bernadotte. Affairs common to both kingdoms are referred to a mixed Council of State. The reigning King is Oscar II, born Jan. 21, 1829. The heir apparent is Prince Gustavus, Duke of Wermland, born June 16, 1858.

**Sweden.**—The legislative power is vested in the Riksdag, consisting of the First Chamber, having 150 members, elected for nine years by the provincial and municipal bodies, and the Second Chamber, having 230 members, elected for three years, 50 in the towns by direct suffrage and 150 in the rural districts, a part directly and a part indirectly, by natives of Sweden who own or farm land of a certain value or pay taxes on 800 kronor of income. The Minister of State at the beginning of 1900 was E. G. Boström, the Minister of Foreign Affairs was C. H. T. A. de Lagersheim, and the Councilors of State and chiefs of the various departments were: Justice, Dr. P. F. S. L. Ammer- stedt; Foreign Affairs, Count Arensberg; Interior, Count G. Dyrssen; Interior, J. E. von Kruisen-stjerna; Finance, Count H. H. Wachtmeister; Ecclesiastical Affairs, N. L. A. Claeson; other Councilors of State, S. H. Wikblad and D. G. Res- tadius.

**Area and Population.** The area of Sweden is 172,576 square miles. The population was computed on Dec. 31, 1899, to be 5,097,402, consisting of 2,486,447 males and 2,610,555 females. The number of marriages in 1898 was 39,900; of births, 149,217; of deaths, 79,642; excess of births, 60,575. The number of arrivals was 7,794 and of departures 7,665; net emigration, 5,689. The population of Stockholm, the capital, was 592,422; of Göteborg, 126,549.

**Finances.** The revenue was estimated in the budget for 1901 at 145,681,000 kronor, of which 969,000 kronor are derived from the land tax, 1,500,000 kronor from tonnage dues, 2,200,000 kronor from farmed domains, 700,000 kronor from the personal assets of ministers, 640,000 kronor from the receipts on railways, 1,610,000 kronor from telegraphs, 5,800,000 kronor from forests, and 1,131,000 kronor from other resources, all of which are classed as ordinary receipts. The extraordinary receipts are 49,000,000 kronor from domains, 11,500,000 kronor from the post office, 5,000,000 kronor from stamped paper, 18,000,000 kronor from the liquor tax, 9,000,000 kronor from the impost on beet sugar, 3,000,000 kronor from the tax on incomes, and 850,000 kronor from various sources. The surplus carried over from former years was 2,316,000 kronor, and the total amount of ordinary receipts is 96,440,000 kronor, and of extraordinary receipts 145,681,000 kronor. The total expenditures were estimated at 132,180,700 kronor, of which 89,504,993 kronor are called ordinary and 42,624,707 kronor extraordinary expenditures. Of the ordinary expenditures 1,320,000 kronor are for stamps, and 772,870 kronor for the sale of kronor for justice, 641,550 kronor for foreign relations, 28,520,084 kronor for the army, 8,652,295 kronor for the navy, 18,019,550 kronor for the Interior Department, including 2,792,903 kronor for administration, 10,750,000 kronor for the post office, 1,610,000 kronor for telegraphs, 1,706,724 kronor for hygiene, and 1,156,833 kronor for other expenses, 7,267,675 kronor for the Finance Department, including 2,982,200 kronor for customs, 450,000 kronor for control of excise duties, and 3,835,475 kronor for other expenses, 13,361,074 kronor for the Department of Worship and Instruction, 4,606,965 kronor for the Agricultural Department, in which 2,279,800 kronor are for forests, 2,327,000 kronor for the navy, and 3,632,450 kronor for pensions. The extraordinary expenditures are 8,442,316 kronor for the army, 13,221,103 kronor for the navy, 7,419,530 kronor for the interior, 973,025 kronor for the Finance Department, 1,710,026 kronor for worship and instruction, 2,904,335 kronor for agriculture, 12,540,000 kronor for education, 4,777,100 kronor for pensions, 297,350 kronor for railways, and 297,350 kronor for other purposes. The expenditures of the public debt office are 11,841,300 kronor for interest and amortization, 1,400,000 kronor for the reserve for insuring workmen against illness, and 250,000 kronor for the insurance fund against accidents to workmen, which items added to the ordinary and extraordinary expenditure of the Government make the total estimated disbursements balance the estimated receipts.

The public debt on Jan. 1, 1900, amounted to 317,489,122 kronor, borrowed almost exclusively for the construction of railroads, including 48,794,500 kronor of internal bonds issued in 1887 and bearing 4½% interest; 3,835,074 kronor outstanding of the foreign loan of 1880, 58,173,785 kronor of the loan of 1886, 32,741,333 kronor of the loan of 1890, 36,000,000 kronor of the loan of 1899, half the authorized issue, all these bearing 3½ per cent. interest, and 25,111,111 kronor of the international loan of 1888 and 18,000,000 kronor, half the authorized issue, of that of 1894, both of them paying 3½ per cent. A new loan of £2,000,000 sterling was arranged in June, 1900.

**The Army and Navy.**—The Swedish army is not yet organized on the system of universal liability, although this was enacted in 1821. The cantoned troops are maintained by rural proprietors and public institutions, 3,771,000 kronor of which is from railways, and for three years. The effective in 1900 were 48 officers and 233 men on the general staff, 1,220 officers and 23,792 men in 56 battalions of infantry, 232 officers and 4,615 men in 50 squadrons of cavalry, 237 officers and 2,700 men in the field artillery, 30 officers and 497 men in the fortress artillery, 3,771,000 kronor of which is from railways, 77 officers and 821 men in 9 companies of engineers, and 66 officers and 622 men in 8 companies of train; total active army, 1,946 officers, 684 employees, 1,728 noncommissioned officers, 1,655 musicians, and 33,057 men, with 6,891 horses. There were 683 officers in reserve,
and the Landwehr was estimated at 250,000, bringing the fighting strength of the nation up to 290,412 men of all ranks, not counting 8 classes of Landsturm, comprising men between thirty-two and forty years of age. The navy in 1900 consisted of 7 turret ships, 4 old armored monitors, 9 old armored gunboats, 5 torpedo cruisers built since 1897, 3 antiquated corvettes, 9 nearly obsolete first-class gunboats, 1 second-class gunboat, and 13 first-class and 9 second-class torpedo craft. The principal strength of the navy lies in the armored coast-defense turret ships, of which there will be 10. The Svea, of 4,100 tons, launched in 1886, has 11.8 inches of side armor, and carries 2 10-inch guns, 4 4.7-inch quick-firing guns, and 14 smaller ones. The size, the coal endurance, the gun protection, and the speed have been improved gradually in the later ones, while the weight and thickness of the armor have been lessened without lowering its protective value. The Nord and Thor, launched in 1898, have 3,400 tons displacement, armor 9.5 inches thick, a battery of 6 4.7-inch quick firers, besides the 2 10-inch guns in the turret, and a speed of 16.8 knots. The Dristigheten, not yet completed, has 3,500 tons displacement, and the remaining 3 vessels will displace 3,650 tons, with 9.5 inches of armor, 10-inch engine houses, and a speed of 17 knots, and the armament adopted for the Dristigheten, consisting of quick-firing guns exclusively, 2 of 8-inch bore mounted in the revolving turret, and 2 of 6-inch bore. The armored gunboats are being rearmed with 4.7-inch quick-firing guns. The navy is officered by 3 admirals, 6 captains, 12 commanders, 12 lieutenant commanders, 54 lieutenants, and 26 sublieutenants on the active list, and 150 other officers in the reserve. Commerce and Industry.—The cereal crops of Sweden in 1898 were worth 272,000,000 kronor. The yield of rye was 7,565,500 hectolitres of wheat, 1,600,500 hectolitres; of barley, 5,217,100 hectolitres; of oats, 24,814,400 hectolitres; of mixed grain, 3,721,200 hectolitres; of pulse, 738,800 hectolitres; of potatoes, 13,575,100 hectolitres. The live stock at the beginning of 1898 consisted of 516,809 horses, 2,538,192 cattle, 1,296,851 sheep, and 892,539 hogs. Of 2,086,110 tons of iron ore raised, 1,400,800 tons were exported. There were 530,863 tons of pig iron produced, of which 72,469 tons were exported, and of bar iron 160,282 tons were exported from 309,715 tons manufactured. There were 10,068 tons of silver-lead ore, 25,207 tons of copper ore, 56,636 tons of zinc ore, and 2,740 tons of manganese ore raised. The production of copper was 78,905 kilogrammes; of lead, 1,470,509 kilogrammes; of silver, 2,218 kilogrammes; of gold, 113 kilogrammes. The coal output was 224,343 tons. The total value of imports in 1898 was 455,249,000 kronor; of exports, 344,909,000 kronor. The imports of coal were valued at 47,064,000 kronor; of wheat, 30,190,000 kronor; of rice, 21,010,000 kronor; of coffee, 22,329,000 kronor; of iron manufactures, 17,191,000 kronor; of skins and hides, 16,210,000 kronor; of woolens, 16,114,000 kronor; of woolen yarn, 10,242,000 kronor; of cotton, 10,190,000 kronor; of fish, 9,767,000 kronor; of fertilizers, 9,455,000 kronor; of petroleum, 8,126,000 kronor; of tobacco, 5,901,000 kronor of pork, 5,530,000 kronor; of wood manufactures, 5,626,000 kronor; of silks, 5,111,000 kronor; of bran, 5,086,000 kronor; of cotton yarn, 5,077,000 kronor; of iron, 4,014,000 kronor; of paper, 4,309,000 kronor; of wine, 4,306,000 kronor; of oil cake, 4,052,000 kronor. The exportation of lumber was 146,402,000 kronor; of iron, 45,299,000 kronor; of butter, 39,932,000 kronor; of wood pulp, 15,534,000 kronor; of stone, 8,840,000 kronor; of machinery, 8,643,000 kronor; of paper, 7,380,000 kronor; of joinery, 7,742,000 kronor; of fish, 7,024,000 kronor of matches, 7,179,000 kronor; of iron manufactures, 5,827,000 kronor; of oats, 4,245,000 kronor; of glass, 4,233,000 kronor. The value in kronor of imports from and exports to the various foreign countries in 1898 is shown in the following table:

The industrial products of Sweden have increased tenfold in value in thirty years, being estimated at 827,500,000 kronor in 1897. In wood and iron the country is one of the richest, and water power and electricity make it independent of coal. Local consumption has trebled in thirty years, and in the last few years wages and the cost of living have gone up 30 per cent.

Navigation. The number of vessels entered at Swedish ports during 1898 was 34,702, of 7,700,000 tons, of which 17,810, of 2,862,000 tons, were Swedish; 2,314, of 841,000 tons, were Norwegian; and 14,578, of 3,997,000 tons, were foreign. The total number cleared was 34,621, of 7,673,500 tons, of which 2,588, of 12,360,000 tons, were Swedish; 838, of 1,538,000 tons, were Norwegian; and 3,977, of 5,201,000 tons, were foreign. The number of oness entered was 14,252, of 3,281,000 tons, were with cargoes; of the number cleared 22,125, of 5,383,000 tons, were with cargoes. The number of steamers among the vessels entered was 15,548, of 6,314,000 tons, of which 5,412, of 2,705,000 tons, were with cargoes; the number of steamers cleared was 15,454, of 6,824,000 tons, of which 7,053, of 4,112,000 tons, were with cargoes. The merchant navy on Jan. 1, 1899, consisted of 2,004 sailing vessels, of 291,392 tons, and 817 steamers, of 265,594 tons.

Railroads, Posts, and Telegraphs. —The railroads on Jan. 1, 1900, had a total length of 5,030 miles, of which 2,990 miles were in the Kingdom, and 4,390 miles to companies. The Government lines cost 325,000,000 kronor to construct, the private railroads 312,000,000 kronor. The Government railroads carried 7,782,919 passengers and 4,968,300 tons of freight in 1896, private railroads 12,630,720 passengers and 11,364,000 tons of freight. The total receipts in 1897 were 65,997,537 kronor, and expenses 36,471,958 kronor.

The post office in 1898 carried 64,344,000 internal, 15,571,000 international, and 341,000 transit letters; 7,939,000 internal, 1,376,000 international, and 51,000 transit postal cards; 120,603,000 internal, 7,449,000 international, and 125,000 transit newspapers and circulars, and 3,580,000
internal money letters and postal orders, remitting 816,941,000 kroner, and 38,969,000 international ones, remitting 64,913,000 francs. The receipts were 14,824,053 francs, and expenses 13,345,879 francs.

The telegraph lines belonging to the Government had a length of 5,540 miles in 1898, with 13,980 miles of wire; those belonging to railroad companies had a length of 9,988 miles with 11,072 miles of wire. The number of paid internal dispatches was 129,681; international, 514,430; in transit, 331,256; service dispatches, 156,899. The receipts were 2,364,326 francs, and expenses 2,010,746 francs.

There were 198 systems of urban telephones in 1898, having 45,540 miles of wire; and the number of conversations was 93,846,774. The long-distance lines had a length of 6,145 miles, with 33,360 miles of wire; number of conversations, 2,785,952.

Legislation.—The improvement of the military power of Sweden on land and sea was the task most urgently impressed on the Swedish Cabinet. On Dec. 18, 1900, one of the measures brought forward was for the payment of damages to laborers injured during their work. The Second Chamber declined to sanction the erection of a fortress near Boden at the end of the railroad, but the Government majority in the First Chamber was sufficient to carry the measure. Gislaved was given 3,000,000 kronor for small arms and ammunition, and increased the sum allotted to new naval construction to 1,725,000 kronor for 1901. In the beginning of May it was proposed in the First Chamber to impeach the ministers because a Norwegian, M. von Ditten, had been appointed to the chief position of the Ministry of Defense. Major Gen. P. T. Holst; Secretary of State, H. Lehmann; section of the Council sitting at Stockholm, Minister-of-State O. A. Blehr and Councilors-of-State G. A. Thulesen and J. G. Løvland; General Secretary, H. Schlyter.

Area and Population.—Norway has an estimated area of 320,335 square miles. The population on Dec. 31, 1897, was estimated at 2,122,400. The population of Christiania in 1900 was computed to be 226,423, having grown from 148,213 in 1891. The number of marriages in 1898 was 15,039; of births, 64,821; of deaths, 32,693; excess of births, 32,128. The number of emigrants in 1898 was 4,859; in 1898 the number was 6,699. The population of each of the American, Canadian, and Argentine provinces is greater than that of any other European country except France. This is due to the large emigration, especially to the United States. To this fact, since a great part of the emigration consists of young men, is due in considerable measure the excess of women over men. Another cause is especially the large number of Norwegian sailors, the men, so many of whom are sailors or fishermen. The number of Norwegian settlers in the United States was over 320,000 in 1890, and since then Norwegians have been emigrating at the rate of about 6,000 a year to the United States, and considerable numbers to South Australia, Victoria, and New Zealand, not a few to Hawaii and the Argentine Republic.

Finances.—The revenue for the financial year 1899 amounted to 83,800,000 kroner from ordinary sources, and the extraordinary receipts were 320,000 kroner subscribed locally for railroad construction and 11,564,300 kroner from loans. The expenditures for the same year were: for public debt, 3,200,000 kroner; for the ordinary revenue 5,214,500 kroner came from direct taxes; 37,421,500 kroner from customs; 4,073,900 kroner from the liquor tax; 4,100,800 kroner from the malt tax; 1,562,900 kroner from the tax on playing cards; 1,143,500 kroner from courts of justice; 961,100 kroner from the succession duty; 1,450,400 kroner from state property, 961,500 kroner of it from forests and 497,900 kroner from mines; 2,826,300 kroner from revenue of active capital; 4,620,900 kroner from the post office; 2,066,200 kroner from the telegraphs; 11,981,100 kroner from railroads; 2,925,400 kroner from the university, schools, and worship; 394,500 kroner from the Ministry of Agriculture; 10,000 kroner from hospitals and insane asylums; and 2,957,600 kroner from various other sources. The total expenditure for 1899 was 73,919,400 kroner for ordinary expenses of the Government and 15,004,900 kroner for the army. The total amount was 89,099,200 kroner, a considerable increase over the previous year, 85,560,700 kroner.
kroner for extraordinary outlay purposes, the latter including 5,185,000 kroner for the construction of railroads, 4,528,600 kroner for the army, 3,245,000 kroner for the navy, and 2,069,400 kroner for other purposes. Of the total expenditure 488,400 kroner were for the civil list; 814,900 kroner for the Storting; 1,394,700 kroner for the Council of State and the Ministries; 8,908,500 kroner for worship and public instruction, of which 2,000,000 kroner were expended on the university, schools, and worship, and 888,200 kroner for other purposes; 6,789,400 kroner for justice, police, and sanitary service, of which 913,600 kroner went for the police and prisons, 2,394,200 kroner for the public health, and 2,981,600 kroner for other expenses; 3,498,900 kroner for the interior department; 4,680,200 kroner of state maintenance, 1,513,000 kroner for agriculture and stock breeding, 310,200 kroner for fisheries, 55,600 kroner for industry and commerce, 432,500 kroner for forests, and 927,000 kroner for other purposes; 23,857,000 kroner for public works, of which 4,361,600 kroner were for the post office, 3,139,900 kroner for telegraphs and 1,163,200 kroner for waterworks and sanitary inventions, 1,229,800 kroner for the operation of railroads, 2,515,000 kroner for roads, bridges, and canals, 791,200 kroner for ports, and 4,400 kroner for other purposes; 11,880,300 kroner for finance, including 1,842,000 kroner for customshouses, 606,400 kroner for silver mines, 2,502,100 kroner for amortization, 5,032,400 kroner for interest, 749,000 kroner for pensions, and 1,126,500 kroner for other expenses; 10,335,500 kroner for the army, of which 10,630,700 kroner were for the maintenance of the army and 284,800 kroner for triangulation; 5,357,100 kroner for the marine, of which 4,252,500 kroner went for the navy and 1,104,600 kroner for lighthouses and piers; 62,600 kroner for state balls; and 150,100 kroner for accidental expenses.

The public debt on June 30, 1899, amounted to 198,549,100 kroner, comprising 245,500 kroner of old obligations, 29,941,000 kroner borrowed in 1886 at 3½ per cent., 61,835,100 kroner of the 3½ per cent. loan of 1888, 9,757,700 kroner borrowed at 4½ per cent. in 1891, 22,915,100 kroner borrowed in 1894 at 3½ per cent., 800,000 kroner of 5 per cent. bonds issued for the construction of a railroad from Drammen to Randsfjord, 11,313,400 kroner of the 3½ per cent. loan of 1895, 25,242,400 kroner borrowed in 1896 at 3 per cent., and 20,880,000 kroner borrowed in 1898 at 3½ per cent. The Government is allowed to use for purposes of insurance 18,633,900 kroner of cash and arrears to collect, and railroads valued at 111,143,500 kroner; total assets, 166,468,000 kroner.

The Army and Navy.—Military service is obligatory according to the law of June 16, 1885, nominally for six years in the active army, but it is not possible to determine the absolute numbers, which vary from year to year lasting forty-eight days for infantry, sixty days for engineers, eighty days for field artillery, and ninety days for cavalry, followed by twenty-four days of exercise with the Landwehr, and the same amount of practice annually for two or three years. The strength of the active army is about 900 officers and 30,000 noncommissioned officers and men, and these can be supplemented by 800 or more officers and 50,000 men from the Landwehr and Landsturm.

The fleet in 1900 comprised 4 armor clads built since 1897, 4 old monitors, 3 first-class and 8 second-class gunboats, 1 torpedo dispatch boat, and 5 first-class and 17 second-class torpedo craft. The coast-defense turret ships, all built in England, are powerful for their size. The Harold Haafager and Tordenskjold, of 3,500 tons each, have a curved armored deck as well as a 7-inch belt and Harveyzed armor on the barbettes, and carry quick-firing guns only, 2 of 8-inch bore, 6 of 7-inch, 6 3-inch, and 8 smaller ones; their speed is 17.2 knots. The Norge and Eidavold, displacing 4,000 tons, have their smaller guns in casemates of 6-inch armor. By the law of 1892 all Norwegian sailors are required to go through seventy days of training for the naval service. There are 116 officers in active service, 60 in the reserve, and about 700 petty officers and enlisted seamen.

Navigation.—The number of vessels entered at the ports of Norway during 1899 was 14,456, of 3,140,169 tons, of which 6,573, of 1,961,290 tons, were with cargoes, and 7,883, of 1,178,870 tons, for coal. For ballast the total number cleared was 14,445, of 3,157,227 tons, of which 13,216, of 2,636,120 tons, were with cargoes, and 1,229, of 521,107 tons, in ballast. Of the total number entered 7,191, of 2,985,730 tons, were Norwegian and 7,265, of 1,034,439 tons, foreign; of the total number cleared 7,235, of 2,111,528 tons, were Norwegian, and 7,216, of 1,045,889 tons, foreign. The merchant navy owned or manned 5,981 sailing vessels, of 1,120,808 tons, and 1,068 steamers, of 437,570 tons; on Jan. 1, 1900, 5,649 sailing vessels, of 1,052,987 tons, and 1,125 steamers, of 482,247 tons.

Commerce and Production.—The exports of rough lumber in 1898 were valued at 40,153,300 kroner, and of worked lumber at 18,483,900 kroner. Breadstuffs were imported to the amount of 45,061,000 kroner, butter for 737,400 kroner, and 7,505,500 kroner worth of meat and bacon. The mine products in 1897 were valued at 3,480,000 kroner, and furnace products at 1,432,000 kroner. The catch of cod in 1897 was valued at 124,407,000 kroner; herring, 1,129,300,000 kroner, and exports 3,500,000 kroner; mackerel, 247,198 kroner; of salmon and sea trout, 1,090,400 kroner; other fish, 3,026,579 kroner; and lobsters, 450,744 kroner.

The total value of imports in 1899 was 310,485,000 kroner, and of exports 159,387,000 kroner. Imports of cereals were 51,700,000 kroner, and of iron 2,200,000 kroner; of coal, 9,000,000 kroner; of iron ore, 7,400,000 kroner, and exports 400,000 kroner; of iron and steel 1,500,000 kroner, and exports 400,000 kroner; of iron manufactures 27,000,000 kroner, and exports 3,000,000 kroner; of coal 24,000,000 kroner, and exports 100,000 kroner; of cotton manufactures 1,000,000 kroner, and exports 2,300,000 kroner; of hides and leather 10,100,000 kroner, and exports 6,500,000 kroner; of textile materials 6,200,000 kroner and exports 300,000 kroner; of timber 6,400,000 kroner, and exports 1,000,000 kroner; of timber manufactures 2,700,000 kroner, and exports 9,100,000 kroner; of leather goods 1,700,000 kroner, and exports 200,000 kroner; of wood manufactures 3,400,000 kroner, and exports 21,000,000 kroner; of drugs and colors 2,100,000 kroner, and exports 200,000 kroner; of oils 10,100,000 kroner, and exports 6,200,000 kroner; of miscellaneous merchandise 30,200,000 kroner, and exports 16,400,000 kroner. The total imports of agricultural substances were 102,000,000 kroner, and exports 55,500,000 kroner; total imports of raw materials 67,700,000 kroner, and exports 58,200,000 kroner; total imports of
manufactured products 72,400,000 kroner, and exports 34,000,000 kroner; total imports of miscellaneous products 68,400,000 kroner, and exports 16,400,000 kroner.

The values in kroner of the imports from and of the exports to the principal foreign countries in 1899 are given below:

The majority of the inhabitants of Norway are engaged in agriculture, notwithstanding the fact that the arable soil is found only in isolated narrow valleys. Of the total area of the country 64 per cent. is covered by mountains, 9 per cent. by lakes, and tracts covered with snow and ice. Only 3 per cent. is used as grain fields and meadow land, less than 1 per cent. being devoted to grain crops. Out of 120,000 farmers 109,000 own the land they cultivate. The farms are small and are highly cultivated. Forests cover 21 per cent. of the whole surface of the kingdom, they are mostly composed of English beech, and birch. The annual production is about 344,000,000 cubic feet. The restrictions imposed before 1860 were removed in that year because they checked the timber industry. The wholesale cutting down of trees that then followed threatened to denude the country of forests, and in 1863 new laws were passed for their preservation. The state purchased large tracts of forest land, and is making systematic efforts to restore large areas that have been stripped of their timber. While the foreign commerce of Norway has quadrupled in half a century, the mercantile tonnage is nine times as great as it was in 1850. Imports and exports surpass that of every country, besides excelled only by that of Great Britain, Germany, and the United States. About 20 per cent. of the population are engaged in industrial occupations, and the exportation of manufactures has gone up from 15,000,000 kroner in 1865 to 45,000,000 kroner. Copper, silver, nickel, and iron are mined, but the ores are not rich, and coal is found only on the island of Andøen. The total mineral output in 1897 was only 3,000,000 kroner.

Railroads, Posts, and Telegraphs.—The Government railroads in operation in 1899 had a total length of 1,250 miles, besides which there were 93 miles of private railways. The Government railroads in 1898 carried 7,706,516 passengers and 1,679,483 tons of freight; receipts were 10,792,758 kroner, and expenses 7,808,320 kroner.

The postal traffic in 1899 was 36,700,000 international and 11,776,300 international letters and postal cards; 2,435,600 international money letters, containing 24,900,500 kroner, and 75,930,000 newspapers, containing 23,400,000 kroner; and 54,555,900 information cards, containing 5,393,200 international newspapers and circulars. The receipts were 4,821,662 kroner, and the expenses 4,577,533 kroner.

The state telegraphs in 1899 had a total length of 7,487 miles, with 17,641 miles of wire; other lines a length of 1,178 miles, with 2,098 miles of wire. The number of internal dispatches was 1,418,167; of international dispatches, 815,062; service dispatches, 25,657; receipts, 2,216,480 kroner; expenses, 2,171,510 kroner.

Storting Elections.—The general election was held early in September. The new Storting was made up of 77 members of the Left and 77 members of the Right and Moderates. In the election of 1897 the Radicals, who had numbered previously 59, and had only a narrow majority in a house of 114 members, won 79 seats, and had therefore a two-thirds majority, which they still retain in the Storting elected in 1900, but only by a single vote. Christians, which in the former elections the Left won over, the Right regained, the large Socialist vote having reduced the Radical strength. The wave of national feeling that produced the excitement in the last election over the question of the relations with Sweden had somewhat subsided, and the demand of Stang, Radical party that was most determined to secure a separate consular representation for Norway and other rights pertaining to an independent nation lost faith in the Radical Premier because he had failed to advance their cause by a single step. The elections were held for the first time under the law of universal suffrage. The Left put forward 7 first-rate candidates, the old and new voters, containing among other propositions that were not approved by all adherents of the party a plan for insuring the entire Norwegian people against want in old age. The working people in Christiania nevertheless set up candidates of their own. The Right showed unexpected strength in the rural districts. The Social.
SWITZERLAND.

Commerce and Production.—There are about 300,000 cultivators in Switzerland who own their land. There were 260,407 quintals of cheese and 203,528 quintals of condensed milk exported in 1898. The wine from 29,884 hectares of vineyards amounted to 547,592 hectoliters, valued at 40,234,047 francs. There were 108,969 horses, 4,511 mules, and asses, 1,506,696 cattle, 271,901 sheep, 415,817 goats, and 565,974 pigs in 1896. The forests cover 2,031,670 acres, of which 1,119,270 acres are protected from destruction by the federal authorities. In 1898 there were 8,872,235 trees planted. There are 150 fish hatcheries, which produced 27,636,000 fry in 1898. The production of the salt mine at 432,187 quintals. The quantity of beer made in 267 breweries was 2,118,123 hectoliters. The alcohol régie sold 66,945 quintals of spirits for drinking and 43,021 quintals of medicated spirits.

The special imports of merchandise in 1899 were 1,122,526,000 francs in value, and exports 736,014,000 francs; the imports of specie were 124,047,000 francs, and of exports 855,642,000 francs. The importation of raw silk was 162,000,000 francs; of cereals, including flour, 117,100,000 francs; of coal, 55,700,000 francs; of woolens, 50,400,000 francs; of iron, 42,300,000 francs; of precious metals, 43,100,000 francs; of chemical products, 38,800,000 francs; of wine, 37,000,000 francs; of cotton goods, 35,600,000 francs; of machinery, 34,500,000 francs; of iron manufactures, 30,200,000 francs; of raw cotton, 27,700,000 francs; of sugar, 22,500,000 francs; of tobacco, 22,300,000 francs; of gold, 18,000,000 francs; of barley, malt, and hops, 16,800,000 francs; of leather, 15,800,000 francs; of building materials, 13,900,000 francs; of coffee, 12,200,000 francs; of petroleum, 11,800,000 francs; of books, 11,500,000 francs; of eggs, 11,200,000 francs; of silk manufactures, 11,000,000 francs; of linen, 10,400,000 francs. The exports of silk manufactures in 1899 were 165,600,000 francs in value; of cotton manufactures, 136,200,000 francs; of watches, 113,500,000 francs; of machinery, 44,800,000 francs; of raw silk, 44,000,000 francs; of cheese, 40,200,000 francs; of silk yarns, 29,500,000 francs; of chemical products, 25,800,000 francs; of milk, 21,300,000 francs; of cotton goods, 15,800,000 francs; of lemons, 11,200,000 francs; of hides, 10,600,000 francs; of animals, 10,400,000 francs; of woolens, 9,500,000 francs; of precious metals, 9,000,000 francs; of woolen manufactures, 8,400,000 francs; of jewelry, 7,500,000 francs.

The values in francs of the merchandise imports from and exports to the different foreign countries in 1899 are given in the following table:

Railroads, Posts, and Telegraphs.—The railroads in the Swiss republic had a total length on
was secured to the people, by the Constitution of 1848. The federal authorities having decided in 1880 that a demand for the amendment of specific articles or the insertion of new ones was invalid, that only a general revision could be obtained by popular initiative, a new law was framed in 1891 which provided for the rejection. The rejection of particular articles of the federal Constitution as well as the insertion of new constitutional clauses may be demanded through the medium of popular initiative; that as soon as 50,000 Swiss citizens having the right to vote should present a demand of this kind the question whether the demand should be submitted to the electors, and the answer would depend upon the majority of the citizens taking part in the vote, and should the answer be in the affirmative the Federal Assembly was to proceed with the revision. The Conservatives, the Socialists, the Democrats, and some of the Radicals objected to this proposal because it left the Chambers free to tamper with the expression of the popular will by drafting a measure calculated to defeat or to give only partial effect to the demand of the people. They proposed to confer on 50,000 electors the right of presenting an amendment or a new clause fully drafted which should be submitted to the people and, if approved, inserted in the Constitution. The Radicals supported the demand and the Liberals protested against allowing irresponsible persons to formulate bills altering the fundamental laws and by skilful agitation to secure the approval of the people without the careful study and the public discussion which the least important bills of the Federal Assembly must undergo, submitted to the majorities which had approved them. The Radicals proposed that the revision of the fundamental laws should be determined by the legislative and executive authorities of the federal really representative of the nation. The party of the Right and the party of the Extreme Left affirm that the Federal Assembly and the Federal Council are not organs of the national will, composed as they are at present composed. The system of representation of the parties in the Federal Council is in line with these ideas of the totalitarian party in control of Parliament and thus enables it to select the members of the Federal Council, did not seem to members of the parties which for years have commanded between them a majority of the voters of the nation and which have been acting in concert to be the right system to secure the popular representation. The Federal Council and its decisions have been subjected to severe criticisms, and its opponents have for a long time asserted that it had lost the confidence of the nation and that there existed against it a deep general dissatisfaction. The double initiative, which would give every interest and every party a system to secure a personal representation. The Federal Council and its decisions have been subjected to severe criticisms, and its opponents have for a long time asserted that it had lost the confidence of the nation and that there existed against it a deep general dissatisfaction. The double initiative, which would give every interest and every party a system to secure a personal representation.
sists in proportional representation in the National Council and the election of the Federal Council by the direct vote of the people. The proposed amendments to the Constitution by which these changes in the governmental system of the country were to be effected, after a long period of agitation and popular discussion, were submitted to the decision of the people on Nov. 4, 1900. Both proposals were rejected, proportional representation in the National Council by 242,094 popular votes to 165,548 and by 11½ cantonal votes to 10½, the election of the Federal Council by the people by 264,087 popular votes to 134,167 and by 14 against 8 of the cantons. Even cantons that have adopted proportional representation for themselves, such as Solothurn and Neuchâtel, gave a majority against such an innovation in the national representation, and the places where the new democratic theories were rooted, the town of Basel and the town and canton of Bern, rejected their immediate application. In December the National Council approved an agreement made by the Federal Council and the railroad company for the transfer of the Central Railroad, the first of the five great railroads in to be taken over. The policy of the nationalization of the railroads on both military and economical grounds has been authorized by the people in referendums by an overwhelming majority. If the Government and the stockholders are not able to agree upon a price in the case of any of the railroads, the matter will be taken before the Federal Court of Appeal. The Federal Council desired to complete the arrangements for the acquisition before the end of 1901 of all the Swiss railways with the exception of the St. Gotthard line, which can not be acquired before 1909. The struggle of the Boer republics in South Africa attracted much attention in Switzerland, chiefly from the point of view concerning the Swiss national defense. Proposals to intervene diplomatically appealed to some as confirming with the traditional efforts of the Swiss Government to further disinterestedly the peace of nations, but they were rejected by the legislative bodies. In reply to the request for mediation which the Boer republics made to Switzerland as to other powers, the Federal Council declined, in March, to take any initiative in the matter since the British Government had already refused to conclude peace on the basis of the independence of the republics and had declared to the Cabinet at Washington that it would not accept the intervention of any power.

The Institute of International Law, which held its annual meeting in September at Neuchâtel, discussed the bearings of the Chinese situation in connection with the question as to what are the rights and duties of foreign powers and their subjects, in case of an insurrection, with reference to the established Government which is attacked by the insurgents. In this connection, words that would limit the operation of the principles recommended by the committee to "states that are sharers in European civilization." M. Rolin-Jacquemyns objected to the phrase as possibly excluding Japan and Siam. A similar objection was made to the phrase "Christian civilization." Prof. Wissink proposed to finally adopted no qualifying phrase was used, the principle being accepted that, in the absence of any provision to the contrary, the rules voted by the Institute are applicable only to "normal" states, full members of the family of nations. A distinction between "just" and "unjust" insurrection was recommended, and an insurrection was declared to be an absolute duty. Not even a formal declaration of the intention to intervene can, according to the decision of the Institute, give the sanction of international law to intervention between a state and those subject to its jurisdiction, Prof. Holland's amendment having been voted down. Foreign governments must not turn insurrections into "political" or "civil" insurrections, though they are bound to prevent export by private individuals, nor can a government allow the organization within its territories or waters of an expedition in aid of insurgents; for an export of arms unaccompanied by the men who are to use them, however, a government can not be held liable. The decision of the Council of the Hague Peace Convention as to the repair of the railway track of the British High Commission was that of the British Government, which was not bound by the treaty of 1871, and that the reparations were subject to the condition of the intervention of the power that is responsible for the violation of the treaty. The President of the Court of Appeal for Switzerland, Prof. Catellani, considered that Switzerland was in no position to offer an opinion on this point, as its relations with the other nations of Europe are subject to the same action on the part of other states; but a third state is bound to respect a blockade established by insurgents who have been so recognized, and must allow its vessels to be visited by the war ships of either party. The theory of reprobation of foreign rules of law to the decision of legal relations of foreign origin which are not covered by domestic legislation, was condemned. The responsibility of a state for injuries sustained by foreigners through riot or civil war was the subject of much discussion. Occurrences in South America have made the question of practical interest, and considerable difficulty is presented in the case of a federal government which labors under a constitutional inability to oblige one of its constituent states to give compensation or inflict penalties for what has occurred within the territory and jurisdiction of such state.

TENNESSEE, a Southern State, admitted to the Union, June 1, 1790; area, 42,050 square miles. The population, according to each decennial cen-
TENNESSEE.

1,258,520 in 1870; 1,542,360 in 1880; 1,767,518 in 1890; and 2,029,016 in 1900. Capital, Nashville. Governor—The following were the State officers in 1900: Governor, Benton McMillin; Secretary of State, William S. Morgan; Treasurer, Edward B. Craig; Comptroller, Theodore F. King; Superintendent of Agriculture, Thomas H. Paine; Superintendent of Instruction, Morgan C. Fitzpatrick; Adjutant-General, A. H. Hamilton; and Attorney-General, G. W. Pickle; Commissioner of Labor, Robert A. Shiflett; Live Stock Commissioner, W. H. Dunn; Factory Inspector, Martin J. Noonan; Railroad Commissioners, N. W. Baptist, J. N. McKenzie, and Thomas L. Williams; Prison Commissioners, W. M. Nixon, John H. Trice, who resigned May 30, 1890, and E. B. Carter. The population by counties was as follows: Anderson, 17,634; Bedford, 23,845; Benton, 11,888; Bledsoe, 6,026; Blount, 19,206; Bradley, 15,759; Campbell, 17,317; Cannon, 12,121; Carroll, 24,030; Carter, 16,658; Chester- ham, 10,112; Chester, 9,896; Claiborne, 20,660; Clay, 8,421; Cooke, 19,154; Coffee, 15,374; Crockett, 15,466; Crockett, 8,333; Davidson, 22,021; Decatur, 10,439; DeKalb, 16,400; Dickson, 18,653; Dyer, 23,770; Fayette, 29,701; Fentress, 6,106; Franklin, 20,392; Gibson, 39,408; Giles, 33,035; Granger, 15,512; Greene, 30,596; Grundy, 7,802; Hamblen, 12,728; Hamilton, 61,693; Hancock, 11,147; Hardeman, 22,576; Hardin, 19,246; Hawkins, 26,228; Hawkinsville, 15,189; Henderson, 18,117; Henry, 24,298; Hickman, 16,367; Houston, 6,476; Humphreys, 13,393; Jackson, 15,030; James, 5,407; Jefferson, 18,590; Johnson, 10,589; Knox, 74,304; Lake, 7,308; Lauderdale, 21,971; Lawrence, 15, 402; Lewis, 4,455; Lincoln, 26,304; Loudon, 10,838; McMinn, 19,163; McNairy, 17,700; Macon, 12,578; Marion, 13,754; Marshall, 18,763; Maury, 42,705; Meigs, 7,491; Monroe, 18,558; Montgomery, 36,017; Moore, 7,506; Morgan, 9,875; Obion, 28,268; Overton, 13,333; Perry, 8,800; Picket, 5,366; Polk, 11,351; Putnam, 16,590; Rhea, 14,318; Roane, 22,738; Robertson, 25,020; Rutherford, 33,543; Scott, 11,077; Sequatchie, 15,422; Smith, 12,698; Spencer, 12,187; Smith, 19,026; Stewart, 15,224; Sullivan, 24,935; Surry, 26,070; Tipton, 29,273; Trousdale, 6,040; Unicoi, 5,871; Union, 11,894; Van Buren, 3,126; Warren, 16,410; Washington, 22,604; Wayne, 12,936; Weakley, 32,546; White, 14,157; Williamson, 36,429; Wilson, 27,078. Also a population of 80,865; Chattanooga, 32,490; Memphis, 102,520.

Finance.—The following data are from the Treasurer's and the Comptroller's biennial reports: Balance in the treasury Dec. 19, 1898, $85,071.41; received from all sources Dec. 20, 1898, to Dec. 19, 1900, 80,120,231.44; total, $62,305,302.85. Paid out on Comptroller's warrants from Dec. 20, 1898, to Dec. 19, 1900, $6,065,299.87; the treasury Dec. 19, 1900, $110,002.98. Included in the receipts and disbursements shown above are amounts credited and charged to loan account, receipts from the Penitentiary, and amounts paid out for maintenance of convicts. Omitting these, it is seen that the net receipts in 1899 were $1,901,976.32; the net disbursements, $1,758,031.23; the net receipts in 1900, $2,069,624.98; net disbursements, $1,801,911.44. The receipts for the two years exceeded the disbursements $881,558.63; the Penitentiary receipts over disbursements were nearly $549,031.57. Out of this amount we were paid Fund- ing Board notes amounting to $625,000; balance, $24,931.57.

This balance is represented by money in hand Dec. 19, 1900, over Dec. 19, 1898.

The main expenditures for 1900 were: Pensions for disabled veterans, 1897 and 1898, $283,723.94; Common School and Normal College, $22,556.61; Attorneys-General salary, $35,317.61; Tennessee Industrial School, 806,245.55; maintenance of convicts, $260,735.42; loan account, $600,000; State prosecutions, $143,298.42; interest on State debt, $347,616; interest on school fund, $139,509.30; judicial salaries, $102,743.77; hospitals for insane, $35,815.77; West Tennessee State Penitentiary, $70,793.37, East Tennessee State Penitentiary, 578.24; School for the Deaf and Dumb, $42,281.46; School for the Blind, $32,418.48; Bureau of Agriculture, Statistics, and Mining, $14,544.75.

The receipts from county trustees, being the property tax for the two years 1899-1900, were $1,014,700.06, showing an increase over the two previous years of $180,510.02; Railroad taxes collected in 1899 amounted to $198,418.31; for 1900, $105,402.41.

The total debt of the State is $17,023,600. Of this, $13,228,600 is in 3-per-cent bonds; the remainder of the interest-bearing debt is at higher rates.

The total valuation for assessment in 1900 was $340,539,148; the State tax, $1,221,256.

Education.—Among the facts given in the biennial report of the Superintendent of Education are the following: The number of children in the State between the ages of six and twenty-one years is 768,343. Of this number, 573,287 are white, 193,556 colored. The total enrollment is 38,354, 35,546 being white and 2,808 colored. In the last two months, an increase of one half month during the present administration. The average salary paid teachers per month is more than $80 (an increase). There are 7,554 schools and 9,195 teachers. The value of school property is, as estimated, $3,063,568. The schools throughout the State use uniform text-books selected by a State text-book commission.

For a number of years the State has contributed to the support of the Peabody Normal College, in Nashville, conducted as the University of Nashville and Peabody Normal College. The grounds, buildings, etc., with some small sum of money, are owned by the University. The appropriation for the support of $20,000 is made by the Legislature and expended under the direction of the State board.

The number of students this year was 602.

Among the material improvements during the year at the University of Tennessee are a dairy laboratory and a dormitory for women students. The attendance in the regular college classes, together with graduates, special students, State students at Knoxville College, and students in the agricultural short course, was 369; in the law department, 56. The total in all departments at Nashville and Knoxville was 750; the number of degrees conferred, 150.

At the Industrial School there were remaining, Dec. 19, 1899, 769 pupils, of whom 471 are white boys, 224 girls, and 65 colored boys. During the year the income from various sources.
TENNESSEE.

669

was $90,404.85. This includes the special appropriation of $80,760.65 made by the General Assembly of 1895, and of which was expended for an inclosure of the school; 263 pupils were enrolled, $2,500; steam cooking appliances, electric plant, and enlargement of gas plant, $3,260.65.

The total attendance at the Deaf and Dumb School was 235; the average, 224.

The fifty-sixth session of the Blind School, ending in June, 1900, was the most prosperous in the history of the school; 265 pupils were enrolled. Vanderbilt University celebrated its twenty-fifth anniversary, Oct. 22. It received this year a large bequest from Mrs. Mary J. Furnam, of Nashville.

At Central Tennessee College, Nashville, 340 were enrolled and 73 were graduated.

Roger Williams University had 268 students, of which 73 were female.

Lane College, for colored students, in Jackson, has sent out 116 graduates from the normal department since it was organized, in 1878.

The last General Assembly provided in the appropriation bill that each Senator should designate two colored persons, either male or female, to scholarships. The appropriation was divided among them before the end of two years. The institutions for the colored designated by the State Board of Education under former legislative provisions to receive these scholarship students are Roger Williams University, Fisk University, Central Tennessee College, LeMoyne Institute, Lane College, Morristown Normal College, Freedman's Normal Institute, and Athens Academy. When a person receives a scholarship appointment he can select either of these colleges.

The General Assembly two years ago appropriated $2,500 annually for teachers' institute work. This appropriation was supplemented each year by a donation of $1,200 by the Peabody Board of Trustees. In 1898, 117,500 were enrolled, and three for colored teachers.

Charities and Corrections.—The financial report of the Central Hospital for the Insane shows the balance on hand Dec. 19, 1900, to be $2,448.70. Other statistics were as follows: Total receipts for the two years were $145,050, divided as follows: Balance Dec. 19, 1898, $101,590.26; total payment for institutions, $51,709.25; for 1900, $54,332.66; from 16 counties for pay patients, $6,635.38; private pay patients, $18,162.50; farm articles sold, $5,803.80. The disbursements were, from Dec. 19, 1898, to December, 1899, $69,289.31; from December, 1899, to Dec. 19, 1900, $73,511.40; total, $142,801.21.

The statistics of the State Prison, as given by the Prison Commissioners, include the following items: On Dec. 1, 1898, there were on hand 1,525 prisoners. There were received and recaptured during the year 1,556. There were on hand Dec. 1, 1900, 1,734 prisoners, composed of 1,516 State and 228 United States prisoners, being 1,110 in the main prison and 634 at Brushy mountain. State prisoners of males, 403; colored males, 1,057; colored females, 52; white females, 3. United States prisoners—white males, 138; colored males, 84. Total, 1,744.

Of the 1,551 prisoners received during the two years, there are: College graduates, 22; common-school education, 80; read and write, 178; read, 119; no education, 743.

The main prison is described as a little manufacturing city of 10 industries, consisting of a foundry, harness factory, chair and carriage factory, box factory, shoe factory, hosery mill, brick manufacturing, and the commissioner's manufacturing department. One of the most important features of the work coming under the jurisdiction of the commission is that performed at Brushy mountain coal mines. There has been produced for the years 1896, 1897, 1898, 1899, and 1900 over 1,150,000 tons of coal, and the entries have been driven nearly 17 miles.

All the prisoners of the penitentiary system are now confined at the main prison and at Brushy mountain.

Militia.—By the annual statement of the Adjutant General's office, it appears that Tennessee has organized a military force of 14,000 men.

Railroads, Telegraphs, and Telephones.—Full statistics of the roads and lines are given in the biennial report of the Railroad Commission. The total mileage of roads is 3,132, of which 2,947 is main line track. During the past two years fifty-four and a fraction miles have been constructed. The entire assessed valuation of the lines in Tennessee from Jan. 1, 1898, to June 1, 1900, 494.44 is distributable and $2,352,478.50 localized property. The total amount of tax payable per mile of railroad property is $250.32, divided as follows: State, $65.66; county taxes, $159.91; city taxes, $24.65. The total State tax collected each year is $201,410.70; total city or municipal, $73,452.40; total county, $474,144.75, making a grand total of $749,007.90 taxes paid by the Tennessee railroads.

There are but two telegraph companies operating in the State, the Western Union and the Postal. The Postal has 1,900 miles of lines, the assessment footing up $86,076.60. The Western Union Company has 13,820 miles of line, valued at $821,930.

The total telephone valuation is $628,220.20. There are 11 lines, with a mileage of 10,240.

An election was held in Nashville, Dec. 15, on a proposition to subscribe $1,000,000 to the capital stock of the Nashville, Florence and Northern Railroad. The election resulted in a vote of 5,717 for 934,361 against 4,622.

Insurance.—Attention has been called to the fact that there are no life and few fire companies in the State, those which have from time to time been organized having failed or gone out of business. This is said to be due in part to the fact that the companies, besides paying a full property tax, also pay a tax for each receipt nearly as large as the tax paid by the foreign companies that pay no local or property tax in the State. The 29 life companies doing business in the State in 1899 received in premiums $2,512,091.90, and paid in losses $1,161,908.68.

Products.—The coal product in 1900 amounted to 3,500,063 tons.

Forty-eight of the mineral production given by the Commissioner of Labor were: Coal, 3,730,134 tons; coke, 440,157 tons; iron, 667,144 tons; copper, 100,022 tons; zinc, 3,750 tons; barrytes, 14,000 tons; phosphate, 402,561 tons. At the time of the report there were in the State 100 coal mines, 15 of which are new ones opened during the year. The deposits of zinc, copper and barrytes have been reported. The number of phosphate mines has been doubled, the reports showing 15 in 1899 and 30 in 1900. The production shows but little increase, however.

The cotton acreage this year was given as 814,260; the consumption in mills, 37,747 bales. The number of spindles is 172,212.

The report of the Commissioner of Agriculture shows that $33,403.95 was received from the sale of fertilizer tags.

The Cumberland.—At the Cumberland River Improvement Convention, in November, resolutions were adopted asking for appropriations to furnish 100,000 tons of coal, and the entries have been driven nearly 17 miles. All the prisoners of the penitentiary system are now confined at the main prison and at Brushy mountain.

The Cumberland.
West Point, in the upper Cumberland, 125 miles. This work can be completed within three years, and at a cost of $2,750,000.

**Lawlessness.**—The keeper’s house was destroyed by men near Mount Pleasant, in March. The toll gate had been erected recently, despite a popular protest.

Lynchings of negroes were reported at Ripley in January, at Fayetteville in August, and at Tiptonville in October.

While attempting to capture an illicit still in Polk County, in December, a deputy marshal was attacked by mountainmen. One of his men was killed, and himself and another were seriously wounded.

**Tornado.**—A disastrous tornado swept over the vicinity of Columbia, in Middle Tennessee, in November. As many as 50 were killed, 100 were injured, and much property was destroyed.

**The Anticigarette Law.**—The question of the validity of this law came before the Supreme Court of the State, and it was pronounced constitutional. On an appeal to the United States Supreme Court this decision was upheld, though four of the judges dissented.

**Political.**—A Governor and a Railroad Commissioner were elected in November. There were five candidates for the former office.

The People’s party held a convention in April, at Nashville. The important question was, whether delegates should be sent to the national convention at Cincinnati for independent party action, or to a convention to fuse with the Democrats. The Mid-Road wing prevailed, and delegates were chosen for Cincinnati. The choice of a gubernatorial candidate was left to the executive committee, which named H. J. Mullins.

The Republican party was divided into the so-called Brownlow and Evans factions. Contesting delegations were sent to the State convention, April 19, resulting in a bolt of the Evans men, two delegations to the national convention, and two State tickets. The Brownlow candidate for Governor was John E. McCall, and for Railroad Commissioner, W. C. Hornsby. The Evans candidates were W. F. Poston for Governor and W. S. Tipton for Railroad Commissioner.

Both platforms emphasized the policy of the national administration, called for suppression of trusts, and denounced the Democratic administration of the State. The Brownlow platform condemned especially the election laws, which, it was declared, “differ in no essential particular from the Goebel election law of Kentucky, which has become a stench in the nostrils of American citizens throughout the land.” Further, it favored the prohibition of child labor, abolition of the inspection fee required of factory owners, and amendment of the penal code so as to raise the grade of petty larceny to $50.

The Evans platform commended the service of Mr. Evans in his present office; condemned the State road law; called attention to the fact that while taxation had increased, “no part of the corpus of the public debt” had been paid; and condemned that part of the Jarvis law which compels the attendance of witnesses by process of the court, and makes their compensation dependent upon the conviction of criminals.

The national committee heard the contest cases at Philadelphia, and gave Brownlow 16 delegates and Evans 8. The Evans men decided not to carry the contest further. The struggle in the State continued for some time, but at the election Mr. McCall carried the only Republican candidate for Governor, with Thomas L. Cate for Commissioner.

**TENNESSEE.**

The Democratic convention was held at Nashville, May 10, and renominated Gov. McMillin and Commissioner Thomas L. Williams. There were some divisions upon the question of expansion; as reported by the committee, it was declared by some of the delegates to be Republican rather than Democratic doctrine, and after discussion 10 names were added to the committee, and the resolution was amended so as to be satisfactory to the convention majority.

The conventions declared against trusts, in favor of the Nicaragua Canal, prohibition of child labor, abolition of the factory inspection fee, and raising the grade of petty larceny; they declared allegiance to the Chattanooga platform of 1898, approved Gov. McMillin’s administration, under which $1,000,000 of State indebtedness had been paid, and favored the nomination of Mr. Bryan.

The resolutions endorsing the office of Governor were: Prohibitionist, R. S. Cheves; Social-Democrat, C. H. Stockwell.

The vote for presidential electors stood: Bryan, 144,671; McKinley, 121,194; Woolley, 3,900; Barke, 1,308; Debs, 410. For Governor: McMillin, 149,768; McCall, 110,831; Cheves, 3,575; Mullins, 1,925; Stockwell, 257.

There were three candidates for United States Senator, but two of them—Gov. McMillin and Judge Snodgrass—withdrew, leaving only E. W. Carmack as declared candidate.

**TEXAS.** A Southern State, admitted to the Union Dec. 29, 1845; area, 263,750 square miles. The population, according to the census of 1890, was 2,590,000, including 87,000 negroes. There were 1,368,000 white males and 12,000 negro males of the slave class. The population of Texas in 1890 was 1.3 per cent. of the total population of the United States.

The following were the officers of the State for the year: Governor, Joseph D. Sayers; Lieutenant Governor, J. S. Browning; Secretary of State, D. H. Garland; Treasurer, J. W. Robbins; Comptroller, R. W. Finley; Superintendent of Public Instruction, J. S. Kendall; Commissioner of Agriculture, R. W. Finley; Adjutant General, Thomas Scurr; Commissioner of the General Land Office, Charles Rogan; Attorney-General, T. S. Smith; Chief Justice of the Supreme Court, S. C. Lee; Associate Justices, Thomas J. Brown and F. A. Williams; Clerk, Charles S. Morse—all Democrats.

**Population.**—The increase of more than 36 per cent. for the decade advanced the lead of Texas among the Southern States in population. In the 3,000,000 class her only companion is Missouri. Texas cities of more than 25,000 inhabitants show the following population; these comparisons: San Antonio—1890, 37,673; in 1900, 53,321. Dallas—1890, 38,067; in 1890, 42,635. Galveston—1890, 29,084; in 1900, 37,789. Fort Worth—1890, 23,076; in 1900, 26,688. Austin increased from 14,573 in 1890 to 22,535 in 1900.

**Finances.** The balance in the treasury to the credit of general revenues at the close of the fiscal year, Sept. 1, 1899, was $1,092,807.94; the receipts during the year ending Aug. 31, 1900, were $2,859,967.60; making the total receipts, including balance, $3,952,775.54. There was disbursed during the year $2,733,781.60; transfers adjusting amounts accounted to $9,406.40; leaving a balance on hand Aug. 31, 1900, of $1,159,987.54. To the credit of the available school fund there was a balance Aug. 31, 1900, of $16,574.76; the receipts during the year were $3,315,276.23; total receipts, including balance, $3,334,830.99; disbursed during the year, $3,061,471.31; leaving a balance on hand Aug. 31, 1900, of $553,387.68. The cash balance of the permanent school fund Aug. 31, 1899, was $1,973,341.80; cash received during the year,
$1,530,507.14; total receipts of cash, including balance, $3,232,849.94; disbursed during the year, $2,014,497.34; leaving a cash balance Aug. 31, 1900, of $1,309,351.60. Bonds on hand to the credit of this fund Aug. 31, 1899, amounted to $5,447,247.05; bonds purchased during the year, $1,059,839.05; total, $8,457,086.10; bonds redeemed during the year, $3,150,644.05; leaving a balance of bonds on hand Aug. 31, 1900, of $7,306,421.15.

The amount of occupation taxes collected was $918,982.48, an increase over the previous year of $1,984.95. The value of assessed property for 1900 was $946,329,238, an increase over 1899 of $23,395,027. There was an increase in value of assessed property in the various districts.

dead, blind, enrollment, the Board of Regents, the Superintendent of Public Instruction shows the school population in 1900 to have been 706,546. The number of pupils in attendance at the State University for 1899-1900 was 1,041, showing a marked increase, especially in the academic department. Besides localities outside of the State, more than 100 counties of Texas were represented in the enrollment. There are nearly 100 schools in the State in full affiliation with the university, and its continuous and rapid growth seems assured. The medical department has exceeded all expectations, and that with adequate appropriations there is practically no limit to its development.

At the Sam Houston Normal Institute the total enrollment for 1899-1900 was 493, representing 130 counties. The graduating class of 1900 numbered 98.

dence in annual reports, the number of patients in the Southwestern Hospital, Jan. 1, 1899, was 704, an increase of 230 during the year. In his report for 1900 the superintendent calls for a change in the lunacy laws so that insane persons can be committed to State institutions without a public trial according to criminal methods, but upon a certificate of medical men submitted to the county judge.

At the State Lunatic Asylum the number of patients, Oct. 31, was 734, of whom 399 were men and 335 women.

The annual report of the State Orphans' Home shows that there were 12 graduates in 1900, all in honorable employment, for which they were well equipped.

According to the biennial report of the Superintendent of Texas State penitentiaries, the net decrease of prison population from Nov. 1, 1898, to Oct. 31, 1900, was 363; total number of convicts on hand at the latter date, 4,109; percentage of whites, 35.3; negroes, 53; Mexicans, 11.5; pardons for the two years, 350; escapes, 180; recaptures, 78; deaths, 269.

Lawlessness.—At Port Arthur, Feb. 11, a man who had been tried and acquitted of the charge of murder was hanged by a mob, and after an inquest was given a pauper's burial. The grand jury sternly denounced the mob.

At Austin, Oct. 15, a large mob of State University students attempted to take possession of the Grand Avenue during a performance. According to the Galveston News, repeated assaults were made by the mob, and several valuable pictures in the lobby of the building were despoiled, while for a time the whole police force of the city were unable to quell the rioters.

A fight among several men, one of them a sheriff, occurred at Anderson, Nov. 7, in which two were killed and two wounded, one of them being the sheriff, who was carried into the jail, which was afterward fired on from the courthouse.

Three negroes charged with murder, and said to have confessed, were taken from the jail at Jefferson, Nov. 14, by a mob, who hanged them from a railroad trestle near the town.

Eight negro convicts of the Humphries lynching of May, 1899, were taken to the Rusk Penitentiary, Aug. 22, 1900. Three of the lynchers who turned State's evidence were liberated.

A Storm at Galveston.—One of the worst calamities in the history of this country visited Galveston and some parts of the mainland Sept. 8, when a hurricane which swept southern Texas spent its greatest fury upon the "Island City" and adjacent districts. The storm was attended by a huge inundation. At Galveston alone thousands of buildings and millions of dollars' worth of property were destroyed in a few hours. Here, also, the number of lives lost, although never fully ascertained, was somewhere between five and six thousand, to which were added hundreds more in other sections of the storm area. For scenes of horror and deeds of shame—such as pillage and robbery of the dead—noblely offset by acts of heroism and self-sacrifice, the catastrophe will be long remembered. The property loss in Galveston is estimated at more than $17,000,000, including more than $3,000,000 lost by the United States Government. More than 4,000 residences were destroyed. The destruction of business buildings and stock, wharfs, shipping, railroad and telegraph property, etc., was proportionately large. More than 30 miles along the shore, above and below Galveston, the country was flooded; and many thousands of lives in land and life were relatively as great as those in the city. In October, on incomplete returns, the Department of Agriculture at Washington estimated the agricultural losses, exclusive of
buildings, machinery, etc., at $5,000,000. Thousands of the coast people were left homeless, but they quickly recovered, with comparatively little assistance, from the first shock of the disaster. In courage and energy they met the loss. Galveston's surplus was equal to their terrible situation, and by the end of the year the restoration of their city was well advanced. At the close of 1900 the relief received by Galveston from all sources amounted to $1,594,000.

In spite of the great storm and a short cotton crop in southern Texas, the movement of cotton through the port of Galveston for the calendar year of 1900 was larger than that of 1899, and the city is expected to remain the chief primary cotton port of the world. According to official custom-house figures, the cotton export of 1899 was 1,535,292 bales, valued at $52,786,731; that of 1900, 1,535,292 bales, valued at $75,352,000. The cotton and cotton-seed oil, the Galveston exports for 1900 together reached the value of $67,033,912. At the end of 1900 the storage-elevator capacity of the city was 3,000,000 bushels, and during a season the port can handle 70,000,000 bushels of grain. Diversification of crops has greatly developed Galveston as a general market and as an elevator.

Floods.—The Brazos flood of 1899, which caused heavy damage, was followed by great enrichment of the soil along the river bottoms through the deposit of deep sediment with highly fertile qualities, in consequence of which new land was broken and the area of cultivation in many places was largely increased. The spring floods of 1900 on many of the streams caused damage to lands and other property. Those on the Colorado were of extreme violence, and at Austin, April 7, the magnificent dam, which cost $1,000,000, was swept away with serious loss of life. (For description of this dam, see Annual Cyclopaedia for 1892, page 2272.) A flood of the same character at Waco on April 15, 1900, was very destructive. There was a sudden flood in the creek at Coleman, July 16, whereby buildings and camps were washed away and lives were lost.

Brazos River Survey.—The end of 1900 brought the completion of the Government survey of the Brazos from Waco to the coast. The engineers reported that improvement of the river so as to make it navigable at all seasons was only a question of money, the most feasible plan being the construction of locks and dams. Stationary dams were considered unsuitable, on account of the periodical overflows. The fall of the Brazos from Waco to its mouth is 535 feet.

Independence Monuments.—A monument to the heroes of the Texas revolution of 1836 was unveiled at Galveston, April 21. It was the gift of the late Henry Rosenberg to the people of Texas, and represents all the prominent features of the revolution. Its full height is 74 feet, and the base is 58 feet square. The bronze statuary, which was cast in France, is supported by a Cuban sculpture of the finest Concord granite.

On the same day, to commemorate the same events, a monument erected by the school children of the State was unveiled on the site of old Washington, the town where independence was proclaimed, which was three times the capital of the republic of Texas. The height of this monument is 13 feet and 9 inches, and the material is gray Texas granite.

Legislative Session.—The Legislature held a special session from Jan. 23 to Feb. 21. The Governor's first message dealt solely with the tax bill framed and reported by a commission created at the regular session in 1899. The commission was directed "to frame and report a bill or bills designed and calculated to secure an exhaustive and equitable assessment of all taxes upon every species of property in this State, real, personal, and mixed, and to extend, whenaccorded, to foreign subjects, property belonging to natural or artificial, to residents or nonresidents, to the end that no character of property, assets, holdings, or valuable interests shall escape the due, just, and equal burdens of taxation; and to provide for and enforce the prompt, effective, and complete collection of all taxes imposed."

The Legislature at this session not only failed to reach any final action upon the bill, but was unable even to consider all its provisions. In a final message the Governor gave his reasons for not calling another special session for further consideration of the bill. Among measures of general importance passed at this session was one providing the rate of taxation so as to save to the people annually about $300,000 in cost of government: another, settling the differences between the permanent school fund and the State regarding the division of the public domain, whereby all the remaining public domain, amounting to 4,456,000 acres and $17,000 in cash, were appropriated to the permanent school fund: and a law providing for a form of government for the public schools in place of a statute declared unconstitutional by the Supreme Court.

Political.—Two Republican State conventions were held in Waco, March 7, and two sets of delegates to the national convention and two sets of candidates for presidential electors at large were elected. These rival gatherings were the outcome of factional differences.

The first State convention of the People's party was held in Fort Worth, May 4. Resolutions were adopted recognizing the national convention called to meet at Cincinnati, May 9, as the only one properly nominated for the presidential nomination, and opposing fusion with either of the old parties, but favoring a union of all reformers under the banner of the People's party, with one leader and no surrender of the Omaha platform. All delegates from the State to the Cincinnati convention were instructed to vote for none but a straight Populist ticket, and for 428,000 votes for John B. Brady. Resolutions were adopted denouncing the British war on the Boers, and expressing sympathy for the South African republics.

The first Democratic State convention met in Austin, June 20. The platform instructed the delegates to the national convention to vote for the nomination of William J. Bryan; to the readoption of the Chicago platform, with amendments opposing trusts and combinations in restraint of trade, affirming that all governments derive their just powers from the consent of the governed, opposing all efforts to establish or maintain colonial possessions, renewing allegiance to the Monroe doctrine, demanding speedy fulfillment of our treaty obligations to Cuba, and for the people of the Philippines that was promised to the Cubans; for a declaration in favor of a constitutional amendment providing for election of United States Senators by direct vote of the people; for a resolution expressing the cordial sympathy of the United States with the South African republics; and for a declaration in favor of the construction, owning, and operating of the Nicaragua Canal by the United States.

The Social-Democratic State Convention was held in Dallas, July 4, and nominated the following State ticket: For Governor, L. L. Rhodes; Lieutenant Governor, G. H. Sharp; Comptroller, W. A. Mitchell; Treasurer, W. E. Marshall; Com.
misioner of the General Land Office, C. A. Otter- 
bien; Railroad Commissioner, G. B. Harris. The 
selection of candidates for Attorney-General and 
Superintendent of Public Instruction was left to 
the State Executive Committee. A resolution was 
adopted declaring the sale of all railroad stock 
belonging to the Railroad Commission because of 
internal dissensions. The platform approved interna- 
tional socialism and reaffirmed the platform of the 
Indianapolis convention; indorsed the nomination of Eugene V. Debs 
and Job Harriman for President and Vice-Presi- 
dent respectively; prohibition, prohibiting the employment of 
children under sixteen years of age in factories, 
mines, or at any employment that precludes the 
fullest opportunity for acquiring an education, and 
which shall provide for assistance, when necessary, 
from the public funds to furnish food, clothing, 
books, and supplies without inflicting the stigma 
of pauperism; a statute for fixing the employ- 
ment of women and children in all unhealthful 
occupations; a statute for rigid inspection of 
factories, mines, and workshops with reference to the 
safety and health of the workers; and that a legal 
workday shall not exceed eight hours. The plat- 
form favored the initiative and referendum.

The second State convention of the People's 
party was held in San Antonio, Sept. 15, at which 
twenty-one presidential electors at large were nominated, and were 
instructed to vote for Barker and Donnelly. The 
following State ticket was put in nomination: 
For Governor, J. C. Kearby; Lieutenant Governor, 
Clarence Nugent; Attorney-General, J. G. Nix; 
Commissioner of the General Land Office, C. G. 
Clark; Comptroller, J. P. Clark; Treasurer, G. D. 
Shea; Commissioner of Public Instruction, J. S. 
Leagne; Superintendent of Public Instruc- 
tion, Reoldi Andrews.

The State Executive Committee was authorized to 
nominate candidates for judgeships of the higher 
courts.

The platform demanded the initiative and referen- 
tum; the abolition of the Railroad Commission; 
State ownership and operation of transportation 
so far as necessary to regulate freight rates; con- 
struction, ownership, and operation of the Nicara- 
gua Canal by the United States; an efficient sys- 
tem of public schools throughout the State, a 
change in the scholastic age making it from six 
years to eight years old; schools to be required to 
be furnished by the State; reforms in the judi- 
cial system of Texas; legislation to secure equi- 
table taxation and to correct abuses of the fee 
system. The gubernatorial nomination was de- 
clined by J. C. Kearby, and T. J. McMinn was 
amed the party's candidate for Governor.

At the second Democratic State convention, 
which met at Waco, Aug. 8, these nominations 
were made for State officers: For Governor, Joseph 
D. Sayers; Lieutenant Governor, J. S. Browning; 
Attorney-General, Thomas S. Smith; Comptroller, 
R. M. Love; Land Commissioner, Charles Rogan; 
Treasurer, John W. Robbins; Railroad Commis- 
sioner, J. S. Kendall; Superintendent of Public 
Instruction, J. S. Kendall: Associate Justice of the 
Supreme Court, F. A. Williams; Justice of the 
Court of Criminal Appeals, John N. Henderson.

The platform, in addition to indorsing the State 
administration and the action of the national con- 
vention at Kansas City, including its nominations 
for President and Vice-President, endorsed the 
declarations in favor of the party policies for the 
maintenance of good government in Texas. It 
approved reasonable efforts to equalize taxation 
and the just taxing of corporations upon their 
gross receipts; impartial enforcement of the State 
laws, without discrimination against the weak or 
in favor of the strong; upholding of the railway 
commission law, of the railroad stock, and boy- 

VOL. XL.—43 A
of the country. The President of the Republic, S. J. Paulus Kruger, re-elected for the fourth term on May 12, 1898, and re-elected in November 1900, to seek the intervention of other powers. Gen. Pieter J. Joubert, who died on March 27, 1900, was succeeded as Vice-President by Schalk Burger, and as Commandant General by Louis Botha. The other members of the Executive Council in the beginning of 1900 were F. W. Reitz, State Secretary, and Commandant Pieter A. Cronje, Superintendant of Natives; J. H. M. Kock,Keeper of Minutes; and J. M. A. Wolmarans and S. W. Burger. A defensive alliance was concluded with the Orange Free State in 1896, after a raid of Dr. Jameson at the head of Bechuanaland border police in connection with an attempted revolution in Johannesburg. The mining center, had 102,714 inhabitants at the census of July 15, 1896, of whom 51,225 were whites. The state schools, 429 in number, had 11,552 pupils in 1897, besides 555 in the model school, the gymnasium, and the girls' high school in Pretoria. The Government spent £140,280 for education, and many of the English resident promoted the founding of their own schools, in which their language was used exclusively, whereas in the Government schools of the district instruction was given in both Dutch and English.

**Finances.**—The revenue in 1893 was £1,702,684; in 1894, £2,347,729; in 1895, £2,533,925; in 1896, £2,769,053; in 1897, £3,020,544; in 1898, £3,437,332; in 1899, £3,983,560; expenditure in 1893, £1,302,054; in 1894, £1,734,725; in 1895, £2,679,053; in 1896, £4,671,333; in 1897, £4,934,066; in 1898, £3,971,473. Of the revenue in 1898, customs duties yielded £1,066,985; royalties, £125,439; direct taxes, £217,410; mining licenses, £226,625; stamps, £283,383; fees, £397,133; postal, £215,491; postal telegraphs, £206,332; South African Railroad, £668,551; sale of explosives, £223,342; other sources, £260,779. Of the expenditures in 1898, salaries absorbed £1,080,352; cost of collection, £22,962; justice and police, £141,307; public instruction, £220,391; public health, £288,532; public works, £1,502, 905; Department of Foreign Affairs, £577,252; public works, £917,382; public debt, £156,657; purchases, £290,271; expenses of Swaziland, £148,961; other expenses, £446,301. The Department of Mining Commissions in Johannesburg collected £849,220, and cost £83,005, making the net receipts £764,215. The debt of the Republic consisted on Dec. 31, 1898, of £136,644 due to the British Government for the occupation in 1877, the 5-per-cent. Rothschild loan of £2,500,000, and a railroad debt of £23,750; total, £2,660,304.

**The Army.**—Neither the South African Republic nor the Free State has maintained a standing military force except for the police. The state artillery of the Transvaal in 1899 consisted of 29 officers, 83 noncommissioned officers, and 259 men, and there was a telegraph corps of 1 officer and 15 men. The Orange Free State had 150 artillerymen in active service and a reserve of 127. The Transvaal Government gave large orders in Europe for Krupp and Creusot guns, Maxims, Nordenfelts, and Mauser rifles and smokeless powder, to rearm the burghers. A powder factory was established, and European experts were engaged for the manufacturing of arms. The number of large guns belonging to the South African Republic, when the war began in October, 1899, was reported by the British Intelligence Department to be 16 Creusot of 15-centimetre caliber, 21 of 37-centimetre and 9 of 75-centimetre caliber, and 15 howitzers. More pommops and other light guns were brought in before and after war was declared, and in addition to what was imported with the artillery a total of about 62,000.

**Commerce and Production.**—Sheep, cattle, horses, ostriches, and goats are raised by the Transvaal Boers on enormous farms. Agriculture is so little practiced that wheat and flour are imported. Meats are grown in the east, chiefly by natives, and with one exception (hogs) in the west, for the market. On the farms of the Cape Colony and Natal the wheat is used for bread, the corn for animal food. The area under regular tillage in the republic is estimated at 50,000 acres. The mercantile community is composed of English, Germans, and other foreigners. The gold mines, belonging to companies whose stock is held largely in Paris, London, and Berlin, but much of it, too, by the strength of the Boer republics made for the Boer Ministry of War at the outbreak of hostilities was 29,279 burghers in the South African Republic and 22,314 in the Orange Free State; total, 51,593. The Cape Colony and Natal Dutch likely to volunteer in the Boer service were estimated at 4,000, the number of foreigners at the same figure, and the number of British settlers making with the artillery a total of about 62,000.
turn gives the total number of persons employed by 86 companies on Dec. 31, 1898, as 88,827. The value of diamonds found in the Transvaal in 1898 was £10,332,893, having declined from £13,563,827 in 1897 and £14,088,130 in 1896. Of the imports in 1898 the value of £6,332,174 came directly from Europe, £1,203,239 from Natal, £1,158,972 from Cape Colony, £290,289 from the Orange Free State, £536,723 from Lourenço Marques, and £281,467 from other countries. A large proportion of these mining machinery, timber, foodstuffs, hardware, and other articles were the produce or manufacture of the United States. The chief imports were machinery, of the value of £1,462,323; live animals, £1,091,038; textile fabrics and clothing, £290,601; haberdashery, £201,060; woolen goods, £165,576; hardware, £577,049; railroad materials, £206,203; vehicles, £181,239; leather goods, £346,068; flour and grain, §356,507; maize, £200,694; spirits, £262,924; sugar, £198,449; timber, £27,450; furniture, £170,512; Government stores, £129,646.

**Railroads and Telegraphs.** —There were 774 miles of completed railroads in 1898, connecting Pretoria with a good line from Lourenço Marques, Durban, and Cape Town and Port Elizabeth, and having an extension northward from Pretoria as far as Pietersburg and a westward branch to Klipksdagor. There were 270 miles more partly built and 250 miles authorized. The length of telegraph lines within the borders of the Union, added to the extensions from Lourenço Marques, is 2,450 miles, or 5,650 miles of wire. The number of messages sent in 1898 was 1,674,117.

**British Advance on Bloemfontein.** —When Field-Marshal Lord Roberts arrived to take command in South Africa on Jan. 10, 1900, the garrisons in Ladysmith, Kimberley, and Mafeking were nearly a week in advance, the Boers having held the relieving forces in check, but successfully invaded Cape Colony. Yet 6 divisions had been sent from England. A seventh was on its way, exhausting the reserves, and volunteer forces had been sent from the colonies and raised in South Africa, which were to be supplemented by yeomanry units in the field and by the Rotarians of the United Kingdom. Lord Roberts’s plan was to raise the siege of Kimberley by invading the Orange Free State. It not only had that effect, but it raised the siege of Ladysmith also, and compelled the withdrawal of the invading commandos in the northern parts of Cape Colony. When the columns of Lord Roberts struck out into the sandveld region of the Orange Free State between Kimberley and Bloemfontein Gen. Piet Cronje was taken by surprise, because the British had not left the railroads before this. He sent a part of his force round by the north, out of the possible reach of the British, and with the rest he endeavored to strike across in front of the British column so as to be able to contest its advance upon Pretoria. Lord Kitchener, who directed the operations, stopped the movement on Kimberley and ordered his whole force to wheel to the right and overtake Cronje. By posting his rear guards well the Boer leader managed to repel the attacks of the mounted infantry, but the cavalry by force of numbers finally seized the Kooldoordrand on Feb. 17, less than an hour before his arrival, obliging him to go back three miles to Wolviersrak to cross the Modder. There the divisions of Gen. Kelly-Kenny and Gen. Colville, under Lord Kitchener’s orders, made a direct attack on the following morning, and sustained a loss of 1,100 men. The tactics employed, which were much criticised, had the effect of retarding Gen. Cronje’s retreat so as to enable Gen. French’s half-exhausted cavalry to pass round and inclose him on the east. The position evacuated by Cronje extended from Magersfontein nearly to the Killoo. That and the position on the Tugela, bestriding another of the railroads by which the British would have to bring their supplies, and that at Stormberg, threatening the railroad that runs from Cape Town to Bloemfontein and Pretoria, were the strongest positions that the Boers could have chosen to defend their country against invasion. All three had to be given up when Lord Roberts decided to invade the Orange Free State independently of the railroads, moving up forces from Cape Colony to co-operate in establishing railroad communication afterward.

The invasion of the Orange Free State by 23,000 infantry and 11,000 mounted men, with 98 guns and a transport of 700 wagons drawn by 9,000 mules and oxen, began on Feb. 12, 1900. At Paardeberg Cronje made a heroic stand when headed off by the British cavalry, and on Feb. 27 surrendered with 4,080 men. A large part of his force during the siege of ten days had escaped by evading the investing line, taking some of the guns and stores. The Boers of the Orange Free State by the British produced an immediate and complete change in the military situation.

The Boers after Paardeberg abandoned the offensive and retreated from their positions at Stormberg and Colesberg in Cape Colony, and brought away their wagons with their ammunition. Lady Smith and the works on the Tugela, against which Gen. Buller had repeatedly hurled his army with disaster. The Free Staters could not be kept in Natal and Cape Colony when their homesteads were at the mercy of the invaders. When Lord Roberts set out from Jacobsdal, Gen. Buller moved simultaneously round the Boers who had captured Monte Cristo hill on Feb. 18, on the following day occupied Hlangwane, brought his troops across the Tugela, advanced on Grobler’s Kloof, made an unsuccessful attack on Railway hill on Feb. 23, and had to retreat over the Tugela, but made a fresh passage on Feb. 26, took Pieter’s hill on Feb. 27, and followed it up on the day following relieved Ladysmith. The Boer forces, which were commanded by Gen. Louis Botha, while they gave the British some of the severest fighting they had yet gone through, were all the time melting away, and they made their last gallant stand only for the purpose of covering the removal to the railroad of their guns and ammunition and the accumulated stores of all kinds. Their evacuation of Hlangwane was without orders, and was due to the feverish anxiety of the Free State Boers to return to their homes. When Gen. Buller had driven a wedge into their position and the departure of Free State troops had left the Boers on the Tugela very thinly manned, retreat became inevitable. With 20,000 men they had held 10,000 British troops in Ladysmith, and at the same time resisted the advance of 30,000 men from the south. Two of the Boer commandos in Cape Colony hastened first to the relief of Gen. Cronje when he was enmeshed in his British trenches. One of them, the western district that they held to be reoccupied by the British. Gen. Brabant with his colonial troops entered Dordrecht on Feb. 18, and on Feb. 25 occupied Jamestown. The Boers in front of Arundel made an attack on Feb. 20, but it was only preparatory to withdrawal. On Feb. 23 Col. Clements chased them back to Kullfontein, on Feb. 27 he occupied Rensburg, from which he
had been driven a fortnight before, and on Feb. 28 he entered Colesberg. On March 4 Brabant captured the Boer position on Labuschagne Nek. At Stormberg the Boers held their position strongly yet on Feb. 24, when they repelled a British attack, but they retired after the surrender of Cronje, and on March 24 Delarey occupied a fortress which had stopped his first attempted advance into the Free State. The retirement of the Boers from Cape Colony was accomplished in perfect order with a stubborn rear-guard defense.

Lord Roberts in his march to Bloemfontein was threatened on the left flank by the Boer forces escaped from Cape Colony and Natal, which were rallied by the presidents of both republics. The British had captured a large train of provisions belonging to the Boers when pursuing Cronje, and now were crippled by the loss of a large part of their own convey, which the Boers captured on the Riet river at Waterval. On the 20th, the Boers intrenched themselves on both sides of the Modder river at Poplar Grove, Gen. Christian de Wet in command. This position, 15 miles long, the British succeeded in turning on March 10, and after a fight with the British cavalry and horse artillery, whose jaded horses were almost used up in the long circuitous march, they retched in, leaving the enemy having inflicted a loss of 50 on the attacking force, which made three assaults on an elevated position from which Gen. Delarey defended the Boer left flank. At Driefontein the central column of the three into which Lord Roberts divided his army found the Boers holding a double line of kopjes crossing and hampering the advance along the Modder, turned in course southward to co-operate in the capture of the Boer position, which was vigorously defended till dark by the men who had come from Colesberg, joined by others from Ladysmith, Gen. Delarey commanding. On March 12 Gen. French with the British vanguard occupied hills commanding Bloemfontein. The Boers made no further attempt to defend the Free State capital. They were concentrating on a strategic line north of it, and the delay that Gen. de Wet and Gen. Delarey had caused gave time for the forces to assemble and reorganize. For the British their resistance had serious consequences. Fatiguing marches, rapid operations, long operating without rest, exhausted and disabled horses, so that the British were practically without cavalry mounts or transport. On March 13 Lord Roberts took possession of Bloemfontein. The evening before President Steyn and the other officers of the Free State Government, without replying to Lord Roberts's demand for surrender within twenty-four hours, departed with the archives, except two pro-British officials, who remained to hand over to Lord Roberts the keys of the public buildings.

Annexation of the Orange Free State.

After the occupation of Bloemfontein Lord Roberts endeavored to clear the country in the south and restore railroad communications with Cape Colony. The cavalry of Gen. French and Gen. Pole-Carew, co-operating with Gen. Brabant, endeavored to cover the line extending from Bloemfontein and Ladybrand, on the Basuto border. Gen. Louis Botha, in command of the Boer forces in the southeast of the Free State, skillfully evaded the strong mounted force which was sent to intercept him, passing up the Leew river valley the day before Gen. French completed the cordon that was intended to hem in the Boer column, which was hampered on its long march by an enormous train. The British were not strong enough to occupy the part of the Free State south of Bloemfontein. Lord Roberts issued a proclamation requiring the burghers to deliver up their arms under penalty of being punished and having their property confiscated. Mobile detachments passed through the districts from which the Boer forces had been withdrawn, and many of the Free State burghers gave up theatrix to the Boers, the Boers remaining loyal to British rule could not be trusted. A long pause at Bloemfontein was necessary to accumulate supplies for the advance upon the new positions of the Boers between Bloemfontein and the Vaal river. Horses had to be got for the cavalry and artillery and transport animals. The cold of April melted the snow in the higher altitudes and the Boers took off their clothing. Before the army reached Bloemfontein it was reduced to quarter rations. Supplies were found there, but before long the question of food became serious in the absence of safe railroad communications.

The Boers, taking advantage of the crippled condition of the British, established their rear-guard posts within 20 miles of Bloemfontein, and made incursions into the southern country to keep in touch with the burghers who still had arms and ammunition. The eighth division of troops sent from England debarked at Cape Town, making the total British force in South Africa more than 90,000 men, and it was followed by a ninth division.

Commandant Olivier, who retreated from Stormberg with 15 guns and a great convoy, left Rouxville just before Gen. Brabant arrived there to intercept him. While he moved northward along the Basuto border, a cavalry brigade marched from Bloemfontein to Thaba Nchu to cut him off, and a detachment entered Ladybrand, but was driven out by the Boers. The 6,000 men of Commandant Olivier, having gained the Platberg, commanded Ladybrand and could defy the British, having a safe line of retreat to the north. On March 25 Gen. French attempted to dislodge the Boers who were intrenched, 2,000 strong, near Karee-Siding, and lost 150 men in an infantry attack, but by stretching out his line he compelled them to abandon their position for fear of being surrounded. This was the first move in the northward advance. Before the British could make a new advance much remained to be done to clear their rear and render secure the position they had been able to hold, and to take measures to advance again, and threatened to retake Bloemfontein. On March 30 a mounted force commanded by Col. Broadwood, which held Thaba Nchu, finding itself threatened by the Boers on the north and east, retired in the night toward Bloemfontein, pursued by the Boers, who opened fire from three sides in the morning. The baggage and two horse artillery batteries, which were sent on while the mounted troops remained to act as a rear guard, marched into an ambush prepared for them at Koornspuit, where 150 men were killed and 200 taken prisoners, and 7 guns and all the baggage fell into the hands of the Boers. One of the batteries immediately drifted, and the Boers quietly secured the surrender of the officers and men as they came along without a shot being fired and without those in the rear being aware that the guns and baggage train had already been given up to the enemy. The men of the other battery fought bravely under a cross fire and brought away some of the guns. The men of the re-enforcements, returned after an arduous and futile march, leaving the enemy in possession of the waterworks. The Boers moved round to the south of Bloemfontein after the withdrawal of the British, and on April
4 they captured at Reddersburg an entire detachment, consisting of 167 mounted men and 424 infantry, of whom 10 were killed and 30 wounded. These successes led hundreds who had surrendered to their former enemies, and approached the Boers, who had the active Boer forces. Gen. de Wet joined hands with Olivier's commando from Ladybrand at Wepener, and closely besieged the British force that was posted on the Basutoland frontier to keep the Kafrs loyal. Here, as at Mafeking, the British had natives fighting with them. When relief was threatened, the Boers approached the British as if they were going on a picnic, and seemed to be waiting for the moment to make a dash on De Wet and Olivier, seemed to have turned the tide of war once more in favor of the Boers. The inability of British generals to cope with the Boer militia attracted the attention of the military men of all countries, and the publication of some dispatches in which the high-minded commanders comically commented on the carelessness in which their subordinates led their men into Boer traps brought on a discussion as to the advisability of reforming the whole military system of Great Britain, even to the extent of introducing compulsory service. The Boer military system was a national one in which every burgher was a marksman, but not only entitled to a rifle, but and the plan of every action was communicated to all the soldiers who took part. Every Boer was not only a fair marksman, but possessed a good eye for country and cover, and was able to judge whether a hill or a field in the ground was defensible and offered facilities for attack or retreat. The Boers used and enjoyed fortifications, field works, or breastworks of stone, and of putting them in the position where they were effectually concealed from any advancing force, was a natural faculty of the burghers developed in their incessant warfare with the natives and their previous conflicts with the British. The mobility of their army, in which every man was mounted, but only entitled to aim, and perceiving every point of their position to strike hard blows where they were not expected, but was of greater use in defense, permitting them to mass their whole strength at the points attacked, denuding every other point of their line, which they did with seeming recklessness. They could thus hold a line of fortifications with the troops that they had, and every man in rear of them, but from the officers except the few who had to do with directing operations. As far as possible, the plan of an intended battle was communicated to the whole Boer army beforehand; and, knowing the general plan, every man had a clear idea of the right thing to do in the emergences that arise in the separate parts of a battlefield. The Boers had no admiration for courageous daring unless strategic necessity called for a sacrifice of life. Piet Cronje's wonderful rear-guard fight and the tenacity with which his men held out in their holes in the river bank to enable the main force to escape, and when an exposed position was necessarily occupied, no matter how valiantly it was defended, as Elandslaagte was by the Johannesburg commando, the Boer generals had no praise for the bravery of their men, only blame for their rashness. In holding on to a position as long as possible, and then retiring to one in the rear and depending that to the last, no troops ever displayed greater courage. They had not the courage, however, to take risks in following up an advantage, and had a chronic fear of being surrounded, as it was the plan of Lord Roberts with his superior forces invariably to surround them. The coldness of the frontal attacks of Lord Roberts on Johannesburg and of Sir Redvers Buller on the Tugela defenses determined him to avoid such tactics in the future, but Lord Kitchener, in attacking Gen. Cronje's retreating force at Drieputs on Feb. 16, departed from the rule, and suffered heavy loss in consequence. The Boer generals had no European advisors except a few officers of artillery, and the Boers themselves displayed resourcefulness in turning all sorts of guns to a useful purpose, whether they were field guns, naval guns, or guns of position. They were about 1,000 trained gunners under Col. Trichardt. The Boers had lost only 4 men killed and 25 wounded of their artillery force for the whole war, and of their material only 1 Krupp quick-firing gun, 2 Nordenfelts, and 1 Maxim-Nordenfelt, while 2 howitzers were rendered useless. They took from the British 4 mountain guns at Nicholson's Nek, 10 15-pounders at Colenso, and 5 15-pounders and 2 Maxims at Koornspuit, otherwise known as Louis Trampost, and all these they employed against their former masters. The Boers had ordered 200 batteries of Creusot guns, but could not get them delivered. The foreign volunteers fighting for the Boers, exclusive of the Uitlanders of the Rand, were 120 Russian scouts, 100 American scouts under Capt. Hassell, 150 Germans, 100 Irish, 100 French, and 200 Angolans. The Uitlanders fighting on the Boer side numbered over 5,000, consisting of 300 in the Irish brigade, similar Dutch, French, Italian, and Scandinavian brigades, and about 500 Irish and Irish-Americans, a larger number of Dutch and of Germans, and smaller numbers of the other nationalities, including a few English, scattered among the Transvaal and Free State commandos. The total strength of the Boer forces in the field, including Boers, Afrikanders from the Cape and Natal, Uitlanders, and foreigners, hardly ever exceeded 35,000 at one time. After the death of Gen. Piet Joubert, who latterly was not able to direct active operations himself, the field was entrusted to another man, Sir Redvers Buller, who was acting as commander-in-chief. Although occupied Kimberley while Lord Roberts was driving the Boer army back upon Bloemfontein, sent out an expedition for the relief of Mafeking, where a British force under Col. Baden-Powell had been closely besieged for many months. Col. Keke- wich, the late commandant at Kimberley, conducted a second expedition through Griqualand, but in every case the Filipinos, Filipinos, the British were not present in force the inhabitants rose in arms. The march through a desert country, with enemies in both front and rear, could not be made from the south. Col. Plumer, who attempted to break the siege from the other direction, had an insufficient force, but was able to create a diversion by marching Zeerust. Gen. Villebois-Marcuel, a French officer whose services were of great value to the
Boers, was surrounded with 68 foreign volunteers at Boshof by a force of British yeomanry, and was killed in the action. Lord Methuen's northern advance from the vicinity of Hoopstad was brought to a stop with daily losses.

The Boers had, while Lord Roberts remained in Natal, raised a force of about 34,000 men in the field, of whom 12,000 held the Biggarsberg line of defense in Natal, 12,000 were in the Free State north, east, and south of Pretoria, 5,000 were at Fourteen Streams, 5,000 were scattered along the northern and northwestern border, and 2,000 beleaguered Mafeking. There was a reserve of about 60,000 more, who were employed as frontier guards, on commissariat service, in the Rand police, and in permanent garrisons at various points. The losses had been 5,000 captured at Paardeberg and before, 1,000 killed, 3,000 wounded, of whom half were again in active service, and 1,000 disabled by illness. The English captives at Pretoria numbered 6,000. Gen. Louis Botha was out April 12

appointed commandant general of the Transvaal army, and Schalk Burger became Vice-President of the Republic. President Steyn and the other Free State officials established the capital of their republic at Kroonstad after they fled from Bloemfontein.

The advance of the British from the south, joined by cavalry and light artillery from Bloemfontein, drew off the Boer commandos that were roaming south and southeast of Bloemfontein, harassing the line of railroad communications, which up to this time could not be fully restored, and keeping alive the spirit of resistance in the Free State and the active impetus of the Volksraad. This enabled the foreclosures of yeomanry and other troops from England and fresh horses and transport animals reached Bloemfontein before the movement was undertaken. Till then Lord Roberts was hamp ered by illness among his men and his beasts and by the transport difficulties for the immense food supplies over the railroad to Kimberley, and from there by a desert road. The Boers had a strong position near Dewetsdorp, which was occupied after some fighting by Gen. Chermside's division from the south on April 23. The waterworks were retaken by Gen. Ian Hamilton. Gen. French endeavored to place himself across the line of retreat of the Boers to Vryheid. This compelled the Boers to save themselves by abandoning the siege of Col. Dalgety's colonials at Wepener and to fall back to Dewetsdorp toward Ladybrand. Gen. Bрабant, who was expected to relieve Wepener from the south, arrived after the Boers had disappeared. Gen. French caught up with the Boers' rear guard at Thaba Nchu on April 27. The retreat was conducted by Gen. Louis Botha, Gen. Grobelaat's commando and various scattered parties, including 2,000 special service volunteers on parade commando, well-mounted troops impeded by no transport, each man carrying provisions for eight days in his saddlebags, were still operating south and west of the Vaal. This column that cleared the south of the Free State from Botha consisted of the divisions of Gen. Chermside and Gen. Pole-Carew, with mounted yeomanry, colonials, etc., the whole force numbering about 12,000 men under the command of Gen. Rundle.

Boer Appeal for Intervention.—On March 11 that for having in recent years acqui led the existence of the two republics Great Britain had paid the penalty ofhaving the two colonies in South Africa invaded and overrun, with great destruction to property and life, and large portions of the British dominions claimed as having been invaded by the two republics, entailing a costly war and the loss of thousands of lives; and in view of the use to which the two republics had put the position which was given them, and the calamities which their unprovoked attack had inflicted upon the British dominions, the British Government was not prepared to assent to the indepen dence of the South African Republic or of the Orange Free State. The two presidents at the same time addressed an appeal to each of the European cabinets and to the Cabinet at Washington, asking for the intervention of the powers to bring about a peace based on the independence of the republics. Because the British Prime Minister had declared unofficially at the beginning of the war that no proposals for arbitration or conciliation would be considered and because the British Government had already deigned to accede to the independence of the republics, none of the Continental powers were willing to undertake mediation, nor were they prepared to send representatives to the Durbar, President Kruger, who was received with honor in France, but was deferred from going to Germany by the refusal of the Emperor Wilhelm to receive him, and went to Holland, where he had the sympathy of both the people and the Government. The American Government, receiving the appeal for an end to the war and the mediation of the Dutch, formed a board of arbitrators. Lord Methuen's rejection of the Boer proposal, communicated the request to the British Government, expressing the hope that a way to bring about peace would be found, and offering the good offices of the United States to that end. The British Gov ernment replied that no intervention of a foreign power would be acceptable. When the Boer dele gates who came to the United States later endeavored to move the administration to take further steps to apply the principles of The Hague peace convention, they were reminded that the very terms of the convention indicated the inadmissibility of further action after conciliation had been refused.

Occupation of Pretoria.—At the beginning of May Lord Roberts was ready to advance northward with an army of over 60,000 men, enough to occupy a broad front extending beyond the Boer line of defense. He planned to turn the position on the Modder by an advance from Thaba Nchu, the columns wheeling with Karee on the railroad for their pivot. Gen. Botha, who had brought away the Dutch raiding columns from the south without losses, and held together the forces of the two republics, anticipated the turning move ment, and had a strong force to oppose Gen. French's progress on the British right flank from Thaba Nchu to Brandfort, which was undertaken on May 6, as well as a force on the road from De la Rey at Klipdrift and the hills near Karee had been occupied by mounted infantry. The front there fore extended over 40 miles. The Boers adopted their tactics to the open ground on which they had now to fight for the first time. They had strong reserves in close columns, and met the British at formation, a force having been ag gressed by the direct onset of skirmishers, which were en forced when driven away, enabling them to hold their ground until the weight of the British infantry pressed them back. Gen. Ian Hamilton's column forced a passage northward from Thaba Nchu, and after several lines of kopjes were taken
by the Canadians, the Gordon Highlanders, and the Shropshire regiment on May 2, the Dutch forces were withdrawn from the hills around 'Ithaka Nchu and fell from their positions, but they clung to the flanks of the columns that marched along the Winburg road. Brandfort was occupied on May 3, Gen. Delarey retiring his forces to the hilly country to the northeast, into which Lord Roberts refused to be enticed. The effective British field force operating in South Africa consisted of 128,000 regulars, 1,000 marines, 29,000 militia, 8,000 yeomanry, 10,000 volunteers, 25,000 colonial troops raised in South Africa, and 8,000 from other colonies, making a total of 200,000. The last contingents from England consisted of 17 battalions of militia and 3,000 yeomanry, and from the colonies 3,500.

The advance of the British brought about new dispositions of the Boer forces. The bulk of the besieging force was recalled from Mafeking just as Col. Mahon’s relieving column which had formed a junction with Col. Plumer’s party, making a force of 2,500 men, came to the succor of the starved and exhausted garrison on May 17. The British charged for the first time on May 13, inflicting a loss of 31 men, and on the same morning Capt. Elhoff led a storming party of 150 men, which forced an entrance into the town, was cut off in the rear, and found internal fortifications that stopped further advance, and after fighting all day and losing 29 killed and wounded, and 80 wounded, the British loss having been 6 killed and 11 wounded.

To prevent the concentration of all the Boer forces on his front Lord Roberts ordered a simultaneous advance from Kimberley against the burgher divisions in the west and in Natal upon the Diggarsberg line of defense. The advance to Winburg and Kroonstad to the eastward was rapid. The Boers abandoned the Vets river on May 3, and Gen. Hutton’s mounted infantry had a severe engagement with the Boers, who retreated when their right flank was turned. At Smaldeel junction a quantity of stores were captured. The British were now in possession of the railroad, which was not much injured except at the bridge over the Vets was gone. Gen. Ian Hamilton’s force, with Gen. Broadwood’s cavalry and some mounted infantry, advanced independently toward Kroonstad, driving the Boers out of a strong position at Howtek, reaching Neal Welkot on May 4, and on May 6 taking possession of Winburg. Gen. Roberts was now committed to the capture of Venterburg. The principal advance of the British was along the line of the railroad, and the main body of the Republican troops fell back toward the Zand river and Kroonstad. The country was hilly, and yet not well adapted for defense. The Boers made a stand north of the Zand at Rietburt, where Lord Roberts telegraphed to Gen. Thaba Nchu was attempted by the Boers prior to the last battle, but this did not divert Lord Roberts from his objective because Gen. Rundle’s division, re-enforced by Gen. Brabant’s force, could deal with the countermarching commandos. President Steyn removed his Government to Lindley, and his forces fled there and thence to Pretoria, which he was preparing to defend. Gen. Brabant arrived on May 17 to capture him. The Boers had defended their position on the Vets with little spirit, and when the British forces approached the intrenched position that they had prepared on the Rhenoster river they abandoned their fortifications without a blow, and retired across the Vaal, destroying one span of the railroad bridge at Vereeniging after they had crossed. On May 26 the British vanguard crossed the Vaal near Purys, and on the following day the main body encamped in the Transvaal, having crossed in four places with a front of 33 miles without encountering serious opposition, the Boers having been misled to the presence where Gen. Hamilton’s cavalry at Lindley and Heilbron and the British having rapidly changed their front from northeast to northwest. The rapid advance on Vereeniging saved the coal mines on both sides of the river from being crippled as those in northern Natal were to prevent the British from using the railroad for shipping coal from the Transvaal. On May 28 the main column reached Klip river and drove away the Boers who were there to contest the advance. At Klip River Berg they were erecting fortifications to defend the approach to Johannesburg from this direction. Lord Roberts had, however, sent Gen. French’s cavalry to make a diversion to the north and west. The Boers were still busy preparing for the defense of the Witwatersrand, the British vanguard passed on to Germiston, and seized the railroad junction. The mounted troops that went round the Boer positions on the left seized the railroad at Elandsfontein, and thus stopped the re-enforcements coming from Heidelberg. The British forces were so rapid that the Boers had no time to organize effective opposition. The lines of communication were held by the British, although an attempt to cut the railroad between Heidelberg and Pretoria had failed, the mobile column sent round on the east having been beaten. Gen. Botha had prepared several positions where he thought the British, but his men abandoned their unfinished fortifications when the enemy came near. The kopjes and ridges south of the Rand were cleared by Gen. Hamilton’s column, which worked round to the west of Johannesburg, while Gen. French’s cavalry seized the important positions on the other side and two whole divisions followed, taking positions on the northern and southern. The main body of the British consisted of two infantry divisions with auxiliary arms. The mounted troops under Gen. French and the column under Gen. Ian Hamilton moved from the Vaal drifts westward and advanced in a parallel line against the Boer camp at Klip River Berg. Gen. Pretorius, who had appointed Military Governor at Bloemfontein, proclaimed the annexation of the Free State under the designation of the Orange River British Colony. On May 28 Gen. French’s column engaged the Boers under Gen. Louis Botha at Gatssrand, and were held in check until reinforcements arrived, when the Boers retired. Pretoria was re-occupied for a siege and was deprived of the gains that were formerly mounted in the forts, but were taken away to be used in the Natal campaign and could not be brought back. At the request of the United States consul, Adelbert Hay, the Boer authorities before leaving liberated 20 British, when the Boers retired, preventing disturbances among the British prisoners of war. President Kruger and the other Transvaal officials went to Waterfall Boven on the way
to the hilly Lydenberg district of northern Transvaal, where great quantities of ammunition and provisions had been accumulated. Commandant Krauss surrendered Johannesburg to Lord Roberts on May 31. The mines, which it was feared might be destroyed by the Boers, were found intact, some of them having been in continuous operation during the war. The rapid movement of Lord Roberts’s army, which entirely disconcerted the Boer generals and gave them no chance to offer any formidable resistance, was mainly due to the transport service organized by Lord Kitchener. Johannes- burg was completely surrounded by various British divisions before the Boers had completed the defense of the Rand, and the overwhelming numbers of the British, holding the roads, compelled the commandos that were posted in points of vantage to make their escape with their artillery before it was too late. Several guns were captured, with many waggons of stores and ammunition, and numbers of Boers gave up their rifles and horses. The foreigners who had been fighting with the Boers or working in the arsenals crowded the trains for Delagoa Bay.

The Boers after evacuating the Rand took up a position at Six Miles Spruit to contest the advance to Pretoria. The leading column of the British arrived there on June 4, cleared one bank of the river, and advancing to the northeast, engaged the general and the other with a few rounds from heavy guns which had been placed in the fore part of the column for the purpose, and frustrated the efforts of the Boers to get at the flank and rear by deploying a great force of mounted troops. The first attempt of the British to chase the Boers was made on June 9. Gen. Sir Redvers Buller planned the advance which had been planned in combination with the movement of Lord Roberts in the Free State. Moving out from around Elandsbaagte, the van of Gen. Buller’s army reached the drift of Suncay river on May 9, and Thorneycroft’s mounted infantry occupied the high hill of Indoda, which for two months had been a British advanced post and outlook. With Lord Dundonald’s cavalry guarding the flanks, the army wheeled around, with Indoda as the pivot of the movement. Gen. Buller planned a simultaneous attack on the Biggarsberg position by the main column from the south and southeast and by Col. Bethune’s mounted column from the west. The Boers were caught between two forks of advance near Beith, but not a circuitous movement flanking their position from beyond Helpmakaar and from Pomeroy. On May 13 the battle was opened by artillery in the vicinity of Beith, and the British naval guns continued firing after the Boers had taken their guns away. The hill of Uithoek, near Helpmakaar, was seized by the Boers’ mounted men, who moved eastward and formed a junction with Col. Bethune’s cavalry. When the Boers saw the British on their extreme left they moved eastward, racing on the crest of the range with the mounted British troops in the valley, both striving to occupy first the high ground about halfway between Pomeroy and Helpmakaar. Col. Bethune’s men reached the goal first. The Boers evacuated Helpmakaar in the night and Dundee the next day.

Gen. Buller had been instructed merely to keep the enemy occupied in Biggarsberg. His turning movement compelled the defenders who were left a large position, where they had been considered impregnable if strongly held. The Boers retreated by railroad from Glencoe, which was occupied by the British on May 16. They followed up the Boers to Newcastle, where they were kept in check by artillery and infantry fire until the burgkers departed on the cars. A squadron of mounted in-
fantry fell into an ambuscade near Vryheid, and few escaped capture or death. The Boers continued their retreat by rail toward Heidelberg, and as soon as they entered the country of British occupied Utrecht, Volksrust, and the other places. The burghers still held positions of great natural strength from which they could impede the northward march of Gen. Buller’s army. They were expelled with difficulty from Dornberg, east of Newen. On May 30 Gen. Clery bombarded Lang’s Nek where the Boers had made intrenchments and placed guns in position. They occupied Majuba also, and Pongwana, a fresh commando having arrived to stop the further advance of Gen. Buller’s army.

In the west, Gen. Hunter crossed the Vaal at Windsor, occupied Fourteen Streams on May 7, the Boers ravaging a large capital of the South African Republic at Machadodorp, and President Steyn made Bethlehem the seat of Government for the Orange Free State. While the British were endeavoring to organize a new rule at Pretoria and Lord Roberts, with less success than at Bloemfontein, was inviting the burghers to deliver up their arms, Gen. Botha’s forces, the Boers developed fresh activity in his rear and struck at his lengthened line of communications. On June 4 Commandant de Wet captured north of Rhenoster a convoy of 55 wagons, containing food, clothing, and ammunition on the way to Heilbron. He cut the telegraph and tore up the railroad at Roodeval, north of Kroonstad, on June 5, and two days later made captives of all the men of the Derbyshire regiment except 35 killed and 111 wounded. This was accomplished by a detachment of the army that Gen. de Wet had assembled in the Bethlehem district, which posted guns unobserved on the heights surrounding the camp. Gen. Louis Botha rallied and reorganized his forces east of Pretoria. Gen. de Wet held a line extending along the mountain ranges from Ficksburg on the Basutoland frontier 40 miles northward nearly to Senekal, and from that point eastward for a like distance to Bethlehem. Gen. Rundle’s division, resting on the railroad from Winburg, was unable to take the offensive, and stood in danger of having its communications cut off. Troops were moved down from the north to relieve the pressure. Gen. Rundle announced to the Boers who were fighting that unless they surrendered within three days their farms and all their possessions would be confiscated.

To the dismay caused by the defeat of the Boer forces before Johannesburg and Pretoria and the flight of the President was added mistrust because President Kruger took with him £2,500,000 of gold. Gen. Botha retired to a fortified position at Pienaar’s Poort, 12 miles east of the city. He was a small force at first, which grew rapidly until he was able to stop the supplies that the British were collecting in the county. Even before the surrender of Pretoria, when it was seen that Gen. Botha’s plan of defense must fail, some of the military leaders as well as civilians were disposed to treat for peace, and afterward negotiations for the surrender of Boers were carried on with Gen. Botha until Gen. de Wet succeeded in settling the British communications. The burghers in Pretoria were greatly encouraged by the rapid resumption of Boer activity, and ceased to surrender arms, whereas 5,000 Mauser rifles had been delivered up till then, so that Lord Roberts determined to attack. Botha’s main force in front was so strong that he could place most of his troops on his flanks, supplies that the British assailed with two strong columns, which were repulsed on June 11, but renewed the attack on the following day and drove the Boers back to a second position, which was evacuated when they saw that they were nearly surrounded. Gen. Jan Hamilton overtook the rear guard and was wounded in the action that ensued. Gen. Botha fell back on Middelburg.

Gen. Buller in Natal forced Botha’s pass on June 8, threatening the communications of the Boers, whose fortified position at Laing’s Nek stopped his advance along the line of the Durban Railroad. Many of the Boers had gone to re-enforce Gen. Botha, and to Gen. Botha’s left, at Kimberley, Warden, Walkers Nation, and Charlestown were occupied without much opposition. The flank force that marched round by the Drakensberg mountains had several fights, and before Laing’s Nek was surrounded and abandoned by the Boers on June 13 the British losses amounted to 30 killed and 100 wounded. Heavier losses were inflicted on the retreating Boers at Almond’s Nek. Natal being cleared of Boers, Gen. Buller entered the Transvaal and established contact with the troops of Lord Roberts, whose plan was to establish a chain of posts between the forces of Gen. Botha and Gen. de Wet and to open the railroads to Durban and Kimberley. Gen. Botha, in his turn, crossed the Vaal and, as he was unable to stop entirely the raids of Christian de Wet on the Bloemfontein Railroad, and it was long before he held the other railroads, Krugersdorp, Potchefstroom, Frankfort, Standerton, Ameersfoort, and other towns were occupied, but without strong British garrisons they were always open to the Boers, who were always in danger to cross the two republics from one end to the other in armed parties without fear of the British and without their knowledge.

The armies of De Wet and Botha baffled for months the skill of Lord Roberts and Lord Kitchener. Botha held his own only a few miles west of Pretoria and kept a large part of the British army there. When troops were sent south to pursue De Wet he resumed active harassing operations.
and when they were recalled to drive him away De Wet struck heavy blows. The British kept 200,000 men in South Africa to garrison the towns, guard the railroads from Cape Town, Durban, and Delagoa Bay, and hold in check the forces of the two Boer republics of Orange and Natal, and for this their force, although comprising the entire available military strength of the British Empire, was not sufficient. Commandant de Wet captured in June enough winter clothing for all the burghers in his army, 3,700 shells, and small-arms ammunition sufficient for three years' campaigning. Operations were conducted by Lord Kitchener, who for three months tried in vain to hem him in with 40,000 troops, twice as many as his force and Botha's combined. The Boer ammunition ran out soon after the fall of Pretoria. The stores captured from the British, however, supplied the rifles, cartridges, and shells his troops needed more than anything else, and all the commissariat supplies that were needed for the Boer soldiers and their horses. When the first attempts were made to sever railroad communications in the rear of Lord Roberts's army he gave notice that farms would be destroyed and stock confiscated for 10 miles on either side of the line, and the Boer commandants were warned by Lord Kitchener to keep with his military failures led him to apply with greater stringency the method of holding the farms, cattle, and families of the fighting burghers as hostages to induce them to surrender, and even to threaten to confiscate the property of the burghers who were on their farms as a means for bringing pressure on those who were in the field. Lord Kitchener carried this policy for a time to extremes. The homes of the Volksraad members of the Free State and the Transvaal were destroyed for the reason that the British blamed these men for having brought on the war. The territory of both republics was dotted with the ashes of ruined homes, and the practice of destroying farms did more than anything else to discredit the burghers in the field. Whenever a Boer commando came to a farmhouse or passed over a farm it was customary to burn the buildings and seize the stock in accordance with a proclamation of Lord Roberts against harboring rebels, as the Boer soldiers were called after the annexation of the republics. Whenever the British fired on the garrisoned towns and the lines of railroad patrolled by the British the Boers moved freely and unobserved, and for a long time no British movement was safe unless carried out with a force as strong as one of the Boer armies. After Commandant de Wet had accomplished his first successful raids on communications Lord Kitchener brought a flying column from Vereeniging to put a stop to such operations, and Lord Methuen hastened with his column from Heilbron to fill the gap that Lord Roberts had left in his bold movement on Pretoria, which would have been less successful if Commandant de Wet had struck before Commandant-General Botha's main line of defense was breached entailing the immediate loss of Johannesburg, the fall of Pretoria, and the consequent military and political demoralization. The commandos of De Wet and Nell retired after a brush with Methuen's and Kitchener's combined forces, but not before a party had attacked a construction train that was repairing the damaged railroad. Station posts with artillery were established all along, and armored trains with machine guns patrolled the line to prevent its being cut again. Gen. Cronje surrendered Klerksdorp, and one or two of the other Boer commandants gave up when the British appeared because they considered the war over. Commandant de Villiers surrendered in Cape Col-

ony. Gen. Baden-Powell traversed the northern part of the Transvaal, taking possession of Rustenburg and other places and receiving the surrender of numbers of Boers.

The operations by which Gen. Botha was driven from the vicinity of Pretoria and the movements undertaken to restore and protect railroad communication with the south necessitated another halt, the cavalry and mounted troops being again exhausted. Gen. Ian Hamilton having occupied Heidelberg on June 23, Lord Kitchener went to Kroonstad to begin a campaign against Commandant de Wet. The Boers had cut off the captures of convoys and detached bodies of troops had a political effect that was more serious than their military importance warranted. Gen. Hunter, who had temporarily taken over Gen. Ian Hamilton's command, advanced on July 1 to Frankfort to co-operate with columns under Gen. Paget. Gen. Chemaly and Gen. Bekker carried an encircling maneuver in the southeastern corner of the Free State, the object of which was to enfold Christian de Wet's little army as in the coils of an anaconda. The operations, were partly successful, and had the result of breaking up the last cohesive fighting body among the Boers of considerable strength in the Transvaal. The town of Bethlehem, which had been President Steyn's capital, was taken on July 7. Clements and Paget having closed in on it from two directions. A cordon was established from Bethheim to Ficksburg by the divisions of Gen. Hunter and Gen. Rundle joining hands, but it did not hold Christian de Wet, who broke through, with Gen. Broadwood's cavalry in pursuit, attacked Gen. Little's brigade near Lindley, divided his force into two parties, one of which was engaged by Broadwood, crossed the railroad at Honing Spruit on July 21, captured a supply train with 102 Welsh fusileers, and moved northward toward the Vaal river, being so lightly equipped that he had difficulty in maintaining his troops although carrying abundant supplies. Commandant Piet de Wet, who had offered to surrender before if Lord Roberts would promise not to deport his men, went into Kroonstad, where his command laid down their arms. The cordon was drawn closer round the remaining Boer forces in the Bethheim district, and Gen. Hunter met Commandant Prinsloo. They fought stubbornly from intrenched positions at Retief's Nek and Stabbert's Nek, from which they were driven by artillery into the narrow valley of the Brandwater, and blocked in on every side by Clements, Paget, MacDonald, Bruce, Hamilton, and Hunter's division advancing from Pooniesburg. Gen. de Wet had taken with him 5 guns, the best they had. On July 29 Gen. Prinsloo surrendered in the valley of the Little Caledon after being shelled with lyddite. Over 4,000 men gave up their arms and horses and 3 guns, and were deported to Ceylon. Commandant Olivier with 1,500 men and 5 guns escaped by the mountain road to Harrismith, Gen. de Wet's arrival in the north was followed by an outbreak of Boer activity west of Pretoria. Lord Roberts was trying to keep open the railroad to Klerksdorp as well as to open the Natal railroad so as to join hands with Buller, who was working his way slowly toward Heidelberg, repairing the railroad which the Boers destroyed. Lord Roberts had prepared to send a force against the Boers at Middelburg and to clear the railroad to Delagoa Bay to Maacha-
dorff, where President Kruger had established himself, ready to slip into Portuguese territory and take ship for Europe if the British appeared, and whence he sent continually to the Boer commands
supplies that were landed at Lourenço Marques. A train was wrecked on the Klerksdorp Railroad. Rustenburg was besieged by a Boer force until May, and Gen. Smith-Dorrien was driving the Boers from near Krugersdorp. Gen. Grobler’s command captured a squadron of cavalry, three companies of the Lincolnshire regiment, and two guns, the garrison that was holding Nitra’s Neck; 18 miles from Pretoria on the road to Rustenburg, was attacked vigorously, and Grobler routed the garrison at Davelpoort, 5 miles north of Pretoria.

July 24 Lord Roberts began his general advance against Commandant-General Botha’s positions on the Delagoas Bay Railroad, which the Boers quickly evacuated. Gen. French occupied Middelburg on July 27. Renewed aggressive tactics of De Wet and Grobler led to Lord Methuen’s marching to the south again to co-operate with Kitchener in an attempt to get the Boers out of the column. De Wet and in defending against his raids in the trunk railroad. Gen. Ian Hamilton’s mobile column was sent back from Middelburg to check Commandant Grobler, who replenished his supplies by upsetting a train near Frederikstad and held Gen. Baden-Powell’s command besieged in Bakenfontein. And Commandant Botha captured a supply train south of Kroostad. To counteract the British policy of burning farms in order to induce Boers to surrender, President Kruger and Gen. Botha promised to repay such losses if theburghers would remain on commando. Gen. Hamilton cleared the Boers from the Magaliesberg and reached the Gariep, where he intercepted commandos who had escaped at Elands river, which had undergone a ten days’ siege by Commandant Delacey. Lord Methuen failed in his efforts to intercept De Wet, who crossed the Vaal and joined Grobler in the bush veldt southwest of Pretoria. Attacks on the Delagoa Bay Railroad in the rear of the column that was advancing to Machadodorp were required by the burning of all farms in the localities where they occurred. For a plot to kidnap Lord Roberts 15 citizens of Pretoria were arrested on Aug. 10. It came out at the trial that the plot had been suggested by a paroled Boer and named Cordua, a detective in British pay. A plot to overpower the British garrison in Johannesburg was reported in July, and about 400 Germans, Frenchmen, Swedes, and Americans were deported. The employees of the Netherlands Railroad Company were banished previously.

Lord Kitchener joined with a large force in an effort to intercept Lord Western’s force that was chasing President Steyn in the Gatsrand. Gen. Buller marched northward to establish communications with Gen. French’s force, which had advanced on the Lourenço Marques Railroad to Wonderfontein, when Buller, after slight resistance from Christian Botha’s command, occupied Ermelo on Aug. 11. Commandant Delacey increased his forces in the other districts of the Transvaal that the British thought they had pacified, until Sir Frederick Carrington’s Australian and Rhodesian troops were compelled to evacuate Zeerust and retreat to Mafeking, and Gen. Ian Hamilton to retire from Rustenburg to Pretoria with his cavalry division and Gen. Baden-Powell’s exhausted troops. In this, as in other districts that the British were forced to evacuate after promising protection to theburghers who submitted, the Boers wreaked vengeance afterward on those who had given up their rifles. Many Boers when the British were in possession of their district offered to surrender on terms, but this was refused, suspecting that many of theburghers who subscribed to the oath of neutrality afterward rejoined their commandos when the Boers became active in their neighborhood and the British retired, revoked his former proclamation permitting them to remain on their farms, and subsequently the British attempted to carry out a plan of internment of the civil population in guarded cantonments close to the British camps. It was announced in the proclamation of Aug. 18 that burghers residing in districts occupied by British troops unless they took the oath of neutrality would be deported, and that if they took the oath and afterward broke it they would be punished with death or imprisonment. The Boers were not less rigorous, forcing burghers who had taken the oath to join their commandos on pain of being shot, actually shooting those who gave willing aid or information to the English, and treating all South African volunteers whom they took prisoners with harsh severity, while English soldiers were treated kindly.

The mounted troops of Gen. Broadwood, the divisions of Lord Methuen and Gen. Smith-Dorrien, and his own active force of mounted Cape Colonists and Canadians, with which Lord Kitchener endeavored to draw a cordon of investment around the two commandos of De Wet and Grobler, could make no contact with this small but formidable commando, and each of them suffered in a sharp rear-guard action, yet all of them together could not hold this remarkably mobile corps, a part of which dissolved into small bands that roved nearly to the outskirts of Pretoria, while the nucleus that could be gained with shotguns and muskets and shotguns. Lord Methuen’s command, with his commandos, was besieged in Elands river and driven back to the tightening circle and get away with all the guns and the train of supplies and ammunition. Commandant Olivier in the extreme east of the Free State escaped with the other remnant of De Wet’s army by doubling back when Gen. MacDonald from Ladysmith occupied Harrismith to the north. All the Boers were out of the Free State by the middle of August. Lord Kitchener pursued De Wet till he lost touch of him, then raised the siege of Elands river. De Wet, passing Commando Nek, demanded its surrender by Gen. Baden-Powell, who with a new command held the position strongly. Gen. Ian Hamilton pushed the Boers out of the Magersberg again, capturing two Krupp guns. De Wet meanwhile crossed to the northeast of Pretoria, pursued by Baden-Powell and Paget; then, having escorted President Steyn to where he could safely go on to Machadodorp to confer with President Kruger, recrossed the Magaliesberg range, and returned to the concentration of British forces at Lord Methuen’s command that marched his men 40 miles a day in the effort to intercept him. Gen. Buller’s force had a hard battle on Aug. 24 at Bergendal with Gen. Louis Botha’s troops, which were strongly intrenched at Machadodorp, but were pressed at the same time by Gen. Pole-Carew from Belfast, while Gen. French attempted to reach the road toward Lydenburg. Field-Marshal Lord Roberts was on the field conducting the combined operation. Buller’s cavalry rode into a trap and suffered from machine guns and shells at short range, and two companies of the Liverpool regiment were captured by the enemy’s pickets to reach the road and were hilted. The position was finally forced by a flanking movement on Aug. 27, and carried by a bayonet charge. Pole-Carew’s simultaneous ad-
Guerilla Fighting.—The action at Boshendal was the last regular battle of the war, which degenerated into a war of irregulars. The Boers made more use of guerilla warfare and became more less successful and more in consequence of the retaliatory measures employed on both sides. Commandant Theron began operations in the vicinity of Johannesburg, where hardships were suffered by the civilian population remaining in town and in the vicinity, about 30,000, though some greater than the Boers. After the surrender of Lydenburg, the Boers were forced to give up their siege of Warden and the other parts of the Transvaal, in spite of the presence of large forces under Gen. Ian Hamilton, Lord Methuen, and Gen. Carrington.

Gen. Buller, starting from Machadodorp on Sept. 1, moved slowly toward Spitzkop, driving the Boers before him through a difficult mountainous country, and Gen.tremendously pressed on to Barberton, which was occupied on Sept. 13. Lydenburg was occupied previously by Lord Dunbar and Gen. Brocklehurst. When the British cleared the railroad to Komatiport, which was reached on Sept. 24, Gen. Piernín with about 3,000 Boers went over the border to surrender to the Portuguese, who destroyed their guns and ammunition. The war was regarded by Lord Roberts as practically over except guerrilla fighting, to deal with which large columns were not necessary. The Boers sometimes captured outposts and surprised detachments, and wherever the British were not present in sufficient strength the whole population made a sortie or a charge on a British police capable of carrying out the work of pacification under the changed conditions was intrusted to Baden-Powell, a major when in command of the war against Mzilikazi. He had become an important general. Up to the end of October the casualties of the war on the British side were estimated at 46,000. The deaths, including 6,482 from disease, had been 11,739. The Boers killed, wounded, and prisoners were believed to amount to 30,000, half that number being prisoners. The annexation of the South African Republic to the British dominions under the title of the Transvaal Colony was proclaimed by Lord Roberts on Sept. 1. The Boers were informed that none of them would be treated as prisoners of war except those who had been continuously in arms and attached to their commands; that noncombatants who failed to acquaint the troops of the presence of the enemy would be treated as rebels, buildings sheltering the enemy would be razed, and a fine of 21s. an acre on all lands and a fine of 21s. for each mile of railway tracks was imposed. The fevers and privations incident to the guerilla campaign caused increasing mortality. Gen. Rundle marched a column through the eastern part of the Orange Free State from Vered to Harrismith, meeting considerable opposition, and Gen. French marched from Machadodorp to Methylaw on the northeastern border. He then marched toward the line of retreat with the forces of Commandant Smuts and Commandant Hans Botha. In November a plot against the life of Lord Roberts was discovered, in which Greeks and Italians were the conspirators. It was decided to enroll the British residents in a corps called the Rand Rifles, the Military Gov.
Transvaal

Officer informing them that they would have to bear the military burden in future rather than professional soldiery. The soldiers, letting the refugees return to Johannesburg was that the volunteers, who were the most useful fighters, could not then be kept in the field. A land settlement commission under the chairmanship of Arnold Forster studied the question of establishing military settlers on confiscated farms in the Transvaal and Orange River colonies, a new constabulary and other forces kept in garrison could have land after a given term of service on condition that they hold themselves ready as reservists to return to the ranks. Sir Alfred Milner was selected to be the Governor of both the new British colonies and High Commissioner of British South Africa. At first, but for a longer time, the Colony. Lord Kitchener was appointed commander-in-chief of the forces in the field, Lord Roberts being summoned to England to succeed Lord Wolseley as commander in chief of the British army. On Nov. 24 Commandant de Wet, who was accompanied in his wanderings by President Steyn, compelled the surrender of 400 troops with 2,000 Boers and 650 civilians. The bodies of Boers gathered in the southern districts of the Free State and began to invade Cape Colony. Gen. Knox once more took up the pursuit of De Wet. Gen. Paget engaged with the joint commando of Viljoen and Erasmus north of Kroonstad at Bronkhorst Spruit, on Nov. 29, and sustained many casualties. The commando was repulsed and a garden kept in garrison by Lord Milner, who was also commander in chief of the Johannesburg forces. A total number of 4,000 men were drafted from India, 11,000 volunteers from Australia and Canada, 29,000 raised in South Africa, and 10,000 yeomanry, 21,500 militia, and 11,000 volunteers from the United Kingdom. Since Aug. 1 there had been 12,500 re-enforcements arrived. The number killed in battle up to Nov. 30 had been 9,018; killed in action, 5,917; wounded, 7,786; in hospitals at the beginning of October, 11,927; invalided home, 35,548. The Australian colonies were invited to send further mounted contingents, and new pecuniary inducements were offered to volunteers in South Africa and the United Kingdom. The ordering of re-enforcements to the Cape Dutch from beginning another rebellion when the Republicans appeared among them. The Boers who entered Cape Colony, most of them detached from De Wet's force and in need of the clothing and other supplies that they commandeered in the towns they entered and of the stock which they took from the farms, drove back the bodies of Brabant's horse and Cape mounted rifles that opposed them, but found Colesberg, Burgersdorp, Stormberg, and the other military positions strongly occupied. Gen. Brabant hastened from Cape Town to conduct operations against them, summoning whatever armed force existed in the area, which was a large one. Cape Dutch volunteer bodies were formed. Martial law was proclaimed throughout all the farming districts, and colonists were warned that if they assisted the invaders they would meet the fate of traitors. The pro-British colonists were armed and assisted the Cape military, while a column was organized by Lord Kitchener to co-operate in the expulsion of the Boers. Hertzog's column occupied Britstown and cut the railroad south of De Aar Junction. The other column, re-enforced by Boers from Zoutpan, seized Philipstust, but retired when Thorneycroft's mounted infantry arrived. Gen. Settle, Gen. Inigo Jones, and Gen. MacDonald were ordered to co-operate in the occupation of the Colony, who were finally headed and driven, some northward and some westward, after having penetrated farther into the colony than the invaders.
TURKEY.

who raised a serious rebellion a year before. Other troops trekked over the western border of the Transvaal into the Vryburg district. While the invasion of Cape Colony necessitated a concentration of British forces in that new focus of disturbance, the commandos in the vicinity of John- nings were engaged in the depression with difficulty checked by Gen. French. Commandant Beyers, who had been co-operating with Delarey, threatened the railroad immediately south of Pretoria at Kaalfontein, and passed eastward when attacked by the cavalry of Gen. William Knox. In the northwestern Transvaal Gen. Charles Botha, who had been overthrown, reached the district of Lydenburg, which was occupied by Louis Botha, who resumed the offensive, destroyed the railroad and captured a Rifle battery, and on Dec. 29 captured the garrison and taking 200 prisoners. Commandant de Wet gathered together another strong and well-equipped commando and occupied the country between Ficksburg, Senekal, and Winburg, while Gen. Charles Knox could do nothing more than guard the line between Winburg and Ladybrand to prevent him from joining in the invasion of Cape Colony. The enlistment in the United Kingdom of 5,000 yeomen was authorized. New Zealand raised 6,000 troops under Maj. Gen. Sir Henry Maoris. Militiamen were recruited in Great Britain to bring up the strength both of their own regiments and of the regulars in South Africa. Selected Johannesburg miners, 1,500 to begin with, were allowed to return to work organized as a military body. Volunteer regiments in England were invited to send out officers and men to take the place of those who returned home. Gen. Baden-Powell was careful in selecting the men for the colonial constabulary, who were to receive as a prize the choicest farms in the new colonies and to uphold the power of the British Empire among the Dutch population in the future. The fighting in January was more severe than in December, and in February there were 150 killed on the British side in a large number of petty actions, while 24 officers and 624 men died of disease and wounds. Up to the end of February deaths from all causes amounted to 664 officers and 13,137 men, and 1,703 officers and 40,504 men had been invalided to England, but a large proportion of these rejoined the ranks.

TURKEY, an absolute monarchy in eastern Europe and western Asia. The Sultan is the eldest prince of the line of Osman. Abdul Hamid II, the thirty-fourth Sultan of the Osmanli dynasty, born Sept. 21, 1842, succeeded his brother, Murad V, who was deposed on Aug. 31, 1876, on the ground of insanity. The Sultan is recognized as the Khalif of Islam, the temporal chief, not only within the Ottoman Empire, but by a large proportion of the Sunnite Mohammedans outside. In matters of religion and law the Sultan is advised by the Sheikh-ul-Islam and guided by the decisions of the Ulama, a body of eminent expounders of the sacred books sitting in Constantinople. In civil and political matters the chief executive officer under the Sultan is the Grand Vizier, or Grand Vizier. These two functionaries, together with the ministers at the head of the departments of state, form the Privy Council, or Cabinet, which has the enormous responsibility of the beginning of 1900 as follows: Grand Vizier, Halil Rizak Pasha; Minister of War, Izzat Pasha; Minister of the Interior, Memduh Pasha; Minister of Justice and Worship, Abdurrahman Pasha; Minister of Marine, Hassan Pasha; Minister of Foreign Affairs, Ahmed Telvik Pasha; Minister of Finance, Reshad Pasha; President of the Council of State, Mehmed Said Pasha; Grand Master of Artillery, Mustafa Zeki Pasha; Intendant of Religious Endowments, Galib Pasha; Minister of Education, Zundu Pasha; Minister of Commerce and Public Works, Zihni Pasha.

Area and Population.—The area of the Turkish Empire still under the dominion of the Sultan is estimated at 1,111,741 square miles, and the total population at 24,515,500. Including the tributary states of Bulgaria and Eastern Roumelia, Samos, and Egypt, with Thassos, and also Bosnia and Herzegovina, the total area is 1,316,767 square miles, and the total population 39,810,000. The area of Turkey in Europe, comprising the vilayets of Constantinople, Adrianople, Salonika, Monastir, Kossovo, Scutari, and Janina, is 62,744 square miles, with 6,868,300 inhabitants. Asia Minor has an area of 2,242,400 square miles and 8,256,900 inhabitants; Armenia, 72,491 square miles and 2,472,400 inhabitants; Syria and Mesopotamia, 200,714 square miles and 4,067,900 inhabitants; Arabia, 173,700 square miles and 1,050,000 inhabitants; Tripoli, 308,900 square miles and 1,000,000 inhabitants. The population of Constantinople is about 1,125,000; Smyrna, 210,016; Bagdad, 145,818; Diyarbekr, 118,811; Lydenburg, 105,000. About half the population of European Turkey is Christian. In Asia Minor the Christians form 17 per cent. of the population; in Armenia, 26 per cent.; in Syria, 18 per cent. in the vilayets of Aleppo, 28 per cent. in the vilayet of Smyrna, 31 per cent. in the vilayet of Beyrut, and 50 per cent. in the Lebanon. Besides the Moslem religion the Turkish Government recognizes the Franks, or Roman Catholics, the Greek Orthodox Church, the Armenians, the Syrians and United Chaldeans, the Maronites of the Lebanon, and Jews.

Finances.—Out of a total revenue of £ 18,500,000, the public debt absorbs £ 6,500,000. Various revenues are hypothecated for the debt and placed in charge of a foreign Council of Debt Administration, which in the financial year 1900 received £ 2,274,378, of which £ 1,125,527 came from the indirect taxes on liquors, salt, stamped paper, fisheries, silk, etc., £ 702,857 from the postal and telegraph revenue, £ 423,000 from the sale of tobacco, £ 202,702 from the Eastern Roumelian tribute, £ 102,596 from the share of revenue of the island of Cyprus, £ 50,000 from customs duties on Turkish tobacco, and £ 606 from various sources. The cost of administration was £ 119,676, leaving £ 2,154,702 net receipts, against £ 2,327,584 in 1899 and £ 2,097,304 in 1898. The total amount of loans outstanding on June 30, 1899, was £ 127,832,553, of which £ 76,937,762 were the converted debt of 1881, £ 28,364,460 various loans obtained between 1888 and 1894, £ 13,553,050 lottery bonds, £ 2,473,451 the 5-per-cent. customs loan of 1886, £ 8,045,600 the 4-per-cent. priority bonds of 1891, £ 2,157,202 the 3-per-cent. loan of 1896, and £ 2,097,304 from the Ottoman Bank. Other debts are: £ 24,513,000 war indemnity due Russia, £ 50,000 of indemnities to Russian subjects, and £ 273,494 for the Damascus Railroad.

The Army and Navy.—The army is distributed in 7 ordinaries, or military regions, 6 of which are in Europe, and the seventh in Thrace and the European part of Asia Minor, viz., 1 corps of nizam or regular troops, 2 corps of the redif or territorial army, and 1 corps of mustahfa, reserves of the territorial army. The nizam troops are kept at their full strength in time of peace, excepting some special bodies. The first 5 army corps have each 46 battalions of redif,
the 6th has 44. Each army corps consists of 2 divisions of infantry, except the 3d and 4th, which have 3 and 4 respectively; 1 division of cavalry, except the 7th; and 3 brigades of artillery, of 2, 252.000; 10 batteries, of 1,510,000; 2 regiments of artillery, of 1,240,000; 3 batteries, and 1 section of horse artillery, excepting the 6th, which has 1 regiment with 17 batteries, and the 7th, which has 1 regiment with 7 batteries. In Arabia, 1 division of 17 battalions, 2 squadrons, and 2 mountain batteries, and in Tripolli 1 division of 17 battalions, 1 brigade of cavalry, and 3 regiments of artillery, are maintained, which are outside of the army corps. The strength of the standing army in 1900 was about 350,000 men; of the territorial army, 364,000 men; of the mustahfiz, 120,000 men; of the general levy, 666,000 men; total war strength, 1,500,000 men, half of whom have received a thorough military training.

The naval force in 1900 consisted of 3 casemated ironclads, 2 turret ships, 2 old broadside ships, 9 old ironclad gunboats, 2 river gunboats, 2 destroyers, and 15 first-class and 7 second-class torpedo craft, with 2 unarmored cruisers, 6 corvettes, 10 gunboats, 3 yachts, and 3 avisos. There were built in 1900, 1 battleship, 10 destroyers, 3 battleships, 6 cruisers, and 6 first-class gunboats. The navy was manned by 2 admirals, 9 vice-admirals, 16 rear-admirals, 130 captains, 70 commanders, 300 lieutenants, 250 lieutenant commanders, 200 ensigns, 450 mechanicians, 50 surgeons, 212 commissary officers and paymasters, about 3,000 petty officers, and 30,550 men.

Railroads, Posts, and Telegraphs.—The length of railroads in operation in 1899 was 2,796 miles, of which 1,240 miles were in Europe, comprising the Orient railroads joining the European system, 786 miles, and the lines from Salonika to Monastir, 137 miles, and from Salonika to Constantinople, 517 miles. In Asia Minor, Turkey there were 1,513 miles, the Anatolian Railroad having a length of 634 miles, the Aidin line 320 miles, the railroad from Smyrna to Cassaba 321 miles, that from Beyrut to Damascus 96 miles, from Damascus to Nazirib 64 miles, from Jaffa to Jerusalem 54 miles, Mersin to Adana 42 miles, and Fosandia to Brusia 23 miles. A line from Acre to Damascus was also built last year. A new German company that built the Anatolian Railroad has contracted to build a line from Konieh to Bagdad and Basra before 1908.

The postal traffic in 1895 was 10,366,000 internal, 2,512,000 international, and 1,848,000 transit letters, 225,000 postal cards, and 1,941,000 internal, 1,183,000 international, and 1,229,000 transit newspapers and circulars. The receipts were 5,724,641 francs, and expenses 1,836,565 francs. The length of telegraph lines is 21,800 miles, with 33,760 miles of wire. The number of messages in 1895 was 3,124,168.

Commerce and Production.—The total value of exports in 1898 was estimated at £ 24,070,000; imports, £ 13,750,000. The value of imports in the financial year 1897 was £ 21,350,710, and of exports £ 15,425,486. The imports of cloth in 1896 were £ 1,510,000 in value: sugar, £ 1,400,000; grain and flour, £ 1,370,000; quilting, £ 1,116,000; yarns, £ 1,053,000; woollen cloth, £ 804,000; oil, £ 1,568,000; animals, £ 544,000; petroleum, £ 512,000; madapolam, £ 471,000; cashmere, £ 401,000; iron manufactures, £ 393,000; timber, £ 375,000; drugs and colors, £ 352,000; butter and cheese, £ 284,000; paper, £ 274,000; coal, £ 270,000; silks, £ 252,000; clothing, £ 235,000; glass, £ 227,000; wool and cotton goods, £ 221,000; carpets, £ 215,000. The exports of raisins were £ 2,197,000; raw silk and cocoons, £ 1,991,000; minerals, £ 2,322,000; mohair, £ 2,767,000; opium, £ 753,000; oak galls, £ 578,000; cotton gins, £ 2,940,000; wool, £ 540,000; hides and leather, £ 498,000; coffee, £ 439,000; grain and flour, £ 370,000; olive oil, £ 319,000; sesame, £ 305,000; carpets, £ 277,000; drugs and colors, £ 262,000; figs, £ 251,000; dates, £ 233,000; animals, £ 220,000; nuts, £ 211,000; seeds, £ 180,000; oranges and lemons, £ 163,000. The imports from and exports to various countries in the financial year 1897 were in value as follows:

Navigation.—The number of vessels entered and cleared at Turkish ports in 1898 was 173,729, of 34,653,457 tons, of which 39,680 were steamers, of 32,446,320 tons, and 134,059 were sailing vessels, of 2,207,137 tons. The merchant navy in 1900 comprised 177 steamers, of 53,953 tons, and 2,205 sailing vessels, of 141,655 tons.

Foreign Relations.—On March 5, 1900, an article announced an increase in the customs duties from 8 to 11 per cent. ad valorem. The powers at once lodged a protest declaring that no such change could be made without a previous understanding with all the powers concerned. The reply made by the Porte was a circular note simply stating that the increase of duty would take effect on May 1, and that the decrease of duties was sent another collective note reiterating with emphasis their previous declaration that the customs duties are unalterable except with the consent of the powers. To this the Porte replied on April 5 in a note defending the proposed increase upon the grounds of the long delay in concluding the new commercial treaties and the extreme financial pressure from which the treasury was suffering. It described the new tariff as simply provisional in character, and pointed out that the duties imposed were lighter than those which the commercial treaties that were being negotiated sanctioned. In these circumstances the hope was expressed that the powers would not insist on their objections. The ambassadors on April 7, while maintaining their previous declarations, invited the Porte to formulate proposals to be forwarded to their respective governments. The Porte answered by a circular intimating an intention to adhere to its resolution to raise the ad valorem duties to 11 per cent. on May 14, and to insist less thereupon warned the Porte in a collective note that it alone would have to assume responsibility for the serious consequences that must follow from the action it proposed to take. On June 20 the Porte requested a reply to its proposals, having refrained from putting its decree into execution. The United States minister, after the Sultan had made three distinct promises to pay the in-
UNITARIANS.

The annual report of the American Unitarian Association for 1900 gives the number of churches of this denomination as 457, while in 1850 it was 251. The average increase in the number of churches in fifty years had therefore been about 4 a year, or the total increase in fifty years nearly 90 per cent. Fifty-two churches that were on the list in 1850, or one fifth of the whole number, had disappeared from it in 1900.

The association had $631,036 of property and more than $400,000 of invested funds, yielding an income of $16,015. It had, further, a Church Building Loan fund of $148,621. Eighty-three churches were on the beneficiary list, receiving $30,004 in all, or an average of more than $360 each. For the home mission purposes of the association $11,062 were required, and for the foreign missions $4,260.

American Unitarian Association.—The seventy-fifth annual meeting of the American Unitarian Association was held in Boston, Mass., May 22. President Samuel Eliot, of Harvard University, Cambridge, Mass., was chosen president. The report of the secretary showed that the number of churches contributing to the association had risen from 319 to 343, and the number of delegate societies from 233 to 304. The gifts of churches and individuals for current expenses had aggregated $75,329, against $75,513 in the previous year, and the gifts and bequests for capital account had amounted to $39,552, against $39,592 in 1899. The development of new sources of income, such as Sunday schools and Young People's Unions, had...
added to the contributions. In the publication department, activity of the post office mission was mentioned; the free tract list contained 195 titles, of which nearly 300,000 copies had been circulated during the year; a new, tenth series, to comprise sermons of earlier leaders of the Unitarian movement, had been inaugurated with the aid of the income of the Edward Wigglesworth fund; free copies of various publications had been furnished to theological, divinity students, colleges, libraries, and reading rooms; the issuing of books and tracts in foreign languages was contemplated, and other means of extending the work of the publication department were considered. The Japanese mission had drawn to its allegiance a number of native leaders of power and repute, and was regarded as the two forces in Japanese life. Its cost had been largely reduced during the past six years—from $10,021 in 1894 to $4,300 in 1899; and during the present year it had been transferred to native control. A steady advance in activity and efficiency had marked the work of the home mission department. The restoration of the system of superintendents had been completed, and four field officers were engaged in service. The foundation of the Hackley School, at Tarrytown, N. Y., was mentioned as one of the most important new enterprises of the year. It started with $150,000 of real estate and funds, given by Mrs. C. B. Hackley, to which Mrs. Goodhue, of New York, had added $40,000 for the Goodhue Memorial Building.

A joint meeting of committees of the association and of the Universalist General Convention had been held Jan. 22, to consider the subject of closer co-operation. Presuming, as it declared, that no disturbance of the separate organic autonomy of the two bodies existed, and that co-operation, not consolidation; unity, not union, were sought, the meeting decided upon the constitution of a permanent conference committee of five representatives from each body, the members of the committee to be appointed for two years. It was made the duty of this committee to consider the income of the two denominations, as they are jointly interested, such as opportunities of instituting churches or missions in new fields, circulation of tracts (literature), or other endeavors to promote matters of common agreement; and to consider all cases of conflict of interest, duplication of missionary efforts, or other occasions of friction between the two denominations, and represent the principles of Christian faith and life. In order to put this plan into immediate operation, the directors of the American Unitarian Association and the trustees of the Universalist General Convention were requested to authorize the members of the conference committee to discharge the functions described in the plan of co-operation until successors should be appointed. On the presentation of this report of the conference committee in its meeting the association approved and adopted the recommendations contained in it, voted a message of greeting to the Universalist General Convention, and requested the presidents of the two denominations to discharge the functions imposed in it for the term of one year. The resolutions on church membership adopted by the last national conference were recommended to the churches and the people, and a committee was appointed to collect and codify the church covenants and statements of faith now in use, "for the purpose of having all churches be as nearly as possible on one basis of membership for its followers; and, second, that some wise system of presenting and teaching our faith to the young may be devised." Representatives of Hungarian, English, German, French, Indian, Japanese, and Jewish Unitarians addressed the meeting.

Sunday-School Society.—The seventy-third annual meeting of the Unitarian Sunday-school Society was held in Boston, Mass., May 24.

The report of the Unitarian Temperance Society, made to the annual meeting in Boston, May 21, dealt largely with the circulation of tracts. The amounts of the receipts showed a balance on hand of $600, besides the Richard Clap Weis fund of $1,000 with accrued interest.

British Triennial Conferences.—The seventh Triennial Conference of members of "Unitarian, Liberal Christian, Free Christian, Presbyterian, and other nonsubscribing or kindred congregations" of England was opened at Leicester, March 29, by Mr. W. Stopford Brooke; the Rev. Dr. James Martineau, deceased, presided, and spoke in his opening address in memory of the Rev. Dr. James Martineau, deceased. A resolution commemorative of Dr. Martineau was also unanimously carried at the business meeting of the Conference, and an address concerning him was made by the Rev. Stopford A. Brooke. The meetings were closed by the discussion of various topics bearing upon the objects of the Conference, presented in papers on How Best to Organize the Religious Life of our Young People, by Mr. H. P. Greg; The Future Supply of our Ministers, by Mr. A. H. Worthington; The Fear of God and the Sense of Sin, by the Rev. P. H. Mackenzie; and The Present State of Unitarianism in Iceland, by Mr. Humphry Ward. The reading of these papers was followed by voluntary addresses.

British and Foreign Unitarian Association.—The seventy-sixth annual meeting of the British and Foreign Unitarian Association was held in London, June 5 and 6. Mr. C. W. Jones presided. Among the business was the consideration of subscriptions, interest, and sales of books and pamphlets, and £934 in dividends from the McQuaker fund, of which £2,494 had been granted for home and £292 for foreign missions, and about one fifth of the amount had been spent upon publications, about 20,000 copies of which had been granted. Some large requests had been received, including one of £3,000 (less duty) from the late Mr. Charles Cochrane. The year was represented to have been one of increased activity. The work of the Rev. Stopford A. Brooke as special preacher for the association had quickened religious thought and life in every town visited by him. Among the foreign affairs of the year, the operations in New Zealand and Copenhagen, Denmark, were mentioned. The usual grants had been made for work in parts of India, and support of the Brahma Somaj movement was recommended as the best method of aiding the spread of liberal religion among the populations of that country. The McQuaker trustees had offered a scholarship of £100 a year at Manchester College, Oxford, for Scottish graduates willing to take up the Unitarian ministry in Scotland. Meetings of the Sunday-school Association and conferences of Sunday-school delegates and of Postal Mission workers were held in connection with the anniversaries.

British Unitarian Association from 285 Sunday schools gave the number of teachers as 3,747, and of pupils as 33,799, of whom 8,321 were upward of sixteen years of age.
UNITED BRETHREN CHURCH.

The Church of the United Brethren in Christ returned 243,841 members for 1900, against 202,474 in 1899. The year's receipts of the Beneficiary Education fund amounted to $10,039, added $4,597, and organized the year and interpreted $2,514 from beneficiaries. At the annual meeting of the Board of Education, May 8, all the presidents of the colleges and the president of the synod of the Church were made a committee to prepare a paper to be presented to the next General Conference, setting forth the needs and denominations of the educational work for increasing the election of a general educational secretary.

Union Biblical Seminary reported 53 students enrolled, with 35 members of the Mission Study Class and 9 members of the Volunteer Student Band. The indebtedness of the institution had been reduced $7,079 during the year, and $16,925 since the last General Conference, making the present amount $37,602, upon three fourths of which the rate of interest had been lowered.

The Historical Society took steps at its annual meeting to have a manuscript prepared to be deposited in its collections, containing an account of the events of interest that had occurred in the Church during the past twenty years.

The treasurer of the Church Extension Society reported, April 18, that the receipts for the year had exceeded $23,000, and the expenditure had been about $15,000, leaving a balance of more than $8,000 in the treasury. Since the society was organized more than $3,000 had been collected on outstanding debts of 68 churches, 23 mortgages had been released, and loans amounting to $125,000 had been made to 110 churches. The amount of new loans for the current year was $12,350, and more than $8,000 in new funds had been collected. The Weaver Memorial fund had reached $4,500, and loans had been made from it to 9 churches.

The receipts of the publishing house for the year ending April 30 reached $204,561; its profits were $20,012; its net assets on April 1 were $308,876, showing a gain during the year of $6,035; and its indebtedness, which was more than $72,000 in December, 1897, had been reduced to $13,082. All the periodicals showed increase in circulation.

The receipts of the judging committee at Lebanon, Pa., April 19, Bishop Kephart presiding. The treasurer reported that the total receipts from all sources had been $82,992, of which about $30,000 were classified as "new funds." Adding a balance of $10,039, which was on hand at the beginning of the year, the total resources of the society had been $92,031. "Commissions were in most of the home missions. The work in Germany consisted of 11 missions, 18 organized churches, 12 missionaries, 956 members, and church property valued at about $42,000. The mission in Japan, begun in 1865, had 16 meeting places, 118 members, and 8 Sunday schools with 13 teachers and 300 pupils, and the debt for house and meeting house property had been paid. The stations in Africa, which had been nearly destroyed during the outbreaks of the natives, were undergoing reorganization. They returned 12 native workers, services held in 75 towns with an attendance of 45,000 persons, 9 Sunday schools with 204 pupils, and 7 day schools with 116 pupils. The present value of church and meeting house property was $9,850. The total annual expenditure of the mission was $4,597. A new mission was started in Porto Rico. The interests of the Twentieth Century fund, the amount to be raised for which was fixed at $30,000, were considered at the meeting. The Woman’s Missionary Board had received $30,665 during the year.

UNITED STATES OF AMERICA.

United Brethren Church Old Constitution.—This body consists of the churches and members which refused to acquiesce in certain amendments to the constitution and doctrinal statement adopted by the General Conference of 1889 (see Annual Cyclopaedia for 1889, page 800), claiming that the action of the Conference was illegal and subversive of important testimonies. It returns 26,643 members for 1900, against 22,507 in 1899.

UNITED EVANGELICAL CHURCH.

This Church, the year ending June 1, 1900, had 478 itinerant preachers; 202 local preachers; 60,993 members, showing an increase of 1,250 over the previous year; 5,441 members received by confession of faith (included in the number already given); 1,217 adults and 2,618 infants baptized during the year; 785 Sunday schools, with 11,170 officers and teachers and 74,718 pupils; 420 senior societies of the Keystone League of Christian Endeavor and 29 affiliated societies, with 12,552 active and 2,436 associate members; 120 junior societies, with 2,834 active and 1,397 associate members; 64 auxiliary societies, with 3,643 members; 763 church buildings, valued at $1,890, 18,140; and $62,717 in indebtedness. The receipts amounted to $23,000, and the loans of the Church Extension Society had been $12,350, and more than $8,000 in new funds had been collected. The Weaver Memorial fund had reached $4,500, and loans had been made from it to 9 churches.

The receipts for the Board of Missions were reported at its annual meeting, held in Harrisburg, Pa., in October, to have been $27,636, of which $18,805 were on the account of the general treasury, $5,754 of the Woman’s Missionary Society, and $3,047 of the Foreign fund. The expenditures had been $23,171, and the surplus of $4,465 had been returned to the general treasury. The receipts for the annual conferences for missions had been $35,181, and their expenditures $43,906, making the totals for the denomination $62,817 of receipts and $61,123 of expenditures. Appropriations were made for the coming year of $37,338. All the arrangements had been made for the establishment of a mission in China, and the Rev. N. Dubs, then a superintendence of the work, went to China as soon as possible. (He sailed for China a few weeks afterward.) A twelfth century offering for foreign missions was determined upon, to which each person in the Church was invited to contribute 20 cents.

UNITED STATES OF AMERICA, a federal republic in North America. The legislative power is vested in the Congress, consisting of the Senate and the House of Representatives. There are 90 Senators, 2 from each State, elected by the State Legislatures for six years, one third being renewed every two years. The House of Representatives has 357 members on the basis of the census of 1890, elected by the ballots of all the qualified voters of the State, each State being subdivided into congressional districts containing each approximately 173,000 inhabitants. The executive power is vested in the President, who is commander in chief of the military and naval forces, has a power of veto over acts of Congress, which can be overcome by a vote of two thirds of each house, and is empowered to make treaties, subject.
United States of America.

961

to the ratifying vote of the Senate. The Vice-
President is President of the Senate, and in case of
the death, resignation, or removal of the Presi-
dent he succeeds the latter for the remainder of the
term. In case of the death or disability of both
President and Vice-President, the Secretary of
State becomes acting President, and after him
other members of the Cabinet in their order. The
Senate, sitting as a high court, can remove the
President or members of the Cabinet on articles
of impeachment presented by the House of Represen-
tatives. The members of the Cabinet, who are
appointed by the President, are non-executive
officers, but his appointments must be
confirmed by the Senate. The President and Vice-
President are chosen by a college of electors, who
are chosen in each State in the manner that the
Legislature prescribes, which in every State by
popular suffrage, their number being equal to
the sum of the Senate and Representatives of
the State. It is the custom of political
parties to nominate in national convention their candidates for the presidency and vice-presidency,
and the electors, who are chosen by each State on
a collective ticket, are accustomed to vote solidly
for the candidates designated by their parties
before the meeting of the electors, and the President
and Vice-President have come to be in fact, though
not in form, by the direct vote of the nation.
The term of the presidency is four years, and elections are held on the Tuesday following the first Monday in November of every leap year. The President-elect is sworn into office by the Chief Justice on March 4th of the year after his election. The
President for the term ending in 1897, was Grover
Cleveland, of New York, and for the term ending in 1893, William McKinley, of Ohio, and the Vice-President was Garret A. Hobart, of New Jersey. The
Cabinet at the beginning of 1900 was composed as
follows: Secretary of State, John Hay, of the District
of Columbia; Secretary of the Treasury, Lyman J.
Gage, of Illinois; Secretary of War, Elihu B. Washburne, of New York; Secretary of State,
John Davis Long, of Massachusetts; Postmaster-
General, C. Emory Smith, of Pennsylvania; Secretary
of the Interior, Ethan Allen Hitchcock, of Missouri; Secretary of Agriculture, James Wilson,
of Iowa; Attorney-General, John William Griggs,
of New Jersey.

American States and Population.—The area of the States and Territories and their population according to
the census of 1900 are given in the table above.
Excluding the Indians of the Indian Territory,
the population is 75,965,397. The population of
Hawaii is 154,001, making the total for the States
and Territories 76,304,799, not including Porto
Rico, Tutuila, Guam, and the Philippine Islands,
which contain an area of about
120,000 square miles and 10,000,000 population.
Counting only the land surface, and not included
waters, the area of the States and Territories,
exclusive of Alaska and transmarine possessions, is
2,970,038 square miles. Rhode Island has 394.98
Inhabitants to the square mile; Massachusetts, 348.92;
New Jersey, 252.67; Connecticut, 187.48; New
York, 152.67; Pennsylvania, 140.69; Maryland,
120.69; Ohio, 102; Delaware, 94.25; Illinois, 86.10;
Indiana, 70.08; Kentucky, 53.68; Tennessee,
48.40; Virginia, 46.21; New Hampshire, 45.71;
Missouri, 45.20; South Carolina, 44.43; Michigan,
42.81; Massachusetts, 36.98; Illinois, 35.90; Virginia,
35.90; Wisconsin, 38; Vermont, 37.62; Georgia,
37.58; Alabama, 35.48; Mississippi, 33.48;
Louisiana, 30.42; Arkansas, 24.73; Hawaii, 23.88;
Maine, 23.23; Minnesota, 22.11; Kansas, 18
Nebraska, 15.91; Indian Territory, 12.64; Texas, 11.62;
Ohio, 10.26; Florida, 9.74; California, 9.52; Washington, 7.75; South Dakota, 5.23; Colorado, 5.21; North Dakota, 4.53; Oregon, 4.37; Idaho, 1.92; Montana, 1.67; New Mexico, 1.39;
Arizona, 1.09; Wyoming, 0.85; Nevada, 0.30; Alas-
ka, 0.11.

Immigration.—The number of immigrants arrived in the United States in 1900 was 448,572, against
311,715 in 1899. The total number of arriving passengers in 1900 was 594,478, of whom
120,477 were United States citizens returning and
25,420 were nonimmigrant aliens. The immigration
was 22.58 per cent. of the total increase of population in 1900. The total immigration from
1821 to 1899 was 19,050,328, of which 7,014,793
were from the British islands, 5,079,362 from Ger-
many, 1,232,631 from Sweden and Norway, 1,049-
315 from British America, 957,783 from Italy,
355,886 from Austria-Hungary, 841,825 from Eu-
ropean Russia, 603,715 from France, 312,509 from
China, 263,380 from Switzerland, 195,662 from
Denmark, 132,808 from the Netherlands, 124,261
from the West Indies, 60,111 from Spain and Por-
tugal, 64,323 from Belgium, 55,015 from Asiatic
countries other than China, 35,457 from minor
European countries, 33,544 from Canada, 34,933
from Polynesia, 27,544 from Mexico, 14,144 from South
America, 2,900 from Central America, and 1,859
from Africa. Of the immigrants who arrived in
1890, Italy sent 77,410, Austria-Hungary 62,491,
Russia 60,982, Great Britain and Ireland 45,181,
Sweden and Norway 19,502, Denmark 2,000, Spain

and Portugal, 2,439; France, 1,694; Switzerland, 1,326; Netherlands, 1,120; Belgium, 1,101; the rest of Europe, 4,019; China, 1,060; the rest of Asia, 7,312; the West Indies, 2,055; British America, 1,322; Mexico, 181; Central America, 139; South America, 89; Africa, 51, and other countries, 1,027. Of the immigrants in 1900, 114,847 came from Austria-Hungary, 13,164 from Germany, 22,922 from Demo-

naries, 1,739 from France, 18,507 from Germany, 3,771 from Greece, 100,135 from Italy, 1,735 from the Netherlands, 9,55 from Norway, 2,424 from Portugal, 6,439 from Roumania, 90,787 from Russia, 355 from Spain, 18,650 from Sweden, 1,152 from Switzerland, 283 from the United Kingdom, 48,237 from the United States, 8,048 from Porto Rico and other possessions.

The total 1899 number of children in the United States between the ages of five and eighteen was 21,572,114 in 1898. The number of enrolled pupils in the public schools was 15,103,874; the average attendance, 10,365,408; average duration of school, 143 days. There were 410,813 teachers—192,257 men and 278,556 women—receiving a total of $124,192,270 out of a total expenditure of $194,292,911 on the public schools of all the States and Territories. In 1899 the total population of school age was estimated at 21,835,774; enrollment of public schools, 15,138,715; average attendance, 10,369,307; average duration of school, 142 days; number of teachers, 411,717; of male teachers, 191,283; of female teachers, salaries of superintendents and teachers, $128,662,880; total expenditure, $197,283,368. The number of public high schools in 1899 was 5,905, with 9,239 male and 9,479 female teachers and 197,127 male and 279,100 female pupils. The number of private secondary schools was 1,037, with 5,940 male and 5,470 female teachers and 51,900 male and 51,938 female teachers. The number of public normal schools was 166, with 839 male and 1,218 female teachers and 11,543 male and 33,265 female pupils; and the number of private normal schools was 165, with 633 male and 493 female teachers and 11,829 male and 11,743 female pupils. The number of colleges, both coeducational for men only, was 454, with 8,209 male and 1,670 female professors and instructors and 31,156 male and 15,071 female preparatory, 54,700 male and 17,757 female collegiate, and 3,707 male and 1,101 female graduate students. The total income of these institutions was $20,242,039. The number of colleges and seminaries for women which confer degrees was 145, with 673 male and 1,768 female professors and instructors and 5,089 preparatory, 14,935 collegiate, and 474 graduate students; total income, $3,236,416. The number of schools of technology and schools conferring the degree of bachelor of science was 43, with 1,116 male and 100 female professors and instructors and 2,357 male and 732 female preparatory, 8,838 male and 1,279 female collegiate, and 150 male and 60 female graduate students. The number of theological seminaries was 163, with 996 instructors and 8,261 students; number of law schools, 91; with 966 instructors and 11,874 students; number of medical schools, 131, with 4,339 instructors and 23,778 students.

The Army.—The strength of the regular army as provided in the army reorganization bill approved on March 2, 1899, is 2,887 officers and 65,000 enlisted men, of whom 551 officers and 2,093 men are attached to the general staff, 1,177 officers and 34,450 men compose 25 regiments of infantry, 472 officers and 12,340 men 10 regiments of cavalry, 337 officers and 11,970 men 7 regiments of artillery, 752 men are in 5 companies of engineers, 720 men in the signal corps, 2,600 in the hospital corps, and 75 are Indian scouts. Each regiment of infantry contains 5 battalions of 4 companies. The weapon is the Krag-Jörgensen magazine rifle of 30 caliber. The cavalry regiment consists of 3 sections of 4 troops of 100 men each. The cavalrymen are armed with the saber, the Krag-Jörgensen carbine of 30 caliber, and the Colt revolver of 38 caliber. There are 2 infantry and 3 cavalry regiments in Europe, and are composed of white officers. The artillery consists of 84 foot and 14 mounted batteries of 6 pieces, the guns having the caliber of 3.2 inches. The regular army is recruited by voluntary enlistment for three years. All citizens capable of bearing arms are liable to be called to arms in war time, between the ages of eighteen and forty-five. The Hawaiian militia, which is limited to drill only or twice a year, especially in winter, numbered 7,521 officers and 98,818 men in 1899. There were 328 cavalry officers and 4,155 men, 391 artillery officers and 5,005 men, 5,918 infantry officers and 57,894 men, and 884 other officers and 1,701 men. The male population available for the defense of the country is estimated at 10,133,000. There are in the army 1 lieutenant general, 6 major generals 16 brigadier generals, 77 colonels, 98 lieutenant colonels, 271 majors, 813 captains, 777 first lieutenants, and 332 second lieutenants. The President was authorized in 1899 to raise a volunteer force of 35,000 men organized in 27 infantry and 3 cavalry regiments. The volunteer force numbered 1,300 officers and 20,000 men, in 111 regiments of infantry enlisted for service in the Philippines, having a strength of 1,200 officers and 31,416 men, and 1 regiment of cavalry consisting of 50 officers and 1,234 men. A regiment of natives of Porto Rico has 31 officers and 400 men. Native troops have been raised in the Philippines, including a regiment of cavalry, 2,247 officers and 2,414 officers and 29,025 enlisted men by June 30, 1901. The garrison in Porto Rico was reduced before the close of 1900 to 1,636 men, including 879 native troops. In Cuba there were nearly 6,000 troops, and in the Philippines nearly 60,000 men. Secretary Root proposed to recruit a force not to exceed 12,000 men among the natives of the Philippine Islands, but the President desired to organize a force to be provided by officers of the regular army, some of the lieutenancies to be given to such natives as show fitness for command. A regiment of Porto Ricans also is authorized. The Secretary of War and Lieut.-Gen. Miles both recommended a permanent army of 100,000 men. An artillery corps is to be organized, divided into 4 sections of 1,000 men.

The Navy.—The battle ships Oregon, Massachusetts, and Indiana, launched in 1893, of 10,288 tons, are protected above and below the water line for over half their length by a belt of 18-inch
armor, and by an armored deck and armored re-
doubts in front of the machinery, and the 4 13-
inch 35-caliber guns in the fore and aft turrets and
8 8-inch guns in 4 other turrets are protected by
inlined armor. These vessels were designed to
make over 16 knots and to carry 11,159 tons, of
which 1,525 tons, launched in 1896, carried 12-inch guns,
to go 17 knots. In the Kearnsarge and Kentucky,
of 11,525 tons, the armor belts are 164 inches thick,
the great guns are of 13-inch bore, and on their
turrets are superposed the turrets for the 4 8-inch
guns. The Alabama, Illinois, and Wisconsin differ
from the others by the number of 14-inch guns instead of
the 5-inch guns carried by the others, besides the 20 quick-firing 6-pounders, which all
these turret ships have. The Maine, Missouri, and
Ohio have a displacement of 12,500 tons, with armor 12 inches thick and 12-inch guns, engines of
16,000 horse power instead of 16,000, since large
corundum and quicksilver are the objects sought. The Georgia, New Jersey, and
Pennsylvania will displace 13,500 tons, will have for
the main armament 4 12-inch and 16 6-inch
guns, and will be able with 16,000 horse power to
make at least 18 knots. The newer armored
cruisers, like the battleship, are larger than their
predecessors, as the Cincinnati, having 12 12-inch
ammunition, ships 6,315 tons, 2 12-inch guns are mounted singly in turrets protected by an
oblique redoubt, and there are 6 6-inch and 12 quick-
5-firing 6-pounders; and in spite of her heavy armament
and armor plates 12 inches thick the vessel,
which was launched in 1892, can make nearly 18
knots. The cruiser New York, launched in 1891,
having a displacement of 8,200 tons, engines of
17,500 horse power, giving a speed of 21 knots, and
in addition to 10-inch side plating a strong
curved steel deck, carries 8-inch guns in pairs in
the fore and aft turrets and 1 on each beam, with
a secondary armament of 12 4-inch and 8 other
quick firers. The Brooklyn, launched in 1896, dis-
places 9,215 tons, having 15-inch plates and an
armament of 8-inch guns disposed as in the New
York, and 12 5-inch and 12 smaller quick firers, and
could make nearly 22 knots with engines of 17,300
horse power. The California, Nevada, and West
Virginia displace 12,600 tons, carry 14 quick-firing
8-inch guns and 14 6-inch and 20 smaller ones, and are
larger than the Cincinnati and Kentucky, with
new cruisers sheathed and coppered. The sec-
ond-class protected cruisers of 3,100 tons—the
Chattanooga, Cleveland, Denver, Des Moines, Gal-
veston, and Tacoma—to be armed with 10 5-inch
quick firers, are smaller than the Albany and New
Orleans, launched in 1899 and 1896, and even
than the Cincinnati and Kentucky, high, as these
were lighter than the Olympia or the Newark,
Philadelphia or San Francisco, and the latest ves-
sels are not intended to make over 16.5 knots.
The newest type of monitor, the Arkansas, Con-
necticut, Florida, and Wyoming, of 3,255 tons,
with 11-inch armor, 2 12-inch guns, 4 4-inch and 3
more quick firers, and a speed of 13 knots. These
fastest vessels in the navy are the unarmored
monitors Columbus and Minneapolis, built in 1892
and 1893, displacing 3,755 tons, and carrying 4
6-inch gun and 22 quick firers of various sizes,
have triple-expansion engines of 18,500 horse
and 20,800 horse power, enabling them to steam 23
and 22 knots, 300 and 280 miles, and are
the ships afloat in 1899 in the effective navy
of first-class battle ships, 6 not completed and 1 of the second class; 19 good
coast-defense vessels, besides the 4 new monitors;
1 armored ram, Admiral Ammen's Katalaunin,
which can be submerged excepting the turtle
deck and the well-armored funnel and ventilating shafts
when she is making an attack; 2 armored cruisers,
and 3 building; 15 protected cruisers, and 6 under
construction; 3 commerce destroyers; 17 gunboats,
and 1 building; 16 torpedo-boat destroyers under
construction; and 24 completed and 13 not yet
completed torpedo boats.

Pensions.—The number of pensioners on the
rolls in the United States of America for the year
June 30, 1900, was 993,530, of whom 752,510 were invalidated and 241,019 widows
and dependents. The disbursements during the
year amounted to $338,462,139, of which $9,828,525
were first payments and $128,633,905 other
pensions. Under the general pension law the total
claims allowed for 1890 was 875,332 claims of invalids and 594,721
of widows, during the fiscal year 1899, 1,231,532,
and 586,521 claims of invalids and 332,029 of
widows, etc., allowed. Under the act of June 27, 1890,
there had been 847,327 applications of invalids and
338,485 of widows, etc., filed, and 451,531 claims of
invalids and 181,292 of widows, etc., allowed. The
applications during the year were 2,753 for invalids
and 7,538 for widows, etc., under the general
law, and 10,940 for invalids and 338,488 for
widows, etc., under the act of 1890, and the claims
allowed were 1,690 for invalids and 3,308 for
widows, etc., under the general law, and 21,345 for
invalids and 12,173 for widows, etc., under the act
of 1890. There were 7 applications of widows of
soldiers of the war of 1812, of which three were
inoperable, and the total number allowed up to date having been 25,713
for survivors and 33,489 for widows; of survivors of the war with Mexico, 69 filed claims and 497
widows, while 21 claims of survivors and 420 of
widows were allowed; of survivors of Indian wars, 26 made applications, and 196 widows, and the
claims of 10 survivors and 34 widows were
allowed. The number of applications arising out of
the war with Spain was 12,038 for invalids and
1,383 for widows and dependent relatives, and the
number of claims allowed was 801 for invalids and
710 for widows, the total granted in the two years
since applications were first filed having been 926
for invalids and 888 for widows, etc., while the
total number of applications was 27,047 for
invalids and 3,934 for widows, etc. The applications
from army nurses were 49 in number; claims
allowed, 22.

Public Lands.—The total area of original
homestead entries in 1900 was 8,479,400 acres, of
which 3,191,380 acres were in the United States
of America, 2,142,140 acres in Kansas, and 2,145
acres in Oklahoma, 477,523 acres in Minnesota,
456,855 acres in Nebraska, 440,518 acres in Arkan-
sas, 439,814 acres in Oregon, 410,040 acres in South
Dakota, 405,496 acres in Washington, 328,437 acres
in Montana, 312,784 acres in Colorado, 296,308
acres in Idaho, 254,536 acres in California, 251,215
acres in New Mexico, 235,308 acres in Wyoming,
208,277 acres in Louisiana, 140,623 acres in Ala-
bama, 127,563 acres in Florida, 123,064 acres in
Mississippi, 110,750 acres in Missouri, 100,173 acres
in Wisconsin, 60,160 acres in Utah, and 53,594
acres in Michigan. The railroad selections in 1900
amounted to 1,352,139 acres, of which 507,467 acres
were in Wisconsin, 355,558 acres in Texas, 159
acres in Washington, 224,913 acres in Colorado,
204,888 acres in Oregon, 171,794 acres in California,
82,738 acres in Montana, 75,344 acres in Utah,
and 44,034 acres in Idaho. The number of acres
disposed of for cash under the homestead acts and
timber culture acts or located with agricultural
homestead entries, and whether for sale, public
land, or mining claims, is in no wise affected by the
purchase or redemption of public land, by the
bonding or unbounding of any public land, or by
the sale or purchase of public land to the Treasury
or to States or railroads, nor is any such thing
considered in the reports of public lands.

UNITED STATES OF AMERICA.
492,017 acres in New Mexico, 466,738 acres in Arkansas, 464,726 acres in Utah, 461,674 acres in Nebraska, 460,976 acres in Idaho, 455,913 acres in South Dakota, 452,166 acres in Kansas, 232,057 acres in Louisiana, 203,881 acres in Missouri, 203,380 acres in Alabama, 149,727 acres in Mississippi, 114,352 acres in Wisconsin, 64,943 acres in Louisiana, 54,700 acres in Arizona, and 49,260 acres in Nevada.

Indians.—The Indian population on reservations in 1900 was 270,544, compared with 243,524 in 1890. There were 86,263 in Indian Territory, 40,189 in Arizona, 19,212 in South Dakota, 13,326 in Oklahoma, 11,431 in California, 10,587 in Texas, 10,546 in Colorado, 9,381 in Washington, 8,932 in Minnesota, 8,480 in New Mexico, 8,321 in Nevada, 8,276 in North Dakota, 7,577 in Michigan, 5,334 in New York, 4,063 in Oregon, 3,854 in Nebraska, 2,115 in Utah, 1,642 in Wyoming, 1,486 in North Carolina, 1,211 in Kansas, and 995 in Colorado, 575 in Florida, 385 in Iowa, and 290 in Texas. The births among Indians were 4,106 in 1900, against 4,863 in 1890; deaths, 3,698, against 5,218. The total area of Indian reservations in 1900 was 121,665 square miles, compared with 162,991 square miles in 1890, the Indian Territory having been reduced from 40,411 to 30,480 square miles, the area of Oklahoma from 29,770 to 13,754 square miles, the land ceded from 14,993 to 2,447 square miles, the Oregon reservation from 3,242 to 2,031 square miles, and the one in Utah from 6,207 to 3,186 and that in Washington from 6,321 to 3,646 square miles, and in Wyoming from 3,600 to 2,828 square miles, while in Arizona the area has been increased from 10,317 to 23,673 square miles.

Patents.—The number of applications for patents during the year ending Dec. 31, 1900, was 41,980; caveats filed, 1,731; patents and reissues, 26,499; cash received, $1,530,828; cash expended, $1,260,019; surplus, $90,898. The total number of first patents issued from 1872 to 1901 was 664,827; during the year 1900, 31,352 were new patents, 39,879; trade-marks registered, 35,678; labels registered, 8,009. From 1836 till 1852 the number of patents was 9,937. During the calendar year 1900, the issues of patents were 24,660 in number; of design patents, 1,758; reissues, 81; total, 26,499; trade-marks registered, 1,721; labels and prints, 3,000; total certificates, 2,551.

Commerce and Production.—The production of corn in the United States in the year ending June 30, 1900, was 2,078,143,933 bushels, of which 213,123,412 bushels were exported, or 10.30 per cent. of the crop, while 1,865,020,521 bushels and 2,480 bushels of imported corn, making a total of 1,865,023,001 bushels, were consumed in the United States. The wheat crop for the calendar year 1899 was 547,303,846 bushels, of which 156,098,762 bushels, or 34 per cent., were exported and 361,207,844 bushels were retained for consumption, the total domestic consumption, after adding 320,195 bushels of imports and deducting 297,330 bushels of foreign and 21,480 bushels of foreign-corn, being worth $82,189,850. The area under corn in the calendar year 1900, according to the reports of the Department of Agriculture, was 83,320,872 acres, producing 2,105,102,516 bushels, having a farm value of $76,511,220, or the value per bushel on Dec. 1 being 35.7 cents, and the yield per acre having been 25.3 bushels, giving an average return of $9.02 per acre. The area under wheat was 42,495,385 acres, yielding 522,220,503 bushels, an average of 12.3 bushels per acre, making the crop worth at 62 cents a bushel, the average price on Dec. 1, $323,525,177, an average of $7.01 per acre. The area under rye was 1,501,382 acres, producing 114,352,417 bushels, having a value of $12,925,417 on the farm, or $7.73 per acre, the price on Dec. 1 having been 51.2 cents, the yield 15.1 bushels per acre. The area sown to oats was 2,394,795 acres, producing 809,125,899 bushels, 29.6 bushels to the acre, worth 25.8 cents a bushel, $7.63 per acre, and $208,098,235 for the whole crop. The average value of 930 acres, yielding 5,966,966 bushels, an average of 15 bushels, worth $5,341,413 at 55.8 cents a bushel, giving $8.37 an acre. The barley crop from 2,894,282 acres was 58,925,833 bushels, worth $24,075,271 at 40.8 cents a bushel, giving $8.32 an acre for the average yield of 2.04 bushels. Of the total wheat crop, 82,485,681 bushels were raised in Kansas, 51,559,227 in Minnesota, 33,323,897 in California, 25,834,625 in Nebraska, 24,050,001 in Washington, 21,705,221 in Iowa, 20,281,334 in Pennsylvania, 18,410,713 in Mississippi, 17,82,995 in Mississippi, 16,108,012 in Illinois, 10,162,578 in Oregon, 9,235,998 in Wisconsin, 8,344,128 in Missouri, 6,557,060 in Indiana, 5,761,351 in Alabama, and 25,724,492 bushels in other States and Territories. The hay crop in 1900 was 501,100,906 tons, cut from 39,132,890 acres, an average crop of 1.28 ton an acre, the average price of hay at $8.59 a ton on the farm the total sum of $445,538,870. Iowa raised 5,006,470 tons of hay, Kansas 7,604,166, and New York 5,331,991 tons, Missouri 2,768,013 tons, California 2,708,171 tons, Pennsylvania 2,672,501 tons, Nebraska 2,639,480 tons, Illinois 2,119,419 tons, South Dakota 2,064,106 tons, Colorado 1,783,133 tons, Michigan 1,727,617 tons, Oregon 1,677,085 tons, Indiana 1,655,428 tons, Ohio 1,622,797 tons, Minnesota 1,021,853 tons, and the rest in Alabama, Kentucky, Arizona, Missouri, Washington, Vermont 1,006,524 tons, Washington 840,491 tons, Maine 843,997 tons, Idaho 659,103 tons, and Montana, Virginia, Massachusetts, West Virginia, Texas, New Hampshire, and Utah each more than 500,000 tons. The area of the potato crop was 2,611,054 acres, yielding 210,926,397 bushels, 80.8 bushels to the acre, worth $90,511,107, the average price having been 43.1 cents a bushel; New York raised 27,481,356 bushels, Indiana 16,630,941 bushels, Wisconsin 15,619,641 bushels, Illinois 15,296,104 bushels, Missouri 14,004,576 bushels, Michigan 12,501,584 bushels, Pennsylvania 10,921,748 bushels, Missouri 10,106,961 bushels, and Nebraska, Indiana, Iowa, Kansas, and Maine over 6,000,000 bushels each. The total wheat crop of the United States in 1896 was 403,004,320 pounds, grown on 594,749 acres, and its value was $24,258,070. Alabama produced 1,005,313 bales of cotton on 2,883,049 acres in 1899, the value of the crop being $35,832,176; Arkansas on 1,720,350 acres raised 699,935 bales, worth $80,189,505, on 149,403 acres; Georgia, 1,345,690 bales on 3,287,741 acres, value $48,024,822; Louisiana, 696,476 bales, valued at $25,670,000, on 1,179,156 acres; Mississippi, 1,203,739 bales, valued at $44,175,897, on 2,754,860 acres; North Carolina, 503,825 bales, valued at $18,143,257, on
1,219,888 acres; South Carolina, 830,714 acres, valued at $29,377,647, on 2,212,020 acres; Tennessee, 192,263 acres, valued at $6,930,307, on 743,145 acres; Texas, 2,488,555 acres, valued at $82,187,133, on 6,642,309 acres; Virginia, 8,007 acres, valued at $290,663, on 35,302 acres; other States and Territories, 394,007 acres, valued at $7,982,479, on 549,578 acres; total area planted to cotton, 23,403,497 acres, producing 9,142,838 bales, valued at $334,347,985.

The crop of cotton moved during the year ending Aug. 31, 1900, was 9,436,416 bales, averaging 478 pounds net and 504.12 pounds gross, or 4,757,002,942 pounds, having a far more valuable and lasting consumption than any other product of the commercial crop. The crop of cotton during the year was 3,100,883,188 bales, 65.18 per cent. of the crop, leaving 1,056,479,754 pounds of domestic cotton for consumption; imports of foreign cotton were 67,398,521 pounds, and exports 1,381,463 pounds, leaving 66,017,058 pounds of foreign cotton retained for consumption and making the total consumption of domestic and foreign cotton 1,722,498,812 pounds. Out of 9,422,000 bales handled during the crop year, 2,343,000 were exported to Great Britain and 3,603,000 to other countries, making the total exports 5,946,000 bales; and 2,047,000 bales were taken by northern and southern mills, making the domestic consumption 1,500,000 bales, or 30.8 per cent. of the total consumption, which amounted to 436,662,516 pounds. The number of sheep in the country on April 1, 1900, was 40,267,818, of which 3,786,688 were in New Mexico, 3,717,160 in Montana, 2,750,546 in Wyoming, 2,754,496 in Ohio, 2,750,240 in Idaho, 2,351,274 in Oregon, 2,517,636 in Texas, 2,261,917 in Utah, 2,198,508 in Colorado, 1,907,430 in California, 1,340,456 in Michigan, 1,103,942 in Arizona, 819,088 in New York, 777,677 in Pennsylvania, 759,390 in Washington, 726,040 in Wisconsin, and more than 500,000 each in Indiana, Illinois, Nevada, Iowa, Missouri, and Kentucky. The total imports of foreign wool in 1899 was valued at $64,603,904, and the wool produced in the United States during the year was estimated at 239,979,815 pounds, or, including 28,663,806 pounds of pulled wool, at 288,630,212 pounds, the average weight of fleece being 6.46 pounds, the shrinkage 61.1 per cent., the product of scoured wool 101,024,837, or, including 17,198,283 pounds of pulled wool, 118,223,120 pounds.

The number of horses in the country on Jan. 1, 1900, as reported by the Department of Agriculture, was 13,537,524, valued at $603,969,412; mules, 2,086,027, value $111,717,092; milk cows, 16,292,360, value $314,812,106; oxen and other cattle, 27,610,054, value $689,480,260; sheep, 41,883,065, value $125,065,013. The total value of farm animals, exclusive of horses, mules, and cattle, which were 38,651,631 in 1890, valued at $170,109,743.

The production of cane sugar in 1900 was estimated at 334,549,450 pounds, 329,968,450 pounds in Louisiana and 4,962,000 pounds in other States; of molasses, 15,160,477 gallons, 14,971,213 gallons in Louisiana and 229,000 in other States.

The total production of refined sugar in the calendar year 1900 was 2,219,847 tons, showing a consumption of 65.2 pounds per capita, 1,950,014 tons having been manufactured from imported raw sugar, 7,647 tons from imported molasses, and 174,430 tons from domestic cane sugar; 82,736 tons were domestic beet sugar, and about 5,000 tons were maple sugar. The production of sugar from beet roots in the United States was 62,826 tons in 1898, 34,435 tons in 1897, 39,684 tons in 1896, 20,443 tons in 1894, and previous to that the industry was in the experimental stage. The consumption of distilled spirits in the United States during the fiscal year 1900 was 97,548,278 gallons of proof gallons, according to the reports of the Commissioner of Internal Revenue, being 1.27 gallon per capita, consisting of 1,386,361 gallons of domestic spirits distilled from fruit, 91,156,023 gallons from grain, etc., and 1,765,598 gallons of imported spirits.

The consumption of distilled spirits of 720,427,491 gallons, 0.4 gallon per capita, 26,492,491 gallons of domestic production and 3,935,000 gallons imported. The consumption of malt liquors was 1,221,500,160 gallons, 16.01 gallons per capita, 1,218,183,225 gallons having been brewed in the United States and 3,510,908 gallons imported for consumption. The production of oleomargarine in the fiscal year 1900 was 104,263,651 pounds, paying $2,085,273 in internal revenue taxes.

The production of petroleum during the calendar year 1899 was 2,396,975,700 gallons, and 17,540,000 gallons were imported, making a total of 2,396,993,240 gallons. The exports were 133,023,656 gallons, valued at $2,790,757 tons, manufactured into illuminating oils, valued at $1,081,744,231 gallons, which left 1,315,249,000 gallons for domestic consumption, the export being 45.13 per cent. of the total production. The production of bituminous coal in the calendar year 1899 was 172,088,917 tons, and the imports were 1,231,512 tons, giving a total supply of 173,300,429 tons, of which 170,379,977 tons were used for making consumption after the exportation of 3,480,452 tons, or 2.02 per cent. of the domestic production. The production has increased 70 per cent. in ten years and the percentage exported has doubled. The quantity of bituminous coal marketed in 1899 was estimated by the United States Geological Survey at 138,594,925 tons, valued at $133,017,663; the quantity of anthracite coal at 47,823,241 tons, valued at $86,081,834; total, 156,886,166 tons, valued at $221,099,497. The total production of anthracite and bituminous coal was estimated at 226,533,564 tons. The total output for the calendar year 1899 of bituminous coal valued at $1,463,745; alumnum, 5,200,000 pounds, valued at $32,558,700; gold, 3,437,210 ounces, of the value of $71,033,400; copper, 555,342,124 pounds, value at New York $104,190,898; lead, 209,240 short tons, value at New York $18,831,600; zinc, 119,408 short tons, value at New York $13,731,920; quicksilver, 30,434 flakes of 761 pounds, value at San Francisco $1,490,754; alumnum, 5,200,000 pounds, valued at Pittsburgh $1,716,000; antimony, 1,275 short tons, value at San Francisco $251,875; nickel, 22,541 pounds, value $8,566; platinum, 300 ounces, value $1,800. The estimated value of brick clay produced was $11,250,000, and of other clay $1,250,000. Of cement, 14,311,407 barrels were produced, valued at $1,491,743; alumnum, 5,200,000 pounds, and of minerals waters sold was 39,562,136, valued at $69,948,030. Of phosphate rock, 1,515,702 tons were dug, value $5,084,076. The production of salt was 18,356,503 barrels, and its value $7,509,184. Of limestone for iron flux, 6,707,435 long tons were produced, value $4,985,205; of gyspsum, 475,235 short tons, value $1,257,080; of ilions, tale,
tin plates were 147,963,804 pounds, valued at $4,700,796, 147,321,985 pounds coming from Great Britain and 641,519 pounds from other countries. The quantity of tin plates manufactured in the United States was $449,922,053, comprising 553,347,870 pounds of tin and 61,633,393 pounds of tin plate, $440,921,853 pounds being made by American and 57,208 pounds from foreign black plates, whereas in 1893 the quantity manufactured was 90,519,202 pounds, of which 56,219,178 pounds were made from imported black plates.

The volume of foreign commerce in the year ending June 30, 1900, reached $2,444,424,206, compared with $1,922,017,761 in 1899, and $1,432,676 in 1898, the excess for the three years amounting to $1,685,548,557. The total value of merchandise imports in 1900 was $849,911,841, an amount exceeded only in 1893, when $860,429,022 worth of merchandise was imported and there was an adverse balance of $1,737,728. The value of domestic exports in 1900 was $1,370,763,571, exceeding the total for 1898, the highest till then attained, by $100,471,568. The value of foreign exports in 1900 was $23,719,511, making the total value of foreign merchandise exports $1,394,483,082.

The values of the articles imported in the year ending June 30, 1900, are given in the following table:

- Clothing and wearing apparel
- Calif.
- Laces, edgings, embroideries, etc.
- Yarn, warps, etc.
- Other manufactured
- Diamond dust or bort.

### Eats:
- Earthen, stone, and china ware
- China porcelain, and bisque, not decorated
- China, porcelain, and bisque, decorated.
- All other

### Eggs:
- Egg
- Emusery ore
- Emusery, grains and ground
- Fans, oval
- Palm leaf

### Feathers, etc., natural or artificial:
- Feathers and down, crude
- Feathers, prepared
- Feathers, flowers, leaves, etc., artificial

### Felt, adhesive:
- Felt, adhesive

### Pharma:
- Guano
- Phosphates, crude
- Plank, black

### Fibers, vegetable, and textile grasses, and manufactures of:
- Flax
- Hemp
- Jute or Tampico fiber
- Jute, jute
- Manila
- Silk
- All other grasses
- Bagging and gummy cloth for cotton
- Bagging
- Cables, cordage, and twine
- Carpets and carpeting
- Cairo hemp
- Fabrics of single jute yarn
- Handkerchiefs

### Fibers, vegetable, and textile grasses, and manufactures of:
- Collodion
- Twine, binding
- Yarns or threads
- All other manufactures

### Fish:
- Salmon
- Lobster
- All other fresh
- Anchovies and sardines
- Cod, haddock, cod, or
- pickled
- Herring, dried or smoked
- Mackerel
- Mackerel, pickled or salted
- Fish, black, uncooked
- All other cured

### Fruits and nuts:
- Bananas
- Currents
- Dates
- Figs
- Lemons
- Oranges
- Plums and prunes
- Raisins
- Preserves from fruits
- All other fruits, free
- All other fruits, dutiable
- Cacao nuts
- Cocos nuts
- All other nuts
- Furs and furred
- Furs, manufactured

### Glass and glassware:
- Bottles, vials, etc.
- Cylinder, crown, and common window glass, unpolished
- Cylinder, crown, and common window glass, polished
- Cylinder and crown glass, silvered
- Plate glass, rolled or rough
- Plate glass, polished
- Glass for optical instruments
- Glass, rough, etc.
- Glue
- Grease and oils

### Gunpowders and explosives:
- Gunpowder
- Firecrackers
- Other explosives
- Gunpowder

### Gut, unmanufactured:
- Gut, unmanufactured
- Gut manufactured, or
- Hair, unmanufactured
- Hair, manufactures of
- Bone, feathers, materials for
- Hats, bonnets, and hoods.

### Hay:
- Hay cuttings, or other glue stock.

### Hay and seeds:
- Goat skins
- Hides of goats
- All other

### Honey:
- Honey

### Household and personal effects of persons arriving:
- Household and personal effects of persons arriving

### India rubber, and gums:
- India rubber, or gums

### Ink and ink powders:
- Ink and ink powders

### Iron and steel and manufactures of:
- Iron ore
- Pig iron
- Scrap iron and steel

### Lead and tin and manufactures of:
- Lead

### Other:
- Pigs, bars, ingots, plates, etc.
- Copper manufactures

### Other goods:
- Other goods

### Other manufactures:
- Other manufactures

### Rice, and manufactures of:
- Rice

### Tobacco:
- Tobacco

### Tobacco manufactures:
- Tobacco

### Wine, and manufactures of:
- Wine
- Vinegar

### Wool, and manufactures of:
- Wool

### Zinc, and manufactures of:
- Zinc

---

**Note:** The text appears to be a table listing various commodities and their quantities, organized into categories such as chemicals, drugs, dyes, foodstuffs, minerals, and manufactured goods. The table format is not explicitly visible in the text, but the structure suggests a tabular representation typical of historical trade and commerce documentation.

</table>

Of the total imports, the value of $567,256,860 was free of duty and $482,704,318 dutiable. The total value of animals imported free of duty was $803,191; of dutiable animals, $3,727,759. The numbers of animals imported free of duty for the improvement of breeds were 1,645 cattle, 4,247 horses, and 2,427 sheep; dutiable cattle, 170, 961 cattle, 1,818 horses, and 379,365 sheep. The quantity of anthomony metal or regular was 3,538,751 pounds, of ore 5,707,112 pounds. Of asphaltum, 130,576 tons were imported. The import of hemlock bark was 22,580 cords. Of British India wool, 1,157,177 pounds were imported. The quantity of bismuth was 187,881 pounds. The number of pounds of old brass was 4,595,894. Imports of breadstuffs were 189,757.
bushels of barley, 2,480 bushels of corn, 41,523 bushels of oats, 234,959 pounds of oatmeal, 330 bushels of rye, 316,968 bushels of wheat, and 717 barrels of flour. Including the various farinaceous food preparations, which made five-sixths of the total value, the imports of breadstuffs amounted to $1,803,729. The quantity of crude bristles was 27,140 pounds, and of sorted and bunched bristles 2,503,018 pounds.

The importation of Portland, Roman, and other hydraulic cement was 2,336,422 barrels; of chalk, 92,615 tons. The imports of chemicals, drugs, and dyestuffs were valued at 1,547,580 pounds of alum in colors, 27,339,480 pounds of crude tar, and 4,107,358 pounds of cinnchon or other bark from which quinine is extracted, 157,917 pounds of cochineal, 48,188 tons of logwood, 3,350,768 pounds of logwood extract and decoctions, 27,943,106 pounds of gum kino, 901,366 pounds of gum arabic, 1,759,530 pounds of gamboge, 2,257,902 pounds of gum chicle, 23,829,342 pounds of copal and similar gums, 38,882,940 pounds of gambier, 10,621,451 pounds of shellac, 2,746,944 pounds of indigo, 106,333,199 pounds of licorice root, 136,403,151 pounds of chloride of lime or bleaching powder, 1,972,349 gallons of mineral waters, 344,593 pounds of crude opium and 142,479 pounds of opium barks and heartwood, valued at less than 9 per cent. of morphine. 1,490,732 pounds of chlorate of potash, 115,276,006 pounds of the muriate, 10,322,836 pounds of nitrate of saltpeter, and 54,552,598 pounds of other potassic salts, 3,513,749 ounces of quina sulphate and other alkaloids and salts of cinchona bark, 11,429,980 pounds of caustic soda, 1,877 tons of nitrate of soda, 6,024,314 pounds of sal soda, 78,571,870 pounds of soda ash, and 23,632,374 pounds of other salts of soda, 155,399 tons of crude sulphur or brimstone, 10,353,980 pounds of ground sumac, and 255,966 pounds of vanilla beans.

The value of dyewoods was $1,083,644; of guanos, $6,884,704; of potash salts, $5,537,169; of soda ashes, $7,886,328; of alum, 1,525,793 pounds, valued at $45,777,126; the average price being 6.5 cents a pound, showing a consumption per capita of 0.91 pounds. The quantity of coffee imported was 787,991,911 pounds. Of coffee substitute, 1,292,639 pounds were brought in. Copper imports consisted of 36,205 tons of ore and regulus and $4,638,794 pounds of bars, ingots, and plate, and $400,012 pounds of other manufactured copper. The value of copper and manufactures, not including ore, was $12,457,470. The imports of unmanufactured cotton were 67,398,521 pounds of raw cotton and 7,899,328 pounds of waste or flocks; of cotton cloth, 3,061,790 square yards of unbleached and 61,896,063 square yards of bleached or colored fabrics, and 6,263,791 yards of other and unmanufactured cotton cloth, $8,513,905. The total value of manufactured articles was $41,296,239.

There were 135,038 dozen eggs imported. The quantity of emery ore was 197,540 hundredweight; of grains and pulverized or refined emery, 705,739 pounds. The total value of china and earthenware was $8,045,295.

The imports of fertilizing materials consisted of 4,756 tons of guano and 110,965 tons of crude phosphates, in addition to manufactured fertilizers; total value of fertilizers, $1,697,986. The quantities of vegetable textile fibers were 6,967 tons of flax, 3,400 tons of hemp, 5,748 tons of isle, 102,660 tons of jute, 42,624 tons of Manila hemp, 75,921 tons of sisal grass, and 10,953 tons of other fibers and glasses; total value of unmanufactured, $26,373,305, of which $24,277,262 were free of duty. The imports of manufactures reported were 436,417 pounds of cables and cordage, 5,193,099 pounds of baling twine, 3,558,384 pounds of coir yarn, 2,857,675 pounds of burlap yarns and threads, 13,254 square yards of carpets, and $32,403 square yards of oilcloths; total value of manufactures, $31,559,371. Among the fish imports were 1,199,079 pounds of fresh salmon, 7,497,327 pounds of canned and fresh lobsters, 14,393,483 pounds of dried codfish and cured haddock, hake, and pollock, 5,130,813 pounds of smoked and 156,217 barrels of pickled or salt herring, 92,733 barrels of salt mackerel, and 736,508 pounds of pickled or salted salmon. The total value of fish was $7,427,057, of which $1,045,240 were free and $6,382,817 dutiable imports. The imports of fruits and nuts included 36,251,779 pounds of dried currants, 19,902,512 pounds of dried figs, 8,512,137 pounds of dried apricots, 1,947,215 pounds of lemons, 83,618,938 pounds of oranges, 443,457 pounds of plums and prunes, 10,309,498 pounds of raisins, and 6,317,633 pounds of almonds. The total value of fruits and nuts was $19,293,592.

The glass imports, of which quantities are reported, were 51,343,339 pounds of unpolished cylinder, pressed and crown; window and plate glass, 1,754,898 square feet of polished cylinder and crown glass, 571 square feet of the same silvered, 119,242 square feet of fluted, rolled, or rough plate glass, 941,879 square feet of cast plate glass, and 45,997 square feet of silvered plate glass. The total value of glass and glassware was $5,057,091. The import of glue was 5,777,082 pounds. Of gumpowder, 31,312 pounds were imported; of firecrackers, 5,901,176 pounds.

There were 143,590 tons of hay imported. Imports of hides and skins comprised 81,998,818 pounds of goatskins, 163,865,165 pounds of hides of cattle, and 190,076,795 pounds of other skins. The total value of hides, including leather, was $28,938,527,481; dutiable, $19,408,217. The import of honey was 146,860 gallons. The importation of hops amounted to 2,590,725 pounds.

Of India rubber, 49,377,183 pounds were imported; of rubber scraps for remanufacture, 19,005,547 pounds; of gutta-percha, 427,078 pounds; of gutta-joofaong, 8,701,753 pounds. The iron and steel imports shipped by weight were 147,963,804 pounds of tin plates, terneplates, and tappers' tin, 47,096,595 pounds of wire rods, 4,114,078 pounds of wire and wire manufactures, 380,438 pounds of anvils, and 639,020 pounds of chains. The total value of iron and steel imports, including iron manufactures, over $9,438,034, was $8,567,878,728. The import of ivory was 353,423 pounds; of vegetable ivory, 16,073,505 pounds.

Of lead, 196,378,961 pounds were imported. The import of lime was 48,783,888 pounds. Imports of leather were valued at $6,519,172; of leather manufactures, $6,773,924.

Of tea imports, 11,776,116 large casks were shipped, and in small casks of tea in bottles, 1,051,318 gallons, and in casks, etc., 2,225,502 gallons. The quantity of maguey or oioxide was 747,971,840 pounds.

Of nickel ore and matte, 23,547 pounds were imported. The import of oil cake was 208,657 pounds. The quantity of fish and whale oil was 581,372 gallons; of other rendered oil, 18,030 gallons; of
mineral oil, 2,354,720 gallons; of olive oil, 967,702 gallons; total value of oils, $6,817,750.

The number of dozens of palm-leaf fans was 1,376,682. The importation of parchment paper was 1,061,113 pounds; of rags for paper stock, 92,352,167 pounds. Of slate pencils, 253,912 gross were imported. The quantity of pineapple, of Paris, or sulphate of lime, was 204,580 tons in the given state. Of platinum, 7,767 pounds were imported. The quantity of plumbago was 20,597 tons. Among provisions were 49,791 pounds of butter and 13,455,990 pounds of cheese, the chief import in this class; total value of provisions, $2,285,353.
The quantity of rice imported from the Hawaiian Islands was 196,190 long tons of rice paid for; of rice, 13,053,351 pounds, besides 23,031,440 pounds of rice flour, rice meal, and broken rice; total value of rice, $2,279,036.
The importation of salt was 410,726,440 tons. Of linseed, 67,379 bushels were imported. The total value of seeds was $1,795,048. The imports of raw silk were 2,884,284 pounds of coarse and 11,259,310 pounds of reeled silk, besides 1,784,404 pounds of waste; and of spun silk in skeins, caps, warps, or on beams, 2,420,552 pounds. The value of raw silk imports was $45,329,760; of silk manufactures, $30,594,373. Of velvets and pile silks, 708,354 pounds were imported. The imports of fancies were valued to 89,576,284 pounds. Of printed cotton, imported free were 1,500,511 pounds of nutmegs, 13,985,333 pounds of black and white pepper in the grain, and 19,626,652 pounds of other spiced; and on 4,516,709 pounds of spices duty was paid; total value of spices, $3,401,265. The number of gallons of domestic spirits returned, subject to the internal revenue tax, was 6,682,024 gallons; of rectified spirits, 2,441,100; of other foreign spirits, 1,550,890; total value of spirits, $3,609,831. Of starch, 11,767,924 pounds were imported. The import of straw was 5,495 tons. Sugar imports comprised 14,435 gallons of molasses free of duty and 7,010,033 gallons of dutiable molasses, 701,350,422 pounds of beet, 504,713,165 pounds of sugar cane, 2,360,001 pounds of dutiable cane sugar below No. 16 Dutch standard in color, and 11,450,282 pounds above the standard. Of the raw beet sugar, 93,221,922 pounds came from Austria, 15,142,273 pounds from Belgium, 588,033,642 pounds from Germany, 2,230,770 pounds from England, and 1,259 pounds from other countries. The cane sugar came from Java, 3,869,000 pounds from Japan, 3,907,357 pounds from Central America, 1,891,917 pounds from Mexico, 200,479,351 pounds from the British West Indies, 706,455,920 pounds from Cuba, 21,644,980 pounds from the Danish Antilles, 3,578,657 pounds from the Dutch Antilles, 7,258,181 pounds from the Danish West Indies, 122,297,489 pounds from the Danish Settlements, 69,864,600 pounds from Brazil, 1,210,991 pounds from Colombia, 149,715,600 pounds from British Guiana, 13,265,520 pounds from Dutch Guiana, 75,165,975 pounds from Peru, 13,356 pounds from elsewhere in South America, 432,768 pounds from China, 9,640,435 pounds from British India, 1,162,292,854 pounds from the Dutch East Indies, 161,989 pounds from Hong-Kong, 1,076 pounds from Japan, 504,713,105 pounds from Hawaii, 49,490,542 pounds from British Africa, and 7,491,702 pounds from Egypt; total, 3,305,957,796 pounds, valued at $885,659,367. The total imports of raw materials and cane sugar were 4,018,086,339 pounds, value $100,250,574. The import of sulphur ore was 367,328 tons.
The number of barrels of tar and pitch was 2,829. The importation of tea was 84,545,107 pounds, of which 15,419,900 pounds were exported again, leaving 68,930,177 pounds for consumption, or 1.00 pound per head of population, of the total value of $10,825,987 and an average price of 12.4 cents a pound. The importation of tin in bars, blocks, pigs, or grain, or granulated was 70,158,915 pounds. Of tobacco, 5,601,065 pounds were imported for cigar wrappers, 14,053,550 pounds of filaments and Turkish and other leaf, and 496,880 pounds of cigars and cigarettes; total value of unmanufactured tobacco, 19,619,927 pounds, $313,297,233; value of manufactures, $2,364,137.
The import of varnishes was 43,743 gallons. The imports of vegetables were principally 967,031 bushels of beans and dried peas, 546,766 bushels of onions and shallots, 613,801 bushels of potatoes and 514,290 pounds of onions, with a total value of vegetables, $2,953,077. Of vinegar, 122,470 gallons were imported.
The imports of champagne were 310,149 dozen bottles; of still wines, 315,920 dozen bottles and 2,533,528 gallons in casks; total value of wines, $7,421,495. The wood imports included 28,228 thousand feet of mahogany, 101,397 thousand feet of lime, 690,226 thousand feet of beech, planks, deals, etc., and 541,034 thousand shingles. Of the total value of wood and timber imports, $5,956,568 were free and $14,635,340 paid duty.
The wool imports consisted of 37,404,243 pounds of clothing, 12,031,283 pounds of combing, and 105,892,929 pounds of carpet wool; total, 195,928,414 pounds. Of the third class, Australasia, direct or by way of Great Britain, furnished nearly two thirds and the Argentine Republic most of the remainder; of the second class, three quarters came from Great Britain and nearly a sixth from Canada; of the third class, Great Britain and Continental Europe between them supplied more than half, China nearly three tenths, and the United States nine per cent. The total value of their imports was $36,194,810, or 3.81 per cent.; fishery products, $6,326,626 in value, 0.46 per cent.; and agricultural products, $883,855,123 in value, 60.98 per cent.
The values of articles of domestic produce and manufacture exported in the year ending June 30, 1900, are given in the following table:

The exports of agricultural implements had a total value of $16,099,149. The total value of live animals exported was $43,583,031, representing 397,286 cattle, 51,180 hogs, 61,722 horses, 43,459 mules, 4,023 sheep, and some fowls and animals. Nearly all the cattle, nearly half the horses, and three-fifths of the sheep went to Great Britain.

The export of beeswax was 319,379 pounds. The total value of bread stuffs was $202,744,078, representing 29,061,062 bushels of barley, 165,604 tons of wheat, 6,982,915 pounds of flour and bread, and some fowls and animals. Nearly all the cattle, nearly half the horses, and three-fifths of the sheep went to Great Britain.
other farinaceous preparations, the export of which is growing rapidly. Of the corn exports, 192,519,755 bushels went to Europe, England taking 85,218,727 bushels, the Netherlands 23,584,536 bushels, Denmark 18,863,565 bushels, Belgium 9,618,054 bushels, and France 5,297,212 bushels, and what did not go to Europe was distributed among American countries. Of the wheat, 96,903,750 bushels went to Europe, 82,774,570 bushels of it to Great Britain, and the rest mainly to the Netherlands, Germany, Belgium, and Portugal. Of the wheat flour, Great Britain took 10,257,028 barrels, the Netherlands 1,300,602 barrels, the West Indies 1,723,887 barrels, South America 1,155,988 barrels, and Asia 2,259,169 barrels.

In the class of chemicals, drugs, dyes, and medicines the export of potash and pearlash was 1,273,905 pounds; of copper sulphate, 44,863,790 pounds; of ginseng, 160,901 pounds; of asphalt of the coker, 4,770,765 pounds. The export of anthracite coal was 1,777,319 tons; of bituminous coal, 5,411,329 tons. Of copper ore, 7,285 tons were exported, less than a fifth as much as in 1891, but nearly ten times as much as in 1880. The exports of iron, iron bars, steel, and iron manufactures, amounted to 333,340,725 tons. Of the exports of raw cotton, 6,600,144 bales, consisting of 18,199,967 pounds of sea island and 3,082,383,221 pounds of upland cotton, besides 25,642,300 pounds of waste, Europe took 2,586,207,059 of the 3,100,533,189 pounds; 1,151,945,186 pounds going to the United Kingdom, 900,356,933 pounds to Germany, 368,046,012 pounds to France, 221,755,337 pounds to Italy, and 123,306,186 pounds to Spain; and of the cotton that did not go to Europe, 161,601,219 pounds were shipped to Japan and Canada used 54,991,535 pounds. The exports of cotton cloth comprised 87,880,515 yards of colored and uncolored goods of the value of $24,832,737 and of cotton manufactures $24,003,087. There were 5,920,727 dozen eggs exported, the export having increased twentyfold in four years. The exports of fertilizers consisted of 767,220 tons of crude phosphates and 35,396 tons of commercial superphosphates, 686,215 tons of lime, and 8,441,959 tons of fish. The fish exports included 1,557,065 pounds of fresh fish, 9,730,573 pounds of dried cod, etc., 3,706,879 pounds of smoked or cured herring, 963,774 pounds of other smoked or dried fish, 1,142 barrels of salt mackerel, 20,683 barrels of other salt fish, and 27,082,570 pounds of canned salmon. The total value of fish exports was $5,427,409. The quantities of dried fruits exported were 34,904,010 pounds of apples, 25,922,371 pounds of prunes, and 2,415,456 pounds of raisins, besides peaches, apricots, and others not specified; the total value of fresh apples, 526,566 dollars; total value of fruits and nuts, $11,642,692. The export of tobacco was 2,420,941,450 pounds; of glue, 2,349,014 pounds of gum powder, 1,612,822 pounds. The export of hay was 72,710 tons. Of hides, 7,480,256 pounds were shipped abroad. The hop exports were 12,630,474 pounds. The export of india-rubber boots and shoes has steadily increased, amounting in 1900 to 767,104 pairs. The total value of rubber manufactures was $2,631,641. The export of iron ore was 40,510 tons. Of raw iron, 160,074 tons were sent abroad; of scrap and old iron, 48,111 tons. The exportation of bar iron was 18,456,435 pounds; of steel rods for wire, 25,533,749 pounds; of other iron and steel manufactures were 103,494 dollars; of oil of peppermint, 80,535 pounds; total value of vegetable oils, $16,345,056.

The exports of paints and colors were valued at $1,902,367. The quantity of zinc oxide was 11,895,960 pounds. Paper exports amounted in value to 80,215,833, two thirds of it coming from 99,308,900 pounds of printing paper. The export of paraffin wax was 182,153,718 pounds. Under the head of provisions, the exports were 55,553,745 pounds of canned beef, 329,078,009 pounds of fresh beef, 47,306,513 pounds of pickled beef, 2,319,165 pounds of beef cured otherwise, 89,030,945 pounds of tallow, 512,153,729 pounds of bacon, 190,441,412 pounds of hams, 8,396,074 pounds of canned pork, 23,946,905 pounds of fresh pork, 133,199,683 pounds of salted or pickled pork, 661,813,963 pounds of lard, 25,852,685 pounds of lard compounds and sub-
bushels of potatoes, the total value, including canned and pickled, being $2,532,278. The tonnage of vessels sold abroad was for steamers 1,032 and for sailing vessels 687 tons.

The export of whalebone was 196,001 pounds. Whale exports were valued at $625,992, consisting of 9,839 hundredweight of bottled whale and 1,408,850 gallons in casks. The total value of timber and wood manufactures was $50,508,416, including 473,542 thousand feet of sawed timber, 4,416,741 cubic feet of hewn timber, 1,046,785 thousand feet of boards, 41,043 thousand feet of joists and scantling, 3,818 thousand slingles, 773,019 shooks, 49,011,533 staves, and 28,501,501 bushels of wood pulp. The quantity of raw wool exported was 2,200,360 pounds; the value of wool manufactures was $1,300,362, including 146,113 yards of carpet, 38,166 yards of dress goods, and blankets, clothing, and various other manufactures.

The export of zinc ore was 92,101 tons; of manufactures, 31,847,855 pounds; value of zinc and manufactures thereof, excluding ore, $1,069,215.

The merchandise imports from the various foreign countries in the year ending June 30, 1900, had the following values:

The total export of quicksilver was 1,071,583 pounds. The shipments of rice were 12,947,000 pounds; of rice bran, meal, and polish, 28,111,408 pounds.

The salt export was 12,731,919 pounds. Of the seeds, valued at $7,036,982, the quantities given are 32,009,371 pounds of clover seed, 49,853,238 pounds of cotton seed, 2,749,266 bushels of flaxseed, and 15,078,139 bushels of rapeseed. Fifteen thousand tons of soap tallow were, exclusive of toilet soap, 36,239,103 pounds. The export of spermaceti was 235,781 pounds. The exports of distilled spirits, valued at $2,278,111, were 540,790 gallons of wood alcohol, reduced to proof, 177,974 gallons of alcohol, including pure, neutral, or cologne spirits, 80,259 gallons of brandy, 670,410 gallons of rum, 803,241 gallons of brandy whisky, 91,721 gallons of rye whisky, and 18,658 gallons of other spirits. The export of starch was 124,935,903 pounds. The value of sugar exports was $2,697,671, including 3,892,374 gallons of molasses, 11,130,770 gallons of sirup, 322,252 pounds of brown sugar, and 22,192,351 pounds of refined sugar.

The exports of leaf tobacco amounted to 334,604,210 pounds; of stems and trimmings, 10,031,487 pounds; of cigars, 2,570 thousand; of cigarettes, 1,164,356 thousand; of plug, 12,198,474 pounds; total value of tobacco exports, $353,482,512. Of the leaf tobacco 21,531 pounds were sent to the United Kingdom, 52,925,167 pounds to Germany, 38,584,488 pounds to France, 38,372,301 pounds to Italy, 19,932,942 pounds to the Netherlands, 17,152,797 pounds to Belgium, 13,772,478 pounds to Spain, and 9,083,645 pounds to Canada.

The export of varnish was 588,545 gallons. The exports of fresh vegetables were 617,355 bushels of beans and peas, 171,636 bushels of onions, 809,472

**UNITED STATES OF AMERICA**
The total value of imports from the United Kingdom was $159,552,401, of which $52,804,130 were free and $106,748,271 dutiable. The total from the Dominion of Canada and Newfoundland was $30,993,833, of which $12,431,242 were free and $25,700,591 dutiable. Of the total imports, 51.84 per cent. came from Europe, 15.30 per cent. from North America, 11.02 per cent. from South America, 16.45 per cent. from Asia, 4.07 per cent. from Oceania, and 1.32 per cent. from Africa.

The imports from the United States from Cuba, Porto Rico, Hawaii, and the Philippine and Samoan Islands were the largest amount, amounting to $60,000,000, of which $49,000,000 were for sugar and molasses, $10,000,000 for tobacco, $5,000,000 for vegetable fibers, $1,000,000 for iron, copper, and manganese, and $400,000 for miscellaneous products, such as coffee, cacao, sponges, tropical fruits, vegetables, hides and skins, and cabinet woods. One third of the sugar imports came from these dependencies. The imports from Cuba, according to the provisional reports, were sugar of the value of $16,029,953, unmanufactured tobacco, $7,239,046, molasses, $4,977,747; iron ore, $737,287; cabinet woods, $3,485,504; fruit, $261,109; copper, $238,028; manganese ore, $246,148; cacao, $164,570; sponges, $105,297; vegetables, $41,919; bones, horns, and hoofs, $37,212; vegetable fibers, $36,755; scrap iron, $9,221; and hides and skins, $2,141.

The imports from Porto Rico were sugar of the value of $1,403,699; molasses, $197,827; tobacco, $181,147; coffee, $9,839; hides and skins, $8,593; fruit, $2,026; tobacco, $4,632; cabinet woods, $452; cacao, $154; and other products, $100. The imports from the Philippines were Manila hemp of the value of $24,259,330; scrap iron, $1,354; tobacco, $833; fruit, $40. The imports from Hawaii were sugar of the value of $19,655,874; coffee, $6,436,386; hides and skins, $63,333; fruit, $34,274; vegetables, $29,306; scrap iron, $300; tobacco, $26.

The values of the merchandise exports to different countries in the year 1900 are given in the table below.

The exports to the United Kingdom amounted to $533,819,545, the exports of domestic merchandise being $327,784,340 and of foreign merchandise $206,035,205. The exports to British North America as a whole were $97,337,494, of which

The total from the Dominion of Canada and Newfoundland was $30,993,833, of which $12,431,242 were free and $25,700,591 dutiable. Of the total imports, 51.84 per cent. came from Europe, 15.30 per cent. from North America, 11.02 per cent. from South America, 16.45 per cent. from Asia, 4.07 per cent. from Oceania, and 1.32 per cent. from Africa.

The imports from the United States from Cuba, Porto Rico, Hawaii, and the Philippine and Samoan Islands were the largest amount, amounting to $60,000,000, of which $49,000,000 were for sugar and molasses, $10,000,000 for tobacco, $5,000,000 for vegetable fibers, $1,000,000 for iron, copper, and manganese, and $400,000 for miscellaneous products, such as coffee, cacao, sponges, tropical fruits, vegetables, hides and skins, and cabinet woods. One third of the sugar imports came from these dependencies. The imports from Cuba, according to the provisional reports, were sugar of the value of $16,029,953, unmanufactured tobacco, $7,239,046, molasses, $4,977,747; iron ore, $737,287; cabinet woods, $3,485,504; fruit, $261,109; copper, $238,028; manganese ore, $246,148; cacao, $164,570; sponges, $105,297; vegetables, $41,919; bones, horns, and hoofs, $37,212; vegetable fibers, $36,755; scrap iron, $9,221; and hides and skins, $2,141.

$90,045,256 were domestic and $7,292,238 foreign exports. Of the total exports, 74.60 per cent. went to Europe, 13.45 per cent. to North America, 2.79 per cent. to South America, 4.66 per cent. to Asia, 3.11 per cent. to Oceania, and 1.39 per cent. to Africa.

The value of merchandise received from foreign countries for immediate transit across United States territory in 1900 was $98,531,462. Of the total value of imports, $44,412,500 came by land vehicle, $1,810,504,940 by sea in American vessels, and $701,223,733 in foreign vessels. Of the total exports, $110,483,141 went by land, $90,779,252 in American vessels, and $1,193,220,880 went in foreign vessels. The percentage of the carrying trade that was taken in American vessels was 12.3 per cent. of the imports and 7.1 per cent. of the exports. By sea, the whole outward trade, which amounted to $2,089,528,616, the proportion that was conveyed in American vessels was computed at 9.3 per cent.

The value of imported merchandise entered for consumption during the fiscal year 1900 was $830,510,527, of which $366,759,322, 44.16 per cent. of the value, was the value of free imports and $463,750,300 that of dutiable merchandise, on which $229,360,771 of duties were collected, an average rate of 49.46 per cent. on dutiable and of 27.62 per cent. on free and dutiable merchandise together. The consumption of imported merchandise was $10.68 per capita, and the duty collected $3.01 per capita. Of the dutiable merchandise imported, amounting to 26.02 of the total imports and having a value of $216,107,303, of which $91,128,161 represent free and $124,979,142 dutiable imports, paid $78,236,070 in duties, 34.26 per cent. of all duties collected, the average rate collected on this class being 62.60 per cent. ad valorem. Articles in a crude condition for manufactures are subject to the various duties. In the United States 192,921,821 pounds of tobacco, or 12.1 per cent. of all imports of tobacco, of which sum $5,492,053 were free of duty and $88,416,666 paid an average rate of 57.16 per cent. and yielded $46,256,057, that being 24.63 per cent. of the total duty that was collected.

The imports of silver, including ore, in 1900, were $832,897,502 in coined value, and the exports were $324,463,845 of domestic and $4,247,930 of foreign, giving an excess of exports of $21,455,973. The value of silver imported in 1899 was $242,210,950. The imports of gold coin and bullion in 1900 were $44,573,184, and the exports were $48,260,739, of which $6,093,893 were domestic and $372,870 foreign gold. The total foreign gold exports was $6,093,757, while in 1899 there was an excess of imports amounting to $51,432,517.

The production of gold from mines in the United States in 1899, according to the report of the Director of the Mint, was 3,437,210 ounces, or in value $71,033,400, of which $25,582,800 came from New Mexico, $18,377,500 from California, $6,488,900 from South Dakota, $5,459,500 from Alaska, $4,760,100 from Montana, $3,430,500 from Utah, $2,566,100 from Arizona, $2,219,000 from Nevada, $1,880,000 from Idaho, $1,429,500 from Oregon, $863,400 from Washington, $834,100 from New Mexico, $189,100 from South Carolina, $113,000 from Georgia, $45,500 from North Carolina, and $22,500 from Texas, Michigan, and other states. The production of silver in the United States was reported to be $54,764,000, having a commercial value of $32,850,000 and a coined value of $70,806,000, of which California produced $29,301,527, Montana $20,810,690, Utah $17,153,155, Arizona $14,561,430, Nevada $9,085,762, New Mexico $650,731, Washington $330,990, South Dakota $188,251, Alaska $81,140, Oregon $173,641, Michigan $145,843, and Georgia, South Carolina, North Carolina, and other states $3,201.

Banking and Currency.—The amount of money in circulation on July 1, 1900, was reported by the Secretary of the Treasury to be $2,655-
Liabilities:  
Deposits.......................... $2,389,719,954  
Surplus fund........................ 181,919,383  
Undivided profits.................... 21,907,692  
Capital stock, etc.................... 9,289,735  
Total liabilities.................... $2,621,679,344  

There were 6,107,083 depositors having $2,440,547,885 of savings deposits, of which $930,790,300 were in the Eastern district, $1,148,091,556 in the Middle district, $1,840,199 in the Southern, $185,806,444 in the Western, and $160,419,580 in the Pacific States.

Navigation.—The tonnage of vessels entered from foreign countries at the seaports of the United States during the year ending June 30, 1900, was 23,533,597 tons, of which 3,974,239 tons were American and 19,559,358 tons foreign. The tonnage of sailing vessels entered was 3,245,874 tons, of which 923,361 tons were American and 2,322,513 tons foreign; the steam tonnage was 20,287,723 tons, of which 3,050,678 tons were American and 17,237,045 tons foreign. The tonnage of vessels cleared for foreign countries during the fiscal year 1900 was 23,671,658 tons, of which 4,066,114 tons were American and 19,611,544 tons foreign. The tonnage of steam vessels cleared was 3,298,091 tons, of which 958,489 tons were American and 2,340,202 tons foreign. The steam tonnage cleared was 20,318,967 tons, of which 3,047,625 tons were American and 17,271,342 tons foreign. During the year 1733,375 tons were entered from and 832,434 tons cleared for Britain, 645,654 tons from and 1,011,512 tons cleared for France, 2,334,042 tons cleared from and 2,706,337 tons cleared for Germany, 793,380 tons entered from and 538,935 tons cleared for Italy, 586,637 tons entered from and 1,303,163 tons cleared for the Netherlands, 443,420 tons entered from and 212,530 tons cleared for Spain, 7,153,522 tons entered from and 4,257,574 tons cleared for Brazil, 330,306 tons entered from and 301,384 tons cleared for the United Kingdom, 1,214,476 tons entered from and 1,301,780 tons cleared for Nova Scotia, New Brunswick, and Prince Edward Island, 1,469,610 tons entered from and 1,465,052 tons cleared for British Columbia, 375,268 tons entered from and 326,518 tons cleared for Central America, 1,005,387 tons entered from and 532,397 tons cleared for Mexico, 705,760 tons entered from and 696,485 tons cleared for the British West Indies and British Honduras, 1,341,923 tons entered from and 1,247,752 tons cleared for Cuba, 73,658 tons entered from and 237,765 tons cleared for Argentina, 500,935 tons entered from and 245,574 tons cleared for Brazil, 330,306 tons entered from and 301,384 tons cleared for Colombia, 132,465 tons entered from and 77,778 tons cleared for British India, 394,801 tons entered from and 456,069 tons cleared for China, 272,491 tons entered from and 256,820 tons cleared for Japan, 141,925 tons entered from and 288,514 tons cleared for French possessions and New Zealand, 680 tons entered from and 274,760 tons cleared for Hawaii, 157,587 tons entered from and 281,897 tons cleared for British possessions in Africa and adjacent islands, and 2,524,253 tons entered from and 1,944,538 tons cleared for all other countries. Of the total tonnage of American and foreign vessels the foreign commerce entered and cleared 8,176,761 tons were entered and 7,843,559 tons cleared at the port of New York, 2,236,066 tons entered and 1,309,121 tons entered at Boston, 1,850,656 tons entered and 1,853,959 tons cleared at Philadelphia, 1,677,935 tons entered and 1,775,269 tons cleared at Baltimore, 1,675,434 tons entered and 1,351,718 tons entered and 1,330,648 tons cleared at San Francisco, 1,103,797 tons entered and
1,173,523 tons cleared at Puget Sound, 724,666 tons entered and 816,834 tons cleared at Galveston, 520,153 tons entered and 595,229 tons cleared at Pensacola, 549,198 tons entered and 505,273 tons cleared at Mobile, 438,105 tons entered and 636,622 tons cleared at Newport News, 344,092 tons entered and 372,019 tons cleared at Portland, Me., 300,593 tons entered and 392,294 tons cleared at Norfolk and Portsmouth, Va., 267,568 tons entered and 343,555 tons cleared at Savannah, 210,884 tons entered and 226,837 tons cleared at Brunswick, 165,378 tons entered and 178,662 tons cleared at Passamaquoddy, 176,073 tons entered and 144,163 tons cleared at Pensacola, 607,007 tons entered and 52,645 tons cleared at Charleston, and 1,750,073 tons entered and 1,705,508 tons cleared at all other seaports. The nationality of the tonnage entered and cleared in the foreign trade at American seaports during the year ending June 30, 1900, is shown in the following table:

The number of sailing vessels, including canal boats and barges, registered as belonging in the United States on June 30, 1900, was 16,280, of 2,607,042 tons; the number of steam vessels was 7,053, of 2,657,797 tons; total merchant marine, 23,333 vessels, of 5,164,859 tons. The tonnage owned on the Atlantic and Gulf coasts was 2,727,892 tons on the Pacific coast, 974,792 tons; in the Northern lakes, 1,565,887 tons; on the Western rivers, 258,456 tons. The steam tonnage employed in the foreign trade in 1900 was 373,356 tons, and the total tonnage of American vessels in the foreign trade was 816,795 tons; steam tonnage in coastwise trade, 2,269,825 tons; total tonnage of coasting vessels, 4,286,516 tons; steam tonnage in the whale fisheries, 3,986 tons; total tonnage in the whale fisheries, 9,899 tons; tonnage in cod and mackerel fisheries, 51,629 tons. The total tonnage of American vessels, 5,164,859 tons, shows an increase of 6.18 per cent. over the previous year, which recorded an advance of 2.41 per cent. over 1898, in which there was a slight decrease in American tonnage as compared with 1897. There were 504 sailing vessels, of 116,460 tons, built in the United States in 1900; steam vessels built 422, of 202,628 tons; canal boats, 38, of 4,492 tons; barges, 483, of 40,319 tons; total, 1,447 vessels, of 393,736 tons, compared with 1,273, of 300,038 tons, in 1899 and 952, of 180,455 tons, in 1898. On the New England coast there were 190 vessels, built of 72,179 tons; on the entire seaboard, 1,107 vessels, of 249,006 tons; on the Mississippi river and tributaries, 215 vessels, of 14,173 tons; on the Gulf Lakes, 125 vessels, of 130,611 tons. Among the sailing vessels built in the United States in 1900 were 28,903 tons, built of steel, and of the steam vessels 80, of 167,948 tons.

**Railroads.**—The length of railroads in operation in the United States on Dec. 31, 1899, was 190,833 miles, 3,981 miles having been added during the year. The total length in 1889 was 161,326 miles; in 1879, 86,556 miles; in 1869, 46,844 miles; in 1859, 27,878 miles; in 1849, 7,365 miles; and in 1839, 1,283 miles. In 1899 the New England States had 7,447 miles; Middle Atlantic States, 22,206 miles; Central Northern States, 40,849 miles; Southern Atlantic States, 21,232 miles; Gulf and Mississippi valley, 15,717 miles; Southwestern States, 36,942 miles; Northwestern States, 31,227 miles; Pacific States, 15,209 miles. The total value of American and Canadian railroads in 1899, valued at 5.75 miles in 1899, was $5,742,181,181; funded debt, $5,644,585,027; floating debt, $505,777,585; total liabilities, $11,692,817,066; average total cost of construction, $622,265 per mile. The gross earnings in 1899 were $1,330,006,379, being 11.4 per cent. on the total liabilities, receipts from passenger traffic net earnings, $2,300,000, leaving $6,165,804 profits, showing miscellaneous receipts $116,100,335. The interest paid on bonds and other debt was $245,250,364 during 1899, the average rate being 4.12 per cent., and the dividends paid on stock amounted to $109,032,255, an average rate of 1.50 per cent. The gross earnings per mile were $7,161 on the average; net earnings, $2,400 per mile, the percentage of operating expenses and interest on funded debt being 5.94, and the floating debt 6.16. The average rate of gross earnings per mile in 1898, was 6.16 per cent. in 1898, 60.74 per cent. in 1897, and 70.43 per cent. in 1896. The number of passengers carried in 1899 was 537,977,301; passengers carried 1 mile, 14,859,541,965, making average passenger receipts per mile just 2 cents; freight carried, 975,790,941 tons; tons carried 1 mile, 126,991,703,110, making average freight receipts 0.71 cent per ton mile. The gross earnings of 100,406 miles for the year ending June 30, 1900, were $1,450,673,054, or $7,776 per mile of line, $366,800,760 of the total being passenger and $1,048,208,875 freight earnings. Operating expenses amounted to $856,314,142, or $5,925 per mile. The net earnings were $323,360,192, leaving $6,165,804 profits, showing an average toll per mile of passage of 30.8 cents and an average cost of 25.1 cents. The Postal Telegraph Company had 192,705 miles of line and 933,133 miles of wire in operation on June 30, 1900. The number of messages sent during the year was 63,167,783. Receipts were $2,748,570, and expenses $1,558,206, leaving $660,364 profits, showing an average toll per message of 0.26 cents. The Western Union Telegraph Company has 26,042 miles of cable and land lines, with 169,236 miles of wire, and during 1900 sent 16,528,444 messages. The total length of telegraph lines in the United States open for public business, excluding railroad, Government, and private lines, exceeds 210,000 miles.

**Telegraphs.**—The Bell Telephone Company, on Jan. 1, 1900, had 1,239 exchanges and 1,187 branch offices, and 599,036 miles of wire on poles, 15,087 miles on buildings, 489,250 miles underground, and 3,404 miles submarine, making a total of 1,916,777 miles. The total length of telephone circuits in the United States, 492,020; number of employees, 25,741; number of subscribers, 632,946. The aggregate length of telephone wires operated is 1,518,609 miles, the number of conversations about 1,666,000 per annum.

**Presidential Election.**—The nomination of William McKinley, of Ohio, who was elected...
President of the United States in 1896 by 271 to 176 electoral votes and by a plurality of 601,554 popular votes over William Jennings Bryan, of Nebraska, the Democratic party, nor was that of Mr. Bryan in the Demo-
cratic party except by the Gold Democrats, who in 1896 either abstained from voting or supported the Republican candidate or joined in the dis-
sentient movement of the so-called Jeffersonian Democracy, who under the name of National Democrats nominated John M. Palmer, of Illinois, for President. Before the great parties held their national conventions in 1900 several of the inde-
pendent parties met to declare their principles and put forward candidates. The fourth annual ses-
sion of the Supreme Council of the Farmers' Alli-
ance and Industrial Union was held in Washing-
ton, D.C., on February 6 and for the following days. The support of the Farmers' Alliance was pledged to the candidates to be chosen by the Democratic party for President and Vice-President, and the following platform was approved:

"Whereas, the Declaration of Independence, as a basis of a republican form of government that might be progressive and perpetual, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness, that to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed;"

"We hold, therefore, that to restore and pre-
serve a republican form of govern-
ment, private monopolies of public necessitates for speculative purposes, whether of the means of production, distribution, or exchange, should be prohibited, and whenever such public necessity or utility becomes a monopoly in private hands, the people of the municipality, State, or Union, as the case may be, shall appropriate the same by the eminent domain, paying a just value therefor, and operate them for and in the interest of the whole people. We demand a national cur-
renzy, safe, sound, and flexible; issued by the General Government only, a full legal tender for all debts and receivable for all dues, and an equitable and efficient means of distribution of this currency in the hands of the people. We condemn the monopolization of expense and without the intervention of banking corporations and in sufficient volume to transact the business of the country on a cash basis. We demand the free and unlimited coinage of silver and gold at the legal ratio of 16 to 1. We demand a graduated income tax. That our national legislation shall be so framed in the future as not to build up one industry at the expense of an-
other. We believe that the money of the country should be kept as much as possible in the hands of the people, and hence we demand that all national and State revenues shall be limited to the neces-
sary expenses of the Government economically and honestly administered. We demand that private savings banks be established by the Government for the safe deposit of the savings of the people, and to facilitate exchange. We are unalterably opposed to the issue by the United States of in-
terest-bearing bonds, and demand the payment of all coin obligations of the United States, as pro-
vided by existing laws, in either gold or silver coin, at the option of the Government and not at the option of the creditor. The Government shall purchase or construct and operate a sufficient mileage of railroads to effectively control all rates of transportation on a just and equitable basis. The telegraph and telephone, like the post-office system, being a necessity for the transmission of intelligence, should be owned and operated by the Government in the interest of the people. We de-
mand that no land shall be held by corporations for speculative purposes or by railroads in excess of their real franchise, and that all lands owned by aliens should be reclaimed by the Government and held for actual settlers only. We demand the election of United States Senators by a direct vote of the people; that each State shall be di-
vided into two districts of nearly equal voting population, and that a Senator from each shall be elected by the people of the district. Relying
upon the good common sense of the American people, and believing that a majority of them, when uninfluenced by party prejudice, will vote right on all questions submitted to them on their merits; and further to effectually annihilate the pernicious lobby in legislation, we demand direct legislation by the people to be rapidly converting society
mand free mail delivery in the rural districts. We demand that the inhabitants of all the territory coming to the United States as a result of the war with Spain be as speedily as possible permitted to organize a free government of their own, based upon the consent of the governed."

The next earliest convention was that of the Social-Democratic party held at Chicago on March 6, at Indianapolis, Ind. nominated Eugene V. Debs, of Indiana, for President, and Job Harriman, of California, for Vice-President, and on March 7 adopted the following platform:

"The Social-Democratic party of America de-
clares that life, liberty, and happiness depend upon equal political and economic rights. In our eco-
nomic development an industrial revolution has taken place, the individual tool of former years having become the social tool of the present. The individual tool was owned by the worker, who employed himself and was master of his product. The social tool, the machine, is owned by the employer and is rapidly converting society
mand for free mail delivery in the rural districts. We demand that the inhabitants of all the territory coming to the United States as a result of the war with Spain be as speedily as possible permitted to organize a free government of their own, based upon the consent of the governed."

"We believe that life, liberty, and happiness depend upon equal political and economic rights. In our eco-
nomic development an industrial revolution has taken place, the individual tool of former years having become the social tool of the present. The individual tool was owned by the worker, who employed himself and was master of his product. The social tool, the machine, is owned by the employer and is rapidly converting society
mand free mail delivery in the rural districts. We demand that the inhabitants of all the territory coming to the United States as a result of the war with Spain be as speedily as possible permitted to organize a free government of their own, based upon the consent of the governed."
of the socially useful classes from the domination of capitalism.

"The working class and all those in sympathy with their historic mission to realize a higher civilization should sever connection with all capitalist and reform parties and unite with the Social-Democratic party of America. The control of political power by the Social-Democratic party will be tantamount to the abolition of all class rule. The solidarity of labor connecting the millions of class-conscious fellow-workers throughout the civilized world will lead to international socialism, the brotherhood of man.

"A few steps in that direction, we make the following demand:

"First, revision of our Federal Constitution, in order to remove the obstacles to complete control of government by the people irrespective of sex. Second, the public ownership of all industries controlled by monopolies, trusts, and combines. Third, the public ownership of all railroads, telephones, and electric plants, and other public utilities. Fourth, the public ownership of all gold, silver, copper, lead, iron, coal, and other mines, and all oil and gas wells. Fifth, the reduction of the hours of labor to forty and its increase to a diminishing scale of production. Sixth, the inauguration of a system of public works and improvements for the employment of the unemployed, the public credit to be utilized for that purpose. Seventh, useful inventions to be free, the inventor to be remunerated by the public. Eighth, labor legislation to be national instead of local, and international when possible. Ninth, national insurance of working people against accidents, lack of employment, and want in old age. Tenth, equal civil and political rights for men and women, and the abolition of all laws discriminating against women. Eleventh, the adoption of the initiative and referendum, proportional representation, and the right of recall of representatives by the voters. Twelfth, abolition of war and introduction of international arbitration."

Early in January the national committee of the Union Reform party, which favors direct legislation, appointed a canvassing board, which sent out canvassers in all the States for the purpose of voting for candidates for President and Vice-President. The balloting continued through February and March. In April the canvassing board announced that Seth H. Ellis, of Ohio, and Samuel T. Nicholson, of Pennsylvania, had been nominated for President and Vice-President respectively on the platform favored at Cincinnati on March 1, 1899:

"Direct legislation under the system known as the initiative and referendum. Under the initiative the people can compel the submission to themselves of any desired law, when, if it receives a majority of the votes cast, it is thereby enacted. Under the referendum the people can compel the submission to themselves of any law which has been adopted by any legislative body, when, if such law fails to receive a majority of the votes cast, it will be thereby rejected." The convention adopted an appeal in part as follows: "We accept the strong and unanswerable arguments of our friends who can be derived or benefit from party except a party to secure direct legislation. We've attached ourselves to the Union Reform party for direct legislation only. This party, organized by progressive and active men from this and other States at a time when dominant parties had legislated to make the initiation of reform movements impossible, acted while we were awaiting an opportune hour. We ask our honest, home-loving fellow-citizens to organize in their respective precincts, and to honestly and fairly extend their organization to county and district, and to assist in controlling and extending the party and movement until the desired object is attained. The majority of our people are in favor of direct legislation and government, and with this sole purpose they must vote at last. The logic of events, the tyranny of the bosses, and the necessities of the hour assure us.

Friends, this securing of a rightful voice is the affair of the individual, of each and every one. Government direct by the people will not come as a volunteer concession, but as a logical and inevitable political power. These controllers of parties will not permit of referendum of acts and expenditures; they will not give to the people initiatory and mandatory rights, because to do so would be to destroy their own useless but lucrative occupations. These party bosses who monopolize political opportunities are the agents of all monopolies. We all believe that conditions can be made better or worse by legislation. The corporations know this and act accordingly. Truly they contribute to the election of candidates, but their great contributions are direct to the machine.

The United Christian party, a new organization, met at Rock Island, Ill., and on May 2 nominated by acclamation Silas P. Swallow, of Pennsylvania, for President, and John G. Woolley, of Illinois, for Vice-President. These candidates withdrew, and the party, which is devoted to the inculcation of religious and moral ideas as controlling forces in politics and government, put in nomination for the respective offices Jonah F. R. Leonard, of Iowa, and David II. Martin, of Pennsylvania. The convention adopted the following platform:

"We, the United Christian party, in national convention assembled, acknowledging Almighty God as the source of all power and authority, the Lord Jesus Christ as the sovereign ruler of nations, and the Bible as the standard by which to decide moral issues in our political life, do make the following declaration: We believe the time to have arrived when the eternal principles of justice, mercy, and love as exemplified in the life and teachings of Jesus Christ should be embodied in our institutions, and that these principles should be applied in concrete form to every function of our Government. We deprecate certain immoral laws which have grown out of the failure of our nation to recognize these principles, notably such as require the desecration of the Christian Sabbath, authorize unscriptural marriage and divorce, license the manufacture and sale of intoxicating liquors as a beverage, and permit the sale of cigarettes or tobacco in any form to minors. As an expression of consent or allegiance on the part of the governed, in harmony with the above statements, we declare for the adoption and use of the system of direct legislation known as the 'initiative and referendum,' which means the 'voluntary representation' and the 'imperative mandate.' We hold that all men and women are created free and with equal rights, and declare for the establishment of such political, industrial, and social conditions as shall guarantee to every person civic equality, the full fruits of his or her honest toil, and opportunity to develop his or her individuality to the same; and we especially condemn mob violence and outrages against any individual or class of individuals in our country. We declare against war and for the arbitration of all national and international disputes. We hold that the legalized liquor traffic is the crowning inanity of capitalism, and we declare for the immediate abolition
of the manufacture and sale of intoxicating liquors as a beverage. We are gratified to note the widespread agitation of the cigarette question and declare ourselves in favor of the amendment of laws prohibiting the sale of cigarettes or tobacco in any form to minors. We declare for the daily reading of the Bible in the public schools and institutions of learning under control of the State. We declare for the Government ownership of public utilities. We declare for the election of the President and Vice-President by United States Senators by the direct vote of the people. We declare for such amendment of the United States Constitution as shall be necessary to give the principles herein set forth an undeniable legal basis in the fundamental law of our land. We invite into the United Christian party every honest man and woman who believes in Christ and his golden rule and standard of righteousness."

The fusion wing of the People's party held a convention at Sioux Falls, S. D., on May 10, at which William J. Bryan was nominated for President by acclamation. A motion to defer the nomination for Vice-President and appoint a committee to consider the subject was defeated by 492 to 462 votes. Howard S. Taylor, of Illinois, J. H. Davis, of Texas, E. Gerry Brown, of Massachusetts, J. W. Breidenthal, of Kansas, T. T. Rhinder, of Pennsylvania, and John J. Lentz, of Ohio, withdrew their names when they were brought forward for the nomination of the convention. John J. Lentz, of Minnesota, who was nominated by acclamation, and who withdrew, on Aug. 8, after A. E. Stevenson was nominated by the Democratic convention, and on Aug. 28 the Executive Committee named Mr. Stevenson as the candidate of the party. The following platform was adopted:

"We recognize the act of March 14, 1900, as the culmination of a long series of conspiracies to deprive the people of their constitutional rights over the money of the nation and relegate to a gigantic money trust the control of the purse and hence of the people. We denounce this act, first, for making all money obligations, deductible from the estate of the decedent, thus enormously increasing the burdens of the debtors and enriching the creditors. Second, for refunding coin bonds not to mature for years into long-time gold bonds so as to make their payment improbable and our debt perpetual. Third, for taking from the Treasury over $50,000,000 in a time of war and presenting it as a premium to bondholders to accomplish the refunding of bonds not due. Fourth, for doubling the capital of bankers by returning them the face value of their bonds in current money notes so that they may draw one interest from the Government and another from the people. Fifth, for a corrupt income tax and further enriching the speculators at pleasure, thus controlling prices of all products. Sixth, for authorizing the Secretary of the Treasury to issue new gold bonds to an unlimited amount whenever he deems it necessary to replenish the gold hoard, thus enabling usurers to secure more bonds and more bank currency by drawing gold from the Treasury, thereby creating an endless chain for perpetually adding to a perpetual debt. Seventh, for striking down the greenback in order to force the people to borrow $346,000,000 more from the banks at an annual cost of over $20,000,000. While barring the new issue of gold, the Constitution this law opens the printing mints of the Treasury to the issue of bank paper money, to enrich the few and impoverish the many. We pledge anew the People's party never to cease the agitation until this great financial conspiracy is blotted from the statute books, the Lincoln greenback restored, the bonds all paid, and all corporation money forever retired. We hail the extension of the franchise for the voting of the money of the United States for the free and unlimited coinage of silver and gold at the present legal ratio of 16 to 1, the immediate increase in the volume of silver coins and certificates thus created to be substituted, dollar for dollar, for the bank notes issued by private corporations under special privilege granted by law of March 14, 1900, and prior national banking laws, the remaining portion of the bank notes to be replaced with full legal-tender Government paper money, and its volume so controlled as to maintain at all times a stable money market and a stable price level. We demand a graduated income and inheritance tax, to the end that aggravated wealth shall bear its just proportion of taxation. We demand that postal savings banks be established by the Government for the safe deposit of the savings of the people and to facilitate exchange. With Thomas Jefferson we declare the land, including all natural sources of wealth, the inalienable heritage of the people. We believe the right of the Government to own homes for the people and prevent land monopoly. The original homestead policy should be enforced, and future settlers upon the public domain should be entitled to a free homestead, while all who have paid an acreage price to the Government under existing laws should have their homestead rights preserved. With France we denounce the barter and exchange and a public necessity, the Government should own and operate the railroads in the interests of the people and on a nonpartisan basis, to the end that all may be accorded the same treatment in transportation, and that the extortion, tyranny, and political power now exercised by the private corporation, which are the only means of commerce money, transportation, and the means of transmission of information—which instruments of commerce are public functions, and which our forefathers declared in the Constitution should be controlled by the people through their Congress for the public welfare. The one remedy for the trusts is that the ownership and control be assumed and exercised by the people. We further demand that all tariffs on goods controlled by a trust shall be abolished. To cope with the trust evil, the people must act directly without the intervention of representatives who may be controlled or influenced. We therefore demand the direct election of Representatives, Senators, and the Governor and all elective offices to the initiative and referendum. A majority of the people can never be corruptly influenced. Applauding the valor of our army and navy in the Spanish War, we denounce the conduct of the administration in changing a war for humanity into a war of conquest. The action of the administration in the Philippine Islands is in conflict with all the precepts of our national life; at war with the Declaration of Independence, the Constitution, and the plain precepts of humanity. Murder and arson have been our response to the appeals of the people who asked only to be given a free government in their own lands. We demand the immediate and unconditional cession of the Philippines to the government of the people who inhabit those islands, and the establishment of an autonomous government over that territory which shall enjoy the benefit of the four-hour day for labor, the eight-hour day for labor, and the protection of its own laws. It is the will of the people that the Philippines shall be granted the right to self-government by the title of a trusteeship, and that its people shall have express and complete control of the government of the islands. We demand the extension of the universal franchise, the abolition of the property qualification for the vote, the suppression of the officeholder, the suppression of the spoils system, the abolition of the political machine, the abolition of all contributions of any kind to political parties, the suppression of all railroad and corporation rebates, the abolition of all contributions of any kind to political parties, the suppression of all railroad and corporation rebates, the abolition of all contributions of any kind to political parties, the suppression of all railroad and corporation rebates, the abolition of all contributions of any kind to political parties, the suppression of all railroad and corporation rebates, the abolition of all contributions of any kind to political parties, the suppression of all railroad and corporation rebates, the abolition of all contributions of any kind to political parties, the suppression of all railroad and corporation rebates, the abolition of all contributions of any kind to political parties.
Indepebadence, the Constitution, and the American flag are one and inseparable. The island of Porto Rico is a part of the territory of the United States, and by levying special and extraordinary customs duties on the commerce of that island the administration has violated the Constitution, abridged the fundamental principles of our liberties, and has striven to give the lie to the contention of our forefathers that there should be no taxation without representation. Out of the imperialism which would force an undesired domination on the people of the Philippines springs the un-American cry for a large standing army. Out of the propensities of our people justifies us in ignoring the plain lesson of history and putting our liberties in jeopardy by assuming the burden of militarism, which is crushing the people of the Old World. We denounce the administration for its sinister efforts to substitute a standing army for the citizen soldiers which is the best safeguard of the republic. We extend to the brave Boers of South Africa our sympathy and moral support in their patriotic struggle for the right of self-government, and we are unalterably opposed to any alliance, open or covert, between the United States and any other nation that will tend to the destruction of liberty. And we denounce the.manipulations of militarism in the mining districts of Idaho. In the Cœur d'Alene soldiers have been used to overawe miners striving for a greater measure of industrial independence. And we denounce the State Government of Idaho and the Federal Government for employing the military arm of the Government to abridge the civil rights of the people, and to enforce an infamous permit system which denies to laborers their inherent liberty and compels them to swear their manhood and their right before being permitted to seek employment. The irruption of Japanese and other laborers under contract to serve monopolistic corporations is a notorious and flagrant violation of the immigration laws. We demand that the Federal Government shall take cognizance of this menacing evil and repress it under existing laws. We further pledge ourselves to strive for the enactment of more stringent laws for the exclusion of Mongolian and Malayan immigration. We indorse municipal ownership of public utilities, and that the wealth which has accrued to the public under that system would be multiplied a hundredfold by its extension to natural interstate monopolies."

The antifusion or Middle-of-the-Road People's party held a national convention at Cincinnati, Ohio, at the same time as the fusionist convention. Wharton Barker, of Pennsylvania, received the nomination for President on the second ballot by 370 votes to 336 for Milford W. Howard, of Alabama, and 9 scattering. Ignatius Donnelly, of Minnesota, was nominated for the vice-presidency by acclamation. The platform was as follows:

"The People's party of the United States, assembled in national convention at the 10th day of May, 1900, affirming our unshaken belief in the cardinal tenets of the People's party as set forth in the Omaha platform, and pledging ourselves anew to continued advocacy of those grand principles of human liberty, until right shall triumph over might, until the sun set over greed, do adopt and proclaim this declaratory statement in respect to the initiative and referendum, and the imperative mandate for such changes of existing fundamental and statute law as will enable the people in their sovereign capacity to propose and compel the enactment of such laws as they desire, to reject such as they deem injurious to their interests, and to recall unfaithful public servants. We demand the public ownership and operation of those means of communication, transportation, and production which the people may elect, such as railroads, telegraph and telephone lines, coal mines, etc. The land, including all natural sources of wealth, is a heritage of the people, and should be used for public purposes, and also, in part, for the support of the public schools, for the establishment of libraries, for the advancement of science, for the promotion of agriculture, and for the benefit of the people. All land so used should be held inalienably for the public good. All lands owned by the Government, which are not needed for national purposes, and all lands now owned by aliens, should be reclaimed by the Government and held for actual settlers only. A scientific and absolute land policy, under which the entire wealth and population of the nation, not reredeemable in any specific commodity, but made a full legal tender for all debts, and receivable for all taxes and public dues, and issued by the Government only with the intervention of banks, and in sufficient quantity to meet the demands of commerce, is the best in currency assembly, reasserts the inalienable right of all men to life, liberty, and the pursuit of happiness. With the founders of the American republic we hold that the purpose of government is to secure every citizen in the enjoyment of this right; but in the light of our social conditions we hold, furthermore, that no such right can exist unless the advantages with which they have accrued to the public under that system would be multiplied a hundredfold by its extension to natural interstate monopolies."

United States of America

[The text continues with various political and social issues discussed, including the demand for public ownership of public utilities, the need for a scientific land policy, and the importance of personal freedom and economic equality.]
Against such a system the Socialist-Labor party once more enters its protest. Once more it reiterates its fundamental declaration that private property in the natural sources of production and in the instruments of labor is the obvious source of all economic servitude and political dependence. The time is fast coming when, in the natural course of social evolution, this system, through the destructive action of its failures and crises on the one hand, and the constructive tendencies of its trusts and other capitalistic combinations on the other hand, shall have worked out its own downfall. We therefore call upon the wage workers of the United States, and upon all other honest citizens, to organize under the banner of the Socialist-Labor party into a class-conscious body, aware of its rights and determined to conquer them by taking possession of the public powers; so that, held together by an indomitable spirit of solidarity under the most trying conditions of the present class struggle, we may put a summary end to that barbarous struggle by the abolition of classes, the restoration of the land and of all the means of production, transportation, and distribution to the people as a collective ownership; the establishment of cooperative commonwealth for the present state of planless production, industrial war, and social disorder; a commonwealth in which every worker shall have the free exercise and full benefit of his faculties, multiplied by all the modern factors of civilization.

The Republican National Convention met in Philadelphia, Pa., on June 19. Theodore Roosevelt, Governor of New York, was the candidate for Vice-President favored not only by the delegation from his own State, but by all the Western delegates. He published a request that the convention nominate some one else, and the New York delegates, by a unanimous vote, requested the nomination of Governor L. Woodruff. But the sentiment was so strong in favor of Mr. Roosevelt that in the first ballot on June 21 he received every vote except his own, while Mr. McKinley was renominated unanimously. The platform was adopted in the following shape:

The Republican party, which, like all the people of the United States, through their chosen representatives, met in national convention, looking back upon an unsurpassed record of achievement and looking forward into a great field of duty and opportunity, and appealing to the judgment of their countrymen, make these declarations: The expectation in which the American people, turning from the Democratic party, intrusted four years ago to a Republican Chief Magistrate and a Republican Congress has been met and satisfied. When the people then assembled at the polls, after a term of Democratic legislation and administration, business was dead, industry paralyzed and the national credit dangerously impaired. The country's capital was hidden away, and its manufactures and resources were disemployed. The Democrats had no other plan with which to improve the ruinous conditions which they had themselves produced than to coin silver at the ratio of 16 to 1. The Republican party, denouncing this plan as sure to produce conditions even worse than those from which relief was so long sought, has, by means of two legislative measures—a protective tariff and a law making gold the standard of value—improved the conditions of all our money and the stability of our currency upon a gold basis have been secured. We recognize that interest rates are a potent factor in production and business activity, and for the purpose of further equalizing and of further lowering the rates of interest we favor such monetary legislation as will meet the varying needs of the season and of all sections to be promptly met, in order that trade may be evenly sustained, labor steadily employed, and commerce enlarged. The volume of money in circulation was never so great per capita as it is to-day. We declare our steadfast opposition to the free and unlimited coinage of silver, and to a measure to that end could be considered which was without the support of the leading commer-
cial countries of the world. However firmly Re-
publican legislation may seem to have secured
the country against the peril of base and dis-
credited currency, the election of a Democratic
President could not fail to impair the country's
credit and to bring once more into question the
independence of our government. A frequent refer-
ence upon the gold standard the parity of their money
circulation. The Democratic party must be con-
vinced that the American people will never toler-
ate the Chicago platform.

"We recognize the necessity and propriety of
the honest co-operation of capital to meet na-
boreal conditions, and especially to extend our
recently increasing foreign trade, but we condemn
collusion and combinations intended to re-
strict business, to create monopolies, to limit pro-
duction, or to control prices, and favor such legis-
lation as will effectively restrain and prevent all
such abuses, protect and promote competition,
and secure the rights of producers, laborers, and
all who are engaged in industry and commerce.

"We renew our faith in the policy of protection
to American labor. In that policy our industries
have been established, diversified, and maintained.
By protecting the home market competition has
been stimulated and production cheapened. Op-
portunities for productive industry, and wages
have been secured and wages in every department of
labor maintained at high rates, higher now
than ever before, and always distinguishing our
working people in their better conditions of life
from those of any competing country. Enjoy-
ing the blessings of the American common school,
secure conditions of self-government, and pro-
tected in the occupancy of their own markets,
their constantly increasing knowledge and skill
have enabled them finally to enter the markets of
the world.

"We favor the associated policy of reciprocity
so-directed as to open our markets on favorable
terms for what we do not ourselves produce, in
return for free foreign markets.

"In the further interest of American workmen
we favor a more effective restriction of the im-
migration of cheap labor from foreign lands, the
extension of opportunities of education for work-
ing people, the raising of the age limit for child
labor, the protection of wages against any
contract convict labor, and an effective system of
labor insurance. Our present dependence upon
foreign shipping for nine tenths of our foreign car-
rying is a great loss to the industry of this coun-
try. It is also a serious danger to our trade, for
its sudden withdrawal in the event of European
war would seriously cripple our expanding for-
eign commerce. The national defense and naval
efficiency of this country, moreover, supply a con-
pelling reason for legislation which will enable us
to recover our former place among the trade-
transporting fleets of the world. The nation owes a
debt of profound gratitude to the soldiers and
sailors who have fought its battles and it is the
Government's duty to provide for the survivors
and for the widows and orphans of those who
have fallen in the country's wars. The pension
laws, founded in this just sentiment, should be
liberal, and should be liberally administered, and
preference given wherever practicable with respect to
employment in the public service to soldiers and sailors
and to their widows and orphans. We commend the policy of the Repub-
liean party in maintaining the efficiency of the
civil service. The administration has acted
wisely in its effort to secure public service in
Cuba, Porto Rico, Hawaii, and the Philippine
Islands only those whose fitness has been deter-
mined by training and experience. We believe
that employment in the public service in these
territories should be confined as far as practicable
to their inhabitants.

"It was the plain purpose of the fifteenth
amendment to the Constitution to prevent dis-
fractionalization of the electorate because of race or color in regulat-
ing the elective franchise. Devices of State
governments, whether by statutory or constitutional
enactment, to avoid the purpose of this amend-
ment are revolutionary and should be condemned.

Public movements looking to a permanent in-
ternational system of national rights in the highways of the country meet with our cordial approval, and we
recommend this subject to the earnest considera-
tion of the people and of the Legislatures of the
several States. We favor the extension of the
rural free-delivery service wherever its extension
may be justified. In further pursuance of the
necessary for the increasing surplus of our farm
products. Every effort should be made to open
and obtain new markets, especially in the Orient,
and the administration is warmly to be com-
mented for its successful effort to commit all
trading and colonizing nations to the policy of
the open door in China. In the interest of our
country we are strongly recommended that Congress
create a Department of Commerce and Industries
in the charge of a secretary with a seat in the
Cabinet. The United States consular system
should be reorganized under the supervision of
this new department, upon such a basis of ap-
pointment and tenure as will render it still more
serviceable to the nation's increasing trade. The
American Government must protect the person
and property of every citizen wherever they are
wrongfully violated or placed in peril.

"We congratulate the women of America upon
their splendid record of public service in the vol-
unteer aid associations, and as nurses in camp
and hospital during the recent campaigns of our
armies. We commend the Government and greatly
appreciate their faithful co-operation in all works
of education and industry.

"President McKinley has conducted the foreign
affairs of the United States with distinguished
credit to the American people. In releasing us
from the vexatious conditions of a European alli-
ce for so many years, the Government has
especially been commended. By securing to our
undivided control the most important island of
the Samoan group and the best harbor in the
southern Pacific, every American interest has been
safeguarded. We approve the annexation of the
Hawaiian Islands to the United States. We com-
mend the part taken by our Government in the Peace Conference at The Hague. We assert our steadfast adherence to the policy announced in the Monroe Doctrine. The provisions of The Hague convention were strongly urged when President McKinley tendered his friendly offices in the interest of peace between Great Britain and the South African republics. While the American Government must continue the policy prescribed by Washington, affirmed by every succeeding President, and inaugurated by The Hague Treaty, of nonintervention in European controversies, the American people earnestly hope that a way may soon be found, honorable alike to both contending parties, to terminate the strife between them. In accepting by the Treaty of Paris the just responsibility of our victories in the Spanish War the Senate won the undoubted approval of the American people. No other course was possible than to destroy Spain's sovereignty throughout the West Indies and in the Philippine Islands. That course created our responsibility before the world, and with the unorganized population whom our intervention had freed from Spain, to provide for the maintenance of law and order, and for the development of government and for the performance of international obligations. Our authority could not be less than our responsibility, and wherever sovereign rights were extended it became the high duty of the Government to maintain its authority, to put down armed insurrection, and to confer the blessings of liberty upon all rescued peoples. The largest measures of self-government consistent with their welfare and our duties shall be secured to them by law. To Cuba independence and self-government were assured in the same voice by which war was declared, and to the letter this pledge will be performed. The founding for the first time of our Constitution, as its final declaration of its principles and policies, confidently invokes the considerate and approving judgment of the American people.

The Prohibition party, in national convention at Chicago, Ill., on June 28, nominated John G. Woolley, of Illinois, for President on the first ballot, and Silas C. Swallow, of Pennsylvania, Hale Johnson, of Illinois, withdrawing his name. Henry B. Metcalf, of Rhode Island, received the nomination for Vice-President over Thomas R. Carskadden, of West Virginia, and E. L. Eaton, of Iowa. The platform, adopted on June 27, contained the following:

"We propose as a first step in the financial problems of the nation to save more than a billion dollars every year, now annually expended to support the liquor traffic and to demoralize our people. When that is accomplished, conditions will have so improved that with a clearer atmosphere the country can itself to the question of to the kind and quantity of currency needed.

"We reaffirm as true indisputably the declaration of William Winwood when Secretary of the Treasury in the Cabinet of President Arthur, that, considered socially, financially, politically, or morally, the licensed liquor traffic is or ought to be the first and foremost issue in America's politics, and that the destruction of this iniquity stands next on the calendar of the world's progress. We hold that the existence of our party presents this issue squarely to the American people, and lays upon them the responsibility of choice between liquor parties, dominated by distillers and brewers, with their policy of saloon perpetuation, breeding waste, wickedness, woe, pauperism, taxation, corruption, and crime, and our one party of patriotic and moral principle, with a policy which defends it from domination by corrupt bosses and which insures it forever against the blighting control of saloon politics. We face with sorrow, shame, and fear the awful fact that the liquor traffic has a grip on our Government, municipal, State, and national, through the revenue system and saloon sovereignty, which no other party dares to dispute; a grip which dominates the party now in power, from caucus to Congress, from police to President, from the rum shop to the White House; a grip which compels the Chief Executive to consent that law shall be nullified in behalf of the brewer, that the canteen shall curse our army and spread intemperance across the seas, and that our flag shall wave as the symbol of partnership at home and abroad between this Government and the men who defy and defile it for their unholy gain.

"We charge upon President McKinley, who was elected to his high office by appeals to Christian sentiment and patriotism almost unprecedented and by a combination of moral influences never before seen in this country, that, by his incompetency and his abuse of his great position, and by his ignoring his duty as President, he has done more to encourage the liquor traffic, to demoralize the temperance habits of young men, and to bring Christian practices and requirements into discredit than any other President this republic has ever had. We further charge upon President McKinley responsibility for the army canteen, with all its dire brood of disease, immorality, sin, and death, in this country, in Cuba, in Porto Rico, and the Philippines; and we insist that by his attitude concerning the canteen and his apparent contempt for the vast number of petitions and petitioners protesting against it, he has shown his corruption and insulted the moral sentiment of this country in such a manner and to such a degree as calls for its righteous uprising and his indignant and effective rebuke. We challenge denial of the fact that our Chief Executive, as commander in chief of the military forces of the United States, at any time prior to or since March 2, 1898, has ever agreed to permit the issue of liquor at any army saloon, called a canteen, by executive order; and as President Hayes in effect did before him, and should have closed them, for the same reason that actuated President Hayes.

"We deplore the fact that an administration of this republic, claiming the right and power to carry our laws everywhere: that by its acquiescence and annex new territory, should admit its lack of power to prohibit the American saloon on subjugated soil, or should openly confess itself subject to liquor sovereignty under that flag. We are humiliated, exasperated, and grieved by the evidence, painfully abundant, that this administration's policy of expansion is bearing its first fruits of destruction, insanity, and crime under the hothouse sun of the tropics: and that when the president of the first Philippine Commission said, 'It was unfortunate that we introduced and established the saloon there, to corrupt the natives and to exhibit the vices of our race;' we charge the inhumanity and want of foresight of the administration of William McKinley and upon the party which elected and would perpetuate the same. We declare that only the policy which the Government of the United States can of right uphold as to the liquor traffic under the national Constitution upon any territory under the military or civil control of that Government is the policy of prohibition: that to establish justice, insuring of peace, and providing for the
common defense, promote the general welfare, and
insure the blessings of liberty to ourselves and our
posterity,' as the Constitution provides, the liquor
traffic must neither be sanctioned nor tolerated,
and that the revenue policy, which makes our
Government a partner with distillers and brewers
and barkeeps, is a disregard of our fundamental
laws, an outrage upon humanity, and a crime against
God. We condemn the present administration at
Washington because it has repealed the prohibitory
law in Alaska, and has given over the partly
civilized tribes there to be the prey of the
American grogshop, and because it has entered
upon a revenue policy by which it is incorporating
the same in the revenue act of Con-
gress in the code of laws for the government of the
Hawaiian Islands. We call general attention to the
fearful fact that exportation of liquors from the
United States to the Philippine Islands increased
from $357 in 1898 to $467,198 in the first ten
months of the fiscal year ended June 30, 1899, and
that our exportations of liquor to Cuba
never reached $30,000 a year previous to American
occupation of that island, our exports of such
liquors to Cuba during the fiscal year of 1899
reached the sum of $629,655.

The Democratic party assembled on July 4 in
national convention at Kansas City, Mo., and on
July 10, nominated by acclamation, William D. Bryan,
by Nebraska, for President, by acclamation. Adlai
E. Stevenson, of Illinois, was nominated for Vice-
President by 559, votes to 200 for David B. Hill,
of New York, 894 for C. A. Towne, of Minnesota,
and 87, all but 2 of them, divided between A. W.
Patrick, of Ohio, Julian S. Carr, of North Caro-
olina, and William Smillie, of Michigan, who
received the ballots of their State delegations.
The platform adopted on the same day was as
follows:

"We, the representatives of the Democratic
party of the United States, assembled in conven-
tion on the anniversary of the adoption of the
Declaration of Independence, do reaffirm our faith
in that immortal proclamation of the inalienable
rights of man, and our allegiance to the Constitu-
tion framed in harmony therewith by the fathers of the republic. We hold with the United
States Supreme Court that the Declaration of In-
dependence is the spirit of our Government, and
that its provisions is the spirit of our faith.

"We declare again that all governments insti-
tuted among men derive their just powers from
the consent of the governed; that any government
not based upon the consent of the governed is a
tyranny; and that to impose upon any people a
government of force is to substitute the methods
of imperialism for those of a republic. We hold
that the Constitution follows the flag, and de-
nounce the doctrine that an Executive or Con-
gress, deriving their existence and their powers
from the Constitution, can exercise lawful au-
thority beyond it, for in violation of it we assert
that no nation can long endure half republic and
half empire, and we warn the American people
that imperialism abroad will lead quickly and
invariably to despotism at home. Believing in
these fundamental principles, we denounce the
Porto Rican law, enacted by a Republican Con-
gress against the protest and opposition of the
American minority, as a bold and open viola-
tion of the American law and a flagrant breach of the national good faith. It is incumbent
upon the people of Porto Rico a government with-
out their consent and taxation without represen-
tation. It dishonors the American people by re-
upholding a solemn pledge made in their behalf by
the commanding general of our army, which the
Porto Ricans welcomed to a peaceful and un-
resisted occupation of their land. It doomed to
poverty and distress a people whose helplessness
appeals with peculiar force to our justice and
magnanimity. In this, the first act of its impe-
rartialistic programme, the Republican party seeks to
encroach upon the rights of a colored people
inconsistent with republican institutions and
denounced by the Supreme Court in numerous
decisions. We demand the prompt and honest ful-
fillment of our pledge to the Cuban people and
the world that the United States has no disposition
nor intention to exercise sovereignty, jurisdiction,
control, or government of these possessions by
conciliation. The war ended nearly two years
ago, profound peace reigns over all the island,
and still the administration keeps the govern-
ment of the island from its people, while Repub-
lican carpetbag officials plunder its revenue and
exploit the colonial theory to the disgrace of the
American people. We condemn and denounce the
Philippine policy of the present administration.

It has involved the republic in unnecessary war,
sacrificed the lives of many of our noblest sons,
and placed the United States, previously known
and applauded throughout the world as the
champion of freedom, in the false and un-Ameri-
can position of crushing injustice and coerced
enforcement of our former ties to achieve liberty
and self-government. The Filipinos can not be ci-
tizens without endangering our civilization; they
are not subjects without imperiling our form
of government, and as we are not willing to sur-
render our civilization or to convert the republic
into an empire, we favor an immediate declaration
of the independence of the republic. We demand
first a stable form of government: second, inde-
pendence; and third, protection from outside in-
terference, such as has been given for nearly a
century to the republics of Central and South
America. The greedy commercialism which dic-
tated the Philippine policy of the Republican ad-
ministration attempts to justify it with the plea
that it will pay, but even this sordid and un-
worthy plea fails when brought to the test of
facts. The war of criminal aggression against the
Filipinos, entailing an annual expense of many
millions, has already cost more than any possible
profit that could accrue from the entire Philip-
inian trade for years to come. Furthermore, when
trade is extended at the expense of the mer-
pire is always too high. We are not opposed to
territorial expansion when it takes in desirable
territory which can be erected into States in the
Union, and whose people are willing and fit to be
true American citizens. We favor expansion by
every peaceful and legitimate means. But we are
unalterably opposed to the seizing or purchasing
of distant islands, to be governed outside the Con-
stitution, and whose people can never become citi-
zens. We are in favor of extending the republic's
influence among the nations, but believe that in-
fluence should be extended not by force and vio-
ence, but through the persuasive power of a high
example. We warn the impatient questions now pending before the American people
is in no wise diminished, and the Democratic party
must not panic by its position on them,
but the burning issue of imperialism growing out of the
Spanish War involves the very existence of the
republic and the destruction of our free in-
citizenship in the State. We demand, therefore, disregard of the campaign. The declaration in the Repub-
lian platform adopted at the Philadelphia con-
vention, held in June, 1900, that the Republican party 'steadfastly adheres to the policy an-
nounced in the Monroe doctrine,' is manifestly
insincere and deceptive. This profession is contradicted by the avowed policy of that party in opposition to the spirit of the Monroe doctrine to acquire and hold sovereignty over large areas of territory and also by the attitude of the present Administration toward the Orient.

We insist on the strict maintenance of the Monroe doctrine, and in all its integrity, both in letter and in spirit, as necessary to prevent the extension of European authority on this continent and as essential to our supremacy in the business of the world. This doctrine declares that no American people shall ever be held by force in subjection to European authority.

"We oppose militarism. It means conquest abroad and intimidation and oppression at home. It means the strong arm which has ever been fatal to free institutions. It is what millions of our citizenry have fought the world over to make sure that the universe is a place for the peace-loving people, a large standing army, an unnecessary burden of taxation, and would be a constant menace to their liberties. A small standing army and a well-disciplined State militia are amply sufficient in time of peace. This republic has no place for a vast military establishment, a sure forerunner of compulsory military service and conscription. Where the nation is in danger the volunteer soldier is his country's best defender. The National Guard of the United States should ever be cherished in the patriotic hearts of a free people.

Such organizations are ever an element of strength and safety. For the first time in our history and coeval with the Philippine conquest has there been a wholesale departure from our time-honored and approved system of volunteer organization. We denounce it as un-American, undemocratic and republican, and as a subversion of the ancient and fixed principles of a free people.

"Private monopolies are indefensible and intolerable. They destroy competition, control the price of raw material and of the finished product, thus robbing both producer and consumer. They lessen the employment of labor and arbitrarily fix the terms and conditions thereof; and deprive individual energy and small capital of their opportunity for betterment. They are the most efficient means of robbing the workingman and the industry to the benefit of the few at the expense of the many, and, unless their insatiable greed is checked, all wealth will be aggregated in a few hands and the republic destroyed. The dishonest paltering with the trust evil by the Republican party in its State and national platforms is conclusive proof of the truth of the charge that trusts are the legitimate product of Republican policies, that they are fostered by Republican laws, and that they are protected by the Republican administration in return for campaign subscriptions and political support. We pledge the Democratic party to an unceasing warfare in nation, State, and city against the trusts and trusts in every form. All laws against trusts must be enforced and more stringent ones must be enacted providing for publicity as to the affairs of corporations engaged in interstate commerce and requiring all corporations to show, before doing business outside of the State of their origin, that they have no water in their stock, and that they have not attempted and are not attempting to monopolize any branch of business or the production of any articles of merchandise; and the whole constitutional power of Congress over interstate commerce, the mails and all modes of interstate communication shall be exercised by the enactment of comprehensive laws upon the subject of trusts. Tariff laws should be amended by putting the products of trusts upon the free list, to prevent monopoly under the plea of protection. The failure of the present Republican administration, with an absolute control over all the branches of the National Government, to enact any legislation designed to prevent or even check the growth of the great combinations, or to enforce the antitrust laws already on the statute books, proves the insincerity of the high-sounding phrases of the Republican platform. Corporations should be protected in all their rights and their legitimate interests should be respected, but no attempt by corporations to interfere with the public affairs of the people or to control the sovereignty which creates them should be forbidden under such penalties as will make such attempts impossible. We condemn the Dingley tariff law as a trust-breeding measure skilfully devised to give to the few favors which do not bear upon them, and to place upon the many burdens which they should not bear. We favor such an enlargement of the scope of the interstate commerce law as will enable the commission to protect individuals and communities from discrimination and the public from unjust and unfair transportation rates.

"We renounce and repudiate the principles of the national Democratic platform adopted at Chicago in 1896, and we reiterate the demand of that platform for an American financial system made by the American people for themselves, which shall restore and maintain a bimetallic price level, and as part of such system the immediate restoration of the free and unlimited coinage of silver and gold at the present legal ratio without waiting for the aid or consent of any other nation. We denounce the currency bill enacted at the last session of Congress as a step forward in the Republican policy which aims to discredit the sovereign right of the National Government to issue all money, whether coin or paper, and to bestow upon the national banks the power to issue and control the volume of paper money for their own benefit. A permanent national bank currency, secured by Government bonds, must have a permanent debt to rest upon, and, if the bank currency is to increase with population and business, the debt must also increase. The Republican currency scheme is a distinction between the wealthy and the poor, and the sugar companies and the taxpayers a perpetual and growing debt for the benefit of the banks. We are opposed to this private corporation paper circulated as money, but without legal tender qualities, and demand the retirement of national bank notes as fast as Government paper or silver certificates can be substituted for them. We do not favor an amendment to the Federal Constitution providing for the election of United States Senators by direct vote of the people, and we favor direct legislation wherever practicable. We are opposed to government by injunction; we denounce the blacklist, and favor arbitration as a means of settling disputes between corporations and their employees.

"In the interest of American labor and the upbuilding of the workingman as the corner stone of the prosperity of our country, we recommend that Congress create a Department of Labor, in charge of a secretary, with a seat in the Cabinet, believing that the elevation of the American laborer will bring with it increased production and increased prosperity to our country at home and to our commerce abroad. We are proud of the courage and fidelity of the American soldiers and sailors in all our wars; we favor liberal pensions to them and their dependents; and we reiterate the position taken in the Chicago platform in 1896, that the fad of enlistment and service shall be deemed conclusive evidence against disease and disability before enlistment.
"We favor the immediate construction, ownership, and control of the Nicaraguan Canal by the United States, and we denounce the insincerity of the plank in the Republican national platform for an isthmian canal, in the face of the acknowledged and earnest protest against the Republican departure which has involved us in so-called world politics, including the diplomacy of Europe and the intrigue and land-grabbing in Asia, and we especially condemn the ill-conceived Republican alliance with England, which must discriminate against other national interests, which has based and recently stilled the nation's voice while liberty is being strangled in Africa. Believing in the principles of self-government and rejecting, as did our forefathers, the claims of monarchical domination, we view with indignation the purpose of England to overwhelm with force the South African republics. Speaking, as believers in the independence of all nations, except its Republican officeholders, and for all free men everywhere, we extend our sympathy to the heroicburghers in their unequal struggle to maintain their liberty and independence.

"We denounce the lavish appropriations of recent Republican congresses, which have kept taxes high, and have watered the perdition of the oppressive war levies. We deplore the accumulation of a surplus to be squandered in such barefaced frauds upon the taxpayers as the shipping subsidy bill, which under the false pretense of fostering American shipbuilding, would put uncarned millions into the pockets of favorite contributors to the Republican campaign fund. We favor the reduction and speedy repeal of the war taxes, and a return to the time-honored Democratic policy of strict economy in governmental expenditures.

"Believing that our most cherished institutions are in great peril, that the very existence of our constitutional republic is at stake, and that the domestic party is in danger of becoming an oligarchy of free government which have made the United States great, prosperous, and honored, we earnestly ask for the foregoing declaration of principles the hearty support of the liberty-loving American people, regardless of previous party affiliations.

The Silver Republican National Convention, held at Kansas City, Mo., on July 6, the day following the Democratic convention, accepted the nomination of William J. Bryan for President, and referred the nomination of a candidate for Vice-President to its national committee, which endorsed the nomination of Adlai E. Stevenson. The following platform was adopted:

"We, the Silver Republican party, in national convention assembled, declare these as our principles and invite the co-operation of all who agree therewith: We recognize that the principles set forth in the Declaration of Independence are broadened and perpetuated by their application in governments among men. We believe the patriotic words of Washington's farewell to be the words of soberness and wisdom, inspired by the spirit of right and truth. We treasure the words of Jefferson as priceless gems of American statesmanship. We hold inviolate a devotion to our republican patriotism and philanthropy which was the great interpreter of American history and the great apostle of human rights and of industrial freedom, and we declare, as was declared by the convention that nominated the great emancipator, that the maintenance of the principles promulgated in the Declaration of Independence and embodied in the Federal Constitution, that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed, is essential to the enjoyment of life, liberty, and the pursuit of happiness.

"We declare our adherence to the principle of bimetallism as the right basis of a monetary system under our national Constitution, a principle that found place repeatedly in Republican platforms from the demonetization of silver in 1857 to the St. Louis Republican convention in 1896, which has been permanently embodied in the platform of Congress and a Republican President, at the dictate of the trust and money power, have passed and approved a currency bill which in itself is a repudiation of the doctrine of bimetallism advocated theretofore by the President and every great leader of his party. This currency law destroys free coinage of the dollar, provides for the Federal government obligations, and· substitutes the redemption of all forms of paper money in gold alone; retires the time-honored and patriotic greenbacks, constituting one sixth of the money in circulation, and surrenders to banking corporations a sovereign function of issuing all paper money, thus enabling these corporations to control prices, increase the volume of money, and diminishing the volume of money in circulation, thus giving the banks power to create panics and bring disaster upon business enterprises. The provisions of this currency law making the bonded debt of the republic payable in gold alone change the contract between the Government and the bondholders to the advantage of the latter, and is in direct opposition to the declaration of the Matthews resolution passed by Congress in 1878, for which resolution the present Republican President, then a member of Congress, voted, as did also all leading Republicans, both in the House and Senate. We declare it to be our intention to defend the fundamental provisions of that law, which not only repudiates the ancient and time-honored principles of the American people before the Constitution was adopted, but is in violation of the principles of the Constitution itself, and we shall not cease our efforts until there has been established in its place a monetary system national upon the free and unlimited coinage of silver and gold into money at the present legal ratio of 16 to 1 by the independent action of the United States, under which system all paper money shall be issued by the Government and all such money coined or issued shall be a full legal tender in payment of all debts, public and private, without exception. We are in favor of a graduated income tax upon incomes, and if necessary to accomplish this
we favor an amendment to the Constitution. We believe that United States Senators ought to be elected by direct vote of the people, and we favor such amendment of the Constitution and such legislation as may be necessary to that end. We favor the maintenance and the extension wherever practicable of the merit system in the public service, appointments to be made according to fitness, competitively ascertained, and public servants to be retained in office only so long as shall be compatible with the efficiency of the service. Combinations, trusts, and monopolies contrived and arranged for the purpose of controlling the prices and quantity of articles supplied to the public, are unlawful, oppressive, and destructive of the public life. We believe in the free markets of the world, and the free and unexpedient sacrifice made and patriotic services rendered we are in favor of liberal pensions to deserving soldiers, their widows, orphans, and other dependents. We believe that enlistment and service should be accepted as conclusive proof that the soldier was free from disease and disability at the time of his enlistment. We condemn the taxation by the administration of the pension laws. We tender to the patriotic people of the South African republics our sympathy, and express our admiration for them in their noble struggle to preserve their political freedom and maintain their national existence. We declare the destruction of these republics and the subjugation of their people to be a crime against civilization. We believe this sympathy should have been voiced by the American Congress, as was done in the case of the French, Greeks, Hungarians, Poles, Armenians, and the Cubans, and as the traditions of this country would have dictated. We declare the Porto Rican tariff to be the same thing as their people to be a crime against civilization. We believe in the republican form of government; and we are opposed to monarchy, and to the whole theory of imperialistic control. We believe in self-government, a government by the consent of the governed; and are unalterably opposed to a government based upon force. It is incontrovertible that the inhabitants of the Philippine archipelago can not be made citizens of the United States without endangering our civilization. We are therefore in favor of applying to the Philippines the principle we are solemnly and publicly pledged to observe in the case of Cuba. We demand that our nation's promise to Cuba shall be fulfilled in every particular. There being no longer any necessity for collecting war taxes, we demand relief from the taxes levied to carry on the war with Spain. We favor the immediate admission into the Union of States of the Territories of Arizona, New Mexico, Oklahoma. We believe the National Government should lend encouragement and assistance toward the reclamation of the arid lands of the United States; and to that end, we are in favor of a comprehensive survey thereof, and an immediate ascertainment of the water supply available for reclamation. We believe it is the duty of the General Government to provide for the construction of storage reservoirs and irrigation works so that the water supply of the arid region may be utilized to the greatest possible extent in the interest of the people, while preserving all rights of the States. Transportation is a public utility, and should be made the subject of laws and regulations made by the States or by the Congress, and in accordance with the wishes of the people.}

UNITED STATES OF AMERICA.

719
"We urge the voters not to be deceived by the plea that the money question has been finally settled. The specific reiteration of the demand for the free coinage of silver at the rate of 16 to 1 by the Kansas City convention and the history known of all men in connection therewith emphasize the danger of this demand. We indorse the action of Congress in passing a bill embodying the gold standard as a step in the right direction. We feel it would be dangerous to elevate to executive power any one hostile to the maintenance and enforcement of this law."

A convention of the Anti-Imperialist League met in Indianapolis, Ind., approved the nomination of William J. Bryan for the presidency, and on Aug. 16 adopted the following platform:

"This Liberty Congress of Anti-Imperialists recognizes a great system of wrong which holds the republic, upon whose future depends in such large measure the hope of freedom throughout the world. For the first time in our country's history the President has undertaken to subjugate a foreign people and to rule them by despotism.

He has thrown the protection of the flag over the Philippines and the Hawaiian Islands. Mr. Bryan has not yet arrogated himself the power to impose upon the inhabitants of the Philippines government without their consent and taxation without representation. He is waging war upon them for asserting the very principles for the maintenance of which our forefathers pledged their lives, their fortunes, and their sacred honor. He claims for himself and Congress authority to govern the territories of the United States without constitutional restraint.

"We believe in the Declaration of Independence. Its truths, not less self-evident to-day than when first announced by our fathers, are of universal application, and can not be abdicated while government by the people endures. We believe in the Constitution of the United States. It gives the President and Congress certain limited powers, and secures to every man within the jurisdiction of our Government certain essential rights. We deny that either the President or Congress can govern any person anywhere outside the Constitution. We deny that the American people endorse the policy of Mr. McKinley which proposes to govern millions of men without their consent, which in Porto Rico establishes taxation without representation and government by the arbitrary will of a Legislature unfettered by constitutional restraint. We deny that in the Philippines prosecutes a war of conquest, and demands unconditional surrender from a people who are of right free and independent. The struggle of men for freedom has ever been a struggle for constitutional liberty. There is no liberty if the citizen has no right which the Legislature may not invade, if he may be taxed by a tax which he has not represented, or if he is not protected by fundamental laws against the arbitrary action of executive power.

The policy of the President offers the inhabitants of Porto Rico, Hawaii, and the Philippines no hope of independence, no prospect of American citizenship, no constitutional protection, no representation in Congress which taxes them. This is the government of men by arbitrary men without their consent; this is imperialism. There is no room under the free flag of America for subjects. The President and Congress, who derive all their powers from the Constitution, can govern no men without regard to its limitations. We believe the great American ideal of liberty is a free press, and we demand that the censorship in the Philippines, which keeps from the American people the knowledge of what is done in their name, be abolished. We are entitled to know the truth, and we insist that the powers which the President holds in trust for us shall not be used to suppress it. Because we do not, as a party, endorse the election of Mr. McKinley. The supreme purpose of the people in this momentous campaign should be to stamp with their final disapproval his attempt to grasp imperial power. A self-governing people can have no more imperative duty than to drive from public life a Chief Magistrate who, whether in weakness or of wicked purpose, has used his temporary authority to subvert the character of their Government and to destroy their national ideals. We, therefore, in the belief that it is essential at this crisis for the American people again to declare their faith in the universal application of the Declaration of Independence and to refuse to be governed by arbitrary men, will not have or exercise any powers whatever other than those conferred by the Constitution, earnestly make the following recommendations to our countrymen:

"First, that, without regard to their views on minor questions of domestic policy, they withhold their votes from those candidates for Congress in their respective districts who will oppose the policy of imperialism. Third, while we welcome any other method of opposing the re-election of Mr. McKinley, we advise direct support of Mr. Bryan as the most effective means of crushing imperialism."

"We are convinced of Mr. Bryan's sincerity and of his earnest purpose to secure to the Filipinos their independence. His position and the declarations contained in the platform of his party on the vital issue of the campaign meet our unqualified approval. We recommend that the committees of the American Anti-Imperialist League and its allied leagues continue and extend their organizations, preserving the independence of the movement, and that they take the most active possible part in the pending political campaign. Until now the policy which has turned the Filipinos from warm friends to bitter enemies, which has militarized the Philippines and threatened their country, has been the policy of the President. After the next election it becomes the policy of every man who votes to re-elect him, and who thus becomes with him responsible for every drop of blood thereafter shed. Resolved, that in declaring that the principles of the Declaration of Independence apply to all men, this Congress intimates that it include the negro race in America as well as the Filipinos. We depurate all efforts, whether in the South or in the North, to deprive the negro of his rights as a citizen under the Declaration of Independence and the Constitution of the United States."

About one hundred volunteer delegates from several States met in Carnegie Hall, New York city, Sept. 5, and nominated Senator Donelson Caffery, of Louisiana, for President, and Archibald Murray Howe, of Cambridge, Mass., for Vice-President. The Committee on Platform, composed of Prof. Francis P. Nash, of Hebrew College; Louis D. LaRooy, of Oxford, N. C.; W. E. Bourne, of Yale; W. F. Lloyd, of New York city; and Edward Waldo Emerson, of Concord, Mass., presented the following platform, which was adopted:

"We, citizens of the United States of America, assembled for the purpose of defending the wise and conservative principles which underlie our Government, thus declare our aims and purposes: We find our country threatened with alternative

UNITED STATES OF AMERICA.

arbitration, to which the United States would not agree, as it would imply an admission that its contention that the coast line mentioned in the treaty follows the sinuosities of the coast admitted to doubt or possible result in a compromise line. Before a modus vivendi was arranged Canadian mounted police were in Dyce and Skagway, and a Canadian Government office was established in one of those places. The United States sent troops to both towns, and both governments attempted to exercise jurisdiction. Disputes as to boundaries and the legal tenure of mining lands were subject to doubt. The provisional boundary leaves these places and the head of navigation within the jurisdiction of the United States. The line leaves in American control also the Indian village of Kukwan, on Chilkoot river, although it is about 10 miles within the boundary claimed by the United States. The boundary commissioners placed monuments at the points along the line where access can be had to the interior—at White pass, Chilkoot pass, on the Klehini river, and on Porcupine creek. The boundary of Alaska where it follows the meridian of 141° west of Greenwich has been surveyed independently by United States and Canadian parties by scientific observations, and the results at several points show discrepancies in no place exceeding 700 feet. A convention was concluded with Great Britain in 1898 for a joint survey on which the Senate failed to take action, and in 1900 negotiations were opened by the Department of State for a new convention to provide for determination of the meridian by telegraphic observations. The Interocenic Canal.—Secretary Hay and Lord Pauncefote on Feb. 5. 1900, signed at Wash-ington a convention to take the place of the articles concerning the projected isthmian canal that are contained in the Clayton-Bulwer treaty, rati- fied in 1850. In that treaty the stipulation that the United States or Great Britain shall obtain or maintain for itself any exclusive control over a ship canal. In the new convention this provision was abrogated, and Great Britain conceded to the United States the right to build and maintain such a canal, and the United States undertook to maintain the neutrality of the prop- ertied interests, and to open to it the ships of all nations in time of peace and war. The treaty was not ratified by the Senate in its original form, but with amendments, and negotiations were be- gun in December to secure its acceptance by Great Britain in its amended form. The text as amended is as follows: "ARTICLE I. It is agreed that the canal may be constructed under the auspices of the Govern- ment of the United States, either directly at its own cost or by gift or loan of money to individ- uals or corporations or through subscriptions to or purchase of stock or shares, and that, subject to the provisions of the present convention, the said Government shall have all rights incident to such construction as well as the exclusive right of providing for the regulation and management of the canal. "ARTICLE II. The high contracting parties, desir- ing to preserve and maintain the 'great principle' of neutralization established in Article VIII of the Clayton-Bulwer treaty and hereby superseded, adopt as the basis of such neutralization the following rules substan- tially as embodied in the convention between Great Britain and certain other powers signed at Constantnople Oct. 28, 1888, for the free naviga- tion of the Suez cunaiti, which is to say: "First, the canal shall be free and open in time of war as in time of peace to vessels of commerce and of war of all nations on terms of equal equality, so that there shall be no discrimi- nation against any nation or its citizens or sub- jects in respect of the conditions or charges of traffic or otherwise. "Second, the canal shall never be blockaded, nor shall any right of war be exercised nor any act of hostility be committed within it. "Third, vessels of war of a belligerent shall not revictual nor take any stores in the canal ex- cept so far as may be absolutely necessary, and the transit of such vessels through the canal shall be effected with the least possible delay in accord- ance with the regulations in force and with only such interdiction as may result from the necessi- ties of the service. Prizes shall be in all respects subject to the same rules as vessels of war of the belligerent." "Fourth, no belligerent shall embark or dis- embark troops, munitions of war, or warlike ma- terials in the canal except in case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dis- patch. "Fifth, the provisions of this article shall apply to waters adjacent to the canal, within three marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than twenty-four hours at any one time ex- cept in case of distress, and in such case shall depart as soon as possible; but a vessel of war of one belligerent shall not depart within twenty- four hours of the capture of a vessel of war of the other belligerent. "It is agreed, however, that none of the im- mediately foregoing conditions and stipulations in sections numbered 1, 2, 3, 4, and 5 of this article shall apply to measures which the United States may find it necessary to take for securing by its own forces the defense of the United States and the maintenance of public order. "Sixth, the plant, establishments, buildings, and all works necessary to the construction, main- tenance, and operation of the canal shall be deemed to be part thereof for the purposes of this convention, and in time of war, as in time of peace, shall enjoy complete immunity from attack or capture, or interference, and be provided with the necessary machinery to repair any damage or to impair their usefulness as part of the canal. "Seventh, no fortifications shall be erected commanding the canal or the waters adjacent. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawless- ness and disorder."

The contract of the Maritime Canal Company, which undertook to construct a canal by piercing the Isthmus of Nicaragua, was declared forfeit by the Nicaraguian Government for nonexecution in October, 1899. That Government refused to re- open the question of the forfeiture, and subse- quently declared war. The Company, therefore, for noncompliance of the stipulated advances. Deem- ing itself relieved from all existing engagements, the Nicaraguian Government showed a disposition to deal freely with the canal question either by entering into arrangements with the United States or by taking independent measures to pro- mote the construction of the water way. A pro- posed agreement, conditional on the abrogation of the obligations of the United States toward Great Britain under the Clayton-Bulwer treaty, gives to the United States the absolute right to build and operate and to police the canal. The Supreme Court.—The Supreme Court is com- posed as follows: Chief Justice, Melville W. Fuller, of Illinois, appointed in 1888.
Justices, John M. Harlan, of Kentucky, appointed in 1877; Horace Gray, of Massachusetts, appointed in 1881; David J. Brewer, of Kansas, appointed in 1889; Henry B. Brown, of Michigan, appointed in 1890; George Shiras, Jr., of Pennsylvania, appointed in 1892; Edward L. White, of Louisiana, appointed in 1894; Rufus W. Peckham, of New York, appointed in 1895; and Joseph McKenna, of California, appointed in 1897.

At the close of the October term, 1898, 308 cases were not disposed of. The number of cases docketed at the October term, 1898, was 351, and 173 cases were disposed of during the term. The number actually considered by the court was 328, of which 174 were argued orally and 154 submitted on printed arguments.

Some of the more important cases decided were as follows:

Texas Antitrust Law.—In Waters-Pierce Oil Company vs. Texas, decided March 19, 1900, the court held as follows: It is well settled that a State has the power to impose such conditions as it pleases upon foreign corporations seeking to do business within it. The statute of Texas of March 30, 1890, prohibiting foreign corporations from doing business in the State unless they were doing any business within the State, imposed conditions which was in the power of the State to impose.

Texas vs. Houston and Texas Central Railroad Company.—This was a suit brought by the State of Texas to recover $675,000 from the Houston and Texas Central Railroad Company for loans from the school fund of the State prior to the civil war, which the company claimed to have paid. The payments were made by the company in Treasury warrants issued by the State under authority of acts passed in 1863 and 1864. The State officials declared that the payments were void on account of having been made in warrants issued after the termination of the civil war, and that no State should omit bills of credit; that they were in violation of the provisions of the Texas Constitution, which forbade the issue of warrants to circulate as money, and that they were issued in aid of the rebellion, and therefore illegal. The State courts sustained the State officials in all respects, and the company then applied for a writ of mandamus to compel the court to issue in aid of the rebellion. The Supreme Court decided that the warrants were not issued in violation of the Federal and State Constitutions, and that the payments of the railroad company were valid. Mr. Justice Brown, concurring in the judgment of the court, dissented from that part which held the warrants were not bills of credit and used as money. But it was too late now, he said, for the State to repudiate them. To do so would be a plain violation of public faith.

The Bankruptcy Law.—The case of Bards vs. the Hawarden Bank involved the question of jurisdiction of the United States district court under the bankrupt law. It is in point of time when the provisions of the second clause of section 23 of the bankrupt act of 1898 control and limit the jurisdiction of all courts, including the several district courts of the United States, over suits brought by trustees in bankruptcy to recover or collect debts due from third parties or to set aside transfers of property made by debtors, and held that such trusts, if not fraudulent as against creditors, including payments in money or property to preferred creditors.

The Minnesota Railroad Law.—In the Wisconsin, Minnesota and Pacific Railroad Company vs. Jacob F. Jacobson, the opinion of the State court was affirmed, upholding the law. The case involved the validity of the Minnesota State law requiring intersecting railroad lines crossing each other at grade to make "Ys" connecting the two. The law was attacked upon the ground that it is a violation of the interstate commerce clause of the Constitution. Justices White and McKenna dissented in the opinion. Justice Harlan said the opinion was far reaching in its effect, and amounted to saying that private property might be taken for public use without any compensation whatever.

Governoaship of Kentucky.—Taylor and Marshall vs. Beckham was decided May 21, 1900. This was an action in the Supreme Court, brought under the statutes of Kentucky by J. C. W. Beckham against William S. Taylor and John Marshall for usurpation of the offices of Governor and Lieutenant Governor of Kentucky. The determination of contests of the election of Governor and Lieutenant Governor in that State is committed to the General Assembly. The court dismissed the writ of error and declined to take jurisdiction. The Chief Justice in delivering the opinion quoted from the decision of the court in Luther vs. Bordens as follows: "The high power has been conferred on this court of passing judgment upon the acts of the State sovereignties, and it would be for the violation of the Federal Government and of determining whether they are beyond the limits of power marked out for them respectively by the Constitution of the United States. This tribunal, therefore, should be the last to overstep the boundaries which limit its own jurisdiction. And while it would always be ready to meet any question confided to it by the Constitution, it is equally its duty not to pass beyond its appropriate sphere of action, and to take care not to involve itself in discussions which properly belong to other forums."

Insurance.—New York Life Insurance Company vs. Cravens. The contract for life insurance in this case, made by the New York Life Insurance Company in the State of Missouri with a citizen of that State, is subject to the laws of that State regulating life insurance policies, although the policy declares "that the entire contract contained in the said policy and in this application, taken together, shall be construed and interpreted as a whole, and not separately or severally, and according to the laws of the State of New York, the place of the contract being expressly agreed to be the principal office of the said company in the city of New York." The power of a State over foreign corporations is not less than the power of a State over domestic corporations.

Legacy to the General Assembly.—The case of Moore was decided May 14, 1900. The contention was that the legacy tax was unconstitutional, on the following grounds: That it constitutes a direct tax; that it is not uniform for the reason that it exempts from its operation legacies under the value of $10,000, and because it provides for a progressive tax on legacies held in trust for the benefit of inequality and want of uniformity, and that the right of inheritance is a privilege or franchise within the exclusive power of the State to grant and regulate, and not subject to abridgment or taxation by the General Government. Another point involved was, that the tax does not attach to any legacy which is not held in trust, unless such legacy exceeds the sum of $10,000. The decision, delivered by Justice White, sustained the constitutionality of the law, holding that the tax was not a direct tax within the meaning of the Constitution, but, on the contrary, a duty or excise. The uniformity clause of the Constitution was held to relate only to geographical uniformity. It was decided that legacies not exceeding $10,000 were not taxable,
and that the rate of tax was progressively in-
creased by the amount of each separate legacy
or distributive share, and not by the whole amount
of the personal estate of the deceased from which
the legacies or distributive shares were derived.
In Plummer v. Color the question involved was
whether, under the inheritance tax laws of a State,
a tax may be validly imposed on a legacy consist-
ing of United States bonds, issued under a statute
declaring them to be exempt from State taxation
in any form. It was held that the right to take
property by will or descent is derived from and
regulated by municipal law, and that the State may
lawfully measure or fix the amount of the tax
by referring to the value of the property passing;
and the incidental fact that such property is com-
posed, in whole or in part, of Federal securities,
does not invalidate the State tax or the law under
which it is imposed.
In the cases of Murdock, executor, vs. Ward,
collector, and Sherman vs. the United States, it
was held that legacies consisting of United States
bonds were subject to the United States legacy tax.

Tax on Express Packages.—The cases of the
American Express Company vs. Michigan and
Crawford vs. Hubbell, treasurer of Adams Express
Company, decided April 9, 1900, raise the question
whether, on such right or privilege the post-
or the carrier shall pay for the stamp which
the war revenue act requires on receipts of goods
accepted for carriage and transportation. The
cases arose from an effort to compel express com-
panies to accept packages for transportation with-
out requiring the shipper to provide or pay for
a revenue stamp in addition to the usual or ordi-
nary charges that existed before July 1, 1898, when
the act went into effect. The court held that
express companies are not forbidden to shift the
burden of the stamp tax by an increase of rates
which are not unreasonable.

Chinese Certificates.—In United States vs. Mrs.
Gaw Lim the question was raised whether a wife
or minor children, of Chinese merchants who are
already domiciled in this country may enter the
United States without the certificates prescribed
by section 6 of the act of July 5, 1884. The court
held that a certificate is not necessary in either
case.

Removal from Office.—In Keim vs. United
States, decided April 9, 1900, it was held that
the courts have no general supervising power over
the action of the executive departments of the
Government in discharging one of the clerks
therein, and that the power of removal from office
is incident to the power of appointment.

War Prize Cases.—The court decided several
prize cases, among them the following: The
Panama sailed from New York for Havana with
a general cargo on April 20, 1898, and was cap-
tured on the 25th while approaching Havana.
She was condemned in the court below, on the
ground that, since by the act of Congress of April
20, 1898, and by the Executive proclamation on the
succeeding day, it was decreed that the war with Spain began on April 21, including that
day, all Spanish property afloat captured from
that time became liable to condemnation, and that
this vessel was not exempt under any provision
of the Executive proclamation. The majority of
the court affirmed the condemnation and found
that the Panama was not of Spanish origin nor
of the exemption of Article IV of the proclamation because
being under a contract with the Spanish Govern-
ment, which attached provisionally to the naval
reserve, she carried an armament susceptible of use for hostile purposes, and was liable, upon
arrival at the enemy’s port of destination, to be
appropriated for such purposes. No general rule
of international law exempts mail ships from cap-
ture as prize of war.

The Adula, decided Feb. 26, 1900, was a British
steamer owned by the Atlas Steamship Company,
the King of England leased to a Spanish citizen
for carrying refugees from Guantanamo, Cuba.
The vessel was captured June 29, 1898, when en-
tering Guantanamo Bay, and was condemned as
a prize vessel. The court held that Admiral Samp-
son’s blockade was effective; that the purpose
of the voyage was pecuniary and not charitable,
and that therefore the vessel was blockaded. If a vessel
has actual notice of a blockade, he is not at liberty
even to approach the blockaded port for the
purpose of making inquiries. If a neutral vessel be
chartered to an enemy, she becomes to a certain
extent and pro hac vice an enemy’s vessel, and
a notice to her charterer of the existence of a
blockade is a notice to the vessel. Justices Shiras,
Gray, White, and Peckham dissented.

The Benito Estenger was decided March 5. This
was a Spanish vessel, but was sailing under the
English flag after transfer from the Spanish owner
to the neutral, and was captured off Cape Cruz,
on the south coast of Cuba. She was condemned in
the court below, and that condemnation was
affirmed by the Supreme Court of the United States.
The transfer to the neutral was found to be merely colorable. The former, or rather the
real owner, a Cuban subject of Spain, declared
that he was an adherent of the insurgent cause,
and therefore an ally of the United States rather
than a loyal subject of Spain. The court applied
the general doctrine that belligerents or the
judges dissenting.

The Carlos F. Roses, decided May 14, was a
Spanish bark, and was proceeding from Monte-
video to Havana, with a cargo of jerked beef and
garlic. She was captured in the Bahama Channel
by the cruiser New York, and was duly condemned
as enemy property. Neutral bankers claimed the
cargo, on the ground that they had made advances
upon the security of the bills of lading indorsed
in blank, and were wholly uncompromised except
through insurers, who would be subrogated to
the owner’s claim, under the contract of The court
found that the transactions, so far as they
were shown, presented evidence of an enemy in-
terest which called upon the asserted neutral own-
ers to prove beyond question their right and title,
which they had not sufficiently done within the
rules established by the authorities. The court
relating to the fact that provisions, by the mod-
ern law of nations, may become contraband, al-
though belonging to a neutral, on account of the
particular situation of the war or on account of
their destination, as military use at ports of
naval or military equipment.

Dewey’s Bounty Claims.—Dewey vs. the United
States, decided June 6, 1900, decided that no
claim brought in the Court of Claims to recover bounty money earned by the
commanding officer of the American fleet at
the battle of Manila, on May 1, 1898. In fixing
the amount of the bounty it was necessary to determine
whether the Spanish vessels engaged at Manila
were of superior or inferior force to the American
fleets, which was done in the Court of Claims. In
determining the relative strength of the two
fleets, the land batteries and mines and torpedoes
of the Spanish should be taken into consideration
in arriving at the strength of the Spanish fleet.
The Court of Claims held that the land batteries
and mines and torpedoes should not be considered

UNITED STATES OF AMERICA.
in determining the question whether the Spanish forces were of superior or inferior force, and found the fleet to be inferior to the American vessels. The Supreme Court affirmed this judgment. Chief-Justice Fuller delivered a dissenting opinion, contending for a liberal construction of the statute, in which Justices White and McKenna joined.

The Constitution of Utah.—In Maxwell vs. Dow the court decided that the provisions of the Constitution of the State of Utah allowing proceedings in criminal cases to be prosecuted upon the process of "information," and limiting juries in certain cases to 8 persons instead of requiring the election law jury of 12, were not in contravention of the Federal Constitution. The decision fully explained what are the privileges and immunities of a citizen of the United States which no State can abridge. Justice Harlan dissented, saying that under this decision, if he did not misapprehend its effect, the Constitution did not stand, by which all the American people have for centuries regarded as vital to personal security.

Jim Crow Cars.—The case of the Chesapeake and Ohio Railway Company vs. Kentucky was decided Dec. 3. It involved the question of the constitutionality of the Kentucky law requiring the railroad company to provide separate coaches for colored passengers. The opinion sustained the validity of the act. Justice Harlan dissented, holding that the law was an interference with interstate commerce, and that the Kentucky Legislature had no right to classify citizens by color in railway coaches.

Cigarettes.—Austin vs. State of Tennessee involved the constitutionality of the Tennessee law which forbids the sale or importation for salt of cigarettes. The case grew out of the importation of cigarettes into Tennessee from North Carolina, the packages being shipped in open baskets. The Tennessee dealers claimed the right to sell the separate packages, under the decision of the Supreme Court made several years ago, that no State can restrain the sale of an original package of an article of interstate commerce without encroaching upon the exclusive right of Congress to regulate commerce between the States. The Supreme Court affirmed that portion of the decision of the court of Tennessee which held that the sale of cigarettes involved in this case was not of an original package and that the original opinion did not decide whether cigarettes are not legitimate articles of commerce. The Supreme Court did not undertake to define what is an original package further than to hold that the ordinary package of 10 or 20 cigarettes, such as is retailed to smokers, is not an original package. Four justices dissented.

UNITED STATES, FINANCES OF THE.

UNITED STATES, FINANCES OF THE. Notwithstanding the extraordinary military expenses incurred in the pacification of the Philippine Islands and the increase of the navy, the excess of the revenues of the Government for the fiscal year ending June 30, 1900, over the expenditures for the same period, was $71,227,000; the increase in the expenditures was an increase in receipts of internal revenue of $21,890,765; of customs, $27,036,359; and from the postal service, $8,460,297. For the same period there was a decrease in the expenses of the military establishment of the Government as follows: The pay department of the army, $37,037,623; the quartermaster's department, $33,548,269; the medical department, $8,665,738. There was also a decrease in the expenditures of the State Department of $20,000,000 on account of foreign intercourse, that being the amount paid to Spain the previous year on account of the treaty obligation. The only notable increase of expenditures was $4,121,037 for the increase of the navy.

The table on page 726 shows in detail the items of receipts and expenditures by the Government for the past fiscal year, compared with like items of the previous year.

The surplus arising from these operations was applied in part to the redemption of the $23,364,500 outstanding 2-per-cent. bonds of the Government, and to part of the remainder of the $24,147,053; 3-, 4-, and 5-per-cent. bonds exchanged for 2-per-cent. bonds, as authorized by the act of March 14, 1900. This premium is in effect the anticipation of interest on the public debt to its amount, and in the end will be a net saving to the Government of about $6,000,000. Considering the favorable occupation to the country of expenditures and the probable continuance and the large available balance of cash, recommendation is made by the Secretary of the Treasury for a moderate reduction of the war taxes.

The act of March 14, 1900, above referred to, authorized the funding of certain 3-, 4-, and 5-per-cent. bonds in 2-per-cent. gold bonds payable at the pleasure of the Government after thirty years from their issue, the outstanding bonds to be received in exchange therefor at a value not greater than their present worth to yield an income of 2½ per cent. per annum. The new bonds were authorized to be received by the department of the State and navy, and bank notes to be issued thereon to the par value of the bonds deposited. Under this authority new national banks were organized throughout the country, which took out circulation, and existing banks largely converted their bonds deposited for circulation into the new bonds, that they might secure the issue of notes on the more favorable terms offered.

The act of March 14, 1900, below referred to, authorizing the exchange of bonds, declares that the gold dollars of present weight and fineness shall be standard of value, and that all forms of money issued or coined by the United States shall be maintained at a parity of value with this standard, and imposes upon the Secretary of the Treasury the duty of maintaining such parity. To that end the act authorizes redemption in gold of the United States notes (greenbacks) and the Treasury notes issued under the act of July 14, 1890, when presented for that purpose, and to secure such redemption authorizes $150,000,000 of gold in the Treasury to be set apart as a reserve to meet such redemptions and to be used for no other purpose; and when notes are redeemed from the fund, the Secretary of the Treasury is required to restore the reserve, first, by exchanging the notes for gold in the General Treasury; second, by exchanging the notes for gold deposits; and, third, by exchanging therefor gold with which the measures fail, 3-per-cent, bonds may be issued for gold as necessary to maintain the fund. The notes so redeemed may be paid out as above stated for gold, also for purchase of bonds, or for any
other lawful purpose except to meet deficiencies in the current revenues. Up to Oct. 1 the total redemptions in gold from the new reserve fund were $22,530,854 in United States notes and $3,594,708 in Treasury notes, for which the fund has been reimbursed from the general Treasury.

The following table shows the amount of money in circulation Jan. 1, 1901, and the same date 1900:

It will be noticed there is a great increase in the issue of gold and silver certificates and national bank notes, and a decrease in that of Treasury notes of 1890, these latter notes being gradually replaced by silver certificates issued upon the silver dollars coined from the bullion purchased under the act of 1890, as authorized by law. The substitution of the certificates for the notes diminishes to its extent the possible demands upon the $150,000,000 gold reserve fund. The increased issue of national bank notes is due to the more favorable terms given by the act of March 14, 1900, to banks taking out circulation. The coinage executed at the several mints in 1900 and 1899 is shown by the following table. The silver dollars were coined from the silver purchased under the act of 1890, for which Treasury notes were issued.

UNIVERSALISTS. The Board of Trustees of the Universalist General Convention, following the by-laws of that body, published a report and financial statement for Oct. 1. This report contained returns from 1,003 parishes, in which were included 47,866 families, 53,070 church members, 59,034 members of Sunday schools, and which possessed parish property valued at $9,733,294 less debt, and had raised $1,244,493 of contributions, including those for parish expenses. The number of church members had increased 893 during the year. These statistics relate only to the organized parishes in the Universalist fellowship, and necessarily take no account of families residing in territory where there are no such parishes, or of the great number of Universalists who in their neighborhoods attend other churches. A comparison with the statistics of three years ago shows that during the interval the number of families had increased more than 30 per cent., the church membership more than 60 per cent., the parish property nearly 42 per cent., and the current expenditure nearly 44 per cent. The aggregate sum of $21,324 had been received during the year from legacies and special gifts, and the total amount of the gifts of the year to the General and State Conventions and other bodies for missionary and other benevolent work had been $77,746. The aggregate amount of the sums applied during the year for missionary and other church work was $12,176. The permanent funds of the General and State Conventions amounted to $127,668, and the current fund amounted to $800,606, showing an increase for the year of $17,141. A special plea was made in the report in behalf of the mission in Japan, where much had been attempted and accomplished, and a great enlargement of missionary possibilities since the beginning of the work could be perceived. A hold of hope is obtained for the possible establishment, tracts and books published, and "a goodly number of earnest and intelligent Japanese" drawn to the Universalist faith and Church. The organization of a canvass for a twentieth cent. fund having been directed by the General Convention, the Rev. Dr. Perin was commissioned to devote the whole time of his other employment to this work, in addition to his duties as financial secretary. Pledges were to become payable when they amounted in all to $100,000. The income only of the money contributed is to be used for the work of the General Convention.

URUGUAY, a republic in South America. The legislative power resides in the Congress, consisting of a Senate and a House of Representatives, sitting for five months annually and delegating the legislative authority and the control of the administration during the other months of the year to a standing committee of 2 Senators and 5 Representatives. The Representatives, 60 in number, are elected for the term of 1 3 years by the ratele of 1 to 3,000 inhabitants by all adult male citizens who can read and write. The Senators, 19 in number, are elected in the departments that they represent by electoral colleges. The presidential term is four years. Juan Luis Cuestas was elected President for the term beginning March 1, 1900, and Bottye y Ordóñez Vice-President. The Cabinet at the beginning of 1900 was composed as follows: Minister of War and Marine, Gen. Callorda; Minister of the Interior and Justice, Saturnino Camp; Minister of Agriculture, Industry, Public Instruction, and Public Works, C. M. Peña; Minister of Finances, Dr. Campeste; Minister of Foreign Affairs and Worship, Herrero y Espinosa.

Area and Population. The area of Uruguay is 72,110 square miles. The population of the departments as determined by the census of March 1, 1900, is as follows: Artigas, 23,334; Canelones, 76,984; Cerro Largo, 39,393; Durazno, 33,153; Paysandu, 44,431; Florida, 39,883; La Colonia, 45,155; Maldonado, 24,048; Minas, 32,505; Montevideo, 253,306 (estimated); Paysandu, 53, 543; Rio Negro, 18,574; Rivera, 22,509; Rocha, 20,757; Salto, 40,599; San José, 27,270; Soriano, 34,628; Tacuarembó, 43,424; Triunfo y Tres, 22,757. The total population of the republic was
The census was imperfect, and 8 per cent. is added for omissions in the official estimate. The number of males was 812,000. The total population of the interior, without the 8 per cent. added to correct the census figures, was 599,364, comprising 308,670 males and 290,694 females. Of the males 230,524 are native-born, including children of foreigners, and of the females 258,941, while 58,146 males and 32,052 females are of foreign birth. About 15 per cent. of the population of the interior consists of foreign settlers, and in Montevideo 45 per cent. of the people are foreigners. The number of immigrants in 1898 was 9,467, and of departures 6,411. The Spanish and French immigrants are mostly Basques. There were 90,199 foreign-born residents in the keys, or 34.3 per cent. of the population. The Spanish, 28,840; French, 11,342; English, 1,579; Germans, 994 Swiss, and 2,078 others. Among the immigrants in 1898 was 2,594 Italians, 3,339 Spaniards, 814 French, 673 Brazilians, 342 English, and 339 Germans. The number of marriages in 1898 was 1,919; births, 29,533; deaths, 1,339; excess of births, 16,615; number of marriages in 1899, 4,463; of births, 31,013; of deaths, 12,343; excess of births, 19,270. Education is compulsory in Uruguay, and there were 535 elementary schools in 1897, with 1,043 teachers and 45,614 pupils, the annual expense to the Government being $75,000.

Finances.—The revenue in 1898 was $15,200,-000, and in 1899 it was $15,750,000. For 1900 the estimate of revenue was $15,977,992, of which customs produce $10,480,000; the property tax, $1,510,845; trade licenses, $890,325; industrial tax, $473,297; tobacco tax, $44,468; educational receipts, $54,926; stamps, $352,394; posts and telegraphs, $310,000; lottery officers' pay, $30,000; bank profits, $25,000; interest on sources, $471,220. The expenditure was estimated at $15,969,698, of which $357,040 was for the Congress, $65,827 for the presidency, $120,806 for the Ministry of Foreign Affairs, $2,230,985 for the Ministry of the Interior, $950,424 for the Ministry of Finance, $1,094,250 for the Ministry of Public Instruction, $800,000 for the Ministry of War, and $3,242,240 for the judiciary, and $9,120,209 for the public debt. The expenses of the public debt in 1899 were $4,984,332 for interest and $395,118 for amortization; total, $5,389,450. The amount of outstanding obligations on Jan. 1, 1899, was $124,425,493, the external loans amounting to $100,018,966, and the internal or domestic debt, $41,153,476; internal debts, $19,986,847. On Jan. 1, 1900, the total obligations amounted to $127,-159,529, an increase during the year of $2,734,134. A new internal loan of $4,000,000 was emitted, and $1,265,896 of external and internal obligations were redeemed. The total amount of new debt created was $21,164,827. According to Cuestas, total Cuestas was $9,128,566, mainly in liquidation of the debt and obligations inherited from the previous Government due to the civil war. Under Julio Herrera the debt increased from $81,279,752 to $103,438,039, a difference of $22,334,287, which includes, however, the consolidation of the external debt by which a saving of interest was obtained. Under Idiarte Borda the increase was $17,181,058, making the total at the accession of President Cuestas $127,673,659. Under Juan L. Cuestas the net increase to the end of 1899 was $6,594,432. The annual service of the public debt in 1898 was $4,984,332, and the interest, $895,117 for amortization, and $759,144 for interest. The actual guaranteed making with commissions and expenses, $6,664,287.

The state of the debt on Jan. 1, 1900, was $25,101,298 of internal, $100,161,600 of foreign, and $3,809,025 of international debt. The debt has grown up since 1860, when $2,726,888 were emitted in 1862 and 1863, and $3,110,815 in 1870 to $17,818,694, in 1875 to $42,357,455, in 1880 to $40,673,185, in 1883 to $59,774,428, in 1890 to $100,600,153, and in 1895 to $106,600,153. The amount of the debt has grown much faster than population or commerce, and is to a great degree nominal, the market value being far below the face value of the bonds, amounting to not more than $75,000,000 for the whole debt in 1900. The silver money put into circulation between 1877 and 1897 was $4,045,857. The Bank of the Republic, founded in 1896, with $10,000,000 of capital paid in and a share capital of $12,000,000 originally, increased in 1899 to $1,700,000, has the option of redeeming its notes in either gold or silver. On July 13, 1900, an additional excise duty was imposed on sugar and increased import duties were put upon sugar, alcohol, wines, and spirits. The excessive import duties discourage the import trade and prevent the expansion of foreign commerce. The revenue of the central Government in the year ending June 30, 1900, was $8,024,350, showing an increase of little over 3 per cent. as compared with 1899, far less than the increase of production and of population.

The Army and Navy.—The standing army consists of 231 officers and 3,273 men, organized in 4 battalions, 3 cavalry regiments, 1 regiment of rifles, and 1 battery of artillery. Of the army there are 8 battalions, 1 heavy battery, 1 light battery, 61 guns of 6-inch caliber, 84 guns of 5-inch caliber, 20 guns of 4-inch caliber, 50 guns of 3-inch caliber, 300 guns of 1-inch caliber, and 500 guns of 7- to 9-centimeters caliber. The Mauser rifle is furnished to the infantry. The artillery has Krupp, Canet, Bange, Armstrong, and Nordenfelt guns. There is an armed constabulary of 3,200 men independent of the army, and about 20,000 men are enrolled in the National Guard. The naval force consists of 3 gunboats, 7 armed steamers, manned by 184 officers and men.

Commerce and Production.—The rearing of animals is the main industry of the country. There were 4,958,772 cattle, 358,067 horses, 13,144 mules, and 14,447,714 sheep in 1897. The number of cattle slaughtered in 1898 was 665,500, and in 1899 it was 1,514,414. The wool product in 1899 was 44,000 tons. The wheat crop in 1897 was estimated at 300,000 tons. The area of vineyards in 1898 was 3,160 hectares, producing 3,531,906 hectolitres of wine and 33,516 litres of brandy. Corn and other crops are also grown by the new settlers, who are rapidly extending the agricultural area. They plant tobacco also and have set out tea plantations. The main export is wine. The export of liver of tuna from the department of Rivera was 87,336 gallons in 1897. The imports of merchandise in 1897 were valued at $19,512,216, and of coin at $3,035,679; exports of merchandise at $29,319,753, and of coin at $3,116,877. The value of commerce imports in 1898 was $24,784,906, and of exports $50,376,916. Of the imports $8,714,823 were articles of food and drink, $2,123,389 tobacco, $4,992,444 textiles, $1,360,909 clothing, $6,410,694 raw materials and machinery, and $4,735,655 articles of other classes. Of the exports $336,925 were live animals, $26,243,492 animal products, $3,315,545 wheat, flour, and feed; $24,000 for sacks, $8,950 for other products. The exportation of beef in 1897 was $4,312,904 in value; of extract of beef, $1,182,810; of hides and skins, $6,633,981; of tallow,
The total value of merchandise imports in 1898 was about $24,000,000, and of exports $37,000,000.

**Navigation.** The number of vessels entered at the port of Montevideo in 1897 from over the sea was 1,120, of 1,904,626 tons; cleared, 1,024 vessels, of 1,766,520 tons; entered in the river and coast trade, 2,439 vessels, of 621,406 tons; cleared coastwise, 2,447, of 621,244 tons. The merchant navy consisted in 1898 of 28 steamers, of 7,654 tons, and 72 sailing vessels, of 21,251 tons.

**Railroads, Posts, and Telegraphs.** The length of railroads on Jan. 1, 1899, was 1,008 miles, and there were 89 miles of telegraph lines, including 17 miles belonging to the railroad. The number of dispatches in 1898 was 3,435,300.

The postal traffic for 1898 was 8,872,575 in internal letters, newspapers, etc., and 6,970,238 in the international service; receipts, 1,786,186 francs; expenses, 1,544,425 francs.

**Government.** The State officers during the year were as follow: Governor, Heber M. Wells, Republican; Secretary of State, James T. Hammond; Treasurer, James Chipman; Auditor, Morgan Richards, Jr.; Attorney-General, A. C. Bird; Attorney-General, Charles S. Burton; Superintendent of Public Instruction, John R. Park; Coal Mine Inspector, Gomer Thomas; State Engineer, Robert C. Gemmill; Board of Equalization, Robert C. Lund, John J. Thomas, J. E. Booth, and Thomas D. Dee; Board of Labor, John Nicholson, J. S. Daveler; Board of Agriculture, J. A. Wright, Secretary; State Art Institute, created in 1898, H. L. A. Culver, President.

**Finances.** On May 31 the State Loan Commissioners offered the State’s new issue of bonds. Sealed bids were also solicited for the sale of the State’s lawful money issue of $300,000 twenty-year 3 per cent. bonds, to refund the old series of 5 per cent. bonds sold in 1890. The commissioners finally sold on Sept. 1, 1899, for 246,350, the whole at par, the buyers to bear all the expense of calling in the old series and engraving and floating the new issue. The money saved to the State by reason of this rate of interest during the period of the next ten years, which would be the remainder of the old bonds, will be $52,500. The treasurer reported for 1899 a balance of $246,350, which sold for about $275,000, with the proceeds of the sale of the old bonds.

The following receipts: Tax collections and land sales, $388,672.85; balance on hand, Dec. 1, $202,208.02; total, $780,880.87. The disbursements were: Re- payment of temporary loan, $175,000; general fund warrants redeemed, $51,077.94; investments of land funds, $1,125,03; total disbursements, $237,010.97; balance on hand, Dec. 31, $552,689.90.

The balance on hand was apportioned to the several funds, as follows: District school fund, $279,465.89; general fund, $211,472; university land fund, $37,133.06; school fund investment, $10,230.51; sundry land funds, $14,617.44; total, $532,909.90.

**Valuation.** In 1898 the total valuation by the State Board of Equalization was $997,134,490. In 1900 it was $1,065,629,041. There is a gain of $1,200,000 in the value of real estate, $1,400,000 in improvements, $1,500,000 in personal property, and $1,000,000 in corporation property.

The value of horses and mules in Utah in 1899 was placed at $1,257,708; in 1900 the valuation of the same class of property was $1,414,693. In 1899 there were 133,015 cattle in the State; in 1900 192,216 were assessed, and their valuation was given as $3,199,789. There was a falling off in sheep, but the statement is made that the figures given do not cover all the sheep owned in Utah, and that fully 1,800,000 sheep that graze in Idaho, Colorado, Wyoming, and Montana are owned by Utah men, although they are assessed in the States in which they range. An explanation of this will be seen in the fact that although the assessment for 1899 was for 1,621,733 sheep and in 1900 for only 1,595,101, the valuation this year is more than $600,000 above that of last year.

The sheep were better in keeping condition, the pastureage has been fine, and the shepherds are well organized.

Only 15,848 swine were owned in the State in 1900, against 19,891 in 1899. The valuation for 1900 was $45,656.

Summing up all live stock within the State, there is a gain of more than $1,250,000 for 1900, according to figures furnished by Secretary Thomas, of the State Board of Equalization. These figures show that the total valuation of live stock in Utah for 1900 was $5,500,000.

**Banks.** The banks throughout the State make an encouraging report; most of them show a material increase in deposits, loans, and discounts. Up to Nov. 30 the failures numbered 49, the actual assets being $35,963 and the liabilities $192,862. In 1899 there were 59 failures, the total assets of the banks then were $147,550, while the liabilities were $539,629. The total bank clearings for 1900 were $108,734,563.

**Precious Metals.** Utah has ranked as the sixth in gold-producing and the third in silver-producing States of the Union, but in 1900 she leaped beyond all former records in the production of her 4 chief metals—gold, silver, copper, and lead. Her silver output in 1899 was rated at $9,696,969, and her gold output at $3,360,509. In 1900 the output of gold increased $800,000, and that of silver $1,600,000. The copper advanced from $1,246,000 in 1899 to $2,514,597 in 1900. This shows the silver gain about 25 per cent. and gold 15 per cent., while lead has not advanced. The whole output of the mines is about one third of the total productive wealth of the State.

**State Lands.** The new purchasers of State lands number 3,510. Some of these paid in full, but the great majority availed themselves of the opportunity of paying a tithe of the purchase price in the first year. Since the statehood the State land sales have aggregated 497,090,14 acres, representing a total sale price of $1,061,541.06. In 1900, 284,248 acres were sold, the total sale price being $399,374.91. This shows that the business of the State Land Board for the year was nearly 60 per cent. as much as for the whole period since the State became possessed of lands to sell.
Leases of mountain lands for sheep grazing were made for 106,531 acres, appraised at $152,226, upon which the annual rental is $6,300.44.

All the revenues for sales and leases of State lands are held in the State treasury in separate funds, and whenever opportunity offers investments are made in school-district bonds, and in mortgages on farms. Only the earnings of these investments are available for the educational institutions of the State, made beneficiaries by the State's enabling act. In the cases of lands revenue going to the establishment of institutions and other public undertakings, the interest is paid in full each year, and in all cases until each particular fund is large enough to begin building. The State has the following amounts now out (exclusive of small uninvested balances in the treasury) drawing interest for the purposes mentioned: District school, $164,168; university land, $150,833; reservoir land, $10,556; Insane Asylum, $3,815; School of Mines, $5,001; Agricultural College, $5,820; Institute for the Blind, $2,260; State Capitol, $3,650; Miners' Hospital, $2,500; Normal School, $100; Deaf and Dumb School, $3,093; Reform School, $6,364; total, $367,854.

Education.—According to the report of the State Superintendent, at the close of the school term, there were recorded in population 86,353. This includes all between the ages of six and eighteen, and shows a net increase of 1,934 over the preceding year. There are 43,119 white boys and 43,080 white girls, and 106 colored boys and 98 colored girls. Boys to the number of 38,156, and 38,584 girls, can read and write. Attending regular schools were 36,760 boys and 36,457 girls; attending private schools, 1,130 boys and 1,294 girls; attending no school, 5,518 boys and 5,577 girls. Fifty-three deaf and 8 blind persons between the ages of five and thirty years are noted in the report.

In the year ending June 30, $1,222,490.92 was expended for the maintenance of public schools. The revenues amounted to $1,001,610.54, including a balance on hand at the beginning of the year of $117,207.25. The unexpended balance at the close of the year was $69,111.51.

The school revenues were from the following sources: District taxes, $628,194.45; State taxes, $229,251.33; taxes from sales of State lands, $24,090.67; school-district bonds, $47,856.16; sinking funds, $16,853.12; tuition fees, $1,202.47; sundry other sources, $44,345.96. The expenditures were: Salaries of male teachers, $239,303.63; female teachers, $346,841.49; new buildings and land, $152,327.87; interest on borrowed money, $57,852.64; current expenses, exclusive of salaries or janitor service, $50,674.88; repairs and improvements, $44,422.33; janitor service, $43,972.93; sinking fund investments, $30,402.42; redemption of bonds, $25,862.70; compensation to trustees, $24,456.35; furniture and apparatus, $26,610.54; supplies, $15,292.52; rent of buildings, $8,857.82; text-books for indigent pupils, $7,246.58; taking school census, $2,683.47; books for school libraries, $1,880.42; disbursements made to parties not otherwise stated, $38,348.94.

The total bonded debt of school districts is $1,089,410, and the floating indebtedness $85,374.92. The net increase of indebtedness in 1900 was $10,089.35.

The State Teachers' Association held its convention in Salt Lake City the last week in December, adopted a new constitution and by-laws, and elected officers. Frank B. Cooper, Superintendent of the Board of Education, was elected president, and Frank Evans, of Ogden, was re-elected secretary.

Prof. J. H. Paul urged the need of securing suitable text-books on botany, geology, and meteorology for use in the schools of Utah, Montana, Colorado, and other Western States. Other discussions were on the need of art in public education and nature study in schools.

Mr. Leary estimated this year's crop of $3,200,000 was produced in 1900, and more than $1,000,000 expended in miners' wages; and this leaves out account of the cost of improvements at the mines.

At Scofield, May 1, about 200 men and boys met their deaths by a mine explosion. Investigations are being made into the cause. It is suggested that the mining contractors have put the charge of coal dust in the air, which caused the fires. At the very near of the explosions occurred, the dust had not yet been cleared away. The cost of the injury amounted to $450,000; at Castle Gate $75,000 was expended.

It is estimated that this company alone controls 10,000 square miles of coal land, some of which has not yet been touched, and much more only "scratched." The average wages is $2.50 a day. This company mined more than 1,000,000 tons of coal during the year, and 1,059 men were employed through the year.

The following statistics were given by Gomer Thomas, State Inspector of Mines: The number of men employed in Utah coal mines in 1900 was 1,504, a gain over the previous year of 381; the tonnage of coal was 1,224,176, a gain of $88,514. The number of accidents during the year was 272; fatal, 209. Twelve mines were opened in Carbon County, 15 in Emery County. No mines were suspended or abandoned during the year.

Fish and Game.—The past season is the first that the hatchery has been in full operation, and, despite some unforeseen drawbacks, the result is most encouraging. The hatchery was located about 14 mile east of Murray, on 53 acres of land along Spring run. The cost of land, building, drive well for water that maintains an even temperature all the year round, equipment, etc., approximates to $4,000, and the needs of the hatchery for the next two years are placed at $3,800, exclusive of $1,500 for a dwelling for the superintendent. It was formally opened on Dec. 30, 1899. In the season 1900-'01 190,000 trout eggs of various kinds were received which were hatched and planted in the waters of Utah, the loss being a little less than 4 per cent.

Commissioner Sharp suggests that the hatchery can easily be made more efficient. 2,000,000 to 3,000,000 young trout every year if advantage is taken of the varying spawning periods. During this first year there were received at the hatchery 500,000 Eastern lake trout eggs, 350,000 Eastern brook trout eggs, 5,000 landlocked salmon from Green lake, Maine, 25,000 native or black-spotted trout of the Big Cottonwood creek, 75,000 grayling trout eggs from Montana, and 10,000 steelheads from Oregon. The distribution was made with reference to the nearness of streams to railroads and other conditions favorable to propagation.
The report says that in the two years just closed a total of 1,010,574 pounds of fish have been caught in the public waters and sold in local markets, representing a value of $68,391, and these figures do not take in the catch made for private consumption.

Incomplete reports show that during the year 66,392 wild ducks were killed and sold, and that 724 grouse were marketed. These, together with 12,760 pounds of venison, represent a value of $12,433.

Owing to the avariciousness of market hunters, large game animals once abundant, such as the elk, antelope, and mountain sheep, are fast becoming extinct, and the same is true of sage hens, pine hens, and various kinds of native grouse.

**Industries.**—There has been ample proof that flour milling might become one of the most prosperous of Utah industries could an outside market be found for the product. There are 75 flour mills in the State, with a capacity for turning out at least 2,000,000 barrels of flour in a year, and this would mean the consumption of 9,000,000 bushels of wheat, almost twice the yield of the State for this year. The mills stand idle a good portion of the time, while the wheat is shipped out unground or consumed at home as stock feed. Good judges place the wheat crop for 1900 at nearly 4,000,000 bushels.

Fifty-seven creameries are working in the State, 5 having been added during the year. The capital was estimated at $200,000. Considerable new capital has been added within the year, and the output of butter, cheese, and skim milk, amounted to about $900,000. Considerable business is still done in the old line of dairy work.

The beet-sugar industry produced nearly $1,000,000 in income during the year. Hitherto the great sugar works at Lehigh absorbed most of the beet product, a great system of piping having been laid for the drawing of beet juice from outlying sections. New factories have started up, and every inducement is offered to farmers for the raising of beets. Even the pulp, which the factories resell to the farmers, has proved valuable as a fattener of cattle.

The industry has been stimulated too by the prospect shown by the Compagnie Sugar Manufacturing Company for next year's crop of Utah beets. Manager McFarland has announced the following schedule: Twelve per cent. purity, $4.25; 13 per cent. purity, $4.58; 14 per cent. purity, $4.91; 15 per cent. purity, $5.25; 16 per cent. purity, $5.58; 17 per cent. purity, $5.91; 18 per cent. purity, $6.25; 19 per cent. purity, $6.58; 20 per cent. purity, $6.91; 21 per cent. purity, $7.58.

In the last two years sugar-beet raising has increased enormously. Cache County alone yielded 6,500 tons of beets in 1900, produced on about 500 acres. The beets bring $3.50 a ton delivered on the car.

An offer from the Ogden Sugar Company has also raised the price of beets at home. A year ago it paid $4.25 a ton; this year it offers $4.50 for beets containing 12 or more per cent. of saccharine matter.

The tomato crop was unusually heavy, and the canning factories were unable to cope with it. The canners complain that contracts were broken, and threaten damage suits. The factory people say that some of the tomatoes were damaged by frost. There is a call for more canning factories. The figures for this year show 225,000 cases.

**For a Library.**—John Q. Packard has given a tract of land worth $20,000 to found a free library in Salt Lake City, and $75,000 to build with.

**Mothers' Congress**.—The Mothers' Congress held its third annual meeting in Salt Lake City in April. Its discussions were full and interesting, and the attendance at the meetings large. Kindergarten work was treated from every point of view. The duty of mothers in the matter of the spiritual training of the younger generation influences, heredity, environment, and the relations of the family, especially those of parents and children, were treated exhaustively. The evening sessions were especially large and spirited.

**Art Institute.**—The Utah Art Institute in its report says that the 32 lectures under the institute's direction for the purpose of awakening interest in art have been productive of much good. Many pictures were given to the institute. The revenues were $3,409.40, and the expenditures were within this sum.

**Monument.**—Utah's monument to pioneers, erected by the Public School State, has been unveiled by his great-granddaughter on July 25. Near the base is a figure group representing an Indian, a trapper, and a pioneer. The sculptor is C. E. Dalin.

**Mormons.**—Reports from returned missionaries seem to show that the gaining of converts to Mormonism is not less easy in France and Germany than in England even, and certainly in Scandinavia. The latter folk held a jubilee in Salt Lake City to celebrate the fiftieth anniversary of the advent of Mormonism into Denmark, Sweden, and Norway.

The ninety-fifth birthday anniversary of Joseph Smith, founder of Mormonism, occurred on Dec. 23, and was celebrated in the new Sixteenth Meetinghouse, dedicated the same day, and built on the corner of Fifth West and North Temple Streets, Salt Lake City, on the site of a log hut put up in 1849 which served for both church and school. The new building was packed with people, and among the old settlers was the aged widow of the prophet Brigham Young, now unable to his jubilee on July 25. Near the base is a figure group representing an Indian, a trapper, and a pioneer. The sculptor is C. E. Dalin.

**Irrigation.**—About the middle of December the Utah Light and Power Company disclosed an arrangement for constructing four great reservoirs in the Ogden canyon, which will furnish 10,000 horse power, irrigate 75,000 acres of arid land, and supply Ogden with water. The water thus stored will enable the company to keep its hydro-electric power plant the entire season up to its full capacity (10,000 horse power) while irrigating lands in the western and northwestern parts of the county and adjoining portions of Box Elder County. It would give a water supply for a city system greater than the one that now supplies Ogden.

**Unoccupied Land.**—It has often been said that the most desirable lands of Utah have been settled for years, yet each year shows great tracts of fertile land reclaimed by irrigation. The State offers an inducement of ten years' time for paying for land, and because of this many intending settlers on Government tracts relinquish their holdings to the State, who for the time being hold the land to apply upon some of the State grants, and then contract with the State for the purchase of the land on the easiest terms. In this way the State is enabled to do an enormous amount of business in the sale of lands for the benefit of Utah's public institutions.

Through the operation of the enabling act by which Utah was admitted to the Union, four sections in each township, or about 5,760,000 acres, were granted for the maintenance of the public schools, 125,000 acres were ceded for maintaining the university, 500,000 acres were allowed for establishing reservoirs, 200,000 acres for the Agricultural College, 100,000 acres each for to help sup-
port the Insane Asylum, the Deaf and Dumb Asylum, the Institution for the Blind, the Reform School, the State Normal School of Mines, 64,000 acres for a State School of Mines, the same for a State Capitol, and 50,000 acres for a miners' hospital. Out of these munificent grants, 7,500,000 acres in all, less than 500,000 acres have been sold by the State.

State Institutions.—A hospital was added to the Deaf, Dumb, and Blind Institution in 1900. The sum of $3,500 was appropriated by the Legislature for the current expenses of the hospital. The expenses of the year were $5,422.03, but the deficiency was paid from funds earned by the institution. A special library has been added to the school, and the library has been increased.

Three students have been graduated in the past two years, and 13 since the institution was founded. The total attendance in the two years was 123; the present enrollment is 76.

Fifty-seven acres of land belong to the institution valued at $15,000, and the buildings at $100,000.

At a meeting of the board of the Insane Asylum in November, Medical Superintendent Hardy reported as follows: In the asylum Oct. 31, 164 men and 155 women. Requisition was made on the Auditor for the sum of $3,302.73, to pay the expenses for October.

VENEZUELA, a federal republic in South America. The legislative powers are vested in the Congress, elected by a Senate of 27 members, 3 from each State, and a House of Representatives numbering 63 members, 1 to 35,000 inhabitants, who are elected for four years by the votes of all adult male citizens. The Congress elects for two years a Council of Government, and for the same term the Council elects the President of the republic. Gen. Ignacio Andrade, who was elected for the term beginning March 4, 1898, was deposed by a revolution and Gen. Cipriano Castro was invested by Congress with supreme power as provisional President on Oct. 21, 1899. The Cabinet, appointed on Oct. 23, 1899, was composed as follows: Minister of the Interior, Fran- cesco Contreras; Minister of Foreign Affairs, An- duego Palacio; Minister of Finance, Tello Men- doza; Minister of War, Gen. Ignacio Pulido; Min- ister of Agriculture, Industry, and Commerce, Manuel Hernandez; Minister of Public Works, Victor Rodriguez; Minister of Public Instruction, Cipriano Urbaneja.

Area and Population.—Venezuela has an area of 393,943 square miles. The population in 1894 consisted of 1,197,059 males and 1,247,747 females; total, 2,444,816. The number of foreigners was 44,129, comprising 11,081 Colombians, 518 other South Americans, 232 North Americans, 13,538 Spaniards, 6,154 English, 3,729 Dutch, 3,179 Italian, 2,545 French, 202 Germans, 82 Danes, and 2,089 others. The population was composed of 376,156 persons engaged in agriculture, 135,638 in industry, 8,341 in navigation, 1,052 in mining, 42,916 in commerce, 3,675 functionaries, 528 religious, 6,638 military, 9,311 in the liberal professions, 211,456 domestics, and 1,650,068 nonworkers. The number of births, 88,819; of deaths, 46,410; excess of births, 42,409. The immigration was 1,411, and for ten years ending with 1894 it was 5,548.

Finances.—The budget for 1900 makes the total revenue 38,877,480 bolivars, or frames, of which 26,600,000 bolivars come from customs, 2,659,080 bolivars from stamps, 2,593,900 bolivars from the transit dues, 2,680,000 bolivars from salt, and 32,000 bolivars from public lands. The expenses were estimated at the same figure, 18,893,456 bolivars being allotted to the public service, 4,967,000 bolivars to the internal debt, 2,185,203 bolivars to the exterior debt, 3,906,000 bolivars to the Venezuelan loan, 7,055,101 bolivars to foreign creditors, 2,240,000 bolivars to public works, and 5,654,500 bolivars to subsidies.

The public debt on June 30, 1898, amounted to 201,419,202 bolivars. When Venezuela seceded from Colombia in 1831 the share of the debt incurred in the war of independence was assumed by the Republic, and since 1849, including unpaid interest, new external bonds for £2,750,000 were issued in 1881, and of these £2,638,200 were outstanding in 1898, in addition to which 50,000,000 bolivars of 5-per-cent. bonds were issued in 1896 for the settlement of arrears of railroad guarantees, making the total foreign debt £4,587,906. The internal debt on Jan. 1, 1899, was 79,753,311 bolivars. A law was made in July, 1896, ordaining that the issue of paper money by the Government, and also the coinage of silver and nickel without special enactment by Congress, should cease from that time, as it was intended that gold coins and gold certificates should take the place of silver and uncovered paper. There were 12,000,000 bolivars in silver in circulation, and the silver has since been kept practically on a par with gold. The Bank of Venezuela, with 12,000,000 bolivars capital, obtained in 1897 the right to collect and disburse the revenue for five years, receiving 2 per cent. commission on all collections and payments, and was allowed 8 per cent. interest on public securities to which it agreed to make up to 6,000,000 bolivars. At the same date a charter was granted to the Bolivar Bank, a new bank of issue, with 20,000,000 bolivars capital, which obtained the administration of the
salt deposits, receiving 10 per cent. of the net revenue, and agreed to extend credit to the Government likewise to the extent of 6,000,000 bolivars at 8 per cent. interest, and also to lend 10,000,000 bolivars to cattle breeders and farmers.

The Army and Navy.—The permanent army consists of 5,000 men, distributed in garrisons throughout the country. The militia, in which every man is enrolled between the ages of eighteen and forty-six, numbers about 230,000 men. The fleet consists of 3 unarmed steamers and several small gunboats.

Commerce.—The principal exportable product is coffee, of which 13,808 tons were shipped from the port of Maracaibo in 1898, 13,024 tons from Puerto Cabello, 26,495 tons from Camarabamba, and 119 tons from Ciudad Bolivar; of cacao, 5,290 tons from La Guayra, 326 tons from Puerto Cabello, 130 tons from Maracaibo, and 41 tons from Ciudad Bolivar. The export of hides and skins was 3,454 tons; of rubber, 580 tons; of quina bark, 15,004 kilogrammes. Sugar, copaliba, longa bestial, ilita, and fish products are also exported. The export of gold bars was 1,218 kilogrammes. The chief imports are provisions, dry goods, hardware, coal, keroseen, timber, cement, and machinery.

Navigation.—The number of vessels that visited La Guayra in 1898 was 392, of 473,104 tons; Ciudad Bolivar, 120, of 44,988 tons; Puerto Cabello, 132, of 218,788 tons; Maracaibo, 302, of 29,220 tons. The merchant fleet of Venezuela consisted of 11 steamers, of 2,185 tons, and 17 sailing vessels, of 2,760 tons.

Railroads and Telegraphs.—There were 529 miles of railroads in operation in 1898. A contract was made in 1899 for the construction of a line from Puerto Cabello to Yaritagua. Contracts were made in 1896 for branch railroads and for steamboat service on the Lake of Valencia.

The length of telegraph lines in operation in 1898 was 3,882 miles.

Political Affairs.—Financial and political internal complications and difficulties kept Venezuela in a state of unrest in 1900 and disturbed commerce. In January the Government had a quarrel with the directors of the Bank of Caracas and the Bank of Venezuela because they refused to advance money, and the officers of these banks were ordered by the minister of finance, who is one of the foreigners, were arrested. The Opposition party made trouble for the Government in several of the states, but in July peace was officially proclaimed and political prisoners were set at liberty. On July 30 a new Cabinet was appointed, as follows: Minister of the Interior, Dr. Rafael Cabrera Malo; Minister of Foreign Affairs, Dr. Eduardo Blanco; Minister of War, P. de Sciolla; Minister of Finance, Tello Mendoza; Minister of Public Works, Juan Otañez; Minister of Public Instruction, Dr. Felix Quintero; Minister of Commerce, Ramon Ayala. A dispute arose later between the Government and an American company regarding the limits of the latter's concession.

VERMONT. — A New England State, admitted to the Union March 4, 1791; area, 9,556 square miles. The population, according to each decennial census, was 154,465 in 1800; 217,855 in 1810; 235,966 in 1820; 280,632 in 1830; 281,948 in 1840; 314,120 in 1850; 315,098 in 1860; 350,511 in 1870; 352,286 in 1880; 352,422 in 1890; and 343,641 in 1900. The capital of the State is Montpelier.

Government.—The following were the State officers in 1900: Governor, Edward C. Smith; Lieutenant Governor, Henry C. Bates; Secretary of State, Frederic A. Howland; Treasurer, John L. Bacon; Auditor, Orion M. Barber; Adjutant General, T. S. Peck, resigned, and succeeded, Oct. 1, by W. H. Gilmore; Railroad Commissioners, Messrs. Foster, Miller, and Watson; Superintendent of Education, Mason S. Stone; Fish and Game Commissioner, John W. Tictcomb; Highways Commissioner, W. B. Viall; Inspector of Finance, F. S. Platt; Chief Justice of the Supreme Court, Russell S. Taft; Associate Justices, Loveland Munson, John W. Rowell, John H. Watson, H. R. Start, L. H. Thompson, James M. Tyler; Clerk, M. E. Smilie. All are Republicans.

State officers are elected biennially, in September of the even-numbered years. The Legislature meets biennially in October of the same years. There are 30 Senators and 245 Representatives.

The town system of representation is still maintained.

Population.—The population of the State by counties in 1900 was as follows: Addison, 21,912; Bennington, 21,765; Caledonia, 24,381; Chittenden, 39,665; Essex, 8,858; Franklin, 30,195; Grand Isle, 4,492; Lamoille, 6,266; Orleans, 12,913; Washington, 19,130; Vermont, 26,495; Windham, 26,660; Windsor, 32,225. Addison, Essex, Lamoille, Orange, and Orleans lose in numbers. The largest gain is in Washington County, from 29,066 to 36,607, an increase of 7,541, or about 24 per cent. The next in order are Grand Isle, with 19,130; Essex, 18,119; Rutland, 11,499; St. Albans, 6,239; St. Johnsbury, 5,666; Springfield, 2,040; Winooski, 3,783. Finances.—The financial condition of the State on June 30, 1900, was as follows: Resources—cash on hand and in banks, $117,101.29; due from towns, State tax, $4,412.75; corpora- tion taxes, $1,305.00; special receipts, $3,813.00; other amounts, $14,383.26; due to towns United States deposit, $8,312.18; due to towns for school and highway taxes, $171,991.08; Auditor's orders unpaid, $13,971.54; total, $208,655.36. This left available for the fiscal year from July 1, 1900, to June 30, 1901, $332,915.98.

The receipts for the two years ending on that date were: Cash on hand and in banks, June 30, 1898, $137,431.76; tax, collateral inheritance, $39,988.89; tax, corporation, $341,633.47; tax, State, $355,972.50; from all other sources, $255,673.59; total, $1,630,702.21. The disbursements were: Paid soldiers, State and allotted pay, $32,438.55; paid delinquent, Legislature, $57,844.20; paid balance temporary loans, $145,000; paid interest, $49,930; paid Auditor's orders, $1,225,328.26; balance cash on hand and in banks, $117,101.29; total, $1,630,702.21. Besides a small amount paid on Auditor's orders as given above, there were orders outstanding and unpaid to the amount of $13,971.54. So that all the orders drawn for State expenses for the biennial term amount to the sum of $1,242,299.80.

The Auditor reports that the net amount of
State expenses for which orders were drawn for the biennial term was $1,098,553.77, of which the following is a summary: Administration of justice, $39,000; educational, 112,542.88; state judiciary, $40,017.98; fish and game, $8,770.94; insane, $259,578.98; legislative expense, $69,104.23; libraries, $10,514.07; Maple Sugar Makers' Association, $1,000; military, $30,926.60; motilities under liquor law, $41,25; wuxious animals, $2,957.50; penal, $82,102.26; pensions, $450; public health, $22,431.09; printing, $18,476.45; Railroad commissioners, $6,315.13; graduates' claims under No. 86, 1898, $11,132.02; Soldiers' Home and deceased veterans, $23,207.25; special appropriations, 1898, $19,627.39; special commissions, $3,592.22; total, $1,098,553.77.

Adding to this sum what the Treasurer has paid by authority of law, without orders from the Auditor, it appears that the State expenses for the biennial term were nearly $1,130,000.

Education.—Among the statistics given by the superintendent in August were the following: Total inmates, 14,555; cost per pupil of total expenditure, $16.28; current expenses, $873,397.03; cost per pupil of current expenses, $13.24; number of children between five and twenty-one years, 90,648; number in attendance, 65,904; number of male teachers, 510; number of female teachers, 3,232; number of Vermont normal school graduates, 632; number of college graduates, 201.

The Insane.—There were 551 patients at the Insane Asylum, Waterbury, at the close of the year, 51 in excess of its normal capacity. The cost per capita each week was $3.50. Private patients paid $5,623 during the year. At the Brattleboro Insane Asylum 827 were cared for at a weekly cost of $3.75 each. This institution has accommodations for 350.

Railroads.—The seventh biennial report of the Railroad Commissioners covers the term ending July 1. Many and great improvements have been made in the condition of the trunk line railroads during the past two years. Nearly all of the old grade rail have been substituted for old and lighter weight rails; iron bridges of increased carrying capacity have replaced most of the old wooden ones and some of the iron bridges of lesser strength; passenger depots have been rebuilt or repaired; and the roadbeds have been greatly improved and filled with large amounts of ballast and renewals of ties. The Central Vermont Company has expended more than $425,000 upon its system since it took possession of the property, May 1, 1899. Large expenditures have also been made for permanent improvements on the lines of the Boston and Maine and the Rutland Railroad in the course of the past two years, and large amounts of money by railroad companies to insure safety, expedition, and comfort to passenger traffic, and quick shipments of freight traffic, the average receipts per passenger per mile and the average receipts per ton per mile by the railroad companies of the State have gradually decreased during the past ten years.

The electric railways have 64.91 miles of main line and 0.07 of branches and spurs. The number of fatal accidents reported is 41; accidents not fatal, 45. Twelve of the 19 companies reporting have paid dividends for the fiscal years 1897-98 and 1898-99, and 4 that did not pay a dividend showed a surplus from operation; the others showed deficits.

Highways.—The first annual report of the Commissioner of Highways shows that in 1900 the total mileage of the highways was 14,825 miles, and 124 miles of permanent roadway was built at a cost of $101,331.54, and the State paid $57,257.17 of the expense.

Insurance.—The cost of State supervision of insurance was $4,261.42 for the year ending June 30, 1900. The National Life Company, of Montpelier, celebrated its semicentennial in July. During the year this company wrote new insurance to the amount of $1,065,615; and at the end of the year had outstanding insurance to the amount of $3,511,170.

The Vermont Mutual Fire Insurance Company, in its seventy-third annual report, shows that the company has increased its surplus in the last fiscal year from $88,987.43 to $89,912.21. The number of lives insured during the year was 5,49, insuring property to the amount of $17,080,702; premium notes taken, $1,308,345; making the whole amount of premium notes in force Aug. 1, 1900, $4,280,641, and the aggregate amount at risk $34,314,496. The assessment is 4 per cent., a rate that has been maintained since and including 1897. The outstanding policies of the State Inspector of Finance finds that there are 22 savings banks and 19 trust companies. Their united deposits are $38,000,000, a gain during the year of $1,763,644. The number of depositors is 118,334, of whom 103,799 are residents of the State, or almost 1 in 3 of the whole population in Vermont. The nonresident depositors number 14,555, with deposits of $6,421,506. The average credit to each depositor is $323.52.

The doors of the Merchants' National Bank, Rutland, were closed March 26 in consequence of the defalcation of the cashier, C. W. Mussey, for about $150,000. The shortages had been adroitly concealed so as to deceive not only the customers but the general public, who was not aware of the shortage until the accounts, 2 bank examiners, all experts, who have examined the bank within a year. The cashier was tried and sentenced to seven years in the House of Correction at Rutland. In his confession he implicated the proprietor of a music store in Rutland, whose trial did not take place before July 1900.

About April 15 a shortage of $23,000 was discovered in the funds of the Waterbury National Bank. The missing funds, it was found, had been lost by the teller, J. C. Farrar, in stock speculations. His sentence was six years. The capital of the bank was not impaired.

Cattle.—The annual report of the Cattle Commission, 72,893 cattle were tested for tuberculosis during the year, and of that number 2,903 were killed. The total amount paid owners for cattle killed was $36,902.25.

Legislative Session.—The General Assembly met Oct. 4, and adjourned Nov. 27. Fletcher D. Potter, Woodstock, was elected Speaker of the House. An election was held to fill the vacancy caused by the death of United States Senator Morrill. It had been temporarily filled by the appointment of Hon. Jonathan Ross, who was a candidate for election by the Legislature. The other Republican candidates were ex-Gov. William P. Dillingham, Hon. W. W. Grout, and Charles A. Prouty. Soph¬era Hazleton was the choice of the Democrats. The choice was made on the third ballot; Mr. Prouty had withdrawn; the Democratic members transferred their votes to Mr. Dillingham, and he was elected by a vote of 162 out of 270.

The Constitution permits constitutional amendment by the General Assembly when the concurrence of two or three persons shall be obtained. This was one of the years. Four were proposed. One of them was to do away with this restriction and allow amendments to be offered at any regular
session, beginning with 1904. This was rejected. Another was to change the time of holding the State election from September to November, and the date of meeting of the General Assembly from October to January; this also was defeated. A third was to divide the State into 30 senatorial districts, according to population, and this failed. The fourth proposed amendment is to authorize the Legislature to provide by law for filling vacancies in the offices of State Senator and Representative. This was passed; but to become effective it must pass the Legislature of 1902 and be adopted at the polls.

The important question of the year was that of substituting high license or local option for the prohibitory law. Numerous petitions for each side were presented in the House and bills were introduced. It was proposed to refer to the vote of the electors the plan of substituting local option for the present law, but this was defeated, and no changes were made. The defeat of the bill is explained by a newspaper favoring the license system in the following paragraph:

"The truth is that the majority of our lawmakers were opposed to the license idea, and no amount of burnishing would make it acceptable to them. They looked on license as evil and unwise, and if necessary were willing to stand between it and the possible desires of a majority of voters in favor of it."

The appropriations provided for expenditures amounting to $1,510,000. The salaries of members amounted to $47,025. The State tax was fixed at 15 cents, and the State school tax at 10 cents.

A bill amending the charter of the Vermont Central Railway in regard to the road tax the company must pay, having the effect to include claims for grain destroyed in the Ogdensburg elevator fire, was vetoed by the Governor, but was passed again by a vote of 163 to 5 in the House and 21 to 5 in the Senate.

A bill to establish a forestry commission to take charge of park lands that may be deeded to the State was amended by authorizing the Governor and the Secretary of State to take charge of such lands.

A proposal to grant municipal suffrage to tax-paying women was lost in the Senate by a narrow margin.

An old statute requiring that any one running a steam vehicle on a public road shall send a messenger a half mile ahead to give warning of its approach, in order to prevent accidents, was repealed.

The preceding Legislature made provision for the appointment of a committee to investigate the matter of double taxation, and its report was presented this year. It showed the negligence or collusion of appraisers in listing property for taxation, and detailed some of the schemes resorted to for evading taxation.

A bill was passed to prevent fraudulent concealment of property from taxation, and another authorizing the State Commissioner of Taxes to investigate the present system of taxing corporations and report with recommendations to the next Legislature.

The Senate passed a bill to abolish capital punishment, but the House refused it a third reading by a vote of 118 to 107.

Among the measures were the following joint resolutions:

Asking Congress to take some recognition of the distinguished services of Capt. Charles E. Clark of the United States battle ship Oregon during the Spanish-American War.

Providing for a portrait of Capt. Clark for the State.

Providing that the week beginning with the third Sunday in August each year be known as "Old Home Week."

Providing for a portrait of Gen. Emerson H. Liscum to be placed in the State Capitol.

A special committee was appointed on the erection of a memorial tablet marking the birthplace of President Chester A. Arthur.

Other measures were:

Reorganizing the militia and consolidating the offices of quartermaster general and adjutant general.

Prohibiting the selling or giving of cigarettes to minors.

To prevent imitations of dairy products.

Providing for traveling libraries.

To protect gray squirrels.

Allowing women to act as notaries public.

Permitting appointment of women to certain town offices (treasurer, superintendent, librarian).

Giving physicians the right to quarantine infectious diseases.

Establishing a State laboratory.

Providing for geological work.

Appropriating $13,951 for repairs at Waterbury Asylum and $4,000 for Brattleboro Retreat.

Removing the words "or mentally" from the act allowing a voter to be assisted if he is physically or mentally unfit to prepare his ballot.

The Legislature elected Hamilton S. Peck Judge Advocate General and W. H. Gilmore for the combined offices of Adjutant General and Quartermaster General, and the Senate confirmed the Governor's nominations of J. O. Sanford to be State Highways Commissioner and E. Cushman State Tax Commissioner. Dr. W. J. Huntingdon was made Surgeon General, and Charles J. Bell, Ernest Hitchcock, and George Atten were made members of the Board of Agriculture.

Political.—The State election took place Sept. 4. Tickets were put out by 4 parties.

The Republican party held two conventions, the first, April 18, in Burlington, to choose delegates to the national convention. They were not instructed for President McKinley, but his administration was approved. In regard to the island possessions the resolutions said: "We unhesitatingly proclaim our conviction that from over no inch of this newly acquired territory, where the Stars and Stripes have floated, carrying their promise of enlightenment and freedom, should that flag be lowered or that promise be withdrawn."

The second Republican convention met in Montpelier June 27, and named the following candidates: For Governor, William W. Stickney; Lieutenant Governor, Martin F. Allen; Treasurer, John L. Bacon; Secretary of State, Fred A. Howland; Auditor of Accounts, Orion M. Barber; Presidential Electors, Truman C. Fletcher, Horace F. Graham, George E. Fisher, Fred G. Fleetwood.

William W. Stickney,
Governor of Vermont.
The platform contained no definite declarations on State issues. The Democratic convention met in Montpelier June 4, elected delegates to the national convention, and made nominations for State officers and presidential electors. The resolutions contained the following declarations:

"We demand a tariff for revenue only, to take the place of the present Dungky tariff; denounce the creation of corporate trusts; demand the untouc

ent enforcement of all antitrust laws; reiterate our faith in the larger benefits to be derived from bimetallism as compared with monometallism; demand the restoration of silver to its original and natural place as a redemption currency, and induct the principles of the Chieago platform of 1892.

"We favor home rule for the Filipinos under the protection of the United States; we demand absolute free trade between Porto Rico and all parts of the United States; the independence of Cuba; no subject peoples; no colonial dependences.

we express our cordial sympathy with the cause of the Boers; we favor an income tax; the election of United States Senators by direct vote of the people; the immediate construction of the Nicaragua Canal under the control and protection of the United States."

The ticket follows: For Governor, John H. Senter; Lieutenant Governor, O. Harris; Secretary of State, II. O. Cummings; State Treasurer, Elisha May; Auditor, C. A. Fitzpatrick.

The Prohibition ticket was: For Governor, Henry C. Barnes; Lieutenant Governor, Charles B. Wilson; Treasurer, Lucien C. Kimball; Secretary of State, Feniimore H. Shepard; Auditor, Frederick H. C. Corrigan.

The Social Democratic party made the following nominations: For Governor, James Pirie; Lieutenant Governor, C. H. Barber; Secretary of State, John McMillan.

The Republican candidates were elected, the vote standing: Stickney, 48,441; Senter, 17,129; Barnes, 9,360; Pirie, 5,567. There are 30 Republicans in the Senate, 40 in the House of Representatives, and 1 Independent in the House. The election was affected to some extent by the question that was to come before the Legislature of establishing local option for the prohibition law. There were but 42 Democrats in the preceding Legislature. At their election the presidential vote was: McKinley, 42,568; Bryan, 28,549; Wool- ley, 3,689; Barker, 307; scattering, 64.

VICTORIA, Queen of Great Britain and Empress of India, born in the palace of Kensington, May 24, 1819; died in Osborne House, Isle of Wight, Jan. 22, 1901. Her father was Edward, Duke of Kent, fourth son of George III, and her mother was Princess Maria Louisa of Saxe-Coburg-Gotha, whose first husband was Prince Charles of Leiningen. At the time of the birth of the Princess Victoria two sons of George III, older than the Duke of Kent, were still living—the Duke of York, then Prince Regent and afterward George IV, and the Duke of Clarence, who became William IV. William IV had had two daughters, both of whom died in infancy, so that Victoria's father, had he lived, would have succeeded to the throne at the death of William IV.

The princess was christened Alexandrina Victoria at Kensington Palace, June 24, and in January of the following year the Duke of Kent died.

The princess was educated under the supervision of the Duchess of Kent and Baroness Lehzen, who had gone to England as governess to Princess Fred- orel of Leiningen, half-sister of Victoria, and who became private governess to the Princess Victoria when the latter was five years of age. Up to her fifteenth birthday the princess was educated under English masters; Rev. George Davys, whom she made Bishop of Peterborough after her acces- sion, taught her Latin; her mistress in music was Mr. J. B. Sale; in history, Mr. Westall; in peman- ship, Mr. Thomas Seward, writing master of the King's School. When King George III died, in 1830, and was succeeded by his brother Wil- liam, Duke of Clarence, whose wife was Princess Adelaide of Saxe-Meiningen, the Princess Victoria was recognized as heir to the throne. During his reign there was great bitterness of feeling between the King and the Duchess of Kent, the chief cause of which was the refusal of the latter to let her daughter to pass a part of the year at court. In May, 1837, when the Princess Victoria became of age, the King determined to settle upon her an allowance of £10,000 a year, of which she should have absolute control, although the Duchess of Kent desired to be appointed her daughter's guardian. On July 27, 1840, the Prince of Wales, however, was made to make the settlement, as he died on May 20.

Immediately on the death of the King, the Archbishop of Canterbury, the Marquis of Conyngham, and Dr. Howley set out for Kensington, which they reached at 5 A.M., and announced to the Princess Victoria the death of the King.

The Privy Council assembled at Kensington at 11 o'clock, and the usual oaths were administered to the Queen by Lord Chancellor Cottomham, after which all present did homage. By the death of William IV his brother, the Duke of Cumberland, became King of Hanover, a throne to which Victoria could not succeed because in that state the Salic law prevailed. The public proclamation of the Queen was placed on the doors of the Palace. The Queen opened her first Parliament in person, and, before the close of the year a civil list bill was passed settling £385,000 a year on her Majesty. There was also passed a bill to increase by £30,000 the income of the Duke of Kent.

The coronation of the Queen took place June 28, 1838, in Westminster Abbey, and the Queen was married to Prince Albert. The day was spent by the Queen in the Abbey, and the Carriage from Buckingham Palace to Westminster Abbey in the state coach. After her entrance there the Archbishop of Canterbury made the presentation of the Queen to her subjects; after prayers and a sermon by the Bishop of London, her Majesty stood on the altar, and with her hand on the Bible took the oath, afterward kissing the book, then, seated in the chair to the right of the mystic stone of Scene, she was anointed with holy oil, presented with swords and spurs, invested in the imperial robe, and handed the scepter, the orb, and the royal ring; then the Archbishop of Can- terbury took the crown from the altar and placed it on her head, and the Lord Mayor and the alder- menes donned their coronets, and a deepening acclamation of "God save the Queen" arose, to be repeated again and again, while the organ pealed
forth the national anthem. When the tumult had subsided trains of peers ascended the steps of the throne to do their homage—first touching the crown with the right hand, then bending and kissing the Queen's hand.

Within a year the court was brought into sudden disfavor with the country by the political crisis known as the Bedfordshire Plot. In May, 1839, the Whig ministry had a majority of only five in the House of Commons upon a proposal to suspend the Constitution of Jamaica, and therefore it resigned. The Duke of Wellington declined the premiership, but recommended Sir Robert Peel, who undertook the task of forming an administration. This was not without a difficulty for the solution of which there was no precedent. The whole theory of the parliamentary responsibility of the ministry had been developed since the time of Queen Anne. Peel stipulated, on forming his Cabinet, that the mistress of the robes and the ladies of the household should be exempt from the approval by the Whig administration should be removed; but to this the Queen would not consent, and she wrote curtly that the course proposed by Sir Robert Peel was contrary to usage and repugnant to her feelings; the Tory leader then had to inform the House of Commons that, having failed to obtain the proof which was necessary for its confidence, the ministry was impossible for him to accept office. The Whig ministry under Lord Melbourne was recalled, and the Premier declared by resolution in Cabinet that the offices held by ladies in her Majesty's household should be exempt from political changes. The Queen acknowledged later that she had been in their interests and in her own, and rejoiced when the Tories again formed the ministry.

It had been arranged even in the Queen's infancy, by the Duchess of Kent and her two brothers—Leopold, whose first wife was the Princess Charlotte of Wales, daughter of George IV., who died in 1817, and who became King of the Belgians in 1831, and the Duke of Saxe-Coburg-Gotha—that Victoria should marry Prince Albert, younger son of the latter, who was born in the same year as the Queen. Although the arrangement was fully understood and acquiesced in by Queen Victoria and Prince Albert, the Queen wrote to King Leopold in 1839 that she did not wish to marry a foreign prince. A few months later Prince Albert, with his brother, Prince Ernest, arrived in England, and during his visit to Windsor Castle the Queen offered him her hand. On Nov. 23, after the return of the prince to his home, the Queen announced to the Privy Council her intended marriage with her cousin. Baron Stockmar was sent to England in January, 1840, as representative of the young Albert of Saxe-Coburg, to make a treaty of marriage and to make arrangements for the prince's future household. But now the court's quarrel with the Tories in 1839 brought disagreeable consequences. The Queen's announcement of her betrothal was made in the House of Lords on Jan. 16 before a brilliant assemblage of the most eminent men in England, and it was received officially. When the Government proposed that Prince Albert should receive an annuity of £50,000 they sustained a severe defeat. An amendment moved by Mr. Hume for reducing the allowance to £21,000 was negatived; but the amendment of Col. Sibthorp—a politician no gentleman, but a debater, and it was £30,000 was carried against the ministers by 262 votes to 158, the Tories and Radicals going into the same lobby and many ministerialists taking no part in the division. All this mortified Prince Albert exceedingly and gave him a poor idea of the welcome that awaited him in England. Parliament also withheld the title of Prince Consort until 1857, and this left the rank of Prince Albert uncertain and led to many disputes and mortifications not only in England, but during the royal visits to the Continental courts.

The Queen's marriage was solemnized on Feb. 10, 1840, in the Chapel Royal, St. James's. The one regret of the London people was that a ceremony so fair did not take place in Westminster Abbey; for Holbein's small chapel in St. James's was ill suited for a great display. However, all that was seen or heard of the wedding pleased the people.

During the Queen's reign several attempts were made on her life. The first was by Edward Oxford, who fired at the Queen as she was driving with Prince Albert up Constitution Hill in an open carriage; the second attempt was that of John Francis in 1842, at about the same place, and was followed about a month later by that of a lunatic who threw a burning stick at the Queen as she was passing from Buckingham Palace to the Chapel Royal; in 1882 Robert Maclean fired as the Queen was leaving the station at Windsor, and there were other so-called attacks made with unloaded pistols.

Queen Victoria had nine children—four sons and five daughters. Namely, Victoria Adelaide, Princess Royal, born Nov. 21, 1840, who married in 1858 the Crown Prince Frederick of Prussia, afterward Emperor of Germany; Albert Edward, Prince of Wales, born Nov. 9, 1841, married in 1863 to Princess Alexandra of Denmark; Alice Maud Mary, born April 25, 1843, who was married in 1862 to Louis Napoleon, born Dec. 24, 1810, and married in 1878; Alfred, Duke of Saxe-Coburg-Gotha, Duke of Edinburgh, born Aug. 6, 1844, married in 1874 the Grand Duchess Marie, daughter of Alexander II., Emperor of Russia, died in 1900; Helena, Princess Christian, born May 25, 1846, married in 1866 Prince Frederick Christian of Schleswig-Holstein; Louise, born March 18, 1848, married the Marquis of Lorne in 1871; Arthur, Duke of Connaught, born May 1, 1850, married Princess Louise of Prussia in 1879; Leopold, Duke of Albany, born April 7, 1853, married in 1882 Princess Helena of Waldeck-Pyrmont, died in 1884; and Beatrice, born April 14, 1857, married Prince Henry of Battenberg in 1885.

The residences most used by the Queen were Buckingham Palace, Windsor, Palace, both belonging to the sovereign, and Osborne House, Isle of Wight, purchased by the Queen, who took possession of it in 1843, and Balmoral, in the Scottish Highlands, also purchased by the Queen from the Earl of Aberdeen in 1848.

In March, 1861, the Queen's mother, the Duchess of Kent, died, and in November of the same year the Prince Consort died. Throughout England the death of the Prince was wholly unexpected, and the news caused great surprise and grief. The Prince was buried in the mausoleum at Frogmore, which the Queen had built.

The Prince of Wales's marriage was solemnized at Windsor on March 10, 1863. The public entry of the bride-elect into London on March 7 was a sight which afforded a remarkable display of loyalty and enthusiasm. The Queen witnessed the wedding from the private pew or box of St. George's Chapel, Windsor, and the amount of deep mourning which she was never wholly to put off to the end of her life, and she took no part in the festivities of the wedding. In January, 1864, a son was born to the Prince of Wales, and was christened Albert Victor after both his grandparents. In 1867 the Queen published The Early Days of
the Prince Consort, and in 1869 her diary, Leaves from the Journal of our Life in the Highlands, of Queen Victoria, was published in 1883.

On Feb. 17, 1876, Disraeli introduced in the House of Commons a bill to authorize the Queen to take, in addition to her other titles, that of Empress of India. The proposition was received with disfavor by the Liberals, and excited general disapproval among press and people. It was the subject of long and fierce debates in the house, but was insisted upon and carried through by the ministry. The bill passed the House of Commons March 23, the House of Lords April 7, and received the royal assent April 27, and on April 28 the Queen issued a proclamation assuming her new title. At the time of the passage of the bill in the Commons the Government made pledges that the new title should be used only with regard to Indian affairs.

In 1878 the death of the Princess Alice took place: in 1888 those of the German Emperors William I and Frederick III; in 1884 that of Leopold, Duke of Albany, youngest son of the Queen; in 1886 that of Prince Albert of Hesse, son of Prince Charles and Avondale, eldest son of the Prince and Princess of Wales; in 1896 that of Prince Henry of Battenberg, husband of the Queen's youngest daughter, who died on board the ship Blonde near the West African coast, whither he had accompanied an expedition against the King of Ashanti. In June, 1888, the Duke of Edinburgh, second son of the Queen, Prince of Saxe-Coburg, died; in 1900 his father, the Duke of Edinburgh, second son of the Queen, and Prince Christian Victor, son of Princess Christian.

On the occasion of the coming of age of the Queen's sons and the marriages of her daughters Princess Alice was in receipt of a grant of $40,000, in addition to the revenues of the duchy of Cornwall, had £40,000 a year, the Princess £10,000, and an addition of £30,000 a year for their children was granted by Parliament in 1889. The princess royal received a dowry of £40,000 and £80,000 a year for life; the younger daughters £20,000 and £60,000 a year. The Dukes of Edinburgh, Connaught, and Albany were each voted an income of £15,000 and £10,000 on marrying. All these grants were voted under the conditions of the general financial settlement accepted by Parliament at the beginning of the Queen's reign, according to which certain Crown lands were given to the nation.

June 20, 1887, was the fiftieth anniversary of the coronation of Queen Victoria, and the country threw itself into the celebration with enthusiasm; large sums of money were everywhere subscribed; in every city, town, and village something was done both in the way of rejoicing and in the way of establishing some permanent memorial of the event. In London the day itself was kept by a solemn service in Westminster Abbey to which the Queen went in state, surrounded by the most brilliant royal and princely escort that had ever accompanied a British sovereign, and cheered on her way by the applause of hundreds of thousands of her subjects. Around her carriage rode her sons and sons-in-law, and some of her grandsons, conspicuous among them being the noble figure of the ill-fated crown prince, afterward the Emperor Frederick, with his son, the present German Emperor. Waiting to receive her Majesty in the Abbey were the ambassadors and ministers of all nations, the peers, and the members of the House of Commons, the judges, the distinguished officers of both services, and a multitude of all that is eminent in every branch of the national life, while grouped together and gazed upon by every eye stood a representative body of the Indian princes. Other ceremonies connected with the celebration of the jubilee were the opening of the People's Palace on May 14, a review of volunteers on July 2 at Buckingham Palace, the laying of the foundation stone of the Imperial Institute on July 4, a review of 58,000 troops at Aldershot on June 9, and on the 23rd a review of a troop of troops at Spithead, in which 135 vessels of war were gathered together, including 26 armored and 9 unarmored ships, 38 first-class torpedo boats, the same number of gunboats, and 12 troop ships.

In September, 1896, the reign had reached a point at which it exceeded in length that of any other British sovereign; but her special request all public celebrations of the fact were deferred until the following June, which marked the completion of sixty years from her accession. The prime ministers of all the self-governing colonies, with their families, were invited to come to London as the guests of the country to take part in the jubilee procession; and, at the same time the place of her long absence of soldiers of the British colony and dependency were brought home. The programme of the procession was quite different from that of 1887. In the latter case the Queen had driven from the palace to Westminster Abbey, surrounded by the princes of her family; lead there taken part in a service which was almost a repetition of the ceremony of her coronation, and had quickly returned home. On the present occasion her purpose, as officially announced, was "to see her people and personally to receive their congratulations"; and with this intention the route chosen was three times as long, and three times as many persons were thus enabled to offer her greetings. One of the most significant things of that day was from Buckingham Palace, along Constitution Hill, Piccadilly, St. James's Street, Pall Mall, and the Strand to St. Paul's Cathedral, where the procession halted while a short service was held on the steps, the Queen not leaving her carriage on account of her lameness. Thence she proceeded to the Mansion House where she received an address, and then—the great novelty of the day—crossed London Bridge, traversed south London amid crowds as great and enthusiastic as those which thronged the West End, and returned home by way of Westminster Bridge and St. James's Park. Some time later the Queen gave a garden party at Buckingham Palace, and held numerous receptions at Windsor, including a reception of the commonwealth and that of the members of the House of Commons and their wives. The Queen herself held a great review at Aldershot; but a much more significant display was the review by the Prince of Wales in her behalf of the fleet at Spithead on Saturday, June 20.

In May of that year the Queen performed what proved to be her last ceremonial function in London, the laying of the foundation stone of the buildings that were to complete the museum—to be called the Victoria and Albert Museum—which had been planned forty years before by the Prince Consort, and one week later she celebrated her eightieth birthday. In the spring she visited Dublin where she spent four weeks at the vice-regal lodge. The following autumn her health began to fail, but she continued her usual occupations, and before Christmas journeyed to Osborne, where she died Jan. 22, 1901. The first portion of the ceremonies in connection with the funeral took place on Friday, April 19. On the day following she arrived at Osborne and placed on board the royal yacht Albert, which conveyed them across the Solent to Portsmouth harbor. The coffin was carried
of the house by Highlanders and bluejackets, and placed on a gun carriage adapted as a funeral car. The yacht left East Cowes a few minutes before 3 p.m., and proceeded through a long avenue of saluting war vessels, British and foreign, followed by the Victoria and Albert with the royal monogram on board, and other vessels. The Alberta arrived in Portsmouth harbor shortly before 5 p.m. The members of both houses of Parliament were on board the liners Scot and Dunvegan Castle, which took up positions between some of the war ships. On Saturday, after a short service on board the Alberta, the coffin was carried from the yacht to the church by a pass of horses and men at 11 o'clock. The procession moved by way of Buckingham Palace Road, the Mall, St. James' Street, Piccadilly, Hyde Park from Apsley Gate to the Marble Arch, Edgware Road, and London Street to Paddington station. The route for the whole distance was lined by 33,000 regular troops and 12,000 marine recruits, the artillery horses proving unmanageable—to St. George's Chapel, where the funeral service was conducted by the Archbishop of Canterbury and the Bishop of Winchester, and at its close Norroy, deputy to Garter king-of-arms, proclaimed the death of Queen Victoria and the accession of King Edward VII. The procession then proceeded from the church to the Palace of Westminster, Kew Palace, and other palaces in London, and was accompanied by a large array of ambassadors and other representatives of foreign powers. The march past occupied nearly an hour. At Padding-
ton the coffin was placed in a catafalque prepared for it in the late Queen's railway carriage. The train reached Windsor shortly after 2 p.m. The coffin was drawn by pack horses—according to a custom the Victorian nation in power and wealth, the spread of the empire, the advancement of the comforts and conveniences of life, and the achievements of British subjects in the arts, in science, in literature, as well as in vast schemes of business organisation. 

**Extent and Population of the Empire.** At the beginning of the reign the empire comprised 8,340,000 square miles and had a population of 108,000,000. At the close, the area had increased over 3,000,000 square miles—it was estimated in 1898 at 11,712,170 square miles—and the population had reached nearly 400,000,000. The United Kingdom alone had about 23,000,000 population in 1837, and in 1898 the number of inhabitants was estimated at 40,188,927. The population of England and Wales had more than doubled; that of Scotland has almost doubled; but Ireland has fallen from about 7,500,000 to about 4,500,000; the highest number was reached in 1813, when the population was 8,293,061. The population of Lon-
don, which was not more than 1,500,000 in 1837, was in 1898 4,504,766 in the registration district, and, including the whole of greater London, 8,408,321. The British Empire in India and the feudatory states extend over an area of over 1,800,000 square miles, and has a population of more than 287,000,000. The protectorates and spheres of influence in Africa and Asia cover about 2,240,000 square miles, and have a population of over 36,000,000. The various colonies on continents and islands including Australia, parts of Borné and New Guinea, New Zealand and other neighboring islands, a vastly extended region in India, and a large part of South Africa, with territories on the eastern and western coasts of that continent, are included in the empire. Brit-
ish North America has been enlarged by the southwestern corner and by the islands discov-
ered by John Ross and Bruce. Growth in Revenues and Military Strength. The public revenues of the United Kingdom have more than doubled during the period under review. The receipts for the year ending March 31, 1898, were £106,614,004, about 83 per cent. of which was from taxation. The total strength of the armed forces of the Crown was 101,000: it is 920,000. The navy in 1837 consisted of less than 200 wooden sailing ships; at the present time it consists of more than 400 iron-built ships propelled by steam. 

**Prime Ministers.** When Victoria came to the throne a Whig ministry under Lord Melbourne had been in power for a year and a half; and in the first year of her reign the Whigs were in power in England and Scotland. The period in 1834-35, when Sir Robert Peel's first ministry was in office. The law then required that a new Parliament should be summoned at the accession of a sovereign; there was therefore a dissolution; the elections reduced the Whig majority, but did not radically alter the position of parties, and Lord Melbourne's administration con-

The Duke of Wellington was then in the House of Lords and wielded great influence as a Tory leader. Lord Brougham and Lord Lyndhurst were the leading debaters in that house. Benja-

**Victorian Reign, Events of the.** The reign of Queen Victoria, as it was the longest in English history, so also was it the most illustrious when judged by the great events that distinguish it, the progress of the nation in power, and wealth, the spread of the empire, the advancement in the comforts and conveniences of life, and the achievements of British subjects in the arts, in science, in literature, as well as in vast schemes of business organisation. 

**Extent and Population of the Empire.** At the beginning of the reign the empire comprised 8,340,000 square miles and had a population of 108,000,000. At the close, the area had increased over 3,000,000 square miles—it was estimated in 1898 at 11,712,170 square miles—and the popula-
went out of office in 1852, but resumed it as Earl Russell in 1865, to remain only about eight months, but in the time intervening between his two premierships he was in every Whig Cabinet. The Earl of Derby, who became Prime Minister as a Conservative in 1852, in 1858, and in 1866, remained in office each term but a short time. The Earl of Aberdeen was in the head of a coalition ministry from 1852 to 1855. Lord Palmerston's two Whig administrations were from 1855 to 1858 and from 1859 to 1865. Mr. Disraeli, who was Chancellor of the Exchequer under Lord Derby, succeeded him in February, 1868, but near the close of the year gave place to Mr. Gladstone, who had been a Conservative in 1852, a Whig in 1859, and now became Whig Premier again in 1874, but in 1880 the Government had become unpopular for many reasons; the wars in Afghanistan and in Zululand and the general state of financial depression, together with the Irish agitation, combined to turn the feeling against the party in power, and the Conservatives were the electors. The Liberals had a large majority. The Queen sent for Lord Hartington, and then for Lord Granville; but Mr. Gladstone was the only possibility. The rivalry of the two great party leaders, Mr. Disraeli and Mr. Gladstone, ended with the death of Mr. Disraeli, then Lord Beaconsfield, the following year. Mr. Gladstone was succeeded in the quinquennium of Salisbury in 1885, but began his third administration in February, 1886. In August of the same year Salisbury became Premier for the second time; his party was defeated in 1892 and Mr. Gladstone again became Prime Minister. He resigned in 1894, and Lord Rosebery, the Foreign Secretary in his Cabinet, took his place. In 1895 the party was defeated in Parliament, resigned, Parliament was dissolved, and the election resulted in favor of the Conservatives and Liberal Unionists against the home rulers; Lord Salisbury formed a Unionist Cabinet, and was still Prime Minister at the close of the reign.

The Canadian Rebellions.—One of the earliest events in Lower Canada was agitation in Canada in 1837. It began with discontent in Lower Canada, where grievances against the Government had been strongly felt for years. The Representative Assembly protested against the arbitrary conduct of the governors, illegal appropriation of public money, and the composition of the Legislative Council. A petition was presented to the electorate. The Governor issued warrants for the arrest of the leaders of the agitation, and resistance to the arrests led to the breaking out of the rebellion. There was some fighting and bloodshed, but the insurrection was speedily suppressed, though the discontent continued; and Upper Canada also had its grievances. The home Government felt the justice of the complaints, and Lord Durham was sent over to investigate and report on the best measures of reform, with the understanding that he was to have dictatorial powers. The bill which passed Parliament after his departure gave him much less power; he, however, continued to act as if endowed with full authority for reconstruction, in consequence of which he was recalled. But the wisdom of his report was acknowledged and its recommendations adopted. It laid down the lines for government of colonies, which were followed not only for Canada, but for other British colonies, and have proved to eminently successful, giving a large measure of local self-government. The internal affairs of the colony in the hands of the colonists themselves. His recommendation that the two provinces should be united was carried out in 1840, and the other reforms were gradually introduced. Lord Durham also recommended that provision be made for the admission of the remaining colonies of North America into federal union with the Canadas whenever their Legislatures should agree upon such union. In 1867 the plan was carried out by the formation of the federation as the Dominion of Canada, in which the North American provinces are united. In 1869 the charters of the Hudson Bay Company expired, and most of its territory was transferred to the Dominion for £300,000. Upon this a rebellion arose in the Red river country, led by Louis Riel, and troops were sent out under command of Col. Wolseley; but before his expedition could reach the Red river country (the Canadian Pacific Railroad did not then exist) the trouble was practically over owing to a promise of amnesty through Arelbish Bishop Taché.

The Rebecca Riots.—These are chiefly memorable for their odd name and the quaint reason for it. They were outbreaks during one of the early years against the toll charges on the roads in Wales, and took their name from a valley in Wales, where it was said to Rebecca, "Let thy seed possess the gate of those which hate them." The gate, according to the interpretation, was of course the toll gate, and mobs of men dressed as women gathered at night and destroyed the bars and tore up the roads. There was some bloodshed before the rioters were dispersed, and the resulting trial showed that there was reason in the complaints; the large toll charges pressed heavily on the poor people in the country districts; and measures were taken by which the wrongs were redressed.

The Repeal of the Corn Laws.—The grain-protection law, which was the cause of the anti-corn-law agitation that raged for several years, had been brought in favor of English agriculturists: it practically forbade the importation of foreign wheat till the price of the home-grown had risen to a certain high figure. Subsequently acts were passed establishing sliding scales by which the duty on imported grain was lowered in proportion as the price of the home-grown fell. Acts in favor of the manufacturing classes were opposed to this policy, while it was upheld by the landowners and farmers whose products were protected. An Anti-Corn-Law Association formed in London came to nothing, but free-trade principles began to gain adherents, and in 1858 the Manchester Chamber of Commerce sent a deputation to Parliament in favor of the repeal of the corn laws. Manchester now became the headquarters of a movement that spread rapidly in the manufacturing and commercial centers, where associations were formed. Charles Villiers was the nominal leader of the free-trade party in Parliament, but Richard Cobden and John Bright are the names most prominently associated with the movement and the principle of free trade. While the doctrine was making gradual progress the potato famine in Ireland, in 1845, brought matters to a sudden crisis. A demand arose throughout Ireland for the opening of the ports, and the ministry was denounced for not calling Parliament together to pass a measure of relief. Lord John Russell, leader of the Whig party, wrote a letter to his constituents about this time announcing his adherence to the principles of free trade. Sir Robert Peel, Prime Minister and leader of the Conservative party, was likewise converted to the views of the Anti-Corn-Law League. But his Cabinet was divided on the question, and he offered his resignation to the Queen, who sent for Lord John Russell; but the Whig leader found it impossible to form a ministry, and upon the Queen's request Sir Robert Peel withdrew his resignation; Lord Stanley, who
would not give up his opposition, left the Cabinet; Mr. Gladstone took his place as Secretary of State for the Colonies; and Parliament was summoned on July 11th, to consider the bill. Mean time the Protectionists were not inactive. They declined to believe in any prospective famine, and denounced the proposed measures as a blow at the agricultural interests. It was as a champion of their cause during the discussion of the corn importation bill that Mr. Disraeli made his first brilliant success in Parliament, though he had been a member for nine years; and from this time on he was recognized as a Tory leader. The bill was passed June 26, 1846.

The Chartist Agitation.—Chartism, which took its name from what was called the “People’s Charter,” arose about 1838, and was a source of great difficulty. The demands of the Chartists were the Reform—manhood suffrage, equal electoral districts, vote by ballot, annual Parliaments, payment of members, and abolition of the property qualification for representatives. These were noisy meetings and processions; there were riots at Newcastle, Birmingham, and Newport. A monster petition was brought in, signed, as it is said, by 1,250,000 signatures. In 1842 another petition with, as was alleged, 3,000,000 names, was brought to the Commons. Newspapers advocating the principles of chartism were established all over the country, and the general poverty and privation among the working classes helped to swell the ranks of the agitators. Feargus O’Connor, the leader of the movement, was returned for Nottingham at the general election of 1847. In 1848, encouraged or excited, perhaps, by the revolutionary movements on the Continent, the chartists planned a great demonstration. They were to form on Kennington Common and march in military order to Westminster. Their leader, O’Connor, was elected to Parliament, and give it one more opportunity to accede peaceably to the demands of the reformers. London was filled with apprehension at the prospect of hostile encounters and bloodshed. But the Duke of Wellington had taken great precautions for guarding the public buildings and protecting all persons and property. The leaders of the movement, as was said, were sworn in as special constables, one of whom was Prince Louis Napoleon, afterward the Emperor Napoleon III. Their services were not needed, however; the demonstration fell far short of what had been expected; the petition had not nearly so many signatures as had been claimed; the public were much more composed in large part of mere onlookers; the procession was not formed, for O’Connor insisted on obedience to the order of the authorities; and chartism died out. Some of the reforms it called for have since been effected.

Wars with the Afghans.—In 1839, England declared war on Dost Mohammed, ruler of Cabul, who had attacked her ally, Runjeet Singh. Shah Soojah-ol-Moolk had a hereditary claim to the throne, and England proposed to restore it to him. British troops were sent into the country in 1839, and in 1840 Dost Mohammed surrendered and Shah Soojah was installed. But Nov. 2, 1841, the greater part of the troops having been withdrawn, the Afghans in Cabul rose against the British and murdered their representatives. The natives attacked the English in their forts with success, Sir W. Macnaghten was in charge, and when the situation seemed hopeless he received a proposal from Akbar Khan, a son of Dost Mohammed, who led the Afghans, that they two should form a secret alliance, should combine against the other chiefs, and keep Shah Soojah on the throne as nominal ruler, with Akbar as his vizier. Unfortunately, the base proposal was listened to, and an agreement made to treat on these terms; but on the 5th, accompanied by three of his officers, the English negotiator went out to a conference with Akbar Khan and his company, he was treacherously slain, one of the three officers was killed, and the other two taken prisoners. Notwithstanding this, Gen. Elphinstone treated with the Afghans and accepted their terms, which were the withdrawal of the British from the country, leaving behind all their treasure and all their guns, but six, which were allowed them for their protection in their winter journey through the wild country that had to be traversed and amid the murderous savages that beset the way. It led through the great dark gorge known as the Koord pass, where 1,000 men, consisting of 4,000 fighting men, of whom a small proportion were Europeans; of camp followers there were about 12,000, including many women and children. Gen. Elphinstone and two other officers, with the women and children, were taken from the army on the march by Akbar Khan, to be kept as hostages. Of the remaining, the 16,000, only one came through alive—Dr. Brydon.

Gen. Sale, commander of the garrison at Jalalabad, refused to be bound by the terms of the forced treaty; he held his post against a siege by Akbar Khan, and when he was certain that re-enforcements were coming through the Khyber pass under Gen. Pollock, he went out to battle and defeated the besiegers. Other successes followed, and the whole of the hostages taken by Akbar Khan that were alive were released. Gen. Elphinstone had died. Lord Ellenborough, who had in the meantime become Governor General, issued a proclamation announcing that the British Government would make no further attempt to interfere with the Afghans in their choice of a sovereign. As the Afghans, however, had not been popular with the people, had been assassinated, and Dost Mohammed was restored to power in Cabul. Another Afghan war broke out in 1878, nearly forty years later. Russia seemed to be intriguing with Shere Ali, son of Dost Mohammed and ruler of Cabul. The British Government decided to invite Shere Ali to remain at his capital. Shere Ali refused to receive the embassy, which numbered about 1,000 men. Troops were then massed on the frontier and Shere Ali placed a force in the Khyber pass. The Indian Government, therefore, under instructions from England, required an apology and the reception of a permanent British mission in his territory, and he was notified that unless he replied satisfactorily his intentions would be considered hostile and he would be treated as a declared enemy. He made no satisfactory reply and hostilities were begun. Gen. Roberts finally arrived in Cabul, but the Russian embassy was withdrawn at the request of the British with the statement that there was no ground for the belief that the Russian Government had influenced Shere Ali to reject the British embassy. The Afghans made little resistance; Shere Ali fled from Cabul, and soon after died. His son and successor Yakoo Khan, signed a treaty at Gandamak, May 5, 1879, agreeing to admit a permanent British resident at Cabul; his foreign affairs were to be conducted under advice of Great Britain, and he was to be protected from foreign aggression. The British authorities were to have complete control over the Khyber and Maimane passes, and the frontier was settled in a way not disadvantageous to Great Britain. The Ameer was to receive £20,000 a year so long as the treaty
was observed. But on Sept. 3 the British residency was attacked by mutinous troops; Sir Louis Cavagnari, the British envoy, with most of the others at the residency, was murdered. The Ameer represented that he was not responsible for the outbreak, but that his people took it upon themselves. The British troops had again taken Cabul, at the close of the year. Abdurrahman Khan was placed on the throne in July, 1880, and received an annual subsidy of 1,200,000 rupees, which has since been increased to enable him to hold his territory independently. A British garrison held Cabul for a year.

In 1883 Russia made some advances in the neighboring country, and Great Britain thereupon took measures to have the frontiers of Ameer Gakhar, which were less annoying or less alarming in regard to the designs of Russia before the delimitation was accomplished. There was some trouble with the Ameer in 1883-94, and the boundary between the British possessions and Afghanistan was more definitely settled. Various hill tribes on the frontier have been subdued in recent years; the public attitude of the Ameer has been neutral during these wars.

Relations with China.—The Opium War began in 1839 with the confiscation by the Chinese authorities of a large quantity of opium brought into China, contrary to Chinese law, by English traders, who bought from the East India Company the opium grown in India. The Chinese, not taking the British withdrawal there was a rebellion by Ayoo Khan, in which the English troops did not interfere; he was finally defeated, and Abdurrahman kept the throne.

In 1875 relations with China again became strained in consequence of interference with travelers and the murder of one on the frontier, and a convention was entered into which guaranteed the right of foreign travelers to protection. In 1902 England seized Port Hamilton at the time when a war with Russia seemed imminent, but restored it the following year on demand of the Chinese Government.

Relations with France.—The friendly relations between France and England were more or less disturbed several times during the reign. Once was in connection with the intrigues of Louis Philippe to bring about the Spanish marriages which were to give to France virtual control of Spain. This subject provoked Bismarck and his agents, and the sons of Louis Philippe to the young Queen Isabella and her sister; but this was too soon to bring about trouble with other powers, and so the marriage with the Queen was given up, but the other took place in 1846; at the same time the Queen was married to the Duke of Cadiz, the choice also of the French King. This was deemed an act of perjury on his part, as he had declared to Queen Victoria that he "would not hear of" his son's marriage to the Infanta.

Another incident that raised unfriendly feeling between the two countries was that of Queen Pomare, of the island of Tahiti, who appealed to England to interpose between her and the French. In 1847 she was seized by a French admiral in retaliation for some indignity shown to French residents by her subjects, with whom the protectorate of France which she had accepted was unpopular. There had been feeling in England at the time when the protectorate was forced upon the island. Now the indignity was shown to her by the superior of the missionary, Mr. Pritchard, who acted as British consul: he was only released on condition of his instantly leaving the island. After some months of negotiation the affair was settled, 1844, by the payment of an indemnity to Mr. Pritchard by France.

Louis Napoleon lived in obscurity in London from 1837 to 1840, and again from 1846 to 1848.
There lived, too, for a time, the Italian Orsini who formed the conspiracy to murder the Emperor, with a view to removing what he believed to be the influence that kept England from interfering to release Italy from Austrian rule. It was believed in France that the plot was arranged in England; the bombs thrown by the plotters, which killed 10 persons and wounded 156, were made in Birmingham. The French were very angry, and accused England of harboring conspirators and murderers. The French Minister for Foreign Affairs sent a dispatch asking if England considered that hostility was due to assassins. The English corresponded courteously, though the French were very angry, and accused England of harboring conspirators to murder, gave the impression that he was carrying favor with Napoleon, and that "the very right of asylum which England had so long afforded to the exiles of all nations was to be sacrificed at the bidding of one who had been glad to avail himself of it in his hour of need." The French correspondence closed with a reference to the fall of the Orsini. There was an English reply: "The fall of the Emperor was the fall of Lord Palmerston's ministry, which just before had seemed secure in the favor of the people. Louis Napoleon once more found a refuge in England after the disasters of the Prussian War and the loss of his throne, and he died there as had Louis XIV. The English people, his abdication, in consequence of the revolution that opened the way of the third Napoleon to power.

In 1860 a commercial treaty was concluded with France, by which some duties were removed and others greatly reduced.

The English set up the empire in Mexico during the war of secession, England, which had united with him in a movement ostensibly to obtain satisfaction for certain claims against the Mexican Government, withdrew when his designs became evident. During the Franco-Prussian War the sympathies of the English people appear to have gone over to the French after their reverses, with the idea that Prussia was dealing too hardly with a fallen foe.

Great Britain and France entered into a controversy over their respective rights in East Africa about 1890. England obtained from Germany and Italy recognition of her right to the whole valley of the Nile. Greece had an important thing of influence. France protested, and the diplomatic correspondence that ensued ended in the withdrawal of France from the post she had taken on the Nile. This was the much-discussed "Fashoda incident."

The alliances with France in the Crimean War and the troubles with China are spoken of elsewhere in this article.

Relations with Greece.—An Athenian mob in 1847 came very near involving England in war with France and Russia. The name of Don Pacifico, a Jew and British subject living in Athens, became a familiar word in Europe, though there was nothing remarkable about Don Pacifico except that he was a Jew and he placed upon his household effects. In that year orders were given in Athens prohibiting the usual Easter entertainment of Christians, consisting of the burning of an effigy of Judas Iscariot. The disappointed Christian mob, by way of consolation, wrecked and robbed the house of Don Pacifico except that he was a Jew. He appealed to the Greek Government for compensation, placing his loss at £32,000. Among the items was a bedstead and its belongings which occupied a large place in the discussions of the subject. He valued the bedstead at £150, the sheets at £30, the coverings at £25, and a pillowcase at £10. About the same time another British subject, Mr. Finlay, made a claim against the Greek Government for some of his land which had been taken for the King's gardens; he had declined to accept the price offered. Further, a British midshipman had been arrested by mistake at Patros, and there were complaints from some subjects of the Queen in the Ionian Islands, which had been placed under a British protectorate by the treaty of Vienna. The English Government in 1850, by Lord Palmerston, who was the Foreign Secretary, made the claims a national demand, and as the Greek Government did not reply, the Greek vessels were boarded, and seized all the Greek vessels found there. France and Russia protested, but Palmerston replied that it was a question between Greece and England. In time, however, the Government accepted an offer from France of arbitration; but this was not successful, and a difficulty arose which caused another withdrawal of English influence from London, and the peace of Europe seemed to be in danger. At length, however, England yielded, and the claims were arbitrated, Don Pacifico receiving something over £1,000. The incident is noteworthy for the celebrated speech Lord Palmerston made in defense of his policy. In the House of Commons he placed the decision in effect a vote of censure; in the Commons a resolution commending the action of the Government was passed after a debate of four days, in which Mr. Gladstone, Mr. Cobden, Mr. Disraeli, Mr. Sidney Herbert, and Sir Robert Peel took part against Lord Palmerston, and Mr. Coburn, after speaking for Lord Palmerston, took up his speech and moved a resolution. Lord Palmerston's speech lasted about five hours, and his victory probably had much to do with his subsequent elevation to the premiership. He assumed that the question was whether England should protect her subjects wherever they might be or should leave them defenseless against foreign oppression. He said in conclusion: "I therefore fearlessly challenge the verdict which this house, as representing a political, a commercial, a constitutional country, is to give on the question now brought before it—whether the principles on which the foreign policy of her Majesty's Government has been conducted, and the sense of duty which has actuated her in extending our protection to our fellow-subjects abroad, are proper and fitting guides for those who are charged with the government of England; and whether, as the Roman in days of old held himself free from indignity when he could say Cito Romanus sum, so also a British subject, in whatever land he may be, shall feel confident that the watchful eye and the strong arm of England will protect him against injustice and wrong."

The debate is also memorable as being the last in which Sir Robert Peel engaged. Going home from a ride in the park on the afternoon of the day when the division was taken, he was thrown from his horse, which shied in sudden fright, and after two or three days the injuries he had sustained resulted in his death.

In 1858, when Sir Edward Lytton was Secretary for the Colonies, Mr. Gladstone was appointed Lord High Commissioner to the Ionian Islands, the people of which had become restless under the British protectorate, and was given the Ionian Islands of Greece. The effect of the appointment, as described by Mr. McCarthy, is interesting: "The appointment created much surprise, some anger, and a good deal of ridicule at home. Sir Edward Bulwer Lytton had alluded in his dispatch to Mr.
Then 150,000; of to exhibition on the Lords in office. A writer of novels (Mr. Disraeli) is leader of the House of Commons, and he has another writer of novels at his side as Colonial Secretary, and between them they can think of nothing better than to send a man out to the Ionian islands to listen to the trash of Greek demagogy and because he happens to be of service to the Queen their petition for release.

On account of the pledges made by the protecting powers and on the advice of England, the second son of the King of Denmark was elected in 1863, and has since reigned as George I. Then England gave over the islands, and they became part of Denmark.

The Great Exhibition.—The idea of the great exhibition of 1851, if it did originate with the Prince Consort, was taken up by him and owed to him its realization. It was carried out in the face of much opposition. The popular notion appears to have been that England would be overrun with a flood of foreign idlers and all sorts of rogues, and a prophecy to that effect was made in the House of Commons, while in the House of Lords Lord Brougham supported a petition against allowing the use of Hyde Park for such a purpose. Prince Albert was accused of a design to bring in foreigners to the subversion of English manners and morals, and fear all sorts of pernicious planning, and carried the project to complete success.

The idea of the glass building was suggested by Mr. (afterward Sir) Joseph Paxton, head gardener on the Chatsworth estate of the Duke of Devonshire. The exhibition was open one hundred and thirty-eight days, and was visited by 6,067,944 persons. From the beginning about half the exhibitions were devoted to the establishment and endowment of the South Kensington Museum. The buildings of glass and iron were removed to form the Crystal Palace at Sydenham, which was opened in 1854. None of the doleful prophecies were fulfilled. The crowds were orderly and gave no trouble. Unexpectedly the great exhibition turned out to be of value enlarging the ideas of British manufacturers, and it is probable that something of the insular terror of foreigners was driven from the minds of the common people. But the expectation that seems to have been entertained that the great exhibition was to usher in an era of British world dominion was disappointed of the reign of universal peace has been cruelly disappointed. The history of the last half of the century is filled with one long series of wars in Europe, Asia, Africa, and America.

The Crimean War.—The first great war of the reign was that in the Crimea, between Russia on the one side and England, France, Turkey, and Sardinia on the other; Sardinia joined the allies in January, 1855. It began in 1854 and ended practically with the fall of Sebastopol in September, 1855, though the treaty of Paris was not made till March 30, 1856. The ostensible subject of quarrel between Russia and Turkey was the desire of Russia to protect the navigation of the Black Sea. But the real object of the Czar was supposed to be the extending of his dominions to Constantinople. Indeed, the Emperor Nicholas had very frankly laid before the English Government a plan by which, if the Turks were deprived of the Black Sea, "the Sick Man" when the end should come Napoleon III was anxious for a foreign war, to turn the attention of his people from affairs at home. July 3, 1853, two divisions of the Russian troops crossed the river Pruth to take possession of the Danubian principalities; war was declared Nov. 1, and Nov. 18, 1853, the Turkish fleet was destroyed in the harbor of Sinope, on the southern shore of the Black Sea. This event produced a great feeling in England against Russia, and the popular sentiment was for war. There was a large peace party, however, and the Prime Minister, Lord Aberdeen, did his utmost to avoid war. Lord Palmerston, Foreign Secretary, represented the House of Commons, and consented to a strong course against Russia; but they yielded, and he resumed his place. France and England demanded that the Emperor of Russia should withdraw from the territory of the Porte, and declared their intention to use force if necessary to compel him; they sent fleets to the Black Sea, and war was declared Nov. 20, 1854. The allies, in command of the English forces, and the invasion of the Crimea was decided upon. The allied English and French forces landed at Kalamita Bay in September, and gained a victory in the first battle, Sept. 20, at the passage of the Alma river. The victory was not followed up, and the exultation which it produced in England was very soon followed by indignation against the authorities when it became known that the army was wretchedly provided for. The hospitals were not properly organized, stores of food and medicine were spoiling in places where they could not be procured for use, and cholera was carrying off the men. The Russians used the interval after the battle of the Alma in great losses. Another battle at Sebastopol by sinking 7 ships there, thus making speedy capture of the stronghold impossible. The allies went on to Balaklava, where the Russians attacked them, Oct. 25, and were repelled. In this battle occurred the famous charge of the Light Brigade, celebrated by Tennyson. Of the 607 men of the Light Brigade, 198 were killed, but of the strangely mistaken order, only 198 returned alive. Another attack the following day was likewise repelled. The battle of Inkerman, the hardest of the campaign, was fought Nov. 5, and was another victory for the allies; the Russian loss was estimated at 12,000.

The wretched management of army supplies reached England a motion for a committee of inquiry resulted in a defeat of the Government, and Lord Aberdeen was succeeded by Lord Palmerston. The popular indignation, for some inscrutable reason, was at first turned against Prince Albert, and the most absurd charges of corruption and mismanagement were made. The result of the inquiry showed the suspicions to be baseless, and the agitation ceased. Some of the instances of mismanagement that came to the knowledge of the people at home during the winter sound strangely familiar. "Shameful frauds," says Mr. McCarthy, "were perpetrated in the instance of some of the contracts for preserved meat. Great consignments of boots arrived, and were found to be all for the left foot. Mules for the conveyance of stores were contracted for and delivered, but delivered so that they came into the hands of the Russians. Medical stores were left in the decay, and the bodies of Turks were found in the holds of vessels in Balaklava Bay, which were needed for the wounded at Sebastopol." The accounts of these things were sent to Eng-
land by the distinguished war correspondent William H. Russell, who was perhaps the first of the present special war correspondents. It was at this time, too, that Florence Nightingale became famous.

The siege of Sebastopol lasted nearly a year. Emperor Nicholas died March 2, 1855, and Lord Raglan June 28. On Aug. 16 occurred the battle of Tchernaya. The allies attacked the Redan and Malakoff forts without success, June 18; on Sept. 8 the French carried the Malakoff by storm; seeing that the fall of Sebastopol was inevitable, the Russians evacuated it, having first set it on fire. By the treaty Kars, which had been taken by the Russians, was restored to Turkey, and Russia received back the places the allies had taken. The Black Sea was rendered neutral, the Dardanelles was thrown open to navigation, the integrity of the Ottoman Empire was guaranteed, and the Sultan issued an edict for improving the condition of his Christian subjects. The loss of England by the war was about 24,000 men, of whom about 20,000 died of disease. The French and Russian losses were approximately 35,000. The national debt was increased by about £41,000,000.

The Indian Mutiny.—There was trouble in 1843 with the people of Scinde, and some hostilities which ended in the subjugation and annexation of the three principalities comprising that province. The rulers, called ameers, were pensioned. Sir Charles Napier, the conqueror, thus described his transaction: "We have no right to seize Scinde, yet we shall do so, and a very advantageous, useful, and humane piece of rascality it will be." When Scinde became a British province the Sepoys lost the extra allowances they had had for service in the enemy’s country, and therefore mutinied. There were two mutinies the first taking place at the time of the annexation of the Punjab in 1849, after the wars with the Sikhs, and again in 1850 there was a mutiny at Govindgar, which was soon quelled.

The great Indian Mutiny broke out in 1857. It was probably due to the alarm with which the natives saw the rapid progress of the British power. It has been supposed that amongst other causes it was a spirit of national pride, for it had been the notion that the cartridges, which at that time the soldiers had to prepare by biting off the ends, were made in paper greased with the fat of cows and hogs. Such use of the fat of the cow would be sacrilege to the Hindu, while the hog was an abomination to the Mohammedan, and to both it was offensive. The first serious outbreak of mutiny was at Barrackpore, where the Sepoys refused to bite the ends of their cartridges, though they had been assured that none of the grease they objected to had been used in them. There were other similar demonstrations. The mutineers were tried, there were some executions, and at Meerut sentence to hard labor for ten years was given to others. The following day they were rescued by their comrades, who fired upon the officers and killed some of the European inhabitants. Then they marched to Delhi and announced their intention to restore the aged King of Delhi to the throne. Bahadar Shah, the hereditary ruler, a descendant of Timour, was about eighty years of age and was living in the palace at Delhi, a pensioner of the East India Company. The siege of Delhi, the awful massacre at Cawnpore by the orders of Nana Sahib, and the relief of Lucknow by Sir Colin Campbell followed, and in December, 1858, the rebellion was at an end. Army mutiny, a descendant of Timour, was about in the suppression of the rebellion were Sir John and Sir Henry Lawrence, Sir Henry Havelock, and Sir James Outram. One result of the mutiny was the transference of the administration from the East India Company (called by the natives "John Company") to the Crown. Lord Canning, who was Governor General during the rebellion, was the first Viceroy of India.

The Indian Famine.—One of the most terrible events of the reign was the great Indian famine that began in 1896—not the first, but the most widespread and disastrous. It is stated that there were 12 famines from 1802 to 1854, with an estimated loss of 5,000,000 lives; and from 1860 to 1879 there were 16 famines, with a loss of more than 12,000,000 lives. This increase is not due to the fact of decreased production so much as to the draining of the resources of the country by taxes. The Government maintains a famine insurance, but from time to time the fund is diverted for military defense on the frontiers, and it has been used in the construction of railroads, which, by bringing in foreign products, discourage native industries and add to the poverty of the people. The irrigation system begun after the famine of 1877 was not completed, and in the drought of 1896 all crops failed. In June, 1897, more than 4,500,000 persons were on relief; 750,000 were re-soldiers who were subscribed in Great Britain, the United States, France, Germany, and other countries; the charitable contributions from all sources amounted to nearly £1,750,000. After the drought came the bubonic plague, which broke out in Bombay and spread to other places. The deaths in the Bombay presidency alone were stated in 1897 to exceed 300,000.

Trouble with Japan.—In 1862 a British subject was murdered in Japan on a road the freedom of which was granted to Englishmen by treaty; the murder was committed by some of the adherents of Prince Satsuma. The Japanese Government was called upon for an indemnity of £30,000, and to hold a British subject responsible for the murder. The war with Satsuma was £25,000 and punishment of the murderers; he did not respond, and an English fleet under Admiral Kuper went to his capital, Kagosima, to demand reparation. The forts fired upon him, and he bombarded the town, destroying the greater part of it, after which Satsuma yielded. The peace was signed in 1865, by which Japan was compelled to have from time to time risen against British rule. An insurrection in 1843-47 was not so serious as one that took place in Lord Palmerston’s second administration. The Maoris resisted the intrusion of the colonists on lands they regarded as their own, and they fought surprisingly well. In August, 1868, the Maoris made a mutiny at Waikato. There were other outbreaks in 1868 and 1869.

The Rebellion in Jamaica.—The slaves in Jamaica had been freed in 1834, and were afterward apprenticed as laborers. This system was abolished in 1836, as it was shown to be little less oppressive than slavery. In 1839 a motion to suspend the Constitution of the island for five years, in consequence of continual disagreements between the Assembly and the home Government came so near to failure that it led to the resignation of the Melbourne ministry, though, in consequence of the Bedchamber Plot (noticed on page 737, this article), they returned to power directly after, and a milder bill was passed. In 1865 an insurrection broke out in the island which was so quickly suppressed that it would scarcely have raised a ripple in England but for the severity with which the participants and those suspected of participation had been punished after the rebellion was over. Edward John Eyre was then Governor of the island. The insurrection, which was more than a series of riots, was brought about by an attempt to evict some negroes from land which they had improved under a promise that if they would pay the arrears of quitrent due the Crown.
they might have the lands rent free. After order was restored a member of the Assembly, against whom no participation in the insurrection was shown, was condemned by a illicitly convened and hanged because he was believed to have encouraged the blacks by his sympathy and chivalry whenever their rights were supposed to be in danger. Then, by order of the Governor, homes were burned, men and women to the number of more than 600 were flogged, many under circumstances of hideous cruelty, and 439 persons were executed. The families of some of those who had been executed was confiscated. The cruelty and injustice of the punishment were strongly condemned in England, though there was a party which maintained that Gov. Eyre was justified. That party was led by Thomas Carlyle. Naturally enough, for he had been one of the loudest supporters of the party of slavery in this country, declaring that “the Almighty Maker appointed the nigger to be a servant.” He praised Eyre as “a just, humane, and valiant man, faithful to his trusts everywhere, and with no ordinary faculty of executing them,” and declared that he was able to do it by “the interposition of his further say” should similar emergencies arise, on the great scale or on the small, in whatever we are governing.” Much more surprising are some other names that appear on the same side with Carlyle’s. John Ruskin headed the subscription to the defense fund for Eyre with £100, explaining that he was able to do it by “the interest of his journey to Switzerland,” partly for his health and partly to complete some notes on the geology of the great northern Swiss valley. Charles and Henry Kingsley, Tennyson, Sir Roderick Murchison, the Earl of Shrewsbury, Tyndall, and Earl Manners also contributed to the fund, and the sympathies of men as distinguished as Vico and other committee that undertook the duty of prosecuting Eyre and his associates after the Government declined it were John Stuart Mill, John Bright, Thomas Hughes, Goldwin Smith, Herbert Spencer, Frederic Harrison, Francis W. Newman, Thorold Rogers, Prof. Fawcett, Sir Wilfrid Lawson, and others. Some of them sent dispatches to the Committee of the House of Commons, which sent the report of the commission of investigation had condemned the punishments as excessive, barbarous, wanton, and cruel. The representative assembly of the island was then abolished, and the government administered by an appointed governor and council.

War with Abyssinia.—This took place in 1868. A British consul at Massowah, an island in the Red Sea belonging to Turkey, who was appointed in 1848, became a great friend of Theodore, King of Abyssinia, and helped him to quell an insurrection among his subjects, in the course of which the consul was killed. His successor, Mr. Cameron, was warned that his service was not due to Abyssinia. Theodore made a secret appeal of his own to Paris on the ground that his relations with Egypt, and regarded the attitude of England as unfriendly. He wrote to the Queen asking aid against Egypt, but received no answer. There was even a story that he asked to marry the Queen, and that as he had boasted descent from the Caesars he did not think his aspirations presumptuous. Theodore does not appear to be any record of such proposals, but for some reason he felt resentful toward the English, and he took Capt. Cameron and other British subjects and held them prisoners; demands for their release were disregarded. Sir Harry Napier was the Governor then in Bombay, and the task put him with a force from Bombay. After a difficult march through a mountainous country they reached the capital, Magdala. The natives fought well, but were beaten. Theodore offered to treat, and sent the captives to Napier. The English general would have been satisfied with the capture, but the massacre of his prisoners. Theodore would not surrender, and his rock-built capital was carried by assault. He was found just within the gate, having died by his own hand. Magdala was destroyed lest it should be used as a stronghold by a fierce tribe of Mohammedans in that region. Sir Robert was made Baron Napier of Magdala, in recognition of his services.

The Treaty of Berlin.—In 1875 an insurrection broke out in Bosnia and Herzegovina against the Turkish Government, which spread rapidly and received aid from Servia and Montenegro. The Turkish Government appealed to England to prevent assistance from being given to the insurgents from surrounding countries. A note drawn up by Count Creusot was sent to the Emperor of Austria, and after his name, became quite famous in the history of the negotiations entered into for the purpose of adjusting the difficulty. In this note Austria, Russia, and Germany joined in declaring that the Turkish Government had failed to carry out its promised reforms, and that the other powers would insist upon measures to go along with them. Austria, by the treaty of Berlin, was to understand that force would be used unless the reforms were at once instituted, but England refused to join with them, and the memorandum was not sent. Following this were outbreaks in Turkey; a Mohammedan mob murdered the French and German consuls at Salonica; the Sultan was deposed and committed suicide; his nephew, who succeeded, was deposed three months later and his brother enthroned in his place. Then an insurrection broke out in Bulgaria, and the Turkish troops sent there not only put down the revolt, but proceeded to wholesale massacre of men, women, and children. In the district of Philippopolis 12,000 were killed. The whole civilized world was stirred by the accounts of the “Bulgarian atrocities,” as it was in later years by the Armenian massacres. The indignation in England was intense. Mr. Gladstone led in denunciation of the Turkish Government and the policy of allowing such a power to tyrannize over the Christians in the provinces. But the humanitarian sentiment which had called for a note in 1875 was checked by the chronic dread of Russian aggression. So there came to be a distinct division of sentiment between those who held that Turkey must be sustained as a barrier against Russia and those who believed that the Turk should no longer be allowed to control Christian peoples, since all his promises of reform had been broken with less. A conference of the powers at Constantinople effected nothing. In April, 1877, Russia declared war against Turkey, and after some repulses secured victories that seemed to mean final success. A large party in England was for war. It was at this time that the word jingo was first used as a name for those eager to use war as a means of securing foreign policy. It was taken from the refrain of a song in the popular music halls:
The British possessions in South Africa were greatly extended during the reign; Natal was added in 1842; British Kaffraria, taken about 1848, was added to Cape Colony in 1861; Griqualand West in 1872; Griqualand East and neighboring territory in 1874–75. The Transvaal was annexed in 1877, but restored to the Boers under British suzerainty in 1881.

There were wars with the Kaffirs in 1846 and in 1851, with the Zulus at Isandhlwana, 1879, and at Ulundi, 1879. Before the Zulu War the Zulus were quite independent, and the Zulu King Mzilikazi was a warrior king, respected for his courage and his military skill. The Zulus were fierce and determined in their resistance, and their military organization was advanced for the time. The Zulu War was one of the most decisive events in South African history, and it marked the end of the Zulu Kingdom.

In 1866 the Zulus invaded the Transvaal, and were defeated at Isandhlwana, where 1,500 Zulus were killed and 9,000 taken prisoner. The Zulu King, Cetewayo, was captured in August. The Zulu War was a great victory for the British, and it marked the end of Zulu sovereignty in South Africa.

The British government had long been interested in the territory of the Zulus, and the Zulu War was a result of the Government's desire to control the Zulus and prevent them from attacking the Boers. The Zulu War was a brutal and bloody conflict, and it was a turning point in South African history. The Zulu War marked the end of the Zulu Kingdom, and it was a sign of the changing power balance in South Africa.

The Zulu War was a great victory for the British, and it marked the end of Zulu sovereignty in South Africa. the rebellious Pasha to yield. A treaty was signed in 1841 which left him his Egyptian, but took away his Syrian possessions. In 1875 the Government bought the shares of the Khedive of Egypt in the Suez Canal, and Parliament voted £4,800,000 to pay for them incurred by the Khedive, proposed by Mr. Gladstone and others of the Opposition. The Government explained that they had negotiated the purchase, not as a financial investment, but as a political move for the purpose of strengthening the empire. In 1876 France and England interposed to secure the payment of debts that had been incurred by the Khedive, Ismail, the interest on the bonds not having been met. The expenditures were placed under the supervision of French and English comptrollers. In 1880 an international Commission of Liquidation was appointed. The debt amounted to $500,000,000. The loans had been negotiated with English and French banking houses at from 7 to 9 per cent. interest, yet the Khedive had actually received only about 50 per cent. of the nominal loans, the rest having gone in bankers’ commissions and the discount at which they were taken. The annual interest and sinking-fund charges on the nearly $233,000,000 owing in 1876 were about 12 per cent., and to pay the interest an addition to the revenue of the Khedive was dismissed the English ministers, fearing, as he said, a massacre. The English and French governments retaliated by compelling the Sultan to depose him and appoint his son Tewfik to be Khedive in his place. In 1880 the floating debt was converted into bonds, the whole amounting to $210,876,630. The Khedive had used the borrowed money largely on public works, the Suez Canal, the Nile canals, bridges, mills, docks, harbor improvements, lighthouses, waterworks, railroads, and telegraphs; he established public schools and built opera houses and palaces.

The salaries paid to foreign officials was one source of the Egyptian revenue. From a report made in 1882 it appeared that the total annual salaries to foreigners in public office was 373,491 Egyptian pounds, and this and other grievances gave rise to the so-called National party. It did not seek to deny the obligation of the debt, but complained of the employment of foreign salaries for work the natives would have been glad to do for small ones lost the exemption from taxation of the fine dwellings of Europeans while the poor huts of their neighbors paid 12 per cent. on their valuation.

An attempt at a constitutional government was made, but the Assembly and the Khedive with his ministers were deposed. The French and English sent squadrons to make a landing, and the Khedive’s proclamation, to fortify the authority of the Khedive, which anchored in the harbor of Alexandria. Arabi Pasha, who stood for the National party, was Minister of War. He was forced from the Cabinet, but the Khedive was afterward compelled to reinstate him.

The powers interposed, and it is possible that arrangements might have been made by which the worst abuses complained of would have been done away with, but the resentiment of the long-suffering people broke out in a riot in Alexandria. An Arabi was killed in a fight by a Maltese; the Arabs gathered in mobs and set upon the Europeans, of whom about 70 were killed, when the number of slain Arabs amounted to over 600. The Europeans fled. The army took possession. The fact that the Egyptian soldiers were throwing up earthworks and mounting guns was made the occasion for action on the part of the British squadron in the harbor, and the city was bombarded July 11, 1882. There was great loss of life among the Egyptians, but the British lost only 6 killed and 28 wounded. Arabi Pasha was expelled from his office as Minister of War and treated as a rebel, but he continued the hero of the army and the people. A conference of representatives of the powers had been going on for some time, but England continued with preparations for war, and sent out a force under Sir Garnet Wolseley, who arrived Aug. 15. In a month the Egyptians were completely defeated. Arabi and two of his colleagues were sentenced to death as rebels, but the sentence was commuted to perpetual banishment. The army of Egypt was reorganized under a British officer.

The rebellion in the Soudan under the leadership of Mohammed Ahmed, known as “the Mahdi,” began about 1881. In November, 1883, an Egyptian army under Hicks Pasha was defeated near Obeida, and the all-powerful Mahdi received the allegiance of the European came away alive. Again in February, 1884, Gen. Baker’s Egyptian force, marching from Trinkitat to Tokar to relieve the beleaguered garrison there, was attacked near Snukim by a detachment of Osman Digma’s Arabs, defeated with scarcely any resistance, and utterly annihilated as a military force, with the loss of nearly two thirds of its numbers. Meantime Gen. C. G. Gordon, known as “Chinese Gordon,” had been sent to the Soudan, to report on the military situation there, to take measures for the security of the Egyptian garrisons and the safety of Europeans in Khartoum; also to consider what steps could be taken to counteract the dangers which it is feared may possibly be given to Egypt by the present insurrectionary movements.” On the advice of the British Government, Egypt had agreed to give up her possessions in the Soudan except those bordering the Red Sea, and Gen. Gordon was to arrange for the evacuation by the Egyptian troops in the interior, and the restoration of their ancestral homes to the Sudanese who had been expelled from them during the Egyptian occupation.

His task of pacifying the Soudan was complicated rather than forwarded by the campaign of Gen. Graham against Osman Digma, in which the Arabs were defeated at El Teb and Tamanieb. Then Berber was taken by the rebels, who were again repulsed at Dougola.

The siege of Khartoum began about March, 1884, but Gen. Gordon found means to send dispatches, in which he asked for help and re-enforcements, which he did not receive. After that the town was so closely invested that it was difficult to send dispatches; the siege was maintained for seven months, during the time showing the desperate need of assistance. This seems to have been delayed because the Government believed that he was not in accord with their policy for evacuating the Soudan. They were severely criticised for their inaction, and have since been held responsible for the sacrifice of Gen. Gordon. The Sudanese Government was not in accord with the general policy of England, which was particularly tailed in regard to the affairs of Egypt. Mr. Gladstone did not recognize the right of the Anglo-Egyptian Government over the Sudanese apparently, and it is possible that Gen. Gordon’s proclamation at the beginning of his Khartoum experience that he
would not interfere with the slave trade indicated to the Government that he did not intend to carry out his instructions.

At length, in August, a relief expedition was planned, and one reached Egypt, under Lord Wolseley, Sept. 9; but it was a long time before they arrived at the scene of action. An advance body under Gen. Stewart was attacked, Jan. 17 and 19, 1885, and suffered terrible loss. Gen. Stewart was killed, and the force went on under command of Sir Charles Wilson. O'Connell was in sight of Khartoum Jan. 28. The flagstaff still stood on the Government house, but Gen. Gordon's flag was gone. Sir Charles therefore returned without going to Khartoum; he was told that the place had fallen through treachery, and that Gordon had been killed. The Mahdi was reported to have died the following June. Subsequently it was showed that there was great suffering during the siege from famine, and that the fall of the city was followed by horrible scenes of pillage and murder. The English expedition, having failed in its mission, was withdrawn. The disorders in the Sudan continued, and it was not until 1899 that the power of Mahdism was finally broken by the defeat of its leader by the army under Lord Kitchener at Omdurman.

Gradually the finances of Egypt have been placed on a better basis, judicial and other reforms have been introduced, and some engineering works of great benefit to the country have been undertaken, and in part carried out.

In 1838 the collection of tithe in Ireland, which had been a fruitful source of discontent and had led to frequent secessions on the part of the authorities and almost ceaseless struggles on the part of the people, was at length abolished and a tax upon the land was substituted. Daniel O'Connell was the leader of a demand for the formation of unions between Great Britain and Ireland. Great mass meetings were held at various places. "The year 1843," said O'Connell, "is and shall be the great repeal year." A meeting intended to surpass all previous gatherings was appointed to take place at Clontarf, near Dublin, Oct. 8, 1843. The Lord Lieutenant forbade the meeting. O'Connell, who was among those invited, was not notified of the decision, and the meeting was held, with the disquiet of those of his followers who were prepared to go to greater lengths and make the movement something more than a peaceable protest. O'Connell and some other leaders were tried and found guilty of conspiring to excite disaffection. They were sentenced to imprisonment for a year, and heavy fines were imposed upon several of them. The sentence was not carried out, the House of Lords, on appeal, having reversed the judgment; but the repeal agitation was ended.

The failure of the potato crop in 1845-46 brought on the great famine in Ireland, in consequence of which the population was reduced by starvation. By 1847 the country received a blow from which it never has recovered. It is doubtful if the repeal of the corn laws, which was hastened by the supposed necessity for opening the ports to foreign grain as a relief measure, did not really militate against the prosperity of Ireland, since it was and is mainly an agricultural country, and the protection afforded by the corn laws formed something of an offset to the other disadvantages under which it labored. Be that as it may, some excesses and outbreaks took place about this time, so that Sir Robert Peel thought it necessary to propose another coercive act at the time when the free-trade bill was before Parliament. The latter passed, but the protectionists joined with the Irish party and the Radicals against the coercions bill; the minister was defeated, and three days later resigned his office and was succeeded by Lord John Russell.

The awful disaster in Ireland—famine and the diseases that accompanied it—inflicted a blow upon the country, and the old device of coercions measures was resorted to. The Young Ireland party, which had been in existence for some years, came forward in 1848, and under the leadership of John Mitchel, who edited the United Irishman, attempted to raise an insurrection. The Government brought in a billet which was, making it a felony, punishable with transportation, to publish any incitement to insurrection or to offer any resistance to the enforcement of law. Under its provisions Mitchel was arrested and his paper suppressed. He was tried, convicted, and sentenced to fourteen years' transportation. The ban on corn act was suspended in Ireland, and warrants were issued for the arrest of other leaders; they came into collision with the police at Ballingarry, in Tipperary, where, after a slight resistance, they were arrested. They were tried before a special commission; Smith O'Brien and Thomas F. Meagher were sentenced to be hanged, beheaded, and drawn. The sentence for high treason, but the sentence was commuted to imprisonment for life, and all the convicts were transported to Australia.

The Fenian uprising in 1866 was the next chapter in the revolt of Ireland against English rule. The invasion of Canada from the United States was checked by the Government. In March, 1867, a general uprising in Ireland was planned, but a heavy snowstorm interfered with the gatherings of the people, and the attempt failed. A scheme to seize Chester Castle, take possession of the arms there, and invade Ireland with such steamers as could be taken in the port had been betrayed, and the fiasco in Ireland ended the struggle. Large numbers of Fenians were arrested, and prisoner. Three men who tried to rescue some prisoners in Manchester were hanged—a policeman having been killed during the attempt—though John Bright and John Stuart Mill, with others, tried hard to save their lives. Another man was hanged for an attempt to blow up Clerkenwell prison for Fenians. The Fenians, it was alleged, failed of its object, but some innocent persons were killed. The habeas corpus act was suspended in Ireland till March 1, 1869. The Fenians made two other feeble attempts upon Canada, and then the movement went to pieces.

One great source of the misery of Ireland and the discontent there was the custom by which land was held. Farming was the only dependence of the peasantry. The land was owned largely by absentee landlords, who employed agents to collect the rents, and the agents were expected to wring from the tenants the very utmost possible. Hence the rack-rent, and when it failed the eviction. If a tenant fell behind his payments, the result was that he must pay a higher rent or give up the holding to a tenant who would bid more, and there was no redress. "The greatest concession," says a historian of Ireland, "that Government made for many generations to the misery of the Irish tenant was to pass an act prohibiting evictions on Christmas Day, and the result was that the roof of a tenant's house should not be pulled off until the inmates had left." He says again that from 1829 to 1880 "the country has been governed by the ordinary law for scarcely a single year. Arms acts, suspension of habeas corpus, changes of venue, peace preservation acts, and coercive measures of all kinds succeeded, accompany, and overlap each other with melancholy per-
victorian. Roughly speaking, Ireland, from the union to 1880, was never governed by the ordinary law. The union, according to its advocates, was to be the bond of peace and lasting affection between the two countries; it was followed by eight years of coercive legislation.

The home-rule movement began quietly about 1870, and in 1874 was made an issue at some of the elections—about 60 Irish members being returned as pledged to it. What they asked was an Irish parliament to deal with affairs concerning Ireland only. Mr. Parnell entered Parliament in 1875, and became the leader of the home-rule party, of which Mr. Isaac Butt had been, if not the originator, an active member. A rather ineffective land act had been passed in 1870; the demand now came to be for three things which were called the three F's—fair rent, fixity of tenure, free sale.

About this time (1876-79) Ireland was threatened through three poor harvests with another famine. Mr. Parnell was joined by other energetic Irish patriots, who organized the great association known as the Land League. Its object was to change the system of land tenure, to abolish landlordism, and enable the peasant to own the land he tilled. The Land League was formed in 1876, over 1,300 in 1877, over 1,700 in 1878, and nearly 4,000 in 1879. Mr. Parnell came to America to raise money for the sufferers, and went back with nearly $230,000 for that purpose, besides a large amount for carrying on the work of the Land League. A bill for compensating evicted tenants was passed in the Commons, but failed in the House of Lords.

The Conservative Government went out in 1880, and Mr. Gladstone's ministry came in. It was expected that the Government and the Irish party would work together, but the expectation was disappointed. The Government would not go as far as the Land League desired. The Irish members were advised to refuse to pay rent above a certain valuation, and to refuse dealings with rack-renters and evicting landlords and agents. This form of warfare took the name boycotting—Boycott being the name of the first man against whom it was used. All violence was steadily discouraged by the device of advice and encouragement always followed by the starving evicted peasants.

The breach between the Government and the Irish party came to a head when the Government brought in a coercion bill; the Irish members resorted to obstruction tactics until the Speaker forbade further debate. The arrest of Michael Davitt just after this was the occasion of the expulsion of a large number of Irish members—36, it is said—who tried to speak against it in the Commons. Even Mr. Bright was now against the Irish party, and the proposed coercion act was carried. A land act also was passed. It created a land court or courts, to which a tenant might appeal if he thought the fixed rent too high. This was much criticised, but it is said to have been productive of great good in bringing relief to tenants from exorbitant demands. Mr. Parnell and the other leaders thought it did not go far enough. They advised that no appeals be taken to the land court till after they had been approved by the Irish Land League. Mr. Gladstone had five of them arrested for defiance of law, and sent to Kilmainham jail. They put out a manifesto advising tenants to pay no rent till they were released and constitutional rights restored. Crime increased under what Mr. Bright had called "the odious poisons remedy of coercion." The historian says: "Ministerialists argued that within ten months the mutinies of animals in Ireland had increased to 47, therefore the liberties of a nation of 5,000,000 should be suspended. They forgot that in the same ten months of the same year there was a total of 3,489 convictions in England of cruel and extraordinary cases of which were of the most horrible kind."

Then, while still the prisoners were at Kilmainham jail, a peace was concluded between them and the Liberals. The agreement was called the Kilmainham treaty. Parnell agreed to act with the Liberal party if provision were made for causing the concentration of the land question against the smaller tenantry, and the coercion act abandoned. It was abandoned, and the prisoners were released.

On May 6, 1882, occurred the horrible crime in Phœnix Park, Dublin—the murder of the Chief Secretary for Ireland, Lord Frederick Cavendish, and the Undersecretary, Mr. Burke. This was a blow to the cause of Ireland. The arrears bill was passed, the franchise was extended to every householder in Ireland, and a land-purchase bill was prepared but not carried through on account of the fall of the Gladstone ministry. The Land League, which had been suppressed, was revived under the name National League. When Mr. Gladstone became Prime Minister in 1886, the question was brought up in a coercion bill which had the support of the Irish members, but divided his own party and led to another change of ministry. The scandal against Mr. Parnell led to a division in the Irish party in 1890, and a bitter fight ensued between his partisans and those who believed that his continued leadership would be management.

Under the Salisbury ministry another great step was taken recently toward good government by the establishment of a system of local legislation and administration, to take the place of the old scheme of executive control of the affairs of communities through grand juries.

The Australian Federation. The Australian colonies entered in 1850 for the better administration of the Government there. It gave the colonies of New South Wales, Victoria, Van Diemen's Land, and South Australia representative government. Other colonies have been established from time to time and made mainly self-governing. In recent years the colonies have been taking steps toward federation. They have submitted to a referendum in the various colonies, and in January, 1899, the premiers met in a new Federal Council to recast the commonwealth bill that was ratified in 1888 in Victoria, Tasmania, and South Australia; and the amended scheme of federation was accepted by five of the colonies.

Relations with the United States. In the early years of the reign there were several causes of friction between England and the United States. One difficulty arose out of the arrest in New York of a Canadian who had killed an American in the fray over the destruction of the Caroline, a steamboat fitted out on the American side of the Niagara, and a vessel belonging to the British mail service was fired and sent over the falls by loyal Canadians. This was settled when, after the British Government had declared the raid to have been a public act, the Canadian was released. Another complication was caused by the question of the right of search for impressing British seamen and suppressing the slave trade. The Creole, a slave ship, had been taken into an English port in the West Indies by the negroes who had mutinied; the authorities had refused to assist the crew, and the negroes had gone free. The northeastern boundary was still unsettled. In 1842 Lord Ashburton, who was known to be friendly to the United States, was sent over as commissioner, and he concluded
with Daniel Webster, then Secretary of State, the treaty that bears his name. The boundary defined by the treaty was regarded as fair to both countries, the United States undertaking to indemnify its citizens in the United States for any losses by it, while others gained. The treaty also included a "cruising convention," a clause stipulating that the squadrons on the coast of Africa, while each enforcing the laws of its own nation, should work in co-operation. The cases of the Caroline and the Creole were certainly in the treaty or its provisions; it was made clear that England was not expected to return fugitive slaves, but the extradition of criminals was provided for; in the case of the Creole the United States had demanded the surrender of the negroes as moonlighters and murderers. The right of impressment was not touched in the treaty, but Mr. Webster, in the amendment to the treaty, in which he declared that the crews of American merchant vessels would be protected by the flag over them. Thus a war that seemed impending was averted, though the terms of the treaty were violently attacked in Parliament and in the Senate before it was finally ratified.

The northwestern boundary still remained unsettled. The line of Great Britain was for the line of Columbia river, beginning where it crosses the forty-ninth parallel. The extreme American claim was for the line 54° 40', which was the original claim of Spain. This gave rise to the party cry, "Fifty-four-forty or fight!" But the forty-ninth parallel had been proposed on the very day the United States as a compromise. A treaty was concluded June 15, 1846, between Mr. Packenham for England and Mr. Buchanan for the United States, giving Vancouver Island to Great Britain. The interpretation of some parts of the treaty, which was drawn up in English, was found obscure and was not settled till 1854.

The war of 1812 was the subject of an arbitration, in which the island San Juan de Fuca he decided to belong to the United States.

In 1850 was concluded the celebrated Clayton-Bulwer treaty in regard to a ship canal between the Atlantic and Pacific, by which its neutrality was guaranteed, and each nation bound itself not to construct or occupy any fortifications in its vicinity, or to make alliance with any state for the purpose of having such fortifications made; not to colonize or assume any dominion over any part of Central America; and not to take for its citizens any rights or advantages of commerce or navigation not accorded on the same terms to the citizens of the other.

Treaties for the suppression of the African slave trade were made from time to time, for extradition, and in regard to naturalization and renunciation of citizenship.

At the close of 1854 a little flurry of disagreement arose over collisions under the foreigner's flag, and the Lincoln government called for the dispatch of the Ironsides for service in the Crimean War, and the English minister was sent away from Washington. England apologized, and diplomatic relations were restored.

The most serious difficulties arose in connection with the war of secession. On the sentiment in England at that time it is best to quote an English historian. Justin McCarthy says in his History of Our Own Times: "The Southern scheme found support only in England and France. In all other European countries the sympathy of people and government alike went with the North. ... Yet in France the people in general were on the side of the North. Only the Empress and the Government were on that of the South. In England, on the other hand, the vast majority of what are called the influential classes came to be heart and soul with the South, and strove to bring or force the Government to the same side." On May 14 there came a resolution in the House of Commons that the Government were of opinion that the Confederacy must be recognized as a belligerent power; on May 13 a proclamation of neutrality was issued, warning all British subjects against giving aid in any way to either side. On June 8 it was said in the House of Commons that the affair of the Trent, which caused intense feeling on both sides the Atlantic, Mr. Mason and Mr. Slidell, sent as envoys of the Confederacy to England and France respectively, escaped from Charleston to Havana, where they embarked in the English mail steamer Trent for Southampton. The Trent was intercepted by the British warship, the San Jacinto, and the envoys were seized and carried to New York. The United States Government did not sustain Capt. Wilkes, though popular feeling throughout the country was with him. On demand of the English Government the envoys were released, and the action of the authorities commended itself to the second thought of the American people.

But the special interest of the treaty is evident in the part of the Senate, and the treaty was finally submitted to the House of Commons, which was passed by an overwhelming majority. It was signed by Mr. Lincoln in the White House; it was called "the Great Compromise." It was then sent to the Senate, and the Senate, with the advice and consent of the Senate, ratified it.

It was then sent to the Senate, and the Senate, with the advice and consent of the Senate, ratified it.

The treaty was then sent to the Senate, and the Senate, with the advice and consent of the Senate, ratified it.

On the 8th it was announced that orders had been given to prevent their departure. In June of this same year Mr. John Arthur Roebuck made a motion in the Commons that the Government be instructed "to enter into negotiations with the great powers of Europe for the purpose of obtaining the renunciation of the blockade of the Confederate Government, and made a speech in favor of it, in which he quoted an interview he had had with Napoleon III, who was most eager to unite with England in recognition; but this was very ill advised and set the house against him, although the majority was strongly inclined toward the South. Mr. Bright answered him in an eloquent speech, and his motion was withdrawn, though not until after news had reached England of the fall of Vicksburg and the National victory at Gettysburg.

No more Confederate ships were built in England, and the question of claims against the Government for the damage done was allowed to rest for the time being. In 1868 it was taken up, and a convention was entered into by representatives
of the governments which was rejected by the United States Senate. Later commissions from the two countries went to Washington, where it was announced that "her Britannic Majesty has authorized her high commissioners and plenipotentiaries to express the resolution of the Queen's Government for the escape, under whatever circumstances, of the Alabama and other vessels from British ports, and for the depredations committed by these vessels." After laying down some rules in regard to neutrals, the treaty provided for the settlement of the Alabama claims by five arbitrators named by the United States to be appointed by the Queen, the President, the Emperor of Brazil, the King of Italy, and the President of the Swiss Confederation. It provided also for a tribunal to settle individual claims between the countries, and a commission to take up the fisheries question; and referred the dispute about the Oregon boundary to the Sovereigns. When the arbitrators met they refused to allow all the American claims, and those for indirect losses, which were immense and which raised a storm of indignation in England, were withdrawn. But by unanimous vote England was held responsible for the acts of the Alabama, and a majority found her responsible for those of the Mersey. Thus the Prince of Wales was paid. The award was $15,500,000, and all claims of citizens were disallowed. On the other hand, Great Britain received an award of $5,500,000 in gold on account of the Canadian fisheries claims.

The trouble about the taking of fur seals in Bering Sea by Canadians and the claim of the United States to exclusive jurisdiction there as coming with the purchase of Alaska from Russia began as far back as 1872, but the United States did not attempt to enforce its rights till 1886, when some schooners belonging to a large fleet from British Columbia were seized and taken to Sitka; but on protest of the British minister the President ordered them to be released, without exclusion of the questions involved. Others were taken in 1887. At the request of the United States the governments interested entered into negotiations in 1888, which were not concluded. Other seizures were made and diplomatic controversy went on till 1872, when, at Secretary Blaine's suggestion, a special commission met at Paris and delivered a decision contrary to the contention of the United States, Aug. 15, 1893. This made good the claims of the Canadians for damages, and the commission appointed to make the award placed it at $473,151.25.

The dispute between Great Britain and Venezuela in regard to the boundary between Venezuela and British Guiana came up about 1894. The President sent a warlike message to Congress. In 1895 an extended diplomatic correspondence ensued between the representatives of the two countries which aroused much feeling on both sides of the Atlantic, and war talk was quite current until the matter was referred to a commission.

After gold was discovered in Alaska a boundary controversy arose and commissions were appointed. On Jan. 30, 1897, a treaty was signed providing for the demarcation of as much of the boundary as lies along the one hundred and forty-first meridian.

The Franchise.—The franchise, which had been extended by the reform bill of 1832, was still further extended by a reform bill of 1867. Reform bills had been brought in by Lord Russell without effect in 1852, 1854, and in 1862; and in 1866 Mr. Gladstone introduced one that he had joined with Lord Russell in preparing. On the occasion of the second reading Mr. Disraeli reminded Mr. Gladstone of his opposition to the reform bill of 1832, when he was a Conservative. The speech of Mr. Gladstone, who was then Chancellor of the Exchequer under Lord John Russell as Prime Minister, is regarded as among the best of his speeches. In its conclusion he said: "This bill is in a state of crisis and of peril and the Government along with it. . . . We stand with it now; we may fail with it a short time hence. If we do so fail, we, or others in our places, shall rise with it hereafter. . . . At some point in the contest it may possibly be the fate of us all to drive us from our seats. You may bury the bill that we have introduced, but . . . you can not fight against the future. Time is on our side. The great social forces which move onward in their might and majesty, and which the tumult of our debates does not for a moment impede or disturb—those great social forces are against you; they are in favor of us. We may now carry this fight, though perhaps at some moment it may drop over our sinking heads, yet it will soon again float in the eye of heaven, and it will be borne by the firm hands of the united people of the three kingdoms, perhaps not to an easy, but to a certain, and a not far distant victory."

The bill failed and the Liberals went out of office; but the next year the Tories brought in a bill for extending the suffrage which went even further than the one of the preceding year, and further still after it had been through the committee and been modified by Liberals and Radicals. Lord Cranborne described it as "a leap in the dark," a phrase ascribed usually to Lord Derby. In 1868 the borough franchise was slightly extended in Ireland.

In 1884 Mr. Gladstone introduced another reform bill, which was carried. It extended the franchise in the counties to the same extent as that in the boroughs. The rural laborers had not been treated politically, but a movement of organization among them, begun in 1872 under the leadership of Joseph Arch, had drawn attention to the injustice done in leaving them out of the provisions of the former franchise acts.

A measure to introduce voting by ballot was introduced in 1884, but not until 1887, when it was carried as an experiment to continue in force till 1880. The property qualification for members of Parliament was abolished about 1838, and about the same time the civil disabilities were removed from Jews, who were allowed thereupon to omit from the oath "on the true faith of a Christian".

The House of Lords.—The privilege of voting by proxy was given up by the House of Lords in 1808. Later the Crown was given power to create life peers, a proceeding which had aroused great opposition when it was proposed about 1858 to bestow a life peerage on one of the judges in a civil suit.

Church Affairs.—The early years of the reign saw the so-called "Oxford movement," which culminated in the withdrawal of John Henry Newman and other scholars from the Church of England to that of Rome and the establishment of the Puseyite, or ritualistic, party in the Church. The interest which the movement awakened and the vitality of the controversy, was due, not from the great university where they were leaders of thought, no doubt led to a belief in Rome that England was on the verge of a great reaction which would carry her back to the ancient communion; and this belief was perhaps the inspiring cause of a papal bull issued in 1850,

VICTORIA.
directing the establishment of "a hierarchy of bishops deriving their titles from their own sees, which we constitute by the present letter in the various apostolic districts" in England. Cardinal Wiseman, as Archbishop of Westminster and Administrator Apostolic of the diocese of Southwark, was to be the head of the Church in England; and he issued a pastoral, in which he said: "Catholic England has been restored to its orbit in the ecclesiastical firmament from which its light had long vanished, and begins now anew in the Church for the whole of its energetically and vigorously."

Lord John Russell wrote a letter to the Bishop of Durham on the subject, in which he condemned the bull as an assumption of authority in England to give titles representing territorial distinctions. The day following the appearance of the letter was Guy Faux day, and the officials of the Roman church were burned all through the country. The excitement led to the introduction of Lord John Russell's "ecclesiastical titles" bill, forbidding Catholic prelates to take titles from names of places in the kingdom under penalties. Although the bill was defeated in the House of Lords, it showed the dislike of Catholic members, but by Liberals like Cobden and Bright and many of the other members, it was passed by a vote of 395 to 63, probably with the feeling that something must be done to satisfy the excited feeling in the country. But the act does not seem to have been enforced, and in 1871, the act was repealed.

About the time that the Oxford movement was going on in 1843 occurred the secession of the Free Church of Scotland, which was a revolt against the appointment of ministers by lay patrons. It was led by Dr. Thomas Chalmers. In 1874 the bill for the abolition of Church patronage in Scotland was passed, giving the congregations the choice of their ministers at the point for which the Free Church had contended.

The question of disestablishing the Church in Ireland was brought forward in Parliament in 1865 by Mr. Dillwyn, who moved that the position of that establishment was unsatisfactory and called for the early attention of the Government. Mr. Gladstone contended that the disestablishment of the Irish Church was unsatisfactory, as it ministered to only one eighth or one ninth of those who were taxed to support it, but declared that the Government was not able at that time to deal practically with the question. This speech, showing Mr. Gladstone's hostility to the Irish establishment, caused great excitement and drew upon him the censure of the Church party, who believed that his principle, if carried out, would interfere with the Church in Wales, where the dissenters were in a majority, and might even be pushed still further. Nothing more was done at that time, but in 1868 Mr. Gladstone offered a bill abolishing charge of the Church in Wales, which became law in 1869, the bill abolishing the Irish Church establishment, to take effect in 1871, received the royal assent. A bill for disestablishing the Church in Wales was defeated in 1895.

In 1871 the university tests were abolished, thus permitting students of every faith to enter Cambridge and Oxford on equal terms. A measure for the restoration of public worship was passed in 1874. Its purpose was to do away with ritualism, which has for years been a disturbing element in the Church. The bill has apparently been a failure.

Various Reforms and Improvements.—Many old abuses not mentioned above have been done away with during the past sixty years. In 1842 an act was passed forbidding the employment of girls and women in mines and collieries. This was in consequence of the report of a commission which had been appointed upon the motion of the Earl of Shaftesbury, that the subject of such labor might be investigated. The report showed that in many of the mines and collieries these poor women had been set to draw carts and carry loads like beasts of burden. Other acts regulating labor and doing away with abuses have been passed at different times. Formerly the laws against combinations of workmen were very stringent. Any effort to effect an advance in wages was treated as a conspiracy. Trades unions were not regarded as entitled to the protection of the civil laws and could not prosecute a dishonest member or secure themselves against robbery. Their aims were looked upon as destructive to society; strike were held to be immoral, without regard to their provocation or purpose. Some outbreaks on the part of trades unions in Sheffield and Manchester about 1868 led to an investigation, which, while it showed that some of them used intimidation and crime to carry out their projects, the majority were innocent of such methods; and the inquiry and the reformation of the unions and time to reforms in them, placing the workmen on a better footing in many respects; in the matter of contracts, where the law had been all on the side of the employer, the employee was placed on an equality with him.

The abolition of the duty on paper was an important reform, as it enabled newspapers to be sold much more cheaply, and thus contributed to the spread of intelligence. The price of a daily paper at the beginning of the reign was 6d. Besides the heavy duty on paper there was a stamp duty and a duty on advertisements. All these were in time removed, the last, the duty on paper, about 1866. In 1840 the uniform penny rate of postage was established. The postal telegraph went into operation about 1848.

In 1857 an act to make the celebrated Gretna Green marriages no longer possible, provided that a residence of at least twenty-one days in Scotland should be required to make marriages legal. Mr. Gladstone and Lord Shaftesbury made strenuous efforts to banish the practice of deserting from the army, and it has gradually disappeared.

The purchase system for commissions in the army was abolished under peculiar circumstances. Mr. Gladstone introduced a bill to do away with it and make promotion depend upon merit; the bill also provided for compensation to officers then holding commissions which they had bought and expected to sell again, and which therefore represented an investment, so that the bill would be an act of confiscation virtually without that provision. It passed the Commons, but the Lords attempted to delay and perhaps defeat it entirely. The bill was passed by a majority of twenty-one on the second reading which was to the effect that it was better not to take any action until a complete plan for the reorganization of the army could be effected. The Prime Minister thereupon devised a plan for defeating the scheme of the Lords. The purchase of commissions was made legal only by royal warrant, and the bill then provided for a royal proclamation canceling the permission which had been given by the warrants of herself and her predecessors. This she did. The House of Lords had then no option but to pass the bill, as that was the only way to save the provision providing for compensation. The action of Mr. Gladstone in thus overriding the legislative power.
by royal prerogative was severely criticised, even by a large section of his own party, to whose principles it was clearly opposed. Flogging in the army was abolished in 1879.

In 1868 a bill was passed in Parliament to do away with public executions, which had long been a source of benefit to the inhabitants of the population; it had come to be understood that they were only a source of hardening and brutalisation to the very class they were intended to impress by terrible warning. Transportation for crime came to an end in 1857, and debtors' prisons have been abolished.

Strangely enough, up to the year 1870 England had no system of national education. There were private schools and church schools and charity schools, but no system of free public education; more than two thirds of the children were without school advantages. In 1870, during Mr. Gladstone's first administration, a bill was brought in by Mr. Forster, for the establishment of free schools, and after much opposition, not perhaps to the establishment of schools, but to some features of the plan, it was carried, and the present system of board schools was instituted; improvements have been made from time to time.

About 1874 the country was stirred by the revelations made by Mr. Plimpton in Parliament, concerning the scheme of sending out seamen merchant vessels which were unsavoury but insured, so that the owners were indifferent to their fate, while the law allowed seamen who failed to fulfill their agreements to be sent to prison. A sailor, therefore, who found himself committed to sailing in a crazy vessel had the alternative of losing his life or going to prison. Mr. Plim- solland offered a bill for securing close inspection of ships, which was opposed as too stringent by shipowners and others; a bill affording temporarily a measure of relief was passed in 1875, and in 1876 its provisions with others were embodied in a permanent act, which was passed.

The great advances in the comforts and conveniences of life, the improvements in methods of travel and communication, the multiplication of machinery, the discoveries of science, the new applications of known scientific principles—all these advantages of the wonderful progress of the past sixty years England has shared with all other civilised nations, and they need only be referred to here.

In the year following Victoria's accession steam communication was established between England and America; the Sirius, the Great Western, and the Royal William crossed the Atlantic. The Cunard line was established two years later. The same year (1837) that Prof. Morse applied to Congress for aid for his electric telegraph, two Englishmen—Whetstone and Cooke—took out a patent for improvements "in giving signals and sounding alarms in distant places by means of electric currents transmitted through metallic circuit." The first successful Atlantic cable was laid in 1866; now all the oceans are traversed in this way, the Atlantic by 14 lines.

"In 1837-38," says Alfred Russel Wallace, "I was living near Leigh ton Buzzard while the London and Birmingham Railway, the precursor of the present London and Northwestern system, was in process of construction; and when the first section was opened at Watford I travelled by it to London third class in what is now an ordinary goods truck, with neither roof nor seats, nor any other accommodation than is now given to coal, iron, and miscellaneous goods. If it rained or the wind was cold the passengers sat on the floor and protected themselves as they could."

The half-century jubilee of the first use of locomotives on the road from Stockton to Dar- lington in 1825 was celebrated at Darlington in September, 1875, under the auspices of the North-eastern Railway Company. The Liverpool and Manchester line had been opened in 1830; the London and Birmingham was first opened through- out in 1838. The Queen made her first journey by rail from Windsor to Paddington in 1842. The London Times says of it: "The master of the horse, whose business it was to provide for the Queen's ordinary journeys by road, was much put out by the innovation. He marched to the station several hours before the start to inspect the engine as he would have examined a steed. But greater merriment was occasioned by the Queen's coachman, who insisted that, as a matter of form, he ought to make believe to drive the engine. After some dispute he was told that he might climb on to the pilot engine which was to follow the line train, and he actually did this; but his scarlet livery, white gloves, and wig suffered so much from sleet and sparks that he made no more fuss about his rights in after trips. The run to Paddington was successfully accomplished, and the motion of the train was found to be so pleasant that the Queen readily consented to offer herself to the railway for a longer journey a few weeks later, when she paid her first visit to Scotland."

About this time the mania for railway speculations set in. Vast sums were subscribed for projected lines; in the autumn of 1845 a table published by the Times showed that 1,428 companies had been registered and were pledged to the outlay of 270,124,520. A panic followed. "For a while railway scrip was not only unsalable, but not to be parted with as a gift. Holders of half- paid-up shares resigned themselves to bankruptcy and men who had raved at Parliament for not passing railway bills with sufficient speed leaped with joy when it happened that the project of their party the company was through, thereby enabling the concern to be wound up and the shareholders to be discharged from further liability."

At the time of the first jubilee (1887) the railway mileage in the United Kingdom was 27,731.

VIRGINIA, a Southern State, one of the original thirteen, ratified the Constitution June 1788; area, 42,430 square miles. The population, according to each decennial census, was 747,610 in 1790; 880,200 in 1800; 974,600 in 1810; 1,065,116 in 1820; 1,211,403 in 1830; 1,293,797 in 1840; 1,421,601 in 1850; 1,396,318 in 1860; 1,223,163 in 1870; 1,512,580 in 1880; 1,655,980 in 1890; and 1,854,184 in 1900. (May 30, 1900.)

Government.—The following were the State officers in 1900: Governor, J. Hoge Tyler; Lieu- tenant Governor, Edward Edwards; Secretary of State, Joseph T. Lawless; Attorney-General, A. J. Montague; First Auditor, Morton Marye; Sec- ond Auditor, Josiah Ryland, Jr. (succeeded, Oct. 17, by John G. Dew); Treasurer, A. W. Harman. Acting Auditor-General, John Hail- land, Auditor of Public Instruction, Joseph W. Southall; Com- missioner of Agriculture, George W. Kinner; Rail- road Commissioner, James C. Hill; Commissioner of Labor, Archer Montague (succeeded, Feb. 1, by J. B. Doherty); Register of the Land Office, J. W. Richardson; President of the Senate, John W. Riely (succeeded, Oct. 1, by A. A. Phlegar), John A. Buchanan, George M. Harrison, and Richard B. Cardwell. All are Democrats.

Population.—The census of 1900 shows the in- crease of population for the State to have been
The College of William and Mary, the oldest in the State, founded in 1693, graduated 30 in all departments.

A class of 25 was graduated at the Virginia Military Institute. A statue, Virginia Mourning her Dead, has been cast in Rome for the institute.

As soon as the necessary funds are obtained, a date will be announced for the unveiling in honor of the cadets who fell at the battle of New Market, May 15, 1864.

Randolph-Macon College, Ashland, conferred degrees upon 25 graduates. This is a college for men.

The Randolph-Macon Woman's College, at Lynchburg, which in 1900 conferred 12 degrees upon 8 graduates, is only about eight years old, but has won remarkable success. Its fine buildings were formally dedicated Feb. 15. (See Annual Cyclopaedia for 1896, page 533.)

The Virginia Polytechnic Institute, at Blacksburg, conferred degrees upon 35 graduates. Ninety per cent. of the graduates of this institution are engaged in industrial pursuits. It has the advantage of both State and national aid, and of grounds comprising over 400 acres. Its administration building, all but one wing, was destroyed by fire Feb. 1, 1900, and many valuable records, etc., were burned.

At the annual meeting of the trustees of the Peabody Educational fund, Oct. 3, the general agent presented a favorable report from Virginia on the work of the Hampton Normal and Agricultural Institute. The portion of the Peabody fund allotted to Virginia for the year ending Oct. 1, 1900, was $5,300.

Delegates representing more than 500 teachers, members of the Virginia Teachers' League, which has a total membership of more than 1,000, held an important meeting at Richmond in December.

Penitentiary.—According to the October report of the Superintendent, the number of prisoners in the Penitentiary showed recent increase. The average number for 1899 was 1,262. The number in October, 1900, was 1,457—male and female, white and black. From July to October, 5 white and 11 colored convicts were pardoned on recommendation of the Board of Pardons.

New Charitable Organization.—Nov. 23 was the date of the organization, under a charter secured from the last Legislature, of the Children's Home Society of Virginia. It may be maintained as an independent State organization or may affiliate with the national organization, which has headquarters at Chicago. Similar organizations exist in 20 other States. The Virginia society has the whole State for its field. Its principal work will be to secure legal control of orphan children and provide homes for them in families.

Agriculture.—The State Board of Agriculture, in March, appointed 10 inspectors of fertilizers to fill places created by the Legislature of 1899-1900. One inspector was appointed from each congressional district, at a salary of $30 a month while performing the duties of the office, the term of service being 1899-1900. Samples of every brand of fertilizer offered for sale in the State are analyzed at the department, and the results are made known in printed bulletins, which are sent free to all farmers who apply for them. The importance of this official action may be estimated from the fact that the farmers of Virginia spend for fertilizers over $3,000,000 annually.

In November the State Board of Agriculture decided in favor of locating in Charlotte County the tobacco test farm to be established by the board. The Board of Supervisors of Charlotte County have agreed to give the State 500 acres for this farm.
Six prizes for Virginia apples were awarded at the Paris Exposition of 1900.

Jamestown Tercentenary.—At its annual meeting the Association for the Preservation of Virginia Antiquities appointed a committee to promote an exhibition to be held at Richmond in 1907, to mark the third hundredth anniversary of the planting at Jamestown of the first permanent English colony on this continent.

Monument to Confederate Dead.—At Charles City Courthouse, Nov. 21, a beautiful monument to the Confederate dead of Charles City County was unveiled with elaborate ceremonies. The shaft, 21 feet high, is of Virginia granite, and rests on a base of white granite 5 feet square.

Railroads.—According to official reports, the net receipts of the railroads of Virginia were greater in 1900 than in any previous year. Coal shipments to deep water were the principal feature of the traffic, but in general transportation there was enormous increase. An important event was the acquisition by the Pennsylvania Railroad of the control of the Chesapeake and Ohio and Norfolk and Western lines. Another was the consolidation of the various seaboard air-line roads.

The last spike, completing the Seaboard Air-line Railway from Richmond to Tampa, Fla., was driven at Richmond, June 2. Seven States are traversed by the new road system, and its completion was celebrated as a southern triumph in commercial enterprise.

Legal Decisions.—The Supreme Court of Appeals handed down in February a decision affirming the constitutionality of the Virginia fence law. In September the court handed down a decision holding the Scovil Act unconstitutional, which was the jurisdiction of his own court. In December an opinion was handed down by the court that the State can not sue for collection of taxes, but is confined to statutory remedies—distress of personal or sale of land upon which the taxes have not been paid. The State can not go into equity and enforce the lien for the collection of taxes.

Lawlessness.—At Emporia, March 24, two men, one white, the other colored, were taken from the jail by a mob and hanged to a tree in front of the courthouse, no effort, apparently, having been made, either by citizens or by officers of the law, to prevent the lynching, which was participated in by white men and negroes. The negro who was lynched had killed two of the most prominent citizens of Greenville County, and the white victim was hanged because he had been in company with the murderer when his crime was committed.

A young negro charged with the murder of an aged farmer near Buffalo Springs, April 22, was saved from lynching at the hands of a mob which several times gathered and demanded his life, by the resolute action of the constable having him in custody.

In the lower part of Wythe County, Dec. 6, a young negro who had committed a criminal assault was taken from an officer and put to death by a mob near the scene of his crime. A negro companion who was arrested along with him escaped the same fate through a "compromise verdict" of the mob, who "tore his clothing from the upper portion of his body and whipped him unmercifully.

On the night of Dec. 1 the house of a justice of the peace, at Goode, Bedford County, was surrounded by a mob, who poured into it "a perfect rain of bullets and buckshot," the fire being directed particularly toward the justice's room and bed. He was badly wounded in the arm, but returned the fire, and the mob soon retired. A reward of $50 was offered by the Governor for the conviction of the men who fired upon the house.

Legislative Session.—The General Assembly, after a three months' session, adjourned March 7. The session was marked by the great amount of work accomplished, and by the extraordinary number of local and special bills passed. Some of the most important were these:

To require railroad companies to provide separate cars or compartments for white and colored passengers. This bill was passed without a dissenting vote in either house.

To provide for separate accommodations for whites and negroes on trains.

To provide for a classification of legislation as to oysters, clams, crabs, fish, etc.

To prescribe the weight of a barrel of apples, and the size of barrels to be used in packing and shipping the same.

To prevent riots on trains.

To incorporate the John Marshall Memorial Association.

To incorporate the Jackson Memorial Association.

To submit to the qualified voters the question of calling a constitutional convention.

To provide for submission to the people amendments to sections 1 and 2 of Article VII of the Constitution, etc.

To create a State Department of Insurance and provide for an insurance commissioner.

Authorizing cities and towns to maintain free libraries.

To create the office of commissioner of valuation in every county and city of the State. The Supreme Court of Appeals, on March 30, declared this act unconstitutional.

To amend the delinquent land law, popularly known as "the land-grabbers' law" of the preceding Legislature. This law had met with strong public disfavor, and the amendments of 1000 eliminated many of its objectionable features.

To provide for the appointment of State and local boards of health.

Incorporating various railroads.

To incorporate the Negro Agricultural and Industrial Society of Virginia.

To incorporate the Children's Home Society of Virginia.

The Senate, on March 3, by a vote of 20 to 2, passed a bill which had already passed the House of Delegates, calling on the Virginia Senators in Congress to vote for an amendment to the Constitution of the United States making United States Senators elective by direct vote of the people.

The Legislature granted to the Virginia Fair Association a charter whereby horse racing and "dove contests" are authorized.

By the general pension bill passed by the Legislature, in addition to numerous private bills, the sum of $135,000 was appropriated. The bill makes some changes in the pension law, one of the most important of which provides for payment to widows of Virginia soldiers, sailors, or marines who have died since the civil war the sum of $25 per annum, upon conditions prescribed in the bill.

Important action was taken by this Legislature in the direction of removing the disabilities and extending the rights of married women in respect of property and various matters of individual legal status.

Political.—The Republican State Convention met in Norfolk, April 10. Candidates for presidential electors at large were nominated. The resolutions approved the administration at Wash-
ington, commending its financial and foreign policies; approved the ship subsidy bill in Congress, and opposed the civil service laws and urged their repeal or modification. They denounced the Legislature of 1899-1900 for adding to the "iniquitous election laws" and increasing the number of officeholders, and for the provision for holding a constitutional convention, which would result in the formation of an office-holding oligarchy that could only be overthrown by revolution.

The Democratic State Convention met in Norfolk, May 2. Presidential electors at large were nominated. In the platform the principles of democracy as enunciated in the Chicago platform of 1896 were approved, and the delegates to the national convention were instructed to vote for William J. Bryan as the candidate for President. The Republican policy of imperialism was denounced as undemocratic, un-American, and unconstitutional. The platform demanded that the Philippine Islands be turned over as soon as practicable to their own inhabitants; that a just territorial government be given to Porto Rico: and that the solemn declarations of our Government concerning Cuba be promptly and honorably made good. Opposition was declared to militarism and great standing armies as the worst enemies of the republic. Criminal trusts and other illegal combinations of capital were denounced as a serious menace to the public welfare, and the Republican party was arraigned for failing to enforce existing laws and to enact others against them. The State administration was approved, and the people were congratulated upon its liberal support of the public schools and of disabled Confederate soldiers and Confederate widows. The platform approved the action of the General Assembly in submitting to the people the question of calling a constitutional convention, and counseled that in framing a new Constitution no effort should be made to disfranchise any citizen of Virginia who had a right to vote prior to 1861, nor the descendant of any such person.

At the elections of May 24 the Democrats were generally successful in the election of local officers. The most important question before the people, that of calling a constitutional convention, was decided in the affirmative, and it remained for the next Legislature to fix a date for the convention to meet. The total vote on this question was 137,732, and the majority in favor of the convention was about 17,000.

At the general election of Nov. 6 the Democrats of the State elected their full congressional ticket by a majority of more than 60,000. The presidential vote was divided as follows: Bryan, 146,080; McKinley, 115,865; Woolley, 2,150.

**VISUAL INSTRUCTION**, information that reaches the mind chiefly through the sense of sight, aided by the explanation of the teacher. A picture of the subject to be studied, or a series of pictures of different parts of the subject, is
projected upon a white screen or background in a dark room by means of a stereopticon. This picture is magnified many times so that it can be seen in minutest detail by the class or audience. Visual instruction is not a new method of imparting knowledge, but it is now carried to such perfection, and is found so helpful in the study of science, history, travel, and domestic economy, that it is worthy to be termed an art.

The Pictures.—A photographic negative of the object to be studied is first made, from which a positive is printed upon a prepared glass 3 by 4 inches in size. The glass for these positives must be clear and bright to give the best results. All objects covered by the picture will appear in light and dark shades, showing upon the canvas without color, but these positive pictures may be so tinted by a skillful artist that Nature will be reproduced quite accurately. Especially is this true of landscapes, birds, mammals, and flowers.

The Projecting Instrument.—The primitive method of projecting these pictures upon a screen was by means of the magic lantern, beginning with its use as a mere toy, where a common oil lamp was employed for a light, and coming by degrees to the use of the stereopticon, single, double, and triple. The stereopticon consists of a case of metal in which is placed the light, the condenser for concentrating the rays of light, the lenses or object glasses for magnifying the pictured object, and the slide holding the positive picture in place.

The Illuminator.—The oil lamp can not be made to throw a light strong enough to bring out the pictures distinctly without the use of many wicks and consequent imperfect combustion, imparting a yellow color to the flame, and frequently causing smoke annoying to the lecturer as well as to the audience. House gas, by means of the Welsbach burner, may be used in a parlor or schoolroom, but the extreme delicacy of the "mantle" employed prevents its general use as an illuminator even as a stationary light. Acetylene gas is of recent use, and has been found to be superior to oil light. The oxyhydrogen or lime light projects a very clear, bright picture, and is in common use for illumination in illustrated lectures. The electric light is more intense and penetrating than the lime light, and the mechanism of the lamp has been so simplified and brought to such a state of perfection that it is easily manipulated, and that light is now used exclusively at the American Museum of Natural History.

Other Methods.—Visual instruction may be imparted in other ways than by the use of the stereopticon. The microscope permits of the investigation of infinitesimal objects in Nature in all their complicated structure and in their natural, variegated coloring, but only one person can use the instrument at a time unless the microscope be connected with the stereopticon. Thus few students could become familiar with the natural objects beyond their own immediate vicinity. For the popular purposes of visual instruction the stereopticon and the photograph have established themselves permanently in the principal educational centers.

The American Museum of Natural History.—The present standing of visual instruction and its development are best shown as exemplified at the American Museum of Natural History, of
which Mr. Morris K. Jesup is president of the Board of Trustees and which is located at Seventy-seventh Street and Central Park West, where this method of public instruction has attained its highest perfection under the direction of Albert S. Bickmore, A. M., Ph. D. In 1882 Prof. Bickmore began his work in visual education by means of illustrated lectures in a single room at the museum, before an audience of 9 persons, mostly school-teachers. In 1884 his subjects illustrated were the skeleton, muscular system, arteries and veins, nervous system, digestion, respiration, hygiene, granites and sandstones, limestones and marbles, evergreen trees (pine, spruce, cedar), deciduous trees (oak, elm, and maple). In 1885 two rooms were necessary to accommodate the growing classes. Their Thackering Hall, at Eighteenth Street and Fifth Avenue, was filled, and shortly afterward a hall at the museum, accommodating about 1,000 persons, was filled with all the appliances necessary for the presentation of illustrated lectures in a form as nearly perfect as could be conceived of at that time. The desire of the teachers and their students to get the benefit of this visual instruction became so great that for several years each new lecture has been repeated four times to entirely different audiences.

Within the last year there has been completed and dedicated at the museum a new hall, the most complete in the world devoted entirely to visual instruction. It will accommodate 1,296 persons with chairs. It is so arranged as to double screens, galleries, and auditorium that each listener may have a direct view of both pictures on the screens at the same time.

The museum gives its instruction under the auspices of the Department of Public Instruction. No children under 12 years were admitted before 1900, passed in 1893 and 1890 were: An act to provide that additional facilities for free instruction in natural history, geology, and kindred subjects, by means of pictorial representation and lectures, may be furnished to the free common schools of each city and village of the State, or part thereof, that has, or may have, a superintendent of free common schools. In section 1 the State Superintendent of Public Instruction was authorized to furnish, when requested, a full set of slides to any school district, or city, town, etc., of the State, for the instruction of teachers and pupils in the common schools. The slides, containing 65,000 negatives, are made, and a full set is sent to the following educational centers: Albany, Amsterdam, Auburn, Binghamton, Buffalo, Cohoes, Corning, Cortland, Dunkirk, Elmira, Geneva, Gloversville, Hornellsville, Hudson, Ithaca, Jamestown, Johnstown, Kingston, Little Falls, Lockport, Middletown, Mount Vernon, Newburgh, New Rochelle, to each of the boroughs of New York city, Niagara Falls, North Tonawanda, Ogdensburg, Olean, Oswego, Poughkeepsie, Rensselaer, Rochester, Rome, Schenectady, Syracuse, Troy, Utica, Watertown, Watervliet, and Yonkers, besides the villages of Albion, Batavia, Canandaigua, Catskill, Glens Falls, Haverstraw, Herkimer, Hoosick Falls, Ilion, Lansingburg, Malone, Mechanicville, Medina, Norwich, Nyack, Oneonta, Owego, Peekskill, Penn Yan, HALL OF PALEONTOLOGY.

un, Niagara Falls, Newburgh, New Rochelle, to each of the boroughs of New York city, Niagara Falls, North Tonawanda, Ogdensburg, Olean, Oswego, Poughkeepsie, Rensselaer, Rochester, Rome, Schenectady, Syracuse, Troy, Utica, Watertown, Watervliet, and Yonkers, besides the villages of Albion, Batavia, Canandaigua, Catskill, Glens Falls, Haverstraw, Herkimer, Hoosick Falls, Ilion, Lansingburg, Malone, Mechanicville, Medina, Norwich, Nyack, Oneonta, Owego, Peekskill, Penn Yan,
Plattsburg, Port Chester, Port Jervis, Saratoga Springs, Seneca Falls, Sing Sing, Tonawanda, Waterford, and White Plains. About 26,000 stereopticon slides are furnished by the museum to the State superintendents of other States and to Canada, at a nominal charge to cover the cost of manufacture and delivery, under these restrictions, as stated in the circular letter:

"We are not dealers in slides, but we are desirous of promoting free public education throughout our land by means of illustrated teaching; and the State Superintendent of Public Instruction of the State of New York, under whose auspices our entire system is carried on, has given us authority to supply, as a matter of interstate courtesy, the superintendent of public instruction of each other commonwealth with one series, and no more, of our slides at cost, after we have finished the work which is required of us by the statutes of our own State. We do not keep a stock of slides on hand, but fill each order separately; hence considerable time must elapse before a shipment can be made, and we can only undertake the preparation of such illustrations between May 1 and Sept. 1. Each lecture is sold complete, and not a selection of slides therefrom."

The New York State Superintendent's restrictions on the use of this visual instruction material are: "In no case shall the use of said apparatus be permitted at any lecture where an admission fee shall be charged, or which shall be given in connection with any other entertainment of any nature, or for the benefit of any private school, church, Sunday school, hospital, or any purpose not connected with the free common schools of the State. No copies in any form may be made from our manuscripts or slides."

The Purpose in New York State.—It is known that in the year 1901 a Pan-American Exposition will be held at Buffalo, N. Y. That this exhibition of the material and intellectual progress of the North and South America may be duly appreciated, Prof. Bickmore, in 1900, prepared a series of three lectures on the scenery and natural resources of South America. These lectures will be repeated many times at the American Museum of Natural History, and in all the educational centers of the State of New York. In this way the people will become familiar with coming events, and will be educated up to a point where they may derive the greatest benefit from the exposition.

For the Kindergarten.—One of the most beautiful lectures ever prepared by Prof. Bickmore is for the kindergarten. It consists of 24 views of natural objects seen in the United States, as boys riding on horseback, children of a district school at recess, driving the cows, gathering apples, etc.; 24 pictures of buildings and street scenes in the city; and 24 views of the seashore—lighthouse, sailing vessel, waves, etc. Each view is explained by a children's song, or in such words as are familiar to them.

Prof. Bickmore has demonstrated that visual instruction is as valuable for children as for their parents.

A Gold Medal.—At the Exposition of Paris in 1900 an exhibit was made by Prof. Bickmore, representing conjointly the American Museum of Natural History and the Department of Public Instruction of the State of New York, of the slides and general objects introduced all competitors in the excellence of its exhibit of colored slides and in the perfection of its system of educational work. While in Paris, Prof. Bickmore, at the request of the École Internationale, gave three illustrated lectures on the United States and their dependencies at its annual meeting. So highly was his work appreciated that he was invited to attend the next annual meeting of the École Internationale in 1901, to be held at the International Exposition in Glasgow, Scotland, and give a series of lectures, and then repeat them in the principal cities from Glasgow to London, the British public might become acquainted with the latest phase of visual instruction in the New World. Mr. W. F. Stead, of the Review of Reviews, London, commended the American Museum's system of visual instruction, and showed the demand for it in England and throughout the English-speaking colonies. This system of instruction has been introduced into Madras, southern India, whence it will probably spread through the peninsula.

In the City of New York.—For the season of 1899–1900 the school authorities of the city of New York appropriated $100,000 to be expended under the supervision of Dr. Henry M. Leipziger, a specialist in visual instruction, for the people. Two thousand lectures were given at various educational centers in the boroughs of Manhattan and the Bronx. These lecture centers are all fitted out with lanterns and screens and all the necessary apparatus for visual instruction. A count of the people present at each lecture shows that 550,000 persons availed themselves of the privilege of this system of education; and the lectures included
almost every subject about which information may be imparted. The free visual instruction in the city of New York was begun thirteen years ago in only a few centers and at a small expenditure of money. Each year the system has been enlarged by the earnest demand of the public for this form of education, until it is now come to be recognized as a prominent and important branch of the city's educational work. In the past year a similar system of free public lectures to the people was inaugurated in Brooklyn, under the auspices of the Board of Education of that borough.

**Voting Machines.**

Mechanical devices used in place of paper ballots in elections, which also count and add the votes cast. Some operate by the deposition of balls or disks, some by perforations in a sheet of paper, which are afterward counted, and others, of the self-registering type, are supplied with an indicator adjacent to the name of each candidate, which is operatively connected with an internal mechanical register—one for each candidate. In this last type of machine the voter makes his selections by placing the different indicators in position to signify his choice of all candidates, and by the subsequent operation of a lever or turnstile registers his selections as indicated.

According to the present election laws in force in the United States, a voting machine must be so constructed that it enables a voter to cast his vote in secret; that it counts positively each vote cast; that it permits a voter to make such selection among the candidates as he wishes—for all of one party, or in part for those of one party and in part of those of other parties; that it permits the voting for persons nominated by any party, and at the same time prevents voting for candidates in excess of the number to be elected; that it be convenient in its operation for the voter, with little instruction, and so constructed that it may be arranged for use by unskilled persons; that it be so constructed that it will not become inoperative during its use; that it be so arranged that the blind and illiterate are able to operate it without assistance; that it will permit a voter having made an error to change his vote while in the booth; that it will permit voting for or against questions or amendments; that it will permit the voter both to indicate and register his own vote, and place it beyond the power of any one else to deprive him of it; that it will permit limited voters, women and certain nontaxpayers, to vote for certain candidates and on certain questions, and at the same time prevent them from exceeding their privileges.

In 1848 a patent was issued in England for a mechanical device for the registering of votes, but no voting machine was invented until the invention of the Myers ballot machine in Rochester, N.Y. The Myers machine consisted of a steel booth 5 feet square and 7 feet high. The voter entered by a door, which was closed, and
he wishes, operate the individual knobs without first pulling out the straight-vote knob. At the close of the election the fronts of the counters are exposed to view, and a record is taken of the result. This machine has been in use in Hornellsville since 1896, and lately in Jamestown and Syracuse, N. Y., and Detroit, Mich. This was the first machine to fulfill completely all the requirements of the present election law.

The Standard voting machine, patented by A. J. Gillespie, of Atlantic, Iowa, in 1897, is about 4 feet square and 8 inches deep, and is supported by legs, the top being about 6 feet from the floor. The ticket is arranged upon the face of the machine in the form of an Australian ballot, the party nominations being in vertical columns, with a numbered pointer at the left of each candidate's name and a large lever at the top of each party column. Extending from the bottom of the voter's hand outward about 6 feet is a semicircular rod, upon which a curtain is drawn by the voter as he enters the machine, thus inclosing himself in a booth and unlocking the machine for voting. To vote on this machine, a straight-vote lever is pulled down, which turns a pointer over the name of each candidate that the voter desires to split, he can do so by turning back any of the individual pointers and in their places turning others over the names of the candidates he wishes to favor. This machine fulfills every requirement under the present election law. The Standard voting machine was first used at a city election in Rochester in 1898, and since that time it has been adopted in Buffalo, Utica, Ithaca, Elmira, Auburn, Oswego, Niagara Falls, Rome, Poughkeepsie, Hudson, Johnstown, Gloversville, and many towns. In no case where this machine has been adopted has there been a return to the paper ballot.

Dr. R. H. Thurston, one of the three voting-machine commissioners of New York State, and head of the mechanical department of Cornell University, in his report on this machine for the election in Ithaca in November, 1899, says:

1. The voting machine is a simple, reliable, durable, and convenient apparatus for its purpose.
2. The machine compels the deposit of a perfect and accurate ballot, of the form chosen by the voter.
3. It restricts the voter absolutely to the limits of the law and permits him freedom as absolute in voting within that limit.
4. Defective ballots, the usual fault of ordinary methods of voting, are entirely done away with, and no man loses his vote by defect of the system, or fault of his own, if he votes at all. The disfranchised voter becomes unknown.
5. Fraudulent voting is impossible, as well as errors in voting.
6. The vote cast is registered, vote by vote, with absolute accuracy and certainty.
7. The result can be declared immediately upon the close of the polls, having been already completely counted.
8. The cost of the system is so much less than that of the old method that the machines usually pay for themselves in three to seven years.
kane, 57,542; Stevens, 10,543; Thurston, 9,927; Wahkiakum, 2,819; Walla Walla, 18,680; Whatcom, 24,116; Whitman, 25,590; Yakima, 13,462.

The population of incorporated places having more than 2,000 and fewer than 25,000 is as follows: Aberdeen, 3,747; Ballard, 4,568; Colfax, 2,121; Dayton, 2,210; Everett, 7,538; Fairhaven, 4,014; Graham, 2,757; Grays Harbor, 2,050; Hoquiam, 2,321; Port Townsend, 3,443; Republic, 2,050; Roslyn, 2,786; Snohomish, 2,101; Vancouver, 4,000; Walla Walla, 10,049.

**Finances.**—The following statements are taken from the Governor's message at the beginning of 1899:

"Four years ago the total State debt was $2,176,347.64. This, in spite of the fact that our State Constitution, in the most explicit terms, forbids any indebtedness in excess of $400,000. Of this total debt, $1,777,916.03 was in the form of general fund warrants. These, with the military fund warrants, amounting to $45,000, were called for at 9 per cent. interest, or a total of $150,000 in interest per annum, approximately. Warrants were two and a half years in arrears, so that on each dollar used by the State in the conduct of its business 20 per cent. in interest was paid. During the past eight years there has been paid, as interest on State indebtedness, mostly to brokers and dealers in warrants, the enormous sum of $10,125,336. During the past four years the total outstanding indebtedness has been reduced from $2,176,347.64 in 1897 to $1,392,639.60 on Jan. 1, 1901, and of this latter amount $730,000, in the permanent school fund, has, under the law of 1899, been used by the State in the payment of general fund warrants and the issuance of required State debts, which, in the eight years of this period, is the entire amount. The general fund warrants, bearing 5 per cent. interest, less cash on hand, $316,398.02; State bonds, bearing 3½ per cent. interest, $155,000; school bonds, bearing 3½ per cent. interest (covered into treasury), $750,000; total, $1,401,198.02; less cash in interest fund, $8,738.36; total debt, $1,392,463.66.

"Among the causes leading to an improved condition of the State's finances must be named the enactment of the revenue law of 1897. This has been found most efficient. The issuance of delinquent tax certificates, bearing 15 per cent. interest, operates to induce prompt payment of taxes. The Redford law of 1899, calling for an investment of money in the permanent school fund in outstanding general fund warrants, is also to be credited with saving to the State large sums of interest."

The State levy as fixed this year is as follows: For schools, 3¾ mills; general fund, 2½ mills. The military and interest fund levies are regulated by statute and are each ¼ of 1 mill. In 1899 the levy was as follows: For schools, 3½ mills; general fund, 2½ mills. The general fund levy is considerably less than last year, but the school fund levy is more; the reason for this is that the levy for schools is based on the number of school children in the State, whereas in 1899 there were 127,306, while this year the number is 139,554.

The Auditor's estimate of the receipts of the general fund during the biennial term beginning April 1, 1901, is $1,820,000, and of expenses, $1,116,800.

**Education.—**The law requires State taxes, not exceeding 4 mills, sufficient to produce $8 for each child of school age; this is for the common schools. Five institutions of higher learning are supported by State appropriations: The University of Washington, at Seattle; the Washington Agricultural College and School of Science, at Pullman; and three State normal schools, one at Cheney, for the eastern portion of the State; one at Lenburg, for the central; and one at New Whatcom, for the northwest. The ordinary expense of these institutions to the State is about as follows: Agricultural College, $150,000; State University, $40,000; normal schools, $45,000.

Olympia is endeavoring to raise an endowment of $150,000 for the educational institutions. Students have offered to found on condition of this fund being given by citizens. It is to be called the Olympia University. The formal offer to the committee appointed by the Chamber of Commerce describes the proposed institution, giving among other details the following peculiar feature: Said parties propose to the last of their property for said University a national institution by operating in connection with it a 'department of travel,' which is an organized plan to combine the advantages of travel and observation with the usual text-book work, and by means of this organized plan they expect to bring students from all parts of the country and to build and maintain an institution at Olympia sufficient to accommodate them."

The text-books for the public schools are selected once in five years by the State Board of Education. Those for the coming five years were chosen in May. A large part of those adopted for the public schools of all kinds were published, and some were prepared by "local talent." Protests in regard to two of them have been made by the superintendents of many of the schools. One of them says: "We examined the geography at the last board meeting and agreed it was wholly unfit for use. Its maps are inaccurate and poorly colored. It contains bad spelling and ungrammatical sentences. The map of Washington is especially poor. The speller is full of errors, some of which are typographical and some apparently made through ignorance. No teacher will dare give out a lesson before going over it in advance and correcting mistakes. I should have preferred to lose all expense at a blow.

**Militia.—**The National Guard consists of 1 full regiment of infantry, made up of 3 battalions of 4 companies each, and in addition 2 companies of infantry unmatched, 1 battery without guns, drilling as infantry, and 1 troop of cavalry. The last Legislature appropriated $10,000 for the purpose of bringing from the Philippine Islands the remains of those Washington boys who died in their country's service. The bodies of 22 volunteers were brought back to their home State, and all but 9 were claimed by friends and taken to their homes. These 9 were brought to the capital city, where the Masonic fraternity of Olympia gave a handsome tray of land for their interment.

**Charities and Corrections.—**The maintenance expenses of the State institutions for the three and
a half years ending Sept. 30 were as follow: Western Hospital for Insane, total, $279,104.90; daily per capita, 594.96 inmates; $0.3673; Eastern Hospital for Insane, total, $174,286.01; daily per capita, 307.36 inmates, $0.4493; State Penitentiary, total, $826,330.00; daily per capita, 1,190 inmates; $0.70; State Reform School, total, $677,708.70; daily per capita, 133.38 inmates, $0.3456; Soldiers' Home, total, $86,148.43; daily per capita, 143.5 inmates, $0.4067.

Banks.—The report of the condition of the 27 State banks, May 31, shows: Loans, $4,708,893; real estate, $1,267,989; surplus, $726,460; undivided profits, $211,707; cash, $1,031,912. The report of the national banks in the State, April 26, shows deposits of $20,420,954, and cash on hand, $2,925,252.

Public Lands.—The figures from the General Land Office for the year ending June 30 include the following concerning Washington: Area unappropriated, unreserved, and unsurveyed, 5,888,581 acres; area unappropriated, unreserved, and surveyed, 5,237,302 acres; area reserved, 12,366,791 acres; area appropriated, 19,264,206. The reserves in Washington are: Mount Rainier reserve, 2,027,520 acres; Olympic reserve, 1,923,840 acres; Washington forest reserve, 3,594,240 acres. The Priest river forest, in Washington and Idaho, comprises 645,120 acres.

A proclamation opening the northern half of the Colville Indian Reservation in the northwestern part of the State was issued in April, to take effect, according to the law, six months later, Oct. 1. The half that is opened contains 1,500,000 acres, 300,000 of which were allotted to the Indians under the treaty of cession. It is estimated that at least 300,000 acres are first-class agricultural land, about the same area mineral land, and the remainder is covered with a fine growth of fir, cedar, and hemlock. The lands chosen by the Indians lie chiefly along Kettle river.

The report of the Geological Survey on the Olympic forest reserve says that, taken as a whole, "this is the most heavily forested region of Washington, and with few exceptions the most heavily forested section of the country. The densest forests are found in the townships near the Pacific coast, in the northwestern part of the reserve, while as the altitude increases, the forests become less dense and the species become of less value for lumber. The total stand of timber upon the area examined—2,400 square miles—is 37,100,000,000 feet, an average of 24,000 feet per acre for the entire area. There is no section of equal area in the State so heavily clothed with forests as this." The timber is hemlock, red fir, silver fir, cedar, and spruce. Portions of this reserve were restored to the public domain this year because more suitable for farming than for forest culture.

The total amount of timber in the State, as estimated by Mr. Gannett, of the survey, is, that 1,14,775,000,000 feet, board measure. Of this amount, 75,114,900,000 feet are in the nine tenths, or 103,504,000,000 feet, is west of the crest of the Cascade range, the remainder—11,274,000,000 feet—being upon its eastern slope and in the northern and eastern portions of the State.

With the exception of the redwoods of California, the forests of Washington are the densest, heaviest, and most continuous in the United States. Except for a few prairie openings, and except where removed by fire or the ax, they cover the country as a thick mantle from high on the Cascade range westward to the shores of the Pacific. Out of the 15,852 square miles of the State formerly covered with merchantable timber, 20 per cent. has been destroyed by fire, 22 1/2 per cent. has been cut, and the remainder, 57 1/2 per cent., is still covered by standing timber. The present supply, as it now stands, is sufficient to supply the sawmills of the United States for four years, unless the price of lumber becomes less.

The report of the State Land Department for the four years past shows a great increase in the leasing of school and granted lands. The total receipts from the lands from 1892 to 1896 were $945,521.32, and from 1896 to 1900, $1,704,374.65.

Industries and Business.—Lumber shipments within the fourth quarter, ending June 30, 1900: Cargoes to foreign ports, 176,911,582 feet; cargoes to domestic ports, 238,855,465 feet; rail shipments, 304,263,000 feet; total, 719,072,047 feet. The value of the foreign cargoes was $1,835,329. No other values are stated by the Trade Register. Assuming that the domestic cargoes and shipments were in a ratio of 1 to 2, these receipts for the first two years amounted to $7,750,000.

The Puget Sound canneries have had an unusually poor season, the pack being only 432,301 cases, 50 per cent. less than that of 1899.

The report of the Dairy Commissioner shows growing growth in the dairy industry.

The first bounty of 1 cent a pound on beef salt, offered by the last Legislature, was paid in December. It amounted to $2,168.90, and was paid to a company in Spokane County.

The stock industry of the State of Washington is valued at $30,000,000. The loss to stock owners from contagious diseases approaches $75,300 annually.

The discovery of shot gold running $10 to the cubic yard was reported in December to have been made on Fourth-of-July creek, a branch of Kettle river.

The number of articles of incorporation filed with the Secretary of State in 1897-98 was 1,852; in 1899-1900 it was 2,168. The receipts for the first two years amounted to $74,773.47, and for the last two $91,150.39.

The State Capitol.—An application was made in December for a writ of mandate against the Governor and the other Capitol Commissioners, to appear and show cause why they should not go to the Capitol building, which was completed Jan. 30, 1896. The action was dismissed in the Superior Court, but may be appealed to the Supreme Court. The Governor explains the matter in his message. "The State has from the General Government," he says, "a grant of 132,000 acres of wild lands, donated to the purpose of aiding in the erection of public buildings at the State capital. But this donation is unproductive. It is agreed that these lands can not now be sold. Regarding their future value a great difference of opinion prevails. Two years ago it was said that if a State Capitol was immediately desired a proposition to purchase the Thurston County lands was commercially sound. This is a beautiful building, centrally located, costing $150,000. The State holds in the permanent school fund $150,000 of Thurston County warrants. An exchange of paper might transfer the title. One hundred thousand dollars, carefully expended, would build an addition of 30,000 feet to the Capitol, containing comfortable quarters for the State Legislature."

Political.—State officers were elected in November. There were five tickets—Democratic (in which the Populists united), Republican, Prohibition, Social-Democratic, and Socialist-Labor. The
two members of Congress are elected by the State at large.

The Republicans held their first convention at Ellicott, April 5, elected delegates to the national convention, and instructed them for President McKinley. The resolutions were mainly expressions of approval of the policy of the administration. The second Republican convention met at Tacoma, Aug. 13, and adopted a platform commending the national administration and the work of the State members of Congress, and said further:

"We favor the building of railroads within our State as an essential means of its development and growth, and we also favor the adoption and enforcement of just and equitable laws regulating and controlling them. We stand for loyalty to the flag; for the old standard of value for all our money; for protection and reciprocity; for the Nicaragua Canal, owned, operated, and defended by the United States; for the election of United States Senators by direct vote of the people; for the further enlargement of our trade and commerce; for a prompt and effective execution of the law by the executive officers, and quickly and efficiently the work of reconstruction and development. For the army and navy—both in peace and in war; for the uncompromising suppression of the rebellion on the island of Luzon; for the unlimited development of every foot of territory under the flag, and for the protection of every citizen in the land; for the immediate rescue of the people imperiled in China, and for ample restitution for loss of life and property therein; for a territorial form of government for Alaska, including protection to navigation, opposing relinquishing soil or sovereignty of that district; for the construction of good and permanent wagon roads throughout the State; for the rigid enforcement of law and order and the economical administration of public affairs, national, State, and county."

Following are the nominations: For Governor, J. M. Frink; Lieutenant Governor, H. G. McBride; Secretary of State, S. H. Matson; Treasurer, C. H. Maynard; Auditor, J. D. Atkinson; Attorney-General, W. B. Stratton; Land Commissioner, S. A. Calvert; Superintendent of Public Instruction, R. B. Bryan; Judges of the Supreme Court, Wallace Mount, R. O. Dunbar; Presidential Electors, Frank Hastings, S. G. Cosgrove, Charles Sweeney, J. M. Boyd; Congress, Francis W. Cushman, Wrayley L. Jones.

The first Democratic convention, at Spokane, May 19, elected delegates to the Kansas City convention and adopted resolutions denouncing the attitude of the administration toward trusts and on bimetallism; opposed imperialism and the Porto Rican tariff; expressed sympathy for the Southern farmers; opposed the Pacific railroad immigration; ap-

proved the record of United States Senator Turner; commended the State administration; instructed the delegates for William J. Bryan, the "great commoner of the present day, who ranks with and will have a place in history with Jefferson, Jackson, and Lincoln"; and recommended James H. Lewis for Vice-President.

The Democrats, the Populists, and the Silver Republicans held conventions at Seattle, Aug. 27, and after conference met in a union convention, agreeing to pass under the Democratic name. The more significant declarations of the platform were:

"We oppose trusts and combinations which corner the products of industry and levy tribute on the people, and we denounce the Republican policy which corruptly creates and fosters these harmful combinations. We are against monopolies of all kinds, and especially view with the gravest concern the attitude of the Republican administration in creating, and enforcing the law to maintain, financial and all monopolies in its delegating to the national banks the sovereign right to make and issue the people's money.

"We witness with shame and humiliation the cowardly and inconsistent action of the present Republican administration in creating, in hanging down the American flag that for a third of a century has floated in honor and unchallenged over the Porcupine mining district of Alaska.

"We demand such legislation as will insure to the farmers and producers of the State of Washington a reduction of freight rates and fares to a just basis.

"We demand the inauguration of such measures as shall give the people the right to express themselves, when they so elect, upon all important questions, by the system known as direct legislation.

"We commend the official conduct of all our State officers, and call attention to the contrast between the present administration of the State and the blight and ruin prophesied by the opposition to surely result from the election of our State officers."

The ticket follows: For Governor, John R. Rogers; Lieutenant Governor, William E. McRoskey; Secretary of State, James Brady; Treasurer, W. H. Silverthorn; Auditor, L. J. Silverthorn; Attorney-General, Thomas M. Vance; Superintendent of Instruction, Frank J. Browne; Land Commissioner, O. R. Holcomb; Judges of the Supreme Court, E. C. Million, Richard Winsor; Members of Congress, F. C. Robertson, J. T. Ronald.

The candidates of the Prohibition party were:

For Governor, R. E. Dunlap; Lieutenant Governor, C. I. Hall; Secretary of State, J. W. McCoy; Treasurer, C. C. Gridley; Auditor, A. W. Steers; Attorney-General, Ovid A. Byers; Superintendent of Instruction, A. H. Sherwood; Land Commissioner, J. C. McKinley; Judges of the Supreme Court, F. Everett Smith, W. D. Hubbard, W. E. Whitman, R. G. House, V. H. White.

The Socialist-Labor party nominated: For Governor, McCormick; Lieutenant Governor, Matt Matson; Secretary of State, William J. Hong; Treasurer, Eric Norling; Auditor, F. B. Graves; Attorney-General, John Ellis; Superintendent, Raymond Bland; Land Commissioner, W. L. Noon; Judges of the Supreme Court, Frank Martin, D. M. Angus.

The Social-Democrats nominated: For Governor, Randolph: Lieutenant Governor, E. S. Reinert; Secretary of State, James H. Ross; Treasurer, J. J. Fraser; Auditor, Charles S. Wallace; Attorney-General, David W. Philips; Superintendent, John A. Kingsbury; Representatives, A. B. Johnson, A. S. Shinaberry, J. H. May, W. H. White.

Gov. Rogers was re-elected, the vote standing: Rogers, 51,944; Frink, 49,860; Dunlap, 2,103; McCormick, 843; Randolph, 1,670.

For all the other State officers and for members of Congress the Republican candidates were elected. The Legislature elected has 26 Republicans in the Senate and 60 in the House, and 8 Democrats in the Senate and 20 in the House.

A constitutional amendment was submitted to vote at this election. It authorizes the Legislature to exempt from taxation $300 of personal property for every head of a family. It was carried by a vote of 35,998 to 8,975.

The State voted for President as follows: McKinley, 57,456; Bryan, 44,833; Woolley, 2,363; Debs, 2,006; Malloney, 866.
WEST AFRICA. The west coast of Africa north of the Congo State and the regions of the interior as far as the Egyptian Sudan have been divided between France, Great Britain, and Germany. The French occupied the area with the least friction at both extremities, the small Spanish and Portuguese settlements on the Guinea coast, and the arid region south of Morocco, to which Spain lays claim, although France has claimed the greater part of it.

French West Africa.—French possessions were recognized under the decree of Oct. 17, 1899, by placing the region of the middle Niger under a separate military administration and uniting the western part of the Soudan province with Senegal. By the convention concluded between France and Great Britain on June 13, 1899, the boundary between the British Gold Coast and the French sphere is fixed on the 11th meridian of latitude; the limit between Dahomey and the British colony of Lagos extends in a northerly direction till it strikes the Niger 10 miles above Gere, and from that point the line runs up the Niger 7 miles to the dry river bed called Dalai Muri, up that to a point 100 miles from Sokoto, running then to the river Gere, keeping at the same distance from Sokoto, to its second intersection with the parallel of 14° of north latitude, then due east for 70 miles, south to 13° 20' of north latitude, east again for 250 miles, then north to 14° of north latitude, and then east to the shore of Lake Chad. All the countries north and east of Lagos, and east of Lagos and south of 15° 30' of latitude, were the republic of the Niger, as separated from the latter by a line following, with some deviations, the meridian of 15° 30' east of Greenwich, and comprises all the interior north of the Congo and Ubangi rivers, merges in the new French sphere in the north. The French Congo, Dahomey, and Senegal all border in the interior of the great shoulder of Africa, and the Sahara are connected with Algeria and Tunis.

The French Congo has an estimated area of 4,250,000 square miles and from 12,000,000 to 15,000,000 inhabitants. Libreville, the capital, has about 3,000 inhabitants. The Commissioner General is A. Groutet, and the Lieutenant Governor of the Congo under him is J. R. P. Leunier. Expenditures in the budget for 1900 make the income and expenditure each 5,576,000 francs. The imports in 1898 were 4,844,000 francs, of which 1,274,000 francs came from France; exports, 5,983,000 francs, of which 1,488,000 francs went to France. The post-office handling letters, etc., in the internal and 363,715 in the external service; receipts, 16,000 francs; expenses, 57,000 francs. Including the military territory and the protectorates of the Lake Chad region the jurisdiction of the Commissioner General extends over 1,160,000 square miles.

Dahomey, with its dependencies, has an area of 125,000 square miles and a population of about 1,900,000. Col. Lioudard, the Governor, has his residence at Porto Novo. The budget of income and expenditure for 1900 was 2,200,000 francs. The imports in 1899 were valued at 12,348,000 francs, and the exports at 12,719,000 francs. The postal traffic was 3,197 with 29,102 internal and 73,818 foreign letters, the receipts being 25,000 francs, the expenses 8,000 francs. Porto Novo has 50,000 inhabitants, and Abomey, the capital of the Dahomey kingdom, 14,000. The Fon negroes who inhabit the country are skilled in agriculture, raising manioc, yams, and corn, and obtain oil and rubber from the forest. Coffee plantations have been established near the Gold Coast, and the interior parts of Dahomey and Nigeria are kept in touch by a joint commission met in February, 1900, on the Oparra river at its intersection with 9° of north latitude, the point up to which the boundary between Dahomey and Nigeria was settled, and proceeded to delimit the French and English spheres of influence on the Niger, according to the terms of the convention of June 14, 1898. They also fixed the position of the two enclaves on the Niger to be leased by England to France, one of them between Loba and the confluence of the river Mussa, the other on one of the estuaries of the Niger.

French Guinea, including Futa Jallon, has an area of about 48,000 square miles and a population estimated at 1,000,000. Konakry, the capital, is on the isle of Tombó. The Governor is M. Ballay. The revenue raised locally was 5,751,000 francs and the contribution of France 224,625 francs. The imports in 1898 were 9,019,875 francs in value, 1,453,400 francs coming from France, and the exports 9,803,000 francs, 4,529,735 francs going to France. A railroad from Konakry to the Niger has been begun. Earthenware, rice, milk, gum, and rubber are the chief products, and the natives of Futa Jallon raise cattle. In 1899 the value of the imports was 15,442,000 francs, and of the exports 9,803,000 francs.

The imports from France supplied 28,150,000 francs, of which 7,799,975 francs took 902,000 francs of the exports. Konakry was a free port until in January, 1900, an import duty of 5 per cent. ad valorem was imposed.

Senegal within its extended limits has an area of 200,000 square miles and a population of 1,180,000 without and 3,800,000 including the military territory of the Soudan. Col. E. Ballay, the Governor of Senegal, with residence at St. Louis, is also Governor-General of West Africa. The receipts and expenditures of Senegal for 1900 were estimated each at 7,139,602 francs. The imports in 1898 were 33,156,000 francs in value; exports, 28,100,000 francs. Of the imports France supplied 28,100,000 francs, and of the exports 2,627,000 francs went to France. The natives grow corn and rice and gather rubber and cotton.

The Ivory Coast colony has an area of 100,000 square miles, including the kingdom of Kong, and a population of 2,500,000. The local revenue which sufficed for the expenditures, was 1,290,000 francs. The Governor, residing at Grand Bassam, is M. Robardeau. The imports in 1899 were valued at 6,390,000 francs, and exports at 5,803,000 francs. Of the imports 1,621,000 francs came from France, and of the exports 2,627,000 francs went to France. The natives grow corn and rice and gather rubber and cotton.

pended on Senegal and the eastern one on the French Congo. The area is roughly estimated at 300,000 square miles, with 2,500,000 inhabitants. Timbuktu, the chief town of the western section, has about 12,000 inhabitants, and is a trading center for all this part of Africa. There were 3,408 troops in 1900, of whom 2,750 were natives. The expenditure of France for the Soudan in 1900 was 6,553,000 francs. The local budget of infants a

The Sultan Rabah, who defeated the Bretonnet party in 1899 and compelled M. Gentil to return toward the French Congo with the other half of the expedition, and who was himself defeated by the larger force, under Capt. Robillot, that the Commissary General of the French Congo sent with M. Gentil, fled northward to Dikao, the capital of Cobolo, with the remnant of his army of 12,000 men that remained faithful after the disaster. The native and the French army fell. The French could not reap the full fruits of their victory because half their own men were disabled. Their march to Lake Chad was postponed, and they remained near Kuma, awaiting reinforcements, while their steamer was sent down the Shari to meet the mission of M. Fourcault which took the Soudan, but halted in the desert on learning that Rabah dominated the shores of Lake Chad. The Sultan of Bagirmi, who had taken refuge at Lai when Rabah defeated his army and usurped his throne, joined Capt. Robillot at Tunia, and the Sultan of Goanim and other Soudanese chieftains whose power had been shattered by Rabah joined hands with the French, who became masters of the country, and the former conqueror and destroyed his strong place. Although his artillery was served by trained gunners and his soldiers were armed with repeating rifles and were experienced shots.

In April the three missions that were sent to Lake Chad in 1899—the Gentil-Bretonnet mission from the north, the Maraprusi mission from the south, and the Central Africa or Voulet mission, whose leader went mad and killed Col. Klobb, who was sent to supersede him, led afterward by Capt. Joulland, next in command to Capt. Voulet, in conjunction with Lieut. Meynier, who succeeded to the command of Col. Klobb's party; and the Foureau mission, which was under Lieut. Bats, in conjunction with Kussuri, and by direction of M. Gentil, the combined force marched on April 22, under Major Lamy, against Rabah, who had reassembled an army and was preparing to attack the French. Rabah's troops were concentrated near the French fort, numbering 5,000 men, 2,000 of them armed with modern rifles, 300 horses, 3 guns. The French column consisted of 700 men armed with rifles, 30 horsemen, 1,500 Bagirmi auxiliaries, and 4 guns. After an exchange of artillery fire the French stormed Rabah's fort of palisades and earthworks, and when his men scattered tried to cut off their retreat, which the Sofas endeavored to cover by resuming the offensive. Major Lamy and Capt. de Coimel were killed, and 18 men, and 3 officers and 5 men were wounded. Rabah's army was utterly routed, and he himself, helpless from wounds, was decapitated by a black soldier. The French placed Omar Ibn Ibrahim, of the former dynasty, on the throne of Bornu, the last one that ever ruled the country. Major Lamy had usurped the government, and the Soudan was left to the mercy of the one with which Rabah had marched against the French, consisting of 5,000 men armed with rifles and a large number of irregulars. This army fled, however, at the approach of the French column of 700 rifles, 100 Bagirmi horsemen, 3 Soudanese spahis, and 3 guns. Capt. Robillot, who occupied Dikao, while Capt. Rebell with 160 men and 1 gun gave chase, and on May 2 captured Fadifallah's camp, together with stores, treasure, and ammunition after a sharp engagement. Another fortified camp was taken on May 7, and, Fadifallah's power having been broken, this area was restored to the French. The rule of Rabah the trade between Bornu and Tchad practically ceased, and that with the Central Soudan became precarious and intermittent. But the trade with Wadai, under the new Sultan Ibrah, became active once more.

British West Africa.—The colonies of the Gold Coast, Lagos, Cameroun, and Sierra Leone have their boundaries more or less defined and definite conventions, and Nigeria also has its limits fixed, though it extends inland to Lake Chad and includes extensive productive and populous territories and the navigable water ways of the lower Niger and the Benue.

The Gold Coast is an area of 40,000 square miles and a population estimated at 1,473,882, exclusive of Ashanti and Adansi. Accra has 16,267 inhabitants, and Cape Coast Castle 11,614. The principal products are palm oil and kernels, rubber, and gold, which is found in numerous places and is being mined with European capital. A railroad from Sekondi to Tarkwa is being built and has been completed as far as Nsuaem, and the Ashanti kingdom subjugated in 1896. By the convention concluded with Germany on Nov. 14, 1899, the disputed zone between the Gold Coast and German Togoland, which was held neutral pending a settlement, has been divided by a line following the course of the river Daka up to 9° of north latitude, and divided for the north with deflections that leave Maraprusi on the Eng.

lish and Yendi and Chakosi on the German side. There are 688 miles of telegraph. The Governor of the Gold Coast colony is Sir F. M. Hodgson, and the administrator of the northern territories is Lieut.-Col. H. P. Northcott. The revenue, £24,718, the expenditure, £23,711, the gold revenue, £1,018 to £258,551, the expenditure to £377,076. An advance of £579,000 for railroads and £98,000 for harbor improvements was authorized in the colonial loans act of 1899. Previous to this none of the West African colonies had any debt. The value of imports in 1898 was £2,101,546, cotton cloth amounting to £230,641, spirits to £68,837, and tobacco to £21,725. The value of exports was £992,998, of which £531,667 stand for rubber, £1,114,288 for palm oil, £66,375 for kernels, and £63,838 for gold dust. The vessels entered and cleared during 1898 were in the aggregate of 1,122,016 tons.

The golden stool, which was the symbol of sovereignty in the kingdom of Ashanti, has never been seen since the downfall and imprisonment of King Prempeh in 1896. Prempeh before surrendering had two faithful servants bury it in the ground, probably also the royal treasure, which is supposed to be immense, and none besides them knew where it was. When Sir Frederic Hodgson visited Kumassi city at the end of March, 1900, he found the people greatly excited, and learned that the cause was the discovery that some of the Kumassi chiefs had made or pretended to have
made of the golden stool. The search for the golden stool and for King Prempeh's buried hoard of gold has been going on ever since the British established themselves in Kumassi. Both natives and British officials had persevered in the search. In 1874, Sir Frederic Hodgson heard of a rediscovery of the golden stool he determined to get possession of it lest the Ashantis should set up a king and begin a serious rebellion. He determined also to get the royal hoard if it was found. He heard that the natives had twice sent money to Prempeh in Savigu one, and a ransom of 300 golds to their former king would be taken farther away. He called for the payment of 50,000 ounces of gold that the British Government had demanded in 1874, to which the cost of the expedition of 1896 would be added, and he peremptorily demanded of the chiefs the delivery of the golden stool, on which he should have a sort of representative of the British Crown.

When the chiefs failed to bring him the golden stool the Governor sent out detachments to search for it. The natives organized parties that resisted and attacked the detachments, killing some of the men and wounding others. Then the Governor, sending for re-enforcements, was speedily answered by detachments of the chiefs and ringleaders, upon which the whole Kumassi tribe rose in rebellion. The Governor retired to the strong stone fort that the British had built when they first occupied the country. It was armed with 6 7-pounders and 4 Maxim commands the town, and was defended by 300 Hausa soldiers. The nearest British posts on the north were Kintampo, 100 miles, and Gambaga, 340 miles away, and the march from the coast was over 100 miles through a continuous morass, for it was the rainy season, when native troops could move but slowly and European troops not at all. In addition to the West African frontier force numbering over 4,000 men, the greater part of them stationed in Nigeria, there was an armed constabulary of 1,300 men in the Gold Coast colony, one of 800 Hausas under 20 British officers in Lagos. By orders from England 300 of the frontier force were sent from Nigeria overland through the Gaman country to the relief of the Kumans and Ashantis. Most of them were by the 26th of May, 200 by the 30th, 200 by the 31st for Lagos to the Gold Coast. A contingent of the Lagos constabulary set out at once when news of the siege arrived. From Sierra Leone 52 of the frontier force and 250 Hausas were sent later. Major A. Morris, commissioner of the northern territory, commanding the garrison at Gambaga, started on April 18, when he received an appeal from the Governor for aid, with his whole force of Hausas, Moshie cavalry, and native auxiliaries, and at Kintampo he picked up the detachment stationed there, so that his force consisted of 7 white officers, 230 commissioned officers and men, and native levies, with many guns.

When the insurrection began many of the people took the side of the British, and there was fighting among the tribes before the rebels became strong enough to lay close siege to the fort. The Bekwais, whose country lies next to that of the Kumans on the side toward the coast, undertook to keep communications open but carried aggressive acts when the Kumans called for the killing of 300 of their number. On April 23 Capt. Parminter, who commanded the garrison, sent a force to clear the way to the eastward which killed a great many rebels, but two days later they closed in on the fort, and began to build a ring of stockades around it, which were made proof against the light ordnance with which it was armed by means of earth embankments. They first made a determined attack on the town in such strength that the Hausas were driven from their cantonments and compelled to concentrate in front of the fort. The garrison lost heavily, while inflicting on the rebels' losses so severe that in spite of their numerical superiority they remained on the defensive thenceforth, camping behind the stockades that they erected and gradually strengthened, and keeping the Hausas closely confined within their own works. The British men at the fort came to be only about 200, had two good marksmen with their breech-loading rifles, for which they made cartridges themselves that were destructive in their effect. The line of intrenchments held by the Hausas surrounded the fort at a distance of 300 yards. The Lagos constabulary entered the fort on April 30, after two days of severe fighting, in which they had 135 casualties. The Ashantis, 8,000 strong, had erected a stockade across the road at Asagni, 2 miles from Kumassi, which they defended with pertinacity with their native weapons and some rifles. The Kumans were joined in the rebellion by the Unamsis, Ofensus, Atekunna, Beposun, Ajusus, Nkoranzas, Mampons, Nuntas, Kokofus, Abalones, and Ashantis, to resist the British yoke and able to muster 50,000 fighting men.

Major Morris sent messages to the Nkoranzas, before resuming his march from Kintampo on May 9, to induce them to remain loyal. When he reached their town he found that the Ashantis had come and seized the King to compel him to take their side, but that the King's sister had persuaded him still to hesitate, and thus the adherence of this powerful tribe was secured by the fortunate arrival of the British force at that moment. The Ashantis contested the way from that point. At Sekedumass the relief column encountered the enemy, who made an ambush in the tall grass, from which they were easily driven by the machine gun. The BritishY's made a determined attack on the fort, which was carried rapidly and the Ashantis were not well prepared. Every town and village that the British passed through they burned. Most of them were deserted, the Ashantis falling back to concentrate near the capital. On May 14 the native auxiliaries walked into an ambush. There was immediate pursuit, but the Ashantis retired and made a determined attack on the capital. The Ashantis had prepared a strong stockade across the road, which was carried after a cannonade by a charge in which Major Morris, leading his men, was wounded badly; but from a hammock he continued to direct the operations. A second stockade, 6 feet high, on which the 7-pounders made little impression, was likewise taken by assault, and the advance of the Hausas was so rapid that the Ashantis were disconcerted and did not defend their third and strongest stockade. A further march of 10 miles brought them to the line of stockades which with the Ashantis had invested the fort. There were none of the enemy at the particular stockades invested, and a second force marched into the fort without further opposition, having in the day's fighting killed several hundred Ashantis, including some important chiefs.

The town was invested on every side with a circle of very strong stockades with a radius of a mile each, each one facing the fort, 4 feet in height, and loopholed at the top. They were made of heavy timbers banked up with earth, each connected with the next ones by paths, so that every fort could be quickly re-enforced. Other columns endeavored to press on to the relief of the garrison when it became known that it was short of provisions, but the Ashantis resisted the ad-
The advance of the different detachments with great persistency. Capt. Hall with the first detachment of the relieving force got as far north as Esuwa, and had no further orders. Capt. Hall went to Bekwai to retire when he found Kokufu on his right flank held by 8,000 Ashantis. Col. Boroughs, on attempting to advance by way of Kokufu, lost 72 men killed or wounded, and had likewise to fall back. The advance detachments of Col. Willecocks's force were accompanied by thousands of native auxiliaries. Capt. Hall went to Bekwai with his force, Col. Carter followed to Kwisa, and Capt. Melliss halted at Kumasi, having found his way blocked by rebels who gave him a hard battle at Dumpossi. The relieving force that took the offensive against the advanced guard and several severe battles were fought. Col. Carter was compelled to fall back to Kumasi. But the boys of Bekwai alone stopped the advance of the rebels.

The arrival at Kumassi of Major Morris and his men gave to the garrison an able commander and an accession of brave soldiers, but this was not sufficient to raise the siege, and only added to the difficulties of the situation, because ammunitions and food were running low. Reconnaissances for food were made, and when 30 or 40 in each force at every stockade that was attacked. Relief from the coast was constantly expected, but when rations were reduced until the soldiers got only a biscuit and a half a day and five ounces of meat, when the native traders who obtained 10s, apiece for biscuits and £2 for a can of corned beef had nothing to sell, and when 30 or 40 in the native civilians and camp followers died daily of starvation, the situation became desperate. Major Morris directed the reconnaissances to the recovery of a track by which he could get out of town. On June 23, when there were only three days' minimum rations for the entire garrison left, he led an expedition of 360 men, to cut a heavy mist at early dawn. The force was 600 Hausas of all ranks, with 800 nonecombatants, escorting the Governor and his wife and the other British civilians, and followed by 1,000 native civilians. One of the stockades was forced by hard fighting, and during the day's rapid march on the return march, both sides of the Bekwais were encoraged continually. The march through swamps and deep rivers was more deadly than the enemy after the first two days. Major Morris managed to throw the pursuing Ashantis off the track by making a rapid march to the west after deluding the besiegers into the belief that he intended to strike for the coast by the direct route. The carriers lost their loads, and every one was near a collapse when the column reached Cape Coast on July 11. During the march the casualties were 2 officers killed, 1 wounded; 80 men killed, and 37 wounded.

The force left to hold the fort under Capt. Bisho was 100 men with provisions for twenty-four days. The enemy might not continue under Sir J. Willecocks was extremely arduous and slow, as the rivers were in flood and rains were incessant. Before he encountered the enemy in force Col. Willecocks knew of the departure of the Governor, and could plan his march so as to reach Kumassi before the food in the fort was entirely eaten. Col. Willecocks could not start from the coast until he had enough carriers. Thousands were sent from Sierra Leone and other colonies, but thousands more were needed to transport the stores and ammunition. The natives of the Gold Coast refused to go at any price. The labor ordinance requiring them to work for the Government was put into force. The men then ran away, and the authorities impressed the women into the service. The main force did not set out until June. The chiefs of all the loyal tribes were required to put as many levies into the field as they could raise. The force that advanced on Kumassi under the immediate command of Col. Willecocks was composed of 700 Yorubas and Hausas of the West African frontier force, 230 of the West African regiment from Sierra Leone, and 49 of the frontier police, with 3 15-pounder and 4 7-pounder guns and a plentiful equipment of Maximines. There were also 200 natives allies, who were to act as scouts, but their guns were taken away from them because when they first saw the enemy they fired wildly among the carriers in their excitement. Col. Willecocks deceived the enemy by spreading a report that he intended to march through Kokufu, northeast of Kumassi, and would attack that place on July 13. This drew a large part of the rebel force in that direction, and they were building stockades in the paths on that side while he took his column 15 miles to the west, and marched upon Kumassi by way of Ekwanta. Before entering the hostile district his road went through the country of the Bekwais, old enemies of the Kumassis, without finding a British party to accomplish their purpose. The march into the enemy country was made in a torrential rain through swamps where the water was waist-deep. The hostile villages were taken at the point of the bayonet. There was no severe fighting until the stockades guarding the approach to Kumassi were reached, but the force pillaged, and most of them hid in the trees, having pits behind them in which men reloaded the rifles of the combatants who lined the breastworks, and having paths leading back into the jungle to afford a safe line of retreat. The bush was so dense that the men had to cut their way through with machetes in order to move and charge on the position. The British party proceeded in locating the first of the hidden stockades and opened fire with his guns, the rebels replied from every direction with rifle fire. They had places built high in the trees to fire from. They had also felled trees and placed brush entanglements to impede the advance of the British; and as soon as it opened from any quarter the Maximis soon cleared the place of rebels. Four such stockades along the road and one large one across the road were taken by successive charges after a heavy bombardment, and the shells had done such terrible work that no one opposed further the entry of the relieving force, which Col. Willecocks led into the fort at sunset on July 15, the very day that he had promised. Out of 3,400 native soldiers employed during the hostilities 850 and out of 200 British officers 55 were killed or wounded.

Col. Willecocks left 150 men in the fort and brought away the sick and a few prisoners who had only resisted an onset of the Kumassis if these had attacked. From his base at Bekwai he sent Col. Morland, on July 21, with 800 men to take Kokofu. The place was surprised and the stockade carried without loss. On Aug. 4 he dispatched 750 troops to Kumassi to destroy the stockades near the town. When the road was opened between Bekwai and Kumassi flying columns were sent out in various directions, which scour the country and cleared away all signs of hostility for miles about Kumassi. Capt. Wilecox met with a check early in September near Bohanka, 15 miles east of Kumassi, which was retrieved by Major Reeve, who with 400 men inflicted punishment on the district. The Ofooms tried to surround the force sent to occupy their
town. At the end of September Col. Willecocks dispersed a force of 4,000 rebels northwest of Kumassi which fought with desperate courage, giving way only after three bayonet charges. This was the last considerable rebel force in the district, and when it was crushed down by Major Colbe, who chased the rebels beyond the Ofo river, the work of pacification became easy.

Lagos lies between Southern Nigeria and the French colony of Dahomey. The colony proper has an area of 985 square miles and 85,697 inhabitants. The Lagos Protectorate, including the Yoruba country, has about 21,000 square miles, with 3,000,000 inhabitants. The principal products are palm oil, palm kernels, rubber, ivory, gum copal, cotton, cacao, and coffee. Spirits, cotton goods, tobacco, and hardware are imported. There is a railroad from the town of Lagos to Abeokuta, 60 miles, and it is being continued to Ibadan. The Governor is Sir William McGregor. The revenue collected in 1898 was £206,444, of which £170,792 were derived from customs; expenditure, £203,803. The value of imports was £980,351, of which £339,779 were for cottons, £7,062 for spirits, and £221,045 for tobacco. The value of exports was £582,329, of which £562,539 represent palm kernels. In 1896 375,898 tons of foreign tonnage entered and cleared during 1898 was 822,378 tons. An advance from the British Government of £792,000 for railroad construction was authorized by Parliament in 1899.

Nigeria has an area of about 400,000 square miles and perhaps 50,000,000 inhabitants. There are 1,000,000 Yoruba, of whom 400,000 are in Ikor with 50,000, Yakoba with as many, and Bida with 90,000 inhabitants. The territory is divided for administrative purposes into Northern and Southern Nigeria by a line running from Owo east to Ashaku. The import and export duties levied by the Royal Niger Company have been abolished since the territories passed into the control of the Crown. The revenues for the northern territory will be apportioned by the Ministry of the Colonies in London from those collected in Southern Nigeria and in Lagos. In 1899 the revenue of the Niger Coast protectorate, since merged in Southern Nigeria, amounted to £189,568, of which £169,720 was derived from customs. The value of imports was £728,920, and of exports £774,648. The number of vessels entered was 379, of 559,012 tons, and cleared 375, of 551,555 tons. Northern Nigeria embraces the Fula empire of Sokoto, with the tributary sultanates of Gwandu, Kano, Katsена, Danhe, Bakun, and the greater part of Adamawa; also a large part of the former kingdom of Bornu and of the Borgu group of pagan states. The Hausas, who form a majority of the population, though subject to the Fula rulers, have long been sought as soldiers by the European administrations in Africa. The people of these Mohammedan states possess a remarkable degree of civilization, and are especially skilled in growing and weaving cotton and in curing leather. They raise also a desirable kind of indigo. The Hausas are the traders of the country, and send their caravans northward to Tunis and Tripoli and eastward to Egypt. The British maintain 2,500 native troops in the country. The British division of Col. Willecocks, the High Commissioner of Northern Nigeria, is Brig.-Gen. F. J. D. Lugard. Southern Nigeria, inhabited by pagan tribes, produces or exports palm oil and kernels, ivory, rubber, ebony, caoutchouc, indigo, gum, barwood, and hides. A military force a considerable degree of discipline is maintained. The High Commissioner is Sir R. D. K. Moor, and the Deputy Commissioner is Major H. L. Gallwey. The Royal Niger Company had an ordinance forbidding the sale of spirituous liquors north of 6° 12' of north latitude. The British Government maintains the prohibition for Northern Nigeria, and, in 1898, removed 40,000 kegs of foreign liquor. Since then, by law of 1898, instead of establishing a zone between 7° of north latitude, the boundary between the northern and southern territories, and 6° 12' within which spirits may be sold but not stored in large quantities, the object being to prevent any smuggling into Northern Nigeria.

The conquest and subjugation of Nigeria was prosecuted vigorously after the Imperial Government had taken the direction of military affairs from the Royal Niger Company and collected a large force to oppose the extension of the French sphere into the region of the middle Niger. In 1899 the towns in the Kwo Ibbiio country made their submission after 19 of their number had been destroyed. The resistance of the chiefs in the Benin territory was broken by the occupation of Benin city, the occupation of 4,000 miles of territory and burning of rebellious villages, and the capture and execution of Ologbosheri, the leader of the hostile chiefs. In 1900, though amicable relations with the Sultan of Sokoto and the Fula chiefs were maintained, a force of 3,000 troops encountered much opposition to their occupation of the country, which they endeavored to break down by punitive expeditions. In extending the telegraph from Lokoja up the Benue river to Ibi the troops were attacked by the Munchi people, who killed several European officers and soldiers as well as native soldiers, and were not brought to submission until considerable re-enforcements arrived to punish them. Parties were dispatched by Gen. Lugard in various directions to seek a healthy site for the seat of the new Government, the valleys of the Niger and its principal tributaries being very unhealthy. One of them, commanded by Lieut.-Col. Morden up the Kaduna tributary of the Benue and by Lieut.-Col. Lowry Cole up the Kwokwana tributary on their return united in an expedition to punish the troublesome Bakundi tribe, and with heavy fighting, in which most of the Europeans were wounded before the town was taken.

The West African frontier force that has been organized to establish British rule throughout Nigeria consists of 2 battalions of infantry, 3 batteries of artillery, 1 company of engineers, with a telegraph section, and an admirably equipped hospital service. The rank and file are drawn in about equal numbers from the Hausa and Yoruba tribes, with a sprinkling of Nupes. Jebba, at the Niger river, was made the headquarters, but nearly half the force was stationed at Lokoja, 200 miles farther down, where the Niger is joined by the Benue. A battalion consists of 8 companies of 130 each, having a strength of 1,000 British non-commissioned officers, with a Maxim and gun detachment, the men being armed with Lee-Enfield carbines. Two of the batteries consist each of 4 7-pounder guns and the third of 6 Maxim-Nordenfelts. Col. Willecocks is in command of the entire force, and each battalion is commanded by a lieutenant-colonel. Other British African frontier force are assigned to the other possessions, the total strength being 5,400 men of which number 2,500 are allotted to Northern Nigeria, 1,000 to Southern Nigeria, 700 to Lagos, and 1,200 to the Gold Coast colony and protectorate. The political and territorial powers of the Royal Niger Company were transferred to the British
Crown on Jan. 1, 1900. A part of the territories previously administered by the chartered company were attached to Lagos protectorate. The rest was amalgamated with the Niger Coast protectorate, and divided into Upper and Lower, or Northern and Southern Nigeria—Lower Nigeria administered by Sir Ralph Moor, with the title of High Commissioner; Upper Nigeria, including the kingdom of Sokoto, the subjugated state of Nupe, and the healthy districts north of the lower Benue, administered by Gen. Lugard as British High Commissioner, and Governor, with powers to call in the bondholders of the Royal Niger Company. £210 for each £100 of stock, or a sum of £300,000, and to the shareholders £150,000 for land and mining rights and compensation for interruption of business, £300,000 in repayment with interest of sums advanced by the company in excess of revenue to develop the territory, and £106,925 for stores, buildings, steamers, etc., making a total of £836,805. The company retained some of its stations and a part of its fleet of river steamers and prepared to carry on its commercial operations as before, relieved of the expense of political administration and military protection, but deprived of the monopoly of trade, which, however, it sought to procured by the English company in other companies and firms trading in Nigeria.

The rebellion of the Ashantis of the Gold Coast protectorate had a disturbing effect throughout West Africa. In Nigeria it roused a dangerous temper among the Fulas, whom as the ruling caste the British have taken great pains to conciliate. The English company, with 5 carriers and a caravan of 200 carriers was on the way to Kano, the capital of Hausaland, when the Ashanti outbreak occurred, and 500 of the Nigerian division of the West African frontier force were dispatched to the relief of the British besieged in Kumassi. At Ilorin and other places the native potentates received the English party, cotton, kola nuts, and kolanuts, Zaria the local chief treated them hospitably, but at Kano they were ordered by the king to leave his country on pain of death, and when they reached Zaria on the way back the chief was no longer friendly. The Emir of Sokoto refused to allow the British to erect a telegraph in his dominions, but entertained the English party in the Sondan, was openly hostile, and sent his horsemen to attack British detachments whenever they approached his country.

Sierra Leone, lying between Liberia and French Guinea, has an area of about 4,000 square miles and 74,835 inhabitants, more than half of whom are Christians, many of them descended from liberated West Indian slaves. In the schools there are over 6,000 pupils. Palm oil and kernels, earthnuts, beni seed, kola nuts, rubber, gum copal, and hides are exported. A railroad from Freetown, the capital, to Songo town, 30 miles, is continued 30 miles farther to Rototunk, and will be extended onward to the confines of the protectorate. There are 30,000 square miles and about 375,000 inhabitants. The Governor is Sir Frederic Cardew. The revenue in 1898 was £17,682, of which £89,524 came from customs; expenditure, £121,112. A loan of £310,000 from the British exchequer has been authorized for railroad construction. The imports in 1898 amounted to £606,349, of which £23,639 was for cotton cloth, £23,639 for spirits, and £18,724 for tobacco. The value of exports was £290,991, of which £112,963 represent palm kernels, £52,504 rubber, and £49,671 kola nuts. The vessels entered and cleared in 1898 had an aggregate tonnage of 1,110,223 tons. In the spring of 1900 a rising of the Youngie in the Ronietta district had to be put down by a detachment of the West African regiment. In September a disturbance occurred in the Karene district of the protectorate, provoked by the conduct of an officer of the frontier police. In November Sir Frederic Cardew, whose policy has pleased the natives, was succeeded as Governor by Sir C. King-Harman. The imposition of a heavy hut tax on the natives of the protectorate who had only recently been brought under British control, and also the mode in which it was collected, was the cause of the uprising and massacres, and it was so reported by Sir David Chalmers, who went out as royal commissioner to investigate the charges against the Governor and the district commissioners. The Secretary of State for the Colonies did not act at the time upon the findings of the royal commissioner because they contained serious accusations against public officials, but after a sufficient interval Sir Frederic Cardew was replaced. He had imposed the hut tax with the approval of the Colonial Office in order to raise the money within the colony and protectorate to support the force of frontier police that was organized primarily to counteract the military power of France in the hinterland and bring as much territory as possible under British influence. The district commissioners, who are chiefs of the frontier police as well as judicial officers, having the power to inflict capital punishment, although not men of legal training, continued to give occasion for complaints, as also the conduct of the frontier police, composed entirely of natives, many of whom had been slaves of the chiefs whom they arrested and accused.

Gambia has an area of 60 square miles and 14,300 inhabitants within the colony, Bathurst, the capital, having 6,000; and the protectorate has an area of 2,700 square miles and 200,000 inhabitants. The exports are earthnuts, hides, beeswax, and cotton, the natives cultivate also corn and rice. The Administrator is Sir T. B. Llewelyn. The income in 1898 was £26,718, and expenditure £29,035. The revenue from customs was £33,762. The value of imports was £246,092, of which £200,787 were for cotton cloth, £4,373 for spirits, and £27,100 for tobacco. The exports were £247,589, of which £17,260 were for earthnuts for 200,509, and rubber for £30,458. The vessels entered and cleared during 1898 had an aggregate tonnage of 328,145 tons. In June, 1900, the Mandingoos attacked two British traveling commissioners on the banks of the Gambia river, and killed them and their escort.

German West Africa.—The German possessions are Kamerun and Togoland, both declared German protectorates in 1884. Kamerun has an area of about 191,130 square miles, with 3,500,000 inhabitants. There were 348 German, 36 English, and 39 other white residents in the middle of 1899. In a botanic garden at Victoria experiments are made with economical plants of the tropics with a view to introduce cultures suited to the climate. Plantations of cacao, coffee, and tobacco have been started. The value of imports in 1899 was 10,638,955 marks. The exports amounted to 5,145,822 marks, the principal articles being palm kernels for 1,365,608 marks, palm fibre for 803,002 marks, cocoa for 598,471 marks, and cacao for 813,115 marks. The imports consist mainly of cotton cloth, spirits, salt, and hardware. During 1899 the number of vessels that visited the ports was 66, of 81,891 tons. A district of 34,000 square miles in the northwest has been conceded to the Northwest Kamerun Company authorized to promote immigration and to carry on agricultural,
mining, and trading enterprises. Gold and iron are known to exist. The revenue in 1899 was 1,713,000 marks, including a contribution from the Imperial Government. For 1900 the revenue was estimated at 3,245,000 marks. The imperial contribution was 2,063,000 marks, and the local revenue was 1,000,000 marks from customs, 330,000 marks from direct taxes, and 150,000 marks from other sources. For 1901 the Reichstag has voted 1,197,700 marks as the imperial contribution. The Governor in 1900 was J. von Puttkamer. The Imperial Government has given little financial aid of late years to Kamerun, and has kept only a small garrison there. Having determined that the protectorate must be run on a paying basis, it has adopted the policy of concessions to syndicates, to which the smaller capitalists who had invested money there objected. An increase in the import duties made in 1899 was also a discouraging circumstance. German planters had invested 8,000,000 marks, and have had success with cacao, with coconuts, rubber, and with tobacco. Their trouble has been to obtain laborers; 8,000 are needed, and only 4,000 have been found, and most of these are brought from Liberia, Lagos, and Togoland. The Kam- erun natives cost less if they can be induced to work. Revolts occurred in 1900 that made it impossible for the planters to cultivate the lands. At Adama in 1899 the tribes in the center from attack, and while the troops were away the Bali tribe, from which laborers had been recruited, rose in rebellion and destroyed the Catholic mission at Kribi on the coast. In the northern part of the colony all plantations had to discontinue work because no laborers could be obtained. The mission's annual revenue of 1,197,700 marks of a weak military post by hostile natives. An expeditions to the north was first sent out under Capt. von Besser in order to punish the Bangs tribe for murdering the explorer G. Conrath and Lieut. von Quies, who had been left in command of a station and to establish German authority in the region. The area of new Kamerun in Kainau. Company had begun operations. The Belg insur- rence shut out from the coast the Yaunde people, who were accustomed to bring rubber to the merchants and hire out to the planters for a term before their return, and also the capable Tikar people, who had begun to come down from Adamawa to the Indies. However, the commanding officer of the forces, who had not men enough left to punish the Bali. The Reichstag voted in favor of adding 100 men to the colonial troops, and the Imperial Government arranged in the budget for the addition of 500 more, raising the total strength from Jan. 1, 1901, to over 1,000 men. The recruiting of labor in Liberia was made diff- cult and expensive by a tax imposed by the Government of the republic on all laborers who emigrate. The Governor of Togoland stopped the supply even from a German possession, forbid- ding the emigration of laborers, but after a conference of persons interested in Kamerun plantations held in Berlin at the invitation of the Government Dr. von Bucka, the director of the Colonial Department, abrogated the decree. Harsh treatment of natives on the plantations was alleged as one cause of the difficulty of ob- taining labor in the back country, and excesses of the troops were said to be one cause of the natives returning from time to time as the demandant, when he returned to Kamerun recalled Capt. von Besser because he was charged with having committed excesses in his punitive expe- dition.

Togoland has an area of 33,000 square miles and a population estimated at 2,500,000. There were 115 Europeans in 1899. The revenue for 1900 was estimated at 750,000 marks, of which 20,000 marks came from direct taxes, 425,000 marks from customs, 35,000 marks from various sources, and 270,000 marks were contributed by the Imperial Government In the Imperial General Budget, expenses were 311, 150 marks for salaries, 228,720 marks for ma- terials, and 550,000 marks for public works. The Governor is M. Köhler. The imports in 1898 were 2,490,925 marks, and in 1899 they were 3,279,708 marks; exports in 1898 were 1,470,454 marks, and in 1899 they were 2,582,701 marks. The mili- tary for the year 1899 was 311 German officers. Palm oil and kernels and gum are the chief exports. Palus have been planted in great numbers, and also coffee shrubs and gun- trees. Cattle have been introduced in the fully back country. In 1890 the number of vessels that visited the ports was 95, of 110,241 tons. Arrangements were made in November for the parti- tion of the neutral zone of Salaga between Togo- land and the British Gold Coast colony. Ger- many laid claim to the greater part of this region, but agreed to divide the territory in accordance with the British claims and desires in considera- tion of the relinquishment of the British treaty right to the joint control of Somoa with Germany and the British in the region. Spanish West Africa. Apart from the islands of Fernando Po, Annobon, San Juan, and Cerisco, in the Bight of Biafra, Spain possesses territory on the mainland, and has claimed the whole coast line from the Campo river in the north nearly down to the Gabun river, known as the French Darien, and the Guinean coast. Spain, however, has disputed this claim and has asserted authority in these regions, while Spain has done little in the way of effective occupation. Spain has also since 1855 asserted a protectorate over the coast south of Morocco from near Cape Juby, opposite the Canary Islands, to Cape Blanco on the south, the region known as the Río de Oro protectorate. No limits were laid down to the extension of the protectorate in the interior, and when the doctrine of Hinterland was accepted in the agreements be- tween France, Germany, and Great Britain, it was assumed by Spain that her claim extended in- definitely inland, and asserted a protectorate, which was not made effective, over the Adrar country lying back of the coast. France, however, contested this claim, has made many sacrifices in order to bring under her dominion the whole Sahara, and has always contested the Spanish right to a Hinterland. An agreement was reached early in July, 1900, between the French minister and the Spanish ambassador in Paris which brought to a close the contests for the territory. In return for concessions on the Guinea coast Spain gave up her pretensions in the western Sahara, abandoning all claim to Adrar and ac- cepting a line between the Spanish and French spheres of influence in northwest Africa to be drawn in such a manner as to leave the Sibkha Hiji, a saline lake less than 200 miles from the coast, within the French sphere. Of the Río de Oro and Adrar protectorates, 243,000 square miles in extent, Spain retains less than 100,000 square miles, and renounces the prospects of extending her influence from the insignificant points on the coast where Spanish authority is now exercised. These states are under the sovereignty of the Governor of the Canary Islands, which are con- sidered for administrative purposes a part of Spain.

In the south Spain claimed a territory in the Rio Campo and Muni valleys of 69,000 square
miles, containing 500,000 inhabitants, and regarded as an exceedingly fertile and promising region. France was unwilling to recognize any of it by reason of the apparently insurmountable position of Corisco. As compensation for the concessions in the northwest France now concedes only a fraction of the Spanish pretensions in the Muni district, but still a considerable tract of country which is capable of commercial development. The coast line, about 75 miles in length, from the Capo Bojador to the southern boundary of Guinea, is bordered by the Kamerun, to the Muni river, is conceded to be Spanish, and inland the line is drawn about 10° 30' east of Greenwich, giving a breadth of about 110 miles to the Spanish possession, which has thus an area of over 8,000 square miles, and is known as a fertile agricultural region through which passes the route of the upper rivers of the Congo State. This area provides that France is to have the right of preemption should Spain at any time decide to alienate the territory, while Spain has a similar right of preemption over the Adrar country. Near Cape Xun Spain has a settlement called Ifu, enclosed inland by British territory and having an extent of only 27 square miles and 6,000 inhabitants.

Portuguese West Africa. South of the Congo Portugal possesses the old colony of Angola, having a coast line of 1,000 miles extending from the Congo to the Cunene, the two rivers dividing it respectively from the Congo State on the north and German Southwest Africa on the south, and streeted by the several borders of the Congo State and British South Africa. The total area is 484,800 square miles, and the population is estimated at 4,119,000. A military force of 4,010 men, of whom 2,858 are natives, is maintained to preserve order. The revenue for 1900 was estimated at 1,673,111 milreis, and expenditure at 1,016,800 milreis. The gold and silver mines produced 1,072,594 in 1898, were 6,380,308 milreis, and exports 6,577,791 milreis. There are 244 miles of railroad and 807 miles of telegraph line. The ports of Angola were visited in 1897 by 615 vessels in the foreign trade, of 1,053,248 tons, and 2,547 in the coasting trade, of 70,743 tons. Coffee, rubber, wax, oils, coconuts, ivory, cattle, and fish are the chief products and exports. The principal articles of importation are cotton goods for 620,000, clothing for 6,220,000 milreis, sugar, leather goods for 393,433, iron goods for 119,344, fertilizers for 76,103, and machinery for 44,210. Flour and provisions are imported into the West Indies from the United States and jerked beef from the Argentine Republic and Uruguay. Of 9,167,767 tons of shipping entered and cleared in 1898 at British West Indian ports 7,290,554 tons were British. In consequence of the economical crisis in the British West Indies, aggravated by destructive hurricanes in the cases of Barbadoes and the Windward Islands, the British Parliament in 1899 authorized advances from the treasury amounting to £603,000, of which £150,000 were loaned to Jamaica to cover deficits and £453,000 to Barbadoes for repairs to the damaged by the hurricane. The capital is on the island of Bolama. The area defined in the convention with France signed in 1866, is 4,440 square miles, and the population is about 82,000. The commercial products are rubber, wax, oilseeds, ivory, and hides. The revenue from imports in 1898 was estimated at 36,653 milreis, and the expenditure at 216,742 milreis. The value of imports in 1898 was 558,566 milreis; exports, 223,130 milreis.

West Indies. The West Indian islands are colonies of European powers with the exception of the large islands of Hayti-Santo Domingo, and Porto Rico. Their population consists of the descendants of the old inhabitants, with a sprinkling of white creoles, who happily recent times declined in numbers through emigration. The islands have gone through a long depression, due to the competition of European beet sugar with cane sugar, which is still their principal product, though on some of the islands it has been replaced by other produce. Great Britain imported from the British West Indies in 1898 sugar for £232,378, run for £106,223, caeco for £440,498, and dyewoods for £33,820, all imports amounting together to £1,283,413, while British exports to the islands were valued at £1,839,980, the chief articles being cotton goods for £450, 244, clothing for £294,708, leather goods for £319,544, and fish for £216,742.

The British Colonies.—The largest of the British islands is Jamaica, which has 4,494 square miles, including Turks and Caicos Islands, the Caymans, and the Morant and Pedro Keys. The area of Jamaica itself is 4,193 square miles. The population in 1899 of Jamaica was 730,725; of Turks and Caicos Islands, 5,482; of the Caymans, 4,322. There are 633 miles of telegraph on the island of Jamaica, and the capital is Port Royal. The Chief Secretary is Sir Augustus Hemming. The Legislative Council contains 5 official, 6 nominated, and 14 elected members. Kingston, the capital, has 46,542 inhabitants. The white population of the colony in 1891 was 14,692. In 1890 there were 14,118 East Indian immigrants settled on the island, including 1,462 indentured laborers; the immigration was suspended in 1886, but in 1891 it was resumed. There were 893 public schools in 1899 with 96,252 pupils enrolled and 56,853 in average attendance. The British garrison in 1899 numbered 1,620 officers and men; the Jamaica militia, 701. The cultivated area in 1898 was 660,491 acres, of which 164,507 were tilled and 375,048 were pasture. Sugar cane covered 27,123.
coffee 22,901, bananas 23,405, cocoonut palms 11,293, caaco 1,527, ground provisions 77,271, Guinea grass 123,136, pimento and pasturage 62,418, pimento alone 4,993 acres. The shipping in 1898 consisted of 134 sailing vessels, of 9,226 tons. In Turks and Caicos Islands there were 45,747 passengers and 392,090 tons. The number of letters and postal cards sent through the post office in 1899 was 4,791,102; the number of telegraph messages, 97,368. The revenue of Jamaica in 1898 was £78,514, and expenditure £75,274. Of the revenue £330,398 came from customs. The chief expenditures were £107,315 for debt charges, £31,150 for police, and £60,405 for public works and maintenance of the public health. The total imports, including railway receipts, were £214,793 for imports and £1,662,543 for exports. The import of cotton goods was £234,907; of fish, £151,569; of flour, £145,639; of rice, £104,146. The export of sugar was £150,311; of rum, £104,293; of coffee, £162,219. The tonnage entered and cleared was 1,827,719 tons. The revenue showed an improvement of 7 per cent. and the exports an increase of 15 per cent. over those of the preceding year. Of the imports less than half came from the United States and the United States, to which 60 per cent. of the exports were shipped, as fruit constitutes now 40 per cent. of the total exports. The sugar also goes to the United States, instead of to England, as formerly, while run, logwood, coffee, and pimento are sent to England. Cotton goods, boots and shoes, sugar were entered chiefly by manufacturers, for good appearance are imported from America in preference to English wares, so that in 1899 the United States for the first time took the lead of Great Britain in the import trade. The revenue for 1901 is estimated at £763,256, and expenditure at £756,901. The estimate of revenue was £144,527 more than the estimate for 1900, chiefly because an estimate of £125,000 for railroad receipts was included. After a long controversy with the railroad company the Government took possession of the railroad on Aug. 15, 1900. A line of steamers has been started to run direct from Jamaica to England in twelve days, each vessel carrying 300 passengers. Bananna, logwood, and the other products of the island. A subsidy of £40,000 a year will be paid, partly by the Imperial and partly by the colonial Government. The growing of fruit in Jamaica is an industry that has sprung up in the last twenty years, and owes its existence to American enterprise and capital. The fruit exports in 1898 amounted to 4,000,000 bunches of bananas, 600,000 cocoanuts, and 100,000,000 oranges. The value of fruit exported in 1898 was over £30,000, of which £20,000 went to the United States.

The Bahamas Islands have an area of 4,465 square miles, with 33,256 inhabitants in 1898. The Governor is Sir Gilbert T. Carter. There is a Legislative Council of 9 members and a Representative Assembly of 29 members elected by the people with a low property qualification. The number of births in 1898 was 2,114; of deaths, 1,224; excess of births, 910. There were 44 public schools with 3,998 children enrolled and 4,000 in attendance. The coconut fisheries in 1898 yielded 169,053. Shells, pimento, and cocoa were other sea products. Pinnacles of the value of £24,360 were exported, including canned fruit. The value of the orange crop was £3,061. Sisal plants covered 20,000 acres. The value of all imports was £228,330 in 1898, of which £53,430 were for cotton goods and £28,880 for flour. The exports were valued at £174,860. The tonnage entered and cleared was 741,522 tons. The revenue in 1898 amounted to £56,760, of which £53,511 were derived from customs; and expenditure, £64,148, of which £27,734 were for public works, £7,935 for the debt, and £5,316 for police. The debt amounted to £118,426.

The Leeward Islands comprise Antigua, with Barbuda and Redonda, St. Kitts, with Nevis and Anguilla, Dominica, Montserrat, and the Virgin Isles. They have an aggregate area of 701 square miles. The population is 127,723, comprising 5,070 whites, 23,320 colored, and 99,333 blacks. There were 137 schools with 25,122 pupils. Sugar and molasses are grown generally on the islands, except where the sugar cane has been superseded by fruit crops. Antigua produces pineapples as well as sugar; Montserrat, sugar, coffee, cacao, arrowroot, and limes, the latter being sold in bottles; St. Kitts and Nevis, sugar and rum; Anguilla, vegetables and salt; the Virgin Islands, sugar and cotton on small farms owned by the negroes themselves, and phosphate of lime from the island of Sombrero. Dominica, Liberian coffee, cacao, limes, and other fruits. The value of imports in 1898 was £25,043 for the Virgin Islands, £7,150 for Montserrat, £5,103 for Antigua, £19,185 for Montserrat, and £30,260 for Dominica. The exports of cotton into the Leeward Islands were £40,630, and of flour £41,967. The export was £26,360; of lime juice £25,753. The tonnage entered and cleared in the Virgin Islands was 11,307; in St. Kitts and Nevis, 493,329; in Antigua, 429,168; in Montserrat, 208,430; in Dominica, 436,598. The revenue of the Virgin Islands in 1898 was £7,151, and expenditure £7,184; the revenue of St. Kitts and Nevis was £40,840, and expenditure £44,659; the revenue of Antigua was £30,963, and expenditure £35,586; the revenue of Montserrat was £6,199, and expenditure £11,386; the revenue of Dominica was £24,560, and expenditure £24,648. The debt of Montserrat was £17,300; of St. Kitts, Nevis, and Anguilla, £74,450; of Antigua, £137,471; and of the Virgin Islands £92,253 and £23,583 in St. Kitts, Nevis, and Anguilla, £21,160 in Antigua, £3,543 in Montserrat, and £11,716 in Dominica came from customs duties on imports.

The Windward Islands are Grenada, St. Vincent, the Grenadines, and St. Lucia. The area is 550 square miles, and the population in 1898 was 21,100, of which 4,756 were in St. Lucia, 23,000 square miles in extent; 44,000 in St. Vincent, having an area of 147 square miles; and 62,652 in Grenada and the Grenadines, of which the area was 166 square miles. The Governor is Sir Alfred Moloney. In Grenada cacao has supplanted sugar, covering 11,115 acres. Bananas, arrowroot, and pimento are grown. St. Vincent, besides sugar and rum, produces spices, cacao, rum, and logwood. The imports of St. Lucia in 1898 were valued at £27,905, and exports at £23,415; imports of St. Vincent at £26,551, and exports at £24,690; imports of Antigua at £257,274. There were 38 public schools in Grenada in 1898, with 8,386 pupils; 36 schools in St. Vincent; and 39 schools in St. Lucia, with 5,000 pupils. The revenue of St. Lucia for 1898 was £67,268, and expenditure £60,975; the revenue of St. Vincent was £27,361, and expenditure
Barbadoes has an area of 166 square miles, with about 190,000 inhabitants in 1896. Bridgetown, the capital, has 21,000. There are 173 Government schools, with 14,734 pupils in average daily attendance. The British garrison consists of 32 officers and 815 men, the island being the headquarters of the European troops in the West Indies. The Governor is Sir James Shaw Hay. There is a House of Assembly of 24 members elected for each yearly session by the people under a restricted franchise. The island area is 1,577 square miles, and the population is 189,580.

The area of Grenada is 93 square miles, with a population estimated in 1898 at 260,000. Port of Spain, the capital, had 34,037 inhabitants. The number of marriages in 1898 was 1,100; of births, 1,792; of deaths, 753; and excess of births over deaths, 439.

The area of Trinidad is 1,754 square miles, with a population estimated in 1898 at 269,000. Port of Spain, the capital, had 34,037 inhabitants. The number of marriages in 1898 was 1,100; of births, 1,792; of deaths, 753; and excess of births over deaths, 439.
was 48, of which 33, of 1,082 tons, were sailing vessels, and 15, of 1,171 tons, steamers. More than half the imports come from Great Britain, and a quarter from the United States, and the exports go mainly to those two countries, the United States being more important than the United Kingdom. The import of gold was less in 1899 than in previous years, owing to the exhaustion of the richer deposits that were being worked. New ones have not been discovered, but investigations point to a wider extent of auriferous lands than was believed to exist. Cacao, rice, kola, and tobacco predominated, and have lately been introduced to take the place of the sugar cane. The Government encourages the settlement of small homesteads. Of the total area of the colony only a fringe on the coast and on the river banks is cultivated. The forests of the interior contain beautiful cabinet woods, and rubber and other valuable gums.

**Colonies.**—The French island of Guadeloupe has an area of 583 square miles itself, and the dependent islands of Marie Galante, Les Saintes, Desirade, St. Barthélemy, and St. Martin being added, the total area of the colony is 688 square miles. Guadeloupe had 170,195 inhabitants in 1897. The population of the dependencies is about 18,750. The capital is Basse Terre. The revenue in 1900 was estimated at 4,968,324 francs, and expenditures at the same, France giving 1,632,950 francs to cover the deficiency of local revenue. The value of imports in 1899 was 18,451,000 francs, and of exports 18,251,000 francs. The post office in 1896 handled 580,883 letters, 43,207 registered letters, etc. There are about 15,000 Indian coolies on the island. The rest of the population, except the white planters, is African. The economical situation is worse than in Martinique, and the negro population for want of employment has become impoverished.

The area of Martinique is 381 square miles. The population in 1894 was 187,692. The expenditures in 1900 were calculated at 5,729,793 francs. The French Government bears about 35 per cent. of the total expenditure. The Governor is G. Gabrit, residing at Fort-de-France. The value of imports in 1898 was 27,065,000 francs, and of exports 26,505,000 francs. Of the imports, 14,182,000 francs were handicrafts and manufactures, the white goods, 8,091,000. In 1894 was 695,004 internal and 893,505 foreign letters and other mail matter. A battalion of marine infantry and 2 batteries of artillery are kept in Martinique, and there is a company of colonial gendarmerie on each of the islands. The Government is constantly in financial difficulties. The feverential blacks and whites causes difficulties in addition to those that arise from the depression of the sugar industry. The creoles are few and, hampered by want of capital, are unable to devise new occupations for the laborers whom they can no longer profitably employ on their sugar plantations. Excluding the planters and some hundreds of black and white, the whole population is black or colored, descendants of African slaves. About half the imports come from France, which receives practically the whole of the exports from both islands.

**French Guiana.** is administered by a Governor, 1,266,000 francs, and a Council General of 16 members. The population is 30,390, including 3,000 convicts and 1,200 convict settlers. There are 1,500 Indians. The area is estimated at 30,260 square miles. The value in 1890 was estimated at 2,389,040 francs, including a contribution from the French Government, which expended 6,899,061 francs on the colony in 1800, but of this 5,450,550 francs were for the penal establishment. Guiana was made a penal settlement in 1885, and since then habitual criminals and all who are sentenced for more than eight years are sent there. The labor of the convicts is now employed for general purposes with good results. Crops are rice, manioc, cotton, and tobacco, though the area cultivated is small. Rum, cacao, coffee, phosphates, and cabinet woods are exported. The exports of gold were 74,646 ounces in 1897, 48,600 ounces in 1898, and 81,715 ounces in 1899. Gold is found mainly in alluvial deposits, but quartz veins are also worked. The two main points of export are Cayenne and Marowijne, but the exports tend to increase. The interior is covered with dense forests, and the country is exceedingly unhealthy and thinly populated. More than a third of the population live in the town of Cayenne. Silver and iron mines are worked besides the deposits of gold and phosphates. The gulfs on the south that were claimed by France have been awarded to Brazil under the arbitration convention of April, 1897, but they have been developed by miners from French Guiana.

**Dutch Colonies.**—The island of Curacao, with the dependencies of Aruba, Bonaire, St. Eustachee, Saba, and the Dutch part of St. Martin, has an area of 400 square miles and a population of 210 square miles. The population in 1898 was 51,524. The number of marriages in 1898 was 203; of births, 1,583; of deaths, 942; excess of births, 641. The Governor is C. A. H. Barge, residing at Willemstad. The revenue in 1898 was 517,485 guilders; expenditure, 687,529 guilders, leaving a deficit of 170,044 guilders. The number of vessels that visited the island in 1898 was 1,074, of 1,265,000 cubic metres. The post office forwarded 30,272 internal and 480,080 external letters; receipts, 73,000 francs; expenses, 58,000 francs. The value of imports in 1898 was 1,900,000 guilders.

**Danish Colonies.**—Denmark has the islands of St. Croix, St. Thomas, and St. John, which combined have an area of 138 square miles. Their population at the census of 1890 was 114,229, of whom 53,420 were males and 60,800 females. The imports in 1890 were valued at 3,103,000 kroner, and exports at 3,069,000 kroner. The Governor is Col. C. E. von Hedemann. The inhabited area of the island is 78 square miles. The value of imports in 1890 was 12,000,000 kroner. It has been proposed that the United States discharge this debt and assume the sovereignty of the islands if the Danish Government be willing to make the transfer. The islands have long been a financial burden to the home Government, and their trade with Denmark is constantly decreasing.

**WEST VIRGINIA.** a Southern State; admitted to the Union June 19, 1863; area, 24,780 square miles. The population, according to each decennial census since admission, was 442,014 in 1870; 418,437 in 1880; 762,794 in 1890; and 938,800 in 1900. Capital, Charleston.

**Government.**—The following were the State officers in 1900: Governor, George W. Atkinson; Secretary of State, William M. O. Dawson; Treasurer, M. A. Kendall; Auditor, L. M. LaFollette; Attorney-General, Edgar P. Ruoker; Superintendent of Schools, J. R. Trotter; Adjutant General, J. W. M. Appleton; Librarian, F. S. Shirkley; Bank Examiner, O. H. Welzel, surrogates, J. B. Barton, J. K. Heins, J. H. Peters; Secretaries of the Board of Agriculture, J. B. Garvin; Commissioner of Labor, L. V. Barton; Mine Inspector, J. W. Paul; Fish and Game Warden, Frank Lively—all Republicans; Presiding Judge of the Supreme Court of Appeals, Marraduke H. Dent; Associate Judges, John W. English, Henry Brannon, and H. C. Me-
Whorton; Clerk, J. A. Holley—all Democrats except Judge McWhorton, who is a Republican.

The past four years at the time of the presidential elections, and are inaugurated on the 4th of the following March. The Legislature meets biennially in January of the odd-numbered years.

Population.—The increase of population in the past decade was 25.6 per cent., while from 1880 to 1890 it was 23.3 per cent. The census of 1900 by counties is as follows: Barbour, 14,198; Berkeley, 19,469; Boone, 8,194; Braxton, 18,904; Brooke, 7,219; Cabell, 29,252; Calhoun, 10,266; Clay, 5,248; Doddridge, 13,689; Fayette, 31,967; Gilmer, 11,762; Grant, 7,275; Greenbrier, 20,683; Hampshire, 11,806; Hancock, 6,693; Hardy, 8,449; Harrison, 27,690; Jefferson, 11,359; Lewis, 7,219; Logan, 9,655; Marion, 32,140; Marshall, 26,444; Mason, 24,142; Mercer, 23,903; Mineral, 12,883; Mingo, 11,359; Monongalia, 19,944; Monroe, 13,130; Morgan, 7,294; McDowell, 18,747; Nicholas, 1,403; Ohio, 48,024; Pendleton, 9,167; Pleasants, 9,345; Pocahontas, 22,884; Putnam, 17,330; Raleigh, 12,436; Randolph, 17,670; Ritchie, 18,091; Roane, 19,852; Summers, 16,265; Taylor, 14,970; Tucker, 13,433; Tyler, 18,252; Upshur, 14,696; Wayne, 23,619; Webster, 8,852; Wetzel, 22,880; Wirt, 10,254; Wood, 34,452; Wyoming, 8,380.

The population of Wheeling is 38,875, an increase of 12.62 per cent. Other incorporated places having more than 2,000 are: Huntington, 11,923; Parkersburg, 11,703; Charleston, 11,009; Benwood, 4,511; Bluefield, 4,644; Charleston, 2,392; Clarksburg, 4,050; Davis, 2,391; Elkins, 2,016; Fairmont, 5,655; Grafton, 5,650; Hinton, 3,763; Keyser, 2,530; Martinsburg, 7,564; Moundsville, 5,103; New Martinsville, 2,115; Sistersville, 2,979; Thomas, 2,126; Wheeling, 2,588; Weston, 2,540.

Finances.—The official statement of the financial transactions of the State by the Treasurer for the fiscal year ending Sept. 30, 1900, is as follows: Balance in treasury Oct. 1, 1899, to the credit of State fund, $387,460.71; the school fund (uninvested), $518,468.55; balance in treasury, $1,134,749.22; balance in treasury Oct. 1, 1900, $119,211.93; total receipts, $1,806,015.54; total receipts plus balance, $2,925,227.47; disbursements, $1,790,478.25; balance, $1,134,749.22. The school fund (irredeemable) is comprised of: $2,925,227.47, balance unvested, $518,468.55; grand total, $1,040,968.55; net increase for the year, $87,656.16.

The Treasurer says: "The unprecedented appropriations made by the last Legislature gave rise to a well-grounded fear that the treasury would be drained before the next meeting of the Legislature, and the proposals would be all money. But owing to the fact that collections have been remarkably good and considerable revenue has been received from sources heretofore unproductive, we have been able to maintain a substantial balance in the State fund."

It is explained that the unvested part of the school fund is not lying idle, but is lent at 3 per cent., payable quarterly. This fund is increasing at the rate of more than $50,000 a year. In the past four years foreign corporations chartered in the State have paid into the treasury $494,652.29. Criminal charges for the same period cost the State $380,000.

Education.—For the years ending Sept. 30 the State paid for school purposes $1,555,672.24.

The school fund receives all money coming to the State "from forfeited, delinquent, waste, and unappropriated lands; and from lands heretofore sold for taxes and purchased by the State of Virginia, if hereafter reconveyed or sold to others than this State; all grants, devises, or bequests made to this State for the purposes of education or where the purposes of such grants, devises, or bequests are not specified; this State's just share of the literary fund of Virginia, whether paid or otherwise liquidated; and any sums of money, funds, or property which this State shall have the right to claim from the State of Virginia for educational purposes; the proceeds of the estates of persons who may die without leaving a will or heir, and of all escheated lands; the proceeds of any taxes that may be levied on revenues of any corporations; all moneys that may be paid as an equivalent for exemption from military duty; such sums as may from time to time be appropriated by the Legislature for the purpose; and all interest from the fund not used for schools is added to the capital."

There is a compulsory school law imposing a fine of $2 for every day a child is kept from school without a valid excuse, but it seems not to be enforced.

The building of the preparatory branch of the State University at Montgomery has been enlarged, so as to accommodate all the present students. The first student entered the university this year from this school, which has been in operation about four years; the explanation is that as there was no preparatory department in the neighborhood of Montgomery, it was necessary to begin with the very lowest English branches. The State has normal schools at Athens and Huntington.

The State University, at Morgantown, reported this year a larger number of students than ever. About 50 were graduated in June; the law class was small, but the audience was large. The legislative appropriation for the past two years was $196,000. Trouble has arisen among the faculty from the dismissal of two professors, and one of them has entered suit against the president, whom he holds to be responsible.

Militia.—The number of men in the organized militia of the State, as shown by the State comptroller's report as of Oct. 1, 1899, was 1,093, and the number unorganized, but available for military duty, as 125,000.

Corrections.—At the Girls' Industrial School, at Salem, 39 inmates were present in March. A site across the ravine from the building has been bought, to make a home for colored girls needing the restraint of the institution. Besides industrial training, the girls have school instruction four hours a day.

The daily average of convicts at the Penitentiary for the past three and a half years was 619; the daily cost for maintenance for each, $0.202; the improvements made from earnings amounted to $723,500.

Banks.—There were 80 State banks in operation between April 1 and Sept. 30, an increase of 11 since the last report of the Bank Examiner. Certificates of incorporation have been issued to 4 additional banking institutions which had been organized or were in process of organization. The total resources of the State banks for the last two years were as follows: $21,747,454.58 for 1899 and $27,430,644.07 for 1900; capital stock (1899), $3,251,257.10 and (1900) $3,449,076.40. The increase for the year was $33,077,353.01 in total aggregate deposits. Surplus funds and undivided profits amounted to $1,672,928.36, and $1,410,361.94 for the year; the increase in savings deposits amounted to $461,040.50, or nearly 45 per cent.

The Montgomery Banking and Trust Company

377
went into the hands of a receiver, a shortage having been found of about $25,000, and the cashier was arrested in October.

**Railroads.**—The statistics of railroad construction credit the number of 123 miles of new track on lines in 1890 and 1900. Contract has been made for the construction of a road along Coal river—the Kanawha, Pocahontas and Coal River Railroad—and part of the work has been done. It will give an outlet for great quantities of coal and timber.

**Industries and Products.**—The Labor Commissioner’s report shows the following figures on the manufactures of the State: Five hundred establishments report 28,334 employees on the pay rolls Jan. 1, 1897; 34,880 employees on the pay rolls Jan. 1, 1890; 40,221 employees on the pay rolls Jan. 1, 1900; an increase of 48 per cent. Average number of weeks in operation year ending Jan. 1, 1900, 461.

Three hundred and five establishments report an advance in wages rates, affecting 22,553 employees. Three establishments reduced wages, affecting 24 employees.

It is also shown that 298 establishments—mercantile, mining, and manufacturing—started between February and January, 1900, report 40,188 employees, $345,816 paid monthly in wages, and $22,842,547 capital invested.

The State stands third in regard to coal production, being surpassed only by Pennsylvania and Illinois. The output in 1900 was 22,000,000 tons. In 1890 the State stood fourth, with 7,304,650 tons. The number of men employed at the mines this year was 28,017. Of the quality of the coal, the London Statist said: “Both for ‘bunker’ purposes and for export it is probable that the coal of West Virginia is destined to take the lead. This State has a far larger coal area than the United Kingdom has, and the seams are so placed that practically all the mining is done by the simple, easy, and economical method of working by adits. It is this State that produces the famous ‘Pocahontas’ coal, which has been declared by some analysts to be fully equal to the very best coal produced in South Wales—that is to say, to the best in the world. About 3,000,000 tons per annum are sold, and it is beginning to be turned out, and the most of it finds its way to Norfolk and Newport News for shipment.”

The State is second in coke production and first in oil.

From the report of the Board of Agriculture it appears that the season of 1899 w. not favorable, and the yield of some crops was below the average, yet the corn crop was estimated at 18,043,584 bushels; wheat, 3,380,751 bushels; oats, 3,185,442 bushels; rye, 132,290 bushels; and buck-wheat, 238,255 bushels. Total value, $16,695,847. Potatoes, 2,972,754 bushels, valued at $1,308,848; hay, 6,083,051 tons, valued at $6,083,051.

Lawlessness.—A Negro was killed near Tazwell, April 19, for assault on a young girl. A great excitement was caused at Fayetteville, Dec. 29, among the negroes by the arrival of 25 negroes, arrested at Star for having attempted to lynch Squire Workman at that place on Christmas night. Squire Workman had arrested a negro on Christmas Eve, and the negro was disorderedly conducted. Later some negroes tried to rescue the prisoner, and one of them was killed; then followed the attempt that night to lynch the justice, for which the prisoners were arrested.

**Political.**—This was the year for electing State officers for the ensuing four years beginning March 4, 1901. There were four tickets—Republican, Democratic, People’s party, and Prohibitionist.

The first Republican convention was held at Fairmont, May 8, and delegates were chosen to the national convention. The second convention, for nominating State officers, met in Charleston, July 11. In both conventions the nominations, commended the course of the State’s representatives in Congress, denounced disfranchisement of colored voters, opposed the removal of any of the State buildings, and said, concerning apportionment: “In the appointment for election of members of the Legislature we favor giving to every county a complete and legal representation, which, if it is worth one cent, and would be under the old system, the Government would be free to dispose of it at any price, and the onus of despotism is thus advanced, so far as possible, of the legislative districts, which, while being a plan intended to equalize representation, has been perverted by the Democrats into a partisan scheme to disfranchise counties and voters.

And in regard to Democratic State administration: “We condemn the Democratic party for twenty years of incompetence and bungling, coupled with fraud and embezzlement, in the management of the affairs of the State. We call upon the leaders of that party to explain why it was that commissioners of school lands and delinquent sheriffs were allowed to pocket the people’s money and were never called to account; why it was that tons and dollars of public funds were fraudulently embezzled and fraudulently removed by the people’s representatives, and why the United States’ Government, which services were absolutely unnecessary, as the United States Government cheerfully paid the full amount of the obligation to the State treasury; why it was that the last Democratic Governor of this State borrowed $100,000 out of the irreducible school fund for State purposes, paying 6 per cent. interest for it, while at the same time one of his State officers had thousands of dollars of the State’s money in his pocket and was paying neither principal nor interest; why it was that the cost of the public printing, binding, and stationery from 1890 to 1896 inclusive, under Democratic control, amounted to a yearly average of nearly $40,000, while under the present Republican administration in the same period of time has furnished over $3,000,000.”

The eight-hour law was approved, and the rapid development of the industries of the State under Republican administration pointed out. Further, the platform declared: “We are unalterably opposed to the payment of any part of the Virginia debt. That portion of Virginia which now consti-
tutes the State of West Virginia paid its full share of taxes into the treasury of Virginia for almost three quarters of a century, and received but an inexorable share of the public improvements for which the Virginia debt was created; and when West Virginia was admitted into the sisterhood of States, the assets which belonged to both of the States were nearly equally in commonwealth; and yet it was arbitrarily decided by the Legislature of Virginia that West Virginia should pay one third of the indebtedness of Virginia, without any reference to the amount of the expenditure of public moneys for public improvements within what is now the territory of West Virginia; and West Virginia has been compelled in justice to the people of West Virginia to show the amount of its indebtedness to the State of Virginia.

The following candidates were named: For Governor, Albert B. White; Auditor, Arnold C. Scherr; Treasurer, John H. Holt; Attorney-General, George M. McCoy; Judges of the Supreme Court, John W. English, William G. Bennett.

The Democrat convention met at Parkersburg, June 6. A platform was adopted pledging support to the Kansas City ticket and platform. It denounced trusts, imperialism, the Porto Rican tariff, the Philippine eigenchaft, and its influence on the electoral act of Congress, the increases of the standing army, and the administration of President McKinley and of Gov. Atkinson. Sympathy was expressed for the Boers. The Nicaragua Canal was strongly favored. A resolution was adopted against recognizing the old Virginia debt in any form.

In an address before the convention ex-Gov. McCorkle arraigned the Republican party in a way that met the approval of the delegates and is interesting for comparison with the extracts given above. He denounced the action of the Secretary of State and the Republican party in defrauding the Democrats of a majority in the Legislature of West Virginia, and the Republican party in this State for its delinquency in allowing the State to be sued on the Virginia debt. He criticised Gov. Atkinson for claiming that the institutions of the State were efficiently managed, and demanded why the present superintendent who is criticized for his actions all over the State, was allowed to continue in office. He denounced the extravagant and inefficient management of the university; showed that it cost at least four times as much under the present administration and with no more students than with the Democratic administration. He took up the institutions of the State and showed by the appropriations that they had immensely increased in expenditure under the Republican administration; dwelt upon the public printing, binding, and stationery, and showed its immense increase under Republican management. He showed further that during his administration he had increased the value of railroads $4,000,000, while, notwithstanding the increase of mileage, the value has been decreased by the Republican administration. He showed that the highest appropriation under the Democratic administration was $1,300,000, but that under Republican management it had increased to $2,200,000, the highest ever known in the history of the State. He then took up the question of the material improvement of the State, and showed that the Democratic party had practically made the State what it is, and showed what it had done in the way of creating the school department, building the university and the public institutions of the State, and showed the marvelous progress under Democratic management.

Following is the ticket: For Governor, John H. Holt; Auditor, James H. Miller; Treasurer, J. Garland Hurst; State Superintendent of Free Schools, Robert A. Armstrong; Attorney-General, George M. McCoy; Judges of the Supreme Court, John W. English, William G. Bennett.

The Republican candidates were elected, the vote standing: White, 118,807; Holt, 100,226; McCorkle, 1,054,670; H. R. Hotan, 56,040; Holton, 1,688,042; Winslow, 97,801; H. W. Bower, 56,040; Debs, 880, 286; Barker, 274.

GOVERNMENT.—The following were the State officers in 1900: Governor, Edward Sciofield; Lieutenant Governor, Jesse Stone; Secretary of State, William H. Froelich; Treasurer, James O. Davidson; Attorney-General, Emmett R. Hicks; Superintendent of Education, L. D. Harvey; Railroad Commissioner, Graham L. Rice; Insurance Commissioner, Emil Gil Johann; Adjutant General, C. L. Boardman; Commissioner of Education, James H. Adams; Labor Commissioner, Halford Erickson; Bank Examiner, E. I. Kidd; Health Commissioner, F. M. Schulz; Fish and Game Warden, J. T. Ellarson; Tax Commissioners, Norman S. Gilson, George Curtis, W. J. Anderson; Forest Warden, C. E. Morley; Chief Justice of the Supreme Court, J. H. Cassaday; Associate Justices, John B. Winslow and Joshua E. Dodge (Democrats), Charles V. Barden and Ronjet D. Marshall; Clerk, Clarence Kellogg. With the exceptions mentioned, all are Republicans.

State officers are elected for terms of two years in November of the even-numbered years. The Legislature meets biennially in January of the odd-numbered years. It consists of 33 Senators and 100 Representatives.
Population.—In 1880 the State stood sixteenth in population, and fourteenth in 1890; by this census it is thirteenth. The percentage of increase is 22.6. There are 1,637 Indians not taxed. State hospitals and lunatic asylums are not included; but the following data are given: There was an increase in the population of every one of the counties. Milwaukee led with an increase since 1890 of nearly 94,000, the present population of the county being 339,000. Other counties reporting an increase of more than 10,000 are Douglas, 29,000; Marathon, 13,000; Marquette, 10,500; Racine, including the city, gained over 9,000. Dane County gained nearly 10,000, the present population of the county being 69,500. Ashland gained 113 only; Green County exactly the same. But as a rule northern counties gained the most markedly: Wood, 8,000 to her present population of 26,000; Shawano showed 27,500; Chippewa, 8,000 to 33,000; Clark County, 14,100 to 26,000.

Wisconsin, 780

The gains are large in the cities, some farming towns showing a large percentage of decrease. Milwaukee has grown from 204,186 in 1890 to 263,318 in 1900; Superior City, from 11,983 to 31,091; Racine, from 21,014 to 29,102; La Crosse, from 20,000 to 22,854. Sheboygan has 22,902; Madison, 19,104; Eau Claire, 17,517. The capital city (Madison) had 13,426 in 1890.

Finances.—In urging reform in the financial management of the State, Gov. La Follette says in his message to the Legislature: Under the law the only satisfactory way to test the financial condition of the State is to have the regular official reports for the term ending on that day. This fact, with a few others closely related to it, I believe to be responsible for much of the public misunderstanding of State finances and for most of the misleading information concerning State affairs upon which legislators have been obliged to rely for guidance. Reports for the fiscal year must be published within six months after the close of the year, and a report in detail of all disbursements must be published within six weeks after the receipt of large amounts of revenue as license fees from corporations, etc., but months before the close of the administration term—months in which extraordinary disbursements, including legislative expenses in each biennial term, must be made before considerable revenue is received. This is the result of a great natural result of this system is found in misleading official reports, showing a handsome cash balance at the close of the fiscal year, and four months later a new administration finds itself confronted at the beginning of its term with an alarming deficit as the foundation for new appropriations by the Legislature and the natural result of steady growth in ordinary current expenses. At the close of the fiscal year, Sept. 30, 1900, the balance in the general fund of the State was $406,408.74. At the end of the calendar year and administration term, Jan. 7, 1901, the general fund balance was only $83,277. Of this last balance, $50,000 is derived from a reimbursement of $50,000 to the legislature on fees which do not become due until March. The State aid to free schools, amounting to $97,607.53, due Dec. 1, 1900, is unpaid—although the warrants therefor are in the Treasury Department—because available moneys in the general fund are required to meet current expenses. These items, when properly debited, leave a net balance of $412,594 in the general fund. Legislative and other expenses payable within the next few days will aggregate more than $100,000, and there is no appreciable amount of receipts due to the general fund from any source before the time for payment of operation license fees and State taxes, which was changed from February to March by the last Legislature. Besides this inevitable deficit, there

is an additional deficiency of $323,505.74, being the amount of appropriations by the last Legislature the payment of which has been refused on account of lack of means in the general fund, and which cannot be met by the general fund as soon as sufficient moneys 'not otherwise appropriated' shall accumulate therein. In brief, you have a legacy of over $300,000 excess appropriations from the last Legislature to take into your considerations, and the administration begins business with a considerable treasury deficit in sight, in lieu of the balance which might by expected from the condition of the general fund at the close of the fiscal year as shown by the annual official reports available to the public for purposes of information.

A table is given showing receipts and disbursements for the ten years ending in 1898, from which it is seen that in four of the ten years there was an excess of disbursements over receipts even at the close of the fiscal year; and there was a steady increase in the cost of State government from $4,894,871 in the first biennial term to $7,340,947 in the last.

The valuation of property in the State was somewhat lower in 1899 ($1,453,370) than in 1898, and the tax levied was $1,345,370. A 1-mill tax is levied for schools. The university receives $268,000, the normal schools $190,000, and the free high schools $100,000. Interest on certificates of indebtedness takes $157,570. The cost of State printing for the past bimomial was $118,111.77.

Education.—Following are school statistics of 1900: School population, 731,063; enrollment in public schools, 445,141; teachers, 13,063; graduates of normal schools, 156,747; amount expended for teachers' salaries, $7,705,211.02; buildings and repairs, $855,247.44; for apparatus, furniture, etc., $119,907.73; number free high schools, 21; number other public schools, 17,382; teachers in free high schools, 17,382; teachers in free high schools, 7,382; pupils in day schools for the deaf, 198.

The receipts for common schools, including free high schools, were $7,209,578.45; the disbursements, $6,735,724.45; the receipts for normal schools, $355,192.23; the disbursements, $323,759.73. The receipts for the university for the year—including a balance, Sept. 30, 1899, of $23,508.44—were $609,944.13; the disbursements, $392,797.46. For day schools for the deaf the State paid, including a balance, $23,030.89; for teachers' institutions, $11,298.53; and for salaries and allowances to county superintendents, $71,475. The total amount expended to the school year, 1899, was $31,576.80.

The number of diplomas and certificates issued and countersigned by the State superintendent in the school year was 1,048, of which 917 were of normal schools. The number of teachers in rural schools receiving less than $25 a month was 2,935; those receiving $25 to $35 was 4,280; and more than $35 was 1,983.

The registration at the normal schools has not increased in the past two years. At the university nearly 1,600 were enrolled before the end of September. In March 87 were graduated from the Agricultural College; the total attendance in this department of the university was 252. The dairy school had 115 students in November.
The number of private schools outside of cities is given as 448, their teachers 645, and pupils 27,213. In cities, 13,301 attended 213 private schools twelve weeks or more, under $25 teachers.

The number of colleges, academies, and seminaries reported, not including those under State or public control, was 19; they paid for instruction $101,658.

The finest building owned by the State was dedicated in October. This is the Historical Library building on the university campus, Madison. It is of white sandstone, and has cost $500,000. It was dedicated by the State Historical Society, for whose use it was built. The dedicatory address was made by Charles Francis Adams. The forty-eighth annual meeting of the society was held in the new building in December. The books in the library include 215,000 titles. The sessions of the summer school for library training, supported by the State Free Library Commission, were held this year in the new building.

**Charities and Corrections.**—The number of inmates in the charitable and penal institutions Oct. 1 was 2,784, and of officers and employees 632, divided as follows:

<table>

</table>

The current expenses of the 9 institutions for the two years ended Sept. 30, 1900, were $1,272,379.20, divided as follow: State Hospital for Insane, Mendota, $218,787.43; Northern Hospital for Insane, Oshkosh, $290,018.50; School for Deaf, Delavan, $82,296.80; School for Blind, Janesville, $71,541.35; Industrial School for Boys, Waukesha, $136,075.57; State Prison, Waupun, $164,435.59; State Public School, Sparta, $84,393.84; Home for Feeble-minded, Chippewa Falls, $141,576.24; State Reformatory, Green Bay, $91,981.08.

All expenditures must be audited by the Secretary of State, and all income reported to him.

**Militia.**—The number of organized militiamen in the State was given in July as 2,745, and the number of men available for military duty but unorganized as 274,116. The expenses of the Adjutant General's department, including the pay of the militia while they were in camp, rents of armories, and salaries, was $91,093 in 1899 and $88,512.52 in 1900. Troops were paid $45,908.71 in 1899 and $43,638.74 in 1900. In the Pension Department 976 cases were settled, in 404 of which the claims were allowed.

**Medical Registration.**—The receipts of the State Board of Medical Examiners for the two years from licenses, registrations, and examinations were $8,772.52, while the expenses were $7,900.20, a balance of $863.31 being deposited in the State treasury. The board granted 1,220 licenses at $5 each, and there were 1,200 registrations at $2 each.

**Railroads.**—In the first eighteen months of the operation of the law prohibiting State officials from riding on passes, the expense to the State for transportation of State officials and members of State boards was $26,632.66. In statistics of railway construction the State is credited with only 86 miles of new track, laid on 8 lines, in the years 1899-1900.

**Insurance.**—The receipts of the Insurance Department for 1900 were $431,318.87, an increase of nearly $56,000 over 1899, and of nearly $200,000 over 1898, before the new insurance law went into effect, the receipts for 1898 being $230,774.43. All of this money is turned into the State treasury. The Northwestern Life Company alone paid $241,636.16. The expenses of the department for the year were about $13,000, not including payments for publication of statements of the insurance companies, which under the law are charged as expenses of the department, but are paid direct by the companies.

The State is carrying insurance on its buildings to the amount of $2,000,000, at an annual cost of $8,064.

**Industries and Products.**—The latest labor reports available are for 1897-98. In those years 528 orders were issued requiring guards or protection around dangerous machinery, the erection
of 26 fire escapes was ordered, the repair of 76 unsafe elevators, the guarding or repair of 32 defective or dangerous stairways or other openings, the changing of 16 doors so as to swing outward, the disinfecting of public buildings, and the employment of six unappropriated cheese inspectors. For the same two years the number of establishments inspected was 2,403, with 119,026 male employees and 14,711 female employees. Some of the returns under the "special investigation" into child labor are significant; 215 establishments were visited, employing 33,805 workers, of whom practically 60 per cent were under sixteen years of age, and of these 4.6 per cent under fourteen years. The average weekly wages were $2.69. The inquiry further showed that 31 per cent had attended public schools and 58 per cent. parochial schools exclusively, and nearly 11 per cent. had attended both of these classes of schools. Also that 82 per cent were born in the United States and 18 per cent in foreign countries. That 72 per cent. reported the occupation of the father as that of common labor, and 28 per cent. as that of one or the other of the skilled trades; that in 60 per cent. of the cases of the 1,216 children who appeared young or weak, and whose homes were visited, the parents owned their home and some of the furniture; that in 18 of the 21 cases the father had regular employment; that of 21 per cent. the father was dead; and that of 32 per cent. the father was either sick or out of employment.

Wisconsin, it is said, makes one fourth of the cheese produced in the country; there are 2,000 cheese factories and 1,000 creameries. Green County has a large reserve of cheese, and the residents produced, $1,200,000 worth of cheese in 1900. The report of the Game Warden gives the following data: In 1900 were issued 32,037 hunting licenses, of which 231 were to nonresidents; the license fees aggregated $82,516, a decrease of $3,500 from the year preceding. "More deer were killed—2,568 shipped in 1900 and 1,953 in 1899; 389 nonresidents killed 104 this year. Of 342 persons arrested for violating the game laws, all but 21 were convicted; fines collected amounted to $4,800; and there were 190 seizures of nets, snares, etc. Twelve persons lost their lives by being mistaken for deer, and 12 others were seriously wounded."

The report of the School Superintendent gives 4,680 for the education of parents, and also 68,356 acres of the State land for schools, worth $121,971, and it was estimated that those remaining unsold were worth only about $500,000. The fund from all that have been sold amounts to about $83,000,000. School districts can borrow for the building of schoolhouses, the limit being 5 per cent. of the market value of real property in the district, and the time allowed for payment fifteen years.

The Forest Warden reported that there were 99 forest fires in 1900, affecting 163 persons and causing a loss of $23,906. The cost of extinguishing fires in 1899 was $1,705 and in 1898 there were only 40 fires, involving a property loss of $1,705 and affecting 11 persons, while the cost of extinguishing them was $362.97.

**Decisions on Laws.**—The legislative act providing that process may be served on private corporations by leaving copy with register of deeds has been pronounced unconstitutional as taking property without due process of law.

**Political.**—The State election took place in November, and there were five tickets—Republican, Democratic, Prohibition, Social-Democratic, and Socialist-Labor. The Republicans chose delegates to the national convention and presidential electors at large at their first convention, April 25, in Milwaukee. The second Republican convention was held in Milwaukee, Aug. 8. Eight names had been nominated for the gubernatorial nomination, and there were 6 avowed candidates—R. M. La Follette, E. M. Rogers, J. M. Whitehead, A. M. Jones, I. B. Bradford, and De W. Stebbins—but before the end of July all except Mr. La Follette had withdrawn. This was a great surprise, as Mr. La Follette has been out of harmony with his party for several years, having been induced to run for the State: his ideas on politics and economies being deemed too radical. He was nominated by acclamation, and the present incumbents of the other State offices were renominated without opposition. The platform declared in favor of some of the changes in State law which Mr. La Follette had most earnestly advocated, notably the nomination of candidates by primary election and the abolition of caucuses and conventions. It said: "We indorse the administration of Gov. Field and the other present State officers as clean, capable, and businesslike; and heartily commend its efforts toward carrying out the pledges of the Republican State platform adopted at the convention of 1898."

"We recommend that caucuses and conventions for the nomination of candidates for office be abolished by legislative enactment, and that all candidates for State, legislative, congressional, and county offices be nominated at primary elections upon the same day, by direct vote, under the Austrian ballot system."

"The establishment by the last Republican Legislature of a State tax commission for the purpose of an exhaustive investigation of the complicated questions of taxation was in accordance with the principles of sound public policy."

"The growth and development of business and commercial affairs require and necessitate large aggregations of capital, and great enterprises may be honestly and fairly conducted, with legitimate profits to investment and substantial good to the community; but combinations and trusts that destroy competition, restrain trade, and create monopolies should be prohibited by law: and we demand the enactment of such legislation, State and national, as shall render these abuses impossible."

"We believe that the demand for better highways, made by the farmers of Wisconsin, should be encouraged by the State, as favoring an improvement of great practical value to the agricultural interests.

Following is the ticket: For Governor, Robert M. La Follette; Lieutenant Governor, Jesse Stone; Secretary of State, William H. Froehlich; State Treasurer, James O. Davidson; Attorney-General, Emmett R. Hicks; State Superintendent, Lorenzo P. Harvey; Railroad Commissioner, Graham L. Rice; Insurance Commissioner, Emil Giljohann;"
Chairman of State Central Committee, Gen. George E. Bryant.

The Democratic State Convention met in Milwaukee, June 12, chose delegates to the national convention, and adopted resolutions on national issues, approving the Chicago platform, expressing love for and devotion to Mr. Bryan, and denouncing "the Republican party for its brazen inconsistency in treating Porto Rico as a part of our territorial possession, and at the same time unjustly discriminating against its people, as well as our own, by imposing a burden of tariff, in express violation of the Constitution of our country; in establishing a system of imperialism requiring a new interpretation of the Constitution necessitating the maintenance of a system of militarism that threatens the perpetuity of our Government, for the sole purpose of gain and conquest; in establishing for all time a scheme of taxation under the guise of war taxes, for the purpose of maintaining a standing army, at a time when peace should prevail, and providing revenue made necessary by a policy of exorbitant and prohibitory tariff impositions, practiced in the interests of monopolies and trust combinations, that have been fostered by the present administration; in the profligate and corrupt use of the public funds in fraudulent army contracts, and the purchase of war vessels; and we point to the gigantic postal frauds in Cuba as a fair sample of Republican integrity."

The remaining paragraphs condemned trusts, favored election of United States Senators by direct vote, and expressed sympathy for the Boers.

The second Democratic convention, in Milwaukee, Aug. 22, named the following candidates: For Governor, Gen. O. S. Solitaire, of Wisconsin; for Attorney-General, Thomas Patterson; Secretary of State, J. H. Woodnorth; State Treasurer, August Bartz; Attorney-General, G. C. Cooper; State Superintendent, Homer B. Hubbell; Insurance Commissioner, G. W. Hill; Chairman State Central Committee, A. D. Warden.

Two presidential electors were also nominated.

The platform repeated the declarations of the June convention on national issues. In regard to two of the four constitutional amendments that were passed by the Legislature of 1889 and will come before that of 1901 before being submitted to the people, it said:

"We are opposed to joint resolution No. 13, proposing an amendment to Article XI of the Constitution of Wisconsin, giving the Legislature power to pass a general banking law, and believe that the people should continue to be vested with the ultimate power to vote upon the passage of any banking law."

"We are opposed to joint resolution No. 16, proposing an amendment to section 1 of Article X of the Constitution of the State of Wisconsin, relating to education. This proposed amendment is in conflict with the recently expressed vote of the people as to the supervision of public instruction, and opens the way for the vesting of the control of the public schools arbitrarily in the hands of the State Superintendent and the taking away from the people of the various counties the election of county superintendent."

A convention of the People's party was held in Milwaukee, Aug. 22. The nominations of the Democratic party for presidential electors were adopted, and the convention decided not to put out a sample ticket in Milwaukee. The People's party platform, the resolutions demanded abolition of monopoly in money, transportation, and land; direct legislation known as initiative and referendum; public control of public utilities, national, State, and local; a primary election law; the issue of all money by Government directly through the Government banks; abolition of the arbitrary power assumed by judges in granting injunctions; a legal eight-hour work day; municipal home rule; and the abolition of prison contract and child labor.

The Prohibitionists met in convention in Madison, Aug. 22, and adopted a platform in line with the party principles, approving the national candidates, and saying:

"We declare that no substantial reform can be made by legislative enactment and that the salutary primary and general elections made so long as the saloon debauches the citizen and breeds the purchasable voter. Break down the run traffic, elevate manhood, and a sober citizenship will give us an honest ballot.

"We are in favor of equal and just taxation, and as the State, according to its own resources, the repeal of the present license laws of this State, which make more than $2,000,000 from the wives and children of drunks, that should be levied upon the property instead of the poverty of our people. This can only be done by the enactment of a prohibitory law in place of the license system, which is wrong in principle, vicious in theory, and a failure in practice."

The ticket follows: For Governor, J. B. Smith; Lieutenant Governor, T. K. Torvildsen; Secretary of State, Edwin Kershwill; State Treasurer, H. J. Noyes; Attorney-General, E. W. Chafin; Superintendent of Public Instruction, H. C. Senn; Railroad Commissioner, V. M. Weeks; Insurance Commissioner, F. R. Derrick; Chairman of State Central Committee, J. E. Clayton.

Howard Tuttle was nominated for Governor by the Social-Democrats, who met in convention in Milwaukee, Sept. 1.

The election gave the offices to the Republican candidates. The vote for Governor stood: La Follette, 264,420; Bohmrich, 160,074; Smith, 97,122; Tuttle, 6,500; Wilke, Socialist-Labor, 7,095. The Legislature will consist of 31 Republicans in the Senate and 81 in the House, and 2 Democrats in the Senate and 19 in the House.

The presidential vote was: McKinley, 265,916; Bryan, 153,284; Woolley, 10,124; Debs, 7,095; Milloy, 523.

WYOMING, a Northwestern State, admitted to the Union July 10, 1890; area, 97,890 square miles. Population in 1890, 60,705; in 1900, 92,531. Capital, Cheyenne.

Government.—The following were the State officers during the year: Governor, De Forrest Richards; Secretary of State, E. C. Cooper; Treasurer, G. E. Abbott; Auditor, Leroy Grant; Adjutant General, Frank A. Stitzer; Attorney-General, J. A. Van Orsdel; Superintendent of Education, T. T. Tynan; Supreme Court: Chief
Justice, C. N. Potter, Republican; Associate Justices, Samuel T. Corn, Democrat, and Jesse Knight, Republican; Clerks, R. C. Moomers.

Population.—The population of the State, by counties, in 1900, according to the Federal census, was as follows: Albany, 13,084; Bighorn, 4,328; Carbon, 9,589; Converse, 3,337; Crook, 3,137; Fremont, 5,357; Johnson, 2,361; Laramie, 20,181; Natrona, 1,785; Sheridan, 5,122; Sweetwater, 8,455; Uinta, 12,223; Weston, 3,203; Yellowstone National Park, 369.

Finance.—The Treasurer's statement of Sept. 30, 1900, shows a net balance in the general fund, after allowing for outstanding warrants, of $22,304.43, a net gain of $25,992.44 over 1898. The Treasurer's cash statement is as follows: Cash balance, Oct. 1, 1898, $103,755.69; receipts from all sources, $71,135.21; investments repaid, $42,107.16; disbursements, $62,195.82; investments, $63,147.16; cash balance, Sept. 30, 1900, $817,685.08. This shows a gain in the cash balance of $67,949.39 over the cash balance of 1898.

The details of State expenditure for the fiscal year ended Sept. 30, 1900, show, among other items, the following: Care of convicts, juvenile delinquents, and deaf, dumb, and blind, $29,079.54; insane, $17,287.58; Soldiers' and Sailors' Home, $3,234.38; Wyoming General Hospital, $12,894.49; university, $8,726.51; interest State bonded debt, $10,200.

Valuation and Taxation.—The Treasurer's report shows the total valuation of property within the State in 1900 to be $37,892,303.81; number of cattle 339,069, valuation $6,154,640.05; number of sheep 2,024,689, valuation $5,426,493.25. The taxes levied in 1900 were as follows: State, $227,510.13; county, $280,771.12; general school, $48,581.13; interest on county bonds, $80,293.32; local school, $14,000.97; special school, $159,925.61; payment school bond interest, $10,434.58; payment county bonds, $10,172.11; total, $853,563.23.

State Lands.—The rentals for the State lands increased from $22,268.69 in 1892 to $91,589.81 in 1900, the great increase having occurred during the past two years, viz., from $40,084.07 in 1898 to $91,589.81 in 1900. The State owns 3,001,005.48 acres of school sections, being sections 16 and 36 in each township. Of this amount, 918,054.47 acres have been leased, 553,477.93 during the past two years.

Education.—The report of the Superintendent of Public Instruction shows that in the past two years 3,424 schools were maintained, and more than 14,000 pupils received instruction.

Soldiers' and Sailors' Home.—Since the establishment of this institution, in 1805, 71 persons have been admitted. The present membership is 21; the gain during the year by admission and readmission was 18; the loss from various causes was 13. The average attendance of men for the year was 21.25; women, 2.66. The average cost of maintenance per capita for the year ending Sept. 30, 1898, was $238.83. The average cost for the past year was $211.56. The total cost of maintenance for the past year was $5,234.38. Of this amount, $1,507 was received from the Governor.

Penitentiary.—The average daily number of all convicts, State and Federal, and the total net cost for care and maintenance of them during the past five years, are as follows: In 1895, 107.38 convicts, cost $5,193.97; in 1896, 111.08 convicts, cost $22,841.13; in 1897, 120.47 convicts, cost $23,576.10; in 1898, 136.11 convicts, cost $22,944.21; in 1899, 144.48 convicts, cost $25,578.41. In 1900 five new prisoners were admitted to the Penitentiary.

Coal Mining.—The State Inspector of Coal Mines reports the output of the mines of Wyoming as 3,777,487 tons in 1899. Seven new mines have been opened recently.

Political.—At the presidential election the Republican candidate, Robbin's, a Democrat-Populist, 10,928. The vote for Congress was: Mondell, Republican, 14,539; Thompson, Democrat, 10,017. The Legislature consists of 18 Republicans in the Senate and 37 in the House, 1 Democrat in the Senate and 2 in the House.

YACHTING. Yachting antedates in antiquity most of the sports and recreations of the present day; but its development naturally had been most noticeable during the century past closed, when popular pastimes have kept pace with the enormous growth of moneyed interests, and everything social and political has advanced with a rapidity not heretofore known in the history of the world. Evidences are not wanting that pleasure craft, propelled by oars or sails, were used by the earliest maritime peoples known to history, and the mention is even made of such craft in the semimythical legends of prehistoric times. It is but a few years since a sumptuous houseboat (or whatever may have been the Roman equivalent for the term) was discovered at the bottom of an Italian lake, and it now adorns a neighboring resort for the instruction of the passing throng.

It appears in Pepys's Diary that in January, 1660, one Commissioner Pett, a shipbuilder of Deptford, England, was building for Charles II a vessel described as a yacht, and that in July of the same year a Dutch sailing yacht lay in the Thames below London Bridge, and was visited by his Majesty, who did it the honor to dine on board. Subsequently the King defeated his Dutch visitor, and likewise at the same time his brother, the Duke of York, in a sailing match from Greenwich to Gravesend and back, the stake being 100 guineas. This is the first stated yacht race of record in British waters.

It is not here intended to relate in detail the history of this luxurious and costly recreation. In England, as has been seen, it had its beginnings under the patronage of the "Merry Monarch"; and while it probably had its periods of depression during the reaction that followed his extravagant reign, it reasserted itself shortly afterward, and by 1720 the first yacht club was established at Cork, Ireland. This was followed in due course at Cowes, England, being organized in 1812 with 50 members. At about the same time wealthy American gentlemen, notably the more prominent among merchants and shipowners, were in the handsomely furnished and equipped, some of which did valiant service as privateers in the war that followed.

The first regularly organized American yachting association was the New York Yacht Club, established in 1844 with 9 members, Commodore John C. Stevens, Esq., being commodore. This grew out of the Holland Yacht Club, whose fleet consisted mainly of sailboats and which hardly to be recognized as a regular yacht club. The first stated match was sailed by the club fleet from Robin's Reef, within
NEW YORK harbor, as a starting point, to and around the Southwest Spit Lightship and return, the schooner Cygnet being the winner.

Therefore, as this paper moreover refers to two such races, a brief summary seems to be called for here. The America was designed and built by George Steers, and, representing the New York Yacht Club, sailed for England under the command of John C. Stevens, commodore of the club. She so utterly defeated and outmaneuvered not only the whole Royal Yacht Club, but the ideas of English builders, and twenty years passed before a challenge was sent across the ocean and an effort made to win back the cup, and with it the formerly acknowledged supremacy of British yachts.

A beginning once made, other challenges and contests followed at irregular intervals, to the number of 10, more or less, until the sixty second victory for the American contestants. Disagreements and misunderstandings have arisen from time to time, and controversies about the racing conditions have occasionally waxed so bitter as to threaten all possible friendly relations; but it is believed that a mutual understanding has now been reached to the effect that the good faith that may be presumed for both sides, should prevent any serious dispute in the future.

The subject of yachting was last treated in the Annual Cyclopaedia in 1896. At that time, owing to the incomprehensible and unwarrantable course of Lord Dunraven during his contest for the America's Cup, it was generally believed on both sides of the Atlantic that ten years would have to pass before another challenge would be authorized by any British yacht club; for, while to Americans the case, after a most careful investigation, seemed to be clear against the plaintiff, it was far otherwise in England, and it was not considered possible that what many Englishmen regarded as an affront to a British nobleman would be soon forgotten or overlooked. A fresh challenge came, however, far sooner than was expected.

In 1897 it became evident that "mug hunting" was assuming an overrunning prominence not altogether to be commended. The fun and good fellowship encouraged by scrub races and friendly ma- rines, both on and off the water, has been crowd- ed out and discouraged by the racing machines, whose owners shunned every contest unless the conditions were such as to favor their individual boats. This state of things was further fostered by those yachtsmen and sailors of smaller craft who, favored by large means, were able to build and equip a new boat, or perhaps more than one, for every racing season, embracing all the improvements that had been devised in the meantime, and thus gaining an advantage hardly to be estimated over their less favored rivals.

In the smaller classes there were some fine contests. An exciting series of trial races off Oyster Bay, Long Island, were conducted in the class of mono- hulled boats, designed and sailed by Clinton Crane, to try and bring back the Seawanhaka-Corning challenge cup, won by the Canadians in 1866. The Canadian defender was Gleneaurn II, built and sailed by Mr. H. Duggan. She was successful in her defense, and the contest was one of skill, strength, and ability; Mr. Duggan was universally recognized as a designer of remarkable ingenuity and as a sailor of the highest skill.

In the large schooner class there were exciting contests between the Emerald and Colonla, two large vessels of the modern build and rig, which were considered the finest type of their class. Colonla was the winner in the larger number of trials.

Off Newport a series of races occurred between the Syee (F. M. Hoyt, owner) and the Vencedor (H. M. Gillig), both cutters about 50 feet in length. The last-named vessel was brought from the Great Lakes, where she had beaten everything in her class, to try conclusions with her salt-water sister. She was badly beaten, owing largely to a series of unlucky mishaps, and she has since been taken back overland to her native element, the fresh-water seas.

In 1898, owing to the war with Spain, yachting in American waters was reduced almost to its lowest terms, and the majority of the yachts along the coast were very properly planted with defense systems of mines and torpedoes, and the vigilance of guard ships, patrol boats, and cruisers interfered sadly with the freedom of the seas as regarded the convenience of pleasure craft. For these reasons the annual summer cruises of the large yacht clubs were curtailed, and in the latter part of the year, that 28 large steam yachts were purchased by the Government and converted into gunboats, some of which rendered distinguished service in action. Notable among these was the Gloucester, formerly the Corsair, which under the command of Lieut. Richard Wainwright did not hesitate to engage at the mouth of Spanish destroyers, both of which were sent to the bottom in short order, though not entirely, perhaps, by the yacht's guns. Many yachtsmen, too, entered the service, some of them as officers, but more as enlisted men, in the regular navy as well as in the reserves, their training in amateur seamanship having qualified them for posts of responsibility and danger.

While all this very naturally interfered temporarily with yachting in its more pacific aspects, it tended to develop the single-hand cruiser classes by taking out of the way the temptation of larger and more luxurious craft. The small boat has always been the true training school for efficient seamanship and all-round usefulness among sailors.

On Aug. 6 the New York Yacht Club received preliminary notice of a challenge for the America's Cup from the Royal Ulster Yacht Club of Ireland, in behalf of Sir Thomas Lipton, a wealthy tea merchant. It was subsequently arranged that the races should be held in Narragansett Bay, and that season of the year being chosen as more likely to afford favorable conditions of wind and weather than usually prevail at an earlier date.

The races for the Seawanhaka challenge cup were sailed, after the usual trials for the selection of the swiftest boat, near Montreal; the contests were won by the Dominion, built and sailed by H. Duggan for Canada, and the Challenger, Clinton Crane, for the United States. The Canadian won in all but one of the races, and that was lost only because he ran afool of his antagonist. Owing, however, to the peculiar construction of the Canadian boat, something approximating the double-hull idea of a catamaran, much indignation was expressed on the part of the Challenger, and
The Canadians won in the international match for half rated, the Gleaner III, of the Royal St. Lawrence Yacht Club, defeating the Constance, of the Seawanahkas (New York).

In 1900 the usual international contest between half-rated boats was held on Lake St. Louis, St. Lawrence river, early in August. The Canadian defender was the Red Coat, of the Royal St. Lawrence Yacht Club, and the challenger was the Minnesota, of the White Bear Club, of St. Paul, Minn. The victory remained, as before, with the Canadians.

It is the reasonable hope that the next challenge for the America's cup would permit the building of smaller boats for the contestants, a "70-foot" class was created, and fairly satisfactory results were obtained, the yachts being nearly as fast as the great 90-foot racers, and involving so much less expense and trouble that it was believed that the general interest of the sport would be furthered thereby.

These hopes proved vain, however, for on Oct. 2 a challenge was received in due form from Sir Thomas Lipton, through the Royal Ulster Club. This was accepted, and the conditions agreed upon in 1898 were re-enacted with slight amendments. The first race is fixed for Aug. 20, 1901, the others to follow as nearly as possible the wind and weather at sea.

At the writing this prospective contest is in course of construction—larger, costlier, and more strictly racing machines than any of their predecessors.

YUKON, TERRITORY OF, a northwestern territory of the Dominion of Canada; population in 1901, 15,500.

Government and Regulations.—The Canadian district of Yukon was constituted a separate territory, under control of the Minister of the Interior, at Ottawa, with the name of the Yukon Territory, in 1888. The first Commissioner, appointed on July 4 of that year, was William Ogilvie. He was associated with him as an Executive Council the following officials: A. B. Perry, Superintendent of the Northwest Police; A. C. Snellker, Gold Commissioner; J. E. Girouard, Registrar of Lands; Mr. Justice Dugas, ex officio; W. H. P. Clement, Legal Adviser. In July, 1900, arrangements were made by the Dominion Government for the local elected representatives in the Council, marked at once on the general community, and in the parliamentary session of the same year the Government at Ottawa, while refusing to support Sir Charles Tupper's motion for an immediate grant of representation to the territory, announced that it would be given before long. On Aug. 17 a large number of changes and amendments in the land, mining, and timber regulations of the Executive Council were announced. They included and dealt with river-dredging leases, placer-mining conditions, hydraulic-mining leases, the recent discoveries of coal, mining 'disputes,' and certificates to miners.

Expense of Government.—The expenditure from the consolidated revenue of Canada in behalf of the Yukon Territory is officially given as $47,025 in 1898, and $1,098,759 in 1899. To this latter sum must be added federal expenditures out of ordinary revenue of $12,647 upon the administration of justice; $387,764 upon militia—practically the maintenance of the mounted police; $68,619 for the protection of the Yukon (estimated cost of $28,932 upon the customs; $21,050 upon postal facilities. The local revenue accruing to the Dominion Government in 1899 included $757,813 from gold royalties; $227,334 from miners' certificates; $202,020 from placer grants, renewals, etc.; $36,000 from mining fees; $44,396 from land rentals;
$54,098 from timber dues; $482,099 from customs. The total, including various miscellaneous items, was $1,753,376.

Reform.—On Aug. 14 the Earl and Countess of Minto arrived at Dawson City on a vice-regal tour. A voluminous memorial, presented to his Excellency by the Citizens’ Committee, set forth at length the position and troubles of the popula-

Lord Minto answered: “As the constitutional representative of her Majesty, you are well aware that I have no direct voice in the legislative affairs of the Dominion; but I must say that I believe I shall be able to make such suggestions as a result of this visit that great good to the country will accrue therefrom.” The Dawson Board of Trade, on July 17, had passed the following:

“Whereas, the Yukon Territory is without representa-
tion in the House of Commons of Canada and is administered by officials of the Government of Canada; and whereas, the wishes and interests of the people of the Yukon Territory are not repre-
sented in any parliamentary or legislative body mak-
ing laws or regulations for the governing of the Yukon Territory; and whereas, the develop-
ment of the Yukon Territory is dependent upon the development of the mining industry in said territory, and the discovery of rich mining areas converts what has hitherto been wasted and value-
less portions of this territory into great resources of wealth, not only to this territory but the Do-
minion of Canada as a whole; and whereas, the
greatness of the resources of the Yukon Territory
are unquestioned, and the certainty of an ever-increasing population assured, if the territory is granted wiser and proper administration and laws; and whereas, the richer portions of gold placer claims on Bonanza and Eldorado creeks have been largely worked out and the mining industry is no longer able to bear the burdensome restrictions and imposts now levied, and the existing administration and regulations must be promptly remedied in order to avert financial disaster to the territory; and whereas, the true condition of the mining industry and the necessities of the Yukon Territory are but little known in eastern Canada, and the Parliament and Government of Canada have not hitherto appeared to be fully informed in regard to the said conditions and necessities (or, if so, heedless of the results), and the laws and regulations enacted by said Parliament and Government for the governing of special industries of the Yukon Territory, and should be immediately changed; now, therefore, be it resolved, that the board of trustees do take immediate steps to raise a fund of $50,000 to be used as the board of trustees shall direct, to place before Parliament and the people of Canada the true position of industries, resources, and administration of the Yukon Territory, and to obtain such necessary reforms in the present regulations, law, and administration as to insure the development and prosperity of the Yukon Territory."

Mining Royalties.—The situation in the Yukon during the past few years in connection with Government royalties upon minerals has been peculiar. As an inevitable ground for complaint and dissatisfaction among a large and floating population of ignorant miners, it has interjected an issue into the politics and Parliament of the Dominion. The original royalty was imposed in view of the great expenses connected with the opening up and government of a new and very distant country. As Dawson grew into an organized town and the territory into a region of stable law and settled administration, the vague complaints and incoherent discontents of the pioneer period took form, and on July 17, 1900, the Dawson Board of Trade formally petitioned the Gold Commissioner for the abolition of the royalty and the substitution of an export duty not exceeding 2 per cent. on all the gold taken out of the country. Between 1896 and 1898 there was an influx of about 30,000 persons into the territory.

Altogether, the annual revenues of the Dominion derived from taxes, royalties, and customs duties in the Yukon are placed at $2,000,000.

Mines and Minerals.—The gold production of the Yukon is officially placed at an average of about $100,000 a year between 1883 and 1896. In 1896 it was $300,000; in 1897, $2,500,000; in 1898, $10,000,000; and in 1899, $16,000,000. The actual production during the past three years has been probably at least $20,000,000 annually, as much gold dust is carried away without record.

Miscellaneous.—Early in May the result of the first Yukon census was announced. It showed a total population of 13,000 men, 2,000 women, 500 children. Of these, 4,500 were British subjects, 9,000 Americans, 330 Indians. In the Klondike region itself there were 8,805 persons, including 2,767 British subjects, 5,539 Americans, and 499 of other nationalities. The population of Dawson was put at 5,404. In September, 1900, gold dust dropped in value about $1 an ounce, and the commercial current price, which had been $17 in 1896 and became $16 in 1898, was placed at $15 by the Dawson Board of Trade, owing to continued intermixture with black sand.
